The task before the reader of this book is anything but easy, for he has to determine what he should admire most—the astounding conclusions drawn by the author, or the ingenuity and boldness with which he maintains that the so-called Aryan, Indo-European or Indo-Germanic Family of languages are one and all derived from an obscure Semitic tongue, viz., the Phœnician, the language of Carthage, and of that enterprising race of merchant-mariners settled at the dawn of history on the shores of the Mediterranean who have been known to have sailed beyond the Pillars of Hercules and established colonies on the Western coasts of Spain, France and even England. The boldness of the attempt is no doubt as unique as it is astounding. It is neither more nor less than a determined plan to knock down and subvert the present science of Comparative Philology, an elaborate and collective superstructure reared mostly by the German linguists, bearing such great names as Bopp, Grimm, Herder and Heyse, and illuminated by a galaxy of other European savants, who have worked laboriously in the same field of research with remarkably unanimous if not always splendid results. Hence, the author cannot be surprised to learn that students of philology, trained as they are in the modern well established methods of philological research, will receive his conclusions with a shock. He cannot expect his theories, innocent as they must appear to every orthodox philologist of all scientific treatment, to be appreciated by any of them, notwithstanding his skill and ingenuity to establish the Phœnician parentage of the Aryan family of languages.

It would not be an unprofitable task were we first of all to lay before the profane readers of our Journal a short sketch

\* Member of the Theosophical Society—"Société Scientifique des Occultistes de France."—Paris.

of the present state of Philology, and the scientific methods by which the eminent Philologists,—the great Gurus of the Uninitiated in this line of research—have established their facts, of the so-called splendid results they have achieved, and of the fascinating vistas that have opened before their eyes to their great satisfaction. These results, we are told, have enabled them to peer more closely than before into the history of humanity "from its first beginnings," thus affording them an almost unexpected source, an efficient help to Archaeology and Ethnology. The field is so vast and the task so fascinating to their direct profane admirers, that it would be idle to expect any justice done to it in a magazine article. But some attempt may be made in order to enable the reader to estimate at their true value the theories so boldly propounded and the assertions so recklessly made by this veritable apostle of Hebraism, M. Levy Bing, the author of this strange book.

Without attempting an elaborate definition of Philology, it is enough to state that this young science, scarcely half a century old in Europe, (it may be said to have taken its rise from Bopp's Comparative Grammar of the Aryan Languages)—treats of the origin, growth and decay of language, that subtle instrument of human thought—and its various vicissitudes through a long series of years. It is remarkably similar to the science of Biology—another and hardly older sister that has under the fostering care of a Darwin and a Hæckel created a similar revolution in human thought in the domain of the science of living-forms. As Biology and the kindred sciences would be incomplete and extremely poor without the element of comparison, so Philology cannot and will not stand on its legs without being comparative. It is not to be inferred from the above that the science of language is a purely modern invention. On the contrary, it is as old as the world, so to speak. Its germs were scattered broadcast ever since the dawn of old Western civilisations, as the student can ascertain for himself, if he only knows English, from Max Müller's Science of Language. Plato, the Father of Philosophy in Europe, to whose comprehensive intellect no science was foreign, has devoted his whole Dialogue—Cralylus—to our subject, extracts from which are given by M. Levy Bing in his book. These germs, from what is still believed an extremely meagre soil, were vitalised almost suddenly into life at the beginning of the present century by the discovery, as European scholars express it, of a finished and well-cultivated language in the far East—the Sanskrit, whose past is as brilliant as its future must be great. This discovery, notwithstanding M. Levy Bing's disparaging remarks, due, no doubt, to his pro-semitic proclivities, marks an era in the history of modern thought. Comparison being thus the very life-blood of the science of Philology, similarities and dissimilarities, coincidences and differences began to be noticed from the first and paved the way to classification—as has been the case with Biology, Zoology, and Botany. The materials at hand were so many and so varied that they afforded ample opportunities of passing them through the crucible of strict induction. Plato and others having failed, it is thought, to rear up the plant of Philology, simply because their horizon was limited, some having drawn their materials from their own respective languages and their dialects, disdaining to give a single thought to other languages which they in their pride of race called barbarous,\* whilst some in later ages were guided by a theological bias or similar prejudices. Therefore, all past labours, in this direction, are proclaimed useless: the philologists of the past century have made a mess of the science and—their work cannot be regarded scientific in any degree.

Now the chief elements in the scientific classification of languages are certain phonetic laws which are well established by the process of strict induction, the resemblance of grammatical forms, and last, but not the least, the names of the numerals. Hence, have arisen three principal groups or families of speech—the Aryan, the Semitic and the Turanian, or the *Allophyllian*, not to speak of others too numerous and too imperfectly explored to need any mention here. What

\* Foreigners were called *Barbaro* by the Greeks. This word is found philologically connected with the Sanskrit "*Varvara*," an *Onomatopœia* for indistinct speech. The Hindus called them *Mlechha*, from the root *Mlai*, meaning to fade, to be indistinct, unintelligible. The Russians still call the Germans *Niemets* from a Slav root meaning *mute*, unable to speak (compare Greek; *aglossos*). The Hebrews called the Gentiles *Laog*,—"stammerers"; vide Canon Farrar's "Families of speech," page 284.

concern us the most are the Aryan and the Semitic languages, being not only the most widely diffused, but also the most important, as being the recognized vehicles of the thoughts and aspirations of civilized life—therefore, each of them necessitating a few words of explanation. The former group, called also Indo-European, comprises the Sanskrit, the Zend, including the Armenian, the Greek, the Latin, the Teutonic, the Celtic, the Lithuanian and the Slavonic Branches. The Sanskrit is the parent of the Hindi, Punjabi, Bengali, Marathi, Gujarathi, Siudhi and a few more. The Teutonic Branch has the English, the German (the Hoch-Deutsch, or High Dutch), the Dutch (the "Platt Deutsch" or flat Dutch), the Icelandic, the Swedish and a few more. To the Latin branch belong the Romanic languages *par excellence*: the French, the Italian, the Spanish, the Portuguese, the Provençal of the Troubadours and several more. To the Celtic belong the Gaelic, Irish, Cornish and Welsh. The Russian and Polish; the Bulgarian and Servian, &c., are all Slavonic.

The second family in literary and historical importance, although it has given three religions to the world—Judaism and its off-shoots, Christianity and Mahomedanism—includes the Hebrew, the Arabic, the Assyrian, the Abyssinian, the Phœnician, which M. Levy Bing makes so much of, and a few more.

It is to be remembered by the lay student that mere words or coincidences of words, as has been forcibly stated by Max Müller in his Survey of Languages, are not sufficient to determine the group to which a language should belong. To take an instance—the Turkish contains more than sixty per cent. of Arabic words; still a Philologist would never look upon it as an Arabic (Semitic) language, for the plain reason that its grammatical system is purely agglutinative, and therefore cannot be Semitic, as it is placed by Max Müller and others in the Turanian Family. The same may be said of the Literary Tamil in India which, though containing more than twenty per cent. or more of Sanskrit words, yet belongs to a sub-group of the Turanian stock, the Dravidian, as its grammatical system is non-Aryan in a marked degree.

M. Levy Bing objects to the names of these two families, and speaks of them as "inappropriate" in his eighth chapter. To the name Aryan he prefers the name "Indo-European." This and the word "Indo-Germanic," M. Pictet in his *Origines*, as quoted by Canon Farrar, designates as "*ni logiques ni harmonieuses*," neither logical nor harmonious. Max Müller in his sixth lecture (1st series, Science of Language) very ably demonstrates that the word *Aryan* (meaning in Sanskrit well born, noble) being found\* in all the cognate languages in some form or other together with the numerous offshoots of its roots, † *A R* meaning to plough, can safely claim universal acceptance. But anyhow, whatever be the objections raised against the adjectives Aryan and Semitic, M. Levy Bing must know that they are now long established terms in the Science of Language, and cannot be ousted so unceremoniously from the philological treatises. Would he object to the terms oxygen, nitrogen, chemistry, protoplasm or metaphysics?

There is still another remark that we cannot resist the temptation of making with reference to the Inductive Methods of research closely followed by the devotees of this science; and that is, when the same methods are scrupulously made

\*A reckless philological blunder—an invariable result of the ignorance of phonetic laws in comparative philology—occurs in the "Vicissitudes of Aryan Civilisation"—a prize essay by Mr. Mahadev M. Kunté—a Professor of Sanskrit at Poona, we believe. He believes that the word *Arya*, meaning noble, is connected with the English word "Sir," Sir represented by "Har" and "Har" corresponding with *Ar* in the adjectival substantive *Arya*. This is certainly philology run mad with a vengeance, to boot! Now, if he had taken the trouble to get at the true derivation of the modern English word "Sir," such an unscientific blunder would have never crept into his otherwise able essay. "Sir" is to be traced to the Latin "Senior," the comparative of "Senex," old, having well-known representatives in all the Romanic languages. This word "Senex" is traceable to the Aryan root "san," represented in an old Vedic word "sana," old, ancient; whence "sanātana," ancient, perpetual, everlasting; compare Gothic "sinteino," and Anglo-Saxon prefix "sin"—all having the idea of something old. Vide M. Williams' Sanskrit Dictionary. A cognate root "san," means to honor, to worship also for "*Senectus reverenda est*," "old age is to be honoured." Vide also Zehetmayr's *Lexicon Etymologicum Comparativum*, p. 230 (Ed. 1873.) For the affix—*ios*, old form—*ios*, vide the above and Bopp. Breal's *Grammaire Comparée*, Vol. II., p. 190.

†Farrar says in his "Origin of Language" that if Erin, the native name of Ireland, be rightly derived from the word "Arya," then "the fact is important as showing that some memory of the old name was preserved in the extreme West as well as in the East." Page 189.

use of in the sub-classes, they invariably lead to the distinct recognition of the mothers from which they sprang as in the case of the Romanic languages derived from the Latin, the Modern Teutonic from the oldest Gothic of Ulfilas, and the Indian\* languages (Aryan) from the Sanskrit. We should like to ask whether M. Levy Bing's method, which, we are afraid, is no less haphazard than empirical and dogmatic, could ever boast of such precision or of such splendid results, as are achieved by this inductive science in the resuscitation of long lost languages and dialects, as the cuneiform languages of ancient Persia and Babylon? Could his methods produce a Burnon for a Rawlinson, when he institutes a comparison between his favourite Phœnician on the one hand and modern languages derived from the Gothic and the Latin, on the other? What would the intelligent reader think of a Philologist were the latter to compare a Bengali or Hindi word with a Gaelic term spoken in the Highlands of Scotland, without tracing them back to their older forms in their respective mother languages? To take one instance out of innumerable others in the book under review, he ascribes a most fanciful and, therefore, unscientific derivation to the French article *du* (Eng. of *the*) derived, as every one knows, from the Latin *de illo*, to the Chaldean *da*, whilst in the same breath he avers that *au* (Eng. to *the*), which he rightly says is for *à le* (though it is from the Latin, *à illo*) is from the Phœnician *al*? The English pronoun *they*, he derives from the Phœnician *ze*, "soften," from Chaldean *da*; in *them* we find—he says—the *m*, a Phœnician characteristic of the plural. Instances of this playing fast and loose with etymology are so many and so bold, that it is difficult to make a selection of them in the limited space at our command.

ERIOOPLES, F. T. S.

(To be continued.)

## PHYSIOLOGICAL CRUELTY OR "FACT AND FANCY."

BY PHILANTHROPOS.

Soon after Dr. Anna Kingsford's paper on Vivisection, published in the December number of the *Theosophist*, and probably as an answer to the same, we received the above named book. It is very well written, and when the author says that it is lawful and necessary to make experiments with living animals for the purpose of alleviating human suffering, and that such experiments should never be made except by competent persons and only when absolute necessity demands them—we agree with him to some extent. Our modern scientists have not, and probably never will, develop their psychic powers to a sufficient extent to become clairvoyant. They are stuck up to their neck in the mire of materiality, and have no other but physical means to help them in their discernment of the fitness of things. But the author demonstrates too much. He attempts to show that there never was any abuse of vivisection; that vivisection is not at all painful, and that the animals seem to enjoy it; that crying and howling is no sign of pain; that vivisection is of very rare occurrence; and that the doctors have a right to vivisect and the people a right but to mind their own business. We must disagree with him, unless we consider reliable witnesses as impostors, and those people, who have moved away from the vicinity of medical colleges on account of the pitiful cries of the tortured animals, as being hallucinated.

In the December number of Dr. Dio Lewis' "Popular Monthly," he has an editorial article on Vivisection or the "Art of Opening and Dissecting Living Animals." The details are shocking enough to stir with indignation

\*In the case of the Indian languages, the field has been worked up with a precision and ability that cannot be too much admired, only of late years, by a Bengal Civilian, Dr. John Beames, in his "Comparative Grammar of the Modern Aryan Languages." Vide his Introduction to Vol. I.

†For an exhaustive and scientific treatment of these English forms, we refer the reader to the New York *savant*, Prof. Marsh's *Comparative Grammar of the Anglo-Saxon*. (Part II, Ed. 1875), than which we know of no book after Grimm's *Deutsche Grammatik*, more perfect in the domain of Teutonic Philology.

even the soul of a Red Indian at the cruelties perpetrated in the name of "Science." Where one such experiment is made in the interests of humanity, a thousand of the same kind are daily made and repeated to satisfy over and over again the *curiosity* of some gaping imbecile future knight of the *pill bag*.

SATYA KAMA SHARMA.

## THE PHILOSOPHY AND SCIENCE OF VEDANTIC RAJA YOGA.\*

BY D. K. MAVALANKAR, F. T. S.

I FEEL really obliged to my friend and brother, Babu Siris Chandra Vasu, B. A., for the presentation of a copy of a Treatise on "The Philosophy and Science of Vedantic Raja Yoga," edited by him. It is the reprint of a book which was first published about four years ago, and a notice of which will be found on page 147 of Vol. I. of the *Theosophist*. At the time the curious autobiography of the author was published in these columns, his book was passing through the press; and although the account of the Swami's (the author's) life looked rather odd, and a trifle too fantastic, the Editor of the *Theosophist* naturally enough abstained from hazarding an opinion upon the merits of a work as yet unpublished. The neutral attitude has since been unfortunately misunderstood, one way or another; therefore, a few remarks on the book in its present form will not be uncalled for.

A careful and attentive perusal of the Treatise forces the earnest student of Philosophy to the conclusion that a large portion of it is either allegorical or that it is a mystification. But the latter is an untenable supposition. Would, it is asked, the highly educated Editor have undertaken the publication of a work, apparently so full of impossibilities—nay absurdities, had it no hidden merits? The alternative, therefore, to which one is reduced is, that the work is a parable, that it is purposely veiled, like so many other treatises on Occultism—in short an allegory. It is needless here to repeat the impracticability of certain occurrences given out by the author as his personal experiences; and it must be said that the Editor has, to some extent, in a special footnote hastened to extricate his hero and himself out of a really perilous situation. Turning, however, to the philosophical portion of the work, two or three important points must not be omitted to be noticed. The author begins by taking Paramatma as the Guru, and Jivatma the disciple. The latter at the same time is defined to be "the reflected light or ray" of the former, *i. e.*, the *Jivatma* referred to in the work under notice is identical with the seventh principle of the Occultist. And yet a passage on page 2, reads:—

The *Jivatma* having reached the sublimest height of knowledge, both theoretical and practical, by perfectly understanding all the principles of righteousness and virtue in all the religions of this as well as of the world above, and having enjoyed all the worldly pleasures with great avidity, the pleasures of a kingly life for a short space of time in a corner of this vast universe of the Almighty, at whose call the royal heads even lie prostrate, the pleasures resulting from the voluptuous beauty of the fair sex and all other sensual pleasures, and strived hard for the accumulation of wealth, and giving himself to all kinds of whims and caprices of his unsteady and changeful mind, in short, after enjoying all the pleasures, both intellectual and sensual, of this world, and finding them worthless and vain, comes to the conclusion that no worldly pleasure is lasting and eternal. Being thus disgusted with all worldly enjoyments, the *Jivatma* feels deep remorse and begins to repent sincerely.

An occultist who will have the patience to master this interminable sentence, need not be long in finding out that the author has used the word *Jivatma* in three different senses, namely, the animal soul, the human soul and the spiritual soul, or, the fourth, the fifth and the sixth (which is the vehicle of the seventh) principle. Atma—the seventh principle—is *alipta*, and can neither enjoy nor suffer. It is the fourth principle which generates the desire for material enjoyment and the

human soul which takes delight in sensual pleasures, but at the same time its upper strata, in which is reflected the light of the sixth, try through its own inherent powers to bring the lower principles under subjection. Otherwise, it is inconceivable how a principle, or substance, which has been immersed in one sort of enjoyment or suffering, can of itself turn its course into another channel. It may be argued that, after all, these principles are but different manifestations of the same *Paramatma*, and hence might be all included under the heading of *Jivatma*. A little reflection will, however, show that position to be indefensible. For the variety in the manifestation of the same essence must be due to the difference in the vehicles of manifestation. If these vehicles be different, how can they be called by one common name? Nor does it require a very deep thinking to find out that it is the vehicles of manifestation that are named, for the manifested being one, is absolute existence and shows no different attributes. It is therefore a matter of great regret that all throughout the book the word *Jivatma* is used to denote so many different principles, and thus is sure to mislead the unwary reader. The second important point to be noticed is the fact that *Asans*, &c., are enjoined for the practice of *Vedantic Raj Yoga*. To an occultist it is of course evident that the author has adopted the technical terms of *Hatha Yoga*, which will disclose the real *Raj Yoga* system, only when esoterically interpreted. In one place a process is described for subjugating the twelve kingdoms, beginning with the lowest one, which is situate in the *Kundalree*. A student of psychology knows that the method refers to the imperfections of the flesh which are to be conquered one by one, beginning with the grossest. It is a matter, however, of great concern as to how many of the readers will feel disposed to give that attention to the work, which alone may, under favourable circumstances, lead them to a correct understanding of the underlying esoteric meaning—(I still persist in giving the author the benefit of the doubt, and feel ready to admit such a meaning in his work). Thirdly, the language put into the mouth of the Guroo is such as to confuse the reader greatly before he can find out whether by "preceptor" the *Paramatma* is meant, or—the author himself. These are among the chief peculiarities that permeate almost the whole of the Treatise; and hence it is very doubtful whether its perusal will do any good to the general public. For only those can understand it who have studied esoteric philosophy up to a certain point; and for them the work contains very little they do not know: while the ordinary reader will be misled by the exoteric phraseology adopted, and consequently find the Treatise positively misleading and harmful. However, the motives of the author and the editor being no doubt perfectly benevolent, it is hoped that these remarks may help to remove all grounds of apprehension in the future. The editorial notes and appendices added to the second edition are of a certain importance, and if properly understood, are calculated to throw light upon some of the most obscure passages in the text. They also help to a clearer understanding of the *Adwaita* Doctrine as propounded by *Srimat Sankaracharya*, which, unfortunately, the author puts in a very misleading form. The Editor is deserving of all praise and thanks for having, by his notes, attempted to rescue his reader, who, otherwise, would have been left hopelessly floundering in a sea of misconceptions. We would recommend the little Treatise to our students on account of its Appendix. We hope that they will carefully peruse it, for it does an infinite credit to the Editor.

Since the above Review was in type, Mr. R. C. Bary, the Publisher of the Treatise, has kindly sent a copy of the same to the *Theosophist* office. In the absence of the Editors from Madras, I beg to thank Mr. Bary on their behalf, for the pamphlet.

D. K. M.

\* Edited by Babu Siris Chandra Vasu, B. A., F. T. S.

PERPETUAL ALMANAC.—We beg to acknowledge with thanks receipt of a copy of "A Perpetual Calendar," kindly presented to us by Munshi Tej Rai, F. T. S., a teacher in the Bareilly College. It begins with the year 1800 and runs up to 6099 of the *Christian Era*—a flattering though rather too sanguine prophecy for the latter. It is a great convenience to be able to find out the days of months for so many years, by the means of but half a sheet of paper. Of course its greatest utility will be rather for the future Astronomers and Astrologers, ordinary men being hardly expected to live beyond a forty-third part of the period over which the calculations of the *Perpetual Calendar* extend. All the same, the little sheet-almanac will accomplish its beneficent mission.

The same author has favoured us with a copy of Part II of his "SCHOLAR'S GUIDE TO ALGEBRA, OR A COMPLETE EXERCISE BOOK FOR THE USE OF HIGHER CLASSES IN INDIAN SCHOOLS." The work, we are told, is intended for candidates working for the entrance examination of Indian Universities. The present part treats of additions and subtractions of Algebraical fractions. We are further informed that the fourth part, which is in the press and is shortly expected to be out, treats of simple equations of one unknown quantity. We trust the efforts of our scholarly Brother in the interests of young students will prove beneficial and successful, and that he will receive the patronage his work may deserve.

NUMBER 3 of the *Alpha*, Vol. IX, an American journal connected, as we understand, with the "Moral Education Society," contains something quite unusual, a *rara avis* in the columns of any magazine or daily, namely—a fair and unbiased mention of our Society, followed by a letter from one of the lady members of our Rochester Branch, to the editor of *Alpha*, Mrs. Winslow. Says the editor:—

We are in receipt of a very interesting pamphlet, . . . . . published in Madras, India, containing observations and explanations of this too imperfectly known association. The very name theosophy is a mystery to the common mind. The word signifies "wise in the things of God," and through this wisdom the attainment of *direct* communication with God as distinguished from a *revealed* knowledge, which is supposed to be attained by extraordinary illumination, a direct insight into the processes of the divine mind and the interior relations of the divine nature. This is the aspiration of the Eastern Adept, and these wise men are said to develop almost superhuman natural powers, often controlling the elements, reading the souls, and influencing the minds of men of lesser growth. But according to a very interesting account of an American branch society, from a letter which we give below, theosophy means to their members the strictest temperance in all things, perfect self-control, charity, benevolence, and even tenor of mind, which tend to soul development. In this respect there is harmony of sentiment between them and our own society for moral education.

India, and the spirituality of this ancient people, seems very near to us just now, by reason of the knowledge of theosophy, F. Marian Crawford's novel, "Mr. Isaacs," and the information obtained from the lectures and social conversation of the Hindoo Brahmin, Mozoomdar, who is now delighting the religious world with his sweet Christian spirit, his elegant and eloquent use of the English language and the knowledge he imparts of his wonderful country, and the reform religious society he represents, known as Brahmo Somaj.\* We are glad to know of these things, and that the study of theosophy has begun in our own country. May such societies multiply and may our young men and women become adepts in wisdom.

ROCHESTER, N. Y., October 9, 1883.

MY DEAR MRS. WINSLOW,—I cannot express the pain it gave me to hear of your poor health. Of all women I know of in the world I would have you well. I now wish more than ever you had come to us when you went away for your health. When people can get no relief elsewhere, they seem to drift to us and get well. They nearly always come and stay a while with me, and there seems to be a power with us through which it is done. I know not from whence it comes. Spiritualists say it is spirits do it all and that I am not honest enough to give the credit where it is due, and I used to think myself it was spirits. I know now such is not the case, but that I psychologised myself to see and feel as I did, and many other honest persons considering themselves spirit mediums are in

\* Known as the *New Dispensation* of the late Keshub Chunder Sen, Mr. Mozoomdar is no Brahmin, as he himself knows. He ought to correct this mistaken notion which has crept into many American papers.—*Ed.*

a similar condition. Some of our own friends are now convinced that no spirit out of the form has ever controlled them, and others who feel "spirits" may have influenced them, feel it has been to their cost, and we as a society "fear" for ourselves to investigate spiritism without the Eastern Adepts to aid us. They are never controlled by spirits, but control them. My dear Mrs. Winslow, I have touched on this subject that you may fully understand the aims of the Theosophical Society. Many of the members have been spiritists for years, and while now denying nothing to spiritists, we for ourselves fear to investigate further without any means to try spirits as commanded so long ago by one who knows. You would like to know the aims of our society. I really do not know how to tell you so much in so little time and space. I shall send with this a pamphlet explanatory of theosophy, but probably our society is not like any other "branch," as so many of our rules have grown up among ourselves. The most important one being perfect self-control, perfect temperance in all things, perfect cleanliness of body, chastity of mind and body, perfect toleration of the opinions of others, and higher than all comes "charity." We also consider it a great misfortune to give pain to any human being or animal, consequently we eat nothing having life. We commenced by leaving off flesh diet, and to control anger and remain calm under all circumstances. We also listen to the woe of the most lowly, and have never been asked for aid in vain. We believe man has great possibilities, and if he lived in harmony with his human and divine nature, he could do as did Jesus of old. We have great veneration for our own and the Bibles of other nations, believing them all to have been more or less inspired. We believe the law of compensation is inevitable and eternal, and that every sin must be atoned for. I think you will appreciate the steepness of our path, but we struggle on, falling backward and climbing up again sad and weary, but firm and determined, cheered on by each other in kindness, and we really have made some great strides upward, for we have overcome the appetite for meat and other food much liked by us, and some of our members had used tobacco thirty years, and would not use it in any way now. None of the society indulge in any of the small vices "so called," and another evidence of the progressed condition of our society is, its appreciation and approval of THE ALPHA. Need I say more for the young men and women of this group?

I have now given you a sketch of this chapter of the Theosophical Society, roughly drawn by an unskilled hand, having but one merit, that of truth, which I think will be vouched for by the whole thirty-six, "and though we may fail many times, we are trying to become more than neophytes in the great science of theosophy." Some of us have been theosophist for four years, and have abstained from meat since then. Parker Pillsbury, one of the number, though he was but just initiated into the brotherhood, is still with us, brave and true as ever, and as ever working on the unpopular side. If he were not brave and unselfish as only he can be, his wonderful book on which he is toiling with his might would never see the light of day. We found he was fully appreciated in India when he vouched for us, thus making it possible for us to get our "charter," and again I think he will vouch for the present letter to yourself. I suppose it would be well to add, the founders of this Theosophical Society are in communication with the "Wise Men of the East." And we have been made aware to our perfect satisfaction that some of those Wise Men still live and have lived many, many hundred years, and by following in the foot-steps of Christ possess his powers and his promise, "the last enemy overcome is death." Indeed, we have those in the parent society who have seen, conversed with, and been guided by them by written messages, &c., &c. And we can call upon them in secret, and after establishing a sympathy toward us by our worthiness of their assistance for unselfish reasons they will inspire and lead us to the light. We know of one who has been instructed by his Guide and is now healing the sick, and has healed over four thousand persons of all manner of diseases, and he denies that any spirit of the dead had anything to do with him. All is done by a pure life and psychological law. I shall soon be able to send you undeniable evidence of these facts. I think the seventh seal is about to be broken.

Ever gratefully,

(Mrs.) J. H. CABLES, F. T. S.

## PSYCHOMETRY.

FROM a private letter to our energetic friend, Mrs. Parker, from Professor J. R. Buchanan, we learn that that distinguished gentleman is engaged in preparing for the press a work upon Psychometry. His wife, who is one of the best psychometers living, is, he writes, "continually furnishing material for illustration. Yesterday, she described El Mahdi, the Mahomedan leader and prophet of the Soudan. She says he is a great seer and has a remarkable future—being a superior man."

The writer has enjoyed the friendship and appreciated the rare intellectual endowments of Prof. Buchanan

for about thirty years, and has always deeply regretted that he has never taken the trouble to produce a treatise upon the beautiful and supremely important science of which he was the modern re-discoverer. Beyond devoting to it a chapter in his work upon Anthropology—published more than a quarter century ago, and an occasional article in his long-extinct *Journal of Man*, he has not given it, so far as we are aware, any special attention. To Professor and Mrs. Denton, not to the Discoverer, are we indebted for an elucidation of the subject; yet though the *Soul of things* is in three volumes, and their contents are most interesting, the reader scarcely finds that full elucidation of the psychometric faculty and how to develop and sustain it, which is needed. If Prof. Buchanan cares for a world-wide circulation for his promised book, he would do well to make it in one volume of 400 to 500 pages, and put it at a price that will not be prohibitory. We have already some thousands of English reading Theosophists in Asia alone, and feel perfectly sure that the book would be welcomed eagerly if of the form described. Psychometry embodies even more potentialities for instructing and elevating average humanity than Clairvoyance. While the latter faculty is most rare, and more rarely still to be found, unless accompanied by a tendency in the clairvoyant to self-deception and the misleading of others, by reason of imperfect control over the Imagination, the psychometer sees the secrets of the *Akasa* by the "Eye of Siva," while corporeally awake and in full possession of his bodily senses. A perfectly independent clairvoyant one may meet with once or twice in a lifetime, but psychometers abound in every circle of society, nay, may be found in almost every house.

Much shameless abuse of ourselves has at different times come into the press from American sources—chiefly from Spiritualists, who have shown very bad judgment in making themselves so contemptible. It is all the more gratifying to read the following remarks upon us and our movement by Professor Buchanan—himself one of the most respected authorities in the American spiritualistic world:—

I love the tropical climates and people and hope some day to have a good time in India. I have been interested in the progress of my friends Mme. Blavatsky and Col. Olcott, and have sent them copies of my book—*Moral Education*.\* In looking over the *Theosophist* I perceive what a grand field has been successfully occupied, and I rejoice that Blavatsky and Olcott escaped from the atmosphere of New York. Our country is very largely the land of materialism, avarice, and sometimes hypocritical selfishness; we are amidst a counterfeit Christianity, a stolid science, and a vast area of human littleness. But still there are many bright souls here and there and they are the heaven of the future.

This is equally the case in every other country, it would seem. *Ex uno disce omnes.*

## LIVING VAMPIRES AND THE VAMPIRISM OF THE GRAVE IN OUR SOCIAL INSTITUTIONS.

BY DR. FORTIN, F. T. S.

MONSIEUR THOREL and one of his friends, a physician, visited me at Paris. These gentlemen came to inform me of some extraordinary things which were going on at Genecy, a village situated near Ruffee.

A girl named Eugenie, whose physiological characteristics were very extraordinary, had been living for twelve years in a cottage at that place. For twelve years this girl had been bed-ridden and lived without eating. A small quantity of pure water was sufficient to satisfy all her wants.

The most extraordinary phenomena occurred around her person; such as raps and knocks on the walls, answers to mental questions, apparitions of spectres, hands isolated in space, an invisible force which took hold of objects that were held in the hands of the spectators; but the most extraordinary thing of all was that

her clean clothes, locked up in a box, were put on her and exchanged for those she wore while she was lying quietly in bed.

People from all parts came to see her. As Ruffee was situated on the Bordeaux line, a road which was much used by the Government officers of that time, Eugenie was visited, amongst others, by Monsieur Thiers, who passed there a night to witness these things.

All the people of the Government, delegates and ministers, came to see the seeress of Genecy.

After I had been told of these phenomena, I hurried to see them myself and started for the place with Monsieur Thorel and his friend, Dr. Boudoin. I took with me Doctor de Guerne, so as to be more secure in our observations; because at that time I was only a student of medicine.

I had at that time a somnambule person as subject in hand. She had extraordinary clairvoyant powers, and so, of course, we took her with us, and we expected to make use of her for the purpose of controlling the phenomena of Eugenie.

When we arrived at Ruffee, we said nothing about our project. We started at night for Genecy, hoping to surprise Eugenie before she would be able to hear of our arrival.

Monsieur Thorel had selected the best horse in his stable, and our trip seemed to come to an end without any remarkable incident, when suddenly the horse stopped and refused to advance further. Monsieur Thorel took it by the bridle and attempted to lead it on; but all his efforts were in vain. The horse, covered with sweat, was trembling in every limb and neighing in a manner indicating terror and pain.

I then invited my somnambule to come out of the carriage and magnetised her to find out what was the matter. She described phantoms and monstrous beasts who obstructed the road in front of our horse. The cause of this phenomenon was explained to us in this manner. Having arrived at Genecy near the residence of Eugenie, she had already perceived us by her clairvoyant sight and knew our object. We were forced to take another route, which was pointed out to us by our clairvoyant.

The cottage in which Eugenie lived was an isolated house by the side of the road. Its appearance was very miserable, and in the interior there was only one window through which the light of day fell upon the seeress, who was lying in a bed, the serge-curtains of which were fastened to the bed posts. The white clothes which the seeress wore, formed quite a contrast with the squalid appearance of the surrounding furniture, which consisted of a table, four chairs and a trunk.

Eugenie seemed to be from 35 to 40 years of age, of a dark complexion and nervo-bilious temperament. Her face was round, her hair black as the wings of a raven, her eyes projecting and round, grey with a green tint, spotted with brown. They shone with a feverish glare, the pupils were lightly dilated and had all the characteristic appearances indicating an amaurotic condition. Her eyes were insensible to even strong light, her mouth was large and her teeth foul; her hands were extraordinarily fine. Her abdomen was considerably extended and swollen, and her legs looked dropsical. Her temperature was below the normal point.

We got two ladies, to whom Eugenie seemed to be particularly attached, to introduce us, hoping so to gain her confidence and to obtain thereby a true and detailed account of her condition. To all our friendly questions she answered with an uncertain voice and in a dry manner, indicative of uneasiness.

I know the object of your visit she said. "You want to take me to Paris, but I do not want to go. I could produce no miracles there, I am satisfied where I am now."

The next day we found her better disposed. We heard sounds, saw a phantom in the form of a woman dressed in white and veiled. A silver piece of five francs present-

\* Noticed in the *Theosophist* for December 83 and Jan. 84, on page 101.

ed by Doctor de Guerne was taken up as by an invisible hand and held in space in spite of our efforts to remove it, until it finally fell on the floor. Other phenomena occurred, but I shall restrict myself to a description of the most important ones.

We had a box made of 0, 60 by 0, 40 centimeter depth, which could be closed by a double lock and added a secret chain.

In this box we put a night gown, a shirt and a bonnet (cap), each of which articles were marked secretly by each of us with private signs and our signatures. Doctor Boudoin insisted on sewing to the gown a piece of his handkerchief, which he tore for that purpose, and to one of the ribbons of the bonnet he fastened a ring which he took from his finger. After locking the box we took some strong glue and glued four layers of paper one on top of the other, over the same. Doctor de Guerne then took the box in his arms and we waited.

Presently Eugenie commenced to laugh, but, imagine our surprise, when we saw on her head the bonnet, to which the ring of Dr. Boudoin was fastened. All this was done without our being able to see a single motion, and Dr. Guerne, who held the box, felt not the slightest shock. When we opened the box, we could not deny the evidence. Bonnet, gown and shirt were completely exchanged.

For five days and six nights one of us remained constantly with Eugenie without losing sight of her. A little pure and cold water was all she took, but the visits of several women, who came with their children to have them touched or blessed by the seeress, soon led to a relation.

First came a woman with four children, the oldest of whom was about eight years of age. A small boy of four years was the first one to be presented to her. Eugenie took him up in her arms, and while a shiver of excitement seemed to run through her, she covered him with kisses. She kissed passionately his lips, his eyes, his head, his neck; she seemed to suck him, to inhale him; her face had suddenly become transfigured by an expression of frenzy; there was a wild and fiery look in her eyes, and the child crying piteously attempted in vain to escape from her embrace.

Ten times we witnessed the same performance. I was selected to attempt to magnetise Eugenie by surprise, for we hoped that by doing so we might obtain still more information. For this purpose I posted my own somnambule, after having magnetised her first, at the foot of the bed, with the object of thereby obtaining a double control. By my touch I established a communication between the two sensitives.

Next, following the advice given me by my seeress, I threw the bed clothes suddenly off, and grasped the legs of Eugenie, put her two feet against my own breast, and pointing with my right hand at her face I commanded her with a loud voice to sleep. I was young, I had faith.

At once Eugenie gave a terrible cry, followed by strange hissing sounds. The commotion was so great, that a uterine hemorrhage appeared, which literally covered me with blood.

My somnambule, having been overcome by faintness, had left the cottage and fallen down on the way. Monsieur Thorel, who was standing near the door, seeing her in such a critical condition, came to take me away from the bed of Eugenie, and I went to the assistance of our poor somnambule, who was lying there, vomiting blood.

It was Sunday; a lot of country people had collected and made hostile demonstrations. A rumour had spread that the physicians of Paris intended to carry off Eugenie against her will. Things looked quite different, when they saw a strange woman rolling in the street and a man who was covered with blood come out of the house of Eugenie. There was no more doubt. Evidently we wanted to assassinate her.

I took my subject up in my arms and attempted to seek shelter at the foot of a large calvary near by, which was surrounded by walls; when fortunately the officers of police, who had been already notified, came running up to us, followed by the Catholic priest and the mayor of the village.

The country doctor and the Thorel family, whose authority was respected at that place, explained rapidly the situation to the authorities.

Let us review the facts and make our scientific deductions. Eugenie found herself, after the death of her mother, alone with her father and went to the neighbouring town of Angoulême to take a situation as a servant. She obtained such a situation in the house of a doctor, who found that she was clairvoyant. He magnetised her regularly for six years. Suddenly this doctor died without having provided for the future of the poor girl, and Eugenie returned to her village, where she lived with her father, and by force of habit she fell at certain hours into the magnetic sleep. Her father, having received instructions by his daughter, granted consultations and prescribed medicines, etc. They went on living in this manner for two years, when the father died. Eugenie, who was now alone and without support, fell several times into a cataleptic condition, in which she was believed to be dead. The first time this condition lasted 21 days and the last time 17 days. At our visit she had been lying in bed for 12 years, and she was very much emaciated. Nobody ever saw her take any food,—a fact which has been ascertained by an almost constant surveillance, and it is certain that very often she was unremittingly watched for 15 to 20 days at a time. All that any one ever saw her partake of, was a little pure and cold water.

Doctor Boudoin, who was practising in that part of the country, informed us that two of his friends remained alternatively with her for 14 days to watch her without interruption.

With her last cataleptic fit her menstruation ceased and her abdomen began to take size and form of a state of pregnancy at the full term. During the period of such suppression she used to complain of having a taste of blood. May we not suppose that this girl vampirized herself? Her blood, which was all the time retained, may have become assimilated and served as nourishment?

During winter her condition grew worse. She became weaker and had the appearance of a corpse, especially in consequence of her immobility. Her voice was very weak and seemed to come out of her abdomen. At such times her seership was very great. In Spring time the inhabitants and the physicians of the neighbourhood assisted at a veritable resurrection. Eugenie came slowly and laboriously to life again.

How can we explain this last phenomenon? By the vampirism which she exercised upon those children that were brought to her that she may touch and bless them. Indeed, in winter roads become very bad, there are no more visitors and no more children to be vampirized.

One more remark. At the time when I attempted to magnetize her, her blood was red as vermilion. We examined it carefully with the microscope. Nothing indicated a chlorotic condition or a change in its constituent particles. After the described event took place, Eugenie became hungry, recovered life, rose and went out.

I expected to take her to my house, to continue my experiments; but was called back to Paris, where I had to remain for several days, and when I returned to take her with me, she had left the country in company with a stranger.

*(To be continued.)*

## DRAMA OF THE LATTER DAYS.

### A SUGGESTION.

[We hardly need to offer an apology to the English friend and author who sends us his "Suggestion" for reprinting it, without his special permission. It is too

good to be lost for our readers. Only why should the writer, who seems to us quite impartial in other things, be so very partial to "Esoteric Christianity?" Surely, without in any way lowering down the Christ system, or even the *ideal* Christ, we can say what is but too easy of proof, that, properly speaking, there is no "Esoteric Christianity," no more than there is Esoteric Hinduism, Buddhism or any other "ism." We know of one Esoteric doctrine—"the universal secret Wisdom-Religion" of old. The latter embraces every one of the great creeds of the antiquity, while none of these can boast of having it in its entirety. Our mission is to gather all these scattered rays, bring them back to one focus, and thus help those who will come after us to unveil some day the glorious sun of Truth. Only humanity must be prepared for it—lest it should be blinded by the unexpected splendour. The true Theosophist, he who works for the sake of truth—not for his own self and personal predilections—ought to respect every religious system—pander to none. But then, perhaps the author is not a theosophist, yet, and as such, we welcome him as one, who, judging from his "Suggestion," is on the high road of—becoming one.—*Ed.*]

ALL THE CHURCHES.—Come thou long-expected Jesus! Born to set Thy people free. O come again, Lord Jesus come!

(The Messiah appears. They gather round him.)

ROME.—Hail, Master! If Thou be indeed the Messiah Whom we expect, wilt Thou submit Thy claims to the judgment of thy infallible Vicegerent and confirm the Decrees of Trent and of all other General Councils by Rome accepted, with all the dogmas and decisions and traditions of our Fathers the Popes?

MESSIAH.—There is much truth and beauty and goodness in your Church, and your zeal hath been great in what you believed to be true; ye have Unity and Order and devotion, and ye acknowledge the Powers of the unseen world, and your rites are significant of spiritual truths. But of these councils and decisions, as such, I know not; that which is true is true without their authority, and that which is false their authority cannot make true, and any who teach them by force or violence are not my disciples. I know them not. Seek ye the truth and the truth shall make you free, and by it ye shall prevail. [*Exit* Rome.]

GREECE.—Hail, Master! If Thou be indeed the Christ of God wilt Thou ratify the decisions of the holy councils and their dogmas and decrees which we receive, and make the Orthodox faith to be Supreme and the chair of Constantinople, and humble the pretensions of the Pope of Rome?

MESSIAH.—There is much of faithfulness and steadfastness in your Church, and I see much that is beautiful and venerable in your rites, but of the decrees ye call orthodox, I know not; if they be true, they shall stand by their truth; if they be false, they shall fall by their falseness. To make you supreme in my kingdom is not mine to give. Leave ye the past and go on to perfection. [*Exit* Greece.]

ENGLAND.—Hail, Messiah, long expected! If Thou be He who was to come, wilt Thou ratify our thirty-nine Articles and the use of our glorious Liturgy, and swear allegiance to our Queen, and drive out all that conformeth not to the teaching of our glorious Reformation, and put the Pope of Rome beneath our feet and all his enormities?

MESSIAH.—I know not the Articles whereof ye speak, nor did I ever sanction them, nor do I see any beauty in your Liturgy that it should be desired, nor do I know of any reformation so glorious as ye describe; what good ye have ye have borrowed it from Rome and spoilt it. Ye have some truths, but ye have no unity and little love; ye fight one with another. How can ye rule if ye have no rule among yourselves? Seek unity and peace. Seek truth and light, and seek ye love. [*Exit* England.]

SCOTLAND and GENEVA.—Hail, Master! Dost Thou ken the Confession of Westminster and the Institutes of Calvin and the Doctrine of John Knox; and wilt Thou guide us by the same, and chiefly wilt Thou pull down Rome and its Bishop, and all other prelates and their liturgies, and make us to be great among the Churches and the Sabbath to be kept?

MESSIAH.—I know nothing of your Confession of Westminster, nor of Calvin, nor of Knox. By their writings and teachings ye have made my Father a Devil, electing to eternal life those who believe your opinions, and consigning all the rest of His children to eternal torture. Ye have made my Name to be abhorred of all men by your blasphemous dogmas and your contempt of reverence and beauty in the worship of my Father, and ye have caused my Sabbath to be a day of gloom and a burden to all my people.

[*Exit* Scotland and Geneva.]

150 OTHER SECTS OF PROTESTANTS (*each trying to be heard above the rest*).—Hail, Master! Wilt Thou establish us and our doctrines and confirm our ordinances, and teach our ways to all the others which be in darkness and the shadow of death; and, above all, wilt Thou destroy the kingdom of Rome and banish all their rites and customs?

MESSIAH.—Ye are in gross darkness yourselves, and teach for truths the opinions of men, contradicting each other, how then can ye teach others? Ye are at war and variance among yourselves, how then can ye stand? And wherefore claim ye each for his own sect and seek to wrest the Supremacy of Rome your Mother, whence ye all have sprung? Ye fight with each other; and ye protest against each other, and ye only agree in fighting and protesting against Rome.

ALL THE CHURCHES TOGETHER.—We have heard Him. He is not with us. He is against us. He cometh to overthrow us—away with Him! As for His works, they are of the devil. He is the Anti-Christ—away with him! Let us pray. (Here they contend violently what they shall pray for, and with what forms, and some doubt to whom they should pray, and not agreeing they all go their way, leaving the Messiah alone.)

Enter PHILOSOPHERS, etc.—Oh, what is Truth, and whither shall we go that we may find it? Oh, that we might find God, that we might know Him!

MESSIAH.—\*I am the Spirit of Truth. Come unto me all ye that are weary and heavy laden with doubt and the vain theories of men who profess to know me, but know me not. Verily, these are the days when the Spirit is poured out on all flesh, and your sons and daughters prophesy and see visions, and your old men dream dreams. Marvel not, nor be deceived, but try the Spirits if they be of God, and see and taste the goodness of God, and find rest for your souls.

PHILOSOPHERS.—Oh, that we might know the Eternal One, the Good, the Beautiful, the True!

MESSIAH.—I come to bear witness unto all Truth, that by the things which are visible and created ye may come to know the invisible things of God the uncreated and eternal. All truth is in God alone, and God is Truth. Abstain from flesh-eating, from drunkenness, from bloodshed, and from all cruelty to any living creature. Early rise ye when the sun ariseth; wash your bodies and be clean, and worship the Eternal Father; work with your hands that which is good, think good thoughts, speak good words, do good deeds. When the Moon appeareth worship the Eternal Mother, and early take your rest. This do and ye shall be taught of God, and ye shall be able to touch and see and know for yourselves the Good, the Beautiful, and the True: the Powerful, the Wise, and the Loving One. There is but One God, perfect, infinite, and eternal, Who is in all things, in Whom are all things, and Who is over all things, God blessed for ever. In the eternal are Spirit and Substance, whereof all things are created, and these two are One in the Eternal, even as the Spirit and the Soul are One. And as in the one man ye see three personalities of the Father, the Son, and the spouse, so in God manifest in the Perfect Man are these Three, and these Three are One. Likewise as in the One Woman ye see three personalities of the Mother, the Maid, and the Bride, so also in God manifest in the Perfect Woman are these Three, and these Three are One; and as Man and Woman perfected are One in the Unity of Love, so also is God manifest in the Perfect Man and Woman, the Two in One, and the Name of the Perfect Manifestation of God unto you is Jesu-Marie, the Two in One, and of these are the generations of the saved, who do show forth each one in himself the Father, the Son, and the Spouse of God, and each one in herself the Mother, the Daughter, and the Bride of God—ever conceiving God, ever being born of God, ever being united to God, and this is the mystery of the Trinity within you.

\* We would stop to enquire of the author whether by "Messiah" he means Jesus Christ alone or—the SPIRIT OF UNIVERSAL TRUTH having had its representative in every nation and creed?—*Ed.*

As the Sun cometh from the East and shineth even unto the West, arising out of darkness and setting in darkness again, so also is man. When he cometh from the darkness it is that he hath shone elsewhere before, when he goeth into darkness it is that he may shine again where ye see not. So man hath lived before, even as he liveth now, and he goeth to his rest for a time and cometh into life again. So through many lives and experiences he is made perfect, and when he is perfect he is made a pillar in the temple of God, and he goeth in and out no more. He dieth no more, seeing that death hath no more dominion over them who are perfect. Again and again is man born into this and other worlds, till his soul is purified from all evil and made perfect in all good. Marvel not then that I said, ye must be born again of water and of fire, (and what these signify ye know). They who have done evil go into corrective chastisement for an age, and they who have done good go into happiness for an age, and when perfect they go into life eternal. God is just, and to every one is given that which they have deserved. As they sow they shall also reap, and each goeth into his own place which he hath prepared for himself and for which he is fit, till his time is come and another place is given to him for further amendment. And they only who persist in wickedness to the end shall die—they shall go out as a candle and be extinguished as a flame.

PHILOSOPHERS.—Of a truth this is the Messenger, the Messiah of God. Master, Thou hast spoken the words of truth, therefore we know Thou art from God, the very Christ, the Anointed. All Nature beareth witness to the Truth of Thy doctrine. Other men have taught with authority their own opinions, but Thou hearest witness to the truth, and from the things which are visible leadest us to know the things that are invisible—even the Power, Wisdom, and love of the Eternal Godhead. Hail! Master, we receive Thee and we worship God and venerate the Image of God, the Two in One, Jesu-Mario in Whom is the atonement of Man with Woman, of Reason with Faith, of Humanity with God. We will go forth and declare Thy truth.\*

[Exit Philosophers.

A VOICE.—“ This is marvellous in our eyes ; the Stone which the Builders rejected hath become the Headstone of the Corner.”

(Re-enter the Pope of Rome in garments of black serge and with ashes on his head, and with him some of his priests and peoples, with the Philosophers, and numbers of other religions, kneeling before the Messiah. He says) :—

Hail! Master, alas! alas! we know Thee not, but we have heard Thy Voice, we have seen Thy light, and we return to Thee; for our eyes have been so darkened through the dimness of ages that we saw Thee not; our ears so deaf that we heard Thee not; our spirits waxed so gross that we perceived Thee not. In the beginning we were with Thee but speedily we fell from the spirit which giveth life to the fleshly letter which killeth; and we grovelled on the earth, and mixing with the world and its fashions we forgot the truth and contended for dominion and power over the kings of the earth by force of carnal weapons. We sat on the ancient foundations, but we revealed not the ancient truths; we have the keys of heaven, but we opened not the gates ourselves, nor suffered others who desired to enter. To us was given Light, but we concealed it in a dark place, and those that cried for more light we persecuted and counted as heretics, and caused many to be put to death in our blindness. And even now, O Master! we had well nigh again rejected Thee, but by the Mercy of the Eternal we heard the holy and true doctrines which once Thou gavest under parables—even the doctrines of ancient times given anew—the new wine of Thy kingdom; and at length our eyes being opened and our ears being unstopped, we have returned to Thee. We are no longer worthy to be called Thy Vicegerent or Vicar, or to rule Thy people. Make us as one of the least of Thy servants that we may carry to all the ends of the earth the light which Thou hast given.†

\* Are we to understand that these “ Philosophers” are Western born Christians or Philosophers in general? This is the important question to clear after the perusal of this able pamphlet. The whole rests upon who personally is “ Messiah.”—Ed.

† Great must be the imagination, and greater still the sanguine temperament of our friend, if he can ever hope as much from the Romish Popish Church! This looks to us like a bitter satire, or does he really believe it?—Ed.

MESSIAH.—Arise! Thou hast loved much, and to thee shall much be forgiven. Be humble, be faithful, be merciful, be just, walk in the light. Thou desirest to be the servant of servants and this place I give thee, and in this thou art king of the kings of the earth. Occupy till I return.

POPE.—Master, send help, there be few with me, and I perish, for the rest have forsaken me.

MESSIAH.—My strength is sufficient for thee; and lo! I give thee twelve men to be Apostles and councillors and rulers with thee and to help thee in all thy work for the twelve tribes of the earth. Other twelve I give thee to be Prophets and Seers to give thee light in all dark places, that thy steps slip not. Other twelve I give thee to be Evangelists and teachers, that they may send forth in faithfulness the words of truth to all nations and peoples. And yet another twelve I give thee to be Pastors, that they may feed my people with fruits of the Tree of Life in their season, and heal their sickness with its leaves. These I ordain and consecrate to be thy fellow-workers and Priests with thee of the Universal Church, and under thee the Apostle, Prophet, Evangelist and Pastor—the Supreme Pontiff of my Church in this age of Light. Be thou with them a light unto all the earth, growing brighter and brighter unto the perfect day; and let these be for light and perfection, even as the twelve four-sided jewels in the breast plate of my High Priest of old. And lo! I give thee other eight and forty to be workers under these, twelve in each ministry, to lead up my people and to judge less weighty causes and to take charge of the temporal affairs, that the poor and the weak may be helped and the oppressed may be restrained; and to this end I ordain them and set them as Deacons of the Universal Church, each under his Priest to attend him in his ministry and service of Humanity.

POPE.—Now, Lord, I go forth in Thy strength. Come all ye who have sought the truth and desired for more light. Let us leave Rome to the Ruler of Italy and go unto the place the Lord hath shewed us, apart from the nations and kingdoms of the earth; and thence let us receive all light for all, thence let us send all light to all, and so this Temple of the Lord and His Bride shall be joy and gladness unto all the ends of the earth.

Glory to Father, Son, and Spouse,  
 Glory to Mother, Maid and Bride,  
 Who, Two in One, and Each in Three,  
 From age to age One God abide.

Ed. Note.—No need to explain to our Occultists, either the meaning, or the more than suggestive hint contained in the symbol which concludes the satire. But some theosophists will be sorely puzzled by the concluding quatrain.

WART-CHARMING.

By HENRY G. ATKINSON.

THE subject is deeply interesting, because it opens the whole question of animal or vital influence as an action, from without as a contagion for instance, or as an action set up in the patient's own mind, and going on waking or sleeping, consciously or unconsciously. When Lord Bacon was a young man at the Embassy at Paris and had warts, a certain lady professed to be able to cure them, to effect which she rubbed them with some bit of animal matter, which she then nailed outside Bacon's bed-room window, saying “ now when that rots your warts will be gone.” And so it happened. And Bacon adds, “ I did not wonder at some of the smaller ones that came quickly and might pass away as quickly, but I had some big hard fellows that had been growing there for long, and I did marvel that those as well should have gone with the others.” Now this is similar to the proceedings in Russia by fixing the idea which goes on working insensibly just as the growth of the wart took place. My own warts,

when a child, were cured by a man coming to our house on business. He took me on his knees and brought out his knife as if to cut them and I, frightened, scrambled away from him. "That will do," he said to my mother, "the warts will go," and sure enough they very shortly disappeared. Now at Lourdes, in France, they use mesmerism as well as by the appeal to the Virgin to keep up an impression on the mind; but you will see the priest aside praying with his hands held over a bowl of water to mesmerise it, which is administered to the patients; but through the impression on the mind (faith), the patients are often cured on the way before they reach Lourdes. But to pass to another class of cases. I have a letter at my house in London from the late Bishop of Norwich—Stanley—relating what occurred to his own actual knowledge to a poor woman who lived close by and who was with child. One day a loud thump at her door, she opened it, and a rough looking sailor thrust forward the stump of his arm. The poor woman was so shocked and frightened that she fainted away; when the child was born it had a stump precisely resembling that of the sailor who had so frightened her. Another case that highly gifted lady, Mrs. Basil Montague, related to me in respect to the influence on the mind we call sympathy. Mrs. Montague brought a rude stranger to her home to dine, and she felt unpleasantly shocked at a nasty sore on his face. Three days afterwards, a similar sore appeared on the same part of her own face. But I must not go on or I could fill a volume with such like matters. But I may add that many like the late Mr. Sergeant Cox attribute *all* the effects in mesmeric cases to the action set up in the patient's own mind; but at one time I was a perfect mesmerometer. The patients felt in themselves in the same spot any pain in me or pinch caused out of their sight, and not only so but I felt their pains before knowing what or where they were. On passing my hand over the person I could detect where the pain was and the pain would enter my hand and leave them, or I could take it from one part and plant it in another just as with heat that you abstract, and feel as you pass your hand over a heated body and with the heat abstracted cast the heat into another body; but what is all this to the wonder of our continually leavening the fresh insensible matter absorbed with life and in all our specialities, physical and mental, a vital action occurring throughout all living nature, vegetable as well as animal—a matter occult and subtle enough in a grand generalization of all animate nature—a law of investment carrying our memories and sense of individual sameness and identity with it and the microscopic gem-cell absorbing, subduing and investing the fresh substance imbibed as it develops with all its special life, and throughout all the infinite varieties of living forms with blind instincts to end, corresponding to the formative laws that caused the correlative forms that produced the instinct, whilst the poor human mind goes labouring on resting on accumulated experience and observation. What is certainly more mechanical and not occult at all, but all rather based on reason than intuition. The difference between instinct and reason is very simple and clear. The one bound by experience what the other over-leaps.

### IS MAN THE HIGHEST ANIMAL?

By C. S. MINOT.

(Read before the American Association for the Advancement of Science, Cincinnati, Meeting, August 1881; and published in the *American Naturalist*, Vol. XVI, pp. 511 & 512.)

THE measure of zoological rank is the specialization, exhibited by all the organs, taken collectively. Speci-

alization may be exaggerated in one or several organs, without the animal therefore attaining as a whole a high rank. This is the case in man. The measure of specialization is afforded by embryology, which shows in earlier stages the simplicity and uniformity of structure, which in later stages is replaced by complexity. The human body preserves several important embryonic features. In man we find three series of high differentiations, namely, in the brain, in the changes induced by or accompanying the upright position, and third in the opposability of the thumbs to the other digits. These are the principal, though of course not strictly the only characteristics of man, which show that he is more specialized than any other animal. In other respects he shows a still more striking inferiority. It is of course a familiar observation that his senses are less acute than those of many animals,—he has neither the keen vision of the falcon, nor the delicate scent of the dog. He is equally inferior in many structural features. His teeth are of a low mammalian type, as is shown both by his dental formula, and by the presence of cusps upon the crowns of the teeth, a peculiarity of the lower mammalia, entirely lost in the horse, the elephant, and many other "brutes." His limbs show a similar inferiority, since they are little modified, preserving even the full number of five digits, and in respect of these members man stands therefore very low, lower than the cow and the pig. He plants the whole sole of his foot upon the ground, yet none except the lower mammalia, together with man and his immediate congeners, are plantigrade. So too with his stomach, which is so simple as compared with that of a ruminant, and indeed is of about the same grade as that of the carnivora. It makes, however, a still more forcible impression to learn that the human face, which we admire when withdrawn under a high intellectual forehead, is perhaps the most remarkable of all the indices that point out man's inferiority. In the mammalian embryo the face is formed under the fore brain or cerebral hemispheres. In our faces the fatal disposition is permanently retained, with changes which when greatest are still inconsiderable. In quadrupeds the facial region acquires a prominent development leading to the specialization of the jaws and surrounding parts, which brings the face to a condition much higher than that of the fœtus. Hence, the projecting snout is a higher structure than the retreating human face. These facts have long been familiar to naturalists, but I am not aware that the inferiority of the human to the brute countenance has heretofore been considered a scientific conclusion by any one. Yet that inferiority is incontrovertible and almost self-evident.

The preceding statements render it clear to the reason that man is not in all respects the highest animal—and that it is a prejudice of ignorance that assumes that the specialization of the brain marks man as above all animals in the zoological system. It does give him a supremacy by his greater power of self-maintenance in the struggle of the world, but that has nothing whatsoever to do with his morphological rank. There is nothing in morphology that any-wise justifies assigning as is actually done, an almost infinitely greater systematic value to the specialization of the brain, and a specialization of the limbs, stomach, teeth, face, etc., hence it is impossible to call man even the highest mammal. It is also doubtful whether mammals would be regarded as the highest class of the animal kingdom, were they not our nearest relatives. Let us beware of claiming to be the head of organic creation, since the Carnivora and Ungulata are in many respects higher than we. I believe that it is just as unscientific to call any one animal species the highest, as to pitch upon any plant to stand at the head of the vegetable kingdom.

## Mystic Yoga.

## THE NILGIRI SANNYASIS.

[The following is a "verbatim" translation of what a Settlement officer told me relating a Sannyasi he met on the Nilgiris.—E. H. MORGAN, F. T. S.]

I was told that Sannyasis were sometimes met with on a mountain called Velly Mallai Hills in the Coimbatore District, and trying to meet with one, I determined to ascend this mountain. I travelled up its steep side and arrived at an opening, narrow and low, into which I crept on all fours. Going up some 20 yards I reached a cave, into the opening of which I thrust my head and shoulders. I could see into it clearly; but felt a cold wind on my face, as if there was some opening or crevice—so I looked carefully, but could see nothing. The room was about 12 feet square. I did not go into it. I saw arranged round its sides stones I cubit long, all placed upright. I was much disappointed at there being no Sannyasi, and came back as I went, pushing myself backward as there was no room to turn. I was then told Sannyasis had been met with in the dense sholas, and as my work lay often in such places, I determined to prosecute my search, and did so diligently, without however any success.

One day I contemplated a journey to Coimbatore on my own affairs, and was walking up the road trying to make a bargain with a bandy man whom I desired to engage to carry me there; but as we could not come to terms, I parted with him and turned into the Lovedale road at 6 P. M. I had not gone far when I met a man dressed like a Sannyasi, who stopped and spoke to me. He observed a ring on my finger and asked me to give it to him. I said he was welcome to it, but enquired what he would give me in return. He said "I don't care particularly about it; I would rather have that flour and sugar in the bundle on your back." "I will give you that with pleasure" I said, and took down my bundle and gave it to him. "Half is enough for me," he said, but, subsequently changing his mind added "now let me see what is in your bundle," pointing to my other parcel. "I can't give you that." He said "why cannot you give me your swami." I said "it is my swami; I will not part with it, rather take my life." On this he pressed me no more, but said. "Now you had better go home." I said: "I will not leave you." "Oh you must," he said, "you will die here of hunger." "Never mind," I said, "I can but die once." You have no clothes to protect you from the wind and rain; you may meet with tigers, he said "I don't care" I replied. "It is given to man once to die." What does it signify how he dies? When I said this he took my hand and embraced me, and immediately I became unconscious. When I returned to consciousness, I found myself with the Sannyasi in a place new to me on a hill, near a large rock and with a big sholah near. I saw in the sholah right in front of us, that there was a pillar of—fire like a tree almost. I asked the Sannyasi what was that like a high fire. Oh, he said, most likely a tree ignited by some careless wood-cutters. No, I said—it is not like any common fire—there is no smoke, nor are there flames, —and it's not lurid and red. I want to go and see it. No, you must not do so, you cannot go near that fire and escape alive. Come with me then, I begged. No—I cannot he said—if you wish to approach it, you must go alone and at your own risk; that tree is the tree of knowledge and from it flows the milk of life: whoever drinks this never hungers again. Thereupon I regarded the tree with awe.

I next observed 5 Sannyasies approaching. They came up and joined the one with me, entered into talk, and finally pulled out a hookah and began to smoke. They asked me if I could smoke. I said no. One of them said to me, let us see the swami in your bundle (here gives a description of the same). I said I cannot, I am not clean enough to do so—"Why not perform your ablutions in yonder stream" they said. "If you sprinkle water on your forehead that will suffice". I went to wash my hands and feet and laved my head and showed it to them. Next they disappeared. As it is very late, it is time you returned home, said my first friend. No, I said, now I have found you and I will not leave you. No, No, he said, you must go home. You cannot leave the world yet. You are a father and a husband and you must not neglect your worldly duties. Follow the footsteps of your late respected uncle; he did not neglect his worldly affairs though he cared for the interests of his soul; you must go; but I will meet you again when you get your fortnightly holi-

day. On this, he again embraced me, and I again became unconscious. When I returned to myself, I found myself at the bottom of Col. Jones' Coffee Plantation above Coonoor on a path. Here the Sannyasi wished me farewell, and pointing to the high road below, he said "now you will know your way home"; but I would not part from him. I said all this will appear a dream to me unless you will fix a day and promise to meet me here again. "I promise," he said. "No, promise me by an oath on the head of my idol." Again he promised and touched the head of my idol; be here, he said, this day fortnight. When the day came I anxiously kept my engagement and went and sat on the stone on the path. I waited a long time in vain. At last I said to myself, "I am deceived, he is not coming, he has broken his oath"—and with grief I made a poojah. Hardly had these thoughts passed my mind; then lo! He stood beside me. "Ah, you doubt me, he said—why this grief." I fell at his feet and confessed I had doubted him and begged his forgiveness. He forgave and comforted me and told me to keep in my good ways and he would always help me; and he told me and advised me about all my private affairs without my telling him one word, and he also gave me some medicines for a sick friend which I had promised to ask for but had forgotten. This medicine was given to my friend and he is perfectly well now.

E. H. M.

## A SOUTH INDIAN YOGINI.\*

I know a young Hindu lady at my native town of—, who had long studied Raja Yog under a *Siddha* in the Northern parts of India. I had been too often duped by pretended Yogis to accept any such claims on mere hearsay, and without sufficient evidence. Having read numerous rare works on *Yoga Vidya*, I knew how to test real Yogis. One day, I accordingly went to her house. She appeared to be about 17 years old. As soon as she saw me, she told me what I came for, and graciously permitted me to examine her, as best I could. I asked her some questions; her replies alone were enough to convince me. I then requested her to smoke *ganja* and let out the smoke through the several outlets of her body, one after another. She not only did so, but made the smoke pass through the pores of her skin; so that she seemed, for a time, enveloped, as it were, in a dense cloud. Some days after, she took me to the river which was then overflowing. She walked barefooted up and down upon the river's surface for about an hour, and then plunged into a dangerous eddy. When I saw a *girl* accomplish what is described as a grand "miracle" in the Bible, "surely," thought I, "it needs no Christ to perform such feats; in every age a hundred such 'Christs' or Yogis, of either sex, must have lived in *Bharat-Khand*." In vain did the bystanders and Police constables try to save her. An hour after, she emerged and swam for about four hours with the whole of her body under the water, her tresses alone being seen floating at the surface, now up the river against the strong current, now down with it, and now right across. At last, she rose—or seemed to rise—high in the air, and, to the astonishment of all, suddenly vanished. I immediately went to her house, but could not find her there. She had disappeared. I passed five years in a state of almost desperation before she reappeared in this part of the country. She was now sternly resolved to show no phenomena whatever. I repeated my visits to her. One day, she instructed me to remain in my private room, with a dagger ready for use. At the appointed hour, she entered the apartment and closed the door. She sat down in *padmasan* (one of the *Yoga* postures) and commanded me to stab her as soon as she became breathless. Though I hesitated for a time, yet the proofs I had seen of her powers nerved me to the deed. I lifted the dagger and struck her with so great a force that it penetrated her chest until one inch of the point was seen outside her back. I was frightened and began to take to my heels. She suddenly rose up and calmly pulled it out. Far from being soiled with gore, the weapon was perfectly clean. On examining her, I found scars on the front and back as of wounds recently healed, just where a minute before was the dagger. To many European and American intellects, all this may sound like a fiction.† But Hindus

\* For sufficient reasons we suppress names of person and place, though all are in our possession. The facts, of course, we cannot vouch for, in this instance.—Ed.

† Certainly it does, though the writer affirms his story to be true.—Ed.

whose blood still retains some of the inherent tendencies for following in the footsteps of their illustrious ancestors, will in it recognise, but a counterpart of what they have heard or read, or seen before. My worthy heroine can also convert lower metals into gold. I once gave her a copper plate with Hebrew characters engraved on it. No one else in this town knows this alphabet. She transformed it into a golden one.

A. B.

THE Notice about the publication of the *Secret Doctrine* having been issued very lately, there was very little time for a wide circulation. A sufficient number of subscribers has therefore not yet been registered in this Office to warrant its publication from the 15th of March, as at first contemplated. At least one thousand subscribers must be secured before the work can be begun. It is hoped, however, that within three months the requisite number will be got. The first number will then appear on June 15th.

MADAME H. P. BLAVATSKY, Corresponding Secretary of the Theosophical Society, left for Marseilles by the "S. S. Chandernagore," sailing from Bombay on the 20th of February. The continuous hard work she has been doing for the Theosophical Society for the last nine years and five years' stay in the hot plains of India, have told considerably upon her health, and the General Council of the Theosophical Society found it an imperative duty to advise her to go to Europe for a change of climate and a short rest, if her industrious nature would permit her to avail herself of it. She will, it is hoped, speedily recover and return to India within five or six months to resume her work with redoubled vigour. She will of course send her interesting articles for the Journal from Europe, in the meantime. All correspondence for the Journal should be addressed to the *Theosophist* Office without any individual's name. Private correspondence for Mme. Blavatsky should be sent to the care of M. P. G. Leymarie, F. T. S., 5 Rue Neuve des Petits Champs, Paris, France. Mr. T. Subba Row Pantulu Garu, B., A. B. L., F. T. S., will conduct the Journal during Madame Blavatsky's absence in Europe.

COL. H. S. OLCOTT, President-Founder of the Theosophical Society, left for Europe by the same steamer, accompanied by Babu Mohini Mohan Chatterjee, M. A. B. L., F. T. S. He has appointed a Special Executive Committee of the following seven gentlemen to transact all official business, while he is absent from India:—(1) Dr. F. Hartmann, (2) Mr. St. George Lane-Fox, of the Loudon Lodge T. S., now in India, (3) Mr. W. T. Brown, (4) Diwan Bahadur R. Raghunath Row, (5) M. R. Ry. G. Muttasawmy Chetty Garu, (6) M. R. Ry. P. Sreenivas Row Pantulu Garu, and (7) M. R. Ry. T. Subba Row Pantulu Garu. For further particulars, see the *Supplement*.

As already announced, the *Supplement* to the *Theosophist* has been appearing as a *Journal of the Theosophical Society*, since January last. It contains translations of the unpublished writings of Eliphas Levi, besides other matters of interest to a student of occultism, which, it is considered desirable, to print in a Journal intended more for our Fellows than for outsiders. Annual subscription to Theosophists in India is Rupees two and, abroad, six shillings. For non-Theosophists, the charge in India is five rupees and, foreign, twelve shillings. Single copies can be had at eight annas, each.

### SPECIAL NOTICE TO CORRESPONDENTS.

(I.) No anonymous documents will be accepted for insertion, even though they may be signed "A Theosophist."

(II.) Any contributor not desiring his name to be made public, should give the necessary intimation to the Editor when forwarding his contribution.

(III.) Contributors are requested to forward their articles in the early part of the month, so as to allow the Editor plenty of time for correction and disposal in the pages of the THEOSOPHIST.

(IV.) All correspondence to be written on one side of the paper only, leaving clear spaces between lines and a wide margin. Proper names and foreign words should be written with the greatest care.

The Manager calls particular Notice to the fact that all Money-orders must now be sent payable at ADYAR (not Madras), P. O. India.

Great inconvenience is caused by making them payable to Col. Olcott or Mme. Blavatsky, neither of whom has to do with financial matters, and both of whom are often for months absent from Head-quarters.

### SPECIAL NOTICES.

It is now evident that the THEOSOPHIST offers to advertisers unusual advantages in circulation. We have already subscribers in every part of India, in Ceylon, Burmah, China and on the Persian Gulf. Our paper also goes to Great Britain and Ireland, France, Spain, Holland, Germany, Norway, Hungary, Greece, Russia, Australasia, South Africa, the West Indies, and North and South America. The following very moderate rates have been adopted:—

#### ADVERTISING RATES.

First insertion.....16 lines and under.....1 Rupee:

For each additional line.....1 Anna.

Space is charged for at the rate of 12 lines to the inch. Special arrangements can be made for large advertisements, and for longer and fixed periods. For further information and contracts for advertising, apply to

MANAGER, THEOSOPHIST, ADYAR, MADRAS.

MESSRS. GRAVES, COOKSON AND CO., MADRAS.

PROPRIETOR, INDUSTRIAL PRESS, 3, HUMMUM STREET, FORT, BOMBAY.

MESSRS. COOPER & CO., MEADOW STREET, FORT, BOMBAY;

TO SUBSCRIBERS.

The Subscription price at which the THEOSOPHIST is published barely covers cost—the design in establishing the journal having been rather to reach a very wide circle of readers, than to make a profit. We cannot afford, therefore, to send specimen copies free, nor to supply libraries, societies, or individuals gratuitously. For the same reason we are obliged to adopt the plan, now universal in America, of requiring subscribers to pay in advance, and of stopping the paper at the end of the term paid for. Many years of practical experience have convinced Western publishers that this system of cash payment is the best and most satisfactory to both parties; and all respectable journals are now conducted on this plan.

The THEOSOPHIST will appear each month. The rates, for twelve numbers of not less than 48 columns Royal 4to. each of reading matter, or 576 columns in all, are as follows:—To Subscribers in any part of India, Ceylon, Straits Settlements, China, Japan, and Australia, Rs. 8; in Africa, Europe, and the United States, £ 1. Half-year (India, &c.,) Rs. 5; Single copies Rupee 1. Remittances in postal stamps must be at the rate of annas 17 to the Rupee to cover discount. The above rates include postage. No name will be entered in the books or paper sent until the money is remitted; and invariably the paper will be discontinued at the expiration of the term subscribed for. Remittances should be made in Money-orders, Hundi, Bill, Cheques, (or Treasury bills if in registered letters), and made payable only to the PROPRIETORS OF THE THEOSOPHIST, ADYAR, P. O., (MADRAS,) India. Subscribers wishing to have receipts, in acknowledgment of their remittances, should send reply post-cards for the purpose.

Subscribers for the Second Volume (October 1880 to September 1881) pay Rs. 6 only in India; Rs. 7 in Ceylon; Rs. 8 in the Straits Settlements, China, Japan, and Australia; and £ 1 in Africa, Europe and the United States. Vol. I is now entirely out of print.

AGENTS: London, Eng., Messrs. Trübner and Company, 57 and 59, Ludgate Hill; Bernard Quaritch, 15 Piccadilly, W.; Paris, France, P. G. Leymarie, 5, Rue Neuve des Petits Champs; New York, Fowler and Wells, 753, Broadway; Boston, Mass, Colby and Rich, 9, Montgomery Place; Chicago, Ill., J. C. Bandy, La Salle St. American subscribers may also order their papers through W. Q. Judge, Esq., Box 8, P. O. Brooklyn, New York; Melbourne, Australia, W. H. Terry, Pub. *Harbinger of Light*; St. Thomas, West Indies, C. E. Taylor; Calcutta, India: Thacker Spink and Company, Booksellers; Babu Norendro Nath, Son, *Indian Mirror* Office, 24, Mott's Lane, Dhurrumtollah Street; Madras, Messrs. Nilasam Brothers, Popham's Broadway; L. Venkata Varadarajulu Naidu Garu, Royapetta High Road; Colombo, Ceylon: John Robert de Silva, Surveyor General's Office; Kandy, Don Timothy Karunaratne; Shanghai, China: Kelly and Walsh.

Printed at the *Scottish Press*, by GRAVES, COOKSON AND CO.; and published by the THEOSOPHICAL SOCIETY AT ADYAR, (MADRAS), INDIA.

VOL. I. No. 3.

MADRAS, MARCH, 1884.

No. 3.

## THE WORK OF THE BRANCHES.

My esteemed friend and brother, Pandit Parmeshri Dass, President of the Branch Theosophical Society at Bara-Banki, writes to say that he finds the memo. on the above subject in the last month's *Theosophist*, has been entirely misunderstood. The following passage therein has been the cause of misapprehension :—

Since the commencement, the Theosophical Society has tried to impress the fact that the Laws of Nature are immutable; and no living being, however high or powerful, can ever alter them to suit the convenience of students..... It will thus be seen that the Theosophical Society promises no Teachers, no Gurus, to take every member, upon joining, under their special charge..... No doubt there are individual members who have been fortunate enough to be accepted as Chelas, but their acceptance was due not to the fact of their being Fellows, but because they have been living the life and have voluntarily passed through the training and tests, enjoined upon aspirants for occult knowledge of every age and nationality.

Upon this it is argued :—

One's own Karma is the essence irrespectively of his connection or non-connection with the Theosophical Society—in other words, all depends upon one's living the life enjoined upon aspirants for occult knowledge. The act of joining the Society is immaterial inasmuch as the life being an essential thing, fellowship in the Society carries no weight with it. The Society thus confers no benefit as a prerequisite on its members, in addition to the result of their own Karma. This being so, a Theosophist and an outsider stand upon the same footing; hence no one should join the Society.

This strange logic passes my comprehension. "All appears yellow to the jaundiced eye," says the poet. One blinded by selfishness cannot therefore pierce through the thick veil before his eyes, and all his conceptions must therefore be narrow. My friend's reply to the above superb reasoning is :—

It is true that living the life is essential—but the life lived by a Fellow of the Theosophical Society has an advantage over that lived by an outsider. A fellow, by the act of joining, places himself in a position wherein the essential qualification can immediately and directly attract the notice of the MAHATMAS. A Theosophist has to exert less in point of attractive force than an outsider, for the latter is not so near the MAHATMAS as the former. Both of them do not therefore stand upon the same footing. All that the passage in the Memo. on the *Work of the Branches* meant to convey was that the Theosophical Society was not an improved sort of Miracle Club or School of Magic wherein for ten rupees (or any sum whatever) a man could become a Mahatma between the morning bath and the evening meal; but that in addition to merely joining the Society, a man should live the requisite life and wait patiently for the results which will come in due time.

The Pandit's reply is correct so far as it goes, but it is incomplete. It does not give the reasons why a Theosophist is nearer to the MASTERS than an outsider. It also omits certain other important considerations. With a view to avoid any further misunderstanding, I shall go a little fuller into the subject, being at the same time as brief and concise as possible. If the critics had read carefully the whole of the memo. and digested it thoroughly, they would probably have not been led into such curious conclusions as they now put forth. It is admitted that the Theosophical Society has been engaged in doing good, with unparalleled success, to Humanity; that, had it not been for its exertions, people would have gone in their own ways as heretofore, would have paid no attention to the writings of the ancient sages and would have remained in entire ignorance of the glorious truths contained therein, not because they could not have been found if properly searched into, but because the earnest spirit of enquiry which has now been raised could never have asserted itself. It is therefore a duty we owe to the Theosophical Society to encourage and support it by all possible means, if we have the least sense of gratitude within us. Moreover, it is within almost every one's mouth that more and more important facts of the Esoteric Philosophy are being gradually given out through the instrumentality of the Theosophical Society. Have the critics reflected to what causes this fact is due? It is because the leaders and promoters of the Association

find that their labour is not being thrown entirely upon barren ground, but that their work is being more and more appreciated, as is proved by important additions to its ranks; they thus feel encouraged to continue their arduous task more and more cheerfully. But let it be once proven that the work has created no interest, and that those for whom exertions are being made prefer to stubbornly remain blind to all higher considerations, and the theosophical leaders will be compelled to drop the work in spite of themselves. Is not the fact that the moral if not the active support given by people to the Society by joining it acts as a stimulant for renewed work—is not this fact a sufficient inducement for right thinking men not to keep aloof from the movement? Again, the Theosophical Society being a Universal Brotherhood embraces all Humanity: as such it may very well be recognized as one complete organism. All its doings are *its Karma*. And just as the different organs derive nourishment from the joint work of the whole body; so also each member of this huge organism has a part of its nourishment from the accumulated store of the *Karma* of the Theosophical Society as a whole. And who will dispute the fact that that Association has been acquiring an immense amount of good *Karma* by its beneficent work of increasing human happiness by promoting knowledge and by uniting together different people into one bond of an Intellectual Brotherhood? Still further: it is a well-recognized principle that *Union is Strength*; and therefore if any Association could afford large opportunities for doing good, it is the Theosophical Society. Selfishness having scaled the eyes of the critics to the fact that they form but a part of the INTEGRAL WHOLE, they fail to perceive that the good of their Fellowmen is their own good. The cloud of self-benefit darkens their mental horizon, through which their sight cannot pierce to have a glance at the future results of their attitude. They see no superior advantage within the narrow range of their vision, and therefore they conclude no such advantage exists. They cannot understand that of all the Associations now existing in the world, the Theosophical Society is the only one that can be employed to the best advantage for promoting human happiness by bringing people to realize the common foundation of all Religions. And that the *Illuminated* have therefore adopted it as the channel of communication between themselves and the outer world. As such, it forms the centre of light, and he who steps into its sphere from the outer darkness, comes within the radius of vision of the BLESSED ONES. To advance further depends upon his *active* goodness and work. By joining he has got his reward of giving an expression to his sympathy and thus affording moral support—and that reward is that he puts himself in a prominent position whence he can be more easily perceived than those who prefer to remain in the outer darkness.

DAMODAR K. MAVALANKAR,

Joint Recording Secretary, Theosophical Society.

ADYAR (MADRAS), }

## UNPUBLISHED WRITINGS OF ELIPHAS LEVI.

*Ind Lecture.*

THE GREAT ARCANUM AND THE GREAT WORK.

(Translated from the French.)

THE Kingdom of Heaven, or if you prefer to call it so, the Divine Royalty, can only be obtained by force. This was said by one of the greatest Hierophants. Only audacity full of energy can obtain it. God in the Bible blesses Jacob; because Jacob dared to wrestle with him. Only those that are equals can battle with each other, and the Israelites are the children of the man who measured his strength with God.

Occultism is the science of the dogma and the ritual; it is the intelligence of the Great Work. All symbols refer to a single secret; which in magic is called the *Great Arcanum*,

and all the rites and ceremonies refer to a single operation, which the hermetic initiates have called the "GREAT WORK."

People in our days continue to ignore with great obstinacy that the universal symbolism, like true science and like true religion, is a oneness, and that symbolism too has a double face; black and obscure on one side, white and shining on the other. Symbolism is the veil of the sanctuary; black on one side like the sable curtains hung in the chamber of the dead, and luminous on the other, as if gilded over by the rays of the sun. On the dark side you behold avenging swords and bitter tears and an inscription which says: "If you lift this veil to enter into the sanctum, which is only reserved for priests, you will surely die." Those that read the inscription and feel fear fall prostrate and die in darkness; but those who dare to lift the veil enter into glory and come to light.

The Great Hierophant of the Hebrews, Moses, represented this truth by that cloud which was dark and thundering on the side turned towards the Egyptians, and luminous and radiant on that turned towards the Jews, whose audacity had triumphed over the abyss of the sea. We understand the spirit of symbolism after we have ceased to believe in its dead letter, and after we have ceased to regard Christ as an Idol, we begin to feel in what respect he is God.

Fear says: "Believe, or die!" Audacity answers: "I will know, even though I had to die for knowing." "Tremble if you dare," says Fear; and Science answers boldly: "Just because I do not tremble I shall dare." "If you battle against God, you will surely die," says Fear; but Will replies, "I shall fight the shadow to obtain light, and I can only live after having conquered the terrors of death." "You will encounter the vultures of Prometheus," says Fear; but Energy and Patience say: "We will defend ourselves with the arrows of Hercules." Fear exclaims with a cry of terror: "Imprudent mortal! enter not into the Kingdom of Hades; your voice would raise all the powers of hell against you." Wisdom answers: "I shall know how to keep silent."

All the epic poems of antiquity, the Golden Fleece, the siege of Thebes, the peregrinations of Ulysses, and the poems and romances of a more modern age; Dante's journey through the three worlds; from the poet of the *Inferno*, to the "Rose of the Stars," the tale of the rose being a more common version of the same voyage; everything gravitates around the Great Arcana and the Great Work. The books on Alchemy, the orthodox books, placed around the emerald table of the great Hermes, have become unintelligible to the science of our days; because they all have a double meaning, of which the most abstract and the only reasonable one was reserved for the initiates alone, and is now so completely lost, that if some *savant* would rediscover it, he would be called a dreamer.

Ekartshausen and Jacob Boëhme are the only ones in our days who have penetrated to the heart of the Hermetic philosophy and divined the dogmas of.....and Asclepiades, which have nothing in common with the Jewish mysteries of the book of Nicolas Flamel. We must not confound the cunning of Jacob with the prudence of Trismegistus.

But the mystic writings of Jacob Boëhme and Ekartshausen are for the ordinary reader entirely unintelligible. The night birds are stricken with blindness in the presence of the sun, and so it is with the majority of mankind. In the spiritual world they carry with them their darkness even into the very heart of the sun. The wise can make use of a lamp in the middle of the night; but what lamp could the wisecracks of intelligence invent to give them light during the day? Diogenes did well in making use of a lantern during day time. This derisive illumination did not compensate him for the prejudice which the shadow of Alexander threw on his state of beatitude.

The phantoms are the lies of night and the realities are the verities of light. Dogmas appear like dreams to those who examine them at night time, but to those who contemplate them during the day, they are eternal verities.

For this reason we must, if we wish to grasp the spirit of the dogmas, tear open the envelope in which the letter is hidden. We must throw away credulity to obtain faith, and the true adoration of God begins only then, when we trample our idols into the dust. The first word of high initiation in Egypt sounded like a blasphemy against Osiris; for this god of light was called a "black god," which meant that symbolism is only a shadow and reason is light. If we make use of a sign or a rite to aid us to express a religious sentiment, we perform a reasonable act; but to subject ourselves to a

sign or rite, to make ourselves the slaves of a practice or an image is an act of folly, and is called *superstition* and *idolatry*. For this reason the candidate in certain initiations was required to trample under his feet the most revered signs. It is said that the Templars before consecrating their swords to the defence of the Cross were wont to spit three times upon a crucifix. Was this meant as an insult to the Redeemer? Certainly not. It was simply an affirmation of their disrespect for the idol. The Templars proved by this strange action that to them the cross was an idea and not a fetish.

Initiations are the schools of immortality. Immortality, the divinity in man, can only be conquered by a supreme independence. Liberty is the real life of the soul, and man in making himself free of all servitude makes himself also free from death. The great effort of probation must be to cut the umbilical cord which connects us with fatality. The Great Arcana and the Great Work are both one and the same thing.

The books of high initiation are so closely veiled in their language, that the text is entirely incomprehensible to the profane; and to them they appear more like the dreams of madmen than like sensible lucubrations. The *Sohar* and the *Apocalypsis* are full of inostrosities, and the twelve keys of Basilus Valentin would discourage the sagacity of Œdipus. The Hermetic philosophers, of whom the tradition is lost in the night of Egyptian symbolism, and the magic of Zoroaster, describe the Great Work in this manner.

We wish to dissolve a natural stone and to make of it a preternatural one, which shall possess the property of changing all the baser metals into gold and to cure all diseases. This stone—they said—is a stone and at the same time is not a stone; it contains fire which does not burn, and water which does not wet. Here they were speaking allegorically. The word stone is usually employed by the hierophants to express that which is immovable and real. St. John sees God in the shape of a jasper-stone; Jesus advises his disciples to build upon a rock; he says himself that he is the stone which the builders rejected, and which shall become the corner-stone. The divine law which was given through Moses was engraved upon a stone; Moses caused water to come out of a rock and Elias produced fire from a stone. Jesus gave the name of Peter (which means rock) to the foremost of his followers in faith, and in the ancient mysteries of the great goddess, the mother of the gods, there was no other representation but a rugged black rock.

In the sanctuary of the Hebrews, the mysteries of the Ineffable Name were engraved upon a cubic-stone. This stone is still one of the grand secrets of initiation in masonry. We find it again in the tablets of ancient rites under the two forms of the unhewn and the hewn stone, and in certain rituals the unhewn stone is called "antimonial stone."

The substance of which this stone is composed,—say the sages,—is found everywhere in the universe. Every body carries it with him, the poor as well as the rich. It is necessary first to calcinate it in fire without burning it, then to triturate it carefully and to let it dissolve in its own flame; then to extract by way of sublimation the "milk of the virgin" and "the dragon's blood," which must be made to boil together on the lamp of Hermes. The substance then turns from black to white, from white to yellow, from yellow to red. It is then solidified and we obtain that inestimable ruby, which is the talisman for wealth and immortality.

All mystics, however, affirm that it is impossible to succeed in accomplishing the work without a high ideal and without the inspiration of a religious sentiment. It requires indifference to riches, and the absence of all evil desire; which fact points neither to the search of material gold, nor to the purely scientific manipulation of some substance which has been analysed by chemists. Here we will now give the explanation of these allegories:—

The unhewn stone is man, such as nature made him, and he must be calcinated by passions; but if he allows them to burn him, he is lost. He must be triturated by work and meditation, and when he once well understands his misery, when he sees himself a moral leper like Job, and left upon the dunghill, then his spirit begins to work and to ferment. First poetry and religion appear and elevate his broken heart and smooth his couch of suffering. They are the doves of Diana of which the sages speak; they are also represented as the virgin-milk, which promises to man a new birth. But poesy and faith would remain sterile, if they did not impregnate the labor of real life. The sublimated whiteness

falls back in roseate showers upon the black matter and meets with the sulphur of the sages, which is the real life; the red oil, the philosopher's wine, and the blood of the dragon of Cadmus. Poetry unites with science, the ideal is confirmed and fortified by reality. Then is accomplished the occult marriage of faith and reason, authority and liberty, force and meekness.

Go then to work you, the alchemist of intelligence. Light the lamp of Hermes, apply a progressive heat, help to ripen the fruit of thought, let day follow night, and make use of that heat and light. Cut off the head of the raven, make room for the dove to soar, and assist at the rebirth of the Phoenix, Perseus, mounted upon his winged horse, winged by poetical aspirations, pierces the dragon with his sword and liberates the beautiful Andromeda. Let the white robed bride be led to the king, robed in purple, let Gabriels become the husband of Beice, let the cross of light be united to the cross of love.

The unhewn stone of the free-masons was called antimony; because natural man is in complete contradiction with the monastic ideal. Besides this, antimony is used to test and purify gold, and likewise are our natural imperfections useful in the moral order of the universe.

Gold, the most perfect of all metals, represents the perfection of works of wisdom. Everything becomes ameliorated and perfected in the hands of sages; because they possess that precious stone and the talisman of immortality, which they knew how to obtain and with it they change into gold the basest of metals.

Man can only reach a perfect independence through a perfect equilibrium of all his faculties and of all his Forces. This equilibrium renders his will a well balanced centre and everything seems to obey his desires, because his desires are just. The sage therefore possesses in reality the mysterious powers of the magicians; he repulses everything that could be injurious to him and attracts that which is good. He reads the thoughts of others by taking into consideration their moral condition; he inspires confidence, and by inspiring it, he often cures the diseases of the soul as well as those of the body.

When man once reaches this sovereign independence, he becomes a priest and a king in such an absolute manner, that neither priests nor kings can influence him in the least. For this reason, the secrets of Occultism have always been veiled. In former times those secrets belonged to the lords of the earth, who did not wish to be dispossessed by conspirators, and who punished with death those who made their dangerous knowledge known; but in our days the priests and kings, having lost these secrets in consequence of having used them for ignoble purposes, they have now come into the possession of the world's exiles, who are obliged to carefully conceal them, because they constitute the legitimate titles to their claims.

The world shudders and becomes agitated at the misunderstood name of liberty. Revolutions are fermenting, and no one can tell what the hidden leaven is, that makes her stir. The world is in labor, preparatory to the great work; the hierarchy of the great mystics must be reconstituted; religion, instead of a pope, wants a grand hierophant. Society, disgusted with kings, will only obey a truly great sovereign. The temple must be rebuilt and the Fathers of the Society of Jesus must give way to the "Brothers of the Rosy Cross."

We care very little, whether or not the coming hierophant of the future be called Pope or not, whether the great Sovereign will be a king or not, and whether or not the Brothers of the Rosy Cross, like the Illuminati of Weishaupt, shall borrow some rules from the Bye-laws of the Jesuits. Humanity always changes her forms, but lives continually the same life, and very often the intimate manner of living is entirely followed out again under the same exterior form. Are not our priests shaved like those of Cybele and Milhros? Is not our almanac almost entirely the same as the one used by the Romans? Have not several of our saints a striking resemblance to the heroes of ancient mythologies? Is not God explained by the Kabbala—ever the same Jehovah? and Jesus, although transfigured by the universal symbolism, which prays to him under the name of Osiris, of Balder, and of Krishna, is he now less than formerly a man-god? So does the human body renew itself daily and still remains always the same.

As long as slaves are led by slaves, they will continue to rebel; but they do not become free. Men, who are domi-

neered over by their passions, are like animals chained to the edge of a precipice. Woe to them, if they break their chain, for to them to become liberated is to die! The flock that follows the ram, having neither dog nor shepherd to guard it, runs undoubtedly the risk of going astray, because their leader is as stupid a beast as they themselves; but if they scatter here and there, each one following his own inclination, they will certainly be lost. Taking everything into consideration, we may say that the tyranny of Caligula or Nero is better for vicious people than a complete state of anarchy, which would soon produce a war of extermination among themselves. One ferocious beast causes less disasters than a hundred thousand; and evilly disposed men, believing themselves free, are only so many wolves unchained.

Behold the great criminals of all abortive revolutions! What slaves are those tyrants! How they are tortured by envy! How they are dragged along by ambition! How they are scourged by rage! How they are outraged by hate and stung by passion! What furies misled the reason of Masaniello, when he saw himself abandoned by the very people whose extreme love he believed himself to have gained! With what anguish expired that sublime monster, the sight of whose boarish head made kings tremble and whose name was Mirabeau! What feverish insomnia made the nights of the pale Robespierre seem endless! What nests of vipers were wriggling in the leprous heart of Marat! Those men believed themselves to be the apostles of freedom, while they were only the monopolizers of a jealous isolation in a savage servitude.

What did those men need to make them free? They needed everything, for they needed God. Hebert and Chaumette thought they had him killed. Robespierre attempted to resuscitate him by calling him the Supreme Being, a title which is as absurd as it is servile; because it presumes that God can be a ring in the chain of his beings; for even if his position were the highest and first, in an absolute manner, it would still presuppose him to be a link either at the extreme end, in the middle, or on the top. We see plainly that Robespierre was unacquainted with the tablets of Hermes.\*

According to this precious relic, which contains the "credo" of Occultism, the collective being is a unity.† That which is above is as that which is below, and as it is below so it is above, and forms the wonders of unity in being. This means that God and man are making each other reciprocally, and their simultaneous operation is identical and reciprocal. Everything originates from a sole being, from a single thought, above by creation and below by adaptation.

The Sun is the father, the moon the Mother. (Sun signifies *fire* and Moon *water*). The Breath is the gestator, and Earth is the nurse. The universal father and his work; the power of one and the force of the other are all one complete sovereignty. Man is God hidden on earth. Separate the earth from the fire, disengage the *spirit-breath* from matter by applying your whole attention and all your wisdom. Spirit ascends from Earth and descends from Heaven to earth, to unite together the superior powers and inferior forces. Then will the whole world be revealed to you in its splendour and every obscurity will fly away, because force issues from all the united forces, spiritualises that which is terrestrial and realises that which is ideal. Such is the mode in which the world was created.

From this universal principle flow wonderful adaptations. This is the law and the measure of the whole philosophy, and for this reason I am called Trismegistus, because I possess the secrets of wisdom of the three worlds.

I said the sun has done his work and the mystery is complete. Such is the symbol engraved upon the Smaragdine tablets. Perhaps the most acute mind of this age has guessed the hidden meaning of this symbol, when it is said: "The word became flesh, so that the flesh may become the word." (See *Seraphita* by H. de Balzac.)

The religion of the Initiates was obliged to envelope itself in the veils of mystery to escape persecution, because it spoke of the eternity of creation, of the sinlessness of the flesh and conquered immortality. For this purpose the fictitious form of a chemical operation was adopted, which ruined many a credulous fortune-seeker and exasperated the obstinacy of many knights of the blow-pipe and bellows. The minor sages are not to be blamed for that. They have often

\* The Smaragdine Tablets.

† Thus says the Book of Khin-te—Ed.

enough repeated that their salt and sulphur and mercury are nothing like ordinary substances of that name; that their fire is entirely spiritual, and that he who expects to make gold in his crucible, will find there nothing but scoria and ashes.

Bernard le Trévisan says that we must reject all salt, all sulphur, all metals, half metals and marcasites to retain the red servant. Now who is this red servant? Some say it is the philosopher's wine, others say it is the blood of the little children; that means the elements of strength and of life. They said that the Great Work costs nothing or almost nothing, that women can perform it while occupied with spinning, and that nevertheless it is a Herculean labour; because it is necessary to conquer a lion, cut the wings of a dragon, grind the bones of an old man and to let them rot for forty days, etc.

Many do not understand the meaning of those mystical figures of speech, of the vices that we must conquer, the old habits which we must break up, the evils which we must learn to suppress, in short, the spiritual regeneration, which a woman can accomplish, without interrupting her daily work.

Nevertheless, it is not absolutely demonstrated that this allegorical and spiritual doctrine entirely excludes the possibility of producing artificial gold.

A contemporaneous chemist, Mr. Tiffereau, truly and with great expense and labor, produced a small quantity. I am acquainted with some distinguished savants, who are still seeking for a solution of this chemical problem, and I have myself assisted them in their efforts, more out of curiosity and scientific interest, than with any serious hope of success.

Let us recapitulate: The Great Arcanum is the divinity of man, or in other words:—*The identification of the human soul with the divine principle.* This identification imparts to him a relative omnipotence and secures to him personal immortality by conservation of memory. (After Bodily Death.)

The Great Work is the conquest of this divinity through complete emancipation of intellect and will. This is the realisation of absolute liberty; which is perfect royalty and supreme priesthood. We reach this end through a persevering will with the help of science, and the initiative of daring under the protection of silence.

We know that the four principal and fundamental words of occultism are:—

TO KNOW, TO WILL, TO DARE AND TO KEEP SILENT.

## Letters to the Corresponding Secretary.

### FUND IN HONOUR OF THE LATE SWAMI OF ALMORA.

I SEND herewith in original the letter I received from Rajani Kanta Brahmachari, a pupil of the late Swami of Almora. He acknowledges with thanks the ten Rupees I sent him at your instance, and expresses his gratitude to, and admiration for, the Theosophical Society, which, although not agreeing with the views of the late Swami, subscribes to the Fund raised for the memory of the latter. He thanks Madame Blavatsky, Colonel Olcott and all the members of the Theosophical Society (I think he means the Parent Society) for this act of their generosity.

SIMLA,  
6th Feby. 1884. }

KUMUD CHANDER MUKERJEE.

### THEOSOPHY AND LOVE.

OUR contemporary of the *Epiphany* has the following remarks on the letter of D. K. M., published in the January number of the *Theosophist*:—

It is with pleasure that we reply to the letter signed with the initials D. K. M., so well known, at least to Theosophists. We will simply put down the thoughts suggested by it, in the order in which they are suggested.

(1.) We apologise for the mistake of putting Yogi for Yoga; a moment's thought would have prevented it.

(2.) We did not mean by "what men call miracles" simply physical marvels, but marvels both physical and psychical,

as may be gathered from our words "the power of *supreme wisdom* or working what men call miracles," or our parallel phrase "the power of the invisible worlds."

(3.) Still we distinctly spoke of powers other than the power of love. And our words might be taken to imply that the power of love was subordinated in Theosophy to these other powers.

(4.) But a glance at the *context* of our words would shew that this was not necessarily so.

In a letter to which we were replying, our correspondent A. B. C. had asked "what internal or external powers have you gained from your God, which can consume the sinful element in your nature, &c.?"

In thus questioning the existence of sin-conquering powers in Christians we simply asked A. B. C. whether he had followed the best method.

We asked whether a more careful study of the history of Christianity, &c., would not perhaps lead him to *admit* the working of such strange powers. In that case the only question left would be the question of their source, in delusion or in God.

And we adduced the parallel case of certain powers claimed by Theosophists and admitted by us, so that our only enquiry was as to their value and their source.

Not one word was said as to whether the power of intense love was claimed or possessed by the Theosophists.

We needed a parallel case of *admitted* powers, and we could only take those powers which we do admit to be attainable by Theosophical methods. Among these perfect love has no place. Theosophists may sometimes be more loving than individual Christians, and we do all homage, for instance, to the nobly appreciative obituary notice which you lately printed of your opponent Swami Dayanand Saraswati.

It is in no spirit of pride that we state it as a part of our Creed that, however unloving nominal Christians may be, perfect love is only attainable by man through union with Christ, nay, that the very gateway to love for the mass of men must be the faith in Christ's love for us. Such a theory has nothing to do with any estimate of persons, but is a necessary corollary of our belief that God became incarnate for love of us. For, if that be a true doctrine, the recognition of the fact of such tremendous love must be the natural preliminary to being intoxicated and transformed by it, the first step in the true Yoga.

We were, you will now perceive, obliged by the logical necessities of our reply to choose by way of illustration a class of powers which we *could* admit to be attainable by your methods, powers, *e. g.*, of supreme wisdom, of psychical perfections, of physical marvels.

(5.) We were and are perfectly aware that Theosophy does profess to despise the mere "powers" or Siddhis, and teaches that Universal Love is an essential part or condition of Brahma Vidya. But we are not aware that it teaches love in the Christian sense to be the *very essence* of perfection, since "God is love."

There has been recently in our columns some correspondence with Professor Dvijadas Datta of the Bethune College. That gentleman has very lucidly set forth the Vedantist idea of unselfishness, or identification of self with the Divine Being, in your own words, of Jivatma with Paramatma.

We cannot recognize in that identification the Christian idea of perfection, which regards God as the eternal infinite not-self to which we sacrifice in ever repeated oblation the eternal finite self, as we are also gloriously fated for ever to sacrifice ourselves for other finite beings, loved by God and by us. Even when sin, what you call Maya, has ceased to veil from us our true union with God, we shall still (we believe) retain our conscious separateness from the Supreme and from His other created beings. We postulate like you, that we are "part of an integral whole" and that "the good of others is our own," not because we are identical with them, but because our highest perfection consists in active and loving work for the perfection of others.

So we do not, with the Vedantist, slowly recognize that we are God, but we slowly learn to give ourselves up to God. You see we are inveterate and irreconcilable dualists. As God for ever yearns and labours in the infinite process of "bringing many sons to perfection" through suffering, so do we for ever demand a non-Ego to which to sacrifice (without annihilating it) the Ego.

But whatever the end, the Nirvana, the Mukti, you may fairly say that the means, the Yoga, are the same. Separate

personalities as we imagine ourselves to be in our present subjection to Maya, the first lesson to learn is that of benevolence. We said long ago, in our reply to Col. Olcott's most kind letter to the *Epiphany*, that we *both* profess to be fighting the same battle in the outset, the battle of love against selfishness. But we deliberately deny, simply on the ground of the experience of the innumerable Saints of the Church of God, that the flame of love can be fully kindled in the heart by Theosophical methods, or by anything less than the Incarnate Sacrifice of God. It is not pride which says this, it is the bitter practical experience of the best Christians.

If then you require "unselfish philanthropy" as a "guide in the acquisition of Brahma Vidya," you are, from the point of view of the positive experience of millions, indulging in a *petitio principii*. Unable to obtain by human will the Nirvana of Love, you will knock in vain at the closed doors of the Nirvana of Wisdom and of Power. But certain powers, psychical, occult, or physical, you may gain by the power of Yoga, without conscious dependence on the help of the Supreme. Your position *if you do*, without the Christian God, *teach the primary necessity of Love*, is worse than if you subordinate it to other powers more easily attainable, knowledge, asceticism, &c.

(6.) The same argument precisely applies to what you say about pride. Your theory is perfect, your practice is, like our own, imperfect.

Theoretically you require as a condition of Brahma Vidya a perfection of love which would cast out all pride. Pride is a form of Avidya, and is as incompatible with Brahma Vidya as love is essential to it. But just as human experience shews that we cannot unaided attain love, so it shews that we cannot banish pride. And Christian experience (*not theory*) deliberately says that human nature can only be entrusted with the *smallest* degree of knowledge or of power without danger of pride when chastened by the belief that the knowledge or the power is not *acquired*, but undeservedly and freely *given*, given through One who died to gain it for us.

If then you cannot attain the preliminary conditions of Nirvana by your methods, by your own will or the help of Gurus (wholly dependent on your own fitness to receive it, you assert) how can you attain Nirvana itself? If, on the other hand, you reply that you *can* attain love and humility by gradual human effort, you must be made of nobler clay than any Christian that has ever yet lived and learned his own profound nothingness and helplessness in spite of his initial faith in his own power to develop himself.

(7.) But, as a matter of fact, though our words did not necessarily imply that Occultism subordinated love to knowledge and power, they did in their general tone reflect the ordinary attitude of Theosophical writers, and the ordinary conception of Occultism in the vulgar mind. Outsiders cannot be expected to make nice distinctions. They read such books as "the *Elixir of Life*." They read the Rules of the Theosophical Society. If in England, they read the pages of "*Light*." If in India they read the "*Theosophist*" Magazine.

In the "*Elixir of Life*" they are told, on page 59, that the will to live is unselfish, long life is "a necessary means to the acquirement of powers by which infinitely more good can be done than without them."

But they read below that "very few of the truly great men of the world, the martyrs, the heroes, the founders of religions, the liberators of nations, the leaders of reforms, ever became members of the long-lived Brotherhood of Adepts." And they read, on page 73, about these same Adepts that "it is with the utmost difficulty that one or two can be induced even by the throes of a world to injure their own progress by meddling with mundane affairs. . . . A very high adept, undertaking to reform the world, would necessarily have to once more submit to Incarnation. And is the result of all that have gone before in that line sufficiently encouraging to prompt a renewal of the attempt?"

Yes—to quote the words just before those last quoted—"our dirty little earth is left below by those who have virtually gone to join the gods."

In one word the ordinary reader finds the Incarnation of Christ and His life-work regarded as a discouraging mistake, and he naturally thinks of such a publication, "issued under the authority of the Theosophical Society," as embodying with subtle philosophy a very doubtful morality, a very strange doctrine of Universal Love,

Again men read the Rules of the Theosophical Society, and they find mention of an Universal Brotherhood of Humanity, but they find the speeches and books of Theosophists rather occupied with philosophy than with the solution of the question of questions, how to learn to love.

Once more they read, if in England, the pages of "*Light*." In the issue of July 28th, 1883, they find an analysis of the speech of a representative Theosophist, Mr. Sinnett, the author of "*Esoteric Buddhism*." Welcomed by the London Theosophists, he is reported to have said that the pursuer of adeptship aimed at something more than elevated enjoyment in the spiritual state; he aimed at great developments of knowledge concerning nature and at a longer span of existence than could be granted by Nature "as a reward for mere goodness." Further on the speaker said (if the report be correct) that "the only way to get on in the evolutionary process *beyond the stage to which goodness could carry the Ego* was to develop supreme spiritual wisdom or knowledge, and that was the object at which the efforts of Adepts are directed."

Now in the course of this same address Mr. Sinnett quite passionately repudiated the charge of selfishness, and spoke of Theosophy as seeking to extend these blessings to the ignorant masses with untiring devotion. But ordinary readers will still feel the impression that the time is not yet come for Theosophy, that goodness, the first stage in the process, must be attained before we talk of supreme wisdom or knowledge, and that Theosophy puts the cart before the horse.

Equally strong will be the impression of ordinary readers of the 'Theosophist' magazine that the radical defect of Theosophy is its belief that goodness is sufficiently attainable by an evolution from within of human nature, a position passionately denied by the experience of mankind at large. If there be no secure foundation, no true method of conquering selfishness and pride, the whole edifice must tumble down.

8. One or two points more may also be noticed with advantage. The question about trance-consciousness, and the conditions of its pure vision, is *only* the question of love in another form. The most potent of all preconceptions is that there is no *personal loving God*. And this preconception, being negative, cannot be removed by negative methods. It is impossible to place the noble soul in a purely indifferent attitude to this problem. The moment the idea of God in the Christian sense rushes upon the soul, the soul rushes towards it with an intensity proportioned to its own nobleness. Only the soul which loves can know or feel God; the soul in a negative attitude, presenting a blank white sheet to be inscribed 'God' or 'no-God' with indifference, is debarred by its very attitude from knowing Him. The soul which does not know God instinctively dreads the thought of a God, and carries the atheistic preconception into the trance-vision. The soul which has truly conquered Avidya has learned to love, and feels the prescient instinct of a Divine Presence already. Learn truly to love and you must see, or at least suspect, God. The dogmas of occultists on this point are valueless unless we first know that they have learned the lesson of perfect love. The first condition of true insight is according to our experience impossible to human nature without the help of that God who alone makes us capable of perceiving His subtle presence, His utter distinctness from, and yet His closeness to ourselves.

(9.) Let us pass to the next subject of D. K. M.'s criticism.

It is needless to say that if Christianity had appealed to blind faith it could not have survived the criticism of the West for eighteen centuries. Appealing then to reason, we are asked whether Christ declared Himself to be God in "plain unambiguous language." Silence is sometimes the most eloquent language; when Christ heard St. Thomas address Him as "My Lord and my God" (John xx, 28), simple silence would have been enough. The words which He spoke in reply, "Because thou hast seen thou hast believed" do but point the contrast between St. Thomas and us who have been convinced without seeing, and are indeed blessed in our faith. Had Christ himself been always silent, the written testimony of His best loved disciple that the "Word was God (John I, 1.) and of His whilom persecutor that "God was manifest in the flesh, believed on in the world, received up into glory" (1. Tim. 3, 16.) would have been enough for all who could gauge at its true value the absolute guilelessness of the writers.

But He spoke. He never said "I am God." He would have been taken to mean that He was the father whom the Jews worshipped (John 8. 54), whereas He was but One Person of the Trinity. But he said God was His Father. Hindus would have understood this in a mystical sense. The Jews understood that it meant (John 5. 18.) "making himself equal with God."

We have the testimony of the Evangelist that his language was to the Jews perfectly unambiguous.

The whole difficulty in India is created by those critics who separate the words of Christ from their historical context, and put upon them meanings possible to a pantheistic Hindu, impossible in the mouth of a monotheistic Jew speaking to Jews.

The Declaration of pre-existence before Abraham (John 8. 58) and of oneness of essence with the Father (John x. 30) were so unambiguous to the Jews that on each occasion they tried to stone Him (John 8. 59. and 10. 31.) They said that He "being a man" had "made himself God." (John 10, 33.)

Christ once rebuked a man for calling Him good, as you say. If the Jew had meant to attribute Divinity to Him, he might have been rebuked for so doing, conceivably. But the whole story (esp Matt. 19. 22) shews him as an unbeliever in the divinity of Christ; the idea almost certainly never occurred to him. He is therefore gently rebuked for using a term of reverence unbefitting one believed by its user to be a mere man. The question whether Christ really claimed to be good, and therefore (according to this test) to be God, is not here touched upon, but is answered in the affirmative by another word of the Saviour (John 8. 46) "Which of you convinceth me of sin?" It is hardly fair to represent Christ as disclaiming in one passage a Divine attribute which he claims in another.

But you go on to say that even if He did claim to be God, his claim was disproved by His historical character which is equalled, if not surpassed, by that of Buddha. When you say that Buddha excelled Jesus in humility, as not claiming to be God, you assume the question at issue, since there can be no pride in claiming to be what you are, if you really are so. And moreover, if Christ were God there at once appears in his life an infinity of condescension impossible to the human Guru. So that the question of the comparison of their characters itself partly implies the previous settlement of the question of Divinity; just as the interpretation of the words "my God and your God" (quoted by you) imply the previous determination of the relation of the human nature to the Divine in Christ.

The Church has expressed that relation thus in the Athanasian Creed, "Equal to the Father as touching His Godhead; and inferior to the Father as touching His manhood." You must then shew that there could be no such union of two natures in Him, or else you must shew that these and similar expressions of inferiority referred to His superhuman nature also, to which in truth they are as inapplicable as are the frequent expressions of equality with the Father to His human nature. It is in fact this very union of irreconcilable attributes in His descriptions of Himself which has confirmed the Church in the conviction that He is both God and Man.

We need not discuss whether Buddhists or Christians now work the greater wonders.

It was well said by John Keble that the prophecy of Christ (John 14. 12) that we should do greater works than those physical miracles of Christ is fulfilled in the Eucharist. But, quite apart from miraculous feeding of the souls of men by the Christian Priest in the Eucharist, wherein the uninitiated see nothing but a little bread and wine, I boldly say that I would sooner work the marvel of placing a sinful soul in contact with the spiritual and redeeming energy of the Cross than fly through the air or cure the Maharajah of Cashmere.

(10). Last of all, you seem to accuse me of a self-evident fallacy in condemning idolatry because of the corruptions of it by the masses. But I did not appeal to any wilful inconsistencies of Hindus parallel to the wilful denial in practice of Christianity of the man who sold his wife, and called himself a Christian.

*Ignoratio elenchi* I can hardly attribute to a man of your ability: but I would ask you whether the point which I attacked was really the misconceptions of idolatry by its votaries. So soon as a man can realize the idols as concrete analysis of the Supreme he is no longer, *properly speaking*, an idolator. It is of the *essence* of idolatry to worship some idols in preference to others who are yet acknowledged, and thus to prefer one or more attributes of the Supreme to the rest, and so to distort the symmetry of the Divine Conception. This is a necessity with the masses for whom idolatry is intended, not a perversion of the system. You will hardly have patience to read, much less to answer, this lengthy reply to your concise and able letter.

#### REJOINDER.

I shall briefly reply to the remarks of the *Epiphany*. I am sorry I failed to gather from the words, "the power of Supreme wisdom or of working what men call miracles," even in the light of the parallel phrase "the power of the invisible worlds," that by "what men call miracles," was not meant "simply physical marvels, but marvels both physical and psychical," as, otherwise some waste of words would have been prevented.

We maintain that the highest ideal of love is to be found only in *Brahmavidya* or Esoteric Theosophy; our ideal of love being a perfect union with the ALL by an utter abnegation of the self and by ardent sleepless endeavours for the good of all sentient beings—even the brute creation, whose sufferings, and wholesale slaughter, are made entirely subservient to the pleasure of Christians and Mahomedans. If the ideal of the Christians is different,—they are welcome to it; only let them not place it higher than ours, unless they are prepared to support their action by the force of arguments. I am glad to find an attempt has been made in this direction by my friendly critic, and proceed to examine it with the attention it deserves.

"It is in no spirit of pride" says the *Epiphany*, "that we state it as a part of our Creed that, however unloving nominal Christians may be, perfect love is only attainable by man through union with Christ, nay, the very gateway to love for the mass of men must be in Christ's love for us. Such a theory has nothing to do with any estimate of persons, but is a necessary corollary of our belief that God became incarnate for love of us. For, if that be a true doctrine, the recognition of the fact of such tremendous love must be the natural preliminary to being intoxicated and transformed by it, the first step in the true Yoga."

The great incentive to love among Christians is, we are told, the realisation of the fact that Christ, or, in other words, the perfect God, incarnated himself, moved by love, for the redemption of man. Without stopping to question the necessity of such a step in one who, if God, might have avoided it by suppressing the original act of injustice—namely, the "apple incident,"—we may here say that there are other doctrines in the Christian faith, and regarded as equally true, which are calculated to weaken if not to completely neutralize the force of this argument. How can we say the Christian "God is love," when he delivers up helpless Humanity, brought into existence without its consent, to the mangling tooth of sin and suffering for a small transgression of its first parents? Even human justice does not hold a son liable for the debts of his father beyond the extent of that father's assets. And how is it that not even the blood of Jesus could restore man to the "blissful seat" from which he had fallen? It may here be urged that the all-Merciful Father has ordained evil but for the ultimate good of man. But the other side may with equal justice contend that an Omnipotent cruel Ahriman has created all apparent good for the ultimate destruction of his creatures, not unlike the Satan of the Middle Ages, granting a short festive season to his servants as a prelude to the eternal damnation of their souls. The real fact is, that our inner self perceives, although the perception in very many cases is clouded by preconceived notions, that love and charity are but the law of our being, and that the violation of the law is always attended with suffering. It is no argument against this proposition that the general mind is not conscious of such being the case, any more than it is necessary for the miser to be aware of the true worth of riches when counting his unsunned hoards with a greedy eye.

Our friendly critic then charges me with a *petitio principii*:—

If you then require "unselfish philanthropy" as a "guide to the acquisition of *Brahmavidya*," you are from the point of view of the positive experience of millions, indulging in a *petitio principii*.

Nothing of the kind. It is enough if I am supported by the "positive experience" of one man—and such a man is always to be found in the person of the Great Beggar Prince of Kapilavastu. The only logical misdemeanour committed in the present transaction is that of hasty generalisation chargeable on the critic himself, in deriving a general proposition from a particular one, however extensive that particular proposition may absolutely be.

The subordination of love to power, attributed to Theosophy, is due to the learned critic's misconception of what is said in the *Bhivir of Life*, which has never been claimed as a complete exposition of the subject. The objections now raised clearly show that the article on "Morality and Pantheism" in the *Theosophist* for November last, has not been properly considered. There it is distinctly said:—

Inactivity of the physical body (*Sthula sarira*) does not indicate a condition of inactivity either on the astral or physical plane of action. The human spirit is in its highest state of activity in *Samádhi*, and not, as is generally supposed, in a dormant quiescent condition. And, moreover, it will be seen by any one who examines the nature of Occult dynamics, that a given amount of energy expended on the spiritual or astral plane is productive of far greater results than the same amount expended on the physical objective plane of existence. When an adept has placed himself *en rapport* with the Universal Mind, he becomes a real power in nature. Even on the objective plane of existence, the difference between brain and muscular energy, in their capacity of producing wide-spread and far reaching results, can be very easily perceived. The amount of physical energy expended by the discoverer of the steam engine might not have been more than that expended by a hard-working day-labourer. But the practical results of the cooly's work can never be compared with the results achieved by the discovery of the steam engine. Similarly, the ultimate effects of spiritual energy are infinitely greater than those of intellectual energy.

To pass to the concluding remarks of the *Epiphany*. My arguments with reference to Hindu idolatry have been misunderstood by the critic. What I mean is this:—That, as no idolatry is sanctioned by the Hindu Scriptures, it is quite unjust to condemn the symbols of Hindu Religion, which are not without a certain similarity in principles to the Christian Eucharist, simply on the ground that the ignorant masses cannot always perceive the underlying spiritual truth. It would be as reasonable to charge the grotesque eccentricities of the Salvation Army on the purity of the Christian faith.

D. K. M.

## Phronema I.

### MY EXPERIENCES.

SOMEbody of old has said:—

"Give ye not that which is sacred to the dogs, neither cast ye your pearls before the swine, for the swine will tread them under their feet and the dogs will turn and rend you."

It is therefore with a great deal of hesitation and reluctance that I make up my mind to pen the following account of my experiences. If this article were destined to go into the public papers, it would certainly never have been written; for not only is it disagreeable to throw one's name to be devoured by the vultures of criticism; but especially because it pains me to see the names of our revered Masters bandied about by fashionable dandies and unfashionable dunces.

In a public paper I would have three classes of readers:

The first class would read it as they would read the market report about the price of potatoes and lay the paper aside without giving the subject a further thought, and this class I consider a very amiable one.

The second class would conclude that I was "one of the ring," that I had come all the way from America to amuse myself by concocting ghost stories, for no perceptible purpose except to fool them. This class I consider very stupid and I pity them.

The third class are men and women of intelligence, who neither accept nor reject anything without sufficient reason. They probably have heard of such things before; still they may have some lingering doubts, which they desire to have removed. This class I consider my friends, and only for their benefit, and to try to help to guide them along on their tedious path through the mists of doubt and disbelief, did I consent to have this printed in the *Journal* of our Society—a paper published for the special use of the members of our Association.

On the twenty-first of September 1883, I left my home in Colorado in the United States to go to India; partly for the purpose of representing the Theosophical Societies of America at our eighth Anniversary, partly because, being of a very sceptical nature, I was anxious to investigate more fully the subject of Occultism and to remove my doubts. And how could I expect to do this better than by going to the Headquarters?

It would have been easier and cheaper for me to go by way of New York and Marseilles, than by way of California, Japan and China; but I had a certain business to perform in San Francisco, which is of too delicate and private a nature to be mentioned even in this paper. So I went to San Francisco. But, alas! for the weakness of the human nature, of even an occultist in embryo! The charm of a pair of beautiful black eyes proved almost too strong for the would-be ascetic. Saint Anthony's temptation was as nothing, if compared to mine, and my trip to the promised land came very near to be a delusion and a snare. However I succeeded in tearing myself away, left, and went to China.

A week or two after my arrival at Adyar, seeing that several others, strangers as well as members of our Society, occasionally received letters from the Masters either by having them dropped from the air, whirled at them through windows, thrust at them by materialized hands through solid walls or sent them through the "Shrine"; I thought by myself that it was about time that I should be equally favoured; for although considering myself a sinner, I could not see that I was a great deal worse and therefore less worthy of consideration than the majority of those that received letters. Encouraged by this thought, I concluded to see whether a letter of mine would elicit an answer from the Masters.

Accordingly I wrote the following lines:—

*Revered Master!* The undersigned offers you his services. He desires that you would kindly examine his mental capacity and if desirable give him further instructions.

Respectfully yours, etc.

I copy this letter verbatim, so that the kind reader may not think me so silly as to trouble the "Adepts" of the Himalayas with my little private affairs, which, however interesting to me, can be of no possible interest to them. Besides this, I am in the habit of keeping my own counsel, and there was no one in India or outside of San Francisco that knew anything about the said affairs. I gave my letter to Col. Olcott and he put it into the Shrine.

A couple of days afterwards, I reasoned with myself about this matter, and thought that, if the Masters should find it worth the while to say anything to me, they would undoubtedly do so without my asking, and I therefore begged Colonel Olcott to return me my letter. Colonel Olcott would have done so, but my letter had disappeared in a mysterious manner in spite of locks and keys and was never seen again. But in place of my letter I received another in the well known handwriting of our revered Master, the contents of which showed not only a complete knowledge of myself and a knowledge of some of the events of my past life, but it also said: "You have committed an act of great imprudence while in San Francisco"—and then went into details about that very private and delicate business to which I referred above, and the details of which I will give to our kind Theosophists, if he or she will call on me and promise, of course, never to reveal it.

Now such a "test" ought to be satisfactory to anybody; but having had a twenty years' experience with Spiritualism, my doubts were not yet fully conquered. Could Col. Olcott have written this letter? What did he know of my private affairs? How could any one know anything about it, as there was no mail received from San Francisco since I arrived by the last steamer, and who in America would take the trouble to write or telegraph anything, and who could do so, as I am almost as much a stranger in San Francisco as I am in Adyar.

But again: might not Colonel Olcott or somebody else have become clairvoyant and read my mind, and then by some unconscious cerebration, or somehow or other, some spirit or something might have written it, and who knows but I might have been taken in after all.

These thoughts, in spite of all reasoning, were left lingering in my mind, until I was so fortunate as to see the Master myself in his astral body, when, of course, they were silenced for ever.

But something more wonderful was in store for me; and although it did not surprise me at all after all I had seen and heard, it will be interesting to those who have no personal experience in such matters.

This morning at half-past eleven I went upstairs to Madame Blavatsky's room and had a conversation with her in regard to society matters. After this conversation the thought came in my mind to ask her opinion in regard to a certain subject of which I had been thinking. Madame B. advised me to apply to the Master himself, to ask him mentally, and that the Master himself would surely answer my question. A few minutes later she said she felt his presence, and that she saw him writing. I must say that I too felt his influence and seemed to see his face, but of course this circumstance will carry conviction to no one but myself.

Just then another lady came in, to my great annoyance, and expressed her wish to have a pair of pincers, which she needed for some purpose, and remembering that I had such a pair of pincers in the drawer of my writing desk, I went downstairs into my room to get them. I opened the drawer, saw the pincers and a few other things in there, but no vestige of any letter, as I had removed my papers the day before to another place. I took the pincers and was about to close the drawer, when—there lay in the drawer a great envelope, addressed to me in the well-known handwriting of the Master and sealed with the seal bearing his initials in Thibetan characters. On opening it, I found a long, very kind and somewhat complimentary letter, treating of the identical questions, about which I had just been talking with Madame Blavatsky, besides giving a detailed and satisfactory answer to the very question which had so perplexed my mind, and a satisfactory explanation of certain matters, which for some time had been foremost in my mind, but of which I had said nothing at all.

Moreover, there was in the same envelope a photograph, cabinet-size, of the master's face, with a dedication to me at the back. This picture will henceforth be considered as the greatest treasure in my possession.

Now, if I know anything at all, I know that my drawer contained no such letter, when I opened it, and that there was nobody visible in my room at that time. The letter, giving a detailed answer to my question, must have been written, sealed and put into the drawer in less than four minutes, while it took exactly forty minutes to copy it the next day; and finally, it treated a very difficult problem in such an elaborate and yet concise manner, that only an intelligence of the highest order could have done the same.

Any further comment I consider unnecessary.

SAPIENTI SAT.

## Official Reports.

### COLONEL OLCOTT IN CEYLON.

IN response to a telegraphed request, the President-Founder arrived in Ceylon on the 27th January, and the same day met the leading Buddhists of Colombo at Widyodaya College, for conference upon the state of Buddhism, as affected by the late Catholic riots and the action of the law officers of the Crown. Mr. Edward F. Perera, the senior Proctor for the Buddhists, attended to explain the state of the case. A dispatch from the Earl of Derby, Secretary of State for the Colonies, in response to a Buddhist petition for redress, as received through the Colonial Secretary, was first read and discussed. The unanimous opinion of the meeting was that it guaranteed no substantial protection against the recurrence, under a weak administration, of the late outrages, and that a final appeal must be taken to Parliament, failing a modification of Earl Derby's views. Colonel Olcott was then requested to proceed to England in charge of the case, with full powers. The meeting then organized themselves into a "Buddhist Defence Committee," with power to add to their number, and Colonel Olcott was unanimously elected an Honorary Member. The High Priest Sumangala presided at the meeting, and Mr. J. R. deSilva, F. T. S., officiated as Secretary. The Defence Committee organized by electing the venerable A. P. Dharm-

gunarvardhana, Mohandiram, as Chairman; Messrs. Don Carolis and H. Tepannis Perera as Vice-Chairmen; Mr. H. A. Fernando, Treasurer; and Mr. C. P. Guneverdhane as Secretary. The meeting then adjourned after requesting Colonel Olcott to proceed to Kandy and report its action to H. E. the Governor, Sir A. H. Gordon, G. C. M. G., and consult with him. This interview occurred at the official residence of the Governor at Kandy, in the presence of Messrs. W. D. Abrew and Goonesekara, members of our Society, and was very satisfactory. His Excellency while, of course, a decided Christian, showed nevertheless his disposition to extend to the Buddhists the full protection of the British law.

On the 10th of January, having received all necessary credentials empowering him to represent Singhalese Buddhist interests before the Home Government and Parliament, Colonel Olcott crossed over to Tuticorin by steamer, and on the 13th arrived at Head-quarters. After stopping there to transact some official business, he left on the 15th by mail train for Bombay, where he met Madame Blavatsky. On the 20th they both sailed by the French line—the *Compagnie Nationale*—for Marseilles, en route for London. Babu Mohini Mohun Chatterji, F. T. S., goes with the President-Founder as Private Secretary, and Mr. Burjorji J. Padshah, F. T. S., of Bombay accompanies the party.

### THE KANDY (BUDDHIST) THEOSOPHICAL SOCIETY.

FOR the first time since its organisation in the year 1881, the President Founder has been able to visit our Branch at Kandy, the mountain capital of Ceylon, the ancient and historically famous stronghold of the native sovereigns whose deeds and misdeeds are celebrated in the *Mahavansa*. He found, as might have been expected, that many changes had occurred, among others the thinning out of worthless members and the assumption of Society work and responsibilities by the more earnest ones. He was enabled to hold a chapter in a new and sufficiently commodious hall, built and owned by the Kandy Branch at a cost of nearly Rupees 2,000. The walls are of *pucca* brick and chunam, the roof a double-hipped one in the fashion of the ancient Royal buildings, covered with tiles, and finished with pinnacles. The plot of ground is within the walled enclosure just opposite the Dalada Maligawa, or Temple Sacred Tooth, and the broad enclosing wall on the side towards the charming esplanade is that upon which Colonel Olcott and party, with the principal Bhikkus (priests) of the two chief temples of Ceylon, stood when addressing his vast audience in 1881. That this plot was destined to be the site of a future Theosophical Hall did not even enter their dreams at that time. The ground is well shaded with cocoanut, bread-fruit, and other trees, and the view of the lake and surroundings exquisitely beautiful as a picture of mountain scenery. *Bana* (Buddhistic Philosophy) is preached every Sunday in the Hall by priests specially detailed by the learned "Maha Terumanse," (or High Priest of Malvata Pansala Monastery); whose rank among the Singhalese Ecclesiastics corresponds with that of the Metropolitan of Moscow, or the Archbishop of Canterbury. The President Founder's visit will unquestionably have important results in more ways than one. At the annual election Mr. C. W. Gooneratne was re-elected President, Mr. G. F. Weerasekara, Secretary, C. L. De Silva, Assistant Secretary, D. John de Alwis, Treasurer, A. de Silva, Arachchi, A. B. Silva, D. T. Karunaratna, D. Johannes Silva, J. C. Caldera, and Rajepakse Ukkuva Vidhane, Councillors.

### COLONEL OLCOTT GIVEN THE RANK OF "ACHARYA."

WHILE at Kandy the impending visit of Col. Olcott to Europe was broached, and as a number of intelligent gentlemen and ladies in that part of the world are desirous of declaring themselves Buddhists, the High Priest issued to him a special commission which empowers him to "give Pansil"—that is, to cause candidates for admission to Buddhism to repeat the "Five Precepts" after him—and grant them certificates that they are accepted among the followers of Lord Buddha. This is an extraordinary mark of confidence—one never previously conferred upon an European and, like the honorary bestowal upon him of the sacred Brahmanical thread, by the renowned Pandit Jibbananda

Vidyasagara, a very high compliment. Among us in India they are regarded as greater honors than any decoration by a temporal sovereign. Upon hearing what the Malvatti High Priest had done, the illustrious Samangala, High Priest of Adam's Peak and Principal of Widyodaya (Buddhist) College, added his own consent, thus giving an extra dignity to the commission. The document is engraved in the Pali language, with an iron stylus, upon *ollas*—the prepared leaves of the Talipot Palm—after the fashion of the sacred books in the Buddhist Monasteries.

### THE ARYAN THEOSOPHICAL SOCIETY (NEW YORK.)

THE NEW YORK THEOSOPHICAL SOCIETY has been formed under the name of THE ARYAN THEOSOPHISTS OF NEW YORK—the N. Y. Branch of the Theosophical Society.

The first meeting was held at the house of one of our old members, Brother G. W. Wheat, and the organization completed.

The second was held on the 10th December 1883 and some new members elected.

The third meeting was on December 17th, 1883, and showed an increase of interest.

We are trying to spread the knowledge of Aryan literature here, and can say that the Press has done great service in that way.

Our present members are all old Theosophists, but we expect to get new members. In this we are careful however, as we do not care to let in inharmonious people, who only wish to rule or ruin. The Rules of the P. T. S. have been adopted. At the last meeting the President, W. B. Shelly, and Secretary J. H. Cables, of the Rochester Branch, were present as visitors.

WILLIAM Q. JUDGE,  
*President.*

MORTIMER MARBLE,  
*Secretary.*

### PRESIDENTIAL SPECIAL ORDERS.

THE arrival from London of St. George Lane-Fox, Esq., F. T. S., and the postponement of the anticipated tours of Dr F. Hartmann and W. T. Brown, Esq., Assistants to the President-Founder, to Ceylon and the Northern Circars, induce the President to make the following modification in the S. O. of the 21st January\*. The above-named three gentlemen are added to the special Executive Committee, and the whole will be known as the Board of Control. They will elect a Chairman, who shall see that the measures adopted by a majority vote, are carried out. All important questions requiring the attention of the Executive shall be submitted to the B. of C. and decided by majority vote. The Board shall meet at least once a week, and it is the particular desire of the President-Founder that everything shall be done to promote economy, system, and efficiency of administration during his temporary absence from India. The points embraced in the S. O. of 21st January, not herein modified, shall stand as of full effect and force.

By order of the President-Founder,

MOHINI M. CHATTERJEE,  
*Private Secretary.*

CAMP, BOMBAY, }  
19th February 1884. }

### SPECIAL CIRCULAR TO THE BRANCHES.

To avoid unnecessary correspondence and work, as also to observe uniformity of procedure, Branches are authorised to adopt the Rules of the Parent Society, and to submit in addition, for approval, such bye-laws as may be absolutely necessary for the working of the respective Branches.

ADYAR (MADRAS). }  
17th February 1884. }

By order of the Council.

### MEMORIAL MEETING IN HONOR OF THE LATE BABU PEARY CHAND MITRA, F. T. S.

HALL OF THE BRITISH INDIAN ASSOCIATION,  
JANUARY 28, 1884.

#### RESOLUTIONS.

##### I.

THAT this Meeting desires to express its sorrow at the death of Babu Peary Chand Mitra, who had proved himself eminently useful to the country by his zealous devotion to public business, by his valuable contributions to Bengali literature, and by his services connected with the intellectual and moral advancement of the people, and the protection of dumb animals.

##### II.

That a portrait or a bust of the late Babu Peary Chand Mitra be placed in some public Institution with a view to perpetuate his memory, and that subscriptions be invited for that purpose.

##### III.

That the undormentioned gentlemen do constitute a committee for the purpose of carrying out the foregoing resolution:—

#### MEMBERS OF THE COMMITTEE.

Maharaja Sir Jotendro Mohan Tagore, K. C. S. I.	Babu Peary Mohan Mookerji.
„ Narendra Krishna Bahadur.	„ Narendra Nath Sen.
Babu Joykisson Mookerji	„ Shishir Kumar Ghosh.
Dr. Rajendralala Mitra, L. L. D., C. I. E.	„ Dwijendra Nath Tagore.
Hon'ble Doorga Churn Law.	„ Surendra Nath Banerji.
Dr. K. M. Banerji.	„ Shib Chunder Deb.
J. C. Murray, Esq.	Manockjee Rustomjee, Esq.
R. Turnbull, Esq.	Babu Jodu Lal Mullick.
Wm. Swinhoe, Esq.	Rai Kanai Lal Dey, Bahadur.
Nawab Abdool Latif, Khan Bahadur.	Hon'ble Kristodas Pal.
Haji Noor Mahomed Jackariah.	Babu Gresh Chunder Ghosh,
	„ Radha Raman } <i>Joint-Secretaries.</i>
	Mitra.

All communications to be addressed to the Honorary Secretaries, No. 20, Nintolah Ghat Street, Calcutta.

The Maharajah Norendra Krishna Bahadur, President of the British Indian Association, was in the Chair.

The first Resolution was moved by the Revd. K. M. Banerjee, L.L.D., D.C.L., President of the Indian Association, seconded by Mr. J. C. Murray (late President of the Bengal Chamber of Commerce), and supported by Babu Dwijendra Nath Tagore, President of the Adi Brahma Somaj, and the Revd. K. S. Macdonald, Missionary of the Free Church of Scotland.

The Second Resolution was moved by Babu Joykissen Mookerjee, Zemindar of Uttarparah, seconded by Mr. Robert Turnbull, Secretary to the Calcutta Municipal Corporation, and supported by Mr. H. M. Rustomjee, Honorary Magistrate, Dr. D. B. Smith, late Principal of the Calcutta Medical College, Babu Norendra Nath Sen, Editor of the "Indian Mirror" and Babu Jodulal Mullick, Honorary Magistrate and Zemindar.

The third Resolution was moved by Babu Shib Chunder Deb, President of the Sadharan Brahma Somaj, seconded by the Venerable Babu Ramtaun Lahiri, and supported by the Revd. C. H. A. Dall, American Unitarian Missionary, and Mr. Hajee Noor Mahomed Jackariah (of Messrs. Hajee Jackariah Mahomed and Co.)

The fourth Resolution proposing a vote of thanks to the Chair, was moved by Rai Koonjo Lal Banerjee Bahadur, Judge of the Calcutta Small Cause Court.

#### OBITUARY.

WE regret to hear from Mr. B. Venkatachella Iyer, B. A., F. T. S., of the decease of our brother G. Subbaramayya, M. A., of the Madras Branch, at an early age. The sad event occurred on the 17th of January last. Notwithstanding his Western education, he had, we are told, a strong love for India and a great respect for true Aryan habits. He might have proved serviceable to his country, had the cruel hand of death spared him a few years more.

**REPORT OF THE EIGHTH ANNIVERSARY  
OF THE  
THEOSOPHICAL SOCIETY.**

AT which were present Delegates from Branches in America, England, Ceylon and all parts of India from North to South and East to West.

Price four annas per copy; postage and packing charges:—India, one anna; Ceylon, three annas; all other Foreign countries, four annas.

Apply, with remittance, to the Manager of the THEOSOPHIST, Adyar (Madras).

**ESOTERIC BUDDHISM.  
(CHEAP EDITION—PRICE RUPEES THREE.)**

THE Manager of the *Theosophist* has received a supply of the paper-cover edition of Mr. Sinnett's *Esoteric Buddhism*. Like the *Occult World*, this work also, in its second edition, has been made cheap for the convenience of the Indian Subscribers.

**THE OCCULT WORLD.**

THE Manager of the *Theosophist* gives notice that only twenty copies of the cheap edition of this work are now in stock. After that supply is exhausted, the book will be out of print in its cheap form. Only those will be able to procure copies, who can afford to pay high price.

**TELUGU AND TAMIL PRIMERS.**

BY

**DIWAN BAHADUR R. RAGHOONATH ROW.**

DIWAN Bahadur R. Raghoonath Row, President of the Madras T. S., has prepared Tamil and Telugu primers for the use of the students of the Theosophical Sanskrit schools. They have been approved by the Sanskrit school committee of the Madras Theosophical Society and are used as Text Books by them for their schools. The primers will be found extremely useful for boys who have to begin a study of the Sanskrit and Vernacular languages simultaneously. Price, 6 pies per copy, exclusive of Postage. Apply to Kailasam Brothers, Popham's Broadway, Madras, who always keep a stock of Theosophical Publications on sale.

Sanscrit Primer No. II (in Sanskrit, Telugu and Tamil)—price As. 5 including postage and packing charges.

MESSRS. NICOLAS AND Co., have made a splendid photograph of a group comprising eighty-three Delegates attending the Eighth Anniversary celebration of the Theosophical Society, together with a view of the portico of the Adyar Head-quarters Building. Every portrait is excellent. Copies may be had at Rs 2-8 (6s) each, inclusive of packing and postage. Fellows of the Theosophical Society may also obtain cabinet size photos of Madame Blavatsky, Colonel Olcott and a group consisting of Madame Blavatsky, Messrs. Subba Row and Dharbagiri Nath at Rs 1-12 (4s) per copy, inclusive of packing and postage.

APPLY TO THE MANAGER OF THE *Theosophist*.

FIFTH EDITION, WITH AN ENGRAVED  
PORTRAIT OF THE AUTHOR.

**ISIS UNVEILED.**

A MASTER-KEY TO THE MYSTERIES OF ANCIENT SCIENCE AND THEOLOGY. By H. P. BLAVATSKY, Corresponding Secretary of the Theosophical Society. 2 vols., large royal 8vo., of about 1,400 pages, cloth extra, Rs. 25—reduced from Rs. 30.

*Opinions of Leading Journals.*

"This monumental work \*\*\*about everything relating to magic, mystery, witchcraft, religion, spiritualism, which would be valuable in an encyclopædia."—*North American Review*.

"It must be acknowledged that she is a remarkable woman, who has read more, seen more, and thought more, than most wise men. Her work abounds in quotations from a dozen different languages, not for the purpose of a vain display of erudition, but to substantiate her peculiar views, \*\*\* her pages are garnished with foot notes establishing as her authorities some of the profoundest writers of the past. To a large class of readers, this remarkable work will prove of absorbing interest. \*\*\* Demands the earnest attention of thinkers, and merits an analytic reading."—*Boston Evening Transcript*.

"The appearance of erudition is stupendous. Reference to, and quotations from, the most unknown and obscure writers in all languages abound, interspersed with allusions to writers of the highest repute, which have evidently been more than skimmed through."—*N. Y. Independent*.

"An extremely readable and exhaustive essay upon the paramount importance of re-establishing the Hermetic Philosophy in a world which blindly believes that it has outgrown it."—*N. Y. World*.

"Most remarkable book of the season."—*Com. Advertiser*.

"To readers who have never made themselves acquainted with the literature of mysticism and alchemy, the volume will furnish the materials for an interesting study—a mine of curious information."—*Evening Post*.

"They give evidence of much and multifarious research on the part of the author, and contain a vast number of interesting stories. Persons fond of the marvellous will find in them an abundance of entertainment."—*N. Y. Sun*.

"A marvellous book both in matter and manner of treatment. Some idea may be formed of the rarity and extent of its contents when the index alone comprises fifty pages, and we venture nothing in saying that such an index of subjects was never before compiled by any human being. \* \* \* But the book is a curious one and will no doubt find its way into libraries because of the unique subject matter it contains, \* \* \* will certainly prove attractive to all who are interested in the history, theology and the mysteries of the ancient world."—*Daily Graphic*.

"The present work is the fruit of her remarkable course of education, and amply confirms her claims to the character of an adept in secret science, and even to the rank of a hierophant in the exposition of its mystic lore."—*N. Y. Tribune*.

"One who reads the book carefully throughout to know everything of the marvellous and mystical, except, perhaps, the passwords. 'Isis' will supplement the Anacalypsis. Whoever loves to read Godfrey Higgins will be delighted with Mme. Blavatsky. There is a great resemblance between their works. Both have tried hard to tell everything apocryphal and apocalyptic. It is easy to forecast the reception of this book. With its striking peculiarities, its audacity, its versatility, and the prodigious variety of subjects which it notices and handles, it is one of the remarkable productions of the century."—*N. Y. Herald*.

"In nothing does Madame Blavatsky show her wonderful ability in a more marked degree than in her use of the English language. Her style is singularly vigorous, perspicuous and piquant. Her scholarship is varied and comprehensive. In metaphysical keenness she shows a power that few writers of our day have attained to. We doubt if Mrs. Lewes (George Elliot), can be called her equal in this respect. Her critical insight is also most remarkable. It seems more like an intuition than the result of study, and yet that she has been a profound student the authorities referred to in her work abundantly show. From the specimens we have seen of its pages we can vouch for its absorbing interest, and for the strength and fascination of the style."—*Epes Sargeant*.

"We do not hesitate to express the opinion that she has made a gallant and measurably successful effort at elucidating the most absorbing and important problems life can furnish. If the veil of Isis has not indeed been swept away, at least so many of the folds have been removed that we are afforded a partial insight into the mysteries and splendors of the Goddess. If our author has not achieved an unquestioned triumph, where such a result would have been specially gratifying, she has at least the consolation of knowing that she has surpassed all her predecessors in a task, complete failure to achieve which would have involved no humiliation. She has produced a unique work, and it will become a classic."—*Sacramento Record-Union*.

**"MY VISIT TO STYRIA,"**

HAVING proved such a success, it is Miss Caroline Corner's intention to publish another Volume of her late Visit to RHINELAND, the proceeds of which (expenses cleared) are to go towards giving a number of the poorest little Children of the East End of London a treat at Christmas, by way of a good Tea, Amusement, and a Christmas Tree, from which prizes of useful articles of warm clothing may be drawn.

Miss Caroline Corner earnestly requests the kind co-operation of friends and other sympathetic and benevolent persons, by means of Subscriptions for the book "*Rhineland*" (published at 1s. 6d. and 2s. 6d. per copy), or by Donations of Clothes for the little ones, or both.

Address Miss Caroline Corner, 3, St. Thomas' Square Hackney, London N. E., England.

# "THE SECRET DOCTRINE,"

A NEW VERSION OF "ISIS UNVEILED."

WITH A NEW ARRANGEMENT OF THE MATTER, LARGE AND IMPORTANT ADDITIONS, AND COPIOUS NOTES AND COMMENTARIES,

BY

H. P. BLAVATSKY,

*Corresponding Secretary of the Theosophical Society.*

ASSISTED BY

T. SUBBA ROW GARU, B. A., B. L., F. T. S.,

*Councillor of the Theosophical Society and Secretary of its Madras Branch.*

## PUBLISHER'S NOTICE.

NUMEROUS and urgent requests have come from all parts of India, to adopt some plan for bringing the matter contained in "Isis Unveiled," within the reach of those who could not afford to purchase so expensive a work at one time. On the other hand, many, finding the outlines of the doctrine given too hazy, clamoured for "more light," and necessarily misunderstanding the teaching, have erroneously supposed it to be contradictory to later revelations, which in not a few cases, have been entirely misconceived. The author, therefore, under the advice of friends, proposes to issue the work in a better and clearer form, in monthly parts. All that is important in "Isis" for a thorough comprehension of the occult and other philosophical subjects treated of, will be retained, but with such a rearrangement of the text as to group together as closely as possible the materials relating to any given subject. Thus will be avoided needless repetitions, and the scattering of materials of a cognate character throughout the two volumes. Much additional information upon occult subjects, which it was not desirable to put before the public at the first appearance of the work, but for which the way has been prepared by the intervening eight years, and especially by the publication of "The Occult World" and "Esoteric Buddhism" and other Theosophical works, will now be given. Hints will also be found throwing light on many

of the hitherto misunderstood teachings found in the said works. A complete Index and a Table of Contents will be compiled. It is intended that each Part shall comprise seventy-seven pages in Royal 8vo. (or twenty-five pages more than every 24th part of the original work,) to be printed on good paper and in clear type, and be completed in about two years. The rates of subscription to be as follow:—

	Indian.	Foreign countries.
	Rs.	£ s.
If paid Monthly ...	1 4 0	0 3
„ „ Quarterly ...	3 0 0	0 8
„ „ Half yearly ..	6 0 0	0 16
„ „ Yearly ...	10 0 0	1 7

Subscriptions payable invariably in advance, and no name entered on the list nor Part forwarded until the money is in hand. All applications to be made and sums remitted to the "Manager, Theosophist Office, Adyar (Madras), India;" at which office money orders must be made payable and always in his favour. In making remittances it should be noted that no other amount should on any account be included in the drafts or money orders, except that intended for this work. Should nothing unforeseen happen, and should a sufficient number of subscribers be registered, the first Part will be issued on June 15th.

## THE DISCOVERY OF ANCIENT FABRICS.

To those who boast too freely of our modern civilization, its arts, sciences and complicated machinery, it may be somewhat humiliating to hear of the discovery by our modern Egyptologists and Assyriologists of textures made thousands of years before our era,—whose “incomparable beauty leaves far behind it that of the most delicate texture so proudly displayed in our international exhibitions.” Just now, one may see in Vienna the archaic fabrics worn by the ancient Greeks and Romans. They were found in Egypt by Mr. Groff. Herr Georg Ebbes, the well-known Egyptologist, has an article in *Allgem Zeitung* about that interesting discovery. Among other textures, he mentions beautiful linen cloth woven by a process hitherto claimed as one of the latest and the most perfect. The Roman dignitary of the fifth century, B. C., wore a tunic made out of such linen—moreover Groff discovered in the same lot, a real, so called “Gobelin web.” And this shows, as several papers now remark, that the well known “*tapisserie de haute lisse*,” as the Gobelin work is called in France, the precious tapestry that decorated only the abodes of kings—is no invention of the French artists at all. It came to Europe, as nearly every other art did, from the East, imported probably by the Crusaders of the twelfth century. Mr. Ebbes concludes his paper in the following words:—

Repeated in various quarters, we often hear an opinion expressed, to the effect that our daily life differs entirely at the bottom of it, from that of the ancients. Yet, it is most worthy of note that the deeper I dive into the long bygone lives of the latter, the more the vestiges of the life of the ancients appear before me, the clearer becomes in me the conviction that even in its smallest details their interior as much as their exterior life differed in no ways from our own!

## IS BUDDHISM PESSIMISTIC ?

MR. F. L. OSWALD writes in an American Contemporary that Buddhism is pessimistic. He says:—

The hope of earthly happiness, according to the theory of Buddha Sakyamuni, is a chimera, a phantom that lures us from error to error through endless toils, and robs even the grave of its peace; for he who dies uncured of his delusion must return to earth, and continue the hopeless chase in another life. Quietism—i. e., annihilation of desire—is the only hope of emancipation; and that goal of peace can be reached only by total abstinence from earthly pleasures. All worldly blessings are curses in disguise, and he alone who has lifted the veil of that disguise has entered the path of salvation. To him, self-denial becomes the highest wisdom, and self-abhorrence the supreme virtue. He must court sorrow and disappointment as others woo the smiles of fortune, he must avoid

everything that could reconcile him to life and lure him back to the delusions of worldly pursuits. . . . The highest goal of the future is the Nirvana, peace and absolute deliverance from the vexations of earthly desires. All human knowledge is vain, the great object of life being the suppression of our natural instincts. Self-affliction is the only rational pursuit. The love of wealth is folly: the slaves of covetousness forge fetters for their own feet. True believers should seek temporal peace by curtailing their wants and cultivating the virtue of indifference to the vicissitudes of fortune. He who strives after higher merit must renounce all earthly possessions, live on alms, dress in rags, shave his head, and abstain from marriage, merry-makings, and the use of animal food. He must have no fixed habitation, and must even avoid to sleep twice under the same tree, lest an undue affection for any earthly object should hinder his spirit in the progress of its emancipation from the vanities of life!

...But this quietude of the sunset hour Buddha Sakyamuni attempts to enforce in the morning of life, his disciples are to seek refuge in sleep before their day's work is done, he gathers dry leaves to bury the budding flower. . . . Pessimism is precocious senility. . . . Young pessimists resemble the fruits that rot before they ripen. Monastic tendencies imply an abnormal condition of the human mind. Only a defeated warrior, a man without hope and without courage, can find solace in contemplating the approach of a premature night.

Buddhism and its daughter-creed can flourish only in a sickly soil. . . . Buddhism has been expelled from the homes of the Aryan races and relegated to the moral pest-house of the South Mongol empires. . . . Disease, crushing misfortune, mental derangement, whatever disqualifies a man for the healthy business of life, qualifies him for the reception of anti-natural dogmas. . . .

We regret to notice that the erudite writer has based his conclusions upon two erroneous premises. In the first place, he mistakes popular Buddhism for the teachings of Gautama Buddha, and, in the second, he has misconceived even popular Buddhism. Even Rhys Davids, who treats of the Southern Doctrine which differs widely from that of the Northern Church, has not dared to arrive at such preposterous conclusions. The learned critic has evidently not paid that attention to the Buddhist literature which it deserves. Otherwise he would not have fallen into the error of saying that the Aryans did not tolerate Buddhism on account of its ascetic practices, which he is pleased to place in the category of pessimistic dogmas. The truth is that such practices were in existence long before the Prince of Kapilavastu unfurled the banner of his Religion, and they are still maintained and are even strongly recommended by those sects which are the declared enemies of Buddhism. The antagonism to that faith in this country is therefore to be traced to some other causes. Moreover, as every reader of the *Light of Asia* knows, it was Gautama himself who denounced in no measured terms such foolish physical tortures as those of *Hatha Yoga*. It is therefore amusing to see how certain writers and thinkers will presume to decide questions they have not thoroughly studied. So much for popular *Buddhism*. As regards Gautama Buddha's real teachings, every occult student is well aware that they are identical with those of Srinat Sankaracharya, who is held in the highest estimation and reverence by three-fourths, if not

more, of the people of India. Every Vedantin, be he of whatsoever sect, admits the philosophical doctrine of *Maya*—illusion. A misconception of the true significance of this doctrine leads a superficial and careless student to put forth such inferences as we have now to notice. The learned critic supposes that since all this world is called an illusion, therefore the followers of this teaching are required to torture their physical bodies.

The philosophical Buddhists are well aware that a healthy body and a healthy mind are the *sine qua non* for a student of the esoteric science, one of whose most prominent and illustrious expounders was Gautama Buddha as the student of the historical development of occultism well knows. As regards the assertion that only those, who do not prosper in the world, turn their attention to this Philosophy, we simply deny the assertion.

The other misconceptions of the teaching of the Philosophy arise out of a misunderstanding of the meaning of *Nirvana*. It is *not* annihilation, as commonly understood. The highest ideal of a *true* Buddhist is to rise up to perfection and thus to realise the perfection of spiritual wisdom. He recognises that the phenomenal is all transient, misleading, and that therefore if he wishes to be "immortal" he must enter the world of *noumena*. He knows the dangers of being connected with an objective life which must end in dissolution, and to save himself from such a catastrophe he draws himself out of the transitory world and puts himself *en rapport* with the one absolute reality which is Bodha as Sankara said. This surely cannot be accomplished by *mere* physical abstinence.

The relation that the *inner* man bears to the inner world of noumena is intimately connected with his own subjective self, and therefore he who would live in a higher sphere after the dissolution of the physical body, must so change his surviving inner nature as to befit it to the plane of existence it has to enter upon. It will thus be seen that there is no room for pessimism in the Philosophy of Gautama Buddha. It may perhaps be urged that that Philosophy is not so understood by the generality of the Buddhists. But that is no argument against the original teaching in its purity. When steam engines and telegraphs were first introduced here, there were some unlettered, ignorant people who looked upon the machines as so many goddesses. Are we on that account to denounce, without a proper investigation, the inventors of these useful machines? Even "*The Light of Asia*," which lays no pretensions to being a complete exposition of the Esoteric Philosophy, as taught by Gautama Buddha, will yield the meaning put forth in these remarks. The student will, no doubt, find corroborative facts and arguments were he to turn to the philosophical literature on the subject. The learned critic moreover falls into an unpardonable error when he says Buddhism is confined to the "sickly" soil, for some of the healthiest and the most vigorous minds of Europe and America have accepted Buddhism as a "perfect system of thought and rule of life."

BHARGAVA SARMA.

## THE HEBREW LETTER NUN ; OR 13.

ESSAY II.

(BY ELIPHAS LEVI.)

We have come to Number 13, the fatal number, from the word *funus*, funeral. It is the sacred number of death.

Verily Death conquered at the Calvary has turned her sting against herself. *Ero mors tua O mors*—said the coming Messiah through the voice of a prophet of a long bygone day. Death "swallowing herself up in her vic-

tory." Death and Hell will be "cast into the lake of fire." Death—"the last enemy, that shall be destroyed." All these sentences belong to the apostles, for they and the prophets have announced the ultimate triumph of life. *Creavit Deus hominem inexternabilem.*

Parturition is death—hence the suffering. But that death is followed by birth. The child dies in its vegetative life and is born unto the human life; then he will die in the human (the embryonic life of the soul) to be reborn to a more perfect life of freedom and intelligence: thus dying or rather being reborn from one sphere into another from one planet or world into another planet or world. Every limited or conditioned life is a gestation, every death a parturition, the ascending periods of life succeeding each other like so many days.\* Every night we fall asleep to awake the next morning. The divine sun gets never old, and the soul of the just is made in the image and likeness of *that* sun.†

The absolute existence of Life is the formal negation of Death. When the Deity said to man: "Thou shalt surely die," he threatened him only with the oblivion of life and the terrors of the unknown. The dreadful face of Death is the mask of the abyss, but the abyss is—life eternal.

Man is immortal, and *men* pass like shadows; they wither like the hay on the fields, but the shadow itself never passes away; it is only *shadows* that disappear: hay neither dies, nor does it dry up; it is only dry grasses that wither out and die. A rose is plucked, there are other roses on the rose-bush. The rose-bush, or rather a rose-bush, withers and forthwith the soil produces other rose-bushes. When winter has caused all the flowers to disappear from one hemisphere, it is then on the other that the presiding genius of the flowers reappears; for flowers are immortal in their types, and immortal also in their brilliant realisation that makes them, emigrating from place to place, to go like the lark, around the world. It is because types are always alive that they are for ever absorbing and rejecting new substances. Withered roses are no longer roses. They are, if I may be permitted this expression, the dung of the rose, which ever lives.

What is here said of the corpses of roses applies to the corpse of every thing else, thus affording us the standard value of the cultus of relics. One can preserve a dried rose—the remembrance of a friend—it matters little so long as it is well understood that the dried flower *per se* is nothing.

Do you know why honours are rendered to the dead? Why one takes off his hat before a corpse that passes? It is the salutation made to the mould of the immortal Adam, to the human figure still impressed upon that clay that will disintegrate. That sacred shape is the great *pentacle* of life, and we bow to immortality in death.

Would we live for ever? Let us realise then within ourselves the immortal type, let us shape our soul *in the image of the true human figure*.

When the bronzo of the sculptor or rather of the caster fails to fill up the prepared mould, producing instead of a statue a formless ingot to be thrown back into the metal in fusion... what happens? Nature is the

\*Read *Esoteric Buddhism* and compare both the phraseology used and the doctrines taught.—Ed.

†The "central sun" whence emanates and whither returns *intelligence* scattered throughout the universe. It is the one eternal universal focus, the central point "which is everywhere and nowhere" outbreathing and inbreathing its ever radiating rays. The "Soul of the just" is Avalokiteswara "made in the image and likeness" of Adi Buddha, Parabrahm.—Ed.

caster and her furnace is never extinguished. It is this, the true fire of hell.\*

God accomplishes creation through types that his will maintains after his intelligence has, so to say, imprinted them in the (astral) Light. Life, working out the universal (primordial) substance, pushes it into such moulds, where she specifies herself in accordance with the distribution of forces which the independent but well regulated will of the Creator can alone produce, and which cannot be the result of chance, the latter having never had any existence. God produces the cause and Nature works out the effects. God creates the types and Nature works out the individuals. Hence our Masters say that God created Adam immortal; the Adam Kadmon, the primitive Adam, the Microprosopus whose arms extend from the West to the East, whose brow reaches the zenith, and whose heel casts a shadow on the disk of the sun. It is the type of humanity glorious and all powerful: ever immortal, sin notwithstanding, but whose scattered limbs have fallen under the shadow of death, because feminine weakness prompted by the astral serpent caused it to face the Science of good and evil. This sin was foreseen by the Creator, whose will it was that the earth should be fecundated with the putrefaction of the peelings (shells) and the manure made of the royal corpses—of those seven Kings who could not live for the reason that they had become antagonistic to each other—three on one side and four on the other, instead of placing one in the middle, thus constituting a perfect balance.....†

What is the shape or form of a beautiful soul? Are there ugly souls? No. The soul is beautiful from its birth and does not admit of any defects; a defective soul cannot yet be called properly a soul: † it is an elemental spirit, a spiritual larva. Every defect is a wound through which life must escape. Thus there are no other than beautiful souls. This word alone ought to show it immortal as well as beautiful.

Beauty is the radiance of the true; and truth is eternal. Beauty formless and changeless is the light of the eternity. To believe in beautiful souls is to admit eternal life.

There are two kinds of defective souls; the imperfect and the mutilated. The former are guilty only when

\*Here the annihilation of "personality" is clearly hinted at, though the French Kabalist would have never dreamt, nor dared to declare the "bitter" truth as plainly as we are doing. Had we from the beginning assumed the policy of pandering to people's prejudices and undeveloped ideas and given the name of "God" to the spiritual side of nature and of Creator to its physical potencies and called Spirit—Soul and vice versa, as necessary for concealing the unwelcome features of the doctrines taught—we would have had nearly all our present enemies on our side. Honesty, however, does not seem always the best policy,—not in the teaching of Truth, at any rate. We know of Western Occultists—among them pupils of Eliphas Levi—who oppose the occult doctrines of the East as outlined in *Esoteric Buddhism* imagining them opposed to the Kabalistic doctrines and far more materialistic, atheistic and unscientific than those of their masters—the Judeo-Christian Kabalists. Let them understand well the real meaning of the comparison made by Eliphas Levi, and see whether it is not in other words a perfect corroboration of the Eastern doctrine of the "survival of the fittest" in its application to the human personal soul. The "furnace of Naturo" is the eighth sphere. When man fails to mould his soul "in the image and likeness of the great Adam"—we say of—Buddha, Krishna, or Christ (according to our respective creeds)—he is "a failure of nature" and nature has to remould the cast before it can launch it again on the shoreless Ocean of Immortality. "Statues—die," in the words of E. L.—the metal of which they are cast "the perfect statue" never dies. It is a pity that Nature should not have consulted the sentimental prejudices of some people, and that so many of her great secrets and facts are so rudely opposed to human fictions.—Ed.

† Easy enough to perceive that E. L. hints at the 7 principles of man, but very difficult for one, unacquainted with Occult terminology, to make out his meaning. The "middle" King is the body of Desire, the 4th principle, *Kama-rupa*. Had "Adam" or man, equilibrated the two triads by putting that body or his desires aside and thus triumphed over the evil counsel of his lower, animal triad, he would have caused the death of all except the 7th. This has reference to the psycho-physiological "mystery of the birth, life and death" of the 1st race in this Round.—Ed.

‡ And since it is a trite axiom—"like cause, like results," then it necessarily follows that every bad result or effect has to be traced to the producer of the first cause—in other words to the "personal" god. We would rather decline for our deity such an imperfect Being.—Ed.

they neglect to perfect themselves; the latter those who have wounded themselves with their sins.

Nothing imperfect can enter eternal life; nothing mutilated can pretend to the eternal reign of life and beauty.

The means of the imperfect and the mutilated are—labour and penance—penance is the orthodoxy of souls.

Labour and penance cannot fail spirits so long as they are alive, it matters not however much their surroundings may change, providence is everywhere the same for them.

There are hospitals in heaven for sick souls: it is what we (the Roman Catholics) call *purgatory*. The latter has been compared to fire, because fire purifies metal. This has to be taken figuratively. Who can believe that men can be made better by being roasted over a small fire?

Life is the progressive motion of Being. Being is being analogous to being, conformable to being.

The same of Life. Forms are the phenomenal appearances of life. Life is progressive—hence the ever changing forms.

No form, however, is ever destroyed; if the imprints are effaced, their types are immutable.

Behold that lovely fair-haired child whether he lives or dies, seven years hence he will be no more. The seven years old boy will have disappeared making room for the adolescent of 14 springs. If you would see again the child, look for him elsewhere; perchance you may find a second imprint of the type.

It is precisely thus that we shall or shall not see those who have left us for a higher life.

Our souls are made for a triple life—physical, metaphysical and divine; respectively known to the Kabalists under three names: *Nephesch*, *Ruach*, and *Neschumah*; or Psyche, the Nous and the Logos, as the Alexandrian philosophers termed them.

It is through Psyche that we have a hold on our physical body; through the means of that plastic mediator which, properly speaking, is neither body, nor spirit, but serves as an instrument for both.\*

What you call death is the sudden rupture of the exterior envelope and the enfranchisement of Psyche clad in her mediator, † or her fluidic body. Spirit (*Ruach*) and Soul (*Mens*) know nothing of death and can conceive of it but through Psyche. These two are so indifferent to that phenomenon, that people often die without being in the least aware of it, and that amidst the joys of real life, the just man is under the impression that the bliss that has just commenced is but the continuation, the remembrance of eternal felicity.

Death is brutal and even violent for those who have lived but a physical, sensual life. In dying they imagine that every thing is perishing and the world ends together with them. They find themselves suddenly plunged in a palpable and, so to say, fluidic darkness that can be compared to liquid mud.

*In fixis sum, in limbo profundis et non est substantia.* Such dead can live neither in the earth's atmosphere nor higher. Their unenlightened imagination conceives horrid nightmares, and there are such, who, to escape the unbearable terror, have fled back, and taking refuge in their own corpses, have reanimated them in the tomb.

These wretched souls are drawn, and fly in despair, toward their second death. Slowly they weaken and sink, like a wounded man who is losing his life blood drop by drop, and then lose all consciousness and remembrance to pass into the state of *larvae*, *striges* and *gools*, often of vampires, according to the vicissitudes and the mysteries of an unexplained embryogony.

\*A sheath as it is called in Sanskrit—and in the Vedanta philosophy *Kama rupa* is the sheath of *Mayavi rupa*, and that also of the body for the realization of its desires.—Ed.

†*Mayavi rupa*, the objective portion of it.—Ed.

Nature destroys all that she does not perfect. The corpse is a horror to life, hence putrefaction sweeps it out of sight. Dead souls have also their decay, and hell is a tomb wherein reigns the eternal worm.

But even decay can never be eternal, for it is a *palingenetical* labour. Dried leaves falling from the tree to the ground decay and manure the earth. The same with these abortions of human life: they serve to nourish and manure the field of universal life. Those creatures, that I have designated under the name of larvæ, ghouls and vampires, are the venomous mushrooms, the putrefied *cuticles* of life. For human souls are unable to live isolated from others, and so long as they live they attach themselves to each other: the souls of the just—to the good, those of the sinners to the wicked souls.

This explains the phenomena of obsession and possession. The wicked spirits who possess themselves of people are souls imperfectly dead seeking death once more, and aspiring to find in the agony of a second death a new impulse towards life.

It is out of respect for the human figure that we must bury our dead; and it is out of respect for the soul-form that hell must cover up and hide its corruption. But where is hell? Everywhere and nowhere. It is not a locality but a state. It is the latent and hazy state of souls that are disintegrating. This hell is silent and shut in like a tomb.\* Weeping and the gnashing of teeth precede it, but within it—there are no tears, as nothing lives in it save Death; and death is tearless for it is pitiless.

We know that death is composed of a series of successive deaths.†

God creates eternally. Creation is always beginning, and always ending in a relative sense. And as creation is eternal in all that is created, we must be also eternal... Adam, the protoplast, that is to say, humanity is the verb, the only son of God‡ of whom it is said—*ex-utero ante luciferum generi*. This explains the pre-existence of souls. If we have sinned in Adam, it must have been because we were existing in him; for to sin is to act, and to act it is absolutely necessary to exist.

Whom does God address, when he is made to say (in Latin) *faciamus hominem*. He speaks to man himself, to the man who is pre-existing in his creative thought, and who clamours for life. Why have we no recollection of our anterior lives? It is because we have hitherto failed to realise in ourselves the unity of the remembrance. But when that remembrance once returns, it will be eternal: || *in memoris eterno erit justus*.

To die, is to awake from a dream, the temporary dream that ushers us into life real and eternal, where there is no more room for dreams, for in the eternity there exists neither present nor past, neither a "before" nor an "after." No; for eternity cannot be divided, and a portion of the eternity shall be still eternity.

So that after death we shall find ourselves alive without beginning, without end. Without beginning, but without an origin. Eternal creatures of an eternal Creator, living blossoms of the immutable will, ever re-born and dying but once—of penal death.....

Second death is not, properly speaking, a penal death, but a fatal death necessitated by the voluntary negation of life. Suicide is a crime but it is not pain. That

\* And this is the Eighth sphere.—Ed.

† The successive stages through which a doomed soul passes to final annihilation are here referred to. Some of these stages are undergone on this earth, and then the disintegrating entity is drawn into the attraction of the eighth sphere, and there remoulded to start on another journey through life with a renewed impulse. The stages above referred to are, according to the teachings of our philosophy, sixteen in number—the last two being, however, the different aspects of one and the same condition, the final extinction and re-formation.—Ed.

‡ On this, our Earth, of course.—Ed.

§ Yes; on the day of Nirvanic Resurrection, See *Esoteric Bud-dhism*.—Ed.

which constitutes the grandeur of this crime is that man changes the penalty that saves for a penalty that kills. He turns into poison the dose destined to cure him and breaks in the hands of Providence the saving rope of his soul.

If man after death re-entered eternity in an absolute way, he would be absorbed by it. Between the finite and the infinite there is always an infinite separation. Man carries away into eternity his notions of time, which to him is but a relative idea, but he preserves the consciousness of a divine life for which there exists no time. Man has to live ages upon ages, but these ages, grouped together, will still present durations with beginning as with end, measured by remembrances and terminated by forgettings.

An absolute consciousness of Eternity would be the annihilation of all created personality. Thus man will never cease to dream of time, though knowing and realising more and more that in supreme reality there can exist no time.

Creation is a circle which begins and ends at all the points of the circumference, but which, in truth, does not begin and could not end since it is the product of eternal life, MAN-GOD. This is the last word of Humanity. The finite in eternal communication with the Infinite is like our eye—with Light and Space.

#### THE WAYS OF PROVIDENCE.

A LONG gushing article appears in a religious Italian paper signed by a theological student. He was going by rail to hold his examination. Getting giddy, while standing on the platform, he lost his balance and fell under the wheels of an approaching engine. Crying out loudly he appealed in his agony to the Virgin "our blessed Lady," lost his senses, and instead of awaking "a glorified, martyred soul," he arose unhurt and none the worse for the little fit of excitement. To recognise the "timely interference of Providence," he made a vow to devote his life to selling, and otherwise advertising the particular Madonna on whose name he had called for to intercede on his behalf with the "*Divina Providenza*."

In another paper we read:—

A terrible catastrophe is reported from Illinois. The Convent of the Immaculate Conception caught fire. Thirty inmates perished, including the lady superior and four sisters, the rest being mostly pupils.

The poor victims must have been terrible sinners, or else why should they not also have called upon the blessed Virgin? It is more than probable that being R. Catholics—they did. What is the explanation given? Of course none, for only such solitary cases of providential interference as the one above, are given, while thousands of other cases, where it has not pleased Providence to help poor wretches in danger, are never noticed.

(Continued from the last Number.)

#### LIVING VAMPIRES AND VAMPIRISM OF THE GRAVE IN OUR SOCIAL INSTITUTIONS.

BY DR. FORTIN, PRESIDENT, THEOSOPHICAL SOCIETY OF THE OCCULTISTS OF FRANCE.

##### Second Observation.

In 1863 there was at Paris in the rue Rochechouart, a woman, whose old age was a mystery. Every one, who knew her, noticed, that she always had some young girl with her as "*Demoiselle de compagnie*," and that she changed those companions very often. Those girls were seen to enter into the old lady's service in perfect health, but soon they showed signs of withering, which always affected their health and often caused their death. When the parents complained, they were quieted by some presents or by money.

In spite of all this generosity, public opinion began to speak, and the old lady was said to eat the girls to prolong her own life. She was declared to be a veritable vampire. The last young girl in her service was the

daughter of a coachman. The father seeing his daughter losing her health, and having heard the accounts of the fate of the other girls which preceded her in that service, complained to the "Commissaire de Police."

An examination was held, the physicians gave evidence that it would be dangerous to let children or young girls stay with the old lady. She was therefore fined a sum of money as indemnity to the coachman's daughter and then died a month afterwards.

Shall we draw the conclusion from these two observations that the Vampirism is a law of nature? Man must learn to assist his evolution by science.\*

The subjects which can be affected by vampirism are of different classes. The lowest order (sorcerers and pythonesses), when they are left to themselves without guidance, may fall in a state of catalepsy, whose special character is its eminent resemblance to death. Buried in such a state of death-like trance, the phenomenon of "dédoublément" (or division of two sets of principles) results. The principles which constitute the animal soul (Kama Rupa)† impart to the vampire two characteristics. He will go to where he is attracted and feast on the blood of his friends or his parents, to sustain the vital principle of his body, which is imprisoned in the grave.

There are also vampires which form a class of elementaries. They are the assistants of men in the performance of black magic. To speak in general terms;—all the blood which is spilt can attract those phantoms.

This is a method employed by necromancers to evoke the dead.‡ Sacrifices made by the shedding of the blood of animals are a part of the ceremonies of black magic. In olden times sacrifices were made in the regular places of worship according to prescribed religious rites, and the selection of animals was an exact science.

\* At the Court of King David there were enough of young girls. Nevertheless the Bible says: "The King, having grown old and unable to warm himself, search was made through all the tribes for a young virgin. Abissay-Seunamite was selected as able to furnish the required physiological conditions, which were then known. She was taken to the King, 'who know her not.' She never left the King and slept on David's bosom." We cannot explain this fact without admitting that this was an act of vampirism by which the old King prolonged his life.

† That which remains, after the separation of the higher principles from the lower ones by the process of dying is complete, consists of the fourth principle and the lower parts of the fifth. This—the animal soul—has still a more or less indistinct consciousness of its own, and its actions resemble those of a person walking in his sleep. It has also a remnant of will, in a more or less latent condition. But as the higher principles have left this, will is no more guided by any moral considerations and cannot exert itself in any other way than by following its attractions. Its lower passions, animal desires and material attractions, still remain, and in proportion as they have been more or less developed, nursed or fortified, during earth life, in the same proportion will they act more or less powerfully after the death of the physical body. Nothing likes to starve:—each body as well as each principle has a powerful attraction and craving for those elements which are necessary for its subsistence. The principles of lust, gluttony, envy, avarice, revenge, intemperance, etc., will rush blindly to the placeto which they are attracted and where their craving can be temporarily gratified;—either directly as in the case of vampires, by imbibing the emanations of fresh blood, or indirectly by establishing magnetic relations with sensitive persons (mediums), whose inclinations correspond with their own.

‡ If there is still a magnetic relation existing between the vampire (elementary) and its buried physical body, it will return to the grave. If there is no such relation, it will follow other attractions.

It craves for a body, and if it cannot find a human body, it may be attracted to that of an animal. The gospel account of the swine into which Jesus drove the "evil spirits" may be a fable in its historical application, but it is a truth, not only a possibility, with reference to many such parallel cases.—*Trans.*

‡ The physicians at Paris prescribe at present fresh blood to cure the anamic conditions of chlorosis and other cases of loss of power. It is a strange sight to witness every day the rush of a great number of people for the slaughter houses, where young women and girls drink the warm blood of butchered animals. It is all the rage, it is the fashion. Nevertheless it is certain that the blood in all its parts does not assimilate with the human system. It is difficult to digest and produces horrible night-mares, but it is the fashion.

We hope that Science, which is ignorant of the effects of blood-drinking, will soon cease to advise people to drink the blood of animals.

All through antiquity science and the greatest legislators have prohibited the drinking of blood on account of its pernicious consequences. I have had a young lady under treatment, who became insane in consequence of visions which horrified her. Having drunk blood on three

Human sacrifices were of two orders, either voluntary and by consent of the victim, or involuntary, when they attempted to resist.

At Babylon, where compulsory human sacrifices were a national institution, where black magic was taught like any other official science, those practices attracted bad influences, which soon transformed that city of wonders into a fated place. Thenceforward Babylon was doomed to destruction.

Here we see the action of the inexorable law. These sacrilegious immolations were a double crime. First the act in itself whose consequences react upon its authors in life and in death, and next as being an outrage of the divine laws.

A voluntary human sacrifice is a human holocaust. Man may give his life by devoting himself to what he believes to be useful to humanity, or it may be demanded by our social institutions. There is a holocaust. The Druids sacrificed virgins in the island of Sayne, because those virgin priestesses of high seership by spilling their blood gave divine revelations for the salvation of their country. This means the collectivity; the mystery of blood, the mystery of revelation. This is the science of the Druids.

The modern world, being unable to grasp the spirit of antiquity, will say that nothing was found. This is an error. An evolution has been accomplished, a halting place on the grand route of humanity has been reached. Gaul has become France. None can avoid the law of transformation. Stability would be death. Modern science seems to become more and more neglectful as to the world of causes and the principles of transcendental metaphysics. Our highest scientific authorities study Matter in its various states, to utilize its forces for the benefit of man. Will this laudable object be accomplished, and do the results justify the efforts used to obtain them?

Is the individual more happy now? Is the family better situated? I leave others to answer these questions.\* It seems to me that modern science is going in an unfortunate direction. While she denies the vampirism of the graves which sucks the blood of the living, she organizes an official vampirism;—a vampirism of sentiments, a vampirism of physical forces, and a vampirism of the grave. Modern life has created a social condition, in which solitude, so salutary to spiritual meditation, cannot be realized; it is a human whirlpool to which vampirism has become allured.

Woe to the people of Europe, who could not find another method of educating and saving their children (the Future) than by shutting them up in colleges and

occasions, she saw after the third time enraged oxen and sheep rush upon her. No more pitiful sight could be seen than to behold this poor young lady. Two more such cases were mentioned to me by a friend, a physician. From these observations we must conclude that blood can produce dangerous results, especially when the patients have the gift of clairvoyance. But in all cases we ought to desist from drinking it.

I know an executioner at Alençon (Département de l'Orne), who was sick before each execution. He saw those phantoms throwing themselves upon the blood of the guillotine, and what the most terrible thing was, that amongst them he recognised his deceased friends and parents. I have attempted to obtain information amongst the butchers. Amongst fifty whom I interrogated, four had been forced to quit their occupation of killing animals. They too saw those phantoms come to gorge themselves with blood.

Although the exuberant healthy appearance of butchers generally is said to be due to the vapors of blood, butchers usually do not reach an old age. Amongst the Israelites seers were so numerous that the legislators established the office of sacrificers in consequence.

We frequently meet with people today, who become ill at the sight of blood.

\* A new danger appears on the scientific horizon in the form of a proposed inoculation of carbon in the animals whose flesh is eaten. Official science shows that the virus may remain in a latent state for an unlimited time without apparently manifesting itself. We are therefore in danger of having poisoned meat to eat.

boarding schools which make them victims of vampirism\* by this monastic seclusion.

Nature punishes terribly those who transgress her laws. Science does not belong to any particular person, she is the transferrable inheritance of every member of the great human family. Occult Science beckons to us from the East to reascend her mountain-heights. There we shall find the corner stone upon which humanity will build her church, against which error and immobility will battle in vain.

### SCRAPS OF ANCIENT HISTORY OF THE ISLAND OF JAVA.

(A Popular Version from Notes furnished by  
BARON TENGNAGELL, F. T. S.)

WHEN the Emperor of Rome had been informed that a great island named Java was in existence, and that it was not yet inhabited, he selected several families, provided them with all the necessaries of life, and sent them to that country to colonise. But unfortunately the information which had been received by the Emperor from certain merchants was not correct. Java was not a desert island, but inhabited by giants and spirits, who, by the supernatural powers they possessed, caused in the course of two months the destruction of all the emigrants, with the exception of twenty families, who returned to Rome. The Emperor then went to consult some ancient sages, who advised him to use certain powerful charms. He followed this advice, and thanks to the efficacy of the means which he used, land and sea were overturned, the spirits and giants left, and the twenty families, going again to Java, were able to re-establish themselves.

For three hundred years did the inhabitants live without a king, but afterwards the Supreme God selected one who became very powerful. In about a century God gave a King to Wiratha, and three hundred years later created Kings for Negastina, Madaera and Dwara Wati. Still a hundred years later the Supreme Being appointed again another King, who came from Tocsen, and after this one died, there arrived at Java a colony of Brahmans and invented the twenty Akshara. (Letters of the Japanese alphabet.)

This legend, which is told with different variations, forms the beginning of the history of Java, while our chronological researches do not go back further than 78 years of our era. At that time arrived from Hindostan a saint named Adji Saka (a colony of Brahmans?) and invented the alphabet. Although it may be very difficult to say to which part of Hindostan this first colony belonged, still various indications made Mr. Crawford and A. V. Humboldt suppose that they arrived from the Koramandel Coast.

During the following four centuries numerous emigrations took place, and the power of the Hindus became stronger in that country. The first historic information to which science gives credence, dates from the year 525 of the Japanese era, 603 B. C. and not much is said about them. Adji Saka left to his successors a record of various prophecies concerning the future fate of Java and his works were known in Hindustan. It so happened that a prince named Kaesoemo Tjitro reigned at Nagastina, to whom the future of his kingdom had been predicted, and he made up his mind to send his son Savelo Djelo with a strong colony to Java. This prince established the kingdom of Mondhang Kamælan and acquired great power, because Arve Banda, who arrived in Java from the Molucca Islands with a powerful army,

\* The young ladies, shut up in boarding schools, are vampirising each other. An irrefutable proof of this assertion lies in the fact that during their enforced common seclusion, the menstrual flow, by which function the girl becomes a woman and a mother, does either not appear or is scanty, or ceases and reappears only during vacations when they are visiting their families, to disappear again when they return to school. Let legislators and mothers think over that question.

submitted himself to Tanelo Tjelo, who understood better than himself the works of Adji Saka, and also because some old prophecies promised the empire to an Indian prince. Under one of his successors the kingdom took the name of Brambanam.

After this civilisation and religion took a new start during the reign of Dewa Kaesoemo, who transferred the capital to Tjenggalo (where Soerebaja resided.) Under his successors the prosperity of the kingdom made a continual progress and reached its highest culmination during the reign of Pandji, whose name is even at this day greatly honored in the epic poems of the Javanese.

The kingdoms of Singo Sari (now Malang) and of Padjadjaran existed contemporaneously at Java; but their history is almost entirely lost. At the end of the year 1301 (Javanese era) the kingdom of Padjadjaran was destroyed and the empire of Madjapahit established. The ruins of the capital of the former name exist still in the Wiro-saba district, the residence of Soerabaja. The princes of Modjopahit extended their authority over the greatest part of Java, over almost the whole of the Sunda Islands, a part of the Moluccas, Borneo and even the Philippine Islands. At that time Java arrived at the summit of its prosperity, and it was especially during the reign of these princes when those magnificent Hindu temples were built, whose remains are still an object of admiration at Singo Sari, Brambanan, Djeng and especially at Boeroe-Boedoer.

But this noble civilisation, this eminent power, this sublime religion, were all destined to disappear; for in 1313 an Arab named Moelana Ibrahim began to preach the Koran, and in 1400 the Mohammedans having continued to preach the Koran with sword in hand, went to destroy the empire of Modjopahit and took possession of the capital. Soon Islamism began to exert its paralyzing influence on that civilisation, and destroyed not only its source, but caused it almost entirely to disappear. The advent of Islamism was the more to be regretted, as the religious sentiment became nearly extinct. The Javanese were made to pass for Mohammedans; but the great majority of them did neither know nor observe anything except a few ceremonies, intermingled with ancient Hindu rites. Their literature is dead, and what little of it is left, dates from the time before Islamism made its appearance. Sciences do not exist, and only a few exceptional chiefs are found, who have a faint idea of them.

The Europeans are Christians or pass for such, but if I can trust to my experience of twenty-five years, indifference in religious matters and materialism are the dominant convictions.

There is in Java like everywhere else a lot of Protestant missionaries, but the results which they obtain are so small, that it is not worth the while to mention them. The Javanese people are plunged in the deepest ignorance, and an immense labour will be necessary to bring this unfortunate people again up to the state of civilisation, which they had attained in the fourteenth century.

The Government looks upon these colonies only as being farms, which must be made to yield as much as possible. Such words as magnetism, spirituality, theosophy, etc., are almost unknown.

Such is the Java of to-day. May a better future be in store for it, and may the Orient again shed its brilliant light, for which all mankind is instinctively attracted again over this unfortunate country.

*Mythical account of the invention of letters by Adji Saka.*

Adji Saka stopped after his arrival at Java, for a while in the mountains of Khendang. He then departed for the kingdom of Mendhang, and before he left he gave orders to his servant Sembada, to wait for him and to keep his knife, and he especially forbade him to return this knife to any one but himself. He then took

with him his servant Dora, and Sombada remained alone in the mountains. When Adji Saka arrived at the frontier, he asked the villagers whether this was the Kingdom of Mendhang. They answered affirmatively, and wanted to know from whence he came? He then told them that he came from Hindostan, and that it was his intention to offer his services to the King of Mendhang. The villagers then said to him: "If you wish to enter the service of the King of Mendhang, you will expose yourself to the most imminent danger; because he is a man-eater, and for this reason a great many of the inhabitants have left; for every day the King commands a child to be brought to him, and every stranger that arrives has to deliver his children to the King." In spite of these terrible news he was not frightened, but, moreover, he transformed himself into a young and beautiful child, and went to the Patih (prime-minister) of Mendhang, and requested to be presented to the King to be devoured. The Patih was extremely surprised on hearing such a request, but finally consented and promised to him that if he should succeed to free the people from this tyrant, he would give him as much land as he could cover with the handkerchief which he wore on his head (daster).

When the King returned from his hunt, he was exceedingly pleased to see that Patih had procured for him such a beautiful child. He seized Adji Saka and put his head into his big mouth, but at that moment Adji Saka took again his natural form, seized the King's lower and upper jaws, and tore his mouth in two in such a manner that he immediately died. He then went to Patih and told him about the result of his mission. The Patih was very much astonished that such a weak child could kill such a monster, and desirous of rewarding him for the extraordinary service which he had rendered to the country, he said to him:

"The reward, which I promised to you, is entirely too small. Ask for two or three villages, and I will give them to you."

Adji Saka, instead of giving an answer, retook his natural form, took his handkerchief from his head and unfolded it, and when it was unfolded, it covered not only the whole kingdom of Mandhang, but the whole of Java. When the Patih saw what supernatural powers Adji Saka possessed, he did not dare to resist him and put him in possession of the whole kingdom of Mandhang, which during his reign enjoyed great prosperity.

Adji Saka then remembered that it had been his intention to make the alphabet, and needing his knife for that purpose he sent Dora to the mountains, to request Sombada to return it, without thinking of the former orders he had given to him. Sombada therefore refused to deliver up the knife, and as Dora insisted, they came to blows and killed each other. Adji Saka becoming suspicious at the prolonged absence of Dora, went himself to the mountain and was very sorry to find both of his servants dead. He then called to his mind the contradictory order which he had given to each of them, and regretted his own carelessness very much; but he consoled himself by thinking that such must have been the will of God, and that by this misfortune he had been permitted to make the twenty Javanese letters, by which he composed the following sentence: "I had two ambassadors, who fought and resisted. Their valor was equal, and they killed each other."

We have absolutely no information about the personality of Adji Saki, but if we remember that Saka is the Sanskrit name for each ruler with which a new era begins, and that this word usually designated Salivahana with which in the year 78 of the Christian era a new era commences; then Mr. Crawford and A. V. Humboldt may be right in their opinion that Adi or Adji (ruler) Saka does not signify a certain person, but only the era during which the first colonists arrived from Hindostan.

(To be continued.)

## CHASTITY.

BY AN AMERICAN BUDDHIST.

IDEAL woman is the most beautiful work of the evolution of forms (in our days she is very often only a beautiful work of art). A beautiful woman is the most attractive, charming, and lovely being that a man can imagine. I never saw a male being who could lay any claims to manly vigour, strength or courage, who was not an admirer of woman. Only a profligate, a coward or a sneak would hate women; a hero and a man admires woman and is admired by her.

Women's love belongs to a complete man. When she smiles on him his human nature becomes aroused, his animal desires like little children begin to clamour for bread, they do not want to be starved, they want to satisfy their hunger. His whole soul flies towards the lovely being, which attracts him with almost irresistible force, and if his higher principles, his divine spirit, is not powerful enough to restrain him, his soul follows the temptations of his physical body. Once again the animal nature has subdued the divine. Woman rejoices in her victory, and man is ashamed of his weakness; and instead of being representation of strength, he becomes an object of pity.

To be truly powerful a man must retain his power and never for a moment lose it. To lose it, is to surrender his divine nature to his animal nature; to restrain his desires and retain his power, is to assert his divine right, and to become more than a man—a god.

Eliphas Levi says: "To be an object of attraction for all women, you must desire none;"—and every one who has had a little experience of his own must know that he is right. Woman wants what she cannot get, and what she can get she does not want. Perhaps it is to the man endowed with spiritual power, that the Bible refers, when it says: "To him who has much, more shall be given, and from him who has little, that little shall be taken away."

To become perfect it is not required that we should be born without any animal desires. Such a person would not be much above an idiot; he would be rightly despised and laughed at by every true man and woman; but we must obtain the power to control our desires, instead of being controlled by them; and here lies the true philosophy of temptation.

If a man has no higher aim in life, than to eat and drink and propagate his species; if all his aspirations and desires are centred in a wish of living a happy life in the bosom of his family; there can be no wrong if he follows the dictates of his nature and is satisfied with his lot. When he dies, his family will mourn, his friends will say he was a good fellow; they will give him a first class funeral, and they will perhaps write on his tomb-stone something like what I once saw in a certain churchyard:

"Here is the grave of John McBride,  
He lived, got married and died."

And that will be the end of Mr. John McBride, until in another incarnation he will wake up again perhaps as Mr. John Smith, or Ramchandra Row, or Patrick O'Flanagan, to find himself on the same level as he was before.

But if a man has higher aims and objects in life, if he wants to avoid an endless cycle of reincarnations, if he wants to become a master of his destiny, then must he first become a master of himself. How can he expect to be able to control the external forces of nature, if he cannot control the few little natural forces that reside within his own insignificant body?

To do this, it is not necessary that a man should run away from his wife and family and leave them uncared for. Such a man would commence his spiritual career with an act of injustice,—an act that like Banquo's ghost would always haunt him and hinder him in his further progress. If a man has taken upon himself responsi-

lities, he is bound to fulfil them, and an act of cowardice would be a bad beginning for a work that requires courage.

A celibate, who has no temptation and who has no one to care for but himself, has undoubtedly superior advantages for meditation and study. Being away from all irritating influences, he can lead what may be called a selfish life; because he looks out only for his own spiritual interest; but he has little opportunity to develop his will-power by resisting temptations of every kind. But the man who is surrounded by the latter, and is every day and every hour under the necessity of exercising his will-power to resist their surging violence, will, if he rightly uses these powers, become strong; he may not have as much opportunity for study as the celibate, being more engrossed in material cares; but when he rises up to a higher state in his next incarnation, his will-power will be more developed, and he will be in the possession of the password, which is CONTINENCE.

A slave cannot become a commander, until after he becomes free. A man who is subject to his own animal desires, cannot command the animal nature of others. A muscle becomes developed by its use, an instinct or habit is strengthened in proportion as it is permitted to rule, a mental power becomes developed by practice, and the principle of will grows strong by exercise and this is the use of temptations. To have strong passions and to overcome them, makes man a hero. The sexual instinct is the strongest of all, and he who vanquishes it, becomes a god.

The human soul admires a beautiful form, and is therefore an idolator.

The human spirit adores a principle and is the true worshipper.

Marriage is the union of the male spirit with the female soul for the purpose of propagating the species; but if in its place there is only a union of a male and a female body, then marriage becomes merely a brutal act, which lowers man and woman, not to the level of animals but below them; because animals are restricted to certain seasons for the exercise of their procreative powers; while man being a reasonable being, has it in his power to use or abuse them at all times.

But how many marriages do we find that are really spiritual and not based on beauty of form or other considerations? How soon after the wedding day do they become disgusted with each other? What is the cause of this? A man and a woman may marry and their characters may differ widely. They may have different tastes, different opinions and different inclinations. All those differences may disappear, and will probably disappear; because by living together they become accustomed to each other, and become equalized in time. Each influences the other, and as a man may grow fond of a pet snake, whose presence at first horrified him, so a man may put up with a disagreeable partner and become fond of her in course of time.

But if the man allows full liberty to his animal passions, and exercises his "legal rights" without restraint, these animal cravings which first called so piteously for gratification, will soon be gorged, and flying away laugh at the poor fool who nursed them in his breast. The wife will come to know that her husband is a coward, because she sees him squirm under the lash of his animal passions; and as woman loves strength and power, so in proportion as he loses his love, will she lose her confidence. He will look upon her as a burden, and she will look upon him in disgust as a brute. Conjugal happiness will have departed, and misery, divorce or death will be the end.

The remedy for all these evils is continence, and to show the scientific necessity for it was the object of this article.

### "MAGICON, OR THE SECRET SYSTEM OF A SOCIETY OF UNKNOWN PHILOSOPHERS."

Such is the title of an old book,—printed in the German language in the year A. D. 1784, and published in the city of Leipzig by one who calls himself "An Unknown of the Quadrilateral Light." The book contains many startling and extraordinary ideas, which, although they may not appear new to the modern Theosophist, are nevertheless interesting to the lovers of Occult lore. Notwithstanding the fact that the said book was printed just one hundred years ago, it speaks in an unmistakable manner of the "Fourth Round," (the present Round of the Septenary Evolution spoken of in *Esoteric Buddhism*,) mentions clairvoyance, predicts psychometry, and gives a satisfactory explanation of the occult meaning of numbers.

The unknown editors of this work were evidently a number of Theosophists in Paris, and must have been initiates. The public called them "Martinists," and they were looked upon by the ignorant as a mysterious sect, communicating with spirits, and supposed to be in possession of some awful secrets.

They were said to be people of imposing figure and distinguished by superior education, who desired neither fame, nor power, nor riches, but only truth.

They were kind, good-mannered and virtuous, seeking only the way to perfection. For the information of our Eastern Theosophists who may know nothing of the Founder of the Theosophical sect of the Martinists, Martinez Pasqualis, we append a short biographical sketch of himself and his disciple—Louis Claude, Marquis de St. Martin.

Martinez was born about 1700 in Portugal, of a Mussulman mother and a Portuguese father. Proficient in the Kabala and the secret sciences, he travelled far and wide, and getting initiated in the East he came to Paris in 1768, and soon after founded several Masonic Lodges, called Martinistic, and died finally in St. Domingo in 1779. From its very origin Martinism was a sect of mystics, who not only "believed" in sub and intra and supra-mundane Spirits, but who evoked them adding to the Elemental Kingdom of apparitions regular necromantic rites. Later on, when De St. Martin had become his disciple and successor, this distinguished French metaphysician reformed the "lodges" and imparted to them a far more philosophical character. The latter, who went by the name of the "unknown philosopher" (*philosophe inconnu*) was born at Amboise, Jany. 18, 1733, and died in Aunay, near Paris, in 1803. Having become dissatisfied with the necromantic character of Martinism, he infused into it much of the Swedenborgian spirit, and finally becoming enamoured of Jacob Boehme, he worked out a perfect system of mystical masonry. He is the author of several remarkable works—"On Error and Truth" (Lyons, 1775), directed against the sceptical negation of the Encyclopadists; "The Man of Desire" (1790); "*Ecce Homo!*"; "The New Man," &c., &c. It is, perhaps, erroneous to attribute wholly his conversion to either Swedenborg or Boehme. His mind was first of all strongly influenced by the writings of another, earlier and still more remarkable theosophist, whose works are now very little extant and whose name—hardly known. John George Gichtel was nevertheless a very famous theosophist, and Rosicrucian and the publisher of J. Boehme's works—born at Ratisbon (1638). The son of very wealthy and influential parents, he became hated by the priests, who could never forgive him the disclosures he made about the immoral life led by the clergy in Germany. As he would not recant, the clergy persecuted him, and drove him finally into exile, forcing him to fly to Holland, where he died in 1720 at Amsterdam in great poverty. St. Martin gives enthusiastic accounts of Gichtel. Like Boehme, he says, he was a born theosophist, wedded from birth to death to Sophia, the Eternal Bride (Wisdom). He studied

diligently the *Three Principles* and the *Seven Forms of Nature*, and having fathomed their meaning, found the true philosopher's stone. In a letter to Baron Kirchberger from St. Martin, who tells the story, we gather that the occult and psychological powers of Gichtel were of a far higher order than those of Swedenborg, transcending them in almost every particular. "In 1672, when Louis XIV laid siege to Amsterdam, Gichtel, by the power of his will, is reported by his disciples to have exercised influence enough to cause the raising of the siege, and afterwards the names of the very regiments and squadrons he had seen in his vision were found in the papers. Princes of Germany and even Sovereigns consulted him, and ladies of all classes, old and young, rich and poor, fell in love with him, sought his acquaintance and his hand and were rejected by him." St. Martin tells a very extraordinary anecdote of him. An enormously wealthy widow offered to marry him, but he gave her no hopes and withdrew into solitude, remaining shut in in his chamber for over a month. One day, as he was pacing about his poor abode, he saw a hand appearing as though from heaven, which joined his hand to that of the rejected widow whose form appeared by his side—and a voice said: "You must have her." Instead of accepting this as an indication of divine will, Gichtel saw at once "that it was only the widow's spirit, which, in the fervency of her prayers, had penetrated the outward heaven (Kama loka,) and reached the astral spirit." To this St. Martin adds: "From that moment, he gave himself altogether to Sophia, who would have no divided heart; he saw that he was called to the priesthood of the highest order." Gichtel's marriage to the heavenly Sophia (the Divine Wisdom) is related by St. Martin in the following allegorical terms:—"Sophia, his dear Divine Sophia, whom he loved so well and had never seen, came on Christmas day, 1673, and made him her first visit: he, in the third principle ("linga sharira") saw this shining, heavenly virgin (was initiated) . . . and the marriage was consummated in ineffable delight. She, in distinct words, promised him conjugal fidelity—that she would never leave him . . . She gave him to hope for a spiritual progeniture, etc."—a language which is too likely to lead any one who knew nothing of Sophia into supposing that Gichtel was really married, but the meaning of which becomes plain to any occultist, especially when one learns further on that "Sophia gave her husband to understand that if he desired to enjoy her favours without interruption, he must abstain from every earthly enjoyment and desire," and Gichtel did so scrupulously. "At the beginning of his union with Sophia, he thought he might rest there . . . but she showed him that this could not be, and that he must fight for his brothers and sisters (humanity); that he ought, as long as he remained under the earthly covering, to employ the time for the deliverance of those who have not yet obtained their inheritance and inward repose." (St. Martin's *Correspondence*, pp. 99 & 170).

The following is an attempt to extract the substance of St. Martin's teachings in a compact form.

#### I.—DEITY.

All that our Theosophists teach, in regard to the fountain of all being, is based upon the conception of the divine unity of the sacred "Three." The highest being, considered as a unity, is the eternal and continuous spring and source of all thinking and immaterial principles, the root of all universal numbers, the first and only cause, the centre from which all life and the powers of all beings continually emanate and to which they return.

The Trinity are not one in Three, but Three in One; containing in itself Action and Reaction, Christ—which means the divine principle of Wisdom and a pure substance, flowing from God to Man and called in the holy writ the Spirit of God, or the Holy Ghost.

The infinite sum of divine powers and qualities is based upon a number, for which man has no quotient; their expressions are the hook of visible and invisible

nature. Two of these necessary qualities are Goodness and Freedom. According to the first one he cannot be the cause of the existence of the Bad, and according to the latter it is its own Law, and consequently its own freedom differs entirely from that of the creatures.

The divine action is not creation out of nothing; but an indivisible and continuous Emanation or Eradiation out of itself. Each of these emanations is indestructible, because the Deity emanates only principles and not compounds. All principles emanate from the same source either direct or indirect.

The direct emanations are the thinking, the indirect, the unthinking ones.

The whole activity of the Deity consists in revealing its attributes, which are infinite, like numbers or powers. Independent of time it reveals itself by those who dwell in it; dependent on time by those who, although emanating from it, are not itself.

#### II.—THE UNIVERSE.

The whole system of our Theosophists is based upon a threefold division; The *Divine*, the *Intellectual*, and the *Sensuous*. They speak of three squares of equal signification. The *divine square*, the seat of divinity, the *intellectual square*, encompassing the various orders of spirits, and the *sensual square*, containing all that belongs to the visible world.\*

I. *The living chain of Beings which form the Universe, and their inter-relations.*

From the source of all life to the smallest germ of matter exists an uninterrupted progression, a radiation of primitive light, a chain of potencies, which flow from unity, the basic root of all numbers.

Beings are generally divided into *thinking* and *non-thinking* beings. The first ones are either only intellectual, that is pure spirits, or also of an animal nature, which means, they are conscious of life and activity; or they may be only active like the principles of sensuality.

1st. THINKING BEINGS are the first and second potentiality of the all-creating universal terminus and possess a common affinity; because thought can only be common to one class of beings, and the whole realm of the Intellectual consists, like the prophetic rainbow around the throne of God, of so many radiations and reflections of the divine light.

They are divided into three classes:—

A. *Divine Beings*, of which man in his primitive condition was one. Their activity suffers no suspension, they are above the laws of time.

B. *Pure Spirits* without a grossly material covering—formerly, man's servants, now his superiors and benefactors. They govern man by their pure influences, and they suffer suspensions, being subject to the laws of time. They are the second class of being and it is the highest aim of earthly man to become one like them (Dhyan Chohans?) It is difficult for them to approach man, but man can find them at every step he makes in his upward progression.

C. *Mixed Beings*. Besides man, who is the last link in the chain of intellectual beings, there are still other beings, who have a double nature, an intellectual and a sensual one and who, more than pure spirits, are adapted to approach man in his state of degradation (Elementals?) The author does not consider it advisable to speak of those in detail.

2nd. UNTHINKING BEINGS, whose life and activity is limited to the sensual. They have no intellect, and all their actions tend only to the acquirement of material comfort and well-being. (Animals, plants and minerals.)

\* Had they spoken of two triangles and one square which is one, they would be nearer to the real occult classification and—Truth.—Ed.

## II. The Constitution of these Beings.

All bodies are an expression of the three primitive elements, which are earth, water and fire (in their occult meaning.)

Each being has a separate principle by which it exists and acts. All principles are inherently indestructible and simple, and after fulfilling their destiny return to the source from whence they came; but the forms, which are only the sensuous representations of the action of these principles, cease to exist after the principle which caused them ceases to act. There remains no original matter.

Each principle is the generator of its corporeal form, and as each has its peculiarity of character, an individual or a species cannot change its nature, but must retain the original number, which determines its character.

There are general as well as special principles of matter, for even the smallest particle of matter contains a principle, which is an indivisible homogeneous unity. General principles differ only from special principles according to their quantity and duration of action. Their action is only one.

Each Being has the character of its special principle impregnated on its form and action, and moreover each being has a certain inherent number, and all beings, those that are thinking as well as those that are only active, interrelate and correlate according to numeric laws. All their principles are only either higher or lower potencies of the all-creating unity of infinity, and their natural position and time of action depend on their respective proximity to or remoteness from the same.

## III.—THE CONSTITUTION OF THE UNIVERSE.

The life and existence of all beings are dependent on a continuous influx of the infinite, and the Universe is based upon seven invisible primitive motors or primitive forms, amongst which are divided the various divine powers. They are the seven colors of primitive light, or so called seven stars around the throne of Deity, which will at the re-establishment of Divine unity be reunited and produce a light whose power will be seven times stronger. In the realm of the spiritual everything is good and pure, in the realm of the sensual governs the evil. All evil is caused by one evil principle, but this evil principle is neither infinite nor eternal. It was originally good and emanated from the infinite good. By attempting to establish a unity of its own it became dark, because it deprived itself of the necessary influence of the divine light by a perverted use of its will, and became the cause of sensuality to which its influence is limited. By this principle and its continuous antagonistic action (contraction), the intellectual world becomes purified and the great work of regeneration accomplished. Its power never affects the pillars of creation, and its whole activity consists in combating the pure agents of the divine light inside the orbit of sensuality, like a heavy mist, which impedes the rays of the sun without preventing the projection of his rays.

Extension of the supremacy of the infinite, and concentration in unity is the object and aim of all divine, spiritual and physical action. Divinity manifests its perfection to individual beings to withdraw them from death, by infusing them with life, and all individuals manifest their tendency to unity in the same manner, by exercising their own powers for the good of other beings exterior to themselves, and thereby assisting in the great work of regeneration.

Everything in Nature has a certain *Number, Measure and Weight*. Number appoints activity, Measure determines the same and Weight gives it the impulse for realisation. According to these are constituted the unchangeable and characteristic marks of distinction of individual existences with their appropriate organs. The realm of the Intellectual contains not only the original

types of everything sensuous, but there is also contained in it (and in it only) the pure, unmixed and unchangeable truth, such as can be comprehended by the reason of man. As the visible and invisible are intimately connected; therefore truth and error in the intellectual plane are necessarily combined with truth and error in the realm of objectivity.

There is no actual procreation in the realm of the intellectual, no fathers and mothers, which can only be found in the region of the sensuous, and for this reason the physical parent cannot be the father of the intellectual germ of his children. In the intellectual sphere the *Above* always verifies and attracts the *Below*, so that every one receives each of his good thoughts and aspirations every day directly from the primitive fountain of truth; but in the realm of the physical the opposite law holds good. The earth like Saturn of ancient mythology eats her own children.

There is no other sensuous world than the visible one. Visibility, the periphery of evil, came into existence through the sensualisation of the invisible universe by the action of certain germinal principles. This invisible world, which is still hidden in the visible one, could be discovered by man if he were able to draw the veil from visibility and to examine the same. The phenomenon of sensuality is not based upon a certain basic substance, but upon certain primal elements, which are immediately connected with the higher powers of creation, or upon an invisible and original *fire*, from which are evolved the three visible elements of *Fire, Water and Earth*; but which cannot be derived from one single material essence or be reduced to the same; because the qualities by which they are distinguished from each other are essentially different. Fire belongs especially to the animal, water to the vegetable and earth to the mineral kingdom. There can be only three elements. If there were four, the visible world could not perish; because its perishableness is based upon this ternary of sensuality. Air does not belong to the material elements, but is a more potent and powerful organ of the originally active fire and its function is to transmit the vital forces to the bodies. From the union and combination of those three elements result *bodies*. The real "*corporification*" however requires certain means for sensualization, in which consists the link between principles and action, and they are called by the alchemists *Mercur, Sulfur and Salt*. They are in exact proportion with the three elements and are the vehicles of their principles, and according to the preponderance of one or another element in the process of corporification is it determined, whether the resultant body will belong to one kingdom or to another.

There are consequently three things necessary for the process of creation or reproduction in the realm of sensuality.

1. The united activity of two principles, of which one acts from the interior to the exterior and another from the exterior to the interior. These active and reactive impulses must meet together, if something ought to come into existence, and they give us a necessary and universal law for the whole creation; because in the realm of *Intellectuality* as well as *Sensuality*, there is everywhere the same antiphony to be found.

2. The action of an *active* as well as *thinking cause* which governs the above double action. This is to our reason the true "*Principium reale*," and the laws of sensuality are the results of this action, and without a consideration of these laws it is impossible to form a clear conception of Nature. This principle of *Intelligence* does not furnish the germs of the bodies, but vivifies the same; it does not invest man with physical or intellectual powers, but governs and illuminates the same; and whenever this principle ceases to act, dissolution begins. This active and intelligent cause can be known and is realized by everyone who has sufficient purity to perceive the same.

All the changes in the visible universe are determined by the actions and counteractions of its four cardinal points, and the contentions of the elementary principles are directed by the active and intelligent cause which is its centre and circumference.

(To be continued).

A. B.

“THE PLANETARY CYCLES OF HUMANITY,  
OR THE ASTRONOMICAL PROGRESS  
OF CIVILISATION.”

BY LEON LECOINTE.

A SUISSE journal “Lumière et Liberté” contains an article, from which we make the following extracts:—

Civilisation seems to expand itself from East to West, which is the opposite movement of that of the globe around its axis. Sometimes it seems to recede a little, but it appears to do so only to push more rigorously forward. As history shows, it has at all times very little deviated to the North or South. It has evidently followed the course of the sun, and amongst all nations the sun is the symbol of intelligence, science and progress.

This progress of civilisation has undoubtedly begun in the East, in Asia, where, according to science, the cradle of humanity stood. From there it went to Armenia, Babylonia; then to Egypt, whence it proceeded to Greece, later to Italy and France, and as it marched onward, it left behind it only a few traces of its presence. Before coming to Europe it might, no doubt, have spread itself over the great continent of Africa; there was no want of room; but in obedience to some unknown law it turned westward, and then traversing the great Atlantic Ocean it spread again in America, where it now follows the same impulse.

May it not be that this law is also in operation on other planets, beside the earth, and that we may, perhaps, be correct in saying: “The progress of civilisation on the surface of a planet is inversely proportionate to the rotation of the planet.”

What will happen when the march of civilisation has arrived at the point from which it started? Will a race superior than the present one appear, and starting once more on its march, continue until the world comes to an end? Are there perhaps other cycles beside this (Adamic) one? These are questions which we cannot answer at present; but it may not be impossible, by taking into account the time which it has required, for civilisation to arrive at its present point, to calculate the duration it will take to accomplish its round; and to be consequently enabled to foretell how many centuries our present humanity may yet have to live; provided that its existence is limited to the present round.

*Editor's Note.*—It would be interesting to know whether M. Léon Lecoicte has read *Esoteric Buddhism*, whose doctrines seem the prototype of the above, and, at the same time, an answer. The question “How many centuries” more has our humanity to live—is a curious one to a student of Occult Science, and how many more millions of years would, perhaps, be a more appropriate one—even in accordance with modern science and the calculations of the geologists. But habit seems a stubborn thing.

OCCULT PHENOMENA.

EVER since the advent of the Theosophical Society in India, the occurrence of “Occult Phenomena” has been a thorn in the flesh of those who do not know how to discriminate properly. Letters have been dropped unexpectedly from the vacant air on apparently trivial occasions, invisible bells have been heard to ring, writing and pictures have been produced from no visible material, jewelry has been received from “no where,” rings and other things have been duplicated and some persons have even received comparatively large amounts of money for the avowed purpose of re-imbursing them, for expenses voluntarily incurred, which, although made with the best motives, were the least to say unnecessary.

On the other hand, many an “honest inquirer” has come to Head-quarters for the purpose of “investigating,” and made the most frantic efforts to obtain a “test,” without any other result than that of being thoroughly disappointed. Some have vainly asked for advice from the “Masters,” and their assistance in what seemed to them most important personal affairs; but which on closer examination were found to be such as had best be left to the consideration of the applicants

themselves. Others threatened seriously that they would indeed refuse to believe in the existence of the “Masters,” unless the said “Masters” would come and comply with their conditions; and others again have gone away, having their vanity deeply wounded, and their sense of self-importance stung to the quick by the apparent negligence of the Mahatmas to take any notice of them or grant their requests, and it is but natural that such should denounce the “Occult Phenomena” and cry their ruffled temper to sleep by yelling “humbug,” because only in this way can they express their indignation for having been disappointed and put their self-conceit to rest.

Some look at the “Occult Phenomena” in the same manner as the Spiritualist upon the message from the “dear departed one,” as a necessary “test,” and believe that without these phenomena Theosophy could not exist. They therefore extol the “Phenomena” to the skies and wonder why the Mahatmas do not come and perform a public exhibition in their astral bodies, or convince the hardened sceptic by some knock-down argument. Others, who are perhaps of a more gushing and sentimental nature, and are taking a more exalted view of the sanctity of every thing that they expect to come from what they call the “Spiritual World,” denounce the “Phenomena” as frivolous and unnecessary; they say that our “holy cause” is materially injured by such trivial performances which do not at all agree with their ideas of what the nature of such a communication ought to be. All these show a want of proper discrimination.

“There is only one step from the sublime to the ridiculous.” If we notice a phenomenon, which is not within our every day experience, we are liable to look at it as a “miracle” and invest it with an air of solemnity and importance, which it does not actually deserve, and which was never claimed for it by its authors. Man in his present conditioned state is now just as much in the “Spiritual” World as he ever will be, and that what may be subjective to one, may be objective to another, “hence the natural distinction made by his mind—the analyst of his physical sensations and spiritual perceptions—between an actuality and a fiction,” which mind, being trained by a false education to look at every thing coming from the so called “spiritual world” with the greatest awe and respect and as something “supernatural” and strange, forgets entirely to apply to such things the same manner of reasoning, which it applies to the common occurrences of his every day life, and which is the only advisable one.

The Mahatmas have often enough assured us that they are not Gods; neither are they anything supernatural. They claim to be only human beings (see Sinnett’s “Occult World”) and we must look upon them as such, although they are far more advanced on the road to perfection than we are, and they therefore know a great many things, which are still unknown to our philosophy. Being men, they have evidently the right to write letters to whomsoever they please and about whatever subject they may choose, and if they have means to do so, without making use of the ordinary methods used for that purpose, and if they can transmit those letters independently of H. M. Mail Service, it would be obviously foolish to offer any captious criticisms on their methods. They may of course write to whom they please and whenever they please and write in what manner and on what subject they may find necessary, useful or convenient. The only thing that is astonishing to new investigators is the manner in which those letters are written and the (to them incomprehensible) way in which they come, and the recipients of such letters therefore consider it sometimes useful to make public the fact of having received such letters, without deeming it necessary to reveal their contents in full, and the astonished new investigator consequently often fails to see the connection between the apparently insignificant character of what little has been shown to him, and the imaginary solemnity and importance with which he invests the supposed “miracles.” Those who see these phenomena every day, look upon them as they do upon other common occurrences. They are not any more awestruck, when they get a letter from a Mahatma than they are in receiving one from another friend or teacher, and they cease to be astonished about them. If we would apply the same standard to the occurrences of every day, with which we judge these so called “supernatural” phenomena, its absurdity would at once become evident. If I am here in India and have a friend in New York, who would occasionally write me a letter, I would certainly be glad to

get a letter from him, partly on account of the information which it would contain, and partly on account of its being a symbol of the continuance of the relations existing between my friend and myself. I would not look upon that letter every time as being a "phenomenon" or go into extasis about having the possibility demonstrated to me that letters can be written and that they can be sent from America to India. But if some ignoramus, who had never heard of such things as letters and mails, were present, the mere fact of the arrival of such a letter might appear almost incredible to him, and if to convince him that the letter did come from New York, I would show him some very unimportant sentence in the said letter, without letting him see the more important and perhaps confidential contents of the same, he would undoubtedly be surprised that such (to him) abnormal and extraordinary "feat" as the sending of a letter from New York to India would imply, should have been performed to accomplish such a small result.

This comparison may appear ridiculous; but it is certainly true, and the ignorance of the above hypothetical ignoramus does not appear more pitiful to us, than our ignorance about occult matters must appear to those who are in full possession of occult knowledge; and the same line of reasoning may also be applied to the other phases of occult phenomena, which are only "Occult," because the majority of mankind have not sufficiently progressed to understand the processes by which they are produced.

Those persons who know neither the contents of letters, said to have been received from the Mahatmas, nor the process by which they have been written or "precipitated," have no right to complain about a "waste of powers," etc., about which they know absolutely nothing, and which may exist only in their imagination. They talk about our relation to the Mahatmas not as it really exists, but only as they suppose it to be, and the sooner they accustom themselves to look upon our revered Masters as teachers and friends and wise men, instead of looking at them with the same feeling of awe and superstition and fear with which the Fijian looks upon his Deity; the sooner will they find that the so-called "Occult Phenomena" are neither intended to convert incredulous sceptics, nor are they produced for the purpose of astonishing the public; but are principally methods of communication or instruction. To appreciate a thing properly and according to its true value, we must neither depreciate its importance, nor over-estimate the same.

As to those persons who have been disappointed in their expectations of obtaining letters or presents from the Masters, they—unless superior reasons existed for the non-compliance with their demands—have probably only to blame themselves for not having made themselves sufficiently prominent (in a spiritual meaning of the term) to attract the Masters' attention or to deserve their consideration. No amount of "tests" could possibly convince them, because spiritual things can only be grasped by our rising above the sphere of materiality, and material natures can do that only to such a limited extent as their limited powers will permit. They may perhaps be surprised and startled by some (to them) inexplicable fact; but soon new doubts will arise, new "tests" will be asked for, and the "honest investigator" will only be perplexed and dissatisfied.

To arrive at the truth or to become worthy of the attention of the Mahatmas, we must rise up to their sphere, instead of attempting the impossible task of dragging them down to our level. They cannot put that into us, which we have not the power to assimilate; they cannot grant any personal favours; because the fact of their doing so would imply an injustice and be incompatible with the high standard of morality necessary to constitute a Mahatma.

There is a general misunderstanding on the part of new beginners, who "want to become Chelas" and force themselves upon the attention of the Masters, instead of developing their intellectual faculties and waiting until Chelaship descends to them. High Spiritual development is impossible without intellectual development, and a high degree of intellectual expansion is necessarily followed by a corresponding development of spirituality. To live in a cave or jungle, to stand on one leg or to stare at the end of one's nose may develop a state of senseless sensitiveness or insanity, but to develop spiritual powers the intellectual faculties must be strengthened first, because upon them as a basis rest and from thence grow as a necessary result the *Occult powers of the spiritual man*.

AN AMERICAN BUDDHIST.

#### NOTICE.

MR. T. SUBBA ROW regrets that with all his good will, it is impracticable for him to bring out a Catechism of the nature mentioned in the advertisement of "A Collection of Col. Olcott's Lectures." Whatever may be his personal views regarding the "Ancient Brahminical Faith," he thinks it premature to put forth any particular form of Hinduism as the "most ancient Brahminical Faith." Originally the advertisement was issued without Mr. Subba Row's knowledge, and he endeavoured his best to steer clear of all the difficulties. He can of course write a Catechism of the Advaita, the Dvaita or any such particular faith, but he finds it impossible to comply with the promises of this very vague advertisement. He is therefore obliged to give up the task.

#### THEOSOPHY AND CHRISTIANITY.

BY AN AMERICAN BUDDHIST.

FROM time to time articles appear in Indian, European and American papers, comparing Theosophy and Christianity, which show an entire misconception of the meaning of the word "Theosophy" on the part of the writers. One such writer in an entirely friendly article writes but recently: "Theosophy seeks to develop the power of spiritual vision; Christianity presents to the soul's opened eye satisfaction for its sight. Theosophy is search for divine wisdom; Christianity is incorporation into its very being."

What does the writer mean by the term "Christianity?" Does he mean the Roman Catholic, the Episcopal, the Baptist, the Methodist, the Mormon Church, or any other of the many denominations, each of which claims to be in the possession of the only true doctrine; or does he mean Christianity in its highest aspect, defined as "The doctrines and precepts taught by Jesus Christ." Undoubtedly he means the last. If so, then if we closely examine the matter, leaving aside the question whether or not the biblical Jesus ever existed, we will find that pure Christianity, divested of all extraneous matter, is nothing else but pure Theosophy. Remove all the ornaments (or disfigurements, whichever you please), which in the course of time have been hung around the shining body of true Christianity by the prejudices and misconceptions of unenlightened writers and the naked truth will stand forth, proving that the real founder of Christianity, whatever his name may have been, cannot have been anything else but a being full of divine wisdom, or in other words a real Theosophist.

Taken in this sense—and only in this sense can it have any consistent meaning,—Theosophy and Christianity cannot be compared with each other, because Theosophy is simply the complement or the perfection of Christianity as well as of every other religion. Take away from Christianity the element of Divine Wisdom, and there will be nothing left but a formless mass of unauthenticated tales, misunderstood allegories, myths copied from other and more ancient systems, clerical dogmas and priestly assumptions. "Theosophy" is the divine light (at least that is what we mean by the word), without which no religious system can exist, and every religion is *more or less* permeated by its rays, which can be seen in spite of all the "theological" rubbish, wherewith priestly ignorance has covered them in its blind effort to hide truth from the sight of the unenlightened masses.

Theosophy in its highest aspect is Religion confirmed by Science, and Science confirmed by Religion. The union of Religion and Science produces knowledge and knowledge establishes Faith. The highest development of the intellect leads to understanding and Faith; but Faith does not belong to the plane of mere Intellect. Men of the highest intellect have their faith confirmed by Reason; but reasoning from the material sphere alone does not necessarily establish Faith. Faith belongs not to the mere Intellect, it belongs to the spirit and can be obtained to a certain extent by the ignorant as well as the wise. But in the case of the ignorant, their faith is always liable to be overturned by the injudicious use

of their reason, while in the case of the true Theosophist, faith is firmly built on the rock of knowledge and understanding.

Truth is intuitively perceived by every healthy and unperverted mind. "Out of the mouth of babes shall come wisdom," &c. and "Blessed are the pure in heart, for they shall see God." But as a child grows up, Dogmatism, Bigotry and Sophistry step in and lead the mind astray. They dress it up and cut its wings and prevent its flight to the true source of all being; they blind-fold it and lead it from one door of the lodge-room to another, and fortunate is he, who in spite of all those self-appointed "guides," finally finds his way to the eternal light.

Those that are gifted with spiritual wisdom will find their way; but those who desire to arrive at the truth by intellectual reasoning, have a long and weary road to travel. If they wish to find out which religious system is right and which is wrong, they must not only study one religious system, but they must study them all. They must study "comparative theology," and in the end they will find that each of the various religious systems, has a certain amount of truth, on which it is based, and that this truth is one and the same in all systems, and only differs in degree; while the different superstructures which have been built upon this eternal truth, and upon which they all rest, are all more or less imperfect. These superstructures reared by imperfect man are the ones about which priests and bigots, philosophers, materialists and "theologians" have been wrangling and fighting and burning and killing each other for thousands of years. They are the ornaments hung around the beautiful form of the naked truth; but instead of adding to its beauty, they often only desecrate its body and hide its shining light under a more or less elaborately manufactured cloak, and its worshippers become idolators; because instead of beholding the truth, they adore the dress in which they have put it themselves.

To perceive the truth, or in other words to become a Theosophist in fact and not only in name, is to enter the right path in life and to progress forward unimpeded by any inherited or artificially acquired banking after old superstitions; it is to make persistent efforts, on the part of Man's higher nature, to arrange and organise into a system the various delusions and superstitions (the nett product of human ignorance) of the different races in such a manner as to lessen or destroy their retarding and otherwise baneful influence on mankind. Theosophy attempts to rebuild the temple of the Spirit that has been destroyed. It is not her object to dispute about absurdities.

The various Christian sects have been denouncing and fighting each other so long, that the more intelligent classes have retired in disgust from the arena. The Christian "Churches" are no more a religious body, but have degenerated into mere social and financial organisations. The divine spirit has left their temples, driven from thence by the money changers and mountebanks, and the places of worship have become merely places for "religious" amusement.

To restore Christianity as well as all other religions to their original purity, to infuse Divine Wisdom into the cold material forms of dead systems, or perhaps better said, to gather what life is left in all the various systems and to construct from that one all embracing universal system of love and brotherhood, infused by wisdom and devoid of superstition, to strive to get rid of the hallucinations of the middle ages and to elevate man to the proper sphere to which he belongs, is the object of Theosophy, and those that properly understand the term will not only find the same not contradictory to their highest religious sentiments but eminently expressive of the same. *To understand what Theosophy means is to become a Theosophist.*

## GHOST STORIES GALORE.

[The following article appeared some years ago in the *N. Y. World*. It is an account given by Mme. Lydia de Paschkoff, a well-known Russian lady and a great traveller, of an event that took place in the Desert. Written by a fellow of the Theosophical Society, in days when Theosophy had hardly loomed upon the horizon of America and published in a daily paper, that would have refused to receive anything of the kind except in a spirit of fun, the narrative was, of course, viewed as a humouristic production, but its humour takes away nothing from the substantial veracity of the story itself. "The Eighth Avenue Lamasonry" was the name by which the Head-quarters of our Society were generally known in New York, ever since the name was given to it by the writer—one of the wittiest and cleverest reporters of New York.]

### A NIGHT OF MANY WONDERS.

(At second hand in "The Eighth Avenue Lamasonry.")

#### THE SCIENCE OF APPARITIONS MADE CLEAR—MAGIC RITES IN FAR OFF EASTERN DESERTS.

"Well, it may not have been a ghost," said Hierophant Olcott, "but all the same, it may." Then a silence fell on the little party that sat smoking in one of the inner chambers of the Lamasonry at 302, West Forty-seventh street, at the corner of Eighth Avenue. It was rather a reflective calm that resembled that of the miniature sphinx on the mantel piece of the mysterious Egyptian chamber. Besides the divans on which the party reclined, there was little furniture in the room, but a huge crystal ball was held suspended in the centre by an invisible cord. From the interior of this globe gleamed strange pictures of deserts and pyramids and things fixed there by some cunning art that, for all the reporter knows, may have been magic. The walls were sombre, but the hall was luminous and filled the room with a sort of pale twilight. Tea, talk and tobacco from Arabia entertained the group, and the fragrant blue clouds grew into phantoms as the weird conversation grew gruesome.

Madame Blavatsky was entertaining, in better than royal style, a friend and compatriot, like herself a traveller in strange lands, like herself a firm believer in the occult, and a Russian Countess, Madame P———, whose card, blazoned with her ancestral arms, bears three legends and a tantalizing "&c." in delicate type, is in her way as wonderful a woman as her hostess. According to one of these legends she is "Member of the Geographical Society of France." Another tells that she is a correspondent of the *Figaro*, and a third that she is corresponding member of the *Tour du Monde*. She has spent years in the East, and was the guest in Egypt of the Khedive, whose mother presented her with a rare souvenir of friendship at parting. It is an immense pearl that now hangs from the Countess's breast-pin in shape and size not unlike the largest molar tooth of Barnum's giant. Other jewels, distinguished among them her black eyes, gleamed as she half reclined in gorgeous raiment on a divan, pretending to smoke a cigarette. Besides those named, there were a French diplomatist, the reporter and another and far profounder journalist. Two others should be mentioned, a Turk, who smoked his own nargileh and drank coffee, and a table servant who passed around tea, tobacco, and sweetmeats. The one a picture of the automatic chess-player was ornamental: the other the counterfeit of a Nubian god was useful. Neither spoke.

"A ghost, yes. Why not?" said Mme. Blavatsky, presently. "I have seen many ghosts. It is not a question of whether there are ghosts, but of whether they are seen. Doubtless the ghost of old Shep was there. The only doubt is whether the officer really saw him as he says he did. I believe he did."

The Turk opened his mouth as if to speak.

"What, then, is a ghost?" asked the diplomat. The Turk nodded slowly and closed his lips on his amber mouthpiece.

"There are ghosts and ghosts," replied the occultist. "The air that we breathe is permeated by a subtler fluid that corresponds to it as the soul corresponds to the body of man. It is the astral fluid and in it are the thoughts of all men, the possibilities of all acts—as on the photographer's plate are images that remain unseen until revealed by chemical action. So the last dying thought of any person, if it be intense enough, becomes objective, and under favorable conditions is very apt to be seen. Only a little while ago the newspapers of this city reported the case of a man who committed suicide in his bathroom. A friend ran for a doctor, against the remonstrance of the dying man. On the way he was startled at seeing for a moment the image of the dying man, clad only in his night-shirt, grasping his pistol and bleeding from his death-wound. It was at a considerable distance from the house. The apparition disappeared almost instantly.\* It was the intense desire to stop his friend that became objective, as the astral man left the physical. So it is with many other apparitions. In haunted houses the last thought of the victim of a crime may remain, and the tragedy be re-

\* A fact corroborated by many eye-witnesses at the time, and which happened in a town on the Hudson River in 1876.—Ed.

enacted perhaps thousands of times before it fades away. It is likely that in the case of old Shep, the watchman, he does not know that he is dead, and his last thought was probably that he was going on his rounds until that thought fades away, and under certain conditions he will be visible to the physical eyes of those around him.\*

"Pardon me," said the elder journalist, "did you say that perhaps he did not know he was dead?"

"It is recorded," said the Hierophant gravely, "that many persons do not know when they are dead, and that they go around afterwards in great perplexity, because no one pays attention to them. They feel as well as ever, and talk to their friends, and are almost frantic at not being able to get replies."

Then there was another silence.

"I have many times hunted ghosts," said the reporter, plaintively after a time, "but I was never lucky enough to shoot one. They are very shy birds."

"In America, yes," said Mme. Blavatsky. "But in the northern countries and in the East it is different. The conditions are different." Then she turned to the Countess Paschkoff and spoke rapidly to her, presumably in Russian.

While the two ladies conversed, Hierophant Olcott waxed encyclopaedic. "The theory of crime being propagated by invisible seeds as disease is, and epidemics of crime devastating countries was first supposed to be a mere figure of speech. Many writers have spoken of it." (Here he quoted many writers.) "But it has its foundation in fact. The astral crimes remain and influence all those who come in contact with them. Thus, it happens that the air and the very ground become saturated with sin in some communities, I have been told that—"

"I remember," said Mme. Blavatsky suddenly in English "a governess I had when I was a child. She had a passion for keeping fruit until it rotted away and she had her bureau full of it. She was an elderly woman, and she fell sick. While she lay abed, my aunt, in whose house I was, had the bureau cleaned out and the rotten fruit thrown away. Suddenly, the sick woman, when at the point of death, asked for one of her nice ripe apples. They knew she meant a rotten one, and they were at their wits' end to know what to do, for there were none in the house. My aunt went herself to the servant's room to send for a rotten apple, and while she was there, they came running to say that the old woman was dead. My aunt ran upstairs, and I and some of the servants followed her. As we passed the door of the room where the bureau was my aunt shrieked with horror. We looked in, and there was the old woman eating an apple. She disappeared at once, and we rushed into the bed room. There she lay dead on the bed, and the nurse was with her (having never left her one minute for the last hour†). It was her last thought made objective."

The Countess Paschkoff understands a little English but does not speak it. She had listened attentively, but without any manifest surprise, and now she spoke. It is perhaps to be regretted that the only record of her talk the reporter has, is derived from Col. Olcott's running translation. This, notwithstanding the Hierophant's enormous linguistic ability, can hardly be supposed to be literal. The lady spoke rapidly, vivaciously musically, and, throwing away her cigarette, gesticulated gracefully. The Hierophant spoke sententiously, dropping into the vernacular frequently and using no gesture, excepting when he stroked his ample beard. Thus ran the American end of the duo:

"In the North there are many apparitions. In the East there is much magic, I have seen both apparitions and magic scores of times. In St. Petersburg there is standing at the present time a house that was built by one of the male friends of the Empress Catherine. I hired this house, and the day after people began to tell me I was foolish. They said it was haunted. But I went to live there. I was brave enough till I was really in the house, and then I got frightened. The principal salon of the house was an immense room with marble pillars. On the wall was a picture of the soldier‡ who built the house. He was all rigged out with crosses and diamonds and ribbons and sash on his breast. They said he walked around at night. So we all sat up waiting for him the first night, and at 12 o'clock we looked for him. All was still. Our hearts jumped up and down. Suddenly the clock struck 12. We looked at the picture, and then we looked out into the hall. We saw nothing.

"Another night and another we looked. We saw nothing. We were all afraid. I had a maid to sleep in my room,

"Many nights we slept thus. At length one night, just after 12, a lackey came running upstairs. He was pale. 'Come, come,' he whispered, 'the ghost walks.' We threw on something or other (I can't make out the name of it), and all went downstairs to the grand hall. The soldier was walking up and

down. We watched him. He had all his diamonds and things on his coat. They sparkled in the faint light of the hall lamp. He walked to the door of the salon, which was closed. He walked through without opening it. We opened it and followed. He was walking up and down the room. We looked for the picture. It was not there. Where it had been the wall was black. He went to the middle of the room. Suddenly, he stopped. He shuddered. He was no longer there. We looked at the wall. The picture was in its place. *Voilà!*"

"It is nothing," said Mme. Blavatsky. "There are many such houses in Russia. In Pavlovsk, stood a house that no one would enter, for the windows were all broken out and there were noises there at night. It was in the time of the Emperor Nicholas I. He said he would stop the foolish stories, and he had new windows put in and surrounded the house with troops. At midnight a crash was heard and the windows were broken out from the inside. The Emperor entered. There was no one there. Many nights he did this, and it was the same. This is historical."

The Countess Paschkoff spoke again and again. Col. Olcott translated for the reporter: "I have seen the procession that goes every year to the shrine between Cairo and Alexandria. The dervishes go on camels and horses and ride over the people that throw themselves down to make a road for them. Little children and men and women lie, and the beasts walk over them, and no one is hurt. Then there are the dancing dervishes that spin around, till they go up in the air, and it takes three or four men to pull them down. And some of them stick knives through their legs and through their throats. The points of the knives come out on the other side. Blood runs down. They pull out the knives. They pass their hands over the wound. It is healed. There is not even a scar. Hoopla! I mean *Voilà!*"

"Superstition," muttered the elder journalist, not meaning to be heard. The Turk opened his mouth to speak.

"It is no more superstitious," said the interpreter (for the Countess had caught the word and was talking again) "than the practices of our Christians. I have seen an image of the Virgin that was worshipped. It is the custom to take it on certain days, in a procession from house to house. The women and children who want to be learned take school-books in their aprons and allow the image to be carried over them, and they think that as it passes all the knowledge in the books passes into their heads."

The Turk shut his lips—

"I was once travelling between Baalbec and the river Orontes," continued the two speakers, "and in the desert I saw a caravan. It was Mme. Blavatsky's. We camped together. There was a great monument standing there near the village of El Maroun. It was between the Lebanus and the Anti-Lebanus. On the monument were inscriptions that no one could ever read. Mme. Blavatsky could do strange things with the 'spirits,' as I knew, and I asked her to find out what the monument was. We waited until night. She drew a circle and we went in it. We built a fire and put much incense on it. Then she [rather he—*Ed.*] said many spells. Then we put no more incense. Then she pointed with her wand [something she never had—*Ed.*] at the monument and we saw a great ball of white flame on it. There was a sycamore tree near by. We saw many little white flames on it. The jackals came and howled in the darkness a little way off. We put on more incense. Then Mme. Blavatsky commanded the spirit of the person to whom the monument was reared to appear.† Soon a cloud of vapour arose and obscured the little moonlight there was. We put on more incense. The cloud took the indistinct shape of an old man with a beard, and a voice came as it seemed from a great distance through the image. He said that the monument was once the altar of a temple that had long since disappeared. It was reared to a god that had long since gone to another world. 'Who are you?' said Mme. Blavatsky? 'I am \* \* \*, one of the priests of the temple,' said the voice. Then Mme. Blavatsky commanded him to show us, the place as it was when the temple stood. He bowed, and for one instant we had a glimpse of the temple and of a vast city filling the plain as far as the eye could reach. Then it was gone, and the image faded away. Then we built up big fires to keep off the jackals and went to sleep."

"Yes, and she was finely scared, I can tell you," said Mme. Blavatsky, laughing.

The Countess then told many merry tales that were of the true Arabian Nights' style about the adventures of Mme. Blavatsky and herself as they went around together, the former, summoning spirits at will and doing magical feats out of pure fun, and finished with one about going into the great pyramid at night and performing incantations in the Queen's chamber.

\* This was written in 1877; and it proves that the Theosophists taught at the time the same doctrines, as they do now, notwithstanding assertions to the contrary.—*Ed.*

† A perfectly true story, a fact witnessed by myself in 1843. But then the woman had just died, and even her spirit could make itself consciously objective.—*H. P. B.*

‡ Count Orloff.

\* Not so. It was the person—a Syrian who accompanied Mme. Blavatsky who drew the circle, not she, and the strange things he did do.—*Ed.*

† Mme. Blavatsky never did anything of the kind. It was the Syrian ascetic again, who produced these wonders, and far more extraordinary were the phenomena than given by the humorous writer.—*Ed.*

DECCAN ASSOCIATION FOR THE PROMOTION  
OF EDUCATION AMONG MARATHAS,  
KUNBIS, MALEES, &c., &c.

FROM the Prospectus of the above Association now before us, we can say the object is a very laudable one and deserving of encouragement and support. The Census Reports show that while the Mahomedans, who are supposed to be the most backward in availing themselves of the help of Educational Institutions, have twenty per cent. of their children at school and 28 per cent. of male adults under the head of "educated"—only 3 per cent. of the lower classes of the Maratha population send their children to school and can count but  $3\frac{1}{2}$  per cent. of male adults under the heading of "educated." With a view to alleviate this miserable condition, the Deccan Association is formed, with the kind help of the popular District Judge of Poona, Sir William Wedderburn. The Hon'ble Dr. W. W. Hunter, the President of the late Education Commission, has also signified his warm and practical support to such a movement, by his learned suggestions and by promising to give "Rs. 5,000 in Government Securities for 5 or 6 years, or whatever time is required to complete a boy's education," regretting at the same time that the large demands upon him in various places prevent his giving more. H. H. the Maha Raja of Baroda has, moreover, promised his liberal support to the scheme, and at the first meeting held in Poona, Rs. 10,000 were collected on the spot among those present. The plan the Association has in view, is :—

To provide adequately for an effective beginning of the work, it is proposed to establish 50 scholarships at 6 Rupees a month, to be held in the High Schools in the several centres of this class of population, such as Bombay, Poona, Sattara, Sholapore, Ahmednagar, Nassik, Dhulia, Ratnagiri, Thanna, Belgaum and other eligible places, and 15 scholarships at 20 Rupees a month to be held in the different Colleges of Art (5), Medicine (5), Engineering Science (5), and Forestry and Agriculture (5). The annual expenditure attending this scheme is estimated at Rs. 720 and can be met out of a fund of about two lacs.

When a sufficient amount of money is collected to enable a beginning to be made, it is proposed to form local committees of management at the places named above, with a Central Committee to direct their operations.

Government have already village schools, and what the Association intends is to give inducement in the form of scholarships to these poor people, so that they may take advantage of these institutions. It is a matter of pleasure for us to note that one-fifth of the members of the Committee are Theosophists. We thus feel doubly encouraged to hope that the efforts of the Association will be crowned with success. It is the duty of every true Aryan to assist this movement by contributions which should be sent either to Sir William Wedderburn, or to Mr. Gungaram Bhaoo Muskey, F. T. S., Honorary Secretary of the Association.

D. K. M.

## Answers to Correspondents.

NIRADHAR, AJMERE:—You will find a solution to all your questions in the *Esoteric Buddhism* and in the various articles in the *Theosophist* treating of the evolution of man and of cosmogony.

GULALCHAND, LUCKNOW:—The answers to your questions would necessitate the reprinting of many of the articles in the *Theosophist* and of almost all other Theosophical publications. If after studying these carefully you find difficulties, put your questions concisely, mentioning your difficulties which will receive due consideration.

F. T. S. (SIMLA):—Declined with thanks.

ESOTERIC CHRISTIAN:—The article on *Theosophy and Christianity* in this number includes your points except the argument that "blind faith" is a contradiction in terms. The expression was however made use of as generally understood to imply "belief without perception," or "faith" in its perverted sense. The original meaning of that word included both "knowledge and perception."

As regards the idea of Love, *Eliphas Levi* truly says that "the man who has learnt to love attracts to himself all souls; to covet is not to love, to exact is not to love, to enslave is not to love, excessive desire is not love: true love is the recognition of God in Humanity."

D. K. M.'s answer to the *Epiphany's* remarks appeared in the last month's *Theosophist*.

TARO:—Next month.

R. S. P:—Declined with thanks. The subject of your book is outside the province of our Journal.

A BRAHMAN THEOSOPHIST:—Too late for this number.

B. J. (TRIPLICANE):—Declined with thanks.

## Letters to the Editor.

### TRANSCENDENTAL OCCULTISM.

As a seeker after truth, I make no apology for my boldness in addressing to your journal the following remarks which suggested themselves to me on my perusing Mr. Dharanidhar Kauthumi's Review of the Unpublished Writings of Eliphas Levi, translated by a Student of Occultism. I am a veritable Brahman of the Kaliyug. My knowledge of Occultism is, I fear, meagre, and possibly you may think that the only characteristic that I possess of my caste is *impudence*; but if so, this, you know, is tolerated by all who understand that a Brahman cannot be without it.\*

It is not for me to decide whether Eliphas Levi was an atheist or not. My knowledge of his writings does not go beyond the book under review and a portion of his *Dogme et Rituel de la Haute Magie*, translated to me by a friend, who being a staunch Roman Catholic, fancied that the Abbé was explaining the mysteries of his Church. But I hope I will be pardoned if I ask Mr. Dharanidhar through the medium of your valuable journal whether he has not failed to understand the translator's real meaning in his definition of an Extra Cosmic Deity. Before stating my reasons, I beg the Reviewer's pardon for questioning the merit of himself or of his sect. From the manner in which D. D. Kauthumi fights the battle and resents the difference of opinion between the translator and the "Eminent Occultist" (E. O.) it would seem that the latter is his Guru; or, at least, that he belongs to the sect of his Master,† and though it is natural for a *Chela* to hold his teacher as the highest authority, and to resent the smallest slight which he fancies is offered to the latter, it does not show good taste to descend to vulgarity and fling ugly epithets at the head of the opponent. The translator's personality is thinly veiled by the modest title he assumes, and those who have the honor of being personally acquainted with him know the falsity of the allegations that "the smoke of false (?) criticism..... is not without fire," and that "he (the translator) is moved by some secret *animus* against E. O."

Now as regards the translator's notes on E. O.'s remarks that "there is no Extra Cosmic Deity," it seems to me that there are good reasons to think that the former did not imply that the discoveries of the 5th, 6th and 7th dimensions of spaces are yet to be made by the Occultists; what strikes me is that the translator's arguments amount to this: "Admitting that the Cosmos is infinite, is it not reasonable to suppose that the Adepts whose experiences do not go beyond the 7th sphere, have yet to learn what lies further on?" For undoubtedly, as appears from the teachings of Occultism, the highest conception of the Adepts whom we know is the 7th sphere, and the Cosmos being infinite there may be spheres, higher than the finite intelligence of the 7th sphered Adept or other being can soar into. It is possible that what the said Adepts call the infinite Cosmos is but the 7th sphered finite reality, and above that in the matter of spiritual refinement may be spheres and conditions which the 7th sphered beings may be unable to conceive; but those that possess knowledge not limited to the sphere reached by the Adepts, may have a "higher intuition." The translator does not question that there are Adepts who have reached to the plane of intelligence described above; for he plainly says "there are Magers and Magers, and there are some who say granting all this, we yet know by a higher intuition, that

\* This is a very extraordinary and by no means a complimentary slur to cast into the teeth of a large class of people and by one of their own caste-men! We beg to demur.—Ed.

† The "Masters" in question belong to no "sect," and even a regular *Chela* has to rise above every sectarian prejudice before he can become one.—Ed.

the infinite to all conditioned existences is not yet All.\* To this intuition he gave the name of "Transcendental Occultism."

Applying Zöllner's theory to the Kauthumi's arguments, we might say that the 4th, 5th, 6th and the 7th dimensions of spaces are all in the universe, and yet we people of 3 dimensions are unable even to conceive their existence; in like manner the condition of that which lies higher in the spiritual scale than the 7th sphere is not known by the Adepts whose knowledge does not go further. What the translator means by "Outside the Cosmos," is probably that which, though pervading all things, is not cognizable by those conditioned in the cosmos of the 7th sphered beings, and how can the reasonings of the latter be applied to the Truth which lies beyond their cognizance. It is needless therefore to take up the logic with which Dharanidhar Kauthumi rejects the idea of the Extra Cosmic Deity, and even the *philosophical reasons* which the reviewer parades are not faultless, e. g., it is not clear how God, who is represented as beyond finite and conditioned Brahma-vidya, must of necessity be conditioned and finite. It is not the translator who maintains that the Superior Intelligence emanates from an inferior one, on the other hand those who see blank beyond a certain condition hold that the Intelligent Law which governs the universe, sprang up from non-intelligence. The reviewer admits that the Scriptures are written in an obscure and oracular style, but has he understood them all, though he may be familiar with them as a Brahman? If not, it is boldness to say that he has nowhere met with the teachings now put forth by the translator.

As regards the Fiji affair, it seems to me that the reviewer has not understood the translator's arguments. The latter probably means that as the real Queen (Victoria) does not bear the least semblance to the ideal Queen of the Islanders, so the real God may not be like the fiction which the Humanity serve, and yet, as our good Sovereign exists nevertheless, the delusive shapes in which she is portrayed, so God pure and absolute may be in existence, although he is caricatured in a thousand fanciful modes by the votaries of innumerable different creeds. Finite intelligence may not find any trace of the natural laws having their origin from God, but those who have been able in spirit to approach his footstool may nevertheless do so. Just as a common coolie of the Fiji island may think the Governor or the Magistrate of the city in which he lives, the all supreme, though the intelligent high officials know that there is a power above them. And is it not also possible for an intelligent coolie to guess that the Magistrate whom he thinks the highest has one above him, and another who rules over the ruler of the Magistrate and so on?

Mr. D. D. Kauthumi would do well to realize the spirit of the Lord Buddha's teachings as well reproduced in Mr. Arnold's beautiful lines.

"Om Amitaya! measure not with words  
Th' Immeasurable! nor sink the string of thought  
Into the Fathomless. Who ask doth err,  
Who answers, errs. Say nought!

\* \* \* \* \*

Veil after veil will lift—but there must be veil  
upon veil behind."

I have failed, I confess, to perceive the scornful laughter with which the translator is said to treat the mathematical problem advanced by E. O. The translator solves it, it is true, from the known properties of circle, but there are metaphysics behind the solution which the reviewer fails to see.

I do not like wrangling; but the reason of my writing this to you is to point out the *untheosophical* spirit displayed by the reviewer, who, foiled in more serious attempts, seeks to gain his cause by raising the (wholly fictitious) cry of *animus* against the translator. But this is not the only reason for which I write. My principal object is to enquire what proofs

\* And there are others who say, "Granting all this, we yet know by a higher knowledge—not 'intuition' that however correct the inference with regard to 'conditioned existences,' there is yet but one immutable Law governing nature through her infinite expanse—the Law of uniformity." "As it is below, so it is above," say the Occultists. "What is true in the least, is true in the greatest," says the mystic Swede.—Ed.

can be adduced that there are *not* conditions beyond the 7th sphere as I have been assured by many Yogis outside the pale of our Society.

SIMLA,  
The 31st January 1884. } K. C. M. F. T. S.

REPLY BY DHARANI D. KAUTHUMI (F. T. S.)

I NEED not waste time in defending the charge of bad taste which the literary *arbitrator elegantiarum* has brought forward against me. A point of taste does not admit of argument; even if it did, it would have been unprofitable to discuss on the merits of some casual remarks stabbed by K. C. M. with numerous asterisks, and thus, like the feet of a fashionable Chinese belle forced into the iron shoe—of vulgarity. Those who refer to my review will find that although the charge of *animus* was not altogether unsustainable by the documentary evidence actually before the Court, it was still rejected by reason of certain facts of which judicial notice was taken by...Court of its own motion. And now not very brotherly epithets are hurled against me,—who am yet accused of "untheosophical spirit"—for showing that which my critic himself is compelled to resort to, as the sinking man's last straw, namely, to press for an acquittal of the translator from the charge of *animus* on the evidence of good character. It is not desirable to dwell on this part of the subject any longer, specially as my critic has very pertinently and bravely pleaded guilty to "impudence" in advance of any accusation, and sought the not over-heroic privilege of a Queen's evidence against his own caste—"the Brahmans of this Kali Yuga," who, by the way, are associated with a white-skin in some parts of India, perchance in the critic's own province.

It is universally admitted to be rather hard to prove a negative proposition; and that difficulty is certainly not removed when made to depend upon *purda nashin* reasons, claiming the privilege of Indian ladies in not coming into Court, and described to the profane observer as simply "good reasons," or introduced to the vulgar eye under the thick veil of a vague—"probably." I shall not, despite my bad taste, violate the privacy into which my critic's reasons have retired modestly and, at the same time, prudently shrinking from what he regards, perhaps, as the dissolute gaze of criticism. A few points, however, may be safely noted here:—

*First*.—The *ultima Thule* of the Adept's knowledge, "the 7th sphere," as my censor calls it, is not the last link of the "dimensions of space" referred to in the third paragraph of the foregoing letter. K. C. M. shows an entire ignorance of what the so-called 7th sphere is, when he talks of the possibility of the existence of "higher spheres" by reason of the infinity of the Cosmos. This "seventh sphere" is the *Paramam jyotih* mentioned in the *Chhandogya Upanishad*. "K. C. M." wants authority, and he may be safely referred to the *Mandakya Upanishad*, where the seven states are enumerated. As I have nowhere found in our Scriptures a reference to the ultra-seventh states, I am justified in rejecting the statements of the Yogis holding such opinions, unless supported by the testimony of such great Adepts as Vyasa and Sankara Charya.

*Secondly*.—The hollowness of the doctrine of an extra-cosmic God is sufficiently proved by K. C. M. when he talks of "the definition of an extra-cosmic Deity," evidently unmindful of the quotation to which he invites my attention—"Measure not with words the immeasurable." The whole argument on this head is a trifle worse than hanging a man on an hypothesis. With regard to "the Fiji affair," as he calls it, all I can say is: if the construction now put upon it be the correct one, the translator has good reasons to cry "Save me from my friends." For in the light of the present interpretation the whole "Fiji affair" becomes a nonsensical rignarole, no ways a reply to the proposition of "E. O." "What a ridiculous supernumerary, such a God, before the jury of sense and logic!"

It is useless to prolong the controversy any longer. Let the reader decide on the merits of my review, and the present criticisms evoked by it in the teeming brain of "K. C. M." *Valeat quantum Valere potest.*

## CONTEMPLATION.

In the article on the above subject in the February *Theosophist* occurs the following:—

1. Without realizing the significance of this most important fact, any one who for a moment finds cause of disagreement with any one of his family, or has his vanity wounded, or for a sentimental flash of the moment, or for a selfish desire to utilize the divine power for gross purposes—at once rushes in for contemplation and dashes himself to pieces on the rock dividing the known from the unknown.

I cannot understand how an ordinary man, who has, on one hand, the abovementioned defects in his nature, (which he generally tries to control, though sometimes with questionable success); and who, on the other hand, tries also to practise contemplation as explained in the article, runs the danger of being ruined. What are the dangers? Can they be named, and the particular causes which give rise to them?

2. To have the highest ideal placed before oneself and strive incessantly to rise up to it, is the only true concentration recognized by Esoteric Philosophy.

This passage is too learned for an ordinary man. Can an example of "the highest ideal" be given? How is the ordinary man of the world to strive after it?

Suppose an ordinary man of the world rises in the calm hours of the morning after a moderate rest, what is he to do? What kind of ideas should he fill his mind with? How is he to sit? How is he to carry on the contemplation so as to steer clear of all shoals and rocks in the sea of occultism? The greatest aim of the man in question is to spiritualize himself as much as could be done *safely*, so that if he cannot eventually be accepted as a chela, in this life—he may at least have the assurance to lead the life of an ascetic in the next birth.

AN F. T. S.

*Note.*—I regret the whole article is totally misunderstood. All I meant to say was that temporary estrangement, from family or friends, does not constitute an essential qualification for advancement in occultism. This ought to be plain to one who weighs carefully my illustration of Janaka. Although in the world, to be not of it. Failing to realise the meaning of this important teaching, many a people rush in from a sentimental disgust of worldliness, arising probably out of some worldly disappointment—and begin practising what they consider to be a true form of contemplation. The very fact that the motive which leads them to go in for this practice, is as is described in the quotation given by my correspondent—this fact itself is a sufficient indication that the candidate does not know the “contemplation” of a *Raja Yogi*. It is thus impossible in the nature of things that he can follow the right method; and the physical practice, which he necessarily undertakes, leads him to the disastrous results adverted to in the article.

Any reader, who has intuition enough to be a practical student of occultism, will at once see that to work up to perfection is the highest ideal that a man can have before him. That is not the work of a day nor of a few years. “The Adept becomes; he is NOT MADE”—is a teaching which the student must first realise. The aspirant works up to his goal through a series of lives. Col. Olcott says in his *Buddhist Catechism*:—

“... Countless generations are required to develop man into a Buddha, and the iron will to become one runs throughout all the successive births.”

That “iron will” to become perfect must be incessantly operating, without a single moment's relaxation, as will be apparent to one who reads carefully the article as a whole. When it is distinctly said that during the time that this contemplation is not practised, i. e., the iron will is not exerting, the process of the emission and attraction of atoms is not stopped, and that the desires, instinctive or otherwise, must be so regulated as to attract only such atoms as may be suited to his progress—I cannot understand my correspondent when he asks me what he should do at a particular hour in the morning. He should cultivate only such thoughts as would not be incompatible with the highest ideal he has to work up to. By perfection, which should be his highest ideal, (I must add) I mean that divine manhood which the Occult Philosophy contemplates the seventh race of the seventh Round will attain to. This, as every tyro knows, depends largely upon a cultivation of the feeling of Universal Love, and hence an earnest desire to do some practical philanthropic work is the first requisite. Even this state, I admit, is not absolute perfection; but that maximum limit of ultimate Spiritual perfection is beyond our comprehension at present. That condition can only be intellectually realized as a practical ideal by those divine men—Dhyan-Cholans. To be identified with THE ALL, we must live in and feel through it. How can this be done without the realisation of the feeling of Universal Love? Of course Adeptship is not within the easy reach of all. On the other hand, occultism does not fix any unpleasant place or locality for those who do not accept its dogmas. It only recognises higher and higher evolution according to the chain of causation working under the impulse of Nature's immutable law. The article on “Occult Study” in the last number gives the necessary explanation on this point.

It is painful for me to find that the very thing I attempted to point out in that article to be mischievous in its results, is again put forward as a desirable attribute or adjunct of true contemplation. I would ask my correspondent to read again the same article, with these additional remarks, before thinking of the necessity of any peculiar or particular posture for the purpose of contemplation. I, at any rate, am unable to prescribe any specific posture for the kind of incessant contemplation that I recommend.

D. K. M.

### A GREAT RIDDLE SOLVED.

REFERRING to the article of D. K. M. in the last issue of the *Theosophist*, headed “A great riddle solved,” in which he says the misconception regarding his Master's appearance “was due to the reports of a certain Bramachari, the pupil of the Vedanti Swami in the N. W. P. who had met last year in Thibet the chief of a sect, an elderly Lama,” who was his Master's travelling companion at the time “the said Bramachari having spoken of the encounter, in India, had led several persons to mistake the Lama for himself.” Now I know of a case in which a certain gentleman of this station saw clairvoyantly the appearance of D. K. M.'s Gurn long before the Bramachari came here and spoke of his encounter with the Kuthumba Lama as he called him. The gentleman in question saw his (D. K. M.'s) Master's portrait mentioned in the last edition of the *Occult World*, and was at first

puzzled with the difference of appearance he saw in the portrait and that he perceived clairvoyantly. But he remembered the Master's modest remarks that the figure in the portrait was very much flattered. The Bramachari only came some months after the incident, and although he narrated to the gentleman his interview with the alleged K. H., the gentleman thought that there must have been some mistake as the Master could not have been likely to read the *Vedas* in the manner he was represented as doing.

Another incident happened here about a month ago. A certain initiated *Grihasta* Brahman who had no connection with our Society—but who had nevertheless heard of the Master from his Theosophist friends, resolved one day to see K. H. in his (the latter's) *sukma sariram*. He sat in his room with his door closed, but was disturbed by the noise outside. In the night, or rather in the early part of the morning, he fancied that some one touched his right shoulder lightly, and the appearance of the figure that he described tallied, as far as I could judge, with that which I had heard attributed to D. K. M.'s Master. But as soon as he was conscious of his presence, he was again disturbed by some other noise. He says he was fast asleep, but the touch of the figure roused him. He had not even heard of the portrait with Mr. Sinnett, nor had any acquaintance with the other people who fancied that they had seen the Master.

There are many other instances which came to my knowledge in which D. K. M.'s Master favoured many individuals. But despite his belief and that of the large numbers of the Theosophists that I know of, I confess I am at a loss to reason with those who think that the real K. H. is an “elderly” man. These persons do not pretend to say who D. K. M.'s Master is. They say that he may be like the portrait of which I have heard Colonel Gordon, Mr. Sinnett and others speak, but if so, they question whether he is the K. H. well known in Thibet.

SIMLA,  
31st Jan. 1884. }

K.

*NOTE.*—We know of only one MAHATMA bearing the name of my venerated GURU DEVA who holds a well-known public office in Thibet, under the TESHU LAMA. For aught we know there may be another bearing the same name; but at any rate he is not known to us, nor have any of those, we are acquainted with in Thibet, heard of him. And this personage, my BELOVED MASTER, is, as I have described Him, resembling the portrait in Mr. Sinnett's possession, and does not look old. Perhaps the clairvoyants are confounding the sect of *Khadampas* with the *Kauthumpas*? The former, although not regular *Dougpas*, are great magicians and indulge in practices an Adept of the good Law would feel disgusted with—such as the well known phenomenon of ripping open the abdomen, exposing the intestines, and then restoring them to their normal place and condition, &c. &c. The latter, the *Kauthumpas*, are the disciples of my MASTER.

My friend and brother of Simla should not lose sight of the fact that while others claim to have seen my Master clairvoyantly, I say that I saw Him in the North personally, in his living, not his astral body. Col. Olcott and Mr. Brown were also as fortunate as myself in that respect. It is now for the impartial reader to judge whether the testimony of three unimpeachable eye witnesses is more reliable or not than that of one or two clairvoyants (untrained we may add) in matters connected with the physical appearance of an individual. Imagination and expectancy are, with various other things, apt to mislead beginners in the Science of Clairvoyance.

D. K. M.

### THE BEST FOOD FOR MAN.

THE use of flesh-meat is forbidden on the ground that it is animal food and the reasons against its use are manifold. Some of these reasons are given by Mrs. A. Kingsford, M. D., F. T. S., and are intended most likely for the guidance of the general public—Fellows of the Society not being excepted. The prohibition is wholesale. It does not refer to the flesh of the diseased animals alone, but is general and extends to all flesh, whether of diseased or healthy quadrupeds or of birds. This being so, I do not see what sense the learned authoress intends to convey when she, at p. 108, column 2, para. 3, says:—“A vegetable dictary, to which we may add cheese, milk, butter and eggs, costs three times less than a mixed dictary of flesh and vegetables.” This sentence, when divested of its financial aspect, signifies in plain phraseology that we are justified in using vegetables, plus cheese, milk, butter and (most singularly) eggs, and that the arguments advanced against the use of flesh meat do not apply to eggs and to the other articles named with them. With due deference to the authoress, I may be permitted to say that I have not been able to follow her in her logic, inasmuch as the

arguments which hold good as against the use of flesh of quadrupeds and birds should equally hold good as against the use of the milk and eggs of these quadrupeds and birds respectively, unless indeed there be some scientific reasons, unknown to me, for the exclusion of the specified articles from the prohibitory category.

Besides this, in proposing to the members of my Branch here the adoption, *inter alia*, of a rule or bye-law against the use of intoxicating liquors and flesh meat, I have been met with the following objection or criticism by a Brother-theosophist to the proposal made by me.

The use of flesh-meat being forbidden, there is no reason why the use of milk of animals should be held permissible to man and particularly to Theosophists, who, as a rule, are bound to cultivate and disseminate feelings of love and kindness not only towards human beings but also towards all lower animals. Observation and experience tell us that the quantity of milk in animals is not in excess of what is necessary for the support of their young ones. Of course the mammalia class only have milk and suckle their young while other classes do not. Now it is asked what right man has to justify him to appropriate to his use the milk of animals, which seems to be intended by nature for the support of their young ones. The only reason that is ordinarily put forward in justification of the practice is that the animals are domesticated and looked after by man, and the milk that is extracted from them is in return as a remuneration for the money and care bestowed on them by man. To this it is responded that the domestication of animals is not voluntary on their part, but it is forced upon them to their deterioration for domesticated mammalia can in no case equal in point of health those in their wild state. The simple laws of nature are always safe guides. *Naturo* teaches us that we have no right whatever to slaughter animals for the use of their flesh. The same nature teaches us that it is equally wrong on our part to milk cows and use the milk which is purely intended for the support of the calves. To deprive the calves of the quantity of their cow's milk is potently a sin of omission only less atrocious than that of slaughter, which is a sin of commission. The difference is merely in the degree of atrocity.

It is sometimes urged that the natural quantity of milk in the animals is over and above that which is sufficient or necessary for the support of their young ones. In other words, this excess, if any, is to be taken as creating a right in man to use the milk. To this it may be replied that a similar excess in wealth with a millionaire does in no part of the world entitle us to divest the said millionaire of the excess or of any part of it without incurring the culpability of crime and sin.

Up to this point we have been discussing about milk. The question of eggs is a question of a higher plane in as much as the deprivation of the young of animals of their milk does not result in their destruction, but the appropriation of eggs of birds by man to his own use; puts an immediate end to so many lives while on their upward way.

BARA-BANKI, } PURMESHRI DASS, F. T. S.  
February 10th, 1884. }

NOTE.—I beg to remind my brother that Theosophy admits of no dogmatic assertion of the fitness of things; therefore no particular kind of food is ordered imperatively, neither is there any that is "forbidden" or "prohibited" in the strict sense of the terms. The Occultist, after careful investigation of all the facts and circumstances of the *whola* case and their impartial consideration with a broad and enlightened vision, recommends a certain course of action as the best. He always takes his stand in the middle, and, surveying the lines pointing to the extremities, comes to a decision. There are people who argue that destruction is the order of the universe, that everywhere we see one creature preying upon another, itself being the food of a third, and that it is therefore perfectly natural for people to kill animals for food. There are others who say that everywhere it is to be seen in nature a feeling of love, an affection—the mother taking care of the children and so on. Therefore no life should be destroyed. There are not a few who say that they use animal food merely because they find animals already dead or killed, but that on no account would they allow slaughter intended solely for themselves. A dispassionate consideration of these three arguments is now necessary. The first class show that they have not risen above their animal nature. Otherwise they would see that this beastly tendency, this desire for the assimilation of animal food with their physical frames, has the effect of chaining them down to a physical plane from the meshes of which no rising is possible unless a more human feeling begins to assert itself. The latent spark of this noble feeling is inherent in animals too, for if they did not have it, they would not feel that tenderness towards their young which they manifest. This class, therefore, we must leave out of consideration for the

present. The sophistry of the third class is self-evident. Our answer to them is that they must remember that an appreciable decrease in the number of flesh eaters must have the effect of lessening the number of slaughtered animals. If they use the flesh of dead animals, they may just as well be asked to follow the example of the Chinese who do not spare the flesh of dead persons. We must now divert our attention to the second class. If the theory that no life should be destroyed be carried to its legitimate extent, the very existence of man would become impossible, for even the air he breathes is full of animalcules, which he must inhale when the respiratory process is in operation. Nay—we can go still further: the ONE LIFE permeates all; each and every atom has latent life in it, and therefore every atom we displace in our movements is an injury to life. The great problem is how to get out of this difficulty. The Occultist recognises the important fact that everything in nature progresses gradually and nothing is achieved by starts or jumps. At the same time he realises that destruction and creation are relative and interchangeable terms, since destruction relates only to form—the substance remaining always permanent—and that the destruction of one form is the creation of another. These relative ideas therefore cease, when the phenomenal and the non-phenomenal are blended together into THE ONE SUBSTANCE. The aim of the Occult Student is therefore to gradually progress on the path of perfection, so that he may get out of this world of forms and be merged into the ARUPI TOTALITY. This is not the work of a day, nor of a few years, but of ages. He therefore gradually by a special training induces in himself such conditions as would enable him to rise higher and higher on the path of perfection. He does nothing violently: he only anticipates, by his knowledge, the usually slow processes of Nature, and he conforms his mode of living to the then conditions of his existence, bearing also in mind that it is but temporary since a higher state of existence requires a better mode. The neophyte gradually leaves off eating until he reaches a stage where no food is necessary. And the ultimate stage is that where all relativity ceases and he identifies himself with the ABSOLUTE EXISTENCE. So long, therefore, as we are in the phenomenal world, we cannot but guide our actions by the law of relativity and have always to make a choice between two evils. A true philosopher, one who has put himself *en-rapport* with his *Buddhi*, makes the right choice. It is for this reason that Occult Science is useful. It gives its votaries a right sense of discrimination and enables them to adopt only that course which would not come in the way of progress, while ordinary humanity, engulfed in the trammels of *Avidya*, gropes in the dark and many a time does exactly the opposite of what may be conducive to progress. This should not be assumed to mean an occultist is infallible; but by his superior knowledge he is in a better position to do what is right than one whose perceptions are clouded by *Maya*. This explanation, I believe, is sufficient to show that *no hard and fast rules can be laid down for general guidance*. There is an infinite gradation of progress towards the ABSOLUTE, where alone all difference can come to an end. As regards the use of animal food, the answer to the first class of men under consideration covers the point.

## Reviews.

### INDIA, WHAT CAN IT TEACH US? \*

WE have to acknowledge with thanks the receipt of the latest work of the veteran Sanskritist, Professor Max Müller of Cambridge. A consideration at length of the views here-in advanced as to the ago of the sacred writings of the ancient Aryas and of the classical literature of the Hindus has been rendered unnecessary for two reasons: first, because they are but the reiteration of the conclusions contained in the previously published works of the learned Professor; and secondly, because the assigned dates are all declared by him to be but provisional. The immediate object which moved the Professor to deliver the course of lectures, collected in the present volume, is to inspire the young gentlemen of the Civil Service, under training to be the future rulers of India, with love and respect for India, its people and its literature. This noble endeavour to bring about friendlier relations between two families of the human race, entitles the Professor to honorable recognition from Theosophists, as a fellow-labourer in the same vineyard of Universal Brotherhood. As such we give the book a hearty welcome. The undeniable facts which are gathered together in the second lecture of the series for the vindication of the truthfulness of the Hindus, will silence every one not afflicted with a tenacity bordering upon fool-hardiness, from uttering such calumnies against the Hindu nation, as have, unfortunately, been but too freely indulged in by a certain class of Europeans. A strong array of facts and arguments have been brought forward in this volume to show that even "civilized" Europe has something of great importance to learn from India. But at the same

\* A course of Lectures delivered before the University of Cambridge. By F. Max Müller, K. M. Hon. Doctor of Law in the University of Cambridge; Member of the French Institute; London: Longmans, Green & Co., 1883.

time we may be allowed to remark that the book would have in no way suffered if care had been taken to weed out from it such passages as remind one of the Biblical exhortation—"Go to the ant, thou sluggard," &c. If, however, the Professor succeeds in carrying conviction home to his readers that great good is likely to flow from an attentive study of the sacred books of India, he will have established a strong claim on the gratitude both of the Hindus and the Europeans.

We shall conclude this notice of Professor Max Müller's valuable work with an extract showing the living power exercised by the Vedanta Philosophy in India. Says the German Pundit:—

In India in spite of all appearances to the contrary, and notwithstanding the indifferences on religious matters so often paraded before the world by the Indians themselves, religion, and philosophy too, are great powers still. Read the account that has lately been published of two native statesmen, the administrators of two first class states in Saurashtra, Junagarh and Bhavnagar, Gokulaji and Ganrisankara, and you will see whether the Vedanta is still a moral and political power in India or not.

But I claim even more for the Vedanta, and I recommend its study, not only to the candidates for the Indian Civil Service but to all true students of philosophy. It will bring before them a view of life, different from all other views of life which are placed before us in the History of Philosophy. You saw how behind all the Devas or gods, the authors of the Upanishads discovered the Atman or Self. Of that Self they predicated three things only, that it is, that it perceives and that it enjoys eternal bliss. All other predicates were negative: it is not this, it is not that—it is beyond anything that we can conceive or name.

All impartial observers must endorse every word in the above extract. It is a revival of a more extensive study of the Vedanta that the Theosophical Society is trying most strenuously to bring about among Hindus. We have made our notice of the great Professor's book as brief as practicable, because his aim is all kind and benevolent, and we do not care to mar the expression of our sympathy by combating, as we should then be forced to do, many of his cherished theories and challenging the accuracy of his archaeological inferences. That has been done by us before—possibly may have to be done again. For the present, we have but to thank this prince among European scholars for his friendly appreciation of India and her people.

### THE INHABITANTS OF THE PLANETS.

DIE PLANETENBEWOHNER, (the Inhabitants of the Planets) and the Nebular Theory, is the attractive title of an interesting book by the astronomer Dr. Carl du Prel, who has already become very favourably known by his previous Darwinistic writings. If one expects to find in this work a fancy sketch of the costumes and manners of the inhabitants of the planets, he will be disappointed as the work is purely scientific, demonstrating that the existence of other human beings than such as we know of, and endowed with peculiar organs, such as are adapted to their peculiar surroundings, is not only a possibility but a logical probability, if not a cosmical necessity. The author is a man of science and as such he deals with solid facts and mathematical deductions. His work forms the key-stone to the arch, which modern astronomy has erected.

According to the nebular theory our solar system was originally a gaseous fireball, which contracted, consolidated and turned with a certain velocity around its own centre, or axis. As this velocity increased, rings were thrown off from its surface, which kept the original movement, imparted to them by the parent body, the sun. These rings have been thrown off at various intervals of time and therefore differ in age, size and density. There are at present over 200 planets, moons and asteroids in our solar system, and originally there must have been a great many more; but the law of the survival of the fittest, which governs everything in nature is here in action too. Each planet by its attraction, (gravitation and tangential force) influences and modifies the movements of its neighbours, and causes perturbations, by which in the course of time a number of planets must have collided and consolidated into one or more. Therefore only those planets, whose perturbations equalize each other, whose periods of revolution are irrational—survive. The perturbations of our present planets are equalized, and those of the asteroids nearly so.

Space will not permit us unfortunately to follow the author into all the details of his interesting investigations of the physical nature, and the progress of planets, moons, asteroids, comets and meteors.

Spectral analysis proves that the elements composing the planets and stars are in their intrinsic nature the same as we know them on earth; but their states must differ very much according to the age and density of the planet and its distance from the sun. The conditions existing on the different planets for the development of organic life must vary accordingly, and therefore their vegetable and animal products must also vary. Only four planets, Mercury, Venus, Earth and Mars, exhibit conditions somewhat similar to each other, and thus their inhabitants may be more or less like man as we know him. But can all life be limited to such an insignificant small portion of the universe?

22½ millions of years are necessary for our solar system, to accomplish one of its grand revolutions around the star Alcyone in the constellation of the Pleiades and a ray of light from Alcyone has to travel for 715 years before it can reach our earth. There are stars whose light takes 5521 years to reach us. Is it reasonable to suppose that all this immense and incomprehensible space and time has been wasted, to give life only to one or four inferior planets, whose importance, is almost like nothing in comparison with the magnitude of the universe? Such a conclusion would prove the personal creator, if such a being could exist, to be unreasonable and unjust. But if we accept the theory that there are other modes of life and consciousness in the universe than those with which we are experimentally acquainted;—if we understand that organic beings can exist in other forms than the albuminous bodies which we know through our physical senses; it then becomes useless to base our speculations on the forms as we find them on earth. But even on our planet there is an almost infinite number of things, which are invisible to us, because we can only perceive things by our senses and those senses are by no means fully developed. In fact we do not know the things themselves at all, but only perceive them by their modes of action.

The constitution of the inhabitant of a planet is not a matter of arbitration, but a result of the correlation of forces which exist on that planet, modified by the conditions found therein. His organs must accordingly differ and be adapted to his surroundings. His size, weight, strength, quality of senses, duration of life, perceptive, mental and spiritual faculties must be in corresponding harmony; and to form a comprehensive idea how a man on a certain other planet may be constituted, we must not only take all these things into consideration, but also the variations of astronomical influences, such as gravitation, density, refraction of the rays of the sun, and the density of the atmosphere through which the rays of the sun must pass. A man for instance, weighing 60 Kilogrammes on earth, would weigh on the moon only 13, while on the Sun—he would weigh 1,762, &c.

The evolution, growth, form and number of organs is a natural consequence of the necessities of their existence. The surroundings of man called them into life, and his organs become developed or disappear, in accordance with the necessity for their use. An organ that may be very useful on one planet may be useless on another. Plants, animals and men project the organs they need, the same is the case with still higher and more complex bodies, such as the body politic of a town or state, church or any other social organization. Here and there principles and men are combined for a common purpose. Each man as each organ has a certain purpose to fulfil. An organ that is affected, makes the body diseased, a person or a body of men that act contrary to the laws of the country, hinder its development and affect the health of the whole. In man as well as in the organisation of state, like everywhere else in nature, the different organs and limbs, to become useful as well as beautiful, must be according to the rules of the "golden circle," which means the division of a whole into unequal parts, of which the smaller part bears the same proportions to the larger one, as the larger one to the whole. Only when this rule is observed, works of art become perfect, and as in art, which is only an imitation of the master works of nature, so through the whole of nature the workings of this law can be traced.

This can only be explained, if we admit that a universal principle pervades the whole of nature, or is identical with nature, which alone is capable of shaping the forms which it evolves according to that rule. This principle having grown into consciousness in man stands before its own works and admires the beauty of its own creations, and the unity of nature and spirit is revealed to us.

We have undoubtedly the right to draw our conclusions as to the form of organic products by observing the products of the human mind, the unity of the universe further permitting us to extend our conclusions to the organisms of other planets. Nature and spirit are radiations from one common point, and the formative principles of both are identical. Ideas become developed, unfolded and differentiated like organic products. The History of the human mind is a process of adapting itself to the conceptions of reality. Here like everywhere we find competition, elimination of error, survival of truths. Goethe says "each age floats in an atmosphere of common ideas and thoughts, and it is just as natural that the same discoveries or inventions should be made at the same time by different persons, as that indifferent orchard fruits of the same kind should ripen and fall at the same time."

Mind (spirit) and nature are one, but we see many inventions that nature has made, while the human mind has not been yet able to imitate them, such, for instance, is the problem of flying, which nature has solved in the construction of birds. Whatever is possible to nature must be possible to man, and as long as man has not succeeded to produce the works which nature produces, as long as he is surpassed by nature in his abilities, he is not yet perfect. If we wish to form an idea of the nature of the inhabitants of other planets, we must look through the book of inventions, and compare the realm of organic nature with the products of technical activity. Where the former surpasses the latter, there we are afforded a glimpse of the possibilities of the inhabitants of other planets or of our own future. If we for instance should make the acquaintance of an inhabitant of another planet, whose brain would have the inherent power to perceive the chemical qualities of matter, a power which we technically possess in the spectroscope; the existence of such a being would be less miraculous than the fact that nature should form a brain, which is capable of inventing such an instrument.

If we agree that there may have been a time, when man could not see or hear, we may also conclude that the inhabitants of other planets may have certain senses of which we as yet know nothing and that are able to perceive such vibrations of ether as cannot be perceived by our senses, and of which we can therefore form no comprehensive idea; while again others may be deficient in such senses as we possess. What appears to us as color may appear to them as sound, etc. Amongst a hundred persons about five are found to be colorblind, and some people cannot hear sounds, which are fully perceptible to others. One and the same object may be either felt, seen or heard, according to the character of its movements or vibrations.

Suppose a metallic rod to be suspended in a dark room and let the same be connected with some mechanical contrivance, by which it can be made to vibrate and increase the vibrations gradually to a certain extent, and we will have the following result: At first the rod can only be perceived by the mechanical resistance it presents to our touch; but when the vibrations rise to the number of more than 32 in a second, an action at the distance commences. The drum of our ear then begins to vibrate in consonance with the rod and we hear a sound of deep sonorous bass. As the vibrations increase the sound increases in pitch and runs up through the musical scale to the highest note, when at 36,000 vibrations per second all sound ceases and the rod becomes imperceptible to our senses. All through the long interval from 36,000 up to 18 millions of vibrations per second we can neither hear nor see the rod; but at this point it begins to affect our sense of feeling, by emitting radiant heat. At a still higher rate the heat ceases, a dull red glow appears which becomes perceptible to our sight, and runs up through all the colours of the solar spectrum through yellow, green, blue, purple and violet, until at 8 billions of vibrations per second, all light disappears and the rod as far as our senses are concerned has ceased to exist, although its presence can still be proved by its exhibition of chemical action. Experiments like the above may be varied in various ways; they

show that all we know of our surroundings, is only the impressions which they make upon our senses. The rays of the sun are not all visible to us. On the one side of the solar spectrum there are rays, which can only be felt (heat rays), on the other side they may produce chemical action (chemical rays). There may be men on other planets, who perceive sound as we do light, and others whose sense of hearing is affected by what is to us inaudible motion, and to such "the music of the spheres" may be more real than the poetical idea implies. We pity the blind and the deaf, but there may be superior beings, to whom we may appear as blind and deaf and we may be looked upon with pity by them.

If we examine into the nature of our organs of sensation and their commencement, the first question which meets us, is "how can dead matter become conscious?" We answer, "Dead matter can never become conscious; because matter is never dead."\* Sensation is a principle, which may be latent or become developed. It may be difficult for us to imagine sensation without a nervous system, but it is more difficult to imagine that a nervous system could become developed without having in its atoms the inherent capacity for sensation. Physiologists know that there can be sensation without consciousness and many plants especially creepers exhibit it. Sensation may be found perhaps to a great extent lower in the scale of nature, but we cannot detect it; because we have to measure it by our own sensation and there all similarity is lost.

Whenever our senses come in contact with the vibrations of ether or matter, the senses communicate them to the brain and there the various sensations are excited. The visible color rays of the sun differ from the invisible heat rays only by the different size of the waves put into vibration. If we talk of the sun as a hot and luminous body, we express no opinion whatever in regard to the condition of his objective existence, but refer only to our own subjective sensations. There is neither light nor sound, nor color in nature; we do not perceive the objective changes in nature, but only those subjective changes, which are produced in the centres of sensation of our brain. We have no other experience than an internal one.

*Our world is consequently only our own Illusion.* We know nothing of any existence of things but that which coincides with our ability to perceive. People usually consider the eye as a mirror in which external things are reflecting their images; but experimental physiology teaches that these things must first be formed by the optic nerve. We do not see the actual images of things as they are, but only their symbolic figures. "Sight"—says Berkeley—"is a language, which speaks to the eye, and we are not conscious of having learned it, because from our earliest day we have learned it continually."

The external world is a phenomenal world. It is a perception of our mind, and not the real nature of things; but only the semblance of reality is impressed on our senses. We call these qualities of things and imagine to grasp an external world, while in reality we never leave our subjectivity by observing them and we only learn to know the mode of their reactions upon our senses. There is no such thing as a cheating of nature. Organic bodies absolutely require for the purpose of their existence such senses and the development of such an intellect to define our own position in regard to the external world. How we obtain this knowledge is practically immaterial, and whether we receive true pictures of objects or only their symbolic representations, is for our purposes one and the same thing. It is not necessary for our purposes that the objects and their representations should be identical. If our senses were constructed differently, we would have an entirely different conception of the world. But whether a book is written in Latin, Greek or Sanskrit letters—what does it matter so long as we can read the letters and understand their meaning; provided the meaning of the same word does not change?

The world, as we imagine it to be, is only a phenomenon, whose condition is dependent on our organisation and ceases to exist with that. This is an old philosophical doctrine and modern Physical and Physiological sciences have proved its truth by experiment. Heat and Light, sound, color, taste

\* And this is a cardinal doctrine of occultism. Our Masters say: We recognize no such thing as "dead matter." Every atom is organic—and to deny this is the greatest mistake of modern science.—Ed.

and smell are not things but only affections of our senses, and whatever we perceive is only the sum of our subjective conditions of consciousness. We perceive only a part of those things that exist and not all that we believe to perceive does exist in reality.

All those different impressions upon our senses would not enable us to define our position, if we did not concentrate or focalise them to a single centre in which the various impressions are kept together by the tie of memory. This centre consists in our personal consciousness. With the same scepticism, with which we accept the testimony of our senses, must we also mistrust the deductions of our intellect, which being the collective focus of our sensuous impressions must be equally liable to error and equally subject to the laws of development. We see therefore very different degrees of intelligence among animals. If the sensuous perceptions of the inhabitants of other planets vary from ours, their intellect must also vary accordingly; for as every organ has passed through several changes in the course of evolution, so the centre of our impressions, the intellect, must have changed accordingly. A being whose intellect would be so very different from ours, would probably perform actions which would astonish us very much, and which we would call miracles, because we could not understand them.

Kant, in his "Kritik der reinen Vernunft" has demonstrated that space is nothing but a mode of perception of our reason and dependent on its specific nature. This is already proved by the fact that all the estimation of the extension of space rests simply upon our comparison. If every thing in nature, ourselves included, would during our sleep suddenly become immensely large or microscopically small, after waking up in the morning, we would never know that any change had taken place, provided we had been ourselves included in the change. Height, breadth and depth, are only subjective. If we were a globular eye without a body, all dimensions of space would be perceived by us as only one dimension.

The mathematician Riemann speaks of the possibility of the existence of a space whose lines do not continue in direct lines, but return into themselves. Such a dimension, would not be infinite, but globular. But if space, with its three dimensions, continuing in straight lines into infinity, is only a subjective form of contemplation, then it will also from an intellectual point of view be permissible to ask whether the existence of a fourth dimension of space is possible. The mathematician Jausse does not doubt its possibility and demonstrates the three dimensional extension of space to be a specific quality of the human soul. Further more, if we can prove that our present three dimensional perception of space is a result of an evolution of our mind during the past, the possibility of a still continued evolution to a four dimensional perception would be presented.

Physiology proves that the appearance of a simple plane in the field of our eye is not a function of our senses, but a psychic act to whose completion the sense of sight simply furnishes the material to the reasoning faculty. For thousands of years man looked upon the starry sky as a plane, to which the stars were fastened, and the stereometric conception of space is of a comparatively recent date. The aspect of our two hands, which are both alike and yet differ—because the right one cannot be replaced by the left, nor the left by the right—indicates that there must be a fourth dimensional perception of space.

As space is subjective, so time is subjective. We cannot imagine a time which will end, neither can we imagine an endless time. Time is nothing unless in connection with our association of ideas. Life passes slow or quick, according to the number of sensations of which we become conscious during a certain astronomical time. To a fly that lives one day, life may perhaps seem longer than fifty years to the dull comprehension of a turtle. The yellow sunray causes 509 billions of vibrations of ether in a second. If we were able to perceive each single undulation, instead of only the sum of these, a single day would appear to us like eternity; while if our mind could only receive one single impression per minute, life would seem extremely short. The existence of both kinds of beings, who have either such quick or slow perceptions, is not unthinkable.

We only know of one mode of consciousness, which is our own; but we have no right to maintain, that this is the only possible mode. We are under the logical necessity of either to believe in the unintelligence of the universe or in our own ignorance. Which of the two is the more probable theory?—

Not one realm of nature has ever been discovered, in which the products of reality have not far surpassed the creations of our imagination. Should it be different, where life and consciousness are concerned?—At present we cannot judge of the quality of things, that lie beyond our horizon, but to suppose that a time will arrive, when we shall be able to obtain knowledge of the inhabitants of other planets, does not seem to be more absurd than the presumption which prevailed only a short time ago, which declared it impossible that we should ever know anything about the chemical composition of the stars.

Our investigations finally teach us, not to look upon the universe as an aggregation of dead matter, combined to mechanical systems; which is the prevailing idea of our age of materialism; but we do not believe to err, if we predict that before many years have passed away, scientists will consider themselves unable to explain the mechanism of the universe, without taking into consideration the phenomena of consciousness and morals.

AMERICAN BUDDHIST.

#### VEDANTISM.\*

WE beg to acknowledge with thanks receipt of a small treatise on the above subject. Although the preface begins from a Dualistic stand-point, the entire perusal of the work shows to the reader that the author substantially admits the Adwaita Doctrine. This strange inconsistency can be explained on either of the two hypotheses, namely, that (1) the author was a dualist but the process of reasoning has led him to Adwaitism, or (2) assuming a dualistic stand-point, he wants to prove the Adwaita to be more correct and logical. However that may be, we need not enter into a discussion here, since the author does not speak himself but uses the language of the Veda. In this respect the book is very valuable indeed, since it is a small encyclopædia of the Vedantic arguments in favour of the Adwaita Doctrine. We would therefore strongly recommend it to earnest students who would have food for thought from Vedic texts.

BHARGAVA SARMA.

#### OCCULT SCIENCE, THE SCIENCE OF BREATH.†

THE title of the book now before us is very attractive indeed. The *Appendix*, with which works generally end, is the first thing which presents itself to the reader as soon as the present publication is opened. The authoritative idea of "creation" which the author puts forth is a very valuable contribution. The following passages are very suggestive:—

... this phenomenal world, this sky, this firmament, and all that is here, did not exist . . . . "There was then no death, and therefore naught immortal! there was no confine between day and night." . . . . "The only one breathed breathless in itself," and there was nothing besides him . . . . All that was darkness and by darkness all was covered . . . .

As light and darkness are relative terms and there can be no conception of either without a knowledge of the other, would it not be better to use some other word instead of "darkness?" The sacred book of Kiu-te teaches us that there is nothing permanent but space. However, to proceed:—

..... With all light there exists a sort of minus, negative light with a tendency to overpower the light whenever possible..... And thus this creation changes on from one shape into another, until at last all these energies will spend themselves into the original heat and nothing but the negative Infinite, the original germ will again be covered in the positive infinite, like the germ in the husk, and similarly proceed again on its second course.....

Let the reader now judge for himself whether the esoteric conception of Cosmogony as given out in the *Theosophist* is in harmony or not with the above extract. All that the Adwaita or Esoteric Buddhist adds is that this ETERNAL SUBSTANCE has no consciousness; for it is itself absolute consciousness, absolute will and absolute knowledge—ABSOLUTE ALL—a phraseology adopted by our own sacred Scriptures. The good and the bad—or the positive and the negative as—

\* A lecture by Babu Dvijadas Datta, M. A.; Edited by D. C. Ghosh, S. K. Lahiri and Co., Calcutta, 1883.

† Translated from the Original Sanskrit by Pandit Ram Prasad Kasyapa, B. A., P. T. S. Published by R. C. Bary. Printed at the "Ripon Press," Lahore. Price per copy, eight annas, packing and postage, one anna. Can be had from the Publisher.

pects of the One Totality—are its inherent potentialities, or rather they assert in that energy which radiates from it and which is the material basis of the phenomenal world. Would not then the term *evolution* be less objectionable than *creation* as applicable to this process of the formation of the phenomenal world from the noumenal? The article "The Victims of Words" in the February *Theosophist*, and the theory of cycles presented in the *Fragments of Occult Truth* and in *Isoteric Buddhism*, should be carefully considered in this connection. The process of evolution and its action in ever-recurring cycles are very concisely given in the *Appendix* of the work under Review. And it will be brought home very forcibly to one who has already devoted himself to a study of the Occult Science.

To turn now to the other portions of the little treatise. Even a tyro of the Esoteric Philosophy is aware that the books of our ancient Rishis are written, as it were, with a double purpose. History and allegory, physical and psychical, phenomenal and noumenal, prose and poetry are so closely interblended that only he who has the key can crack the outer shell and separate the kernel from the skin. While the exoteric, literal interpretation concerns itself with physical facts, the esoteric, hidden meaning opens up a realm of psychic research. This is a significant truth, inasmuch as it shows that, unlike the modern scientists, the ancient Rishis, who had studied deep the operations of Nature, did not confine themselves only to one phase but took cognisance of both. In their investigations they applied both the Platonic and the Aristotelian methods, and having thus ignored the claims of neither of the two broad Departments of Nature, arrived at brighter and more correct results than the scientists of the present day who exclusively concern themselves with but the physical side. The reader, who will bear these facts well in mind and not be carried away only by physical facts or external phraseology, will gather much from the little pamphlet under consideration. The author lays great stress upon *Swara*, which he translates as *breath*. We however beg leave to state that it is only one of the meanings. *Swara* also means sound, the external manifestation of *Vach*. And he who knows the mystery of the *Logos*, the Word, the Ineffable Name, is fully aware of the highest importance of *Swara* in this respect. On page 6, the author says:—

..... The beginner of our science must be pure in thought, calm in mind, virtuous in actions, and have unmixed faith in his spiritual teacher; he must be strong in determination and grateful. On a ruffian, an ill-natured, angry man, a liar, one whose vitality has been wasted, or one any other way immoral, this knowledge is thrown away.....

And yet on page 16 occurs the following:—

If a Yogi wishes to kill a man he must try to do so in the Vayu Tatwa.

This appears a striking contradiction. But we believe if the word *Yogi* be not used in the latter sentence, it would be all right. It has been very often pointed out that the lowest powers of Occultism are but physical, and it is in this stage that the danger lies for a beginner, lest he should diverge to the left hand road. The difference between white and black magic has already been noted in a special article in the *Supplement* to the February *Theosophist*. It is thus the sorcerer, who is actuated by *selfishness*, and not the *Yogi* whose progress depends upon a cultivation of the feeling of unselfish philanthropy and thus merging into THE ALL—that can be actuated by a desire to "kill a man."

Speaking about the *Swara* in the body, we find the author saying:—

..... There are ten principal nerves. This includes the tubes &c. It is in these ten that the ten manifestations of *Swara*, \* the ten so-called *Vayus* move.....

The very next sentence, however, reads:—

The word Vayu (air) is not to carry the idea that actual gas moves in the nerves. We mean by it ten forces, which perform here ten different functions.

This idea is so very important that it should never be lost sight of. It furnishes the key to interpret esoterically the exoteric phraseology used by the author, which, although good enough for physical purposes, must not be carried into the domain of occultism. These *Vayus* in their connection

\* In this connection *Swara* means *Nadam* and the ten *Swaras* are what are generally called the "Dasavidhaprapavanadams".—T. SUBBA ROV.

with the production of *Nadam* must be considered in the light of different kinds of magnetic currents, which, by acting on the Akasa pervading the physical system, produce the Occult sounds alluded to. They are the different vital rays existing in the body which in their totality constitute the 2nd principle in the sevenfold classification.

The reader is forcibly reminded of the hot and cold passes or breathings mentioned in works on Mesmerism, when he finds on page 8:—

The reason of this is that when the breath is in *Ida* it gives coolness to the body, and when in the *Pingala* it gives warmth.

Or in plainer language, one may say heat and coolness are the two aspects of the positive and negative phases of vital magnetism.

A very important passage occurs on page 19:—

Every disease causes the breath to flow out of the wrong nostril and the wrong *tatwa* to come into course. When the breath is therefore restored to the proper nostril.....and the proper *tatwa* has been brought into course, the disease vanishes.....

The Theosophical readers will at once here recollect the explanations given by Col. Olcott of his wonderful mesmeric cures. All nervous diseases are caused either by the want of magnetic fluid which causes debility, or by its accumulation in some spot, thus preventing its free circulation, or, in other words, by the disturbance of the equilibrium existing between the different poles of the magnetic fluid. If the patient be sympathetic to the magnetiser, the nervous derangement can easily be remedied. The mesmeriser has either to give his own healthy fluid to make up the deficiency in the patient, or to restore a healthy circulation by removing the local obstruction. This will make it clear why it is that all diseases are not readily curable.

The small work before us is very valuable indeed, provided, of course, that the reader does not for a moment lose sight of the importance of the above remarks. Otherwise he is apt to get entangled in a labyrinth of physical phenomena which would not only be of no assistance in psychic development, but would moreover be positively injurious, if misapplied, either through misunderstanding or incompetency.

A careful consideration of the articles on the *Elixir of Life* and on *Contemplation* may be useful to the reader in comprehending the esoteric meaning underlying the external phraseology used by our author.

BHARGAVA SARMA.

#### "THE ORIENTALIST."\*

THE first number of this periodical lies on our table, and we give it hearty welcome. The Editor, Mr. William Goonetilleke, is a well-known lawyer and littérateur of Kandy, a gentleman of ripe scholarship in Sanscrit, Pali and Elu, but more especially the first named. He has secured as contributors to this issue Mr. L. C. Wijasinhe—one of the best informed Buddhist lay scholars in Ceylon, whose name occurs in Col. Olcott's *Buddhist Catechism*; Mr. T. B. Panabokke, F. T. S., and Mr. M. C. Sidde Lebbe, a Mahomedan lawyer and writer. The contents of this number are: "Introduction," "Perelitase," and "Sanskrit Puzzles," by the Editor; "The Pali Text Society," by Mr. Wijesinha; "An Account of the Virgin Mary and Jesus" as given by Arabic writers, by Mr. Sinne Lebbe; and a notice of Mr. Arnold's "Light of Asia," by Mr. Panabokke. From what we know of the abilities of the Editor, we feel safe in prophesying for the *Orientalist* a high rank among Journals of its class.

#### "THE PLATONIST."†

It gives us great pleasure to announce the fact of the resuscitation of the *Platonist*. The Journal was started in the year 1881 by Mr. Thomas M. Johnson with a view to spread

\* *The Orientalist*, a Monthly Journal of Oriental Literature, Arts and Science, Folklore, &c. Kandy, Ceylon. Sub. Rs. 6 and postage in advance.

† A monthly Journal, devoted chiefly to the dissemination of the Platonic Philosophy in all its phases. Edited by Thos. M. Johnson, Osceola, St. Clair County, Missouri, U. S. America. Annual Subscription, Rupees 9, inclusive of Indian Postage. Apply to the Manager of the *Theosophist*.

a wider knowledge of the Platonic Philosophy than is possessed at the present day and was noticed in one of the numbers of Vol. II of the *Theosophist*. For want of support, however, the publication had to be stopped and it was with difficulty and after considerable sacrifice on the part of the editor that the first Volume could be completed. Better hopes are now entertained and Mr. Johnson is confident of success. The first Number of the Second Volume, which is now before us, was issued on the 1st day of the new year and the outlook seems promising indeed. The "Salutatory" article defines what Platonism is and gives the reader the scope of the Journal.

Platonism is a method of discipline rather than the designation of a system. Its aim is to bring out into bold relief that philosophy which embraces the higher nature of man within its scope, unfolds the mysteries of the interior being, and renders us awake to every thing essential to human well-being. The faith of all ages, the most ancient as well as the present, however diverse in form, has always been the same in essence. In every creed the effort to realise the Truth is manifest, and every worship is the aspiration for the purer and more excellent.....

The scope of THE PLATONIST will be extended to include not only the Wisdom-Religions of the Archaic period, Oriental as well as Occidental Philosophy, and expositions of the intrinsic and esoteric nature of the various beliefs of the world, but likewise philological investigations, translations and interpretations of the later writers as they may be offered; and in that every variety of energy and speculation relating to its department of labor or tending to enlarge the field of knowledge.....

In short, the *Platonist* intends to be what the *Theosophist* has already been: the mode of the former's procedure will however be more suited to the Western world, since the latter is better acquainted with the Greek Philosophy than with the Eastern. As the Editor rightly observes, the real esoteric doctrine is one, but the forms of expression differ, and its understanding largely depends upon the manner of presentation. The *Platonist* is therefore a labourer in the same field as ourselves and deserving of assistance from all our co-workers in the East and the West. The first article begins with the introduction by Marsilius Ficinus to the *Works of Plotinus*, which are intended to be reproduced. Its perusal is likely to give to a superficial reader the idea that Plato was a believer in a Personal, and therefore necessarily a finite, God. It would not therefore be uninteresting to quote the reprint on page 4 of the observations by Thomas Taylor concerning the views of the Philosopher:—

According to the theology of Orpheus, Pythagoras and Platon, the immediate Artificer of the Universe is not the Ineffable Principle of things; and this, not from any defect, but on the contrary through transcendancy of power. For as the essence of the first cause, if it be lawful so to speak, is full of Deity, his immediate energy must be divine, and his first progeny must be gods; just as souls are the immediate progeny of one First Soul, and natures of one First Nature. As the immediate offspring, therefore, of the First Cause are wholly absorbed in Deity, and are, as it were, stamped throughout with the characteristics of the Ineffable, so as to be *secondarily* what the First God is *primarily*; and as the universe from its corporeal subsistence is not a thing of this kind, it is not the *immediate* progeny of the Ineffable. Hence, as the world is replete with all various forms, its immediate artificer is a divine essence characterised by Intellect; for Intellect is the primary seat of forms. At the same time it must be observed that among causes which produced from their very essence, whatever the inferior cause produces is also produced by the superior, but the manner in which it proceeds from the superior transcends that in which it produces from the inferior. For processions are according to the characteristics of the natures from which they proceed. Hence, as the First Principle of things is ineffable and super-essential, all things proceed from him ineffably and super-essentially, and other intermediate causes are necessary to the evolution of things into *distinct* subsistence.

Attentive students of the doctrine of evolution, given out in *Esoteric Buddhism*, who have read with care the article on *Victims of Words* in the February *Theosophist*, will at once recognise the identity of thought. The essay on *The Soul*, by Prof. Alexander Wilder, F. T. S., throws a flood of light upon the subject. It was first read at a meeting of *The American Akademie* and then published in the *Platonist*. The following extracts from the same will be very interesting and instructive to the reader:—

...The answer, therefore, is made to the great question of the Ages: "Whence, where, and whither?"—*ETERNITY*. It is our history, that we came forth as from a Foreworld and return thither as to an everlasting Future. This is, nevertheless, an illusion of the senses incident to the daily whirl of change; for we, each and all, as spiritual beings, are even now in the Eternal Region. It is only the flesh and blood that has no inheritance there. We do not imagine, when a cloud intervenes between us and the sun, that we have been thereby removed away from the presence of the day. In like analogy, the darkening of our souls by the conditions of external nature is not the separating of them from the realms of the Eternal World.

This is a clear exposition of the philosophical conception of the doctrine of *Maya*. When *Avidya*, the creation of *ignorance*, is removed, the one Absolute existence is realised.

...If we would delineate the separate properties of the three, perhaps the enumeration and distinction made by Irénæus is ample for the purpose: "There are three things of which the entire man consists, namely: flesh, soul and spirit;...The soul is intermediate between the two; sometimes it follows the spirit and is elevated by it, and sometimes it follows the flesh and so falls into earthly concupiscences." Origen, likewise, adds his exposition: "If the soul renounce the flesh and join with the spirit, it will itself become spiritual; but if it cast itself down to the desires of the flesh, it will itself degenerate into the body."

This is not to be interpreted too literally to mean that body is to be physically tortured and destroyed. Fanatical enthusiasts, without trying to comprehend the idea meant to be conveyed by the writer, generally mistake external formulæ for eternal verities. Thus from exoteric interpretations have arisen the practices of *Hatha Yoga*, the followers of which consider it meritorious to torture the flesh and attempt thereby to obtain *Mukti*. Physical practices may have their good results: but these must be on a physical plane. And as has already been pointed out in the article on *Contemplation*, active—not passive, which is positively injurious—concentration develops physical mesmeric powers. But psychic development requires the strengthening of the soul, which can be done only by cutting off the desires which tend towards spiritual degradation and by cultivating higher aspirations. In short, as has been shown in the article on *White and Black Magic*, the assimilation of the fifth principle—the human ego—with the *Buddhi* and the *Atma*, is the first important step necessary for the attainment of Immortality; its alliance with base passions and material desires is sure to bring on in course of time complete annihilation. All that we regret in the article under notice is that the incompetency of the English language has compelled the learned professor to use the word *soul* to denote the various principles known to the student of Occultism. But a careful reader will find out all the different significations in which the term has been made use of.

...As man advances toward maturity, selfishness—"the childish thing," which is of right supreme only in the condition of babyhood, should be left in the background, and give place to a generous regard for the well-being of others, "charity that seeketh not her own." Thus "that which is spiritual" follows upon the former state. Moral character, spirituality, the regenerate life, the true, *anastasis*, is developed in this maturing...

Every true philosopher lays down a cultivation of the feeling of unselfish philanthropy as the essential condition of spiritual advancement. This is no sentimental gush, no flash of the moment, to which some theological systems appeal. But its *practical realisation* is the basis of development according to the teachings of Buddhism, *i. e.*, Wisdom-Religion, not the popular theology.

It is plain that Paul considered that individual to be in the psychic category, whose notions and principles of action are circumscribed by the ethics of sensuous reasoners. Spiritual things and every thing pertaining to the higher intellect are absurd to such; he is totally averse and unable to apprehend them from this point of view...

Our readers may recall here with advantage a passage in the "Replies to an English F. T. S.," in the September *Theosophist*, wherein it is stated distinctly that men devoid of the sixth sense are constitutionally incompetent to comprehend supersensuous truths.

The translation of Part II of "Iamblichos: on the Mysteries," by the same learned brother of ours is equally interesting and instructive as his essay on *Soul*. Those who have read the reprint of Part I into the back *Nos.* of the *Theosophist* are familiar with the ability with which the translator handles his subject. The present Number of the *Platonist* also contains two articles from two other Fellows of our Society. Mr. Wm. Q. Judge, a well-known officer of the New York Branch, writes ably on the subject of *Psychometry*: while the translation of the "Kabalistic Doctrine of Spirits," by an F. T. S., whose name is not mentioned, is a very valuable addition to the other interesting and instructive matter in the *Platonist*.

We have made a good many extracts to show that the *Esoteric Doctrine* underlying all the Faiths, whether of the Orient or the Occident, is one and the same: and that to a superficial reader the different forms of expression will sound like an exposition of different and perhaps antagonistic ideas. It is also significant to note that almost all the articles in the number before us are contributed by Fellows of our Society, and it gives us pleasure to add that the Editor himself is an

F. T. S. All brothers and sympathising friends should therefore try to promote the circulation of a paper engaged in the same work as ourselves, namely, search after Truth and a wide dissemination of Knowledge for the amelioration of the spiritual condition of our fellowmen.

BHARGAVA SARMA.

### THE ANCIENT HISTORY OF INDIA.\*

MR. A. CUPIA has laid his countrymen under deep obligations by the publication of his "Ancient History of India," the first volume of which is now before us. Such a gross ignorance of the ancient high civilization and intellectual and spiritual glories of India prevails that we, the degenerated sons of the mighty Aryans, are generally looked upon as of a nation just emerging out of barbarism. The Orientalists have no doubt done a great service to our country by showing that we are not quite the descendants of savages as we were popularly supposed to be. But even the greatest of these scholars, Prof. Max Müller, calls the time of the *Vedas* as the "Childhood of the Race." It is a current belief that progression lies in a straight line, and hence to suppose that there was a time when any portion of mankind could have had a civilization far higher than the modern one which boasts of railways, telegraphs, telephones, phonographs, and what not—is looked down upon as something akin to innocent lunacy. The Aryan theory of evolution which speaks of development in spiral circles—cycles—is known to very, very few. Our ancestors recognised that just as destruction and creation are interchangeable terms—since these are relative terms, applied to the forms which always change, the destruction of one form being but the creation of another, the substance always remaining the same—so in the same manner retrogression is but progress. Having reached the apex of development, the material casts off its old skin to take on a better and a higher one. An ignorance of these philosophical and metaphysical theories propounded by the *Rishis* and a vanity inherent in hollow civilizations standing upon a material plane—are at the bottom of our sacred scriptures and history not being given the high place they deserve. At such a time, the attempt of our patriotic author to bring to light the hidden gems from the mine of Aryan thought cannot be too highly praised. As he rightly observes, our countrymen should "note the fact that the loss of their self respect as a nation and of their unconsciousness as to the existence of their ancient literature and of their past history has emboldened the foreigners, particularly the Anglo-Indians, to speak lightly of everything connected with them and to ill-treat them before their very face." The present work is the result of arduous labour. The author had to ransack almost all the ancient works in original Sanskrit by the help of Pandits to be able to compile as correct a history of ancient India as possible. And the reader is struck with respect for the author who could succeed so well in such a difficult task. We may not agree with him in all that he says, but there can be no two opinions on the fact that "as a book of information and reference it doubtless supplies a place which had been left vacant by all the literary men of the modern generation" and that the author has done his best to make his book as complete as possible. Political and social topics are beyond our legitimate province, and we leave those to be looked into and settled by the parties concerned. The work is very valuable indeed, and ought to be in the library of every Theosophist, who is engaged in the active work of carrying out the second object of our Society. If any of our branches should, in conjunction with the author, take advantage of the present work and carry their investigations deeper and deeper and publish the results of their researches for the benefit of their country, they will have done their duty rightly,—a duty they owe to the world, which should know the truth,—to their country, which should thus be given the chance of obtaining justice at the hands of the present generation, to their forefathers, who have bequeathed to them such invaluable treasures of knowledge, and lastly to themselves, the unworthy sons of the worthy Sires.

### SPECIAL NOTICES.

It is now evident that the THEOSOPHIST offers to advertisers unusual advantages in circulation. We have already subscribers in every part of India, in Ceylon, Burmah, China and on the Persian Gulf. Our paper also goes to Great Britain and Ireland, France, Spain, Holland, Germany, Norway, Hungary, Greece, Russia, Australasia, South Africa, the West Indies, and North and South America. The following very moderate rates have been adopted:—

#### ADVERTISING RATES.

First insertion.....16 lines and under.....1 Rupee.  
For each additional line.....1 Anna.

Space is charged for at the rate of 12 lines to the inch. Special arrangements can be made for large advertisements, and for longer and fixed periods. For further information and contracts for advertising, apply to

MANAGER, THEOSOPHIST, ADYAR, MADRAS.

MESSRS. GRAVES, COOKSON AND Co., MADRAS.

PROPRIETOR, INDUSTRIAL PRESS, 3, HUMMUM STREET, FORT, BOMBAY.

MESSRS. COOPER & Co., MEADOW STREET, FORT, BOMBAY;  
To SUBSCRIBERS.

The Subscription price at which the THEOSOPHIST is published barely covers cost—the design in establishing the journal having been rather to reach a very wide circle of readers, than to make a profit. We cannot afford, therefore, to send specimen copies free, nor to supply libraries, societies, or individuals gratuitously. For the same reason we are obliged to adopt the plan, now universal in America, of requiring subscribers to pay in advance, and of stopping the paper at the end of the term paid for. Many years of practical experience have convinced Western publishers that this system of cash payment is the best and most satisfactory to both parties; and all respectable journals are now conducted on this plan.

The THEOSOPHIST will appear each month. The rates, for twelve numbers of not less than 48 columns Royal 4to. each of reading matter, or 576 columns in all, are as follows:—To Subscribers in any part of India, Ceylon, Straits Settlements, China, Japan, and Australia, Rs. 8; in Africa, Europe, and the United States, £ 1. Half-year (India, &c.) Rs. 5; Single copies Rupee 1. Remittances in postal stamps must be at the rate of annas 17 to the Rupee to cover discount. The above rates include postage. *No name will be entered in the books or paper sent until the money is remitted; and invariably the paper will be discontinued at the expiration of the term subscribed for.* Remittances should be made in Money-orders, Hundi, Bill, Cheques, (or Treasury bills if in registered letters), and made payable only to the PROPRIETORS OF THE THEOSOPHIST, ADYAR, P. O., (MADRAS,) India. Subscribers wishing to have receipts, in acknowledgment of their remittances, should send reply post-cards for the purpose.

Subscribers for the Second Volume (October 1880 to September 1881) pay Rs. 6 only in India; Rs. 7 in Ceylon; Rs. 8 in the Straits Settlements, China, Japan, and Australia; and £ 1 in Africa, Europe and the United States. Vol. 1 is now entirely out of print.

AGENTS: London, Eng., Messrs. Trübner and Company, 57 and 59, Ludgate Hill; Bernard Quaritch, 15 Piccadilly, W.; Paris, France, P. G. Leymarie, 5, Rue Neuve des Petits Champs; New York, Fowler and Wells, 753, Broadway; Boston, Mass, Colby and Rich, 9, Montgomery Place; Chicago, Ill., J. C. Bundy, La Salle St. American subscribers may also order their papers through W. Q. Judge, Esq., Box 8, P. O. Brooklyn, New York; Melbourne, Australia, W. H. Terry, Pub. *Harbinger of Light*; St. Thomas, West Indies, C. E. Taylor; Calcutta, India: Thacker Spink and Company, Booksellers; Babu Norendro Nath, Sen, *Indian Mirror* Office, 24, Mott's Lane, Dhurrumtollah Street; Madras, Messrs. ## RESUME OF RESEARCHES IN OCCULTISM.

BY AN AMERICAN SPIRITUALIST.

"Now I acknowledge what the Master said :  
The world of Spirit is not closed before us ;  
Our eyes are dim, our sense immersed in clay ;  
Awake, oh child and rise and see how glorious  
Is the bright sunlight of eternal day."

The writer of the following lines has been for many years an earnest investigator of "Spiritualism." He has many times witnessed the most astounding phenomena, including full form "materializations," bringing of plants into closed rooms, levitation of human beings, and so on. In his investigations he has met with only a small percentage of deliberate fraud and actual humbug, and he has therefore defended the truth of these facts by word and pen.

However, being of a sceptical nature, he was never fully satisfied as to the source of these phenomena, and desired a more reasonable explanation than that given by the "Spiritualists." He therefore took up the study of Occultism, and having obtained satisfactory results, he made up his mind to visit the Headquarters of the Theosophical Society in India, to receive if possible still further light and to make practical experiments.

He was not only very kindly received by Colonel Olcott and Madame Blavatsky, and the Chelas, but he also was so fortunate as to see, soon after his arrival, a high Adept in his astral form.

It is not his intention to tell about all the wonderful things which he has seen and heard at Adyar and which are there every day-occurrences, but to give, if possible, a short and plain summary of the results of his investigations. Necessarily many points will only slightly be touched upon, which it would take volumes to fully explain.

## THE CONSTITUTION OF MAN.

*Terra legit carnem, tumulum circumvolet umbra, Orcus habet manes spiritus astra petit.*

Goethe's Faust speaks to the materialistic philosopher (Wagner) in about the following language :

"One sense alone is conscious in your heart,  
Be happy and avoid to know the other.  
But in my heart, alas ! two souls reside ;  
Each from the other tries to separate.  
One clings to earth with passions and desires  
And fond embrace ; the other breaks her bonds,  
And rising upwards spurns the dust of earth."

Every one whose spirituality is not by a total immersion into materiality or entirely lost, feels that his material body is inhabited by at least two spiritual elements, which follow different attractions and differ essentially from each other. Man is therefore usually considered to be a triune being, consisting of his animated physical body, his intellectual soul and his divine spirit. But occult science, having superior means of investigation at her command, tells us that man is composed of seven principles, each of which can again be sub-divided into seven.

These principles interlink and influence each other by mutual attraction during life ; but at death they separate into three distinct groups. The physical body, whose vitality is departed, becomes disintegrated into the element out of which it was evolved ; the more refined principles, which were the cause of his animal desires, the "spirit" of the Spiritualists and what the Occultists call Elementary, may under certain circumstances live a very long time before it perishes ; but the spirit alone is immortal. It rises to its proper sphere, where it no longer intermeddles with the affairs of earth, and after a time of rest, whose duration and enjoyment is determined by the purity of the acts and thoughts of the man during life, it becomes reincarnated to start again on the road to progression.

As the proportions in which these principles and their component parts may intermingle, are almost infinitely numerous, they present an infinite variety of forms and conditions. A lower principle may be more or less active by being more or less infused by the emanations of a higher one, and a higher principle may become more or less developed, according to the amount of activity which has been expended for that purpose. By using the word "principle," neither matter nor force is meant in the usual interpretation of the term, but the element out of which both have formed, and of which

they are the positive and negative poles. So is water solid in the frozen state, becomes liquid when melted, gaseous when heated to steam, and when overheated evolves electricity. So do those principles progress from a lower state up to a higher one ; but all have been originally evolved out of one primordial element, the common source of all being.

## I. PHYSICAL MAN

consists of the first three principles.

1. *The material body* with its organs and senses, which is visible and tangible to us simply because the organs and senses by which we perceive it, are formed of the same principle in the same state of evolution. Matter in a higher state can pass through it, as water penetrates sugar. It decomposes after death, but sometimes its vitality may be retained for a long time after all signs of life and consciousness have apparently left it, as shown in cases of buried Fakirs, also in well known cases of vampires, &c.

2. *Vitality*, the seat of life, formed by a correlation of lower forces, such as heat, electricity, magnetism, &c, being a separate and non-intelligent force, whose vibrations are of a higher order. Its movements and modes of action can be guided by will, it can be attracted or infused into other bodies, and thereby many occult phenomena, such as animal magnetism, abnormal growth of plants, &c., can be explained. It does not die but becomes attracted to other bodies and helps to develop new forms.

3. *Astral Body*. It is the ethereal counterpart of the physical body and the instrument by which will acts on the vital force. It is unconscious and non-intelligent. It is the cause of involuntary movements, reflex actions, spasms. It is the tool of the atomic body so to say, vital force being its spirit. It dies at the death of the body, but may sometimes be seen by sensitive persons hovering over the tomb or near by, in the shape of the man, as long as the emanations of the body are yet strong. It disappears when the body is decayed.

In healthy persons this principle can never during life separate itself from the physical body ; but in weak and dilapidated persons so called physical mediums, it may ooze out and be seen as a "materialized spirit." The difference of its outward appearance and resemblance to the "departed one" is due to and determined by the activity or intensity of the desire of the audience, or the medium, or both, to have such or another person represented, or also greatly by the will of the Elementaries attracted to the seance room. It is essentially the double of the medium, and shows only like a mirror a reflex consciousness or memory.

It cannot go beyond a few hundred yards from the body of the medium. If the magnetic thread that connects the two snaps, the medium will die. The seeress of Prevorst went about more in her astral form than in her physical body, but no further than the room she was confined to or the garden. The astral body is the especial playground of Elementaries and Elementals.

## II. INTELLECTUAL MAN

consisting of

4th. *The Animal Soul or Kama Rupa*. This is the vehicle of the will, the body of desire and illusion. It is the realm of all gross appetites, passions and cravings for animal necessities or enjoyments. It is the cause of voluntary but unconscious movements, such as mediumistic writing, &c. Its ruling power is selfishness and instinct, whose forces are focussed in the spinal cord. It is neither conscious nor intelligent, but these powers dawn upon it from the higher principles. It can involuntarily separate under certain circumstances from the body and travel to long distances, where it may be felt as a presentiment or seen by sensitive and even often by normal persons as an apparition, wraith or doppelgaenger of a living person, or it may be projected by the ardent desire of a dying person and then appear at the time of death or soon after as a ghost, &c. It shows no intelligence and acts unconsciously, although sometimes it may be accompanied by a ray of light of the higher principles of the dying man, before their separation took place. Here the majority of ghost stories might find their explanation.

An adept however can project his astral form voluntarily to long distances. It is then infused with the higher principles, acts consciously and intelligently and can be made visible and audible, or materialize, so as not to be distinguished from a physical living body ; and this is the way in which the adepts of the Himalayas and other places communicate with people at

long distances, for instance with the officers of the Theosophical Society at Adyar, and those who witness such phenomena every day have ceased to be astonished thereby.

This principle may survive a very long time after death. In men whose spirituality preponderated during life its vital power is very small, and it is then wholly unconscious and dies out soon; but if its loves and hates have been very strong and if it has thereby assimilated with it a large portion of the lower parts of the fifth principle, it becomes strong, enduring and tenacious and dies hard. It may also in cases of very material (wicked) but intellectual persons (black magicians) have attracted to it the whole of its fifth principle and thereby become fully conscious, after which it may live and suffer for thousands of years, perishing slowly and gradually, until it finally dies.

This unconscious or half conscious principle is the occasional visitant of seance rooms, where it is galvanized into a semblance of life by the reflection of the higher principles of those present. It may have a faint memory of its own, but it is incapable of forming an original idea. These elementary bodies, if they are the remnants of good men and women, are difficult to raise into a semblance of life, which can only be done by the strong will of necromancers ("mediums" are involuntary necromancers). The remnants of others draw more strength from the mediums and sitters, live thereby longer and have consequently longer to suffer. In exceptional cases, however, such as sane suicides and sudden deaths, a division of the higher principles may not yet have taken place and such are genuine cases of spirit communications, which are in so far detrimental to the spirit, as they re-attract it to earth.

This principle is only guided by impulses and after death its impulses are no more controlled by a consideration of the moral consequences of its acts. Its desires and appetites may still be very strong. It then follows wherever its attractions may lead it, to gratify its craving for lust, life, passion, revenge, etc., and will therefore associate itself with corresponding living human beings (sensitives) or even animals. To this class belong the cases of obsession, hysterical curiosities, etc. By drawing life and strength from living beings, it becomes a vampire. Its magnetic connection with the body in the grave may or may not be broken. In the latter case the "materialized spirit" diffuses a cadaverous odor. It may also serve as a puppet for Elementals and then appear under different forms.

5. *The Intellectual Soul or Manas*, is formed by a higher unfolding of the lower principles and a rising up of the same to the higher ones. This is the link "which joins the ape to god," that is, it forms the step by which man's animal nature reaches up to the higher spiritual principles. It is the seat of the mind with all its powers of reason, memory and imagination, of observation, reflection and conception, and these powers find their central focus in the brain. Here is the seat of intellectual consciousness. In the present state of evolution of man this principle has not yet fully developed. Man is only partially free; because although being able to choose between good and evil, yet his knowledge is still very limited and he is therefore only partially a responsible being.

After death the higher parts of the constituents of this principle separate into two parts. The higher groups, such as are fitted for a pure spiritual condition combine with their sixth principle and rise to their proper sphere as an immortal (as far as his individuality is concerned) spirit. Here it lives in a condition of rest, whose duration and more or less pleasant or unpleasant sensations and conditions are proportionate to the purity of his thoughts and acts while on earth. It passes there through a corresponding infancy, youth, manhood, old age and dotage, when it will be re-attracted to this or some other planet by the laws governing reincarnation:—

The lower parts go to join the elementary remnant of the fourth principle and strengthen the same. Man has it therefore in his power, either to lower himself below the brute by giving way to his inferior attractions, or by reaching up to the higher ones to rise to the divine.

There are exceptional cases to be found of living corpses, that is of persons who by a life of bestiality have during their corporeal life lost their higher spiritual principles, or others such as cretins, and idiots, in which the same never could take root.

### III. THE SPIRITUAL MAN.

To him belong besides the higher parts of the 5th principle, especially the sixth and seventh. So far the principles under consideration have become developed especially from below upwards; but now a rising up of the same to the sixth becomes necessary. As man, guided by his intuitions, advances, he becomes less dependent on space and time.

6. *The Spiritual Soul or Buddhi*. This is the highest principle, pure spirituality, materiality and a condition which only very few have yet reached. Those who have progressed so far, are called Illuminates, Initiates or Adepts. Here is the realm of knowledge. Spiritual consciousness, of which man in his normal state has only a vague impression, is here fully developed and personal immortality established. By assimilating with this principle man becomes proportionally all-seeing and omniscient; that is, he can put himself *en rapport* with everything that is not repulsive to his nature and thereby perceive the same. He knows his own powers and the powers of nature, and knowing

them he can control them, instead of being controlled by them. He can now guide himself and direct his future incarnations, if such are considered necessary.

But still he advances. His reason becomes wisdom, his goodness broadens into universal love, his powers expand. He becomes a Buddha and finally one with the highest, the source of all principles.

7. *The Spirit or Atma*. This is an inconceivable state. It is the universal fountain from which all things come and to which all return, the unimaginable, unchangeable state of Nirvana, the spirit of the spiritual soul, *Parabrahm*.

### MAN'S PROGRESS.

"When shall we three meet again,  
In thunder, lightning, or in rain?"—(Shakespeare.)

The individual spiritual Monad from its first descent into matter, up to its full development as a perfect spiritual unity has to pass seven times around the septenary chain of planets belonging to our system and to pass on each through seven races and sub-races, (as fully explained in Mr. Siunett's "Esoteric Buddhism.") It does this by repeated reincarnations, during each of which it remains inwardly the same spiritual individual, but appears every time on the stage of life as a new personality.

"Fresh

Issues upon that universe that sum,  
Which is the lattermost of lives.  
Who toiled a slave, may come a new prince,  
For gentle worthiness and merits won,  
Who ruled a king may wander earth in rags  
For things done and undone."

E. ARNOLD (*Light of Asia*.)

Man's personality is therefore not immortal so long as his spiritual consciousness has not been thoroughly established, and unfortunately the majority of mankind have as yet very little of the same, it being a product of the sixth principle. Normal man in his present state of cyclic evolution has only reached the fifth step on the fourth of the seven ladders of progress. Only the fourth principle has reached maturity, the fifth is in its adolescence, the sixth in its infancy and the seventh has only an embryonic existence in him.

Men may be very intelligent and self-conscious and conceited; but not possess a glimmer of spiritual consciousness, and unless they possess this consciousness, they can be neither complete nor perfect.

The great secret of occultism and the great work before us is therefore to establish this spiritual consciousness; for while the individual Monad, if unguided and left to itself, may wander blindly along through untold ages, and perhaps finally be wrecked on the rocky shore of materiality, the illuminated soul, guided by the divine light of the spirit, is able to find its way and to take unimpeded its flight to the summit of perfection.

To accomplish this great work man must observe the following:—

1. *Learn* that the sixth spiritual principle, the divine spiritual soul does not descend to him, but that he must rise up to it. It would be useless for him to sit down in devout pious meditation to wait for the blessings to come down, instead of helping himself.

2. He must obtain *Knowledge* and know himself and his own powers. This knowledge he may obtain by meditation (intuition) and instruction. It forms the basis of his faith, self-confidence and courage.

3. The strengthening of his *Faith* forms the firm basis upon which to rest his will. It develops the elements of the will which are self-esteem, firmness and continuity.

4. As his *Will* becomes strong he must put it into *Action*, by exerting it continually in the proper direction, and by rising mentally up to the higher principles and grasping them. "The Kingdom of heaven must be taken by force." This can only be done by the power of WILL, assisted by the practice of the highest morality and virtue. "Only the pure in heart can see God."

5. He must purify his imagination, so as not to impede his progress and weaken his will, which would drag him back to a lower plane. To do this he must never lose sight of the great object in view and repress all low and animal desires. Christ (the seventh principle) must drive the money changers (low cravings) out of the (human) temple, the sixth principle before. He can take up his residence there. Man must therefore always follow the voice of the divine Guru in his heart.

6. By controlling his actions and purifying his imagination he starves to death all the lower instincts of his animal nature, contained in the fifth principle. In ascending to those sublime heights he must tear himself away from material attractions which are his internal enemies. He must not only avoid them, but outgrow all desire for them.

7. To overcome his external enemies he must avoid all noxious influences, such as impure physical or moral surroundings, combative or irritating associations, the influence of

Elementals and Elementaries, and everything that may be detrimental to his bodily or mental health. He must be free and independent, and press fearlessly forward, without looking back to the missteps he may have made in the past.

"He who ascends to mountain tops will find  
The loftiest peaks most wrapped in clouds and snow;  
He who surpasses or subdues mankind,  
Must look upon the hate of those below.  
Though high above the sun of glory glow,  
And far below the earth and ocean spread;  
Round him are icy rocks and loudly blow  
Contenting tempests on his naked head;  
And so reward the toils, which to these summits led."  
(BYRON.)

The kind reader, who interests himself for such subjects, will now be no longer in doubt as to what Occultism is, how Spiritualism can be explained, and how one may become an Adept. But only few of us are able to climb to such giddy heights during this one life. However, we may accelerate our progress by waiting, watching and working, and by ever keeping before our mind the old motto, engraved with golden letters on the holy cross of Wisdom and surrounded by the rosy light of Love:

*Know, Will, Dare and Be Silent.*

TRY.

#### UNPUBLISHED WRITINGS OF ELIPHAS LEVI.

*Translated from the French.*

##### III. LECTURE.

#### WHAT IS NECESSARY TO BECOME INITIATED.

PLATO wrote over the door of his academy: "Let no one enter here, who is not well versed in Mathematics." Pythagoras exacted further the study of Music. In this way the two great Masters desired to teach that above all we must possess the sentiments of accuracy and harmony.

Exact and inflexible mathematics preside indeed over the laws of nature. Subjected to the intelligent evolutions of calculation, they prove the existence of a calculator who is superior to man. For Man by his most exalted exertions can only obtain an intuitional perception and prove only to his own satisfaction more and more the sublimity and infinity of the divine intelligence.

We must know that nature is harmonious in spite of the apparently existing discords, and this we learn by contemplating the high intelligence of music, which knows how to harmonize even discordant sounds and to transform them into the most perfect harmony.

We must know that there are no discords in nature, and that the mutual destruction of imperfect beings represents only the creative labor of progressive perfection, which is the universal law of being.

We must know that exact proportions exist between the beings, that therefore no man will ever walk on his hands, for the purpose of astonishing an ant; that nothing of a similar character can be supposed to take place between man and a being so superior to man as man himself is superior to an ant, and with still stronger reasons; that the universal principle of being has never subverted and will never subvert the laws of nature, for the purpose of confounding man's reason and to obtain his homage.

We must know that the universal and regular laws of nature produce sometimes exceptional manifestations, which are due to a concurrence of certain causes which only rarely happen and which result in singular facts or phenomena, which by the ignorant are mistaken for miracles or wonders.

We must know that matter is only a phenomenon and that mathematical reason alone is a reality.

We must know that matter is inert and that intelligence alone is action; that force is the lever of intelligence, that life is the labor of universal reason; that outside of the demonstrations of mathematics phenomena will always remain doubtful; that if we record phenomena, we only collect the materials necessary for the study of the laws, which govern them. We must know that reason is not a sentiment, that sentiment is not reason; but that a reason which we feel and a sentiment which is in accordance with reason, can conduct us to certainty by combining the two living forces of the soul.

We must know that the soul is the very person of man, whose body is only the phenomenal appearance; that the soul-essence is liberty, its attributes intelligence and love, and its immortality a sufficient cause for durable and perfectible action. We must know that pure mathematics are the examination of reason and the logical manifestation of the divine principle; that supernaturalism is a hypothetical fiction of extraneous operations of this principle, and that Metaphysics are only a dream, if they are not the differential and integral calculus of the mathematical powers of thought.

We must know that moral emancipation is accomplished not by violence but in spite of violence; that he who demands does not deserve; that silence imposed upon truth by constraint shifts the responsibility of falsehood, and that it is often useful and even necessary to deceive unreasonable people; but that nobody ever obtains a good object by evil means.

God and Nature will that beasts shall be submissive to man. The tiger may surprise a disarmed or careless hunter, he may break his chain in captivity and destroy his keeper; but such an accident is never a victory. Mobs rebel but do not become free. They take up arms in the name of justice and their first acts are crimes. The heat of unchained passions produces ferocity but never gives birth to heroism.

Imagine yourself the bands of Spartacus as masters of Rome, where they install a Government of revolted slaves, ordering pillage, overthrowing the monuments of glory of their masters, defiling and staining with filth the Senate and the Capitol, then turning traitors against each other and selling themselves; next falling asleep, tired and exhausted by their saturnalia, and proclaiming themselves victors at a time when the avenging host is already in possession of the city; waking up and taken by surprise they kill their wives and children and fly to bury themselves amongst the smoking ruins of the "Eternal City," dying conquered and infamous, justly punished as rebels, thieves, assassins and incendiaries; made unfortunate by their faults, cowards by their crimes which could not save them, evil-doers and still slaves.

Not in the ancient world was seen this tremendous disaster. The gods of ancient Rome have spared such a sight to the capital of Brutus and Caesar; it was reserved to the pretended modern civilization.

I am writing these lines with a trembling hand and a sick heart on the 31st of May 1871. Oh unfortunate, unfortunate city of Paris. And nevertheless we may consider as providential those circumstances by which an evil, which might have extended over the whole of France, was restricted to the city of Paris alone.

The experiment has been made and is decisive. Anarchy has furnished her proof and history will mark down this formidable lesson. Now more than ever will it be necessary to remember that the feet can never usurp the functions of the head, and that the social body has functions like the human body. The most intimate union of all the members must be established. When one suffers, all the others ought to come to its assistance, and in this consists their equality of nature, regulated by an inviolable hierarchy. The feet must walk, the hands work and the head govern to keep the body in health. Well balanced man represents a living monarchy. The universe is the monarchy of the sun. Great monarchies have never been flourishing except through great monarchs. Republics end always by the conflicts of those who pretend to reign in virtue of the audacity of the greatest villain. They are in fact monarchies in fusion. They are the boiling metal which is waiting to be formed into a colossus of monarchic pride; a mould crossed by a sword.

Even the highwaymen and robbers, the most offensive of all mankind, always choose a leader to whom they give absolute power. Republics like ships in danger need a dictator for captain, and when the dismasted wreck, having been deserted by the crew, founders, the living wrecks of the republic, engulfed by the sea, consider themselves fortunate to be permitted to save themselves in the galley of the empire. No one despises the poor so much as those who are poor themselves; and of all tyrants the worst is the slave.

The robbers of 93 and 71—robbers in the name of liberty and conscience, began by closing and profaning the churches and murdering the priests. If the Roman republic was a success, it was because the resolution which dethroned the Tarquins was made by the best people in Rome and not by the vile mob. It is certainly a long way from Brutus to Mirabeau, still further from Mirabeau to Marat. After Marat—will it be possible to descend still further? Yes. There is the Pere Duchesne, and still below the Pere Duchesne, what can we find there? The populace.

What is the populace? Is it only the poor classes? No. This is not a question of poverty or wealth. Many great men have been poor. Jesus did not have a stone on which to rest his head, and his most fervent disciples, those who have changed the face of the earth, professed poverty. The populace is the fertile soil of the ignorant, the indolent and the willfully blind. These are the men subjected to their passions; these are the lepers of vice, the paralytics of intelligence, the cripples of reason, who do not want to be asked questions or to be guided; in short, they are the turbulent beasts, which society must either enchain or demolish, if it does not wish to perish by them.

Men without moral freedom are the most dangerous of all animals, and we must always exert our strength in their interest and sometimes restrain them for the same reason in their liberties. We must only confide to them that which we desire to lose, and it is necessary to conceal from them all truths which they may misuse. If I have two watches, one made out of gilded brass, and the other one of pure gold, am I obliged to deliver the golden one to a thief who wants to rob me of it? And if I abandon to him the brass-watch, can he say that I cheated him? Must I reconduct the miscreant to the road from which he strayed and who fears that he might not reach his destination in time to commit a crime? No! I repeat to you again that the slaves of fatality are unworthy of freedom, unworthy of truth and unworthy of human brotherhood.

The occult and primitive book of Tarot gives in the eighteenth symbol the representation of them under the form of three different animals, a dog, a wolf and a water-crab, which obtains its nourishment from animal and vegetable corruption in impure water. We educate the dog, kill the wolf and eat the crab. The dog is the fool who obeys; the wolf the fool who howls and kills. The crab is not a fool, it is foolishness itself, for a popular tradition tells us that the crab marches backward, and here the crab of natural history becomes mixed up with the symbolical crab.

Which is more valuable; the dog or the wolf? If you ask a shepherd this question, you will know beforehand what his answer will be, or perhaps he will give you no answer at all. He will laugh, because he does not suppose that you would ask such a question seriously. It is just as if you would ask what is more valuable, the soldier or the brigand. Nevertheless it is known that the brigand is the ideal of ladies of high standing, while kitchen-maids and chamber-maids are perhaps the only ones whose hearts are captured by a soldier.

The high truths of science are neither made for brigands, nor for soldiers, nor for the majority of women. A soldier cannot be free; a brigand does not know how to be free, and a woman answers always according to the sway of her heart. The grand, true and only emancipation of women is maternity, which makes her—not free—but sovereign. Women who want to become free in the same manner as men, become unavoidably prostitutes; the most abject and despicable slave.

Ninon de l'Enclos was a woman of talent and fortune, who sacrificed to a false liberty the most precious gift of her sex,—her virtue. She could obtain a reputation of honesty only by a paradoxical pun. It was said that she was an honest man. No one, not even one of those of her courtesans who were made to blush the least by her, ever attempted to deny for a moment that she was a dishonest woman. A passionate man casts himself at the feet of the dishonest woman in the servile insolence of his desire, because he disrespects her sufficiently beforehand to suppose that she will submit to him. After she has submitted, he becomes certain of that fact and his disrespect is justified.

To be worthy of initiation it is necessary to know how to subdue the beasts, beginning with those which we carry in our heart. The passions which rule us are living forces which aid us to conquer immortality. Those which govern us are weaknesses, which lead us unavoidably to death.

I have often beheld with a curiosity mixed with pity the deep and insane love which certain degraded creatures have for animals. I have seen some old ladies who were rich and without children, eat at the same table with pet dogs, fed with partridge wings, served on precious plate.

I have seen how in the midst of a great conflagration a terror-stricken woman with dishevelled hair wildly rushed about, crying in such heart-rending tones, as could possibly be produced by maternal despair: "Let everything perish; but save my cat." Often did I ask myself, what may have become of that unfortunate woman, if her cat had not been saved? Undoubtedly she must have gone mad, provided grief had not killed her. We smile at such an unfortunate mania; but how many intelligent and distinguished men have died of despair for the loss of an animal; because that animal had a pretty female form.

It is very difficult to be always reasonable, and not to suffer occasionally the consequences of our animal weaknesses. The wise are not without sins and faults; but they do not love sin and the faults which they commit are to them signals of danger, stimulating them to make renewed efforts towards the good and to be still more carefully on their guard. The fool, to whom you show his faults, gets offended for not having been found perfect, and says that nature is responsible for his stupidity. If you had always remained such as nature made you, you would never have learned to talk or walk. Nature wishes that man shall go on and progress; correcting his faults and becoming more and more perfect every day. No one has the right to make himself troublesome and noxious to others and he who rejects moral progress becomes an apostate of the eternal life.

The Parisian students insulted one day the honest M. Nizard, for having said in one of his public discourses, that morality is not the same thing to every body.

The greatest folly of modern pride is the dream of equality and it is wrong to say to anybody that Boquillon has less intelligence than Pascal. Boquillon wants to be told the whole truth. That which remains unintelligible to him must not be intelligible to another. The vagrants who almost ruined France during two months, wanted to burn the Louvre and the public libraries. Their morality was to themselves certainly not the same as to the valiant Archbishop of Paris whom they assassinated; but they would have been the very first ones to cry down M. Nizard, if they had heard him say that morality is not the same thing to everybody.

What an incredible thing! It surpasses all possible dreams of Victor Hugo! It so happened in the nineteenth century that the court of miracles took possession of the capital of the world and organised plunder, tried honest people for their lives and set fire to the church of Notre Dame of Paris. The Tuileries, the Palais Royal, the Hôtel de Ville and the most beautiful parts of the capital were in ashes. And these criminals had an army of two hundred thousand men, and three hundred thou-

sand men let them do as they pleased. In this case the wolves terrified the dogs, and the crabs remained quiet in their corner.

May it not displease the contradicators of M. Nizard; There are three different kinds of morality. The natural morality, the philosophical morality and the religious morality.

The natural morality is simply that of common sense. The philosophical morality is the morality of reason, and the religious morality is that of spirit and faith. By using your common sense you arrive at reason. With reason enlightened by the illumination of spirit you certainly arrive at faith; but faith does not impose itself upon good sense by doing violence to reason, and reason by rejecting faith parts by this very act from common sense.

There is nothing in the world more dangerous and at the same time more pitiful than those little reasoners who comprehend nothing that comes from spirit and who believe themselves to be above ordinary common sense. They are those who preach Atheism, Materialism and Anarchy. A wise man said in my presence: "A little philosophy makes Man an atheist, but a great deal of philosophy leads him to the knowledge of a God."

The boor with his good common sense is satisfied with the faith of a charcoal-burner and lives quiet. He follows nature and the usages of his country. He knows that his priest preaches neither vice nor dishonesty, and he feels perfectly that the morality of the gospel is true. If you tell him about some bad priest, he draws therefrom no conclusions against religion, because he knows that there are also good ones and that by them only religion is represented. If he has gross vices, he does not attempt to excuse them by sophistry. This man is in the right path. He has read neither Proudhon nor Büchner; it is useless to tell him that God is evil, that possession is theft and that he has no more of a soul than his dog. He would only be offended and he would be a thousand times right. But let this fellow come to town, let him talk with some smooth-tongued workman, let him be inoculated with the poison of pride and envy, and he will be lost. He thinks that he has only been a brute and to become emancipated he becomes a square fool; he loses his reason with his good sense; he has lost his faith and not learned science, there remains with him only that which is necessary for making him a criminal.

It is evident that the duties of a laborer or workman are different from those of a judge, and that a judge is not subject to the obligations of a priest. A workman must have good sense and reason; a judge needs science and a more elevated reason and a priest ought to have a reasonable and knowing piety, which should be like an apotheosis of good sense. Duties become more difficult and more severe in proportion as the functions become larger, and morality in proportion to man's elevation becomes more exacting and rigorous. Not in this manner were the two moralities of M. Nizard understood. They made him say that duties were more rigorous for small people and easier for the great ones, which is an absurdity.

To preach theology and asceticism to common laborers, blind belief to free-thinkers and scepticism to priests is an immoral way of instructing. Devotion is very dangerous for ignorant men; intellectual blindness suits not reason; and doubt is the deadly enemy of faith. We must distribute science to all, in certain proportions we must develop good sense amongst the masses, lead reasoners to reason and speak of piety only to men that are reasonable enough and know enough to arrive at faith without assistance. In short, instruction ought to be hierarchic like nature. Then will it cease to be revolutionary and become constructive instead of being continually destructive.

On this hierarchy of intelligences and on the necessity of a proportional and gradual instruction rests the law of Occultism, which was the great secret of the ancient sanctuaries and which is yet the secret of Free-Masonry.

Amongst the Free-Masons the apprentice does not comprehend the symbols of the fellow-craft, and the fellow-craft is not initiated into the secrets of a master. Each grade has its rites, its pass-words, its sacred signs and formula.

In each degree the candidate is subjected to new trials. In olden times all this was meant seriously; but now Free-Masonry as well as the Church has lost the key to its ceremonies and mysteries.

After having the Church in her temporal power stabbed to the heart, Free-Masonry in her turn is driven back by another conspiracy, which is much more formidable in its way than all the secret societies of ancient and modern times. We mean the organized society of Jacks, the united conspiracy of work against capital; the hands which try to kill the head under the pretext that the hands work and the head does nothing. We see those acephalic revolutionists at work; they have lost Paris, but the world still remains to them. This they have undermined and this they will set on fire. Nothing can prevent them; persecutions will bring them new followers, and this ferocious anti-christianism is at present in its period of martyrdom.

Each sect which pretends to renovate the world, seeks first to destroy the old world. It is not clearly proved that it was Nero who burnt Rome to find a pretext to burn the Christians,

What did Nero care, whether or not there was one more superstition in that Rome, where the places of execution exhaled gods towards Olympus? The public voice accused the Christians of being the incendiaries, and if we remember all the monstrous extravagances of Gnosticism, which were just then confounded with newly-born Christianity, we can understand that the "Commune" of Roman heretics had their share in this immense forfeit, which was reproduced eighteen centuries afterwards by the "Commune" of Paris.

Do not the followers of modern sectarianism begin to murmur that it was the army of Versailles which set the city on fire and that M. Thiers wanted to destroy Paris, to revenge the ruin of his house? Let a drawer of caricatures come and show us the little man perched like a screech owl upon the tower of St. Jacques, looking through his spectacles at the fire and pinching the strings of a fiddle, and we will have the complete parody of Nero's epic and paradoxical crime.

If we would now take the incendiaries of the "Commune" to our burnt quarters, tie them to stakes, pour petroleum over them and set them on fire, the honest people would be very much horrified; but the mob would undoubtedly applaud. In such a manner did Nero make himself horribly popular through the tortures of the Christians, by burning the martyrs like torches, after having plastered them over with pitch. He was only complying with the demands of the public rage; these execrated men were to the Roman mob only criminals subjected to the talonian law.

Indeed these pale and dark men, who met in subterranean caves to perform magic operations, and who pretended to eat the body of an executed criminal and then restore him again under the form of bread;—what effect must they have caused to the Roman world! These fanatics who loved death, who came out of the catacombs to proclaim the ruin of ancient civilization and to order the demolition of the temples. Those enemies of the gods, ready to break the masterworks of Praxiteles and Phydias; in their hatred for the religion of their country! They were not men, they were monsters. They were believed to be powerless, and yet they have triumphed. Is there any more affecting grief, than Julian shedding tears over the ruins of the altar of Jupiter, the glory of the forefathers and virtues of ancient Rome? But what were those tears good for? The fatal hour had arrived, and stars which are once extinguished cannot be relighted.

May a new catholic Julian now appear, and certainly one will appear, to restore the kingdom of the Pope and to reinvest the priests with their temporal influence, which they possessed during the Middle Ages! Will he also restore the ancient creeds? Will he create the face of an angel with a mask of Vuillot? No! He will galvanize a corpse, in which by tormenting him he will hasten the final decomposition.

Like Christianity must Anti-Christianity have its reign and all the apostolic sees of the ages have foretold this.

The supreme law of equilibrium requires that the spiritual movement inaugurated by Jesus shall have the corresponding material movement of Proudhon and Buechner. Faith has to undergo her last persecution, and already the most eminent and spotless priests of Paris have been the first victims.

Violence unfortunately produces violence. The violence of the "Commune" was insane; the reaction in proportion to that will prepare a new revolution, which sooner or later will break forth, and which by its excess of impiety will make a new impulse in the world towards religious ideas and a powerful manifestation of piety and faith possible and even necessary.

When man walks, he moves forwards by alternate and apparently contrary movements. He makes a step to the right, one to the left, one again to the right, and so on and nevertheless he never makes the same step again. Nothing endures except the eternal, and that which is past never returns. Life is an unceasing creation, and the same breath never passes twice over one's lips. While we are in the shade we wait for the sun, and when we are exposed to the heat of the sun, we seek the shade. The one and the other are desirable, and for the wise, good like God is always present; at all times and in all forms.

Often it seems that evil rules the world, but always the good by its ever living power of equilibrium reigns supreme. A pain is always productive of joy; error is truth in disguise; the Sphinx appears to be a monster and is a problem; the paradoxical is the hyperbole of reason. All folly is wisdom, which decomposes to become formed again and more complete; a cadaver is a genesis; crime is a forceps by which the difficult births of virtue are assisted; and M. de Maistre who believes in the divine mission of the soldier did not flinch before the apology of the hangman. Every evil contains its own remedy and therefore we see in the book of Job, Satan preside according to his rank, and in his turn in the senate of the Beni-Elohim and answering the Eternal who interrogates him in the presence of the sons of God. By the permission of Jehovah he tempts Job, and in the holy book, the work of hell has the character of a divine mission. "Quod superius—quod inferius" says the secret dogma of Hermes.

We must know how to support the divine treatment and patiently await the end of the trials to which we are subjected by the eternal physician. We must suffer without silent revolt the cruel operations and bloody amputations. Life can never be a hell as long as we keep courage and hope, and the sick and aching heart even when it is failing and guilty, cannot be lost as long as it remains submissive to God—the eternal order.

We must know how to make use of reality by beholding the ideal without ever mistaking one for the other, or to confound them.

Then we shall never mistake the relative for the absolute; the means for the end; the instrument for the music; riches for happiness; a passion for destiny, a woman for divinity, nor a loved being for the perfection of love. Ideal love is perfect love, and it alone can fill and satisfy our soul. We must not seek it in others but in ourselves, ask no one for it as long as we have not found it, and exact it the less as we feel ourselves more capable of approaching it. The legitimate cravings of our heart are not the torture of Tantalus, and nature never refuses to us anything which she owes us. Those that are dissatisfied with life are bad players, who wish to be paid without having gained. All deception is the punishment of an imprudence, all despair is the rage of a robbed thief. A man who despairs has put his confidence in lies, for truth does never cheat. He loved injustice because the immutable justice of truth did not console him. He is a sick person who prefers death to recovery. What are in fact lost illusions, if they are not a desire which goes? But reason is horrible to mad men, who prefer to consider themselves happy in their folly. Rather than to return sincerely to truth, they fly voluntarily into the bosom of death; because their desperate way of looking at the face of death transforms it into a last illusion and makes it look like an eternal lie.

We must finally know how to stand the trials, and this we cannot do without a perfect knowledge of the aim which we wish to reach and an immovable will to arrive there.

This will be the subject of our next lecture.

---

## Letters to the Corresponding Secretary.

---

### MR. NIBLETT AND THE "EPIPHANY."

I HAVE just read the comment on my letter to the *Epiphany* by the Editor of that paper in the Supplement to the *Theosophist* for this month. The Editor of the *Epiphany* has no doubt acted with Christian spirit in regard to my letter. He ought at least to have sent me a copy of his paper as he had done of his issue of the 22nd September last, by which he invited discussion, as he is no doubt aware that I am neither a subscriber nor a reader of his paper, and not to have allowed the readers of his paper to remain in the happy belief that I have been unable to reply to his learned cutting up of my letter, which, to say the least, is not a strong attempt in that direction.

The note on my letter in the *Epiphany* shows ignorance on the part of the learned Editor of that paper of the grand principle of the Theosophical Society. The Editor asks "whether we must remain apart in our views is a principle of Theosophy." Now it is a known fact that Theosophy is not dogmatic, neither a sectarian creed nor religion. The Theosophical Society embraces persons of all sectarian creeds and religions. Besides if he had but carefully read the 2nd para. of my letter he would have found that I was giving expression to my personal views and not the views of the Fellows of the Theosophical Society at large. How then does he say "May we ask you whether we must remain apart in our views is a principle of Theosophy."

It seems to me that the learned Editor of the *Epiphany* has a happy and novel method of shifting the burden of proof from off his own shoulders. In his 4th para. he writes, "Now, can you name some 'most learned' men, their learning embracing a thorough knowledge of history, who have denied the existence of Christ." He quite forgets that it was he himself who asserted that "as a rule the existence of Christ is admitted as fully by the most learned (?) enemies as by the friends of Christian Theology." By all the rules of reason (perhaps the rule of Christian orthodoxy excepted) he ought to make good his own assertion and not to need my help of historical knowledge.

I am indeed much obliged to the learned Editor for his note about my acquaintance of history and historical personages, and also for pitying my simplicity and for telling me that I regard "Christianity as an antiquated and supersti-

tious creed." I accept all this as coming from a Christian spirit of the 19th century and am much obliged to him for it.

ALLAHABAD, }  
February 1884. }

H. NIBLETT, F. T. S.

Note.—We can say from our own experience that Editors generally do not know the names of subscribers. The Editorial and Manager's are two distinct Departments, neither interfering with the other. Our brother is, therefore, we think, rather too severe upon the Editor of the *Epiphany* in charging him with having, by not sending the paper, "allowed the readers of his paper to remain in the happy belief that I (Mr. Niblett) have been unable to reply to his learned cutting up of my (Mr. N.'s) letter."

D. K. M.

### PRACTICAL WORK FOR THEOSOPHISTS.

THE objects of the Theosophical Society are very laudable, and if they are realized by the Hindus, immense service will be rendered to mother India. I attach much importance to the second rule of the Society, which, if strictly followed, will, I make bold to say, materially help the regeneration of the children of the soil, and along with them the whole Aryavarta. We are called heathens, barbarous, by the occidental nations only because our books on science, philosophies, &c., are buried in oblivion, and more so because there is no trace of their existence in the present century. A nation can only be termed civilized or uncivilized according to its arts, sciences, literature, &c. It is therefore incumbent on the fellows and members of the Theosophical Society, Branches of which are established at every important station in India, to set themselves without loss of time in right earnest to resuscitate our books on sciences, philosophies and arts and to publish them for the intelligent public.

The full complement of the Hindu Medical books (Ajarveda Sastra) cannot be found now, and hence the children of the soil who are receiving education in Western Sciences and imbibing Western ideas, do not hesitate to pronounce that we never possessed works on Chemistry, Botany and Surgery, and I had the mortification to hear on several occasions from men versed in the so-called exact sciences that the healing art never was studied and developed in India in the way it has been in Europe and America. Now the time has approached for the scales from the eyes of the Hindus being removed; they will then have the opportunity of obtaining a sight of India, as she was attired in precious garments not borrowed nor new, but manufactured long before Newton, Galileo, or Hippocrates saw the light.

Ajarveda Shastra is the parent of all western and modern Medical Sciences. This no one can deny, and every Arya is therefore in duty bound to try to restore it according to his might.

It is not idle to expect that those members of the Theosophical Society who have taken the Medical Science for their special study (whose number is not small, I presume) should be up and doing to bring out new Editions of *Charaka*, *Susrutha*, *Bagvata*, *Bhasprokas* and host of other books of Aryan Rishis with necessary annotations. It is a pity that reliable *tikas* (notes and annotations) of ancient medical works now extant, *Charaka* and *Susrutha*, cannot be had in Bengal. I trust the opportune time has now come for the members and the sympathisers of the Society to form themselves into groups to promote the study of the Aryan science and philosophy, and work in harmony for the religious, moral, social and intellectual regeneration of Bharatvarsha.

Will you or any of your numerous readers kindly enlighten me with the information as to how many books on Hindu Medical science are in existence, and what subjects they treat of?

I shall be highly obliged if you will be good enough to find a corner for this.

JAMALPUR, }  
5th January 1884. }

BAJ COOMAR ROY,  
Assistant Secretary, T. S.

We publish the above letter with a view to place the excellent suggestions of our brother before Branch Societies and individual members desirous of doing some practical work for the good of their country and fellow-men. The bringing to light of long-forgotten Sanskrit works will not only revive the ancient learning of Aryavarta, but it will also prove to occidental scholars that the ancestors of those they

now look down upon as of an "inferior race," were intellectual, moral and spiritual giants. This part of theosophical work is the real link between the East and the West, uniting them both in a bond of Intellectual Brotherhood.

H. P. BLAVATSKY,  
Corr. Secretary, Theosophical Society.

### A CANON OCCULTIST.

[A RUSSIAN Theosophist sends to us extracts from a letter received from an old friend of his—a Canon having his prebend in one of the R. C. Districts of Southern Russia. It is not every day that one meets with Catholic priests so profoundly versed in Occulism; and one especially who, appreciating the Kabala at its real worth, takes a proportionate interest in Eastern Occultism and Theosophy. The letter is interesting in various ways, and not to our members alone. We hope to gratify our readers by translating extracts from it.]

".....You seem a great linguist... But you ought, in addition to this, to study Hebrew, at least so far as to be able to understand all the Kabalistic terms. Were I younger, I would certainly study Sanskrit, as this would offer very little difficulty to one of my nationality; for, I am neither a Pole, nor a Slavonian, but a Lithuanian; our language being wonderfully similar to the Sanskrit—so much so, indeed, that the words Sayambuva, (Swayambu) *Vissapradji*, etc., would be understood by every Lithuanian peasant. Thus *Sayambuva*, means literally in our language "one born through himself," ("Self-born.") *Vissapradji*—"the very beginning," etc. Some time ago I read in the papers that a learned Brahmin upon his arrival in Berlin, hearing of the existence of a people in Prussia, who spoke a language very much akin to the Sanskrit, travelled purposely to Tilzitt. Once there, he addressed the inhabitants in Sanskrit and was answered by them in Lithuanian, and both understood each other to perfection! Your son should study Sanskrit; it will prove useful to him in the future when the great (cyclic) change prophesied by the adepts will come to pass.

I congratulate you upon the post occupied by you in the Theosophical Society of\* .....you must have many members. It is to be regretted that your organ (*the Theosophist*) should appear in English, instead of being published in either French or German...I know little of your Society...and am anxious to learn something of its Rules, Objects and Laws. Who are your *Mahatmas*? Are they Mages, Zoroastrians or Brahmins? Kindly send me your translation of some of these (theosophical) publications..... Why you should regard me as an adept in secret sciences is a matter of wonder to me..... It is rather I that could be taught by you than yourself learn anything from me.†

Action and Reaction! this magic law or dogma is repeated now-a-days by every profane without understanding its significance. And yet it is to be found every where: in all the Societies, religious and political, among the nations as within man himself. Like action, like reaction. As the Kabalists have it—*Malkout* is always made in‡ the image of *Keter*. But to form *Malkout* in a large Society, requires several centuries. Luther abolished fasts; the Protestants reject fasting and never fast. It was easy to foresee that to preserve the equilibrium, people would be found one day, who would for one reason or the other be always fasting. Thus just when the Roman Catholics themselves are gradually abandoning this religious custom, appear the vegetarians..... Adepts prepare for their *Magni operi* with 40 days' fasting, they eat but fruit and use neither flesh nor anything sour. The Roman Catholic 40 days' fasting has originated in this alone; after which period—come Easter and the Resurrection. All the great Magi—Moses, Christ, Paracelsus, Trithemius—lived like all other men..... Take care lest instead of adepts and Magi, you should be made to become fakirs.....

\* The writer alludes to our Society.—Ed.

† "Notwithstanding his protests"—remarks the gentleman-theosophist who sends us the above extracts—"he is a man profoundly versed in these sciences, one who had studied occultism for over twenty years. But they are all the same, over hiding their knowledge behind the veil of ignorance!"—Ed.

‡ For a better comprehension of those of our members who are ignorant of the meaning of these Kabalistic terms, we explain them. *Keter* is the equilibrizing power (lit. the "crown"), and *Malkout*—The Kingdom, the synthesis of the whole creation—or in another sense supreme and absolute universal intelligence.—PARABRAHM :—Ed.

The history and progress of initiation (into adeptship) ever varies and is being ever resurrected. It began in India, with the Brahmins; and when these profaned it, making it the means of robbery and manslaughter, it was transplanted in its pristine purity into Egypt and Chaldea. Abraham was but an Indian Brahman, *Abba Brama*, meaning simply "Father Brama," two words transformed into one—"Ab(-b)raham." When Egypt profaned the occult sciences, the secrets of initiation were carried by Moses into Palestine under the name of the Holy Kabala or oral tradition. When the Hebrew high-priests left it in their turns to profanation—came Christ who renewed, purified and transmitted it to his apostles. St. John was a Kabalist. All of the first Christian founders, writers, fathers of the Church, Apostles, Popes and Bishops were Kabalists and adepts of various degrees—therefore there are many of the latter. The very rites of the Passion Week in the Roman Church contain in themselves the programme of Christian initiation and represent strangely the *Magnum opus solis*,—"Le Grand Œuvre du soleil."\*

The Christian initiation has now, however, ceased. There are but few adepts now-a-days—yet there are some left. As for the rest, they repeat (to them unknown) words, and perform ceremonies, without in the least understanding their true spirit. The adepts are waiting for the renovation of Initiation *through two persons*; that is to say, of the two persons who will reveal once more the grand mysteries, one will become the spiritual, the other the political ruler—"Aaron and Moses." The object of the true initiation is to found the Kingdom of Heaven, on earth, based upon truth and justice supported by one strong Church and one strong empire. Let us hope it will come soon.† Moreover, who knows! Perhaps, these two persons (the two expected Messiahs) will come forth from your Society; not being sure I would not dare deny it. The said events are prophesied especially and strongly by Paracelsus. I made a copy of his *prophecies* written in Latin, with its diagrams and figures and will send it to Dr. E. G. .... you can get Paracelsus from him.

Why should you not know more than I do? You know better and more languages than I do, and have easier access to books than I. The religion or rather the philosophy of the adepts, *i. e.*, their rites, are easy enough to learn theoretically; sufficient for it to read, to reflect and understand. As to the practice, or the application of the secret forces in nature to deeds—it is very difficult; none of the adepts ever put this science clearly in writing, on the contrary they have all concealed the means used. One can be toiling 20 years and more and have no success. Being of delicate health from childhood, I sought relief in the Universal Panacea, and, though it never cures disease radically, it supported and preserved my life. Besides this I searched and pursued the mystery of "the rod of Moses" and partially—the Philosopher's stone. My labour was interrupted only owing to the iniquitous and impious attempts of the Nihilists and I gave it up lest I should become suspected‡ of treason. Thus I was prevented from discovering fully these secrets, yet I learned something of them and embodied some of my knowledge in two works called "The Rod of Moses" and "The Mysteries of the Sphinx" ..... I will be very glad to learn more of—..... No society can well develop without the participation of women in its work; it is they who are most useful in the spreading of new ideas.

I would read the work of Baron du Potet (*La Magie dévoilée*) with great interest, if it were but to learn how far people owing to personal and unaided labour are able to penetrate and unveil that strange secret which was known to Moses, Elijah and Jeremiah—who destroyed in one night over 100,000 men of the army of Senacherib. Very natural that

such a man should be really unconquerable. No need for him to be present at the battle and risk danger. Of what use before such a power all the modern inventions of far reaching guns and cannons! In the *Apocalypse* (St. John's Revelation) the Kabalists point out to a passage prophesying that the above-mentioned "two personages" will be in possession of this fearful secret, as also of the *Rod of Moses*. I would fain learn how far my own ideas coincide with those of Baron du Potet.

Kindly send me the *Rules* of the Theosophical Society as soon as they are translated. I would like to have two copies, if possible, for I desire to send one to my friend and college fellow of the Academy \* \* now Bishop—as a corroboration of a certain prophecy made by me to him several years ago....."

#### "PHENOMENA."

In the Supplement to the February issue, I find registered two occurrences under the head—"Phenomenal," which are remarkable,—remarkable, not in the hackneyed unmeaning sense of the newspapers, but remarkable in the literal sense of the word—worthy of remark.

My first observation is that the record of these occurrences says either too much or too little for the reading public, among whom are members of the Theosophical Society and the uninitiated as well. It says too much, because while publishing a lot of details connected with the phenomena, it excites a hope well warranted under the circumstances in the breast of every one, that members of the Theosophical Society, in addition to the mental and moral progress they secure, are constantly under the guidance of their "Masters," who interfere (pardon the word) in almost every trifling affair of this world, even to the extent of compensating in hard cash for the pecuniary losses which the members may "unjustly" be subjected to—a hope which I need hardly say is thoroughly out of place and almost inconsistent with the high moral tone of the eloquent and impressive admonition which the President addresses to the candidates at the initiation time.

The record again says too little, because while the writers honestly believe that they have given to the public all that is necessary for them to know that the occurrences registered are free from jugglery, there is an amount of omission, very important omission indeed, which leaves a very unpleasant impression that the statements published are only those elicited in the "Examination-in-chief" of a witness by a partial advocate; that much of the cross-examination and re-examination have been most unwisely omitted, and that fuller statements were deemed either ruinous to the cause and purposely suppressed or omitted from an inadequate appreciation of their great importance. I believe it is the latter.

The object of the first phenomenon was to check Mr. S. Ramaswami Iyer's vehement talk. He was doing this in the presence of a venerable lady, which fact alone should have curbed the ribald license of the tongue. And *what was* this "rather warm" and "vehement" tone, which a single look from any ordinary lady, much more of Madame Blavatsky could not chasten and tone down? Was the interference from the spiritual world a necessity in the case? I find the substance of all this big talk omitted in the record, and that purposely—an omission which I do not regret; and knowing, as I do, some particulars connected with it, it would be a breach of ordinary propriety were I to mention them in spite of the intentional silence of Mr. Coopposwami Iyer: but I must say that to *my* mind at least the cause that excited the vehement tone was most trivial compared with the grand machine that was used for its removal: a quiet snub from Madame Blavatsky would have done all the good the young man required, and Master S. Ramaswami Iyer in his teens would have richly deserved a few cuts on the back from the strong hand of the President. As it is, there has been a waste of energy and force, which is one of the sins against Laws of nature and (pardon me) an abuse of power. Suppose an officer, who is a Theosophist as well, is ordered to lead a forlorn hope, would you not think him fit for the lunatic Asylum if he talked "vehemently" and "rather

\* The Great Work of the Sun.

† It is the firm belief of the Kabalists (the Jewish especially) that the time will come when all the nations will be one under one Church composed of Hierophants, whose combined knowledge and wisdom, symbols and differences will also be one.

‡ The writer refers here to alchemical works. The crucible and the ever burning fire of the seeker after the Philosopher's stone risks certainly to be easily mistaken by the ignorant Police and detectives (in search for the criminal fabricators of dynamite and explosive bombs)—for an apparatus of the murderous Nihilists.—*Ed.*

warmly" against the orders and waited for a Mahatma to give him an encouraging word? And why should he not wait in hope inasmuch as the Mahatma had condescended to do so in one case, comparatively a trivial case, and could not in fairness be justified in withholding his aid in another and more serious case?

Now the next case. Does the Mahatma undertake to indemnify every Theosophist who bears "an unjust expense?" The absurdities of the question are on its very face, and yet one would be justified in raising it. The "unjust" nature of the expense Mr. Subramanya Iyer has not explained: that explanation would have shewn how far the Theosophist who bore the expense was not himself to blame for it, how far he was not a careless victim of his own credulity and deserved the indemnity. There are fools and villains in this world, and the latter are constantly living at the expense of the former, and a great deal of the consequent misery is due to ignorance, to wipe off which is the grand object of the Mahatmas, not in the direct way, which has been most singularly adopted in the present instance, but by teachings.

"But who are you to lay the law down for the Mahatmas? They act as they will, your duty is to believe and admire," will probably be the remark of the Editor of the *Theosophist*. A similar reprimand has been addressed in the "Occult World." I shall bear this reprimand and, aye, a great deal more. God knows I am not a critic for the sake of criticism. Knowledge is my thirst, and the publications of such phenomena push me back a considerable distance in my way onwards. Would it be difficult for the Mahatmas to exhibit a phenomenon at each initiation? Would not the Theosophical Society be simply mobbed for initiation under such circumstances? and yet how long would such a state of things last? and how long would the initiated remain content after the first experience? The craving is the most unhealthy ever known and is never satiated. Miracles, using the word in its ordinary sense, have never done much good. On the grandest occasions—I cannot even conceive of such occasions—a miracle may be justifiable: but man's fate in this world is to struggle on, is to study, is to see through the hollowness of this material world by observation and contemplation, and not to be waiting for money compensations for "unjust" losses or for words of encouragement from the Mahatmas at every petty annoyance that he must suffer by thousands as long as he is in this world.

Theosophy has a deep foundation of its own; if its sublime principles were not found sufficient enough to convert the world, such phenomenal occurrences as these would prove simply impotent. They may for a time excite curiosity, wonder, and be the talk of a few for a month: then they lose their effect and there is a craving for more: you *must* satisfy it: you try to repress it, it is at your peril. K. H.'s letters in the "Occult World" are explicit on this point: his theory is sublime: his participation, however, in the two recorded phenomena has staggered me. Will you teach me to reconcile the theory with the practice?

"A STUDENT."

NOTE.—I must state at the outset that I have the greatest respect for the writer, for he is one of the very, very few enlightened natives of India who have joined our Society for the sake of the Philosophy and its high aims and objects and not for the sake of "phenomena." In fact what kept him so long from us was the latter. If the percentage of such exceptional men were to steadily increase, that would indeed be a very hopeful sign of the intellectual and philosophical progress of humanity. In the present case, our brother's remarks are directed against the two articles appearing under the heading of "Phenomenal" in the February Number. I shall, however, show that his criticisms, although well meant, are to some extent misdirected.

In the first place, he seems to think that the interference of Mr. Ramaswami's GURU, in what he calls a trivial matter, was a waste of power. This observation betrays an ignorance of the mode of communication between the Adepts and their *Chelas* or fellow-initiates. A careful consideration of the article on PRECIPITATION will show that the Adept and the *Chela* or another Adept are like the two signallers at the two ends of a Telegraphic line. It is only when the batteries are out of order, or moisture or some such cause prevents the free working of the wires—that expense has to be undergone to restore or keep the communication intact. In the same way the Adepts have to use no power in communicating with one another or with their *Chelas* of a certain degree, unless either of them is ill or exhausted by fatigue, &c., or unless some antagonistic influence interferes with the Astral Wires, if I may use the expression. In the case under notice, Mme. Blavatsky, who is in constant communication with the Adepts, was there. The

presence of all the *Chelas* helped to keep the Astral Telegraph free from any disturbance, and little or no power had to be used to send the letter in question to Mr. Ramaswami. Mme. Blavatsky could no doubt have checked the vehemence of the language used by Mr. R., but at the same time Mr. Cooposwami Iyer's description indicates that the check exercised by the Mahatma was only one of the purposes of the letter in question. Advantage was probably taken of the opportunity, while communicating serious matters, to also add a few words of reprimand in regard to the subject then vehemently discussed. This latter fact, however, was "phenomenal" for those who have no idea of the possibilities of Occult powers, and naturally enough Mr. Cooposwami Iyer gave prominence to the same. My brother should remember that what is "phenomenal" for an outsider, is not necessarily so for a *Chela*. If others were to see my MASTER as I see Him, they would consider it a "phenomenon." I do not, for I know that as the usual mode of communication between an Adept and his *Chela*. The same remarks more or less apply to the second phenomenon mentioned by Mr. Subramania Iyer. There was no intention of exhibiting "occult powers." The absence of Mme. Blavatsky and other *Chelas* would have prevented the occurrence; for in that case an appreciable amount of "power" would have to be used to lay the Astral Telegraphic Line. The two gentlemen in question only took advantage of the opportunity of their presence on those occasions to mention what they saw, for the benefit of those who were then absent. Surely our philosophic brother does not mean to deny that the overwhelming testimony of eye-witnesses to facts, influences people in favour of the same, and that there are many, who now "despise phenomena" as *tamasha*, but were led to a study of the philosophy by the force of unrebutable evidence poured forth before them through the "Occult" literature. Happy would be that day indeed when the *noumenal* will supersede the phenomenal; but till then we have a duty to perform, and that is to hasten its approach, though not by any radical means. If these occurrences then, in which no special power had to be exercised, can stimulate not a few to enquire into the philosophy, why should they be lost, without turning them to some advantage, however slight that advantage may be? I would also refer those interested in the matter to the article on "Occult Phenomena" in the current number of the *Theosophist* (See page 165).

D. K. M.

## Phenomenal.

### I.

ENCLOSED is an article, entitled "Chastity;" to which a little history is attached, that may perhaps interest my brother-Theosophists.

I left Wadhwan on the 15th of February in company with Madame Blavatsky and Baboo Mohini M. Chatterjee. We were on our way to Bombay, returning from a visit to His Highness, the Thakore Saheb of Wadhwan. A few hours before we started, Madame Blavatsky had read the said article, corrected a few words and returned it to me. I read it carefully to see what corrections she had made, and whether I might not myself make some changes. I only found a few words corrected, folded the paper, put it in my pocket-book, deposited the pocket-book in my satchel, locked the same, entered the car and put the satchel on my seat, where it never left me and never was out of my sight, until the event which I am about to describe, occurred. We travelled on, Madame Blavatsky being in the same car. Towards evening Madame Blavatsky requested me to let her see that article again. I took it out of my satchel, unfolding the paper before handing it to her, and as I did so, imagine my surprise to find on it four long lines written on a space which was blank before, in the well-known handwriting of our Master, and in a different kind of ink than that used by Madame Blavatsky. How that writing could have been done in my satchel and during the shaking of the cars, I do not pretend to explain.

Another incident occurred when I was alone by myself. On the morning of the 20th of February, I received a curious Thibetan medal from our Master through Madame Blavatsky. I then accompanied her on board the steamer on which she was to sail for Europe. On my return to the shore I went into a native jewelry shop and brought a locket to deposit my medal, but could not find a chain long enough for my purpose. I then returned to my room, and paced the floor, studying what to do in regard to the chain. I finally came to the conclusion that I would buy a rose-colored silk ribbon. But where to get it, being a stranger in Bombay: that was the question. My pacing the floor brought me again in front of the open window, and there right before me on the floor lay exactly the very silk ribbon, brand new, and just the one I wanted.

BOMBAY, }

A. B. F. T. S.

## II.

THE following is the substance of a letter sent to the Editor by Babu Parvati Charan Ghosh, a Fellow of the Satya Marga Theosophical Society of Lucknow :—

At the request of Pandit Pran Nath, the President of our Branch Society, I beg to report an account of the following occurrence. When the Pandit left Madras after the anniversary celebration, he stayed a few days at Allahabad on his way home. Here it occurred to him to write a letter to the Masters, to obtain information in regard to certain matters. He wrote the said letter, handed it to a probationary Chela residing there, and that Chela sent it with an explanatory note to Mr. Damodar K. Mavalankar, asking him to submit it to his Guru.

When the explanatory note arrived, Mr. Damodar was surprised not to find the letter in question enclosed, and therefore wrote back to the Chela, that he was glad the letter to the Mahatma was by some oversight (as he supposed) not forwarded; because since the VIIth anniversary celebration in Bombay he had received strict injunctions not to accept any letters addressed to his Guru.

The fact, however, is that Pandit Pran Nath's letter was forwarded from Allahabad; and the mystery was solved, when, on opening Mr. Damodar's letter, it was found to contain a Chinese envelope, addressed to the said Pandit, and containing a reply from the Mahatma. The letter, as sent by Mr. Damodar, was sufficiently stamped; but when it arrived it required additional postage on account of the Master's reply. The paper on which it was written was of a peculiar kind, such as cannot be found in India. We merely mention these facts with a view to stimulate our Brothers in their search for truth, and to remind them that whenever they deserve the notice of the Mahatmas, such notice will be taken. If any further information in regard to the above related case is desired by any Theosophist, it can be obtained by applying to our President.

LUCKNOW, }  
24th Feb. 1884. }

## Official Reports.

### THE BEHAR THEOSOPHICAL SOCIETY (BANKIPORE.)

THE following Office-bearers were elected for the Behar Theosophical Society for the year 1884 :—

BARU TROILOKYA NATH MITRA, *President*. BABU GOVIND CHARAN, M. A., B. L., and BABU PURNENDRA NARAYAN SINHA, M. A., B. L., *Vice Presidents*. BABU PURNA CHANDRA MUKERJEE, B. L., *Secretary*, and BABU BENI NATH BANERJEE, B. A., *Assistant Secretary*.

### THE KANCHUNJANGA THEOSOPHICAL SOCIETY (DARJEELING.)

THE Secretary to the "Kanchunjanga Theosophical Society" reports that the first Anniversary of that Branch was celebrated with success on the 5th of January last. The Office-bearers elected for the current year are :—

BABU ISHAN CHANDRA KUNDU, *President*; DR. KHIRODA PRASADA CHATTERJEE, *Secretary*; and BABU BARADA KANTA CHOWDHRY, *Librarian and Treasurer*.

### THE BHRIGU KSHETRA THEOSOPHICAL SOCIETY (JUBBULPORE).

A THEOSOPHIST visiting the above Branch reports:—

On the day of my arrival here, a meeting for the carrying out of the Sanskrit School project enunciated by Col. Olcott—during his visit to this station—was held. Rupees 4,300 have up to date been subscribed, out of which Rs 3,200 have already been collected. Besides this a monthly subscription of Rupees fourteen has been promised. The Members are trying their best to get more subscriptions or donations. The meetings of the Branch Society are held regularly, and some of the Fellows are engaged in performing marvellous cures by means of mesmerism.

## THE CHOCHAN THEOSOPHICAL SOCIETY.

*Extract from the Proceedings of an Ordinary Meeting of the Chohan T. Society, Cawnpore, held at the President's Quarter, on Wednesday, Jany. 27th, 1884, at 7 p. m.*

With reference to the President's proposal laid before the Branch at its last meeting, and to Resolution No. 1 of that meeting, Babu Ganendra Nath Chakravarti, M. A., laid before the meeting the result of his personal consultation with the members of the Branch, as regards their contribution to the Permanent Maintenance Fund of the Parent Society. After a discussion of the proposal, it was resolved—

"That all the members of the Branch who, in conformity with Rule 4. of its Bye-laws and Rules, have been up to this time paying Rupee one per month to the Branch Funds, should contribute Rupee one per mensem to the Permanent Maintenance Fund of the Society."

The President wished to remark that though Rupee one per month per member paid by the Branch would not amount to any considerable sum, it would yet show that the members of the Branch were really willing to actively help the Society—and were worthy of their honorable position as Members of the Chohan Branch; and further that if all the Branches followed their example, the Parent Theosophical Society would soon cease to be a pecuniary burden on its life-devoted Founders, and would save them many an anxious thought about the financial future of the Society.

M. N. GANGULI,

*Secretary.*

KISHEN LALL,

*President.*

### SANSKRIT SCHOOLS AT BAREILLY.

PANDIT CHANDRA SHEKHARA, the Delegate of the Rohilcund Theosophical Society (of Bareilly) at our last Anniversary, gives us the welcome news that his Branch is doing its utmost to raise subscriptions for the establishment of Sanskrit Schools at Bareilly. His Highness, Rajah Madhavrao Peshwa, a Councilor of our Society, has subscribed Rs 2,000; while Lala Damodar Dass, a resident of the town, has contributed Rs 500 for the laudable object in view. Our industrious brothers have collected rupees five hundred more and intend raising a considerable sum. They have, moreover, one and all, cheerfully put down their names for the amount of a month's pay. If all Hindus were but to follow the noble example, Bareilly would, no doubt, within a very short time, boast of a splendid Institution, where the foundation of the revival of the National Language will be laid.

### THE FIRST ANNIVERSARY OF THE SECUNDERABAD THEOSOPHICAL SOCIETY.

THE 1st Anniversary celebration of the Secunderabad Theosophical Society took place on the 26th January 1884, in the Albert Reading Room and Library, Mr. P. Iyaloo Naidu Garu being in the chair. Among those present were Messrs. Dorabji Dasabhoj, Mr. Balakrishnah Moodaliar, Ramachandra Pillai, Raghunadha Prasad B. A., Mr. Dorasami Pillai, B. A., Venugopaul Pillai, Ruthuasami Mudaliyar, Vurdaraja Moodelliar &c. &c. A large number of native gentlemen attended and the Hall was overcrowded.

The Secretary, after explaining to the audience the aims and objects of the Theosophical Society, gave a short account of the progress made during the past year, and hoped that similar Branches would be formed all over Aryavarta and inspire the rising generation with such lofty moral notions and veneration for the past glories of our ancestors as may effectually check the spread of National degeneration and moral degradation.

The Society during the year met twice a week and many extraordinary meetings were also held. Experiments were also tried at the meetings on mesmerism and other subjects with some success. During the year, Colonel Olcott the President-Founder visited the place and gave some practical lessons on mesmerism as a healing art to the members of the Society, some of whom, have begun to acquire that power of healing mesmerism which Colonel Olcott during his tour throughout India exercised for the public benefit.

Mr. Dorasami Pillai, B. A., then made a speech of about two hours. It is very gratifying to note that, although not a Theosophist, he spoke very appreciatively of our movement, and we would recommend to our friends and sympathisers as also the opponents a careful consideration of that most beautiful lecture.

C. KUPPUSWAMI AIYAR,

Secretary.

SECUNDERABAD, }  
15th February 1884. }

#### THE ADHI BHOUTIC BHRATRU THEOSOPHICAL SOCIETY (BERHAMPORE, BENGAL.)

OUR Anniversary was celebrated on the 7th and 8th Magh 1290 B. S. corresponding to the 20th and 21st January last. A Brother from Bhagalpore came as a delegate and others sent sympathising letters. Pundits had explained to them our object and they were invited to expound Shastras and to lecture. Twelve of them complied with our request. The Bhagalpore Brother was much taken up with the ceremony, complained that they had to work under great difficulty and begged our co-operation. There was a holiday at the beginning of this month and we advised them to hold their Anniversary on that occasion. This they did. Myself, Brother Dina Nath Ganguly and Brother Shyama Churn Bhatta went.

Jamalpur is a very important place, about 2 hours' journey by rail from Bhagalpore. There is a small branch working there under still greater difficulties. I am very glad to say that not only every thing went off very satisfactorily, but that for two successive days we had public meetings where-in we undertook to answer the queries of every enquirer. We did so from 6 A. M. to 11½ P. M. to the complete satisfaction of all. Ideas were put into our heads which even startled ourselves on the occasion. Brother Shyam Babu spoke eloquently, and the Brethren of Bhagalpore and Jamalpore felt doubly strong. The latter pressed us to go to Jamalpore and we have agreed to do so on the occasion of Good Friday when they will celebrate their anniversary. The result reminded me of the saying "That there is much to do but few laborers in the field."

NOBIN K. BANERJEE,

President.

BERHAMPORE, }  
8th February 1884. }

#### THE BHAGULPORE THEOSOPHICAL SOCIETY.

THE first Anniversary of this Branch was publicly celebrated on the 7th of March. Babu Ishan Chandra Misra, M. A., F. T. S., gave an interesting address on *Theosophy*. He maintained that the idea of Universal Brotherhood, as preached by our Society, was really catholic. In this respect it essentially differed from the teachings of theologians who recognise only such as brothers as embrace their particular creed. Theosophical Brotherhood is therefore bound to spread, as it is formed upon an intellectual basis and does not meddle with physical considerations. The speaker also showed how groundless were the certain prejudices entertained by the local public against the movement.

This Branch has moreover practically carried out the idea put forth by Col. Olcott in his last anniversary address, about the formation of an "Aryan League of Honour." Several teachers of the *Tej Narain School*, among whom is our good friend Babu Ladhli Mohun Ghose, F. T. S., took prominent part in the proceedings. The movement was organised under the name of "Students' Moral Association," with Babu Ishan Chandra Misra, M. A., F. T. S., as the President. During the infancy of the Association the members of our local Society and the teachers of the school propose to take the lead. The start was made with forty-two students.

MR. LANE-FOX AT ADONI.

THE Secretary of the Adoni Theosophical Society officially reports the work done by Mr. Lane-Fox at that station. He delivered there an interesting and instructive public lecture on *Theosophy*. He successfully endeavoured to adapt his language and style to the comprehension of his audience. The

impression made by him there is believed to be lasting, as he is a very effective speaker and his philosophical placidity remains unruffled in all cases. His short stay has infused additional vigour into this Branch.

Mr. Lane-Fox directed a great portion of his efforts towards the elucidation of the true object of the Theosophical movement, and in clearing away certain misconceptions as to the meaning of the word "Mesmerism" and the phrase "gaining powers." He pointed out that true powers were the necessary result of enlightened knowledge, that is to say, knowledge coupled with spiritual perception.

#### SELF-MESMERISATION.

A Brother Theosophist, writing from Midnapore, mentions wonderful cures by the process of self-mesmerisation. During an attack of choleric diarrhoea he perceived a nerve current rising up to the stomach in front and then descending along the spinal chord. By concentrating his attention on the current, he tried to change its direction. In an hour he was much relieved and fell asleep. After getting up, however, he found he had another attack. He took a dose of an opiate and then meditated as he did before. Although he did not go to sleep in the latter case, he got perfectly cured. He feels, he says, quite sure that a single dose of three grains of opium could never have cured a disease which the doctors had pronounced to be of a serious nature. On another occasion he had an attack of lumbago. The pain was so intense that he could not walk erect. He concentrated his attention on the part affected and imagined that the affected portion of the spinal chord had become curved, although in reality there was no such curvature. He then concluded that there must be some displacement of the spinal chord of the *Pranamaya* body. Efforts were made to restore that particular portion of the *Pran*. The effect of the imagination was to produce "a state of strain" on the affected part. This was done for some length of time before sleeping. The next morning the patient was all right. Our brother thinks these two instances of self-cure may prove interesting and instructive to his Fellow-Theosophists who can employ with advantage the same process, should they suffer from the same or similar complaints.

D. K. M.

#### Personal Items.

THE vacancy caused by the untimely death of Mr. G. Edwera in the Secretaryship of the Galle (Buddhist) Branch has been filled by the election of Mr. Paul Edward Ponnumproma, a very excellent man and devoted Buddhist.

Mr. Charles Frederick Jayawickrama has been elected Secretary to the Board of Managers under the National Fund Trust.

Mr. Charles Amardas d'Silva, Proctor, the son-in-law of the late Emanis d'Silva Gunasekara, has been appointed by Colonel Olcott a Trustee of the same Fund, in place of the latter gentleman, deceased.

In the VIIIth Anniversary Report, the name of Babu Kamud Chunder Mookerjee, F. T. S., of Simla, was printed as having paid Rupees thirty to the Fund for the purchase of the Adyar Theosophical Head-Quarters Property. That gentleman now writes to us that the amount was remitted *through and not by* him, the real donor being "G. C. C." who does not wish to have his name made public.

#### OBITUARY.

The Secretary of the Bombay Theosophical Society reports the death of Mr. Jehangir Cursetji Tarachand, F. T. S. of that Branch, on Sunday the 2nd ultimo. The deceased was long suffering from disease of the kidneys. Mr. Jehangir was a warm advocate of Theosophy, and had his life been spared, adds the Secretary, he would have rendered good service to her cause.

# "THE SECRET DOCTRINE,"

A NEW VERSION OF "ISIS UNVEILED."

WITH A NEW ARRANGEMENT OF THE MATTER, LARGE AND IMPORTANT  
ADDITIONS, AND COPIOUS NOTES AND COMMENTARIES,

BY

H. P. BLAVATSKY,

*Corresponding Secretary of the Theosophical Society.*

ASSISTED BY

T. SUBBA ROW GARU, B. A., B. L., F. T. S.,

*Councillor of the Theosophical Society and Secretary of its Madras Branch.*

## PUBLISHER'S NOTICE.

NUMEROUS and urgent requests have come from all parts of India, to adopt some plan for bringing the matter contained in "Isis Unveiled," within the reach of those who could not afford to purchase so expensive a work at one time. On the other hand, many, finding the outlines of the doctrine given too hazy, clamoured for "more light," and necessarily misunderstanding the teaching, have erroneously supposed it to be contradictory to later revelations, which in not a few cases, have been entirely misconceived. The author, therefore, under the advice of friends, proposes to issue the work in a better and clearer form, in monthly parts. All, that is important in "Isis" for a thorough comprehension of the occult and other philosophical subjects treated of, will be retained, but with such a rearrangement of the text as to group together as closely as possible the materials relating to any given subject. Thus will be avoided needless repetitions, and the scattering of materials of a cognate character throughout the two volumes. Much additional information upon occult subjects, which it was not desirable to put before the public at the first appearance of the work, but for which the way has been prepared by the intervening eight years, and especially by the publication of "The Occult World" and "Esoteric Buddhism" and other Theosophical works, will now be given. Hints will also be found throwing light on many of the hitherto misunderstood teachings found in the said works. A complete Index and a Table of Contents will be compiled. It is intended that each Part shall comprise seventy-seven pages in Royal 8vo. (or twenty-five pages more than every 24th part of the original work,) to be printed on good paper and in clear type, and be completed in about two years. The rates of subscription to be as follow:—

	Indian.	Foreign countries.	
		£	s.
If paid Monthly ...	Rs. 1 4 0	0	3
„ „ Quarterly ...	„ 3 0 0	0	8
„ „ Half yearly... „	„ 6 0 0	0	16
„ „ Yearly ... „	„ 10 0 0	1	7

Subscriptions payable invariably in advance, and no name entered on the list nor Part forwarded until the money is in hand. All applications to be made and sums

remitted to the "Manager, Theosophist Office, Adyar (Madras), India;" at which office money orders must be made payable and always in his favour. In making remittances it should be noted that no other amount should on any account be included in the drafts or money orders, except that intended for this work. Should nothing unforeseen happen, and should a sufficient number of subscribers be registered, the first Part will be issued on June 15th.

## REPORT OF THE EIGHTH ANNIVERSARY OF THE THEOSOPHICAL SOCIETY.

AT which were present Delegates from Branches in America, England, Ceylon and all parts of India from North to South and East to West.

Price four annas per copy; postage and packing charges:—India, one anna; Ceylon, three annas; all other Foreign countries, four annas.

Apply, with remittance, to the Manager of the THEOSOPHIST, Adyar (Madras).

## ESOTERIC BUDDHISM.

(CHEAP EDITION—PRICE RUPEES THREE.)

THE Manager of the *Theosophist* has received a supply of the paper-cover edition of Mr. Sinnett's *Esoteric Buddhism*. Like the *Occult World*, this work also, in its second edition, has been made cheap for the convenience of the Indian Subscribers.

MESSRS. NICHOLAS AND Co. have made a splendid photograph of a group comprising eighty-three Delegates attending the Eighth Anniversary celebration of the Theosophical Society, together with a view of the portico of the Adyar Head-quarters Building. Every portrait is excellent. Copies may be had at Rs 2-8 (6s.) each, inclusive of packing and postage. Fellows of the Theosophical Society may also obtain cabinet size photos of Madame Blavatsky, Colonel Olcott and a group consisting of Madame Blavatsky, Messrs. Subba Row and Dharbagiri Nath at Rs 1-12 (4s.) per copy, inclusive of packing and postage.

APPLY TO THE MANAGER OF THE *Theosophist*.

सत्यात् नास्ति परो धर्मः ।

THERE IS NO RELIGION HIGHER THAN TRUTH.

[Family motto of the Maharajahs of Benares.]

## "INFINITE PERSONALITY."

THE article of Mr. Herbert Spencer in the *Nineteenth Century* has created a great deal of discussion, especially in the theological circle. Nothing can be more injurious to human progress than a condition of intellectual stagnation, and a spirit of enquiry marks an important stage of the upward development. The freethought movement has loosened the chains forged by theology upon its weak followers, and the result has been a keen and an earnest spirit of investigation. Few doctrines are now accepted upon "faith" or authority alone; only those which pass through the crucible of reason and logic stand on a firm and lasting basis. An impartial search is necessary to lead one to truth. Every attempt, therefore, made in this direction is a cheering and a hopeful sign of the times. It would not consequently be uninteresting to examine some of the theistic answers to Mr. Herbert Spencer's arguments against the fruitless task of attaching a personality to the Infinite. The chief contention of that distinguished philosopher is that consciousness, which is formed of successive states, when applied to the Eternal Reality, makes of the Divinity an anthropomorphic, hence necessarily a finite, Being; for such consciousness implies changeableness. To this a certain class of theistic thinkers urge, in reply, that they do not believe that the divine consciousness is formed of successive states, but that they conceive it "to be a permanent and unchangeable consciousness, with the ideas and emotions constituting it as eternally existing therein." And further:—

"When God 'is represented as seeing and hearing this or the other, and as being emotionally affected thereby,' it is not meant that the fact is a new occurrence in the divine consciousness, but that it is an ever-existing part of the eternal consciousness, only coming to the cognizance of our limited consciousness in time. Love of his creatures, approval of virtue and disapproval of sin, these and other feelings which we attribute to the Divine Being are conceived, not as transient phenomena appearing in and disappearing from the Divine Mind in time ..... but as permanent and eternal states of the Divine consciousness....."

This assertion may seem sound at first sight, but a little thinking shows it to be not quite logical. A proposition to be true must stand the test of both the inductive and the deductive methods. Talking of the Divine consciousness in relation to *all* humanity, the above proposition of the Theists that all the states of *existence* are eternally present in the Divine Mind, may hold good. But this Divine consciousness must now be considered in its bearing upon the *individual*; he exists because, according to the Theists, God *wills* so. No intelligent person can deny that will is a mental

state and as such forms part of consciousness. It is also obvious that if all causes are simultaneous, the effects must also be simultaneous. Now the birth, growth and death of an individual are entirely different effects of the Divine will. If all these mental states are simultaneous in the Divine mind, the effects must be simultaneous. Do we however find it so? No man comes into existence, develops and dies simultaneously. If the effects are *successive*, the mental states which produce those effects must also be successive. The same applies to the whole universe. It does not come into existence, develop and die simultaneously. What a superficial thinker is generally misled by is the fact that his mind is capable of passing so rapidly through successive states that he imagines these mental states simultaneously present in his mind. But when a logical test is applied to the hypothesis, such as mentioned above, then it becomes evident that the rapidity of the succession of mental states must not be misunderstood to mean their simultaneous presence. If "God" *is* He cannot *exist*; for *existence* implies *change*. Like the modern scientist, who is charged with standing in the middle of the chain, the theist in his process of reasoning adopts the same course. The other "proposition" that change from activity to inactivity does not imply such changeableness as is "inconsistent with His (the Divine Being's) infinity," is equally open to objection. If the will to be active and inactive is simultaneous in the Divine mind, then the creation must be simultaneously active and inactive, which it is not. Hence these two mental states must be successive, and Mr. Herbert Spencer's reasoning holds good. The Adwaitee Philosophy offers a logical solution of the problem, when it teaches that *Parabrahm*, the one Eternal, Infinite Reality, has no will, no intelligence, no consciousness, for it is itself absolute will, absolute intelligence and absolute consciousness. And to talk of Absolute consciousness being conscious is to attempt the absurd task of measuring infinity by finity.

B. S.

## THE METAPHYSICAL BASIS OF "ESOTERIC BUDDHISM."

THE pamphlet of Mr. C. C. Massey, an F. T. S., of the London Lodge of the Theosophical Society, is a valuable contribution to the discussion now being raised by the publication of Mr. Sinnett's *Esoteric Buddhism*. It is a trite axiom that truth exists independent of human error, and he who would know the truth, must rise up to its level and not try the ridiculous task of dragging it down to his own standard. Every metaphysician knows that Absolute Truth is the eternal Reality which survives all the transient phenomena. The preface to the *Isis Unveiled* expresses the idea very clearly when it says:—"Men and parties, sects and creeds, are the mere ephemera of the world's day, while Truth, high seated on its rock of Adamant, is alone eternal and supreme." Language belongs to the world of relativity, while Truth is the Absolute Reality. It is therefore vain to suppose that any

language, however ancient or sublime, can express Abstract Truth. The latter exists in the world of ideas, and the ideal can be perceived by the sense belonging to that world. Words can merely clothe the ideas, but no number of words can convey an idea to one who is incapable of perceiving it. Every one of us has within him the latent capacity or a sense dormant in us which can take cognisance of Abstract Truth, although the development of that sense or, more correctly speaking, the assimilation of our intellect with that higher sense, may vary in different persons, according to circumstances, education and discipline. That higher sense which is the potential capacity of every human being is in eternal contact with Reality, and every one of us has experienced moments when, being for the time *en rapport* with that higher sense, we realise the eternal verities. The sole question is how to focalise ourselves entirely in that higher sense. Directly we realise this truth, we are brought face to face with occultism. Occultism teaches its votaries what sort of training will bring on such a development. It never dogmatizes, but only recommends certain methods which the experience of ages has proved to be the best suited to the purpose. But just as the harmony of nature consists in symphonious discord, so also the harmony of occult training (in other words, individual human progress) consists in discord of details. The scope of Occultism being a study of Nature, both in its phenomenal and noumenal aspects, its organisation is in exact harmony with the plan of Nature. Different constitutions require different details in training, and different men can better grasp the idea clothed in different expressions. This necessity has given rise to different schools of Occultism, whose scope and ideal is the same, but whose modes of expression and methods of procedure differ. Nay, even the students of the same school have not necessarily a uniformity of training. This will show why it is that until a certain stage is reached, the *Chela* is generally left to himself, and why he is never given verbal or written instructions regarding the truths of Nature. It will also suggest the meaning of the Neophyte being made to undergo a particular kind of sleep for a certain period before each initiation. And his success or failure depends upon his capacity for the assimilation of the Abstract Truth his higher sense perceives. However, just as unity is the ultimate possibility of Nature, so there is a certain school of Occultism which deals only with the synthetic process, and to which all the other schools, dealing with analytical methods wherein alone can diversity exist, owe their allegiance. A careful reader will thus perceive the absurdity of a dogmatism which claims for its methods a universal application. What is therefore meant by the Adwaitee Philosophy being identical with the Arhat Doctrine, is that the final goal or the ultimate possibility of both is the same. The synthetical process is one, for it deals only with eternal verities, the Abstract Truth, the noumenal. And these two philosophies are put forth together, for in their analytical methods they proceed on parallel lines, one proceeding from the subjective and the other from the objective stand-point, to meet ultimately or rather converge together in one point or centre. As such, each is the complement of the other and neither can be said to be complete in itself. It should be distinctly remembered here that the Adwaitee Doctrine does not date from Sankaracharya, nor does the Arhat Philosophy owe its origin to Gautama Buddha. They were but the latest expounders of these two systems which have existed from time immemorial as they must. Some natures can better comprehend the truth from a subjective stand-point, while others must proceed from the objective. These two systems are therefore as old as Occultism itself, while the later phases of the Esoteric Doctrine are but another aspect of either of these two, the details being modified according to the comprehensive faculties of the people addressed, as also the other surrounding circumstances. Attempts at a revival of the knowledge of this Truth have been numberless, and therefore to suggest that the present is the first attempt in the world's history, is an error which those whose sense has just been awakened to the glorious Reality are apt to commit. It has already been stated that the diffusion of knowledge is not limited to one process. The possessors of it have never jealously guarded it from any personal or selfish motives. In fact such a frame of mind precludes the possibility of the attainment of knowledge. They have at every opportunity tried all available means to give its benefit to humanity. Times there were undoubtedly when they had to rest content with giving it only to a few chosen pupils,

who, it should be remembered, differ from ordinary humanity only in one essential particular, and that is, that by abnormal training they bring on a process of self-evolution in a comparatively very short period, which ordinary humanity may require numberless ages to reach during the ordinary course of evolution. Those who are acquainted with the history of Count St. Germain and the works of the late Lord Lytton; need not be told that even during the past hundred years constant efforts have been made to awaken the present races to a sense of the knowledge which will assist their progress and ensure future happiness. It should not be, moreover, forgotten that to spread a knowledge of philosophical truths forms but a small fraction of the important work the occultists are engaged in. Whenever circumstances compel them to be shut out from the world's view, they are most actively engaged in so arranging and guiding the current of events, sometimes by influencing people's minds, at others by bringing about, as far as practicable, such combinations of forces as would give rise to a higher form of evolution and such other important work on a spiritual plane. They have to do and are doing that work now. Little therefore do the public know what in reality it is that they ask for when they apply for *Chelaship*. They have to thus pledge themselves to assist the MAHATMAS in that spiritual work by the process of self-evolution, for, the energy expended by them in the act of self-purification, has a dynamic effect and produces grand results on a spiritual plane. Moreover, they gradually fit themselves to take an active share in the grand work. It may perhaps be now apparent why "THE ADEPT BECOMES; HE IS NOT MADE," and why he is the "rare efflorescence of the age." The foregoing considerations should never be lost sight of by the reader of *Esoteric Buddhism*.

The great difficulty which an ordinarily philosophic mind has to contend against, is the idea that consciousness and intelligence proceed out of non-consciousness and non-intelligence. Although an abstruse metaphysical intellect can comprehend or rather perceive the point subjectively, the present undeveloped state of humanity, at any rate, can conceive the higher truths only from an objective stand-point. Just as, therefore, we are obliged to talk of the setting of the sun, in common parlance, although we know that it is not the movement of the sun that we really refer to, and just as in geocentric system we have to speak as though the earth were a fixed point in the centre of the universe so that the unripe mind of the student may understand our teachings, so in the same manner the Abstract Truth has to be presented from an objective point of view, so that it may be more easily comprehended by minds with not a very keen metaphysical intellect. Thus one may say that Buddhism is rational Vedantism, while Vedantism is transcendental Buddhism. Keeping this difference in view, an explanation of the difficulty above put forth may be given from the Buddhist stand-point. If the reader will here recall the answer of the MAHATMAS to Question V of "An English F. T. S.," published in the *Theosophist* for September 1883, he will remember the explanation concerning "the mineral monad." The one Life permeates ALL. Here it may be added that consciousness and intelligence also permeate ALL. These three are inherent potentially everywhere. But we do not talk of the life of a mineral, nor of its consciousness or intelligence. These exist in it only potentially. The differentiation which results in individualisation is not yet complete. A piece of gold, silver, copper or any other metal, or a piece of rock, &c., has no sense of separate existence, because the mineral monad is not individualised. It is only in the animal kingdom that a sense of personality begins to be formed. But for all that, an occultist will not say that life, consciousness or intelligence, do not potentially exist in the minerals. Thus it will be seen that although consciousness and intelligence exist everywhere, all objects are not conscious or intelligent. The latent potentiality when developed to the stage of individualisation by the Law of Cosmic Evolution, separates the subject from the object, or rather the subject falls into *Upadhi*, and a state of personal consciousness or intelligence is realized. But the absolute consciousness and intelligence which has no *Upadhi* cannot be conscious or intelligent, for there is no duality, nothing to wake intelligence or to be conscious of. Hence the *Upanishads* say that *Parabrahm* has no consciousness, no intelligence, for these states can be cognised by us only on account of our individualisation, while we can have, from our differentiated and

personal state, no conception of the undifferentiated, non-dualistic consciousness or intelligence. If there were no consciousness or intelligence in Nature, it were absurd to talk of the Law of Karma or every cause producing its corresponding effect. The MAHATMA, in one of the letters published in the *Occult World*, says that matter is indestructible, but enquires whether the modern Scientist can tell why it is that Nature consciously prefers that matter should remain indestructible under organic rather than inorganic form. This is a very suggestive idea in regard to the subject under notice. At the beginning of our studies we are apt to be misled by the supposition that our earth, or the planetary chain, or the solar system, constitutes infinity and that eternity can be measured by numbers. Often and often have the MAHATMAS warned us against this error, and yet we do, now and then, try to limit the infinity to our standard instead of endeavouring to expand ourselves to its conception. This has led some naturally to a sense of isolation, and to forget that the same Law of Cosmic Evolution which has brought us to our present stage of individual differentiation, is tending to lead us gradually to the original undifferentiated condition. Such allow themselves to be imbued so much with a sense of personality that they try to rebel against the idea of Absolute Unity. Forcing themselves thus in a state of isolation, they endeavour to ride the Cosmic Law which must have its course; and the natural result is annihilation through the throes of disintegration. This it is which constitutes the bridge, the dangerous point in evolution referred to by Mr. Sinnett in his *Esoteric Buddhism*. And this is why selfishness, which is the result of a strong sense of personality, is detrimental to spiritual progress. This it is that constitutes the difference between white and black magic. And it is this tendency to which reference is made when talking of the end of a Race. At this period, the whole humanity splits up into two classes, the Adepts of the good Law and the sorcerers (or *Duggas*). To that period we are fast rushing; and to save humanity from a cataclysm which must overtake those who go against the purposes of Nature, the MAHATMAS, who are working with her, are endeavouring to spread knowledge in a manner to prevent its abuse as far as possible. We should therefore constantly remember that the present is not the apex of evolution, and that if we would not be annihilated, we must not allow ourselves to be influenced by a sense of personal isolation and consequent worldly vanities and shows. This world does not constitute infinity, nor does our solar system, nor does the immeasurable expanse our physical senses can take cognisance of. All these and more are but an infinitesimal atom of the Absolute Infinity. The idea of personality is limited to our physical senses which, belonging as they do to the *Rupa Loka* (world of forms), must perish, since we see no permanent form anywhere. All is liable to change, and the more we live in transient personality, the more we incur the danger of final death, or total annihilation. It is only the seventh principle, the *Adi Buddha*, that is the Absolute Reality. The objective stand-point, however, adds further that *Dharma*, the vehicle of the seventh principle or its Upadhi, is co-existent with its Lord and Master, the *Adi Buddha*; because it says nothing can come out of nothing. A more correct form of expressing the idea would be that in the state of *Pralaya* the sixth principle exists in the seventh as an eternal potentiality to be manifested during the period of cosmic activity. Viewed in this light both the seventh and the sixth principles are Eternal Realities, although it would be more correct to say that the seventh principle is the only Reality, since it remains immutable both during cosmic activity as also during cosmic rest, while the sixth principle, the Upadhi, although absorbed into the seventh during *Pralaya*, is changing during *Manvantara*, first differentiating to return to its undifferentiated condition as the time for *Pralaya* approaches. It was from this standpoint that Mr. Subba Row was arguing in his article on "A Personal and an Impersonal God," which was meant as a reply to Mr. Hume, who was then talking of the Arhat Philosophy.

Now the Vedantin doctrine says that *Parabrahm* is the *Absolute Reality* which never changes and is thus identical with the *Adi Buddha* of the Arhats. While *Mulaprakriti* is that aspect of *Parabrahm*, which at the time of *Manvantara* emanates from itself *Purush* and *Prakriti*, and which thus undergoes change during the period of cosmic activity. As *Purush* is force, which remains immutable throughout, it is that aspect of *Mulaprakriti* which is identical with *Parabrahm*. Hence it is that *Purush* is said to be the same as *Parabrahm*, or the *Absolute Reality*. While *Prakriti*, the differentiated cosmic matter, constantly

undergoes change, and is thus unpermanent, forming the basis of phenomenal evolution. This is a purely subjective stand-point from which Mr. Subba Row was arguing with the late Swami of Almora who professed to be an Adwaitee. A careful reader will thus perceive that there is no contradiction involved in Mr. Subba Row's statements, when he says from the objective standpoint that *Mulaprakriti* and *Purush* are eternal, and when again from a subjective standpoint he says that *Purush* is the only eternal Reality. His critic has unconsciously mixed up the two stand-points by culling extracts from two different articles written from two different points of view and imagines that Mr. Subba Row has made an error.

Attention must now be turned to the idea of the *Dhyani Chohans*. It has been already stated above that the sixth and the seventh principles are the same in all, and this idea will be clear to every one who reads carefully the foregoing remarks. It has also been added that the sixth principle, being a differentiation of *Mulaprakriti*, is personal, however exalted and ubiquitous that personality may be. In the Adwaitee Philosophy the *Dhyani Chohans* correspond to *Iswara*, the Demiurgus. There is no *conscious Iswara* outside of the 7th principle of Menu as vulgarly understood. This was the idea Mr. Subba Row meant to convey when he said:—"expressions implying the existence of a conscious Iswar which are to be found here and there in the *Upanishads*, are not to be literally construed." Mr. Subba Row's statement is therefore neither "perfectly inexplicable," nor "audacious," as it is consistent with the teaching of *Sankaracharya*. The *Dhyani Chohans*, who represent the aggregate cosmic intelligence, are the immediate artificers of the worlds, and are thus identical with *Iswara* or the Demiurgic Mind. But their consciousness and intelligence, pertaining as they do to the sixth and the seventh states of matter, are such as we cannot cognise, so long as we prefer to remain in our isolation and do not transfer our individuality to the sixth and the seventh principles. As artificers of the worlds, they are the primary principle of the Universe, although they are at the same time the result of Cosmic Evolution. It is an incorrect understanding of the consciousness of *Dhyani Chohans* that has given rise to the current vulgar notion of God. Little do the dogmatic theists realise that it is within their power to become *Dhyani Chohans* or *Iswara*, or at least they have the latent potentiality in them to rise to that spiritual eminence if they will but work with Nature. They know not themselves, and thus allow themselves to be carried away and buried under a sense of personal isolation, looking upon Nature as something apart from themselves. They thus isolate themselves from the *spirit* of Nature, which is the only eternal Absolute Reality and hurry towards their own disintegration.

The reader will now perceive that *Esoteric Buddhism* is not a system of materialism. It is, as Mr. Sinnett calls it, "transcendental Materialism" which is non-materialism just as the absolute consciousness is non-consciousness and the absolute personality, of which Mr. Massey talks, is non-personality.

Mr. Massey's description of evolution from the idealist stand-point, with which his pamphlet closes, no occultist will disagree with. The book shows such various phases of thought that different portions must evidently have been written at different times. It is undoubtedly a valuable addition to the existing literature on the subject and will be read with extreme interest by the students of "The metaphysical basis of *Esoteric Buddhism*."

DAMODAR K. MAVALANKAR, F. T. S.

#### POSTSCRIPT.

After the above was in type, a copy of the "Reply to the 'Observations' of Mr. T. Subba Row, F. T. S.," by Mrs. Kingsford and Mr. Maitland of the *London Lodge of the Theosophical Society*, came to hand. Most of the questions raised therein having been discussed in the foregoing article, attention must now be confined to three or four important points put forth in the present pamphlet.

It has been authoritatively declared, more than once, in the *Theosophist* that the eighth sphere must not be confounded with the visible moon. The authors of the pamphlet are therefore undoubtedly right in this respect.

Speaking from a subjective stand-point, to talk of locality and time is absurd, since the latter are mere relative terms and as such restricted only to the phenomenal. Abstract space and eternity are indivisible; and therefore to try to fix time and place, as though they were absolute realities, is neither metaphysical nor philosophical. However, objective stand-point is essential, as has been already pointed out. In the economy of Nature, every thing is right in its place, and to ignore a certain plane is just as illogical as to over-estimate it. True knowledge consists in a right sense of discrimination: to be able to perceive what phenomenon performs what function, and how to utilize it for human progress and happiness. Both the objective and subjective stand-points, as much as the inductive and deductive me-

thods, are therefore essential for the attainment of *true* knowledge which is *true* power. In doing so, it is human habit and nature to associate certain phenomena with certain abstract ideas, having of course determined beforehand the exact relation between these two. With these remarks, it may be left to the intuition of the readers to find out the relation between the phases of the moon and the states of being known to occultists as the eighth sphere.

Next we come to the question of the *Dhyān Chohans*. What they are conceived to be has already been stated in the foregoing article. It may however be remarked here that the learned and gifted authors of the pamphlet under consideration seem to mix up both the subjective and the objective stand-points when they say:—

“We confess that the difficulty propounded by us respecting the alleged part taken by the *Dhyān Chohans* in the production of the *Cosmos* is not removed by the statement that ‘as there can be no beginning of Eternity, so there can be no first *Dhyān Chohans*,’—if we are to regard these as human, and not Emanations, but products of Evolution. For, both logically and chronologically, the producer must precede the product, the manifest the manifestation. Unless, indeed, it be that we are called on to believe that prior to, and independently of, manifestation is no-Being; a belief which would involve the doctrine that the manifest exhausts Being; in other words, that the *Cosmos* is God.”

Perhaps the difficulty may be removed when it is remembered that the *Dhyān Chohans* represent the cosmic intelligence and consciousness, and that our conception of chronology is inconsistent with the idea of Eternity, and when the subjective and objective stand-points are realized in their distinct aspects. The *Dhyān Chohans* may be considered as the *Elohim* of the *Kabala*, while the “Seven spirits of God” of the Cabalists are represented in the Oriental teaching by the primary seven Centres of Energy which subsist “indefeasibly in the Divine Nature, as the seven rays of the prism in light.”

We may assure the erudite authors that, according to the Oriental occult teaching, “When a race has reached the Zenith of its physical intellectuality and developed its highest civilization, “its progress towards absolute evil” is arrested by the destruction, as far as possible, “of its false and pernicious system of thought and conduct... by means of such further interior unfoldment of man’s spiritual consciousness as will supplement and correct mere intellect and pure intuition, and thus enable man to realise his higher potentialities.” The formation and the growth of the Theosophical Society is one of the indications of the fact, as has already been pointed out. Moreover, from a proper understanding of the doctrine of Karma and of what has already been said in the *Fragments*, &c., concerning the after-states of suicides and those who die premature deaths, it will be obvious that the influence of the results of the evil actions of *Duggas* is likely to be worse, under certain conditions and circumstances, when they are destroyed than when alive. In the first place, their *elementaries* are likely to affect a number of sensitives who may thus be dragged, unconsciously to themselves, towards evil. Then, the premature death of one evil personality is likely to influence innumerable other evilly inclined personalities by the Law of Affinity, as in life the former has not had full opportunities of working out the effects of its bad Karma. As they are all, more or less, actuated by merely selfish and personal considerations, there can be no complete unity among them, and their “powers” are generally exercised and sometimes exhausted in matters of dissensions among parties and sects. The conditions being such as above indicated, it will be seen that the physical destruction of a race would tend to increase rather the evil effects than otherwise. At the same time, it should not be forgotten that those entities who have as it were reached the grandeur and the eminence of a Prince of Black magicians, ultimately tend to so group themselves as to make it impossible for them to have their influence spread beyond a very limited area. This opportunity may be taken advantage of; and none will deny that it is a certain kind of physical destruction by which they are all focalised together, as it were, in a spot, until a total annihilation results. It is to this destruction that Mr. Subba Row refers in his “Observations.” The phrase “Absolute evil” has been made use of in the same sense as a mathematician sometimes uses the terms “Zero” and “Infinity”—to indicate a theoretical limit.

A few words may now be said in connection with the idea of *Buddha*. When Mr. Subba Row talks of the historical aspect of *Buddha*, he probably refers to *Gautama Buddha*, who was a historical personage. It must, of course, at the same time be remembered that every entity that identifies itself with that ray of the Divine Wisdom which is represented by *Gautama*, is a *Buddha*; and thus it will be evident that there can be but one *Buddha* at a time, the highest type of that particular ray of Adeptship.

As the purpose of this writing has been elucidation of truth by means of discussion—spirit which should animate every true philosophical disquisition—we hope we have succeeded in leaving entirely out of consideration every personal question—which so often mars the force of metaphysical arguments. The chief aim of the Theosophical Society is human enlightenment and

true progress, which can be gained only by impersonal intelligent discussions, thus promoting a Brotherhood formed upon the basis of mutual intellectual sympathy.

D. K. M.

Note.—Mr. Subba Row’s reply to the pamphlets above referred to will shortly appear in a separate pamphlet.—Ed.

## THE COSMOGONY OF THE OLD TESTAMENT.

A Verse of the Bible, examined by the Light  
of the Jewish Caba’a.

BY AN AMERICAN BUDDHIST.

The first chapter of Genesis in the Bible, accepted by the Christians, says:—

i. *In the beginning God created the heaven and the earth.*

These opening lines, as well as the rest of the grand poem, called “The Bible,” have been for centuries either ridiculed by those who were ignorant of the wisdom concealed in the allegorical or symbolical language in which the book is written, or they have been regarded with awe, terror and superstition by those, who, incapable of seeing their true esoteric meaning, have looked upon the exoteric sense, which these words conveyed, as the final dictum of an extra-cosmic deity. In addition to these unfortunate circumstances, there is an inaccuracy of translation from the Hebrew text, which is very much to be regretted, and which becomes apparent already in the beginning of the chapter. If by *Prasit* we understand the active principle of the creation, instead of its beginning, in such a case we will clearly perceive that Moses never meant to say that heaven and earth were the first works of God. He only said that God created heaven and earth through the principle, which is his son.\*

If the Christian translators of the Hebrew Bible had been more conversant with the Hebrew language and with the occult meaning of Hebrew words, they would perhaps have translated it differently, and if the doctrine of evolution and the construction of the sidereal universe had been known to them, they would probably not have left their readers to suppose that the word “creation” meant the formation of something out of nothing, or that their “history of creation” or the first four chapters of “Genesis” was intended to present an allegory of our planet “Earth,” leaving them in ignorance of the fact that it referred to the grand evolution of the universe when, after the night of Brahma was ended, a new activity commenced; when “God awoke from his slumber” and sent out of his divine essence the germs and sparks from which worlds grew into existence.

If we examine the occult meaning of the original text, from which the Bible of our present day has been composed, and call to our assistance the explanations offered by the *Cabala*, we find the following principles represented as laid down in “The voice of Israel.”

1. From nothing can proceed nothing. There is therefore no substance which sprang from nothing, or was created by nothing. Even matter cannot have originated from nothing; no more can it have derived its origin from itself, because it is destitute of shape, and differs only in one grade from nothing, and is almost equal to nothing. Hence it follows, that no matter exists of itself.

2. All that exists is solely of a spiritual nature. This spiritual nature is uncreated, eternally intellectual, sensible and living, automatous, and necessarily self-existent. It is the infinite Godhead, the first-cause of every cause.

3. All existing things must have emanated from that infinite Being. Seeing then they can have emanated from Him only, they must exist in Him only. The World then is the immanent effect of the Godhead, in which He has exhibited his attributes and properties in a variety of degrees and modifications.

4. The nearer the thing emanated is to the infinite fountain-head, the sublimer and holier it is, and the farther it is from the same, the more it is destitute of the divinity and therefore of perfection.

5. In order that that emanation might proceed from the hidden source of the infinite and divine light, and become manifested as the modification of divine powers and attributes, God caused a primitive source to emanate from Himself; from and by which all other emanations came and still come into existence. The primitive source of all things emanated from the Godhead is called *Adam Kadmon*, original man, the first and only-begotten Son of God.

\* See “*Isis Unveiled*,” p. 36.

6. This first-begotten Son of God manifested himself in his emanations in ten special modes, or in ten rays of light, which they call *Sephiroth*. Through these Sephiroth proceeded from the Adam Kadmon, or original man, as the immanent effects of his emanation, the spirits without all matter, the angels as created distinctly existing substances, yet without matter, and those beings that with respect to their existence and power depend upon matter, in short all that is not God.

7. Though all that exists flowed, by means of primitive emanation, from the divinity, yet is the world different from the Godhead as the effect is from the cause; nevertheless, not as separate from, but rather as immanent in the Godhead. The world is thus the *revelation* of the Godhead, not according to innate hidden being, but according to visible glory.

These principles may be reduced to two chief principles, and two fundamental doctrines:

A. Everything that has existence has emanated from the primitive source of the infinite light, spirit and life. The creation of the world is a revelation of the intrinsically incomprehensible Godhead, called by the Cabalists "*the concealed above all concealments*." The creation therefore consisted merely in this, that the primordial Being drew forth out of himself the power of light and life for the gradual impartation to an infinite degree.

B. God is everything, and God is nothing of that which is not God.

1. As proof for the first of these principles, the Cabalists adduce the maxim, that, since no being can come into existence from nothing, it follows that no creation can proceed from nothing.\* That which is must, according to its essence, be from eternity, or else it was not at all. The Being, however, that was from eternity, cannot be mutable and inconstant matter, which, since it unceasingly alters its form, has no durability in itself, and cannot therefore be from eternity; while, on the contrary, that which is eternal must be of the opposite character, *i. e.*, of a nature invariable like itself, existing by itself and unchangeable.

Hence it follows that all that exists, must in an absolute sense be a spiritual essence. This spiritual essence is uncreated, eternal, containing in itself the principle of all existence, intellectual, self-determining, immense, absolutely necessary, originating in itself, and therefore nothing else than the Godhead, who is called *Ensoph* or the infinite Being; because it is the primeval cause of all that exists.

That which exists cannot exist by itself and without God, but in Him and through Him; it can only be regarded as having emanated from, and therefore as a revelation of, the infinite Being.

2. The second principle the Cabalists explain in the following manner. *God is everything*. Not as if He could be divided as to His essence, but He *is all* because there is nothing that does not proceed from Him alone, exist and cohere through Him. For this reason they also call him *makon* (space), because that everything is in him, and *hoo* (he), because He is in all.

When they say that all proceeds from Him, they disclaim the idea leading to the conclusion, that there is any thing material on His part, but that all created beings have their origin in Him according to that which is in them of light, spirit and life. This kind of becoming and being they designate by the expression *nahir*, which has a two-fold signification of shining and outflowing. When they say that all things exist by Him, it is with reference to this that all things were brought into existence by the uninterrupted ray proceeding from God, which pervades all space and is called *God*. In a similar sense they understand the expression, *all things cohere through God*, *viz.*, that all things are animated, sustained and united by means of the spirit of God. In this sense are all beings God himself, which they designate by the expression *hoo* (the being).

In the same way they most emphatically maintain that God is nothing of all that which is not God; *i. e.*, which belongs to the world. For they say, the world is but the veil of the most hidden or incomprehensible Being, through which penetrates the impression of the highest power and wisdom of God, especially his most exalted attributes. But

\* When it is said that God created the world from nothing, it is not to be read *méayin*, but *meensoph*, *i. e.*, from the infinite Being.

God himself is not the unity in nature; but the absolute unity above nature, and is therefore not subject to number, measure or any other estimation, but *is to man an abstract idea of spiritual contemplation*.

From the above definitions it appears that the words "*In the beginning God created*" mean something very different, from what those, unacquainted with the esoteric philosophies, commonly suppose them to imply. As to the words "*the heaven and the earth*," it does not require a great stretch of the imagination, and will become clear by a further study of the Cabala that they refer to the material and spiritual universe. If we therefore attempt to render the first verse of the first chapter in Genesis in a language more appropriate to the intelligence of our century and more in accordance with the esoteric truth, which that sentence contains, we might perhaps say:

*The one, unthinkable, self-existent, eternal, unchangeable and infinite supreme cause, the inexhaustible source of all life, power and intelligence, which in itself is space, duration and motion, produces out of itself and by the activity of its own inherent will, the principle out of which the spiritual and material universe is evolved.*

This first emanation of the Supreme, the first ray of Light, both male and female, the *Adam Kadmon* of the Chaldeans, the *One Life* or *Vach* of the Hindus, the *Logos* of the Greeks, the *Word* or *Christ* of the Christians, and *Seventh Principle* of the Occultists, is the beginning, by which all things come into existence; it is the embodiment of the *law of evolution*, the cause and energy manifested in the visible and invisible universe. It is called by the Cabalist *primordial man*, the *first and only begotten son of God*; *Sephira* or *Divine Intelligence*, the mother of all the *Sephiraths*, while the *concealed Wisdom* is the father.

This first ray manifested itself in ten rays of light, and with these the Cabalists connect the ten names of God, ten orders of angels, the three heavens and the seven planets, the ten patriarchs, etc. *En-Soph* is non-existent, for it is incomprehensible to our finite intellects and therefore cannot exist to our minds. When the time for an active period had come, then was produced a natural expansion of the Divine essence, and from this eternal light was emitted a spiritual substance. This was the first *Sephira*, containing in herself the other nine *Sephiraths* or intelligences. In their totality and unity they represent the archetypal man, who in his individuality or unity is yet dual or bisexual, for he is the prototype of all humanity.

The ten *Sephiraths* are divided into three classes, each of them presenting to us the Divinity under a different aspect, the whole still remaining an indivisible Trinity. The names of the ten *Sephiraths* are:

1. *Kaithar*, Crown; 2. *Chochmah*, Wisdom; 3. *Beenah*, Understanding; 4. *Chaised*, Grace; 5. *Geburah*, Strength; 6. *Tiphareth*, Ornament; 7. *Naitsach*, Victory; 8. *Hod*, Majesty; 9. *Yessod*, Foundation; 10. *Malchut*, Kingdom.

These ten *Sephiraths* form at the same time four worlds in various gradations. They influence those worlds from the upper to the lower, but in a diminishing degree, and are conceived as so many degrees of spirit, light and life, descending in a gradually coarser state or corporification. These worlds are:—

1. *The Azilah*, or *emanated world*, as the next to the Divinity, contains the ten *Sephiraths* in their greatest potency, and is therefore directly adjacent to the incomprehensible Being of the Godhead, and immediately emanated from him. It is the highest and most perfect manifestation of God, without defect, alteration and change, but ever remaining the same. It is the noblest, and the beings contained therein are the immediate emanations from Adam Kadmon, or the *Logos* and therefore of the same nature with him.

2. *The Beriah*, or *created world*, is the next emanation from the *Azilah* world. Though this contains likewise the ten *Sephiraths*, they are not of so great a potency as those of the other, and this is therefore lower and more confined than the other. The substances which it contains are, however, yet without matter, of a pure spiritual kind. As they have the *Azilah* world as their source, so they are in their turn a source to the inferior worlds.

3. *The Tezirah*, or *fashioned world*, is the next emanation from the *Beriah* world. Its substances, though already subject to individuality, do not yet consist of matter. This is

then the world of angels, *i. e.*, the intelligent and yet incorporeal beings, who are enveloped in a lucid covering, who, when they appear to man, adopt a still coarser matter.

4. *The Assiah, or formed world*, consists of the grosser parts of the three upper worlds, which on account of their materiality and weight, are sunk down to this lower world. Its substances consist of matter confined to space, which are perceptible to the grossest senses under various shapes and are subject to an unceasing change and a continual mutableness of existence and decay; of decrease and increase and gradual transformation. They therefore call this world a world of seemingness and illusion. For in it there is nothing simple and indivisible, but mere composition, which at every moment changes form, internally and externally.

To those who cannot elevate their minds above the world of forms, who constantly move on a low material plane, who reject intuition, spirituality and inspiration as idle dreams, and cannot conceive of the nature of an idea, and who therefore feel it their duty to reject and ridicule the ancient symbolical writings, which include "the Bible" as nonsense, fancy and superstition, the above explanation may at least serve to show what the subject *is*, which they ridicule and reject; while to the Christian fanatics, who profess to believe in the letter of their "Bible," it may prove that, if they would examine those letters by the light thrown upon them by the "Bibles" of other nations, and learn to distinguish between the esoteric and exoteric sense, their conceptions of their own professed religion would become more grand and sublime in proportion as their knowledge extended. They would at once see the harmony and conformity existing between the fundamentals of their own religions and those of other nations; their spiritual aspirations would grow; they would come out from their state of isolation and realise the grand doctrine of the *Fatherhood of God and the Brotherhood of Universal Humanity*.

#### "MAGNETIC" QUACKERY.

An erroneous opinion seems to prevail to a certain extent amongst the public that, by joining the Theosophical Society, one must necessarily become endowed with wonderful powers. Many think that, after the "mystic rites" of the first initiation have been performed, they are to constitute so many "Messiahs" to be sent into the world to perform miracles and to cure the sick, and they look perhaps with contempt and pity upon the multitude of M. D.'s, who, at a great expense of labour and money and after much trouble, study and vexation of mind, have obtained their sheepskin and title, but only an inferior knowledge; while they, —happy mortals!—at the expense of only ten Rupees, have been suddenly transformed from the condition of ignoramuses into that of paragons of medical wisdom. The sovereign right of a regular M. D. to kill or cure has, as they think, been conferred upon them without putting them to the irksome and tedious labour of developing their intellectual powers sufficiently to deserve that right, and they are going to exercise it, let the consequences be what they may.

The number of such would-be saviours of mankind is very large, and we are continually in receipt of letters, asking for our assistance to spread the practice of "medical magnetism" all over the country; but we shall not only do nothing of the kind, but we shall use our endeavours to discountenance entirely the indiscriminate attempt to use such powers and to denounce quackery in all its departments.

Not many would be so rash as to desire to be put into the office of first engineer on a steamboat, without knowing anything about the powers of steam or the mechanical construction of the engine. Any man in such a position would be afraid that an explosion might follow and that his own valuable head might be blown off. But the medical quack runs no such risk for his head. He thinks that if he fails or makes a mistake, it is the patient who suffers, not *he*. He probably does not consider the doctrine of Karma of sufficient importance to remember that each cause will have its effect that

the curse of his ignorance comes home to roost, and that *he* will be the chief sufferer in the end. "The Karma of evil, be it great or small, is as certainly operative at the appointed time as the Karma of good," and if an uneducated mesmerizer injures his victim by a misapplication of his magnetism, or by the impurity of the same, it will be useless for him to excuse himself by saying that he has done evil by intending to do good; because he ought to have known that he was wrong to bring forces into play, the natures of which he did not understand. Man is a more complicated mechanism than a steam engine, and in man the many and more active forces involved in the process of life are far less simple to handle than steam. We have been answered that the "regular profession" generally does not know more than the most common tyro about the laws of what is called "animal magnetism" and therefore it would be useless to turn such patients as wish to be treated by "mesmerism" over to them, and such is the truth. We do not desire to shield prejudice or defend ignorance, whether it is openly practised or whether it hides itself behind the seal of a medical diploma; but we would, warn professional as well as unprofessional ignoramuses, not to meddle with such things, before they have thoroughly studied the subject.

Let therefore those who "feel called" to practise mesmerism, whether they are M. D.'s or ordinary mortals, first study the constitution of man *in its different aspects*, the real nature and causes of the diseases, which they propose to treat, and the quality of the forces they wish to employ. Let them live such lives as will develop only a healthy and pure magnetism. Let them be of good health, use the proper food and occult training, and above all lead truly moral lives. In short let them be true Theosophists, and the powers which they seek will descend upon them without being "transferred" by the editor or any one else. Their very presence will then act as a charm against disease, they will carry blessings in every house, and their patients will get well without having to submit to a course of ridiculous "passes, blowings and snappings of fingers." Diseases and doctors' bills will decrease where such men go, and the blessings of mankind will follow them in their path.

But those who, ignorant of the laws of life and health and perhaps only for the purpose of gratifying their own vanity, or as a sort of amusement, or for gain, attempt indiscriminately to infuse an undesirable or perhaps injurious magnetism into their fellow-beings, are entirely in the wrong, and to convince them of this fact is the object of the writer. A man cannot become an Adept by staring at the end of his nose or by standing on one leg for an hour every day; to become such he must first develop his intellectual faculties to their fullest extent. He cannot become a healer by making faces or passes at patients according to the rules laid down in books on Mesmerism, which teach how the "passes" are to be made. To become a real healer, he must first put himself into the possession of a healthy magnetism and then know how to intelligently apply the same. To do the first he must continually lead a life not only of physical but also of mental purity; for evil desires poison the magnetic emanations, impure thoughts pollute them and selfish motives impart deleterious qualities to the same. A wrongly directed or vacillating will gives a wrong direction to their action, and an ignorant mesmeriser may do a great deal of harm. To become a successful magnetic healer, one must be possessed of a *Knowledge* of the laws of nature, especially such as relate to the cause of human suffering, of sufficient *Wisdom* to apply the forces with which he deals properly and of an entirely unselfish *Love* for humanity. We can therefore encourage only those in the practice of medical magnetism, who are properly *qualified*; and we can only consider those qualified, who, by a long continued course of

study, have obtained a true insight into the nature of disease, and by observation and practice developed sufficient intuition to intelligently apply the same.

AN AMERICAN BUDDHIST.

### THE PHOTOGRAPHIC PICTURE OF A MURDERER IN THE EYE OF THE VICTIM.

THE "Democratic Press" brings an account of an experiment made by Dr. Pollock, an American physician, which shows that the last impressions, which the eye of the dying receives, may be permanently impressed on the same, and become plainly visible to all by the application of a microscope.

A man by the name of Beardsley, residing in Auburn, was found murdered, and the coroner's jury gave a verdict that the instrument of murder, with which the victim's skull was fractured, had been a heavy blood-stained rock, which was found close by the body. The following is a part of the report:—

"At the *post-mortem* examination the eye was inserted into a solution of Atropia, which produced a considerable dilation of the pupil. We then applied a powerful magnifying lens, and by its aid we plainly perceived the form of a man in a light coat, his attitude was that of bending forward with outstretched arms, and near him, as if floating in the air, was the image of a rock. Unfortunately the eye was somewhat damaged by our manipulations, which evidently produced a partial displacement of the retina; and although the form of the figure was plainly visible to all, still the face of the murderer was too much out of shape, to lead to his recognition."

An experiment of the same kind without removing the eye from its orbit might lead to better results.

(*Psychische Studien.*)

### THOUGHTS ON MIND READING.

By DR. L. SALZER, F. T. S.

WHATEVER psychologists of the materialistic school may have to say about the phenomena occurring under the influence of mesmerism, or at spiritualistic *seances*, there is one psychic phenomenon which has gained undisputed recognition, and this is the faculty of some men to read, under conditions not yet scientifically defined, the thoughts of others. Of course men of the world are still to be found by the thousands who ridicule the idea of one man ever being capable of reading the thoughts of another man. But then men of the world are, as a rule, not particularly gifted with a scientific turn of mind. Dr. Carpenter in his "Mental Physiology," after having destroyed in his own way all mesmeric and spiritualistic phenomena, denying one half of the respective facts, and explaining away the other half in a manner satisfactory to himself, willingly admits, without any attempt towards explanation, the fact of thought-reading as stated above.

At first sight, it would appear that it is hardly necessary to state what is meant by thought or mind reading; the word, as it stands, one should say, is intelligible enough, without further explanation. When, at a given moment, A. knows what B. thinks, then A. has performed the act of thought-reading with respect to B. Not always, however, is the mental operation involved in thought-reading so plain and simple. As far as I am aware, both from my own experience and from experiments made upon others, A. may not actually know what B. thinks, and yet he may answer B.'s mental question in such a fitting manner as if he knew all about B.'s thoughts. A few examples will illustrate best this particular mode of thought-reading.

Some years ago while entering a house, I found two ladies busy in working the *planchette*, which was at that time "the rage" in Calcutta. The mode in which they

went to work was as follows. They asked some questions aloud, as if directed to the *planchette*; then they laid their hands on the moveable writing instrument; the *planchette* moved upon a sheet of paper, and in moving traced some sentences, which were supposed to have been inspired by some invisible spirits. I tried hard to explain to the ladies that the writing is by no means of a "spirit" origin; that it is their own thought, conscious or unconscious, that comes out in those sentences by some sort of automatic motion—it was of no use. They asked the *planchette* if I was right, and the *planchette* answered: Spirits. All right, I said, if we have to do with spirits, they will know just as well to answer a question addressed to them in silence. I then went into an adjoining room, shut the door behind me, and, taking out of my pocket a piece of paper and a pencil, wrote down the following question: What will become of the *planchette* after ten years? I then folded the paper, returned to the other room, laid the folded paper under the sheet of paper spread out for the *planchette*, and requested the ladies to answer the question written on the folded paper. They soon began to operate, and to my surprise *planchette* answered quite sensibly: Break up. What is the meaning of that? I asked. We do not know, they said, but this is *planchette's* answer. What was your question?

At a second similar experiment, my question was: Would the *planchette* give again a suitable answer? It would, was the reply, without either of the operating ladies knowing what would.

I shall give only one example more from my own experience, as the faculty of thought-reading has been lately developing itself in me. The question put down on paper by a member of the Bengal Branch of the Theosophical Society, while my back was turned towards him, was as follows. Shall I ever succeed in becoming a chela? "Try," was my answer, without knowing anything about the nature of his question, and, it goes without saying, without having the slightest conception what he was to try. Strange to say, the word (Try) was pronounced with such an emphasis, that the poor man said it will ring in his ears as long as he lives. Yet I became only aware of the meaning, and I may as well say of the significance of the word, after I had unfolded the paper and had read its contents.

Now all this is certainly not thought-reading in the common sense of the word. A. has, in none of these cases, guessed the thoughts of B.; what he appears to have guessed is the substratum of B.'s thoughts, one of the possible answers that lay dormant in the mind of B. while framing his question; in other words dived, so to say, into the depths of B.'s unconscious cerebration, while, what was uppermost in B.'s mind (the question) remained all along hidden to him. It must be confessed this is rather an awkward way of doing things; especially so, when it is remembered that to unravel half-developed thoughts is by far more difficult, than to grasp thoughts ready-made. A thought-reader of this class, so it would appear to my untutored mind, must necessarily waste a good deal more of energy than the plain and simple thought-reader, while the work done by him must be pronounced by far inferior to that performed by his rival in the art of thought-reading. And yet, when I come to examine myself closely, I find that no perceptible effort is made on my part in the attempt at fittingly answering an unknown question: I simply make a blank of my mind, and a word bubbles up—I pronounce it—and the thing is done. So it was with regard to the word "Try," and so was it with regard to many similar words and answers occasionally given.

Whatever may be the *modus operandi* of this class of thought-reading, it appears desirable that the two

classes of thought-reading should be distinguished by different names. Should I have been the first, who drew attention on the subject, then I would propose, the one should go by the name of direct, and the other by the name of indirect thought-reading.

### PRINCE BISMARCK'S MYSTERIOUS VISITOR.

*La France* in an article headed "Chronique Allemande" says about Prince Bismark: "There is no doubt that he works hard, while undergoing treatment at Kissingen; but it is not religious politics that takes up his time. Although not a single caller is admitted, still a very mysterious visitor comes to him every day. This visitor is a tall, dried-up, old man with grim face and clothed in the fashion of the country people of Bavaria, namely wearing, as they all do, silver pieces in place of coat buttons. Certain knowing gossips say that this peasant comes from Pasing, near Munich, that his name is Huber, and that he is nothing more or less than a magician or wizard."

This account, coming as it does from a French source, admittedly unfriendly to Prince Bismark, would appear, at first sight, to have for its object to throw a slur on the Chancellor, and charge him with superstition and credulity. But if we turn to the German Journal *Psychische Studien* published at Leipzig, we find another article headed "Gambetta and Bismark in their relation to Psychism." It shows that several years before Gambetta's death he was dining at the house of a friend, when after dinner the lady of the house proposed a bit of fortune-telling by cards, an amusement that was smilingly accepted. When it was Gambetta's turn to have his fortune told, the lady became suddenly serious. "Do you know," she said, "that you are threatened by a great danger which comes to you through a woman?" "You are perhaps right," replied Gambetta, "my mother was already told before my birth, that she would have a son who would occupy a high position in France, but who would be killed by the hand of a woman."

According to the same journal Prince Bismark is a sensitive. Ideas come to him and keep him awake, when he would prefer to sleep. Who knows but Professor William Carpenter may yet show that the victories in France were but a result of Bismark's unconscious cerebration. Hesekiel tells a ghost story which occurred in Bismark's castle in Schoenhausen; the Chancellor himself saw the ghost and never denied it. He also expressed on a certain occasion his belief in mystic numbers and lucky and unlucky days, and when on the 14th of October 1870 General Bayer opened negotiations with him in regard to the surrender of Bazaine, Bismark put off the transaction of that serious business, privately giving the reason for it that it was an unlucky day.

Shall we draw the conclusion that these great men are ignorant and superstitious, or that they, perhaps, have higher developed intuitions than the ordinary rabble?

### THE SOUL.

ESSAY III (BY ELIPHAS LEVI).

The Soul is eternal; and immortality means Eternity. Nothing can ascend to heaven that has not descended from heaven. Void not existing, can produce nothing. An Eternity that begins is a double absurdity, for it would presuppose an Eternity that has an end. Beginning and end are two words that exclude every idea of Eternity.

God is creating soul eternally.\* In this soul we were, into it we will return, but transfigured and strengthened by our trials. The conscience of the eternity is the intelligence of the sacrifice, for it is through sacrifice alone that man can commune with God.†

He who saves his soul will lose it; and he who loses it will save it, said the Sovereign Master. That is to say, that he who sacrifices God to his personality will lose his personality, and he who sacrifices his personality to God will find it eternal in God. God is everywhere, in the soul and with the soul, and the soul is everywhere with, and in, the form that it modifies. Soul is one and multiple. Metal, stone, vegetable and animal participate in the universal Soul. Soul is the first creation of the verb; the verb is in her and yet ceases not for all that to be in God. *Tu ipso vita erat et vita erat lux hominum.*‡

Yes; true life is intellectual light, human light; and this light is the soul. The soul is the radiant star that never hides. It is the soul that God questions and who is answered by it that his works are perfectly beautiful. It is in the soul that God sees the light of the world, and it is again in the soul that we perceive the light of God.

Spirit is one as substance is one. Special and personified souls are lighted at one common fire, which, like the sun, scatters its rays through analysis and gathers them in again by synthesis. It is the same fire that lights the torches of the festivals, and the flames of a conflagration. Collective soul is sinless, because it is impersonal. It is the burning bush that God transforms into a brilliant and eternal luminary; the soul has to become personified and to incarnate itself before it can reach self-consciousness; it limits (conditions?) itself in order to spread, and has to die if it will live.

Soul is the directing and conservative principle of life; and God the creative and conservative principle of soul. Soul is his breath, his *Ruach*; our breath comes from ourselves, but it does not belong to our substance; nor is *Ruach* co-substantial (coeval?) with God. Universal soul does not animate only the embryo in his mother's bosom; but also the myriads of zoosperms hidden in the prolific male substance. It is the universal soul that shapes the forms, but it does not create them, neither does it perceive them with any consciousness of their beauty. It acts like those weavers of the fine gobelin carpets, who copy servilely the pictures placed behind them and never look at them, doing their work with a mechanical but blind precision. Universal soul can be compared to the *suppositum* or the *substratum* of the divine verb. When God says, "Let there be light," he commands the eyes to open, the intellect to be born, and desires the night to make room for splendour.

Nature is but a collection of laws; that which renders them living and efficacious is the soul. This intelligence that manifests itself everywhere where there is life, not

\* This assertion is only true in the sense that that Parabrahmam or Adi-Buddha is eternally manifesting itself as Jivatma (7th principle) or Avalokiteswara.—T. S.

† "God is creating soul eternally" and "soul eternal" nevertheless! Can sense and logic be more sacrificed than to the fallacy of certain meaningless but hallowed words such as "creation?" Had E. L. said that "God is evolving soul eternally," that would have sense; for here "God" stands for the Eternal Principle, Parabrahm, one of whose aspects is "Mulaprakriti" or the eternal root, the spiritual and physical germ of all—the soul and the body of the universe both eternal their ultimate constitution—which is one.—Ed.

‡ Surely, the "sacrifice" of our reason—if a personal God is meant.—Ed.

† What round-about and prolific sentences to say that which can be expressed in a few words: God is nature, visible and invisible, and nature or Cosmos in its infinity is God! And yet E. L. was undoubtedly a great occultist.—Ed.

as an accident, but as a cause—it is the soul. \* God does not act directly on the bodies, otherwise, all would be perfect in its form, and the repairing motion would cease to be necessary: hierarchy is everywhere, and the order is never interrupted.

Universal soul has itself for support or for *substratum* the primordial corporeal substance which is the vibrating and vibrated fluid that we call *od*, *ob* and *aour*. † There is within the astral light an animistic principle, which is, in a way, latent and impersonal, which is neither god nor the devil, but which is—soul, the fatal *anima*, called to become free *animus*. But this is something so occult, that I have not dared to mention it in my printed works.

How can we conceive an impersonal and, at the same time, intelligent nature? By giving it *multipersonality*. For, if it is not personified in its universality, it is, at least, specialized in all living personalities. It is through this that one is enabled to read in the thought of another person; through this again, that seers can find in that one common source every remembrance and every thought that was, is, and will be. But this is once more a profound arcanum that must remain unknown to the vulgar; an arcanum profaned, at present, by these miserable spiritists, who play with fire over an immense powdermine, that will one day bring them back to reason.

The mystery of the intercommunication of the universal, with the individual, soul, is the great arcanum of Magic.

Universal soul is the great mystery of salvation. God will save neither a portion, nor the half, of the great soul: he will save the whole of it.

When a body loses a leg a wooden leg is made for it, and still it suffers pain in its foot, that is amputated and gone.

But wooden legs cannot be made for souls; and the soul that suffers from the limbs it has lost, regenerates them by accepting the necessary suffering.

It is called sacrifice. Meditate and try to understand. KEEP THESE THINGS SECRET, FOR YOURSELF.

For, if the profane come to know and study the occult soul, he would mistake it forthwith for God, and that would be the real creation of Satan. It is *divina in origine*, but *non divina in natura*, and this has to be well understood.

The occult soul is one, as God is one, universal as himself, but through him. It is this soul that the Bible calls absolute MAN, this name including also the spirit of angels and the soul of the stars. This soul is "universal man" or the great Adam, the Adam Kadmon of the Kabalists. It is he who is the Macroprosopus of the "Sohar," it is in him that we live, and move and have our being, as he lives and moves and has his being in God, ‡ whose black *mirage he is*. Thus, the angels and the sun, it is we ourselves; *their* soul is *our* soul. Thus we have always lived in this soul one and universal, whose most distant recollections we can always evoke. It is in those recollections that we recognize those who have lived ages back, and that, by comparing, we can tell

\* We have been just told that soul only servilely copies "like the goblin weavers" the ready models it finds, and that it is not conscious of the beauty of the forms it is shaping. What and wherefore the "intelligence" then?—God being intelligence itself, and the soul his agent likewise intelligent. Whence the imperfection, the evil, the failures of nature? Who is responsible for all this? Or shall we be answered by Christian occultists as we have hitherto been by their orthodox brethren: "the ways of Providence are mysterious and it is a sin to question them?"—Ed.

† It is in fact the Mahamaya of the Hindu occultists.—T. S.

‡ And we the manifested prakriti (not differentiated)—Ed.

§ Which amounts to saying that it is not in the personal Jehova, the God of the Bible, that "we live and move and have our being," but in Adam, the spirit of Adam—or HUMANITY in its universal and cosmical sense. This is in perfect accord with the occult doctrine; but what will the Theists and Christians say to this?—Ed.

This universal soul is in fact the manifested Brahman of the Hindu philosophers and Avalokiteçwara of the Buddhist occultists.—T. S.

whether a portrait of Socrates, of Jesus, or of Luther, is a good likeness or not.

This soul preserves all the echoes, every word ever pronounced. Hence the Master's words, that the secrets told in the ear shall be revealed on the house-tops. The whisper of the sage will become one day the voice of peoples like the roar of great waters.

What I now write was read by Simeon-ben-Jochai and Isaac de Loria in the imprints of the secret verb of Joseph, Moses and Solomon. Centuries more will have to pass before the mustard seed grows into a large tree. But what a transformation on earth when HUMAN UNITY (or the unity of man?) will have become a dogma and when all will have learned to know that—

"ALL OTHERS ARE STILL I."

ELIPHAS LEVI,

*Superquo par.*

### "SOME UNCOMMON THOUGHTS ON IMMORTALITY."

MR. LAURENCE GRONLUND has kindly favoured us with a copy of the "*Index*" containing his able article on the above subject. The attempt to show in a concise manner that the doctrine of immortality is scientific and logical, is not quite without success. The argument that "the well accredited instances of the often astonishing influence of the mind over the body, and the still more wonderful control of one mind over the bodily and mental states of another, tend to prove that mind is more than a 'function' or an 'effect'"—may not in itself be sufficient for establishing the possibility of immortality. But when it is urged that "by the study of cataleptic patients, it has been demonstrated that the soul has extraordinary capacities, *independent of the orderly agency* of the bodily organs, and that its perceptions in that condition are as much realities as those of its ordinary state"—the argument assumes additional strength and vigour. It is the phenomena of clairvoyance and trance—natural in some and inducible in others by powerful mesmerisers—that are the stumbling blocks of the materialist. These, at any rate, give ample evidence of the existence of something in man, which acts independently of his body. Further investigations demonstrate the fact of the survival of that something after what is called "death," *i. e.*, physical decease. Col. Olcott has always based his scientific lectures upon these facts. Once that the exhibition of consciousness when the body is in a state of mesmeric sleep, and the survival of that consciousness after the death of the body are admitted as facts, we have to turn away from modern science for further facts, as the latter has not yet quite made up its mind to accept them, much less could it give a scientific theory concerning the after-states of man. Where the modern "exact" science thus halts, the ancient philosophy of the Aryans begins. The latter had investigated all these phenomena, or most of them, and based a perfectly scientific system thereon. It is therefore absurd to say that the Aryan science is in antagonism to the modern, when the fact is that the former leads the student from the point where the latter brings him to a stand-still, into the domain of noumena, whence proceed the phenomena of the visible world. The author of the article under notice successfully shows how the pre-existence of the soul must be admitted, once that its survival is acknowledged. Darwin's theory of evolution postulates that there is a continuous progress in evolution and that the higher forms are evolved out of the lower. The present man has thus reached his present condition of development in the process of gradual evolution from his ancestor, the ape. The teaching of the Aryan Science, on the other hand, shows that while Darwin is right so far as he goes, he begins and ends in the middle of the chain and deals only with physical

evolution. The modern evolutionist says that although the material out of which man is evolved may evolve other men and forms, still these men have nothing to do with the previous man, as the consciousness which is a function of organism dies with the death of the body. When however the phenomena of clairvoyance prove these two assumptions to be wrong, the Aryan theory which is based upon a knowledge of those phenomena, cannot but lead to truth, since it is based on logic and mathematics, which cannot err. Mr. Groulund is probably not aware of the Aryan teachings on the subject, although his conclusions, based upon the theories of Western Philosophers like Hume, Knight, &c., are in some respects identical with those of the ancients. We do not entirely agree with all that he says concerning the after-states of man, but to enter into that subject would necessitate the recapitulation of the whole occult doctrine, hitherto given out, which our readers are quite familiar with. It is however a pleasure to note that Western thinkers are day by day vindicating the truth of the science and the philosophy of our forefathers.

B. S.

### MODERN SPIRITUALISM AND THE JAPANESE MAGIC MIRROR.

(Translated from the *Psychische Studien*.)

MODERN Spiritualists as well as their sceptical opponents may perhaps draw useful conclusions in regard to the superficiality of their own observations and investigations of phenomena.

At the time when European civilisation first invaded Japan, mirrors were unknown among the common people. Many of them had never seen a looking glass. They had heard of such things, but believed them to be divine objects, by which one could read the most secret thoughts, and which it was not lawful to possess.

One day a poor coolie, a "Djin-rik-shi" man, whose occupation was to pull a hand-car, found a small pocket-mirror in the street, which had probably been dropped by some English lady. It was set in a pretty silver plated frame and engraved with some very mysterious characters, such as are found in the English alphabet.

He picked it up, and as he looked at it, the tears came in his eyes and the glow of a holy emotion spread over his face. "Is it possible?" he said, "here I behold the face of my dear departed father, living and moving just as I knew him when he lived. Oh what a miracle, that I, a poor sinner, should be blessed with such a holy vision!" Carefully he hid the mirror under his clothes and took good care not to show it to any one, not even to his wife.

But such a precious article could not be constantly carried about his person without the risk of losing it; and after mature deliberation he concluded to hide it in a safe place.

Placing it, therefore, in an earthen vessel, he covered it with his garments and hid it away in his room. But his thoughts were continually wandering to his hidden treasure. Ten times a day he would return to his locked chamber to behold the sacred face of his father. He thereby neglected his business to a considerable extent.

This strange behaviour excited his wife's suspicions; because the Japanese ladies are not less inquisitive than their European sisters in regard to the doings of their husbands. But no amount of coaxing and caressing would bring her the desired explanation. He had all kinds of excuses. Sometimes it was a headache, which caused his frequent return; another time it was a pretended "desire to see his wife," and so on. But she was not to be put off in this way. She made up her mind to search the rooms; and, if necessary, to turn the whole house upside down. So during his absence she went for the earthen pot—and found the mirror.

"Good Heavens," she whispered as she held it in her hand. "A woman." "Ah! now I understand," she cried, as a deadly palor spread over her face, "he loves me no more. He is in love with *this one*. Oh! how wretched I am," and she began to weep very pitifully.

Just then her husband came home in hot haste, to behold once more his dear departed father. He found his wife in tears; but at the sight of him, her jealous sorrow kindled into rage. "Oh!—you miserable wretch," she cried, "I have found you out at last; you are running after another woman and desert your lawful wife! And what a woman! If you think her pretty, I must say I am very sorry for your taste. You ought to be ashamed of yourself!"

The poor man thought he was dreaming. He rubbed his eyes to see whether he was awake, and said with as much tenderness as his confusion would permit: "What are you talking about, my love? I to desert you? I love no one but you." "How," exclaimed the woman, "dare you utter such a lie?" and saying this, she held the mirror before his eyes. "Oh!" he said, "and is it this that makes you so angry? Indeed, it was wrong of me not to show you this enchanted metal before. You see I found it in the street, and every time I look at it, I see the face of my departed father before me."

"And a nice kind of a dead father you have?" she retorted. "Do you really think that I am blind and cannot distinguish the face of a man from that of some old strumpet?"

Now came the husband's turn to get excited and to lose his patience. "How dare you," he cried, "call my blessed father an old strumpet." And as the mirror passed from hand to hand, a war of words commenced. "It is my father," said he. "It is a tea girl," said she. Then she recommenced to weep, and to sob—"Oh! my dear Kiki," (such was his name) she cried, "you, who have ever been so kind and good." But again, her anger reasserting itself, she shouted—"You are a... You are just as bad as all men are, and worse. If *she* were at least beautiful... but I never saw an uglier monster. Fie upon her, what a shame," and the weeping recommenced once more. "My poor Kiku," said he, "I am sorry to see that you have lost your reason." "Hold your tongue, you wretch," she cried. "You deserve that I should kick her out of the house, and you with her." "I am holding my tongue," said he. "Yes," said she, "because you cannot deny that you are in love with this... I will not call her by her proper name." "No," said he, "come my dear Kiku, and be reasonable. Just look at it. Don't you see that this is my father? Don't talk any more so foolishly."

But his persuasions were in vain; the quarrel became more and more animated, and they were about to proceed from words to blows and scratches, when, just then, an old, grey-bearded priest happened to pass by. Attracted by the noise, he came to inquire what was the reason of all this fuss. "My children," he said, "you seem to quarrel? This is not the way in which you should employ your time." "Oh holy Bonze," explained the woman, "Kiki has a sweetheart. He, who is hardly able to support one wife decently! He neglects his work, earns no money, and we shall soon starve; and all this on account of his *woman*." "Do not listen to her, Oh saintly Bonze," said the man "she lies and is crazy." "All women are more or less given to prevarication," said the priest, "whose voice was trembling from age." "I found this in the street," said Kiki, giving his magic mirror to the priest, "and every time I look at it I behold my deceased father, just as he looked when I was still a boy and sitting on his knee." "And I," said Kiku, "I see in it the face of a tea girl, just look at it, and see how foolishly he talks. A child would be astonished at his stupidity and laugh to his face. I think that girl has made him drunk."

"Let me see," said the priest, and he examined the mirror. But as he did so an expression of astonishment

spread over his face. He passed his hand over his eyes, like one who does not believe in his senses; then looked again, and after a long pause, he said:—"My children, you have both been the victims of a great mistake, and it is very probable that some spirit, or a demon of hell has thrown a spell over you, and blinded your eyes, so that each of you should see differently. This sacred metal shows neither your deceased father, nor the face of a girl; it represents the holy face of a blessed priest, with a white beard; an old and venerable looking man! Do not quarrel any longer, but live in peace. This sacred metal I shall take with me, for it is not proper that such a thing should be in the possession of common people—such things can only belong to the church!"

So saying he hid the mirror in his belt, gave his blessing to the reconciled couple, and majestically walked away.

MORAL.—It is a parable of the "seance room." Every Spiritualist sees in the same "materialized form" the reflection of his own image, distorted in the mould of his expectation and fancy—the wish being the father to the thought.—Ed.

### A SPIRIT VISIT.

TO HIS HOLINESS THE METROPOLITAN PLATON.

THE "*Diocesan Vyedamosty*" of Mohilev (Russia) quotes an interesting experience in the life of the Venerable Platon, one of the three Metropolitans of the Russian Empire—as narrated last year by himself, during his visit to the town of Tuer, his birth-place. While holding a conference at the Monastery of Jeltikof in the cell of the Father Superior, he related to the assembled guests some episodes of his long life. Among other events, he described what the spiritualists would call a "Spirit visit,"—he had received years before. We translate *verbatim*.

"...Yes; I had such an experience in my life; I saw once before the shadow of a dead man, and in as vivid and natural a form as any one of your own I see now before me. It was in the year 1830, when I was Inspector at the Theological Academy of St. Petersburg. Among other students there was one, named Ivan Kriloff, that I had known in the Seminary of Orloff. I see his face before me as vividly as ever, whenever I think of him. He progressed well, was a fine looking young man of good behaviour and a promising student. Once he came to ask my permission to enter for a few days the hospital, as he felt unwell. So thinking that, perchance, the poor boy had made himself ill through too much austerities and that he might recuperate in the hospital diet of chicken and white bread and, at the same time, not lose time in writing his examination essay, I consented. After he had become a patient for a long time, I heard nothing of, nor from, him, nor had I been notified of any danger to him by the doctor. Once I was lying in my room on a sofa, reading a book, with a table placed behind me. Suddenly I left off reading and turned to the other side, thus facing the table, when, to my surprise, I saw Kriloff standing at the other end of it, and looking earnestly in my face. Thinking, as he had not been announced, I might have been dreaming, I rubbed my eyes, and arose from the sofa, ..... yes, ..... it was Kriloff, motionless, and still gazing fixedly at me. .... His head and face as clear and as distinct as yours, but his body hazy, as though veiled in a mist or a cloud. Once more I looked at him. It is he. He! ..... but what's the matter with him? I felt a shuddering when the phantom finally moving, glided noiselessly from the table to the window, where it finally disappeared. I was still trying to unriddle the meaning of this, still uncertain whether I had not dreamt the whole scene when some one knocked at my door. I donned my clericals and called out to the visitor to come in. It was the Hospital Warden who had come to notify me that one of the students had just delivered his soul to God.

"Who is it?" I asked.

"Ivan Kriloff," he answered.

"When did he die?" I exclaimed, completely taken aback.

"About five minutes ago or so. I lost no time in coming down to report to your Reverence," said he.

"And now," added the holy Archipaster, addressing the monks and guests assembled around him—"I leave the mystery to be solved by yourselves."

But every one kept silent.

"All this," concluded the Metropolitan, "proves to us undeniably the existence of some mysterious connection between us and the souls of the departed."

NOTE.—Quite so, and the word "undeniably" is here properly used. That such a connection exists was proven to the world by thousands upon thousands of well authenticated cases of the apparition of the dead making themselves visible to the living. But it can take place only immediately, or very soon, after the separation of the surviving principles from the body. Such visions, when they take place, are serious and full of solemnity to the living. The "Spirit"—a real Spirit in such cases, fulfils the last desire of the soul, some praiseworthy craving, beneficent to the survivor in every case, if not to the departed entity. But one has yet to learn that one of such phantoms has ever shouted, "Good evening to you Mr. So and So," performed Japanese juggling feats with flying musical boxes and rapped Yankee-doodle on a guitar à la "John King"—or any other like worthy of the "Summer Laud."—Ed.

### PRACTICAL INSTRUCTIONS FOR STUDENTS OF OCCULTISM.

UNDER this head we propose to give a series of articles, by which students of Occultism may be guided in their exertions to obtain occult knowledge and power. They are called "practical," because they ought not to be only considered theoretically, but should be put into practice, that means, to be embodied in their every day life.

I.

#### FREEDOM.

##### EMANCIPATION AND DEVELOPMENT.

"No Neophyte must have at his initiation one affection or desire that chains him to the world."—*Bulwer Lytton*, "ZANONI."

It is said that the first step, which the Student of "Practical Occultism" must make, is to renounce the "vanities of the world." This does not necessarily mean that he must break his family ties, throw away his means of support, avoid society, become a misanthrope and retire into a cave or a jungle, there perhaps to amuse himself with the morbid fancies of his imagination, and to continually crave internally for the very objects which he has pretended to renounce, and which he has given up externally. He may live in the world and yet not be of the world. His body and mind may be more or less engaged in the affairs of everyday life, and at the same time his spiritual faculties be constantly exercised. He may be "personally" in the world, and yet spiritually *soar above it*.

Man has besides his physical body two sets of faculties, the intellectual and spiritual, and their powers correlate and interrelate with each other. If he employs his intellectual powers only on the physical plane and for material purposes, he becomes selfish and material. He concentrates, as it were, his powers into a small focus, which represents his "personality," and the more they are concentrated the smaller will be the focus, the more the person will become little and selfish and lose sight of the whole, of which he as such is only an infinitesimal and insignificant part.

On the other hand, if he prematurely attempts to send his spirit out into the regions of the unknown; that is, without having sufficiently developed and expanded his intellect, to act as a firm basis upon which to rest his spirituality, he will wander like a shadow through the realms of the infinite, and behold spiritual things without being able to comprehend them. He will become an "impractical man," a superstitious fanatic and a dreamer. Too rapid growth in one direction to the exclusion of a corresponding growth in another, is detrimental to progress, and it is therefore necessary to discriminate properly, and to develop the intellectual and spiritual powers in the right proportion.

To "renounce the world" does not therefore mean to look with contempt upon the achievements of science, to remain ignorant of mathematics or philosophy, to take no interest in human progress, to avoid the duties belonging to the sphere in which we are born, or to neglect our surroundings; but it means to renounce selfishness, the love of self, the first angel of evil, or, according to Edwin Arnold,

"The sin of self, who in the universe  
As in a mirror sees her fond face shown,  
And crying, 'I' would have the world say 'I';  
And all things perish so if she endure."

"LIGHT OF ASIA."

*The renunciation of selfishness is necessarily accompanied by spiritual growth.*

One of the first duties therefore which the Student of Occultism has to perform, is to divest his mind of the idea of "personality." That means to begin by attaching less importance to "personalities," personal things and personal feelings. He must forget *himself*. He must not look upon his existence as being a permanent, unchanging and unchangeable entity, standing isolated amongst other isolated entities, and being separated from them by an impenetrable shell; but he must consider himself as an integral part of an infinite power which embraces the universe, and whose forces are concentrated and brought to a focus in the body which he temporarily inhabits; into which body continually flow and from which are incessantly radiating the rays of the infinite sphere of Light, whose circumference is endless (nowhere) and whose centre is everywhere.

To make this idea clear, we will examine man in his three different aspects.

I. It has often been demonstrated that the *physical body* of man can have no real or permanent individual existence. We cannot see it, hear it or feel it, we only feel the effects which its actions produce, or, in other words, we feel the vibrations or convulsions of the forces, which, acting upon our senses, produce certain "mental impressions," and these coming to our intellectual cognizance produce consciousness. Moreover the constituents of that temporary body continually change by the processes of "assimilation" and "elimination." Tissues disappear slowly or quickly according to their nature or affinities, new ones take their places to be replaced in their turn by others, and the process continues as long as life lasts. Neither has the form of the physical body any permanency. It changes in size, shape and density as age advances, from the buoyant health of infancy and youth to the vigorous constitution of manhood or the grace and beauty of womanhood, up to the infirmities of decrepit old age, the forerunner of decay, death and putrefaction.

II. There is no permanent individuality in the physical body; but is there any in the *Mind* or *Intellect*?

To answer this question, we will first investigate the meaning of these words.

The *Intellect* in conjunction with the *Will* is an active power, by which all mental impressions from the exterior world, coming through the senses, are drawn together as to a common centre or focus, and there being held together for a time by "Memory," are applied to some object or purpose. By "*Memory*" is meant the passive power of forming and retaining in the focused condition the indelible impressions produced by thought in the Akasa or Astral Light. Now as time changes, so also the perceptions change. New perceptions replace the old ones, the will loses its power to hold them together, memories grow dim, and the intellect changes its form and mode of action. No grown up man has the same opinions he had when a child; what seems to him wise to-day appears to him foolish to-morrow; our ideas of right or wrong and our religious or philosophical views take their colouring from the modes of thought prevailing in the country in which we live and from the influences that are governing there. The intellect is born, grows and develops by change, and although this process may be delayed or extended indefinitely, still there must be a change similar to that of the physical body, and there can be no permanent individuality in the *Mind*.

III. We come now to a consideration of man's higher principles, the spiritual soul and the spirit. The majority of men possess the sixth principle only in an embryonic form, and many have not even yet a consciousness of its existence. It can therefore not be regarded as having any individuality at all, unless, accompanied with the higher portions of the "*Mind*," it grows and unites itself with the seventh, the "*One Life*," the one and eternal universal spirit. This divine spirit is a unity,

and cannot be divided up into parts and "bottled up" in the different individual "personalities." It cannot be drawn down to them, but they must rise up to it, and the higher they rise, the more do their mental and spiritual faculties expand. The more they amalgamate themselves with that principle, the more do they become one with the same, until finally each "individual" spirit embraces in its potentiality the universe and is comprised in the All, as the All is comprised in him.

If this view is correct, then we find that man's existence and activity are by no means limited to the confines of his material body; but must extend through all space. At the end of his cyclic evolution he will illumine all space, as he is now illuminated by the spiritual rays of the same to an extent proportionate to his capacity for attracting the said light.

Man is a centre of forces, into which the rays of the universe converge. In this centre the work of Illusion begins, and to that centre is it confined. Effects are mistaken for causes, and phantasmagoric appearances are mistaken for realities. The mind revels in delights which are due to such causes as produce hallucinations, and desires are created for which there is no real necessity. As the rays of our sun are reflected from the dull surface of the insignificant pebble or the oyster shell, producing the manifold tinted colours of the rainbow, dancing and glittering in various hues as long as it is exposed to the sun, so do the rays proceeding from the objective world, flowing through our senses, reflect their images upon the mirror of our mind, creating phantoms and delusions, illusions and desires, and filling it with the products of its own imagination.

To discriminate between what is real and what is unreal, to distinguish between the true and the false by means of the divine light of the spirit, is the first duty of the true Theosophist. In performing this duty he finds that the love of self is illusory; that there is no permanent real "self" and no individual existence except such as embraces all mankind, and when he once fully grasps this idea and is willing to let his "personality" die and disappear, then the eternal life of spiritual consciousness has begun to dawn upon him, and his immortality as an integral and individual form of the universal spirit has commenced.

Bulwer Lytton's "*Zanoni*" says: "For the accomplishments of whatever is great and lofty, the clear perception of the truths is the first requisite." From the fragments of truth, which have been variously displayed in the course of ages, and which are hinted at in the various "sacred" books, but which more recently have been explained to us in their true esoteric sense and in a language better adapted to our times and more comprehensible to us, it appears that, as spirit descends into matter, the universal spiritual monad on its downward progression becomes first differentiated in the animal kingdom; that is, it breaks up into different rays of various hues (characteristics) overshadowing the different classes and species collectively, and further on, on a higher scale their "personalities" separately, until it reaches its highest degree of differential isolation in man.\*

Here it commences to reascend, but now not as a *passive* ray of the universal spirit but endowed with *positive activity* and accompanied with such portions of the personality's lower principle, as have been able to become absorbed into the same. The spirit is the same in the descending as in the ascending ray; and is the same in each "individual." But as it ascends each ray becomes endowed with a different hue by the "personality" of each "individual" (the higher parts of

\* There are exceptional cases (of black magicians) in which a still higher degree of "individual" isolation is reached by an imprisonment of a part of the sixth principle in the lower ones; but such a condition, although long enduring, is not permanent, and as in such cases the seventh principle is entirely absent, they do not come within the limits of our present consideration.

the fifth principle). The more intellect has been evolved, the more of it will there be to follow the spirit in its upward flight and to give it a distinct character or colour; but if the development of the intellect has been retarded, or if such as has been developed has been applied to material or "personal" purposes, the less will there be of it to combine with the spiritual ray, and pure spirit will be proportionally bare and unclothed by intelligence and devoid of active power, and must either return to its original state or be compelled to return again to earth, to attract to itself a new combination of Manas. The more the intellect is developed and expanded, the more will the spiritual state and spiritual consciousness be established as on a firm basis, and the spirit, invested by the divine attributes of Wisdom and Love, reaches out into the infinite ocean of the universe and embraces in its potentiality the *All*.

A change begins now to manifest itself in the mind of the beginner, who has reached that state of development, in which he looks upon his own "personality" as being of little importance. It is not only his *own* "personality" that now appears to him in that light, but also every other "personality" as proportionately insignificant and small. Man appears to him only as the "centralisation" of an idea; humanity at large appears to him like the grains of sand on the shores of an infinite ocean. Fortune, fame, love, luxury, &c., assume in his conception the importance of soap bubbles, and he has no hesitation to relinquish them as the idle playthings of children. Neither can such a renunciation be called "a sacrifice," for grown up boys or girls do not "sacrifice" their popguns and dolls, they simply do not want them any longer. In proportion as their minds expand, do they reach out for something more useful, and as man's spirit expands, his surroundings and even the planet on which he lives appear to him small as a landscape seen from a great distance or from a high mountain; while at the same time his conception of the infinite which surrounds him grows larger and assumes a gigantic form.

The feeling produced by such an expansion of mind is true contemplation and in a potentialized degree is called "extasis" or "trance." This expansion of our existence "robs us of a country and a home," by making us citizens of the grand universe, lifts us up from the narrow confines of the "Real" to the unlimited realm of the Ideal, and, releasing man from the prison houses of mortal clay, leads him to the sublime splendour of the Eternal and Universal Life.

But "the mirror of the soul cannot reflect both earth and heaven, and the one vanishes from the surface, as the other is glassed upon its deep." How then can this grand renunciation of self and expansion of the spirit be accomplished?

There is a magic word which is the key to all mysteries, which opens the places, in which are hidden spiritual, intellectual and material treasures, and by which we gain power over the seen and unseen. This word is "*Determination*." If we desire to accomplish a great object, we must learn to concentrate upon the same all our desires. Whether the object is good or evil, the effect is invariably proportionate to the cause.

The power of will is omnipotent, but it can only be put into action by a firm and resolute determination and fixedness of purpose. A vacillating will accomplishes nothing. He whose heart trembles with abject fear to give up his old habits, inclinations and desires, who is afraid to fight and subdue his passions, who is the slave of self and clings with cowardly apprehension to the delusions of life, can accomplish nothing. Vices do not cling to man, but man clings to them and is afraid to let go his hold and loose his grasp, either because he over-estimates their value and utility, or, perhaps, imagines that by doing so his illusive self may be precipitated into the infinite nothing and be dashed to pieces upon the fancied rocks below. Only he, who is willing to let his

"personality" die, can live, and only when personal feelings and desires are put to rest then man becomes immortal.

How can he, that has not the power to command himself, become able to command others? A servant, to become a master, must first become free, and freedom is only acquired by determination and will put into action. An Adept is not made; he must grow to become such by his own exertions. He who dives into the depths of the earth loses the sight of the sun, and he who sinks into matter cannot perceive the spirit. He who is wedded to wrong ideas or opinions, or chained to superstitions, cannot behold the truth. Old ideas, loves and opinions die hard. They have grown up with us, we have become attached to them, and it is just as painful to see them die as to lose an esteemed relative or friend.

They are often our own children. We have created or adopted, nursed, nourished and trained them; they have been our companions for years, and it seems cruel and sacrilegious to drive them away. They appeal to our mercy, and, when once dismissed, return again, clamouring for our hospitality and expostulating their rights. But we shall get rid of them easily, if we call to our aid a powerful genius, whose name is Determination. He will put into action the Will, and Will is a powerful giant without any sentimentality, who, when once set into motion, becomes irresistible and of whom we propose to speak on some further occasion.

AN AMERICAN BUDDHIST.

#### AFTER DEATH.\*

In the regiment to which I belonged during my service in Caucasus, I had a great friend and chum by the name of Michael Petrovitch Osokine. He belonged to a good and wealthy family, had received a fine education and was exiled to Caucasus for a duel. From the first we felt attracted to each other. He was of an eccentric character, and looked as one who was constantly trying to forget a painful past. He began by throwing himself headlong into the fathomless whirlpool of a celibate military life, with its eternal drinking parties and scandals, but found in this little satisfaction. Then he sought relief in friendly intercourse and long conversations, the tenor of which enveloped him, in our eyes, in a still deeper shade of mystery. This seemed to answer his suffering soul better.

One day Osokine saved my life. During an expedition in the mountains while reconnoitering the enemy's position in a thick jungle, a Tchetchene, quite a young boy, unawares pounced upon me from behind a tree. As I was unprepared for an attack, he snatched the pistol from my hand and would have easily disposed of me, had not Osokine suddenly appearing on the spot, killed him by splitting his head in two with his Circassian *shashka*.

From that day we became brothers. In the evening, before a bottle of wine, we pledged eternal friendship. By degrees, Osokine turned the conversation upon death and after-life.

"Who knows when death is to snatch one," he remarked. "See, to-day, for instance...only simple chance has saved you from finding yourself now in heaven or hell..."

"Nonsense. True, death was pretty sure; as for heaven, or hell, it is no better than empty talk; I am afraid..."

"Why so?"

"Because, no one can tell for a certainty. A man lives, and then dies, that's all...Do you mean to say that the question of an after life has still any interest for you?"

"It has. I will say more: nothing has ever interested me half as much as this great problem...I may often doubt, I would if I would believe. Only think! A man, so to say, *dies*...He is perfumed with incense, wept over (with false tears, generally), laid out in a coffin, which is carefully nailed and sealed, the casket is lowered down into a deep hole, and the grave thickly filled and covered with earth and sod...heirs and enemies rejoice and secretly think: 'you are buried and put out of the way, my man; you will find it hard now to crawl out of your hole...you are dead...dead! whereas in truth—who knows!'"

\* Condensed from the St. Petersburg *Nevoyé Vremya*.

perchance he is all that time amidst those who pass on him such and other kind remarks. For all we know, he may be standing there, among the crowd, over his own tomb and looking at it asking himself 'who is it, who is dead? whom are they burying?' If it is me, they are then sadly mistaken; for here I am, well and free, more free than they ever were—since I am not only here, but—everywhere... It is just at this point that black magic comes in... of which magic, the least said, the better... Have you never thought of this? Have you never asked yourself the question:—'How it is, that there I live, breathe, feel, think (this especially) and then suddenly all such processes are stopped and from something I have become *nothing*!... How, nothing? How can this be?... and you must know that when I say 'you,' or 'I,' I do not mean you or anybody; but something quite different, something that can neither die, nor decay, but has to live throughout Infinity. My body will rot away, but I will remain the same for ever... It is only the force of habit that makes us dread, according to tradition and custom, the word 'death.' Undoubtedly it is a solemn, a suggestive word. But we have never understood it correctly, led into mistake through our suffering body and foolish heart. To die is by no means to see the end of all. I'll give an illustration; we are moving on with the army. The roads are good, the rivulets murmur softly around the rested soldiers, the woods are green and cool, and birds fill the morning air with their merry songs... We have started early, at dawn, when the sun was hardly daring, so to say to peep at our blooming healthy faces; a little later, it has arisen and gradually has enveloped us in its intense heat and light.

Our journey is becoming wearisome. We pant, we gasp for breath, we feel tired. Then the sun sets, the west dons its reddest, its most fiery garments, the great shadows are creeping out, and little by little they cover the whole horizon below and above, as with a sable mantle... The evening breeze cools our burning faces... we feel more tired out, and still more weary; we thirst for rest, but have to march on, for the hour of rest has not struck... Stop...! we have arrived... Quick, a bed, a large fire... We throw ourselves down and—go to sleep... That's all... But this is not always the end of our journey. The morning comes, and we find... something quite new, something entirely unexpected!"

"What an illustration! This will never do, for it is by far... too simple!"

"And why should we imagine that death is not quite as simple and as natural?... Death may be a problem to man, alone... and only while alive: he will solve it when he is dead... Ah!"—and Osokine sighed very bitterly.

We kept both silent for a time. The great bivouac fires were going out, the tongues of flame had disappeared buried under a veil of ashes... Suddenly he started and whispered into my ear:—

"Say?... Let us mutually pledge our words of honour to the following promise: who ever of us dies first, must visit the other... Will you?"

"What nonsense... why should you talk so foolishly!"

"Are you afraid?"... he sneeringly asked.

"Not at all... but this is really too absurd!"

"Indeed it is not. But it is simply this: we feel ashamed at being caught talking upon matters that relate to soul, and have nothing to do with our physical bodies; things, for which neither reward nor medal is to be expected... I will tell you what... We are no better than brutes... and that's the whole secret"... "Speak for yourself..."

"All right... only tell me now seriously whether or not you accept my pledge... fear not; I will be the first to die... and no regret for it, either..."

"Very well,"—I said, with a forced smile,— "But how shall we notify each other of the other's death?... Mind, a mistake is easy..."

"Quite easy... and, out of friendship for you I would not have you committing it in my case... Listen, I will appear before you in such a way that no doubt will be possible, that you will know it is I, and believe, nay, *know* it!... Yes, friend, you will be happy then, for you will doubt no longer..."

His voice trembled with suppressed emotion, when saying this: "That will do, Osokine," I said. "I feel chilly and we better begin a new bottle and then turn in... we have to rise early to-morrow..."

"Do not laugh!... It is a serious matter—once you have consented there's no backing out of it. A pledge is a pledge you know... give me your hand!"...

I stretched it out, and he eagerly pressed it, uttering a low 'amen'; and then gazed straight between my eyes with a look that made me feel quite queer... The camp fires had now gone out entirely along the lines. The huge mountains were slumbering within their thick misty veils, their rugged tops alone, occasionally illuminated by a rapid flash of lightning... a kind of ceaseless mournful creaking in the forest, a rustling of leaves and strange, incomprehensible sounds around us broke alone the silence of the sleeping camp... The loud neighing of a horse and the monotonous watch-cries of the sentries, finally broke the spell. We separated. Some time after, Osokine told me quite unexpectedly, that he was leaving the Caucasus, to return to Russia. He was sorry, he said, to part with the country, sorry to leave the regiment... sorry also to have been spared by the enemy's bullet...

"You are an amusing fellow, upon my word!" I could not help remarking laughingly. "You seem to be over courtin' death, and death, very evidently, will not have you!... When are you going?"

"In a few days... By the bye, you have not forgotten our mutual agreement? Do you remember it?"

"I do, I do... only, I am afraid it will now be your turn to expect a *post-mortem* visit from me... There are no Circassian *murids*, in Petersburg, you know..."

"Who can tell!" he answered thoughtfully.

After his departure, for the first year or two I received from him occasionally letters. Then they suddenly ceased, after which I lost sight of him entirely. For over fifteen years I had no news whatever of my old companion, and truth to say, ended by hardly ever thinking of him. One night, I had a dream... A party of soldiers were carrying a corpse in which I recognized Osokine. There he was, stretched on a litter, with his eyes wide open and his colourless lips muttering soundless words. When I awoke that dream that had awakened in me long forgotten feelings of friendship brought with it an association of ideas that ended somehow my taking the train for St. Petersburg. I had long left the service, lost my wife and children, and determined to seek oblivion in the noisy metropolis from a sorrowful past. Once there, I tried to find out my old eccentric friend, but was unsuccessful. I only learned that the said dream that I had been half inclined to look upon as the promised visit from the dead, was nothing of the kind.

Osokine was alive somewhere abroad, but none knew his whereabouts. Thus passed two months... We were now in the heart of the cold, dreary winter of 187—.

Once I got an invitation to a ball in the house of a rich general, whom I had known in the Caucasus. I arrived late, and to avoid attention crept into the drawing room, where I sat quietly hidden by a large window curtain. I was in one of my fits of melancholy. When found out in my retreat by the lady of the house, she could not help laughing at the sight of my rueful physiognomy. Probably not knowing what to do with me, she invited me to a game of whist. Luckily, it did not last long. Thus, escaping as soon as I could do so with propriety, I sought refuge in the general's library: There, I was alone, the room was comfortable and cool, and placing myself in a large arm chair I was soon lost in my usual disconnected thoughts.

And now, like a series of Chinese shadows, there arose before me a long line of remembrances: first my youth, merry and confiding, without any serious aim in life; then came my years of maturity, of care, and more sober thoughts... of my wife, the poor, dearly beloved one, I tried not to think at all... on the other hand, the image of Osokine arose before me as a living man, with all the scenes and events connected with our short acquaintance. The "night of the pledge" arose before me in all its vividness. I saw the same bright, deep blue sky, in the immensity of which the snowy peaks of the Caucasian mountains bathed their dazzling whiteness. There's the thick forest, the camp on which is falling silently the coming night... a soldier's *bourka*,\* and on it a form. I do not recognize Osokine, but I *know* it is his body... a hazy, misty, gray shadow, trembling and vacillating like the bluish smoke of a fire in sun light... "He, who dies

\* Buffalo-skin cloak worn by the Circassians and adopted by Russian soldiers.

first, shall visit him who will survive!"...are the familiar words I hear pronounced, in my reverie, but so close and so distinct are they, that I start, in my arm-chair, repeating mechanically—"Childish pledge...nonsense"—and try to smile at the remembrance. "Why, indeed, all this trouble, on his part to convince me?" I thought—"and suppose he did come after his death to warn me, as promised—what then? would I feel any the happier for it?...Besides...he is not dead at all—he is alive..."

"And, if—dead?..." says a deep voice near me.

"What"!...I shouted loudly.

"Supper is ready, Sir?"—is the answer I receive from a grim old servant in white gloves who seems very much dissatisfied in having to hunt for me throughout the large mansion.

I threw away my extinguished cigar and prepared to join the party in the dining room. When emerging out of the library, I saw distinctly a delicate, trembling shadow brushing past between the door and myself.

At supper, for no mortal reason I could account for, I suddenly felt in better spirits. Was it the brilliant light of the candelabra, its dazzling reflection in the rich crystal and silver, overlading the table its sparkle in the ladies' diamonds, the merry conversation, the din and animation of a crowded ball room, or the neighbourhood of gay partners at the supper-table that produced a reaction? I do not know. But there I was, heartily laughing at the *réparties* of pretty women, who paid no attention to me, and merrily smiling at the jokes and flirtation around them. Right in front of me was the host, the old general, who addressed me several times, and offered wine, which I refused.

He left his place very soon, however, for the neighbourhood of an old lady at the other end of the table; and his chair was immediately occupied by a dark looking gentleman about forty. The change took place so rapidly, that, as I remembered later; I could not tell how, or when he had come there. He sat for a time silently and modestly, touching nothing, and when he first attracted my attention, I had something like a momentary hallucination: I thought I saw through him the back of his chair! There are such thin and emaciated figures that seem transparent at first sight. All his frame seemed to shake and tremble when I gazed at him for the first time. Stretching out his wax-white hand to the decanter, and pointing at without pushing it toward me, he pronounced in a low, soft voice only these words:

"Will you have some?"

"No, thank you," I said.

Notwithstanding the black evening-suit of a civilian his white cravat and finely trimmed black beard, something in his manners betrayed an old soldier...remarking the attention he bestowed upon me, I looked at him more closely; but his eyes growing suddenly dim, I could not catch their gaze.

I imagined I had seen him somewhere before...His face was familiar to me, though I could not recollect where I had met him.....

Such things often happen. One meets an old acquaintance whom one had not seen for years. One makes painful efforts to seize the thread of memory, tries hard, but with no success, until an insignificant gesture, a sound, a word bursting like a flash of lightning amid darkness, brings back to one's memory an old familiar face, a long forgotten event in life.....

But this was not my case. My efforts to awaken memory by scanning his face were useless, and no word or gesture of his could recall to my mind any past event to connect him with. Only, when he saw how attentively I was examining him, his face grew brighter. He began, to my amusement and perplexity, to show to me a most exaggerated attention. He awkwardly and ceaselessly stretched out his hand toward various decanters, in order to push them nearer, within my reach, yet never succeeded in grasping or even touching any of them, as I thought.....

"When have you left the Caucasus?" he suddenly asked.

"For over a year," I answered.

"Lovely country!" he sighed.

"Have you served there?"

He nodded affirmatively.

"Have you known there one Michael Osokine?" he asked again.

"Oh yes! can you tell me where he is now?"

"He is here. But I believe, he is going away again...to-night or tomorrow."

"Just like him!" I remarked.

He smiled faintly without answering.

"Can you give me his address? I would very much like to see him, if I am in time."

"He lives on the English quay in the house of his uncle."

Thank you. I will see him no later than the day after tomorrow.

"It is well. I will detain him, and then see and take leave of you there myself...."

"Do you also leave the town with Osokine?"

"Yes; I am going far...very far!..."

The supper was finished and we were forcibly interrupted at these words. The noise of the chairs, the hubbub of a large crowd drowned his last remark, and drew off for a moment my attention from my new acquaintance. When I turned to him again, the dark gentleman had already disappeared.

One day later, not without a certain agitation, at the prospect of meeting my old friend, I drove to the house of Osokine's uncle. A terrible disappointment was waiting for me there. I was informed by the servant that Michael Petrovitch Osokine had just died. Sadly I ascended the large stairs that led to the rooms lately occupied by him. The hall was full of the smell of burning incense. In the front room, placed on a long table, I saw a coffin. Surrounded by a small group of the relatives and friends of the deceased. A priest was officiating the service for the dead. I approached the coffin wondering, whether after so many years of separation I would recognize him. I had no sooner caught hold of the dead man's face than I felt overcome with a sense of surprised horror. Before me, clad in his civilian's evening dress, and white cravat, lay dead the unrecognized interlocutor I had met during supper, at the general's ball on the night before last! I felt terribly shocked and aggrieved at the occurrence. "Strange man!"—I soliloquized—"why should he not have named himself to me, why not have helped the memory of an old friend; so changed, so altered!...Yes, I can see now how it happened that I had failed to recognize him at first sight!..."

"What has he died of?" I enquired of a grave old gentleman, standing near me.

"Of something like cerebral fever, I believe; for the last week he remained entirely unconscious..."

"How can it be!..." I cried. "Unconscious for the last week? Why I met and conversed with, without recognizing him, only the night before last, at General N—'s ball!..."

The grave old gentleman looked at me askance but said nothing, probably under the impression that I was suffering from brain fever also. "The night before last, Osokine was lying on this table," somebody said in a whisper. "The poor fellow is dead for the last three days!" I felt my hair stand on end and my flesh creeping cold...I ran away!

### MAGICON, OR THE SECRET SYSTEM OF A SOCIETY OF UNKNOWN PHILOSOPHERS.

(Compiled and translated from the German.)

#### III.—MAN.

A STUPENDOUS revolution in the realm of spirit caused the source of all being to begin an immediate emanation of itself, and this divine emanation was primordial man. By virtue of his divine origin, he was not only the most elevated and ancient being, an expression of divine power and number, but while in possession of all the privileges of a spirit, still he was surrounded by an indestructible cover, which secured him against the destructive powers of the elements. In this glorified condition, in which he experienced the most exalted happiness, he was enabled to command in the reign of the Invisible, as in that of the Visible, to reveal the power of the Highest, and by the restoration of Unity to restore order, peace and happiness. Dwelling in the centre of the square, he could view the whole of his realm, in all four directions and comprehend at once the past, present and future. He possessed the power over life and death of his inferiors, because he infused them with life by

his presence, and his withdrawal caused their death.\* But he became unfaithful. Instead of governing the Sensuous, he confounded the four cardinal points of Light and Truth, and thereby deprived himself of Light. Instead of only watching the totality of his realm, he was attracted to a part of the same. He thereby became involved in sensuousity, that is, he went from 4 to 9 and fell into darkness.† That which to him formerly was a unity, now appeared to him as multiple and subdivided; the sensuous took the place of the intellectual, and the intellectual that of the sensuous. His crime consisted in his transition from the supersensual to the sensual. The sensuous was not made for him, and he was prohibited from tasting the same, but he lusted after the same, and by obtaining the false enjoyment he lost the true one. He fell from spirit into matter, and it is now the object of man's efforts to regain the former position. He not only lost his original place in paradise (the intellectual square); but he also lost his power, the living word; he became separated into the male and female. He also lost the invulnerable cover of his primordial state and hid himself in an animal body ("clothes of skin"), which made him susceptible to the impressions of the sensuous and exposed him to the dangers of the elements. However this mortal body, the seat and cause of his sufferings, became at the same time a protecting coat against still greater dangers, to which he would be exposed without such protection. The organs of this material body are in exact proportion to his intellectual powers; its regularities are based on a certain number and its natural colour on a certain order in the arrangement of the elements. This body is a complete representation of the materials of which the world is composed. It is a microcosmos and has the same proportions and functions as the macrocosmos, and like the earth it has to combat all inimical forces. It is the expression of a spiritual, but not thinking, principle, called the animal soul, and which is the link between the intellectual soul and the physical body.

Man's present condition is more difficult now than before his fall. He has more dangers to meet and less powers at his command to resist. He is still engaged in the battle of the sensuous against the intellectual. He desires to become spiritualized, but his body attracts him to the sensuous by a thousand charms and draws him still deeper into the mire of matter, and his intellectual principle cannot breathe the pure essence of life without the beneficial influences of a higher reaction. But even the realm of the sensuous is a benefit to him and acts as a safeguard and a starting point for his return. His power of returning depends on his power to subdue everything that renders obscure his true interior nature, and to remove everything that prevents him from returning to his original source. He cannot accomplish this in any other manner, than by ascending on the same line by which he descended. He must return from 9 to 4, from the sensuous to the intellectual, from darkness to light. He must penetrate the mists that hide the sun from his sight, until he arrives at a point where the rays of the same reach him without refraction. This is the great work of *Redemption*, by which man at first and before all vivifies and strengthens the power of his intellectual germ, and by renewed stimulation and expansion of the same and by a well-directed will becomes susceptible to the prerogatives of the spirit. By the exercise of courage and the possession of Faith can the time of trial be shortened to a considerable extent; but no *vicarious* atonement is possible, and the deeper man fell, the further will he have to rise.

However man, feeble as he is, is not entirely dependent on his own resources of inherent faculties of courage and will only, in his attempts to rise. There are many great and good men, who stimulate him by their examples, if he chooses to accept them for his guides; but besides these there are amongst us, and have been at all times, real celestial agents on earth, who are taking the utmost interest in our welfare. A direct intercourse with these men is not impossible for man, if he becomes sufficiently purified to be approached by them; they

themselves being highly progressed and pure, although human beings.\* By a proper course of mental and spiritual training we can perceive, or come in contact with, those beings. The less our attention is attracted by sensuous things, the more our spiritual sight becomes developed; and the more the exterior man dies, the more alive becomes the interior one. All this, however, would be insufficient for the redemption of man, if it were not for the constant activity of the universal spiritual principle, by which all his powers are continually increased and vivified, and by which man is led to the recognition of all things, and especially to a knowledge of himself.

There is consequently no want of certain and powerful remedies by which man can lift himself from darkness to light; but if he is too careless and negligent to use these means, he will pass to a much more horrible condition; especially if he denies the existence or necessity of such powers. He will then pass into a condition from which he can only be redeemed by a most terrible and continued purification. He will pass from 9 to 56. The law by which man passes from 4 to 9 is terrible, but it is nothing in comparison with the law that rules 56, a stupendous law, by which those which become exposed to its action cannot arrive at 64 without having experienced the full rigour of that law. Man, who does not perform his duty during the time appointed to him, must begin again, but starts from a point much farther back and has to labour for a much longer period; and after that there is still a more terrible and almost infinite period of suffering. The unfortunate beings belonging to that class, are like the satellites of "Saturn," which continually revolve around its ring, without being able to enter into the same. They cannot enter the sphere of Good, and see the light without being able to approach to it, and have to suffer, until all their impurities are burned and destroyed by their own inherent light.‡

But by the proper use of his faculties man is certain to attain his object, and his doubts vanish as he rises. He need not fear death, because death is only terrible to those who have amalgamated themselves entirely with the sensuous; and if he elevates himself by his will to such a degree of purity, as to become one with Divinity, he will then even in this life be able to spiritualise his own being sufficiently, to behold the whole realm of the Intellectual, and he will find himself much nearer to God than he ever expected to be able to go. The divine agents will be perceived by him, he does not need to read any books to obtain instruction,‡ and he is so much advanced on the road to perfection that death only needs to remove the gross material veil, to let his intellectual temple appear in its full beauty: because then he will live and act entirely in the sphere of the Infinite.

If we look at man in his social relations, we find that the origin of the social state, consists neither in a forcible gathering of men by some powerful individuals, nor in an arbitrary or indiscriminate confluence of entities to a common unity by means of a social contract. Primordial man was born to rule, not over his equals but over inferior beings. He could not belong to any political body of men, which body cannot exist without sensuous links and intellectual privations. But as he became more and more sensuous, his condition became one of an uninterrupted chain of wants, dependencies and necessities; and the social organisation became necessary to supply those wants and to free again his intellectual nature and regain his rights. The formation of society was therefore not an act of arbitrariness but of necessity; its purpose is education and its final aim freedom and recovery of the rights of the individuals out of which it is composed. The legitimacy of the rule of one man over another depends upon their respective degrees of depravity or real nobility. A large number of individual parts of society sink into the mire of the elements, and it is therefore natural and necessary that they should be assisted to rise by those that are less depraved; and only in this respect can an authority be legitimate, while in any other case it

\* Such men are the *real* originators of the present Theosophical Society.—*Trans.*

† The number 56 (7 × 8) signifies the eighth sphere. 5 (one half of 10) is the number of Idolatry, and 6 signifies the sphere of Light. Both numbers combined are the type of the separation of the bad from the circle of good (64), composed of Light (6) and its exalted inhabitants (4).

‡ This is likely to be misunderstood. He may have to read a good many books, before he arrives at a point where he needs them no more.—*Trans.*

\* This death is *spiritual death*. When the communication between a human being and his divine immortal Atma, his "logos" is severed, the result will be the *spiritual death* of the man.—*Ed.*

† Number 4 represents the sacred square, which is the symbol of the manifested logos. 4 becomes 9 when the logos or the spiritual monad attaches itself to the remaining 5 principles in man. This is the descent of spirit into matter which is darkness.—*Ed.*

would necessarily be the highest degree of injustice. The farther an individual is advanced on the road to his own individual perfection and purification, the more he obtains a power over others, based upon justice, and the more he approaches the light, the more extended will be his influence over those that are withdrawing from the same.

A child cannot be its own father, teacher and provider, and collective man needs certain guides, possessed of superior virtues. Government therefore ought to consider it its first duty to educate the intellect of man, abolish evils and provide for the gratification of the real necessities of man. Religion and Politics have an identical aim, and each king therefore should also be a Melchisedech or high priest. Mankind, in attempting to separate what they consider the "wordly" from the spiritual, has lost the true spirit, and kings and priests, by losing the true spirit of religion and becoming sectarian, have lost their power. True religion and true freedom are inseparable. Primordial man was in possession of the power of punishing his inferiors and even to deprive them of life by depriving them of his life-giving presence; but man in his present condition has lost the power, and no person has the right to punish or kill another person. The power of kings and judges to punish is therefore only symbolic, and they possess such rights only as the representatives of a higher authority than individual man and therefore ought to exercise such powers only in the interest of their highest conception of justice. Punishments ought to be proportionate in severity to the severity of the crimes, and it is unjust to punish only those crimes which have been committed against the physical man, so-called political or temporal crimes; and to let those criminals go free, who attempt to poison, injure or destroy the intellectual or spiritual part of man. The cause of this injustice is that those who are entrusted with authority are themselves imperfect or criminal and liable to misuse their authority, and mankind cannot expect to arrive at the golden age before its leaders will be more perfect men, whose hearts are filled with love for humanity, and whose minds are illuminated by the divine intelligence of the universal spirit.

AN AMERICAN BUDDHIST.

(To be continued.)

(Continued from the last Number.)

#### SCRAPS OF ANCIENT HISTORY OF THE ISLAND OF JAVA.

(A Popular Version from Notes furnished by  
BARON TENGNAGELL, F. T. S.)

##### II.

WHAT is now left of the civilization, science, and prosperity, which could be found in Java during the domination of the Hindus?

Before answering that question, we will mention without comment two events. The advent of Islamism in 1313 and the arrival of the Hollanders at Java in 1594.

In the south of the division Lebak, in the Presidency of Bantam, in the mountains of Kendong, there live a number of little people, called the Bedoeni. They are originally Sudaniens like the rest of the population, with whom they entertain no communication; because they have still preserved their ancient religion. Very probably they are the ancient inhabitants of Bantam or Padjadjaran, which have emigrated to the mountains at the time when the Mussulmans conquered the land. They are only agriculturists, and crimes are entirely unknown in their little community. They pay their taxes regularly and are distinguished from the Mahomedans by the simplicity of their costumes, their love of truth, their loyalty and their elasticity. They are divided into Djelma-dalem and Djelma-loewar. (Interior and exterior Djelma.) The first ones live retired from the world, and preserve with the greatest exactness their civil and religious usages. They occupy the Kampong Tji-Beo, and they cannot transcend the number of forty men. The number of the women is not fixed. If, in consequence of births the number of forty is transcended, they who are above that number go to the exterior ranks of Djelma-loewar. Those who live in the villages with the rest of the population observe their customs only in so far as the circumstances permit. Their number is unknown, but it is supposed that

there are not more than one thousand souls. Their civil government consists of three chiefs: The Girang po-oen, the Girang dalem and the Girang serat. The Girang po-oen is their civil and religious chief; he maintains the order and the peace, the usages derived from their ancestors, and their religious observances. He performs the marriage ceremonies, and on solemn occasions pronounces prayers. His office is hereditary, but not remunerated. The Girang dalem is the eldest son and probable successor of his father, whose orders he causes to be executed, whenever they concern the civil government. The Girang serat is chosen by the Djelma, and his duty is to attend to everything that has to do with the outside world. All affairs have to be transacted verbally, because it is forbidden to write. Their religion is but little known, but they have a great horror for Islamism. They are not allowed to cultivate anything else but rice and maize, and whatever else they may need they have to get it by way of exchange. They are permitted to cook their rice and maize; but all other nourishment they have to eat raw. They are prohibited from killing or eating any kind of animals and even from making use of tame animals. They are not permitted to write, or to use any clothing except white, blue or black; neither are they allowed to use gold or any kind of things which they have not manufactured themselves. They believe in a future life and that the souls of criminals are burned in the craters, and that those of virtuous people go to paradise.

##### *Idolaters in the Mountains of Tengger.*

After the conquest of Madjapahit by the Mussulmans, those of the inhabitants who decided to remain true to the faith of their fathers and to the cults of Brahma, Vishnu and Siva, escaped to the uninhabited mountains under the guidance of Kjabhi Dadap Poetih. Their villages, which can only be found at an altitude of four thousand feet, resemble each other; their houses, built of wood and covered with "alleng alleng," are occupied by several families, and have one door each, which always faces the Mount Bramo. There are about three thousand of them. They are very ignorant, and their primitive religion has become mixed up with so many strange practices that its originality has become unrecognizable. After the people are assembled, the chief priest goes to the edge of the crater, asks for the blessing of the gods Sang Jang Toenggal, Paudec Deva Nata, and above all of the supreme God Deva Brahma, and then throws his offerings into the crater.

The population then begin all sorts of festivities.

Their buffaloes run free in the mountains, where no tigers are to be found. They do not trouble themselves about their cattle or their horses, and only when some of them are wanted for their sacrifices, then they are collected and caught. Theft and other crimes are unknown amongst those idolaters, who live in peace in their mountains in the greatest simplicity, and avoid as much as possible the contact with the inhabitants of the valleys. They only occupy themselves with agriculture and cultivate maize, potatoes, onions and other vegetables, which they exchange for such objects as absolute necessity requires.

They never take part in any dispute or opposition; they do faithfully their duties toward the Government, and the Government does not intermeddle with their costumes and usages.

##### *The Island of Bali.*

The Island of Bali is under the authority of the Dutch Government and comprises nine divisions or kingdoms, independent of each other. They are named:—

1. Boleleng; 2. Djembrana; 3. Karang Assom; 4. Klongkon; 5. Djanjar; 6. Bangli; 7. Badong; 8. Mengoevi; 9. Tabanan.

It is supposed, that the same Hindus, which have propagated their religion at Java, have done likewise at Bali; but it is certain, that after the conquest of Java by the Mahomedans, many of those who refused to accept the new faith, went to Bali, where the Hinduism then took a new start and became extended. At the present time the Brahminical faith (Sivaism) and Buddhism have there a considerable number of adherents.

The Buddhists are not very numerous, and inhabit especially two places, called Karang Assom and Djanjan. The Brahman priests have preserved their religion in their primitive purity and follow exactly the prescriptions of the Vedas; but the people honor besides a number of spirits,

good and bad ones, such as the "pitris, the spirits of their ancestors and Boeta, or demoniacal spirits." The places which are especially consecrated to the cultus or the "Sadkah jangan," or the six temples, consecrated to Siva. There are others besides, which are less venerated, and we also find the "Parajangan" temples, dedicated to all gods; "Roemah Deva," small temples, dedicated to one single divinity; "Sanggar," chapels, and finally "Panatarans," or sacred places, where the offerings for gods or spirits are deposited. These offerings consist of rice, cooked meat, fish, fruits, silver and clothing.

Bloody sacrifices of buffaloes and poultry and hogs are only performed at solemn occasions. The people are divided into four castes—the Brahmins, the Xatria, the Wesja and the Soedra.

In the caste of priests or Brahmins, the men have the title of "Idabagoes" and the women Idajoe; those which have some knowledge of religion and literature are called Palanda. They are very numerous, and many are forced by poverty to obtain a living by agriculture, fishing or manual labour.

The caste of the Xatria is the second one in importance. It comprises the warriors, and their members have the title "Deva." At former times all the princes did belong to that caste; but now it is not so, and at present the Deva Agong is the only one who has necessarily to be a Xatria.

The caste of the Wesja is the third one, and is very important at Bali. Its members were formerly merchants, agriculturists, artists and artisans, consider now every occupation as below their dignity, and only attend to the trade. The members of this caste, to which nearly all the princes of Pali belong, have the title of Goesti.

The caste of the Soedras is the last one, and is that of the common people. They have no title, and whenever one belonging to a superior caste speaks of one such, they call him Kahoela (servant) or Wang (man). They are entirely subject to the other castes, who can dispose of them and their possessions as they please.

Besides these castes, there are also the Tjandalas, which everybody despises and rejects. They are such as have contracted incurable diseases, in consequence of which they have become outcastes and who now in mournful solitude drag out a miserable existence to its end.

For the soul of the dead to be received in the swarga of Indra, next in the Vishnuloka, and afterwards in the Siyaloka, it is necessary to burn the corpse of the defunct. The bodies of the three highest castes are therefore always burnt; but as this ceremony is a very expensive one, the corpses are usually embalmed or interred, until the relatives have amassed the requisite sum. The Soedras bury their dead, and it is admitted generally that their souls transmigrate into an animal, usually into a dog; and this accounts for the respect with which they treat those animals. If by some accident a Soedra becomes wealthy, he is obliged to disinter the bodies of his parents and to burn them. The ceremonies on such occasions differ according to the castes, but only the widows of princes are burned with their husbands. This sacrifice is performed in two different ways. At first they erect near the funeral pyre of the husband, a chamber built of masonry of about four feet in height, in which a hot fire is kindled. The women are taken there with the same ceremonies used in bringing the corpse of the husband, and after arriving at the pyre, they either throw themselves alive into the flames, which process is called ma-bila, or they strike themselves at the edge of the chamber with some knife in such a manner that they fall dying into the fire, and this way, which is considered the most valued, is called Satya ma-satya. The wife who sacrifices herself in this way obtains thereby the cognomen "Satyawati" (the faithful one). Ordinarily, whenever a princess dies, some of her slaves sacrifice themselves in the same manner.

#### *Notes concerning the History of ancient Java.*

In consequence of the many uncertainties which the ancient legends present to us, it would undoubtedly be very difficult to discover the entire truth; but it seems that there is some probability in the following statement. It seems probable that the islands of Sumatra and Java were once a part of the Indian Continent, at a time when Ceylon was a part of the same. We might then admit that goni and giants,

of which according to the legend the primitive population was composed, were the Autochtones, living in the forests of the interior, and which have been subjugated originally by an Aryan or Brahminical immigration, which came from Malacca, whilst the legend of Hadji Saka refers to a colony of Buddhists, which not having the same laws as the Brahmins, could without difficulty cross the ocean. If we admit this explanation, it follows that the institution of castes dates back to an epoch anterior to the separation of Ceylon and Sumatra and Java from the Indian continent.

If we look to the proofs which corroborate the probability of this theory, we see that they are of two kinds: 1, proofs derived from the antiquities of the Hindus; and 2, proofs derived from Sanscrit works, which form a part of the Javanese language.

About fifteen or sixteen years ago an ascension was made of the Dempo volcano, which is situated in the Passoemelo, in the interior of Sumatra, and whose elevation is about 10,000 metres above the ocean level. Although this volcano is still active, there were found upon its top the ruins of ancient Hindu temples, which must have been of very great antiquity, because the natives did not even know of their existence.

In going from Lahat at Gocong Sakti in the Passoemelo, I saw myself the remnants of colossal statues, which were broken, and whose origin was equally unknown to the inhabitants. It seems therefore that Brahmanism flourished at Sumatra at such a remote epoch, that even the remembrance of the same is lost, and that the population at that epoch was much more than at present. There have also been found at Java, on the summit of several volcanoes, which are still in activity, the remnants of Hindu constructions; and about ten years ago an extraordinary successful attempt was made to climb to the top of the Saneroe volcano, which is in full activity, and 11,460 feet above the ocean, and there again some constructions were found, dating from a Hindu epoch.

The opinion is held generally that the primitive colonists were driven back from the borderlands of the ocean towards the interior, and the Buddhist colonists then occupied those lands. This is the opinion of the scientists who have investigated the subject. It seems to me that now another conjecture presents itself, founded upon facts, which formerly were wanting, because it is only four years since "Isis Unveiled" has been published. The primitive population is said to have been composed of the subjects of Theredat. They had already engaged in war with the Brahman colonists, who had arrived by land, and were finally driven back from the country while the descendants of the Brahmins had their power augmented by the successive arrival of Buddhist colonists. The inhabitants, who were still savages of the forests of the interior, were then subjected and gradually converted to the religion of the Brahmins and the Buddhist religion, both of which live in Java peaceably together.

As far as Sanscrit is concerned, it is certain that the Javanese language contains a great number of words belonging to Sanscrit, and that these words do not refer to religion only but that they refer to things and ideas, which must have presented themselves at the beginning of a new-born civilization. At all times, and especially wherever strangers have attempted to convert a people, they have always begun their work by studying their language, and have only employed foreign words when the language of the country was insufficient to express their new ideas. But as we have to do with a great number of different ideas, we must admit that commercial relations existed between the natives and the foreigners, and that to those relations we must attribute the great number of Sanscrit words in the Javanese language; and, as these words are pure Sanscrit, it follows that the Sanscrit must at that time have been a living language and that this circumstance makes the above theory the most probable one.

Throughout Java the word "Dessa" indicates a village, a community of natives, and the Hindu word is "Desha." This would not confirm our supposition, except after the subjects of Theredat had been driven back, and there was none left to the Island but Hindus and the savages inhabiting the forests,

Islamism finished by subduing the whole island in 1460, at which time Bantam was conquered. Islamism persecuted the idolators with fire and sword, but the Christians, at least the Hollanders, did not trouble themselves about their religion, and, if the Malnis have preserved a recollection of religious persecutions, this must be attributed only to the Portuguese and to the Spaniards.

### AN ARABIAN STORY.

TRANSCRIBED BY P. DAVIDSON, F. T. S.

As a sequel, under the same category to the highly interesting story "Can the Double murder?" which appeared in the *Theosophist* of January 1883, I herewith append the following, which confirms the fact of the susceptibility of the *Mayavi-Rupa*. It is related by Palgrave, in his interesting work on Arabia.

In the year 1850, which answers to 1228 E. H., during the reign of the Sultan Sáeed, King of the eastern portion of Arabia called *Oman*, a young merchant of Muscat, who had recently married one of the fairest damsels of that city, embarked on commercial business in a ship bound for the coast of Zanzibar. After a prosperous voyage he arrived at the market for his traffic, and there remained, according to his custom, some months laying in a suitable cargo for his return home.

One evening, while residing at a placo opposite the island of Zanzibar, about 2,000 miles south of Muscat, he was seated on the roof of the house where he lodged in company with an Arabian, whose acquaintance he had recently made. Chance had thrown them together, and community of race in a foreign land had produced a certain degree of intimacy.

The sun was setting, and the two friends were smoking their pipes in that peaceful way peculiar to Orientals generally, when the merchant remarked a strange expression pass over his companion's face, which caused him to enquire the cause. "Did you see what I this moment behold," answered the Arabian seer, "you would look even graver than I do." Such a reply naturally led to further enquiry, on which the magician, after a suitable show of reluctance at having to communicate painful news, at length said, "I have just seen such a person," naming a well-known libertine of Muscat, "enter your house at this very hour, and at a moment when there is no one at home but your wife, who appears to greet him with great joy."

It was now the husband's turn to look grave indeed. Starting instantly to his feet, and seizing the magician by the throat, the merchant extracted from him a minute relation of all that was passing between his wife and her visitor, which cannot be better told than in the well-known words which Shakespeare puts into the mouth of Iago, when saying to Othello,

"There are a kind of men so loose of soul  
That in their sleep will mutter their affairs:  
One of this kind is Cassio," &c.

The indignation of the injured husband rose to the highest pitch. "Are there no means," he eagerly inquired, "to forestall, or at least avenge the crime?" To the latter part of the question the Arabian seer replied that he was indeed possessed of the most effectual means for that end, and would willingly exert them. "Do so at once," rejoined the merchant. "Not so fast," answered the other, "we must first preclude the possibility of ill consequences to ourselves."

He then directed the merchant to draw up a document, empowering his friend, the magician, to take vengeance on the guilty woman and her paramour. The paper was quickly written, dated, signed and sealed. "Now," said the clairvoyant; "call up the whole family to whom this house belongs, after which I myself will countersign the document."

The orders of the seer were fulfilled. By this time night had set in, and the whole party stood in silence on the roof, under the open canopy of the starry sky. The writ of death lay on a table in the midst. "Now give me your dagger," said the magician to the husband. The latter drew from his belt the crooked silver-handled dirk, commonly worn by Arabs of a certain rank, and handed it to his friend. He took it in silence, turned slowly towards the north, and after muttering a few words, stabbed the air twice. "Now go and sleep in peace," said he to the husband; "your vengeance is complete, for the criminals are both dead."

Shortly after this extraordinary incident had occurred, the merchant left Zanzibar for Muscat. Immediately on his landing he was told that his only brother had been cast into prison, and was then detained on suspicion of murder. "Your wife," said his friend to him, "and with her such a one," mentioning the name of the individual denounced by the clairvoyant at Zanzibar, "were found one morning dead within a chamber of your house; a dagger had pierced them twice through and through. No trace could be obtained of the murderer or his weapon; but as your brother seemed the most likely person to have done the deed, he was arrested and questioned before the judges. Nothing, however, appeared to prove his guilt; so the Government consigned him to prison until your return, in order that a fresh examination of the matter might then take place."

The merchant at once went to the authorities, and told his wondrous tale. The case seemed too strange not to be sifted to the bottom, so it was referred from tribunal to tribunal, till the Sultan Sáeed declared that he reserved to himself the right to judge the case in person.

Accordingly, the Sultan caused the merchant and his brother to be brought to Nezwah, the capital of Oman, his usual place of residence, but without permission to quit the city. Then he sent orders to Zanzibar, that all who had signed the document, or been in any way witnesses of the scene on the house-top, should be sent to his capital without delay. When all the party were assembled at Nezwah, consisting of the two brothers, the African honscholder, and his family, together with some of his neighbours and the clairvoyant magician, the Sultan held a sort of *lit de justice* in the open air. The document was produced, and all present recognised and authenticated their respective signatures, while cross-examination only confirmed the correctness of the merchant's statement. Whereupon Sultan Sáeed declared himself unable to decide the guilt, or to award punishment in such an extraordinary case, and dismissed both the merchant and his brother, together with the witnesses from Zanzibar, after granting them a handsome recompense for loss of time and trouble incurred.

At the same time the Sultan strongly advised the Arabian seer to be henceforth more discreet in the exercise of his occult powers—a recommendation afterwards extended to all the magicians and clairvoyants of Oman. And if the all-potent monarch did no more, popular rumour assigned a reason for his forbearance—that his own favorite spouse, the mother of the present Sultan, was the very Hecate of Arabian Wizards, and Witches, and worthy to preside at any weird meeting of black cats, broom-sticks, he goats, magic cauldrons, or any of the spiritualistic circles which exist either in Europe, or America, at the present day.

### CHEAP AND GOOD FOOD.

(Knowledge.)

By T. R. ALLINSON, L. R. C. P.

ALLOW me to bring under the notice of your readers some experiments I have just concluded to solve the difficulty of feeding our poor in London and elsewhere. The cry is that food is so dear the poor can scarcely live. This cry is true if they want to live on luxuries, but if they will live on wholesome but plain and healthy fare, they can do so for very little. A little over a month ago I determined to give up all expensive articles of food and live almost as cheaply as possible. Having left off flesh foods for nearly two years, and lecturing frequently on the question of food, I knew what to select. Looking over my food accounts, I found milk, butter, eggs, and cheese, with tea and coffee, were fairly expensive articles, and none of them necessary, so I gave them up for a time to see results. On October 19, I began my experiment; my weight was then 9 stone, 8 ounces. I continued this purely vegetarian diet for a month, when my weight was 9 stone, 3 pounds, 12 ounces, or a gain of 3½ pounds. My friends said I looked well; I felt well, and did my usual work the same as ever. I walked from 10 to 15 miles daily, seeing patients or taking exercise. Here is an account of my dietary, which cost me little more than sixpence a day, and I could easily live for less without luxuries:—Breakfast consisted of a basin of porridge, made from a mixture of oatmeal and wheatmeal, which I found more palatable than either singly. This I usually eat with bread to insure thorough insalivation,

Then came bread fried in refined cotton-seed oil, or fried vegetable haggis. For drink I had a cup of cocoa or fruit syrup, with warm water and sugar. The cocoa used was an ordinary one with plenty of starch in it, which makes a thick drink, and no milk is then required. Dinner consisted of a thick vegetable soup and bread, potato pie, savoury pie, vegetarian pie, vegetable stew, stewed rice and tomatoes, &c. For a second course I had bread plum-pudding, stewed rice and fruit, baked sago, tapioca and apples, stewed prunes, figs, raisins, and bread. Tea meal consisted of bread and jam, stewed fruit, or some green stuff, as watercress, celery, tomatoes, &c. I had only three meals a day, and frequently, when very busy, I had only two, and a cup of cocoa and a biscuit for supper. I always use the whole-meal bread, as it is laxative and contains a good deal of nitrogen, which is thrown away with the bran. The cotton-seed oil is a cheap and good cooking oil, and is impossible to detect. This diet I continued for a month, and now I only take the animal products when out, not having them at my table.

Now compare this diet with one of flesh or mixed one. The latest analysis shows flesh to contain from 70 to 74 per cent. of water, the dry residue being very rich in nitrogen, and it contains a little carbonaceous or fatty matter. Hence, to live on meat alone, as much as 8 lb. a day is necessary. Then there are to be considered the diseases of animals which are communicable to man if that flesh be not thoroughly cooked all through, and as very few of our animals live a perfectly natural life, most of them are more or less diseased, especially the fat ones. The excess of nitrogen taken into the system in eating flesh meat has to be got rid of by the liver, kidneys, and lungs; hence these organs are overtaxed, and much disease is the consequence. In fact, were it not for flesh food we doctors should have very little to do. Man living in towns cannot afford to eat much flesh, because he does not get sufficient exercise and oxygen to burn up the excess of nitrogen. If he does eat this flesh and if he eat much, then he must suffer from many complaints, such as indigestion, bilious attacks, congested liver, hemorrhoids, gastric catarrh, and other gastric troubles. If the habit be continued in, gall-stones or urinary calculi may follow, or rheumatism and gout. Then the kidneys become diseased and more work is thrown on the heart, which becomes also diseased; the end is death by one of the lingering diseases, which shows a diseased organ somewhere. Even epilepsy and many nervous diseases are aggravated by flesh. Cancer is on the increase, and, from some observations I have made, it may be indirectly traced to flesh. Consumption has only a remote connection with flesh, it being due chiefly to want of fresh air. Vegetable food is cheap, contains an abundant supply of nutriment at first cost, and our systems are so formed as to use it with least expenditure of vital force. We use no cruelty in obtaining our food, and can easily see if it be wholesome or in a rotten state.

By means of our diet much disease is prevented, and even most chronic cases of present disease can be alleviated by it. If we want a cheap dietary we have the following foods to choose from:—Wheat, oats, barley, maize, rice, sago, tapioca, semolina, hominy, peas, beans, lentils, &c., which are all concentrated foods, and very rich in nutriment. Potatoes, parsnips, beets, carrots, turnips, onions, cabbage, sprouts, &c., give variety, bulk and flavour; to these may be added the sweet herbs for making savoury dishes. Apples, pears, currants, gooseberries, plums, strawberries, raspas, blackberries, and other fruits, with melons, peaches, grapes, &c., are high-priced, but wholesome fruits. The dried fruits, as dates, figs, apple rings, currants, raisins, &c., are cheap and good. To these may be added tinned goods. Thus one can see the immense variety of tasty things we have, and these to suit all purses. We can add to these milk, butter, cheese, eggs, and honey, which are got without killing animals. But if we take animal food, then fish is least injurious, then beef and mutton, while veal, pork, game, &c., are very indigestible, and ought to be avoided.

#### A NEW DISCOVERY.

##### LIQUID OXYGEN AND NITROGEN.

WE are slowly learning more of the liquid and solid states of the elementary and compound bodies formerly known as permanent gases. According to the latest researches, oxygen, when cooled to 136° C. (213° F.) below zero liquefies to a colourless transparent liquid at the very moderate pressure

of 23 atmospheres, or thereabouts. Nitrogen at the same temperature does not liquefy at a pressure of 150 atmospheres, but yields a colourless liquid with distinct meniscus, when the pressure is cautiously allowed to fall to a point not lower than 50 atmospheres. It is now well known that ozone, under quite moderate limits of pressure and temperature, is a liquid of intensely blue colour, which gives a vapour which can only be compared in colour with the brightest blue sky. In this condition ozone is a most potent body, decomposing with explosion upon slight provocation into common oxygen. Pure alcohol is a white solid at about—130° C. (—202° F.). At a very slightly higher temperature it is viscous, like oil.—*Lancet*, Sept. 15.

#### ARE THEOSOPHISTS ATHEISTS?

MR. ST. GEORGE LANE-FOX delivered an interesting lecture on the above subject in Patcheappah's Hall (Madras.) Our thanks are due to the *Madras Mail* for giving a pretty long report of the same in its issue of 31st March. We cannot do better than give here the extract from that Journal:—

At Patcheappah's Hall, Madras, on Friday night, Mr. St. George Lane-Fox, undertook the task of answering this question. There was a large attendance of natives. Mr. Anantha Charlu presided, and among those present were the Secretary of the Theosophical Society, Mr. Damodar K. Mavalankar, Dr. Hartmann, Mr. Srinivasa Row, Dr. Athalye.

Mr. Fox commenced his lecture by remarking that a great many people supposed that Theosophists were necessarily Atheists. It had been supposed that their leaders were Buddhists and that Buddhists were Atheists. He would endeavour to show that, if there was one word which was above all others inapplicable to Theosophy, that word was Atheism. Theosophists included people of various beliefs and sects. The Theosophic movement as such was not a "religion," although Theosophy was in one sense a very true religion inasmuch as it brought people together working for one common object, yet it was not a religion in a vulgar sense. As soon as people realised that there was a future, continued existence beyond this life, they were in fact Theosophists. The very fact that they believed in that future state and wished to assist others to do so proved them to be Theosophists in embryo. They could not deal with the *Ultimate Cause*, and therefore they remained silent upon the attributes of the *Supreme*. That was the position of nearly every true Theosophist, but such an attitude of respectful silence could not be identified with Atheism. Broadly speaking, Atheism was a misnomer. The Theosophic doctrine was one of enlightened observation. It taught that, existing everywhere and about us, there is an unseen something of which we cannot immediately take cognisance by our ordinary physical senses, but that vague feeling leads us to investigate into the unseen and unknown, and all enlightened people would realise that they do not know yet much that man is capable of knowing if he adopts proper means of enquiry. They know of the existence of people who had developed the higher senses and faculties, and who had consequently greater powers of research into the unknown than we possess. Those persons, who were called Mahatmas, or sometimes the Adepts of *Occult* science, had got a doctrine, which was the result of their investigation. It was a matter of absolute knowledge to them—because by their experience, which extended over a very long period and over an immense area, it was not merely a matter of conjecture. This doctrine which they held and taught as a matter of absolute knowledge, regarding both material and spiritual things had been in existence for ages. He would try to explain what that doctrine was. It taught first that all is subject to change, that nothing was fixed and immovable, but what was, is not necessarily what is or what shall be, so far as its condition is concerned. That there was a movement, and that the tendency was towards perfection. That perfection was always being worked towards and the progress was not even and continuous so far as could be supposed by conditioned beings like us, but that it was a movement in cycles. That there were periods of activity and rest, but that each period, whether on a small or a large scale, is always something building up more and more toward a grand magnificent end, which is held in view as an ultimate possibility. Those periods of change from activity to rest were called in Sanskrit *Manvantara* and *Pralaya*. We human beings were the *microcosm* of the *macrocosm*, so that our whole lives we have intervening activity and rest. Death was one of those periods of subjective rest which the human ego or soul had to undergo in the process of evolution towards the higher state. That doctrine when applied to the *Macrocosm* was sometimes called the doctrine of emanation and absorption. During the period of universal rest there was a period of the unknowable, and for us unthinkable, condition of absolute existence and absolute consciousness, but this was the only one reality. The period in which every thing is in a state of quiet unconscious rest did not last for ever. There came a time when the night was passed and there was renewed activity in the universe, and there was emanation from the Supreme called *Mulaprakriti*\* of a power or powers which vivified all that is and

\* The reader should not here lose sight of the fact that *Mulaprakriti* may be said to be identical with the *Supreme* only in the state of *Pralaya*. *Mulaprakriti*, or undifferentiated cosmic matter as it is interpreted, is that aspect of *Parabrahm*, which forms the basis of the phenomenal *Universe* during the day of *Brahma*, while *Parabrahm* is that hypothetical abstraction which remains immutable both during the day and the night of *Brahma*. (See the article on the *Victims of Words* in the February *Theosophist*):—

then became in the aggregate two powers called *Purush* and *Prakriti*; those two powers combined with the intelligence resulting from their action formed the *trinity* of everything in nature. Now they believed in the vital importance of that one vivifying active spirit which animated all, and called it *the one life*. It was the one existence which always is and always must be. He proceeded to speak of the one vivifying energy, tracing the energy from its source in the sun's rays into wood, the growth of which was caused by the sun and might be regarded as an accumulation of the sun's power. The scientist said that energy was incessant and that matter was indestructible, but he could not go farther. He did not know why energy acted upon matter in a particular way. He did not know,—or perhaps did not care—why it was that there should be that continuous action of life always expanding and give rise to more developed and perfected forms of being, always tending to evolve conscious life out of inert material. The occultist *did* care, because he knew that the greatest matters of fundamental consequence to our very being were involved. Thus the Theosophist, who was one who generally aspired at becoming an occultist in time, was much less an Atheist than the ordinary man of science. The scientist did not approach the height to which the occultist soared. Occultism was beyond the reach of the scientific man. A true occultist was a true philanthropist; he was always an optimist and always hopeful, knowing that there was a brighter and better time to come. Occultism taught them that their acts should be directed toward the attainment of some higher end. The further they went along the right path the more contented they became, and the more they benefited mankind. The more they exerted themselves towards the common object the more they were able to throw down the barriers to progress, consequently the more they gave rise to unity, and co-operation and happiness among the various races of men. Theosophy was essentially practical, and to the Theosophic doctrine belonged the utilitarian doctrine. The Theosophist believed that anything that was useful or necessary to physical happiness should not be despised, but should rather be recorded in the light of a means to an end. It was not sufficient to say there was a higher state, and that it was no use to try to be good here. But it also taught that it is not sufficient to look upon this life as an end in itself, but that we should endeavour to realise it as extremely important in its right place, as a means to a truer and higher end. Wealth too must not be despised, but it should also be rightly appreciated and understood. The modern scientific economist was able to point out that money was not wealth itself, but merely its temporary representative and a medium of exchange or distribution, and that an individual or a nation should work for the purpose of attaining rather money's worth than money, rather the end itself than merely one of the means. The Theosophist or Occultist, said that although humanity taken as a whole intuitively desired that which was useful for their progress, that was to say real wealth, yet there were very many things which people desired, which were exactly the opposite of wealth rightly understood, and that the desire for money itself was often fanatical and unmeaning. The occultist knew that true or real wealth meant accomplished and accumulated work, work which was useful or needful towards some true end or stage in the evolutionary progress of humanity, in other words properly concentrated *Cosmic Energy*.\*

A vote of thanks to the lecturer concluded the meeting.

The above report of Mr. Lane-Fox's Lecture does not give some of the most important points dwelt upon at length by the lecturer. This led to a misunderstanding of the situation by some members of our Society who attach importance to the mere word *Atheism*, and to interpret it in a sense not yet accepted by the general public. For the edification of our brothers of that phase of mind, we copy below the reply signed "Another Theosophist," from the *Philosophic Inquirer*, to a "Theosophist" who took up the former attitude. We would also draw their special attention to the article on "The Metaphysical Basis of Esoteric Buddhism," which will be found in another column.

B. S.

#### "ARE THEOSOPHISTS ATHEISTS?"

"A Theosophist" in the *Philosophic Inquirer* of the 6th Instant, seems to misunderstand entirely the scope of Mr. Lane-Fox's lecture on the above subject, at the Patechappal's Hall, Madras. With the permission of my good brother, I shall here show how his charge against the lecturer of going against the rules of the Society, does not hold water. The Theosophical Society is sometimes charged with atheism—that word being associated in the minds of the general public, as he (Mr. Lane-Fox) was careful to explain, with a notion that it has

\*To illustrate the position, which Theosophy takes in regard to Theology and Science, Mr. Lane-Fox concluded his lecture by reading the following passage of "Isis Unveiled," Vol. I. page XIV.

"Deeply sensible of the Titanic struggle, that is now in progress between materialism and the spiritual aspirations of mankind, our constant endeavor has been, to gather into our several chapters, like weapons into armorios, every fact and argument that can be used to aid the latter in defeating the former. Sickly and deformed child as it now is, the materialism of to-day is born of the brutal yesterday. Unless its growth is arrested, it may become our master. It is the bastard progeny of the French Revolution and its reaction against ages of religious bigotry and repression.

To prevent the crushing of these spiritual aspirations, the blighting of these hopes, and the deadening of that intuition which teaches us of a God and a hereafter, we must show our false theologians in their naked deformity, and distinguish between divine religion and human dogmas. Our voice is raised for spiritual freedom, and our plea made for enfranchisement from all tyranny, whether of *Science* or *Theology*."

B. S.

no belief in any higher aspirations or any future existence, limiting its operation to grossly mundane affairs with no spark of philanthropy in it. The lecturer had to show that such an idea was entirely erroneous in regard to the Theosophical Society: he was not there to wage a war of words, which has been unfortunately the cause of many an unprofitable dissension. The word was understood in a certain sense and he desired to prove that in that sense the Society was not atheistic. He distinctly began by saying that the Theosophical Society was open to persons of all shades of belief, and that as such it could not be identified with any particular form of faith. He laid great stress upon this fact and also added further that hardly any man who had given any thought to the subject, could be found outside of the Lunatic Asylum, who did not believe in an unknown cause, a supreme power, as the basis of all phenomena. (Of course there may be some who may not have thought over the matter and had therefore to be put out of consideration then.) Therefore, as soon as a person realised this truth, he became a Theosophist, whether he joined the Society or not. It will thus be apparent that what the lecturer wanted to impress upon his audience was the fact that there was *no atheist in the sense in which the word was generally understood and interpreted*, adding that the word atheism was in fact a misnomer. It is now for the readers to judge whether in this manner he respected and defended the position of those who choose to call themselves atheists—transcendental if you please—as opposed to believers in a Personal God—or whether he disrespected their belief as my brother is pleased to suppose. In strength of my assertion, I have to refer the reader to the report in the *Madras Mail*, where Mr. Lane-Fox says that a true Theosophist refuses to personify with human attributes that Supreme Power.

Again I beg to emphasise the point that Mr. Lane-Fox was in the Hall to defend an *idea*, not a word; and his scientific explanations were clear on the point. He did not say plainly, but what he led his intelligent and attentive hearers to infer was that a true Theosophist—not a mere member of the Society, who may be an agnostic, although not an atheist as commonly understood—was a cosmopolitan. As such, he could be a Pantheist, a Monotheist, an Idolater—nay even an Atheist—all depending upon the stand-point from which he would then argue his position. Just as a mountain top could be reached by various paths, so truth could be perceived from different aspects, and to realise the truth from all its aspects and its numerous stand-points was to become a true Theosophist. He was a Pantheist, because he recognised the existence of that Supreme Power as universally diffused; he was a Monotheist, because he admitted of only one eternal, infinite, absolute existence—a Unity; he was an Idolater, because Nature was his idol by the abstract contemplation of which he realised the non-natural; he was an Atheist, because he refused to personify that Supreme Power, or, in other words, to drag down the Infinite to the level of the finite, by investing it with human attributes. All these stand-points were beautifully presented by the lecturer to an intelligent and attentive thinker. What a superficial thinker generally falls a prey to and what every abstruse metaphysician always avoids, is to be—a "victim of words." This only reminds me of a lecture of Col. Olcott's. After he had finished, one of the audience asked him to substantiate the truth of what he had said by exhibiting a phenomenon. All that the Colonel could and did say was that he could give explanations to the people, but he had not the power to furnish them with brains to be able to understand him—the request of the wisacre being evidently in direct opposition to the spirit of his lecture which treated of transcendental philosophy.

ANOTHER THEOSOPHIST.

9th April, 1884.

This controversy simply shows that Theosophy has no particular creed.—Ed.

(Continued from the March Number of the Theosophist.)

#### MEDICAL MAGNETISM AND THE HEALER MAGNETIC.

Now it is my purpose to show in a few words the relation existing between the magnetic system of treatment, Homeopathy and Allopathy. There is a sad want of peace between Allopathy and Homeopathy. Each wages a constant warfare against the other. Each condemns the other as being useless, irrational and inefficacious in the extreme. Although there is a constant jealousy and warfare between Homeopathy and Allopathy, yet to the right observer both are equally good and useful. Although the principles of both the systems are quite different from each other, yet it cannot now-a-days be denied by anybody that Homeopaths as well as Allopaths do every now and then cure manifold diseases by their respective systems. Here arises a very important question of itself in every thinking mind. It is this:—How can both the systems accomplish the same very end when the doctrines they profess and stand upon are diametrically opposite to each other? To this my simple answer is that although the doctrines they profess are quite opposed to each other yet I am in a position to presume that there is a truth common to both. In the absence of that common truth, they could not accomplish the same

very end. It is that common truth which has given to both of them the respectable positions they enjoy. Deduct that common truth from them and you will find in them nothing worthy of remark. What and where is that common truth cannot be positively pointed out in the face of antagonism. But so far as I can safely proceed to say, the doctrines of both Homeopathy and Allopathy are found in happy harmony in *Magnetopathy*. I think every one will be exceedingly happy to find the two ever antagonistic principles lying in one and the same place in perfect harmony. The fundamental doctrine of Homeopathy is "*Similia similibus curantur*," *i. e.*, the similar cures the similar. This doctrine is a part of the doctrine of Magnetopathy, for it has been shown plainly that Magnetism can create disease as well as it can cure disease. In this respect the doctrine of Magnetopathy is quite Homeopathic. Again, the fundamental doctrine of Allopathy is "*Contraria contrariis curantur*," *i. e.*, contrary cures the contrary. This is also a part of the doctrine of Magnetopathy, for it has been shown plainly that the human body gets diseased when the head is magnetised by the north pole, while it becomes healthy when the same is magnetised by the opposite or south pole of a steel magnet or the magnetic healer. In this respect the doctrine of Magnetopathy is Allopathic. In short the doctrines of both Homeopathy and Allopathy combine to make up the unit of the grand doctrine of Magnetopathy. Therefore the systems of Homeopathy and Allopathy may wage war against each other, but Magnetopathy can never do so against any of them. Rather finding them both in its own bosom, it binds them both by a tie of affection. It bids them make peace with each other and work for the good of mankind. At last it is not out of place to show that the modes of magnetic treatment that have up to the present time been invented and practised by some European physicians are quite different from that already discussed in the foregoing pages. In times gone by long since Mesmer, Dr. Reichenbach and Dr. Hahneman used steel magnets as a remedial agent in the treatment of manifold diseases. How far they were successful in combating with diseases is now beyond our power to ascertain. But so far we are in a position to conclude that, had the modes of their employing magnetism been very successful, they would not have been so much neglected by the medical profession at present. Their present obsolescence is a proof of their not having been so successful.

Frederic Antony Mesmer, a German physician, found out by experiment the curative property of the steel magnet, but he did not long use it for the treatment of diseases. He ere long found an analogy between the steel magnet and the human body, and by the force of his *will-power* used the magnetism of his own body to cure the indispositions of others. The mode of applying animal magnetism by *will-power* for the treatment of diseases and various other purposes is popularly termed Mesmerism after his name. That Mesmerism, having very little connection with my mode of applying instrumental magnetism, deserves no particular mention here.

Baron von Reichenbach, an illustrious German philosopher, made various investigations regarding the properties of steel magnet and its relation to human body. He found by experiments that the human body was affected by the touch of magnets and by the influence of terrestrial magnetism. He speaks of a man having his limbs made rigid and consciousness lost altogether by the action of a powerful magnet presented to him from such a distance as the room he was in permitted. He also remarks that in some places in Europe man keeps health by lying down in bed with his head placed northward and becomes uneasy by lying down with his head placed southward. He again observes that, in some other places in Europe, the effects produced from lying down are quite contrary to those mentioned above. He assigns no reason for the effects thus observed in different places.

One might imagine that the philosopher in question formed his conclusions from observing the effect of lying down with his head placed both northward and southward for a considerable length of time. No, that was not the case.

He says in his own language that he observed the effects by making the subject of experiment lie down in each place for an hour only in the direction he desired. How far therefore his observation on the subject can safely be relied upon is left to every intelligent man to determine. Further his experiments on the subject have not up to this time been verified by any other philosopher, and therefore they may be called empirical.

He also remarks that the two hands of a man are the two magnetic poles, and that the head, eyes and mouth, are the foci where the Magnetic force appears to be concentrated. This he asserts to be the reason why passes with the hand and gazing with fixed eyes are the most powerful means of mesmerising. This fact perfectly disagrees with the results of our actual experiments which have undoubtedly established that the palms of the two hands are but the two branches of the south pole, and head, eyes and the mouth are but the parts of the north pole.

Reichenbach further observes that the magnetic light emanates from the hands of sensitive persons as well as from the poles of steel magnets. He says that the light issuing from the north pole is blue and that issuing from the south pole is red. The property of the north pole is grateful coolness and that of the south pole is disagreeable warmth. The right hand of man, being in his opinion the north pole, produces cooling sensation, and the left hand, being the south pole, produce warming sensation. From this it is plain that, when he desired to cure any indisposition of the human body, he produced either coolness or warmth according to the nature of the indisposition, by causing either the north or south pole of a magnet or the palm of right or left hand to be passed down along the body indisposed. How far this mode of applying steel magnetism was successful in removing the ailments of the human frame is a matter of great doubt. It is to be regretted that all these researches made by Baron von Reichenbach are in sad variance with the results of our most careful experiments repeated over and over again on the magnet and the human body. In the cold climate of Europe they might have been all solid and true, but in the hot climate of India they appear to be a mass of vapour. Dr. Hahneman, the great founder of Homeopathy, has noted down in his *Materia Medica*, the different kinds of systems which the two poles of steel magnet can severally produce on being applied on the different parts of a healthy body. The intention of his so doing is according to his doctrine of "*Similia, similibus curantur*" to apply either of the poles to a certain part of a diseased body, for the cure of such symptoms, which that pole is found to produce on the same part of a healthy body. One simple example would suffice to explain the subject more fully. Suppose the application of the south pole of a steel magnet on the eyes of a healthy body makes them red, inflamed and painful. Now, in accordance with the doctrine of the doctor, the application of the very same pole of the magnet to another man's eyes which have been inflamed and painful for some reason or other would cure them. Whether Dr. Hahneman himself carried on this mode of treatment in what we call real diseases with good results is not clearly stated by him. Supposing this mode of treatment to be efficacious, it is neither in accordance nor in variance with our mode of magnetic treatment, for it has no connection with our terrestrial magnetism. In consequence thereof we need not dwell upon it at large.

A few years since there have been some persons in England who have been using magnetism empirically for the treatment of diseases. Amongst them may be mentioned the names of Herring, Dr. Scott, Seymour,

Whetings and Welton. Mr. Herring has invented a magnetic brush for baldness and neuralgic pains in the head. He has set a small horse-shoe magnet flatly behind the brush and has arranged a few rows of steel bristles on its front side. The steel bristles, being in contact with the two legs of the horse-shoe magnet, are necessarily magnetised by it in such a manner that the points of half the number of bristles are rendered the north poles, while those of the other half are rendered the south poles. In consequence, when the brush is used in combing the hair, both the north and the south poles of a few hundred of small magnets act simultaneously on the head. This mode of operation is according to our theory inefficient in the extreme, for the effects produced by the two opposite poles at the same time on the same spot are sure to neutralise each other. Moreover the magnetic brush having no connection with the terrestrial magnetism which is acting constantly on our body, and which is the basis of our mode of magnetic treatment, deserves no further discussion here. I should only say here that, had the points of all the steel bristles of the brush been true magnetic south poles,\* and had the brush instead of sliding along the head from up downwards been held stationary on the crown of the head, it would have been deemed as a magnetising instrument of our system. Dr. Scott has invented a magnetic brush which he calls Electric Flesh Brush. He alleges that his brush quickly cures rheumatism, gouts and all aches and pains resulting from disordered blood and other causes.

The brush is similar to Mr. Herring's magnetic brush in every respect except one. In Herring's brush the bristles are made of steel, while those of Dr. Scott's brush are made of horse-hair. In consequence the magnetisation of the head effected by Herring's brush is direct, while the magnetisation of the head by Scott's brush is effected through the intervention of horse-hair. Our remarks regarding the efficacy of Mr. Herring's brush hold equally good in the case of Dr. Scott's brush. Some of my patients have perseveringly used Dr. Scott's brush, but unfortunately have derived neither good nor bad results from it.

Mr. Seymour, the Medical Electrician of Guys's Hospital, has invented some magnetic appliances which he calls Amynterion appliances or Magnetic curative appliances. He makes a paste composed of steel filings and India rubber and constructs different kinds of bands and pads with that composition. Afterwards he magnetises these bands and pads by putting them into suitable coils excited by Galvanic batteries. Mr. Seymour advises his bands and pads to be worn on the diseased part of the bodies: consequently his appliances are named Lung Invigorators, Chest-protectors, Spine Bands, Knee Caps, Anklets, Wristlets, Pad Soles, Throat Protectors, Belts, Friction Gloves, Necklets, &c. &c. In these appliances the magnetic poles are used indiscriminately without paying any regard to terrestrial magnetism which, in our opinion, is the chief source of human health. How far these appliances are efficacious in removing disease has not been experimented upon by myself. They may prove efficacious to some extent when they are by chance applied to the human body in the manner in which we use the horse-shoe or the bar magnets to it for the cure of diseases.

Mr. Whittings of London has recently invented a kind of magnetic appliance for the cure of certain diseases which he calls "Magnetod." According to the seats of diseases his Magnetod appliances are differently constructed and are termed *Lung Invigorators, Chest Protectors, Throat Protectors, Spine Bands, Friction Gloves, Wristlets, Knee Caps, Corsets, &c.* He alleges that by his Magnetod appliances Bronchitis, Asthma, Conges-

tion of the Lungs, Pleurisy, Palpitation of the Heart, Lumbago, Sciatica, Gout, Neuralgia, General Debility, Nervousness, Hysteria, Paralysis, Headaches, Constipation, Deafness and Wakefulness are quietly relieved and cured.

From the facts just now stated, it becomes evident that the Magnetod appliances of Mr. Whiting are in every respect similar to the Amynterion or Magnetic appliances of Mr. Seymour which have been described before. The principle upon which both of them are based and constructed is virtually the same. The only difference between the two is in shape, size and color. Another peculiarity of the Magnetod appliances is their being perforated throughout. In consequence the Magnetod appliances deserve no separate remarks regarding their efficacy in curing diseases.

## Letters to the Editor.

### A REPLY TO "A NATIVE THINKER" ON THEOSOPHY."

In the January number of the Journal of the Theosophical Society, there is an extract from the *Madras Mail*, headed "Theosophy," and written by "A Native Thinker." The writer asks why occult science has not bestowed upon us some efficacious remedy for cholera or snake-bite, so as to stem the immense loss of life which takes place in India year after year. "A Native Thinker" is evidently not aware that occult science has actually given such a remedy to the world thousands of years ago, but the world heeded not and must suffer the consequences. I need not tell "A Native Thinker" that, according to the teachings of Theosophy, it is the holy men of all ages and generations who have been, to the exclusion of all others, the custodians of the mysteries, which in their *ensemble* constitute, or are supposed to constitute what goes by the name of the Occult Sciences. Now, holy men have at all times proclaimed that those who live a truly pious and godly life shall be safe from disease, and secure even against the bite of serpents.

The question as to how far the above assertion is true, or not, has nothing to do with the subject under discussion. "A Native Thinker" wants to know: Why occult science has not proclaimed to the world a remedy against cholera or snake-bite?—I say in reply, that occult science has done so from ancient times up to this date. Owing to my ignorance of the Sanskrit language I must leave it to the learned editor of the *Theosophist* to bring forward the necessary evidence from the ancient Hindu writers. I shall restrict myself to the Bible and its teaching on the subject.

In Exodus (xv. 26) we find the following sentence as spoken by Moses to the people of Israel: "If thou wilt diligently hearken to the voice of the Lord thy God, and wilt do that which is right in his sight, and keep all his statutes, I will put none of the diseases upon thee which I have brought upon the Egyptians, for I am the Lord that healeth thee." Under similar conditions we find a similar promise in the 5th book of Moses: "And the Lord will take away from thee all sickness." As to immunity from serpent bite, we find it recorded (Numbers xxi. 4—12) that Moses did protect the Israelites while in the desert against the consequence of snake-bites. Of the prophet Daniel it is recorded that he came out intact from a lion's den, into which he had been thrown; and there is somewhere a passage in Job—a book said to be older than the books of Moses—where it is stated that even the beasts of the field make peace with the man of God.

Coming now down to the time of Christ, we find the same doctrine enunciated in the address he delivered to his apostles, (Mark xvi. 15 20):—And he said unto them, "Go ye into all the world, and preach the gospel to every creature; he that believeth and is baptised shall be saved, but he that believeth not shall be condemned; and these signs shall follow them that believe: In my name shall they cast out demons; they shall speak with (new) tongues; they shall take up serpents, and if they drink any deadly thing it shall not hurt them; they shall lay hands on the sick, and they shall recover. . . . And they went forth, and preached everywhere, the Lord working with them and confirming the word with signs following."

\* Note.—In English books on Magnetism the exact north pole of a magnet is termed south pole, and likewise the exact south pole is termed north pole. But in French books reverse is the case. They call each by its true name.

He that believes and is baptised shall be saved! Do you want to know what the baptism of Christ was? Read the 3rd chapter of Matthew, where John the Baptist, the forerunner of Christ, is reported to have said: "I indeed baptise you with water unto repentance; but he that comes after me (Christ) is mightier than I, whose shoes I am not worthy to bear, he shall baptise you with the holy spirit and with fire." There, this is the baptism of Christ. And he who is thus baptised, or imbued, with the holy spirit, or the spirit of holiness, and believes, is promised by Christ to be safe against the effects of deadly things or serpent bites.

The pathology of disease, as enunciated by Christ, can be learnt from the way he is reported to have cured a man afflicted with palsy. (Matthew ix. 6) Arise, said he to the sick of the palsy, arise, that ye may know that the son of man hath power on earth to forgive sins. If "A Native Thinker" will now turn to the Yoga Sutras of Patanjali, he will find that a similar doctrine has been held by the ancient Hindus. Of course this concordance of teachings at times and places so far distant from each other is not brought forward with the intention to prove the truth of the doctrine; what this concordance however undoubtedly proves, is the fact that men versed in the occult sciences did hold the same views on the subject at various times and places.

That Christ was a master of the occult sciences, that he selected his disciples with the view of imparting to them his knowledge, can be seen from the following verse: (Matthew XIII. 11.) "Unto you it is given to know the mysteries of the kingdom of heaven."

Are then all the inhabitants of Hindustan, in order to be proof against cholera and snake-poison, to become Yogis, in accordance with the doctrines laid down by Patanjali? Is it practical that they should do so? Here Theosophy steps in and teaches us the great lesson that the practice of Yoga (concentration of thought and will power) does not consist so much in the observance of certain postures and the attentive repetition of certain *mantras*; as in a constant watchfulness over the inner mind, by means of which man may be expected to deal, as far as his requirements are concerned, with worldly affairs, without being thereby drawn into the vortex of materialism. Such a state of constant watchfulness may, by itself, be far from constituting the true Yogi or adept; it is however sure to render the individual concerned receptive of the adept's influence. And since adepts are supposed, according to what we have seen before, to be gifted, not only with the virtue of immunity from disease, but also with the power of healing the diseases of others—I should say that the question of "A Native Thinker" finds in Theosophy its complete and practical solution. For however little practicable it may be that every man should, at the present round of humanity, strive to become an adept; it is practicable and, indeed, highly desirable, that each and all should live such a life as would render the respective subject easily receptive of the healing powers of the adept.

That this view of the subject is not spun out of my own imagination, but has, moreover, been acted upon—with what amount of success I am unable to say—by the early Christians, may be seen from the following passage of the Apostle James (v. 14.) "Is any sick among you, let him call for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord, and the prayer of faith shall save the sick, and the Lord shall raise him up, and if he have committed sins, they shall be forgiven him."

I am afraid, all I had to say in answer to "A Native Thinker," will after all hardly satisfy him. He, with a good many others, might, moreover, be likely, at first sight, to look upon my attempt to solve the question as far-fetched, if not worse than that. I confess, not a very long time ago, I myself would have looked upon the explanation I have just given as a sort of subterfuge. I would have said to myself: "There is an easy way offered to the Mahatmas of proving their superior knowledge, and of benefitting mankind at the same time; they have only to mention the cholera remedy, or the antidote to snake-bites: instead of this they tell us to live the life of a saint—certainly no easy matter, and the consequence will be the world will be going on as before and man will continue to die by the thousands of the cholera scourge."

Now, first of all, "A Native Thinker" starts with the supposition that there is, somewhere in Nature, some such thing as a cholera remedy—a supposition which, to say the least of

it, is gratuitous.\* And the same may be said with regard to snake-bite. A long series of statistics have proved that the allopathic method of cure is simply helpless in the face of cholera, if not worse. The average mortality of cholera patients, when left to themselves, is 50 per cent, under allopathic treatment, the mortality, the average mortality, has sometimes risen to 60 and 70 per cent. Homœopathy boasts—rightly or wrongly is out of the question for the present—of a far more favorable result. But then Homœopathy repudiates the idea of any cholera specific altogether. Homœopathy proclaims that it is an idle task to search after a certain specific for a certain disease; for there is none. Homœopathy insists moreover that it is not the disease that is to be treated, but the patient; and since patients, even when apparently laboring under the same pathological disorder, widely differ with regard to age, sex, habits of life, climatic and hereditary influences, temperament and constitution, the curative agent must be different with different individuals. If it be true that a pure and pious life makes men proof against disease, then the remedy in us surpasses in universality by far all what outward Nature can offer us in this respect. Meditation, as usually understood and practised, must appear as a poor and wretched therapeutic patch-work indeed, in comparison with the health and vigor-giving virtue of a spiritual life.

Now, as far as I am able to understand Theosophy, I believe I am not wrong in saying that the Mahatmas are ready and willing to awaken in all those who are earnestly prepared for it, just such a mode of inner life as would conduce to immunity from disease. And "A Native Thinker" is not satisfied with, and thankful for, this favor? Is not prevention better than, and by far to superior, cure?

The fact is, "A Native Thinker" doubts altogether the existence of the Mahatmas and the very existence of occult science; he would however be inclined to give up his doubts, if the alleged possessors of esoteric knowledge could, or would, reveal to him and to the world at large a cholera specific, or a specific against snake-bite. So long as this or something similar is not done, he calls upon his countrymen to pause before they commit themselves to a belief in the revelations of the Theosophical leaders.

May I request "A Native Thinker" to listen to the following story. There was once a habitual drunkard, who felt that he is gradually becoming shaky and nervous, wretched and miserable. Having heard of a famous doctor, he made up his mind to go and consult him. The doctor perceived that he had to do with a drunkard, and told his patient that he required no medicine; all that is wanted to restore his health is to give up the pernicious habit. "But," said the patient, "my neighbour, the apothecary, told me that he has a patent medicine in stock, by the name of Pick-me-Up, which would counteract the injurious effects of drink in an hour's time." "Then why don't you try it?" asked the doctor. "Because I thought, you, in your superior wisdom, could give me a still better advice." "Well that is what I have actually done."

I leave "A Native Thinker" to draw from this little story his own conclusions. I need hardly remind him that in the eyes of only wise and holy men our usual worldly life, with its thousand worries and ambitions, is no better than the life of a drunkard is in our own eyes.

Let us first get sober and clear-minded before we venture to ask questions, and expect to get suitable answers! In other words, let us first live the life of purity of mind and body, and see what will come out of it afterwards.

L. S.

#### TAROT.

WOULD it be too much to ask the Editor of the *Theosophist* to explain "the manner of reading the hieroglyphs of the Tarot" as mentioned in Eliphas Levi, page 355, *Rituel de la Haute Magie*? I have pored over the matter but have not succeeded in getting at his meaning. I have the Tarot Italian, French and Spanish.

*Note.*—We regret we can say no more than that the "Tarot" may be looked at as a circle, a square, a five pointed star, or a cross. A real occultist can work upon this hint and, trying to explain the mystery from these four stand points, can get at its real meaning.—T. S.

\*The recent researches of Dr. Koch however seem to indicate, that there is a specific remedy for cholera, because the cholera-cocilli cannot live in the gastric juice, if it contains a certain amount of acid.—Bigotry and Dogmatism are just as distasteful in Medicine, as they are in religion.—A. B.

## EXPLANATION WANTED.

A FEW years ago I was visiting some relatives in Z..... Switzerland, one evening there was a social gathering at our house, and it was proposed to try to hold a circle. The Protestant minister who was present objected, but his objection was overruled, and the table began to tip. The spirit (?), on being asked its name, gave that of a seamstress, who had died only shortly before. On hearing this name every one began to laugh, because the said seamstress had been a very queer and eccentric person; but soon this hilarity was followed by a more serious mood, because on being asked where she was, she (the spirit) said she was in hell. She then related that she had poisoned her mother, gave the name of the poison, the name of the place where it was bought, and other detailed circumstances. She also gave the particulars of her own burial and the text of the funeral sermon; but this part of the communication can be explained by the presence of the identical minister who preached it.

However there was no suspicion about her mother's death having been an unnatural one; but public opinion, being aroused by this spirit communication, it provoked enquiry and investigation. The body was exhumed and examined, the poison was found, the purchase of the same traced to the indicated chemist shop, and the story corroborated in every detail.

A. v. H....

*Note.*—The corroboration of the facts concerning the murder of the communicating spirit's mother will perhaps be taken by some as a proof that it was a "genuine spirit" communication. Let us see, however, if any other explanation, more reasonable and scientific, can be given. It has been stated on the authority of our occult doctrines that in the case of ordinary humanity, the *shell* (composed of the fourth, and the grossest portion of the fifth, principles) survives the death of the physical body for a certain period. This period largely depends upon the *Karma* of the individual, whether in mental desires or physical acts. Thus it is not difficult to conceive the possibility that the feeling of repentance for the horrible act of *matricide* may have so strongly impressed the dying thought of the seamstress as to effect for the time being the union between the fourth and the lower portions of the fifth principle, wherein reside memory and physical consciousness. The presence of the minister—one of a class whose whole bent of mind, owing to professional proclivities, is generally directed towards penitent sinners—and the further fact of his being the very priest who officiated at her funeral are sufficient to give the *shell* a stimulus, if any were needed (since the seamstress had died but a very short time previous to the seance and consequently hardly needed any) to give vent to a thought of so oppressive a nature. The confession of the "shell" of the seamstress that she "was in hell," is enough to show to any thinking mind that the communicating principle could not have been a "spirit," and spoke of hell simply because it found the ready picture of one in the priest's brain. It is needless to mention here that occultism admits of no orthodox Hell, although evil personalities have their various degrees of mental suffering in the state of *Avitchi*.

D. K.

## WHAT SYSTEM OF MEDICINE IS THE BEST ?

You are perhaps aware that I am by profession a medical practitioner besides being the teacher of Medicine in the local Medical School. It is therefore of the greatest importance that I should know the true laws of cure and learn to distinguish between what is good, and what is indifferent in each system of medicine, and also between a sound and a false system.

Will you therefore kindly take the trouble to ask any of our Reverend Mahatmas whether

Allopathy.  
Homœopathy.  
Mesmerism.  
Electrotherapy.  
Hakemec or the Greeco-Arabic system.  
Ayurveda as taught in Charaka and Susruta, or

Ayurveda as taught in Tantras and later Hindo works, is to be preferred as being based on true principles. In case there be truths in each of the above systems, I am anxious to know in what diseases each system is superior to the others.

Yours fraternally,  
N. G., F. T. S.

To comply with the request of our brother, to tell him in what diseases each system of medicine is superior to another, it would be necessary to write a complete work on Therapeutics. If a person needs mechanical treatment, the homœopathic plan of salvation would be of little use; while in other cases the homœopathic treatment

would do less harm than the heroic practice of Dr. Sangrado. Electricity may do good or may do harm, according to the manner in which it is applied, and while the magnetism of a pure and unselfish mesmeriser can do no harm, that of a selfish and ignorant magnetiser is always injurious.

Shakespeare says: "There is good in every thing." We would therefore advise our brother to study the nature of disease, and then practise that system, which *he understands best*.

A. B.

## A SINGULAR CASE.

A CORRESPONDENT writes:—

"The *Banner of Light* has a curious case given in its columns. 'There is,' it says, 'a gentleman, in the city of New York who, until latterly, was one of its most able as well as respectable merchants. Loss of mental faculties is a frequent consequence of long-sustained application to a single subject, but in this case there is a peculiarity of affection that may interest many readers of the *Banner*:'

Notwithstanding the complete decay of this gentleman's mental faculties, he writes as wise and sensible letters of business to-day as he ever did, and this, although he is utterly incapable of reading what he has written; a description of a case that is unprecedented, so far as this writer has witnessed.

I suppose that in this case only the 4th Principle is active; but what has become of the fifth? Has it evaporated or become latent or paralyzed? Is a man in his dotage only a shell? Or has the connection ceased? *If a shell, what has become of the fifth principle?*

L. A., F. T. S."

*Ed. Note.*—We think it is the reverse. It is neither the 4th principle—the only one alive in the period "of dotage" or insanity—nor the 5th that is active, for both are, so to say, paralyzed, in the case of the New York gentleman. Everything in the brain is dead, or rather in a cataleptic stupor—with the exception of that portion called in physiology sensigenous molecules, which go to form the physical superstructure or foundation of memory in our brain. And even in that portion of the brain-substance only those molecules are really alive and active which are directly connected rather with mechanical impulses, long acquired habits, &c., properly speaking, than with memory *in toto*. We have heard of several cases of insanity upon all and every subject except that which had degenerated into a mental and physical habit. A portrait painter, a lunatic, when asked to draw some particular person whom he had known, would paint his likeness from memory far better than he might have done during his days of perfect health when having that person before him at a sitting. Nevertheless, as soon as the likeness was completed, he used to see invariably in it some animal, asking whether that dog or cat, or bird was not "very very natural and beautiful."

## SPIRITS AND ELEMENTARIES.

MR. E. WILKE of San Francisco, U. S., America, inquires whether Madame Blavatsky has changed her mind in regard to the character of spirits communicating at spiritual seances; because "Isis Unveiled," Vol. I., page 67, says: "We are far from believing that all the *spirits* that communicate at circles are of the classes called elementals and elementaries. Many, especially among those who *control* the medium subjectively to speak, write, or otherwise act in various ways, are human disembodied spirits."

So far as we know, Madame Blavatsky has had no reason to change her mind, since she wrote the above paragraph. Only the same might have been more explicit, and probably would have been so, if "Isis Unveiled" had been written expressly for believers in Spiritualism. However the subject of intelligences, communicating at spiritual seances, has been more explicitly treated on page 313 of Vol. III. (September number) of the *Theosophist*. It says: "But though elementaries and elementals constitute a large proportion of the performers, there are other classes of actors."—"This class comprises the spirits of sane suicides. They are *Spirits* and not *Shells*, because there is not in their cases, at any rate until later, a total and permanent divorce between the fourth, and fifth principles on the one hand, and the sixth and seventh on the other. The two decades are divided, they

exist apart, but a line of connection still unites them, they may yet reunite, and the sorely threatened personality avert its doom," etc.

Such "spirits" do exist and the complete division of their higher principles from the lower ones does not take place, until its appointed life term is run out, which term cannot be shortened by a wilful act of suicide. They remain "spirits" until the time comes, when in the regular, not interrupted, course of events they would have died. They then die a second death, and the final division of the principles takes place. Such "spirits" may be very much injured by coming in contact with immoral mediums and necromancers.

As regards the purer spirits in the devachanic condition, they cannot consciously communicate with us; but a sensitive person can put himself "in sympathetic rapport with their ray," the soul of the "medium" may become "attuned" to that of the person in Devachan, and speak and act like her, as has been repeatedly explained by Madame Blavatsky.

As to our correspondent's question about Avitchi, we would say that this is a state of wickedness for such, in whom the germ of the sixth principle has united with the lower principles. It corresponds to Devachan; but instead of being a state of enjoyment, it is a state of suffering. It is the place for "Black Magicians."

A. B.

## Acknowledgments.

**SHRI RAJRISHI GRANTHA**, by N. O. Trivedi:—The work is in *Guzerati* and treats of the Aryan Religion. Printed at the Press of the United Printing and General Agency Company, Ahmedabad.

**GUP AND GOSSIP**:—A weekly serio-comic melange of Politics, Society, Literature and the Arts. Calcutta, No. 6, Vol. I (April 12, 1884).

**RELIGION IN GENERAL**:—A lecture delivered at the Anniversary Meeting of the Secunderabad Branch Theosophical Society, by N. M. Duraiswami Pillai Avargal, B. A. Printed at the Gladstone Press, Hyderabad (Dekkan).

**THE BRITISH EMPIRE: its History, Past, Present and Future**, by a Tea-Planter. Printed at the People's Friend Press, Calcutta. The small pamphlet is very unique and grotesque. It tries to show from the Bible prophecies that the English are a lost tribe of Israel, destined to have the political and the spiritual power of the whole world, at the reappearance of Christ, which event is put in the year 1897 as of probable occurrence. While certain past events are shown as the fulfilment of the prophecies, no distinct future events are fixed at a particular period by the same methods. The work is a fair specimen of theological dogmatism and too gross and material an interpretation of what may probably have an esoteric meaning in the Bible.

B. S.

## Answers to Correspondents.

**Mr. Samuel Jonathan, Salem**.—The claims of the Catholic Saint at Goa will be discussed in the next number.

**E. C.**—"Christianity and Theosophy" has arrived too late for insertion in the present number. We will however say, that we see no objection to that kind of Christianity, which you attempt to defend; because it is pure Theosophy, as pure Christianity necessarily must be.

M. DE BOURBON, F. T. S.

We are happy to announce that the hope to which we gave expression in the February *Theosophist*—in talking of the alleged death of the Secretary of our Branch Theosophical Society at Hague—has been realized. The deceased gentleman was the elder brother of our Fellow Theosophist. On seeing the article in question, our brother immediately wrote to the above effect under date the 3rd of March, from Bergen where he had gone on official business. As he is the life and soul of our Branch, it gives us great pleasure to see that he has been spared for the promotion of the work he has so ably undertaken.

## Reviews.

### LA LINGUISTIQUE DÉVOILÉE, (LINGUISTICS UNVEILED.)

BY M. S. LEVY-BING, F. T. S., PARIS.

(Continued from the March Number.)

LET us now cast a hasty glance at the characteristic features that distinguish the two families of speech—Aryan and Semitic.

The roots, the primary elements, or as Max Müller calls them, Phonetic types, to which all words in every language are reducible, are in the Aryan family monosyllabic, like *gam*, "to go;" *kar*, "to do;" *bhu*, "to be;" *shru*, "to hear;" *mri*, "to die;" *juv* or *juv*, "to live;" *i*, "to go;" &c., &c. They have an inherent vitality and are accompanied by inflections which were themselves at one time simple elements, but long anterior to the separation of the races speaking the old-Aryan tongue by a process of excessive attrition and therefore decay, are now scarcely distinguishable from their former selves. These roots, with slight modifications according to certain laws, have made such rich and copious languages as the Sanskrit and the Greek, not to mention such modern highly cultured languages as the German, the English and the French. The subject of these roots or *dhatus* has been so ably and exhaustively handled by the ancient Sanskrit grammarians—from Panini downwards—that they have left nothing undone; but circumstances, too numerous to mention, prevented them from applying their critical and metaphysical acumen to the study of foreign, yet cognate, idioms, and thus anticipate the moderns by building up the science of Comparative Philology. That task was left to Francis Bopp—*clarum et memorabile nomen*—with his numerous followers (mostly Germans) who worked up these materials left by the Sanskrit grammarians, with a zeal and devotion quite astonishing into that impregnable stronghold which M. Levy-Bing is attempting to destroy with his feeble and clumsy Phœnician battering ram.

The roots of the Semitic languages are, as a general rule, trilateral, as *talaba*, he called; *hasaba*, he counted; *qatala*, he cut; *kolama*, he wrote.\* The inflectional changes are made by adding—of course in accordance with certain set rules—in the beginning, in the middle or at the end, certain letters called serviles, *a, i, t, n, m, sh, e, k, l, b*.

The paucity of the roots and the artificiality of the formation of derivations and inflexions on a trilateral basis render the languages, which do not differ much from one another, so stiff and heavy that although one of them at least, the Arabic, is the richest in literature of them all, they cannot be compared with the pliancy, freedom and the extreme adaptability to the wants of the human mind which distinguish the roots and the inflectional changes of the Aryan languages. Hence the Semites have recourse to, very often, the most elaborate metaphors for the most common conception, which indeed add a certain grandeur and dignity to their style highly typical of their serious and at times melancholy mode of life and turn of mind.† This is what Canon Farrar says regarding this family in his "Origin of Language:" "They are simple and rigid, metallic rather than fluid; physical and sensuous in their character, deficient in abstraction and almost incapable of metaphysical accuracy. The roots are trilateral in form and so few in number that their meanings are generally vague, being in fact a series of metaphorical applications of some sensible perception. They are deficient in style and perspective; they are, as Ewald observes, lyric and poetic rather than oratorical and epic; they are the best means of showing us the primitive tendencies of language; they may be compared to the utterances of a fair and intelligent infancy

\* The roots have a preterite signification of the third person singular masculine (the Semite verbs have their two genders also, the masculine and the feminine); the *a* sound is to be pronounced like the Sanskrit अ. M. Levy-Bing would write them down as *tlb, hsb, qtl, klm*.

† To support this, our assertion, I could quote a number of authorities; but the student of English only, we may refer to the third lecture of Farrar's *Families of Speech*, and to Chapter XII of the American Philologist's, Prof. Whitney's, *Life and Growth of Language*.

retained in a manhood which has not fulfilled the brilliant promise of its early days."

We have been compelled to dwell a little longer on this point than perhaps we strictly should. But the ingenious author of the book under review is not only bold enough to attempt proving to the philological student that the Aryan Family of languages is derived from the Phœnician and scientifically proved to be almost identical with Hebrew but is ambitious enough to propose in his second Chapter and elsewhere that his Phœnician ought to be made a *universal language all over the civilized world!* The adoption of this measure would, he believes, cut the Gordian knot of the difficulties, which we poor mortals experience in the intercommunication of our thoughts from such a multiplicity of languages. He then exultingly quotes from Leibnitz, who, whilst speculating on the possibilities of a universal language, says that if such a thing existed, it would spare the human race one-third of their lives which they now spend in learning languages. To this kind proposal we can only remark in the words of Horace:—*Risum teneatis amici?* A universal language is not a new idea. Leibnitz, who simultaneously with Newton was the inventor of the Differential Calculus, believed in the possibility of a Universal language. But, unlike M. Levy-Bing, he proposed that a new artificial language be invented for the purpose by a conclave of philosophers. Unfortunately he died before the plan was matured. Max Müller in his third lecture (second series) of his *Science of Language*, gives an analysis of such an artificial Universal language planned and matured by an English Divine, Bishop Wilkin, who flourished in the seventeenth century. But M. Levy-Bing would save us the trouble of concocting an Artificial language and desires to present us with a language already "cut and dried" for universal adoption. One wonders whether he is really serious or merely trifling with the intelligence of his readers by proposing such a scheme. Does he not know that a language was never made as a matter of human convention, nor was it ever adopted in a similar manner by a whole nation, much less by many nations simultaneously and collectively? The making, or the adoption, of a language is the work of time—a principal factor in all human undertakings. It was, we believe, Augustus Cæsar, who complained that he was unable, Emperor as he was, to add a single word to the Latin language such as could be adopted by all the Latin-speaking nations of the Roman Empire.....

Let us now move a step further and see what our science has to say regarding any possible relationship or any points of osculation between these two families of languages. This subject, as well as the still grander subject of the origin of language in general, is fraught with so many difficulties that the Students of Philology confessedly admit, without any reservation or dogmatism, that with their present knowledge their theories are based at best on conjectures, surmises and strange coincidences. Of course our author is equal to the task when he makes this bold assertion—the key-note if we may say of all that he endeavours to prove—"The princes of the Science," he says, "one cannot repeat it too often, have declared formally and unanimously that the origin of words called Aryan is still undiscoverable. It was therefore necessary either to stop short with them before that wall (muraille) which, raised as high as the heavens, formed an insurmountable barrier within and which had guarded for so many centuries the secret of the Indo-European languages—or to make a breach, to dash through that barrier, to penetrate into a new region, to explore it in all its parts, to recognise with certainty every one of those bonds, which bind it to ancient religion, and to show that these two worlds, which have been believed to be absolutely separated from each other, form but only a single whole and splendid universe." He imagines that he has "done it" by attempting to trace the descent of the Aryan languages from his Phœnician, which, in reality, is the Hebrew. He does not point to the latter as the Parent of all the Aryan languages—though he evidently means it, when he so frequently says that "it is identical with the Phœnician," and when he quotes innumerable passages from the Hebrew Bible illustrative of the use of his roots, and not from the few Phœnician fragments that have been preserved to us from the ravages of time. The reason of it is not far off. He reasons that it was the Phœnicians who gave their alphabet to the Jews, and as a matter of history to the Greeks through

Cadmus,\* and thence to the Romans who have spread it all over Europe. So far M. Levy-Bing's treatment of this subject which he embodies in the first part of his work is very able and lucid. In this he shows the different stages through which the art of writing took its origin from picture-writing, thence developing itself into the Hieroglyphics of Egypt, and thence eventually into Phœnician and Hebrew alphabetism.† But the difficulty as regards the origin of the Sanskrit alphabet M. Levy-Bing slurs over, only assuming that its origin is Phœnician—an assumption which has yet to be substantiated, as it is simply an open question among the Philologists of the present day. After having given an importance to the Phœnician alphabet greater than what it seems to deserve, he argues without any show of reason that *because* the Phœnician gave its alphabet to the Indo-Europeans, it has also given them the elements of speech—a logical fallacy in which the conclusion is false, not only on account of the premises being questionable, but also the mode in which the conclusion is derived is quite erroneous, as it attempts to prove much more than *his* premises seem to warrant.

Now let us revert to the points of osculation as I have expressed myself above between the two Families. Philologists are willing to acknowledge that there are such points, and the author in his chapter entitled "The Avowals of Science" (*Les Aveux de la Science*) has taken very good care to give his readers numerous quotations from Bréal, Rénan, Geiger, Schleicher, Curtius and others not only in this connection, but also on those difficulties in their science which they have yet to surmount; as also on those moot-questions that are still undecided and undetermined. M. Levy-Bing's avowed object in doing so is to discredit philology by showing what are the riddles it has confessedly never been able to solve. This is scarcely fair. What science in modern ages would stand the test of such a canon of criticism, nay, what human institution? Now these points of contact seem to depend mainly on the similarity of a number of Aryan and Semitic roots in no way giving us a *carte-blanc* to suppose that the one set is derivable from the other. "General laws," says Farrar, "operative in the formation of all languages, might not be taken for indication of special affinity; who would maintain the identity of quadrupeds and birds from the analogy of their respiratory and digestive system? In the formation of languages certain first principles were necessarily observed by all, and this of course leads to some general resemblances."—*The Origin of Language*, page 199, Note. M. Levy-Bing, it must be admitted, has done yeoman's service‡ by making a collection of these resemblances and coincidences for which the science of Philology can never be too grateful. These, in the opinion of not a few *savants*, indicate a possible though a remote, common source—too far removed to be investigated by modern methods—from which the two streams *may* have flowed, each taking its own peculiar course "at its own sweet will," and each passing on through congenial soils and swelling its volume by accretion and growth in a manner so widely different as to become one of the scientific puzzles of modern times. To give even a few of the author's instances, would inconveniently enlarge this article. But still, we should like to observe that the resemblances between the Sanskrit *Shash* and the Hebrew *Shesh*, meaning "Six," and between the Sanskrit *Sáptan* and the Hebrew *Shieboe*, meaning "Seven," have been treated upon quite fully by writers on this subject.§ Now the Sanskrit षष् *shash*, the zend *Khshavas*, the Lithuanian *Sheshi*, the Ancient Slav *Shesti*, the Gothic *Saihs*, the Latin *Sex*, the Greek *Hex*, all point to an ancient *Kshash* षष् as has been observed by Bopp. And, we know that *sh* ष was never an initial letter in Sanskrit, but is found but in a very few words. And we moreover see that the Zend form here is more primi-

\* Who was very likely an initiated Aryan from Jambudvîpa.

† A graphic and interesting treatment of the evolution of the Roman alphabet, stage by stage, from the Egyptian Hieroglyphics, is to be found in Ballhorn's "*Alphabete Orientalischer und Occidentalischer Sprachen*," pages 8 and 9—my Edition being that of 1873.

‡ Nay, he promises to give us Etymological Dictionaries of the French, the German, the Latin, the Dutch, the Russian, the Italian, the Spanish and the Romance languages. "Avec la justification de l'origine phénicienne pour tous les mots"—with the justification of the Phœnician origin for all the words (literally).

§ Rénan among them, the author in French of a Comparative Grammar of the Semitic Languages—a work filling the same honorable place in somitic philology as Bopp's *magnum opus* in Aryan philology.

tive than the rest.\* We therefore beg to submit to M. Levy-Bing, that the resemblance of the Sanskrit word and its Semitic prototype is probably accidental. For were our methods identical with his unscientific method, we should have to derive tholatter from the former. The same remarks may be made regarding the Semitic name for the number seven. The Sanscrit सप्त *Saptan*, which in this case is the oldest form, † is represented in Zend by *Haptan*, in Armenian by *evtan*, in Greek by *Hepta*, in Latin by *Septem*, in Gothic by *sibun*, in Lithuanian by *Septyni*, in ancient Slave by *Sedmi*. If M. Levy-Bing imagines that the Semitic is the oldest form, he has not only to account for the *tan* in words for "seven" in Sanskrit and other cognate sister languages, but has also to prove by instances as a phonetic law that the Semitic *b* corresponds to the Sanskrit, Greek, Latin, Lithuanian, Slave or Zend *p* (individually and separately) to the Armenian *v* and to the Gothic *b*.

In this connection I would mention an unfortunately glaring instance of the theological bias creeping into the writings of an otherwise cautious and able writer whom I have to quote often for the lucidity of his remarks. I mean Canon Farrar, who in a note in his *Chapters on Language*, (p. 193) says:—"It is not indeed impossible that the Aryans borrowed from the Semites the single number *saptan*, seven, from its mystery and importance in the Semitic system." He evidently refers to the Semite Kabala, that mystic storehouse of ancient Occult lore, which students of Occultism in our Society with the mere glimpses of light that they receive from their illustrious Gurus are beginning to learn, is a *réchauffé* of remotely ancient Aryan science and learning. The reader will thus perceive how theological bias asserts itself in most unexpected quarters and very often limits the intellectual horizon of even the best thinkers of the West.

ERIOPOLES.

#### A SHORT COMPENDIUM OF ASTROLOGY. †

We beg to acknowledge, with thanks, receipt of a copy kindly sent us by the author through Mr. A. Govinda Charlu, F. T. S. The Science of Astrology requires a sound knowledge of Astronomy, which, being a part of mathematics, must be classed among those termed "exact." Unfortunately, however, Astrology has to contend against two classes of persons. One denounces it as a humbug, a sham, a delusion, while the other worships it superstitiously without realising its importance as a Science. As the author, however, of the work under notice does not enter into this question, it is not the legitimate province of a reviewer to force a discussion of the subject. But at the same time the author's concluding remark cannot be too strongly emphasised:—

...We cannot but sink into insignificance, when the gigantic minds of antiquity are brought out in bold relief. With all our enlightenment and scientific progression, we have still much barbarism to unlearn.

The work is in two languages, Kanarese and English, and gives the necessary hints for a beginner, who, if he wants to acquire more extended and detailed information, must dive into the Sanskrit works, so voluminous and so complicated as to confuse him who does not first seek the assistance of a useful pamphlet like the one under notice. In this respect the work is instructive and useful indeed, although the reviewer cannot vouch for its scientific accuracy, since he can lay no claim to a very deep knowledge of the subject. At the same time it must be said that it is a matter of regret that the book does not allude to the most essential condition of success in arriving at correct astrological calculations. The reviewer was informed by a competent astrologer that physical and moral purity are strictly enjoined upon the student. Now one who comprehends the phenomena of conscious clairvoyance will see the necessity of such a condition. Perhaps the reader may say in reply that in that case the horoscope would be the result of clairvoyance and not of astrology. Nothing of the kind, however.

\* Vid. M. Breal's Translation in French of his "Vergleichende Grammatic," p. 227, Vol. II.—(My Edition is that of 1868). Again M. Abel Hovelagne in his "Grammaire de la langue Zonde" quotes many recent authorities in this connection. Vide p. 157 of his book. (My edition is that of 1878.)

Clairvoyance proper is a part of astrology proper, and each is the necessary complement of the other. The former furnishes the details of combinations which the latter, however accurate, cannot in every individual case determine with scientific precision. The author would do well to investigate this matter and say a few words in connection with the same, whenever he should think of getting out a second edition.

B. S.

#### HEREDITARY FACULTIES IN MAN.\*

A book full of thought and provocative of thought is this new one of Mr. Galton's; a most useful book for the student of human nature. In his researches into the faculties of the mind he sometimes comes within sight of the very door of Esoteric Science, and, if he turns back without crossing its threshold, we must ascribe the blame to the unfortunate environment of the modern scientist, not, in this instance, to the man himself. If it were possible for a strictly orthodox Western scientist to become a thoroughgoing occultist, Mr. Galton is as likely an one as any to set the example. He is fearless, candid, systematic, cautious and thorough; the last, one would imagine, to make disgraceful surrenders to expediency or clamour and, after saying that matter includes every potentiality, to eat his words upon hearing the outcry they caused, as a certain other "scientific worthy" did. His present book is the more valuable to our party of Esotericism in that it shows at once the last step forward of Western Science and the gulf it has yet to leap. Those followers of Aristotle, who are so proud of creeping like the tortoise step by step from their "particulars" to their 'universals,' will find, in Mr. Galton's failure to grasp the one Final Vital Truth that lay almost within short reach, one more proof of the impotency of their method to solve the mystery of Man. But let us see what his researches have to show us. His general object is to note the varied hereditary faculties of different men and the great differences in different families and races, to learn how far history may have shown the practicability of "supplanting inefficient human stock" (he talks like one who is dealing with brute beasts!) by better strains and to consider whether it might not be our duty to do so by furthering the ends of evolution rather than to leave things to take their own course.

He begins by a study of human nature, making it clear that there is no such thing as a practicable unity of instinct as to wrong and right the world over: different conditions of development imply different standards of good and evil. And, as humanity is progressively evolving the more perfect from the less perfect, the higher from the lower, not even the European conscience has as yet properly developed, for even in that quarter "there are elements, some ancestral, and others the result of degeneration, that are of little or no value, or are positively harmful." He finds our cosmic relations but imperfectly understood as yet, but the evidence increasing that we as men are but inseparable integers of nations, as nations but units of one terrestrial family, and as the humanity of one planet but one group of a "vast system which in one of its aspects resembles a cosmic republic." The tendency of this view is to make us feel a kindlier interest in people and things outside our several little circles of personal relationship, to broaden the sympathies, break down selfish conservation, and stimulate the yearning for a better, deeper, more complete knowledge of ourselves and our world. Among the chief barriers artificially erected between men, religious creeds are the most formidable and cruel; Mr. Galton therefore takes up that question and dissects it bravely. The arguments offered by non-scientific persons for believing in the interference of an extra-cosmic Deity in human affairs are weighed, tested by scientific observation, and refuted. The pretended efficacy of prayer is similarly analysed and similarly declared against. Mr. Galton backs his conclusions by citations from the statistical tables of population, life, fire and marine insurance, and banking corporations: affirming that the figures prove that those who pray least to and believe least in Divine care and guidance thrive as well if not better than those who believe and pray most. And there is nothing whatever of rudeness or ribaldry in his argument; he judges, thinks and writes with the passionless calm of the philosopher and the man of science.

\* *Inquiries into Human Faculty and Its Development.* By Francis Galton, F. R. S. London, Macmillan & Co., 1869.

Among the many interesting and striking features of the book in question will be especially remarked the chapters upon "Composite Portraiture," "Criminals and the Insane," "Gregorians and Slavish Instincts," "Mental Imagery," "Number-Form," "Visionaries," "Psychometric Experiments," (he seems to ignore Dr. Buchanan's priority in the use of this term), "Twins," "Theocratic Intervention," "Objective Efficacy of Prayer," and "Enthusiasm." Various photographic plates are given to show how one single face, startlingly individual in character, may be composed or made up out of 20, 30, 50, 60, or more different faces of separate individuals of both sexes. Thus, the portraits of father, mother, several brothers and sisters and relatives may be blended into a single composite portrait, which will represent not one personality but the aggregate personalities of all the individuals together. Thus a type of any given family or nation may be easily composed, and data of the greatest value to the student of human development thus supplied. Mr. Galton furthermore gives us a series of engraved and coloured plates to illustrate the curious discovery that in many persons' minds the mention of any given number or name immediately calls up a correspondential geometrical figure, or mechanical construction, such as lattice-work, steps of stairs, lines, groups of stars or dots, or clouds, or landscapes, or flashes of colour. Persons living this mental peculiarity may be at the same time in robust health and the soundest mind; it is simply a mental peculiarity of theirs, and shows that there is with them a sympathy of action between various parts or organs of the brain, such as Number, Form, Colour, etc. This is to speak like a Phrenologist, and Mr. Galton who ignores, if he be not actually ignorant of Phrenology, would do well to look over the treatises of Gall, Buchanan, Spurzheim and Combe in this connection. If any readers of the *Theosophist* have such perceptions of form and colour in connection with numbers or names, they will do a service by communicating the facts to the Editor, and if they can draw, by sending sketches of the forms and colours they mentally see when any given numbers, names or words are pronounced.

It is curious to find how the statistics collected by Mr. Galton with regard to the life-histories of twins go to support the doctrine of Karma as taught by the Hindu and Buddhist sages. This subject presents two distinct aspects. In one set of cases the twins are as like each other as may well be imagined; in another set—quite the reverse.

Instances occur, in which twins separated from each other by great distance are attacked by the same disease at precisely the same point of time with identical results, and thus lead Mr. Galton to the just remark that "we are too apt to look upon illness and death as capricious events, and there are some who ascribe them to the direct effect of supernatural interference, whereas the fact of the maladies of twins being continually alike, shows that illness and death are necessary incidents in a regular sequence of constitutional changes."

On the other hand there are equally numerous cases, in which twins presenting no dissimilarity in their nurture, are utterly dissimilar in all other respects. We shall quote a remarkable instance out of the many cited by the author:—

They [the twins] have had *exactly the same nurture* from their birth up to the present time; they are both perfectly healthy and strong, yet they are otherwise as dissimilar as two boys could be, physically, mentally and in their emotional nature."

Two conclusions are clearly necessitated by these researches. First, that what we call accidents are not really such and that the reign of law in Nature is so perfect that theocratic intervention is an impossibility. Secondly, that the chain of causation which governs a man has its origin in the shadowy regions beyond his birth, or, in other words, everything is subject to the law of Karma. With regard to this last conclusion it may be urged that we are mistaking the law of heredity for the law of Karma; but a careful examination of the set of cases in which the life histories of twins are so utterly dissimilar will render the groundlessness of such contention quite clear. If heredity were the potent factor in the problem as imagined, the nurture of twins being the same, they ought, without a single exception, to be perfectly similar in all the events and acts of their lives. But, as we have seen, such is by no means the case. If the questionable supposition be here raised that there really is a difference of nurture in these cases which escapes the observation of all concerned,

we have only to turn to the specific values assigned by Mr. Galton to Nature and Nurture, after a careful examination of a large number of facts—"There is no escape from the conclusion that Nature prevails enormously over Nurture." The effects of Nurture being thus eliminated, we have Nature alone to account for the similarity of the life of twins in some cases and their dissimilarity in others. If heredity were the sole directing energy in the formation of Nature, it would be utterly impossible to explain why such divergent results should be produced in the life-events of the two classes of twins we have referred to above. Surely this consideration points to the operation of some missing element, of great potency, which overrules heredity in, perhaps, the same proportion as heredity prevails over nurture. Occult science steps in at this stage and declares the succession of births, and the law of Karma as the *Deus ex machina*; and shows how this law is differently manifested as Nature and Nurture if science persists in shutting her eyes after all this, the loss is certainly not ours. Among the striking examples of the probable action of Karma, which have come under the writer's notice, was the case of the two Hindu lads brought to him at Moradabad a few months ago, to be cured of paralysis. The elder brother is about 17, the younger about 14 or 15 years of age. (These figures are perhaps but approximatively correct, the present writing being done at sea with no exact data available). They are the children of healthy parents and have brothers and sisters all healthy. So far as inquiries could show, there was no apparent cause whatever for their exceptional affliction. Yet each was stricken with paralysis upon attaining the age of 11 years. And by turning to page 88 of the *Theosophist* for December 1883, it will be seen that when the writer's Guru was appealed to to give permission for the cure of the boys, as many other paralytics had been cured, his answer was, "*Karma cannot be interfered with.*"

Our author's reflections upon the observed sympathies and repulsions between different kinds of animals are amusing to the occultist for their superficiality. No more than his compeers can he take in the idea that these phenomena of attraction and repulsion are but the expression of an universal law of polaric similarity and dissimilarity; that it is not the outer but the inner substance of the being which feels its attractions and repulsions. Ignoring this great fact, see how he errs in his hypothesis. "Swallows, rooks, and storks frequent dwelling houses [of man]; ostriches and zebras herd together; so do bisons and elks. On the other hand, deer and sheep, which are both gregarious, and both eat the same food and graze within the same enclosure, avoid one another. The spotted Danish dog, the Spitz dog, and the cat, have all a strong attachment to horses, and horses seem pleased with their company; but dogs and cats are proverbially discordant. I presume that two species of animals do not consider one another clubable, unless their behaviour and their persons are reciprocally agreeable. A phlegmatic animal would be exceedingly disquieted by the close companionship of an excitable one. . . . . Two herds of animals would hardly intermingle unless their respective languages of action and of voice were intelligible." There are instances on record of friendships between a cock and a horse, a cat and young chickens, a cat and an elephant: would Mr. Galton have us believe that the horse could interpret the clarion crow of the cock, or the chickens and elephant the caterwauling of the cat? Or, to pass into the vegetable kingdom, we find that plants and trees have also their sympathies and antipathies, not only for each other but also for man. In some countries it is customary to plant a tree on the day of a child's birth, and to dedicate it to the latter as its, so to say, vegetable foster-brother. And so close becomes the sympathy between them that instances are noted of the tree's drooping and dying as the child becomes ill and dies, and *vice versa*.\* Prof. Max Müller gives a number of such cases in his treatise: "On Manners and Customs," drawn from many countries of Europe, New Zealand, British Guiana, and Asia. And Mr. Tyler, (*Researches into the Early History of Mankind*) in pursuing the same topic, remarks that we are driven to "inquire whether there is not some intelligible and truly human element in this supposed sympathy between the life of flowers and the life of man." Some plants are so attracted by the sun [*e. g.*, the common sunflower] as to follow its course throughout the day, even

\* For remarks upon this subject see *Isis Unveiled*. I. 209, 246, etc.

when hidden by a fog. The acacia unfolds its petals at the sun's rising and closes them again at his setting; so does the lotus. Equally faithful to the man is the nightshade. The vine hates the cabbage but loves the olive; the ranunculus is attracted by the water-lily, the rue by the fig; while, as Baptista Porta\* tells us, so "fierce" is the antipathy between plants and even between cuttings of the same plant, that in the case of the Mexican pomegranate the shoots when detached from the tree repel each other "with extraordinary ferocity." We have dwelt upon this portion of Mr. Galton's excellent work at greater length than we otherwise should, because his lame and feeble attempts to explain an occult and universal law of nature give us so complete a view of the distance there still is between science and the truth, and of the enormous gain that there would be to Western research if our Tyndalls and Spencers would but honor their ancestors by at least reading their literary remains.

H. S. OLCOTT.

## TWO LECTURES ON MAN,—HIS BODY, LIFE AND SOUL.†

THE pamphlet containing the two lectures by Dr. J. C. Daji, on the above subject, delivered before the members of the Self-Improvement Association—affords good reading. The first lecture, which takes up nineteen pages, is confined to the subject of man's body, from a medical standpoint. It is the second lecture, occupying a space of thirteen printed pages, that is interesting to a psychologist. On page 20 one of the operations of *Life* is described as follows:—

It counteracts the force of gravitation, so as to enable the fluids of the body to pass from below upwards, in opposition to the laws of gravity.

Let the reader now turn to the *Isis Unveiled* and the different articles in the *Theosophist* explaining the phenomenon of the rising in air of Indian Fakirs. We remain on the ground so long as our magnetic polarity is opposed to that of the earth. Should we succeed in reversing our polarity and making it similar to that of the earth, we shall be repelled from the ground and remain suspended in the air so long as the two polarities are similar. This phenomenon, although of very rare occurrence and extremely difficult of achievement, is neither impossible nor "supernatural." In the Law of Gravitation, the occultist recognises but the Law of Attraction and Repulsion, and, according to the preponderance of the one or the other, the effect is produced. When their forces are equilibrated, the body remains stationary. This is however a digression, though indirectly bearing upon the above quotation from the book under review.

The author further on goes into the subject of the *Soul*. He decides the question in favour of transcendentalism, and the *soul* being entirely distinct from the body and not a mere function of the brain. Whatever the readers' opinion be, there is no doubt the author's arguments are clear and concise.

B. S.

\* These examples and many more are given by him in his *Natural Magic* (*Magia Naturalis*) which appeared in the 16th century.

† By Jehangir Cursetji Daji, L. M. & S. Printed at the Bombay, Gazette Steam Press, Rampart Row, Bombay.

## SPECIAL NOTICES.

It is now evident that the THEOSOPHIST offers to advertisers unusual advantages in circulation. We have already subscribers in every part of India, in Ceylon, Burmah, China and on the Persian Gulf. Our paper also goes to Great Britain and Ireland, France, Spain, Holland, Germany, Norway, Hungary, Greece, Russia, Australasia, South Africa, the West Indies, and North and South America. The following very moderate rates have been adopted:—

### ADVERTISING RATES.

First insertion.....16 lines and under.....1 Rupee.  
For each additional line.....1 Anna.

Space is charged for at the rate of 12 lines to the inch. Special arrangements can be made for large advertisements, and for longer and fixed periods. For further information and contracts for advertising, apply to

MANAGER, THEOSOPHIST, ADYAR, MADRAS.

MESSES. GRAVES, COOKSON AND Co., MADRAS.

PROPRIETOR, INDUSTRIAL PRESS, 3, HUMMUM STREET, FORT, BOMBAY.

MESSES. COOPER MADON & Co., MEADOW STREET, FORT, BOMBAY;  
TO SUBSCRIBERS.

The Subscription price at which the THEOSOPHIST is published barely covers cost—the design in establishing the journal having been rather to reach a very wide circle of readers, than to make a profit. We cannot afford, therefore, to send specimen copies free, nor to supply libraries, societies, or individuals gratuitously. For the same reason we are obliged to adopt the plan, now universal in America, of requiring subscribers to pay in advance, and of stopping the paper at the end of the term paid for. Many years of practical experience have convinced Western publishers that this system of cash payment is the best and most satisfactory to both parties; and all respectable journals are now conducted on this plan.

The THEOSOPHIST will appear each month. The rates, for twelve numbers of not less than 48 columns Royal 4to. each of reading matter, or 576 columns in all, are as follows:—To Subscribers in any part of India, Ceylon, Straits Settlements, China, Japan, and Australia, Rs. 8; in Africa, Europe, and the United States, £1. Half-year (India, &c.) Rs. 5; Single copies Rupee 1. Remittances in postal stamps must be at the rate of annas 17 to the Rupee to cover discount. The above rates include postage. No name will be entered in the books or paper sent until the money is remitted; and invariably the paper will be discontinued at the expiration of the term subscribed for. Remittances should be made in Money-orders, Indian Bill, Cheques, (or Treasury bills if in registered letters), and made payable only to the PROPRIETORS OF THE THEOSOPHIST, ADYAR, P. O., (MADRAS) India. Subscribers wishing to have receipts, in acknowledgment of their remittances, should send reply post-cards for the purpose.

The Supplement to the "Theosophist" or, as it is now called, the "JOURNAL OF THE THEOSOPHICAL SOCIETY," is given free of charge to our Members who are subscribers to the "Theosophist." Members who subscribe only for the Supplement are charged Rs. 2-0-0 per annum.

To Subscribers who are not Members of our Society, the charge for the Supplement only is Rs. 5; for the "Theosophist" with Supplement, Rs. 13 per annum.

Subscribers for the Second Volume (October 1880 to September 1881) pay Rs. 6 only in India; Rs. 7 in Ceylon; Rs. 8 in the Straits Settlements, China, Japan, and Australia; and £1 in Africa, Europe and the United States. Vol. I is now entirely out of print.

BUDDHISM IN RELATION TO  
CHRISTIANITY.

At the last large meeting held in February, by the Victoria (Philosophical) Institute, 7, Adelphi Terrace, London, a paper was read by Rev. R. C. Collins, M. A., on Buddhism in relation to Christianity. Referring to the parallels between the persons and characters of Buddha and Jesus Christ, he said:—"Take, as a prominent instance, the birth stories. I need not here give details, which are to be found in any modern work on Buddhism. The supposed miraculous conception; the bringing down of Buddha from the Tusita heaven; the Devas acknowledging his supremacy; the presentation in the Temple, when the images of Indra and other Gods threw themselves at his feet; the temptation by Mara—which legends are embellished by the modern writer I have already quoted, and such phrases as "Conceived by the Holy Ghost," "Born of the Virgin Maya," "Song of the heavenly host," "Presentation in the Temple" and "Temptation in the Wilderness"—none of these is found in the early Pāli texts. The simple story of ancient Buddhism is that an ascetic, whose family name was Gautama, preached a new doctrine of human suffering, and a new way of deliverance from it.

There is no thought in the early Buddhism, of which we read in the Pāli texts, of deliverance at the hands of a god; but the man Gautama Buddha stands alone in his striving after the true emancipation from sorrow and ignorance. The accounts of his descending from heaven and being conceived in the world of men, when a preternatural light shone over the world, the blind received sight, the dumb sang, the lame danced, the sick were cured, together with all such embellishments, are certainly added by later hands; and if here we recognise some rather remarkable likenesses in thought or expression to things familiar to us in our Bibles, we need not be astonished, when we reflect how great must have been the influence, as I have before hinted, of the Christian story in India in the early centuries of the Christian era, and, perhaps, long subsequently. This is a point which has been much overlooked; but it is abundantly evident from, among other proofs, the story of the god Krishna, which is a manifest parody of the history of Christ. The *Bhagavat-Gita*, a Theosophical poem put into the mouth of Krishna, is something unique among the productions of the East, containing many gems of what we should call Christian truth wrested from their proper setting, to adorn this creation of the Brahman poet, and indicating as plainly their origin as do the stories of his life in the *Maha Bharata*; so that it has not unreasonably been concluded that the story of Krishna was inserted in the *Maha Bharata* to furnish a divine sanction to the *Bagavat-Gita*. If, then, as there is the strongest reason to believe, the Christian story, somewhere between the first and tenth centuries of the Christian era, forced itself into the great Hindu epic, and was at the foundation of the most remarkable poem that ever saw the light in India, can we be surprised if we find similarly borrowed and imitated wonders in the later Buddhist stories also?

Several Home and Colonial applications to join the Institute as guinea subscribers were received, and its objects being to investigate all philosophical and scientific questions, especially any said to militate against the truth of the Bible,—a discussion ensued in which Mr. Hormuzd Rassam, Professor Leitner, from Lahore, Mr. Coles, an earnest student of the question during 25 years' residence in Ceylon, Professor Rhys Davids, and others took part, all agreeing in and confirming the statements of Mr. Collins' paper. Dr. Leitner brought a large number of photographs of early Indian and Tartar sculptures showing the first introduction of the Christian story into those monuments, and he pointed out the value of such additional confirmation of Mr. Collins' statements:—

(*The Englishman*, March 22, 1884.)

We produce the above abomination as an example to show to what extravagant perversions of the truth the pious zeal of certain "Reverends" may lead, if there be a desire to make disagreeable historical facts agree with their little sectarian views. According to the Rev. R. C. Collins, M. A., the legends of the New Testament, a book, which was written during the Christian era, were stolen and surreptitiously incorporated into books that were written ages before even the Old Testament was thought of. This beats the story of the man who, by "logical" reasoning, found out that he actually

was his own grandfather, and was so much frightened at his discovery, that he hanged himself. But the Rev. R. C. Collins, M. A., will not do likewise. He will live to pervert historical data, to make them conform with the chronology of the Bible. Dr. Leitner will continue to bring photographs of the crosses and other "Christian" symbols, such as can be seen every day in the caves of Elephanta and which were cut out thousands of years ago, and he will make those who share his ignorance, believe that the "Christian story has been introduced into those monuments," and that these Christian symbols have been added by modern sculptors. If Rev. R. C. Collins thinks that he has "discovered" that the ideas of the "presentation in the temple," the "temptation in the wilderness," &c., are "Christian stories," which have "forced themselves into the Hindu epic," we can, on the other hand, assure him, that the whole story of the massacre of the "Innocents" by king Herod is bodily taken from *Bhagavata*, and refers allegorically to an historical fact. King Herod is the type of Kamsa, the tyrant of Mathura, the maternal uncle of Krishna, to whom astrologers predicted that a son of his niece Devaki would deprive him of his throne. Therefore he gives orders to kill the male child that is born to her; but Krishna escapes his fury through the protection of the Divine wisdom that overshadowed him, which causes the child to be carried away to another city, out of Kamsa's reach. After that, in order to be sure and kill the right boy, on whom he failed to lay his murderous hands, Kamsa has all the male new born infants within his kingdom killed.

The Rev. Mr. Collins' "paper" contains in a short space so many errors that it would take a volume to contradict him. The only truth in it is that "there is no thought in early Buddhism of deliverance at the hands of a God, but the man Gautama Buddha stands alone in his striving after true emancipation from sorrow and ignorance." Buddha did not come to make us ride to Heaven on the back of a God; but he taught us that we must use our own efforts, and he instructed us in what direction these efforts must be used. *He came to show the way—"The Perfect Way."*

If it is truly the object of the "Victoria Institute" to investigate all philosophical and scientific questions (not those only that can be adapted to their preconceived notions), we would earnestly recommend to them to read Mad. Blavatsky's "*Isis Unveiled*." There they will find, for instance, on page 90, Vol. I:—

"While the miracles recorded in the Bible have become accepted facts with the Christians, to disbelieve which is regarded as infidelity, the narratives of wonders and prodigies found in the Atharva Veda, either provoke their contempt, or are viewed as evidences of diabolism. And yet, in more than one respect, and notwithstanding the unwillingness of certain Sanscrit scholars, we can show the identity between the two. Moreover, as the Vedas have now been proved by scholars to antedate the Jewish Bible by many ages, the inference is an easy one, that, if one of them has borrowed from the other, the Hindu sacred books are not to be charged with plagiarism."

Finally we wish to state that while we consider it our duty to tear the mask from the face of Bigotry, when she pretends to be Science, we do neither desire nor intend to "militate" against the truths of the Christian or any other "Bible." Whether the "Bible" has been copied from the Vedas, or the Vedas from the "Bible," can make little difference and be of little practical interest to one who understands these truths; but the misfortune is, that while these Reverends attempt to defraud, belittle and depreciate in a very "un-Christian" manner the religions of others, they neglect the study of the true meaning of their own sacred books, and, while they wrangle about the letter, the spirit is lost.

A "CHRISTIAN" BUDDHIST.

## LECTURE IV.

## THE OBJECT OF INITIATION.

THE object of the ancient initiation was to become worthy to be a priest and a king.

The high science taught by Zoroaster and Hermes was amongst the ancients the art of priesthood and of royalty. Priests and kings were then looked upon as representing divinity upon earth. God spoke to the priests and governed the people through the kings.

To approach divinity without an intermedial and to exert power are still the privileges of him who is admitted in the occult sanctuary. He is admitted to see God through intelligence and reason and to adore him in spirit and in truth, and he is armed with strength to dispel from himself and others—not the necessary sufferings, but at least all the real misfortunes of life, and to dispose, in the measure of human forces, of all advantages and benefits which the perfection of nature can procure.

To become inaccessible to evil and error, to be master of oneself and therefore worthy to command others, always to choose, of all things in creation, only that which is good and to possess in peace that which one has chosen,—is not this a dignity truly sacerdotal and royal? In other words, is not this a divine existence? This is the object of the occult sciences, and we must arrive at it through the real initiation.

Is perfection possible to man? Yes, certainly! If we comprehend that we do not speak of absolute perfection, which would elevate him above his proper nature, a perfection of which we can dream, but which we cannot define or even conceive. We speak of a perfection, which is within the human nature and which can be expressed by the three words, which are so badly understood and which serve as motto to the adherents of the republican doctrine: Liberty, Equality and Brotherhood.

Liberty of intelligence, free of all prejudices; liberty of will, free of all shameful and irregular passions; liberty of affections, always voluntarily directed towards good. Equality through the perfect equilibrium of mind; and Brotherhood with the right of eldership to our own advantage and that of entire nature. Yes, the sage is the beloved brother of the stars, because he knows what they do not know, and he understands the laws which direct the thought before it is formed; he understands their influence, he analyses their light, he is in some respects the treasurer of their wealth; he is the brother and friend of all nature; he is the priest of the seasons and he offers their first fruits to God; he is the consoler of men, the minister of the animals, and all this without constraint, without efforts and perfectly naturally, as soon as he has succeeded in perfecting his nature. He is therefore the happiest, the most useful and the most amiable of men. His invisible divinity becomes visible in him; impersonal infinity manifests itself in his person, and he becomes a living solution of the great riddle of Man-God.

It is true that such a high prerogative dooms him at first to the sacrifice. He will be adored by some and detested by others; because there are good and bad people on earth. He has to defend himself as well against the imprudent actions which the enthusiasm of his friends may cause, as against the exasperated hate of his enemies. None possess with impunity the fire from heaven, and the slaves of Jupiter will always be the executioners of Prometheus. He will be persecuted in the name of God, and for God's sake will they try to kill him. He may be benevolent as Osiris, a poet like Orpheus, wise as Socrates, with the knowledge of Pythagoras; meek and patient as Jesus, pious like Savonarola, a good pastor like John Huss; nevertheless he will be treated as a public malefactor and be made to answer for his science before ignorance, for his ignorance before stupidity, for his virtue before the vicious. Christ said: If one will follow me, let him take up his cross before starting and let him walk resolutely to the rack.

Such was the fate of the revelators of the ancient world and of the reformers of the middle age. So does the type of the perfect man, which is divine and human at the same time in the person of Jesus present in an extraordinary manner the symbols of sacrifice. But the sacrifice is only the probation and the gospel is only the introduction to the great book of wisdom resuscitated by Jesus, and, living for ever in his dis-

ciples, must for ever write or rather form by acts, which are at once divine and human, all through the coming ages.

An act of humanity is truly a divine act, and good works are more efficacious than prayers. The best of all good works are those which are performed spontaneously and without any pretension to merit. Christ said, a good tree will produce good fruit, and thus do good people perform good works without much thinking about it. They perform them, because they could not act otherwise; they answer their goodness as sun gives his light; and if a drink of water given to a thirsty wanderer merits an eternal reward, what price can be adequate to pay him who discovers a spring in the desert and who constructs a fountain?

Mercenaries are paid and recompensed; but what can we give to him who possesses all? Would you offer an apple to an apple merchant? How can you justify the just, who is judge himself? All recompensations are temporary and an eternity of blessedness would not be a recompensation but a normal state at which the souls of those, who know how to make themselves immortal, must arrive. We obtain it by vanquishing fear, desire and death. He who has sufficient intelligence will understand it.

A just man can never become accessory to injustice and therefore he will never accept an unjust death. The Kabalists say Cain and Abel were equally guilty—the one by killing his brother and the other by doing nothing to prevent this crime. The condemnation of Socrates and Jesus were regular according to the laws of their times and countries, and they therefore accepted the sentence without protest. They were stronger than the laws to which they subjected themselves; they broke them by submitting to them and forced the moral world to enlarge by seeking for a new legislation.

It certainly cannot be told with impunity to the common people that Osiris is a black god. He who strikes at the altar ought to perish at the foot of the altar, and Voltaire would have merited the death of Socrates and Jesus, if, by denying the accredited superstitions, he had not affirmed the eternal dogma. But Voltaire was a fanatic and not a revealer. He neither deserved the hemlock nor the cross; he was not worthy to receive the glory of the martyrs.

Socrates, before he dies, advises his disciples to offer for him a cock to Æsculapius, and he, the adorer of the true God, is blamed for such an apparent act of superstition. Jesus, before he delivers himself to his executioners, performs with his disciples the ceremony of Easter-day according to Jewish customs by eating lamb and bitter herbs. Socrates as well as Jesus proved themselves to the end to be true observers of those religious customs, which their doctrine is about to change. They obey while they give liberty to others, and in this act they prove themselves to be perfectly just. It is known that Voltaire went to the holy communion, but he boasted that he was doing it as an act of policy and irony. He can therefore not be excused, and his apparently religious acts were in fact veritable sacrileges.

The divine life of the Initiate is by the vulgar crowd looked upon as being supernatural. Because nature rises up for the sage, he naturally avoids that which attracts catastrophes upon the head of the senseless. He radiates good and repulses evil, and superior intelligences are supposed to serve him.

Solomon was the king of spirits; Jesus could command angels; Socrates had a familiar demon; Appollonius held the key of miracles. They know the secrets of the present, uncover the past and penetrate the future by their sagacity of connecting effects with causes. They are sorcerers like physicians and prophets like astronomers; they are diviners simply because they are divine, and they are divine because they are perfectly human; that is, they are men, such as God and Nature evolve, and such as Science and Virtue complete.

The Initiate alone possesses riches, because he disposes of them for good purposes and is never afraid to lose them; because he alone can obtain them without desiring. He alone enjoys the pleasures of life, because he chooses his own and keeps sway over his senses. He walks like Jesus over the waves of the turbulent sea, and needs only to rise to pacify by a word or look the tempests which assail him during his sleep. He is not afraid of the bloody step to calvary; because he knows the luminous road to Thabor. He may be poor and leprous like Job, an exile like Pythagoras, sentenced to death like Socrates, imprisoned like Appollonius,

tortured like Campanella, burnt like Savonarola, Giordano, Bruno and Vanini; he cannot be impoverished of his true possessions, nor be humiliated in his own eyes, nor discouraged nor belittled, nor can he be made to fear death. He knows, like Job, that his redeemer lives and that he will come to raise him up again; his redeemer is the word of truth, it is God, always victorious in just men; he knows that to suffer is to work and that to work is to become rich.

Never can he be separated from those he loves; for he knows well that real love is immortal. He does not love death, he loves immortality, and he knows well that she will not escape him. Are we then really separated from our friends when they travel? Do not souls remain united from one end of the universe to the other? Does a mother cry because her child sleeps; and does the father, who works for his children, grieve because he knows that they have before him moved into the house where the whole family must unite again some day and for which he undertakes to pay by his work.

Being free from regrets, the Initiate is inaccessible to fear. He loves God and does not fear him. He knows that the religious laws are the ordinances which moral medicine prescribes, and that, according to the words of Christ, those who are sound do not need a physician. He looks with pity upon the imaginary sick, who allow the ridiculous threats of Dr. Quack to terrify them and respects all salutary practices, which he can advise others to follow, while he does not need them himself. Being more fortunate than the blind man of Thebes, he knows the three enigmatic words of the Sphinx: God, Nature, Man. He knows that the universal symbolism is only the paraphrase of that enigma; he knows that God explains himself by nature and manifests himself in man; that humanity is one in three persons, which are the father, the mother and the child; that the incarnation of God is the reversibility which results from solidarity; that Christianity, far from being an idolatry, has overthrown all the false gods by affirming the hypostatic union, that is to say, the personal union of God and man in such a manner that we all are each one the God of the other, and that he who loves his neighbour understands and fulfils the whole law.

He does not therefore need any preachers, his sovereign pontiff is reason enlightened by faith, and he does not need to mount the she-ass of Gallilea or the mule of Mastai to enter into the holy city, but he takes good care not to change a single word of the traditional and common dogma. Enigmas have the quality of appearing at first very absurd to the mind; but, if we suppress or modify only one of these apparent absurdities, the enigma becomes comprehensible and is more than a stupidity.

An adept will therefore accept the Christian dogma in all its orthodoxy and will take good care not to dispute the divinity of Jesus Christ; because it is the divinity of man. Jesus himself called the supreme formula of the great arcanum indifferently the son of man and the son of God. He said, the Father and I, we are only one, and I will become one with my disciples; and this is affirmed sufficiently in the divinity of man, the fall of Jupiter and the abdication of Jehovah. He also says: The kingdom of heaven is within you; that which you do to man you do to God; I give to you the keys to the kingdom of heaven; and that which you bind on earth shall be bound in heaven and that which you untie on earth shall be untied in heaven; and he did not say this to the priests, for there were no priests amongst the apostles; he said it to all the faithful and added: "He that believes can do all that I do and still greater things can he do."

Such was the immense range of Christianity. The death of the great Pan in all the idols which the sacerdotal lie infused with life and his re-birth into humanity. Since Christ became a man who suffers, God suffers; and that which you give to man you lend to God and still further: the whole of humanity is the body of God, of which we are the members; all must suffer what one suffers, and the happiness of one makes all happy. This is the dogma of salvation, the dogma of the future: *The holy solidarity*. According to the mythological legend Œdipus and the Sphinx have disappeared from earth and have been believed to be dead; but nobody has ever recovered their corpses; because the Sphinx threw herself into the abyss only to set a trap for her rival. Œdipus did not solve the enigma and he became king of Thebes only to become its scourge, became forced to abdicate and to put out his eyes, Œdipus in his turn dis-

appeared in a tempest, and the king left nobody behind but two brothers who were enemies and bound to eternal warfare; and of the Sphinx remained nothing but her formidable and still not understood riddle; for the two brothers, that is, the two parties which are still dividing the world, must for ever tear each other to pieces, as long as they do not understand it. Œdipus and the Sphinx, those two corpses, which only survive to combat each other for ever, are now two phantoms, which still incarnate themselves and here we see how they reappear on earth. Œdipus, still blind, thinks he will become clairvoyant and he proposes riddles to the Sphinx, which he does not understand himself; but he gives them out as obscure truths, which science must accept without attempting to comprehend.

The Sphinx, in her turn, having become a riddle-solver, raises her head before the dethroned king of the holy city and is going to solve all riddles by the authority of science and reason; for the Sphinx is the genius of science and nature.

The sacerdotal Œdipus, the blind man who believes himself infallible, says that it is prohibited to guess; the Sphinx with her human head smiles at such a defence and begins to drive away before him like smoke, by a single word and a breath, the pretended immovable dogmas of the old man.

Let us assist at this battle and take down stenographically their dialogue. This will be the subject of our next discourse.

#### INAUGURATION OF NEW BRANCH SOCIETIES AT CHITTORE AND VELLORE.

On the 14th of April 1884, Dr. F. Hartmann, accompanied by Mr. L. Venkata Varadarajulu Naidu, arrived at Chittore, where great preparations had been made for the reception of the delegates from head-quarters. A spacious bungalow was fitted up with flags, flowers and inscriptions. An address of welcome was read by Mr. H. M. Winfred, which was answered by a few remarks from Dr. Hartmann. The meeting then adjourned until 5 p. m., but in the meantime Messrs. Narainsami Mudaliar and L. Venkata Varadarajulu Naidu addressed the natives in Tamil and Telugu, and explained to them the objects of the Society.

At 5 p. m. a large and intelligent audience assembled, Mr. C. Masilamoni Mudaliar took the chair, and Dr. Hartmann then addressed them in a speech, of which we give the following summary:—

GENTLEMEN,—You have heard the name "Theosophical Society," and I have been asked to explain what that Society is. It is a Society that has been started some eight years ago in the United States of America; it afterwards transferred its headquarters to India, and its branches extend now already all over the inhabited globe, counting in India and Ceylon some ninety branch societies, and having numerous branches in America, England, France, Russia, Australia and other places. Its members call themselves "Theosophists," and my interpretation of the term "Theosophist" is, that it means, *a person who earnestly and without fear or prejudice seeks for the truth, and attempts to apply the truths which he has found, in practical life*. The Theosophical Society proposes to do what no Society ever succeeded in doing before, that is, to *reconcile and harmonise* the two old enemies, *Religion and Science*. It expects to show that *true science and true religion cannot contradict each other*; that one is the complement of the other, and that it is only the absurdity and bigotry of a pseudo-religion which cannot be accepted by true science, and the conceited ignorance of a pseudo-science, which cannot be harmonised with true religion. *True religion and true science are two ways, which lead towards the absolute truth, and as there can be only one such truth, both must finally arrive at the same end*; but *modern science and modern religion, instead of going straight towards the truth, they take a circuitous route and lose their way*. Like children, here they see a gay butterfly and chase it over the hills, there they wade in a swamp to pluck a curious flower, and are deluded from their path by all sorts of delusions.

There is just as much ignorance and bigotry in modern science as there is in modern religion. When Galileo declared that the world was round, the religionist cried "blasphemy," and he would have been put to the torture if he had not recanted, and when Morse invented the telegraph, he was laughed at by the "scientific" world. But the world's evolution goes on in spite of bigotry either in science or religion. What was "blasphemy" fifty years ago, is accepted as truth to-day. No priest now-a-days dares to maintain that hell consists of a burning lake of fire and brimstone, or that God created the world in six actual days, and took a walk in his garden in the cool of the morning of the seventh; neither does any scientist now-a-days dare to ignore electricity, or deny the circulation of the blood; but there are plenty of other absurd dogmas and prejudices in

modern religion and in modern science, and if you attack either, the cry "blasphemy" arises as loud as before.

There can be only *one* truth; but that truth appears under different aspects according to our stand-point. If you go in a dark room, and let a ray of sunlight pass through a prism of glass, it will be divided in seven rays, each of a different color, but all these rays can be recombined in one single ray of pure white light. The pure white ray represents Theosophy, and the various colored rays represent the different religious systems or theologies. The word "Theology" (from *Theos*, God; and *Logos*, word) does not mean "the word of God" any more than "Geology" means the word of the Earth; but it means a collection of certain doctrines and opinions in regard to divine matters, and as every man has an idea of his own as to what "God" is, so there would be as many theologies in the world as there are men and women, if not the majority of them, either from inability of thinking for themselves, or from some other motive, had consented to accept some other man's belief as their own.

Some people cannot think of God as anything higher than a painted stone or stick of wood, others believe him to be a monster, others say that he is an angry old man, and others think that he is a kind being of some sort that can be reasoned with, and who after having made up his mind to do a certain thing, can be persuaded to reconsider his decision. Those people call each other infidels, heathens and atheists, if one does not believe in the same kind of a god as they do. They however all agree that God is the *supreme cause* of everything that exists, and as the existence of the world proves that some cause must cause its existence, consequently there can be no real "Atheist," for surely no man would be insane enough to say that an effect can exist without a cause; and if the pretended "Atheist" says that the universe itself is the cause of its own existence, then the *Universe* is his God, and he is an Atheist no longer.

There are many different *Theologies* in the world, and most of them have different sects, each of which claims to be the *only* possessor of the truth; but there can be only *one Theosophy*.

"Theosophy" means supreme wisdom. It is a word, composed of two Greek words: *Theos* or God, or *Supreme*, which means everything that is good and pure, and *Sophia*, or *Wisdom*, which means the highest degree of intelligence and knowledge. A *true* Theosophist should possess these two qualities, goodness and wisdom, and it will therefore be seen that a *true* Theosophist is not often to be found. Plato, Socrates, Buddha, Sankaracharya, Confucius, the historical Jesus, the Kishis and Mahatmas and other great men may be looked upon as *true Theosophists*. A *real* Theosophist must necessarily be a nearly perfect man; and if we call ourselves "Theosophists," we do not presume to say that we are already perfect; we only mean to say that we are trying our best to obtain as much perfection as possible in this life. But we do not rest here. We are not so selfish that we only want to save *ourselves*, and do not care what becomes of others. We want to assist in the great work of evolution; we want to abolish ignorance and superstition, and to develop not only intellectuality, but spirituality also. Our Society has three specified objects:

The *first* is "to form a nucleus for *Universal Brotherhood*." Now this is nothing new. Every religion pretends to have the same object. Christianity invites you with open arms to become a "brother" by joining the church, but unless you do join the church, you cannot be a brother, and probably you will go to hell. Oh how glad will these pious theologians be, and how they will laugh, when they look down from heaven and see you squirm in hell; because you did not accept their doctrine of "vicarious atonement," etc. The Koran teaches universal brotherhood, and the Mahomedan has been often willing by fire and sword to make you his brothers; but unless you become a follower of the Prophet, you are an infidel dog. Every sect more or less restricts its idea of brotherhood to the narrow confines of its particular church. The French revolutionist also had a universal brotherhood. He said: "Come and be my brother and think and act as I tell you, or I will cut off your head." The kind of universal brotherhood, which resulted from our modern civilisation, is seen in the standing armies of Europe, where women and children, cripples and invalids, have to work and starve, to keep all able-bodied men on their legs, and without useful employment, to protect them against a surprise-visit from their brothers across the frontier.

The *Theosophist* makes his universal brotherhood unconditional. He reasons that *all* men and even all animals and all things that exist come from one universal source, and that therefore we *all* belong to one family and must respect each other's rights. He does not care whether you are a Hindu, or a Christian, or a Jew, or a Mahomedan, or a Parsee, or whether you believe in nothing at all, because if you act up to the principle of universal brotherhood, you will be sure to act right, and receive your reward.

The *second* object of our Society is the study of ancient religions and sciences. Comparative Theology shows that the modern sacred writings and their allegories and symbolism have been mostly copied from the ancient sacred books, and thereby they became disfigured by many mistakes, misinterpretations, falsifications and interpolations. It is reasonable to suppose that the nearer we go to the fountain, the purer we will find the

water, and it follows that the most *ancient* sacred writings come nearest to the truth. In the Vedas, for instance, we find the originals of nearly all the principal allegories of the "Bible," or the Cabala, although dressed up in different forms and called by different names. The same basic truths, which we find in the ancient writings, we find repeated in almost all other religious books, and most of all sacred books have the same fundamental truths; but these truths are usually disguised under the form of some allegories, which are quite remarkable by their absurdity, if taken in their *exoteric* sense and believed *literally*. So if the Hindu says that the universe came out of the *navel* of Brahm, he means the same thing as the Cabalist, who says that Adam Kadmon is the first emanation of the supreme cause, or as the enlightened and therefore excommunicated Christian, who calls that first emanation the "logos" or "the son of God" or the "Christ principle," etc. All these different stories and allegories are so absurd, if taken in their literal sense, that children would laugh in your face, if you would tell them such stories, provided they had not been told before hand that they must not laugh, because that would displease God. These stories have been *intentionally* made so absurd, so that they might not be taken *literally*, and to show that they have a secret meaning, and in their very absurdity lies their protection; and yet priests of all classes will take them in their literal sense, and if you try to explain them, they will cry blasphemy! blasphemy! and call you an infidel, an heretic and an atheist. This is a great misfortune for them,—not for us. I myself have been educated in a Christian church; but my common sense revolted against the belief that we all should be condemned to die, because a certain woman by the name of Eve had the imprudence to bite in a forbidden apple; that God made Adam out of a piece of clay and Eve out of one of Adam's ribs, etc. I asked for an explanation of the meaning of these fables, and if I had received that explanation, I might perhaps be talking now in a Roman Catholic pulpit instead before you; but instead of getting those explanations, which are very beautiful, and which I now know, I was told that I must accept the literal meaning, and that to doubt was a sin. I could not swallow these stories; so I left, and hunted in other quarters for information, and I am glad I did so.

But *why* did the priests not give me the true information? Simply because they did not know it themselves, and if any explanation is given to them, they do not dare to investigate its truth. They have to think according to orders, and if one, wiser than the others, like Eliphaz Levi, should dare to think for himself, he would be excommunicated and consigned to the allegorical devil and his symbolical imps. The Hindus are not so ticklish. They do not ask for a *literal* meaning of their symbols. They do not believe it when the missionaries say that Christna was a very immoral person, because he was not married, but had 60,000 concubines. They, or at least the intelligent amongst them know, that this allegory means to say, that Christna was assailed by 60,000—(that means a good many) temptations; but he did not succumb (that is, he did not get married) to a single one.

There have been at all times people whose common sense has revolted against accepting the literal meaning of theological absurdities, and it is no wonder that the scientists laugh at such stories. But explain them, and show their beauties, and the ridicule will cease, and the laughs will have cause to bewail their own ignorance. The misunderstanding of these legends has often been the cause of serious consequences. It has led to innumerable religious wars, to the killing and burning alive of thousands—nay millions—of people, and to a continual changing from an extreme of superstition to an extreme of materialism. The laws of the material and spiritual universe are an analogue. A pendulum in motion will swing from one extreme to the other, and back again nearly to the first extreme. It is not long since we have had an age of extreme superstition, when people were buried and tortured, because they would not believe in a certain kind of a god. Then followed an age of materialism, headed by the French revolution, and every one that believed in any kind of a god, had, if possible, his head cut off. Twenty-five years ago Dr. Buechner and his "Matter and Force" were all the rage; now nobody cares about such books any more. We are about at the turning point of this age and new superstitions spring up. I will not talk about such excrescences as the "Salvation Army," which perform their farces in public streets and are a general nuisance. Those soap bubbles will soon burst; but the great danger in Europe and America seems to me to lie in the misunderstood facts of spiritualism. The followers of spiritualism, especially in England, France and America, have become very numerous; they have left the basis of unprejudiced scientific investigation, and are adopting a creed. They wish to embrace their "dear departed" and are running after elementals and spooks. On the other hand the churches have degenerated into mere social organisations for religious amusement. You find there plenty of noise and show, but no worship, because the spirit has fled and the priests have lost the key to the sanctuary. Ignorant and superstitious "Free-thinkers" and wilfully blind "Truth-seekers" are stumbling over the country and poisoning the moral-atmosphere. Meat-eating and the use of stimulating liquors is looked upon as something necessary, lying and stealing are considered acts of "smartness," and the prevailing thought is,

how to make money and how to spend it. There is only one way to check the progress of superstition and immorality, and that is, to prove to the people the necessity of wisdom and purity. This is an age of reason, but of a superficial reason, without any spirituality. The people have had enough of mere assertions, they want facts and explanations, and these can be found by the scientific investigation of the ancient sacred books.

The third object of the Theosophical Society is the study of the hidden mysteries of nature and the occult powers of man. If I were talking to an audience of English or German professors, who believe that they already know all the laws of the universe, and who imagine that that which they don't know is not worth knowing, it would be a useless waste of time to try to convince them, that invisible things or hidden powers in man do exist at all. If those men know just a little more, they would know that (man and the universe also) has a sevenfold constitution, and that they do not yet fully understand the first one, do hardly believe in the second, and know nothing at all about the rest. But most of you have seen the effects of the occult powers of man, such for instance as that of sending the astral body to a distance, while the physical body remains in one place, etc., and some of you have developed similar powers. The question with us therefore is not whether such powers exist, but what is the best way to develop them? It is the general opinion that the exercise of the will in concentrating the mind is the most important thing for that purpose, and many think that "concentrating the mind means" to sit still, look for a long time at a certain object, and try to think of nothing at all. Such people do not concentrate their mind, but they render it a blank and make it a good play ground for elementals and spooks. To concentrate our mind properly, we should think intensely of some grand and noble idea, we should study the laws of nature and develop our intellect to the highest degree. As our intellect becomes developed, so must our spirituality be developed on a corresponding scale by a good and pure and moral life and by a proper unstimulating diet. How can we expect to control the forces of nature without, if we are not able to control the forces of nature within us. Theosophy therefore teaches that we should develop our intellect and purify our thoughts and learn to control our actions. We must above all do away with selfish ideas. We must consider ourselves as members of one family, and look more to the interest of the whole family than to that of our own little selves. If therefore there are any amongst you who want to join this Society for the purpose of obtaining some material benefit only for themselves, I am afraid they will be disappointed, and I would advise them to stay away. We do not want any members who ask: what good will I obtain; but such as say, what good can I do? We do not want a lot of helpless children, who sit down in the mud and expect our great masters to draw them out, without their using their own efforts; but we want in every town a nucleus of good and intelligent men, willing and able to assist others; men who can teach others; and in whom the people will trust, and to whom they will come for advice, and of which the people will say: These are good men, because they are Theosophists, and upon them rest the blessings of the Mahatmas.

After some remarks made by the Chairman a vote of thanks to the lecturer was proposed and accepted. Later in the evening a good many candidates were initiated into the secrets of the Society by Dr. Hartmann, assisted by L. Venkata Varadarajulu Naidu, and the rest of the evening as well as the next day was taken up by discussions on the subject of Theosophy.

Dr. Hartmann choose for his second lecture the subject "Theosophy and Theologies," on which occasion V. Sreenivasa Chariar took the chair, and concluded the work of the evening by some remarks highly complimentary to the lecturer. Another initiation ceremony followed that evening, and on the morning of the 16th, instant the delegates left for Vellore.

On the 17th, at 8 A. M., Dr. Hartmann delivered a lecture on Theosophy in Veenaragava Mudaliar's house, and in the evening of the same day a largely attended meeting was held at the house of A. Narainami Mudaliar, at which the highest problems of metaphysics were discussed between Dr. Hartmann and one Ekanki Swami, a Sanyasi, after which the delegates took their departure.

(From the Madras Mail.)

### LECTURE ON THEOSOPHY.

By MR. ST. GEORGE LANE-FOX OF LONDON.

On Saturday evening Mr. St. George Lane-Fox, a member of the Theosophical Society, delivered a lecture on Theosophy, in Patchéappah's Hall. The Hon'ble Gajapatti Row presided, and among those present were Dr. Hartmann, Damodar K. Mavalankar (Secretary of the Society), Mr. and Mrs. Coulomb, Mr. Bhashyam Iyengar, Raganatha Row, Dewan Bahadur, and Dr. Oppert. Mr. Fox is a member of many of the learned societies of England, and is best known as an expert in electrical science. He came to India to investigate, joined the Theosophical Society and is now staying at its head-quarters at Adyar, Madras. He has visited Calcutta, Lahore, Simla, Poona, Bombay and other places.

Mr. Fox commenced his lecture by remarking that he was sure all present would agree with him that the Theosophical movement was one of the most remarkable movements of the age. He had been watching the movement for some time from Europe, but long before he became acquainted with the name of the Theosophical Society, he was a Theosophist. There was a latent power growing in the West, which would soon burst forth, and the name of Theosophy would soon be adopted by thousands of people who so far have only sympathised with the objects and methods of the movement. The object of Theosophy was the promotion of unity—of mutual assistance between every branch and race of mankind; to enable the people of different nationalities to co-operate for the common good and join together in the work which obviously is the work which mankind has to accomplish sooner or later. The Society sought the promotion of a universal brotherhood. The movement—the movement did not necessarily mean the Society—was being assisted by thousands, and being promoted in very many and various ways. The methods which the Society proposed to adopt, although not thoroughly adopted yet, were methods of conciliation. It had had its difficulties, of course, as all new movements had had. The word "Theosophy" was an old one derived from the Greek. Underlying all external histories of nations, there had generally been one object, that of the promotion of unity and division of labour. There had always been an attempt to interchange ideas between different sects. When they had thoroughly interchanged their ideas more and more, they would find out that the fundamental bases of all their ideas were one and the same; that underlying the common ground was Theosophy. It was commonly and wrongly supposed that Theosophy was a sect; it really included among its members every variety and shade of nominal belief. As they united together in that common object, their various religious proclivities seemed to tone down, and they came to understand that that which they had been considering as the vital matter in religion was the mere husk or shell. Those who investigated the matter more carefully would see that there was no reason why any body professing any particular belief,—provided his objects were sincere and pure,—should not heartily assist the Theosophic movement. On what did human progress depend? For that was at the basis of all consideration of our future. Human progress did not mean the passing of time, but if they regarded these matters in the light of modern science and modern thought, they would notice that mankind is developing. The theory of Evolution had gained great hold over the minds of Western people, but he might say that it had always been professed by Eastern thinkers. The process of Evolution was merely this change going on in various departments, not only of human life, but of the animal, vegetable and mineral kingdoms. If they recognised the fact that human kind is progressing, and that we progress by fits and starts, or rather, cycles, they would understand that progress as a whole is continuous and real. What was human kind tending towards? He compared the human race to the growth of a child, having periods of bodily activity, then mental development and maturity, followed by decay. He contended that the reasoning faculties grew and grew until they led to a very extraordinary amount of intellectual thought. In the lower animals the senses we are possessed of are not all developed. These senses were added one by one, so to speak, as life grows from its very low states towards the higher. If man had had less powers in time past, we must, reasoning by analogy, come to the conclusion that we shall still progress evolving new faculties and powers. Some extraordinarily developed men now possessed faculties not possessed by others. One of the causes of the Society was the knowledge that those faculties can and do exist at the present time in a body of human beings. Those strange growths, so to speak, of human nature, have been believed in for a long time by the people of India, but until quite recently they were not suspected by the West. However, the fact that it seemed probable that those faculties could be evolved had begun to dawn upon the thinkers of the West. What were those faculties or powers? By the intervention of what are called our physical senses, we were able to take cognisance of outward appearances: could not they imagine that there might be other faculties latent in the mind, which enabled them to assimilate knowledge by other means? Undoubtedly they could. When that faculty he spoke of—the intuitive faculty or spiritual perception—was cultivated properly, it grew into a real power, such as could be utilised, and became a great deal more useful than other faculties already developed. That was the chief power which was in store for the future mind. He had been investigating esoteric Theosophy, which meant that study for the few which is not suitable for the multitude. It had existed at all times, but it had generally been hidden from public gaze for this simple reason, that it had been beyond the public reach. There was supposed to be a great amount of secrecy in what was called the occult doctrine and that was imposed—it was often thought—by people who were its custodians or guardians in order to deprive the public of its advantages. That was not the case, for the secrecy was in a wish on the part of those custodians not to be misunderstood. Knowing that people could not understand in its true light the whole of that doctrine, the custodians did not attempt the useless task of trying to explain it to the general public. But recently, owing to development naturally going on within a certain portion of

mankind, it had been desirable to make some effort to enlighten the general public, and that process of enlightenment was simply a phase of Theosophy. It was an attempt to draw the veil of *Maya* from the minds of more developed intellects, and so enable them to see in their truer light some of the phenomena with which they have already become familiar. Psychological Research next claimed the lecturer's attention, and he remarked that now for the first time was an attempt being made to elucidate some of the truths of that science. He explained the meaning of mesmerism and automesmerism. Proceeding to examine occult phenomena, he remarked that those phenomena had been misunderstood in many quarters. Some had thought, wrongly, that occultism was the chief means of the Society to produce a certain effect. It was not at all an important part of the scheme. The occult powers, which were possessed by people who had been able to explore the depths of nature beyond that of the ordinary mind, were manifestations of an intellectual power usually misunderstood by the general public, but they were not by any means miraculous. Occultism was merely hidden by virtue of its being beyond ordinary reach. In concluding his lecture, Mr. Fox said he was convinced that we are at the beginning of a period of enlightenment. It might not be a Utopia, but it would be a partial Utopia. We should be reigned over, as it were, by the peaceful influence of Harmony and Love. (Applause.)

Votes of thanks to the lecturer and chairman concluded the meeting.

### HOW I BECAME A THEOSOPHIST.

BY GYANENDRA NATH CHAKRAVARTI, M. A., F. T. S.\*

SCPTICISM and rank materiality are two exotic plants which have taken root in the hearts of our young Indians by a purely physical education as imparted in our colleges and schools. My educated friends, presuming upon the fact that a knowledge of the western physical science is incompatible with a belief in occultism and in the existence of a superior science nearer home, are often taken with the surprise which characterises the dying words of Julius Cæsar when they hear that I am a Theosophist and a full believer in the occult portion of Theosophy to boot. It is with the object of explaining my conduct to such of my friends and acquaintances and to dispel the foregone conclusions of them and others like them, who muster very strong, that I take up some space in this valuable journal.

As regards the nobleness and practicability of the first two objects of the Society there can be no two opinions, especially as the practical work done by it during the short period of its existence has been so great and good as to attract the attention of almost every outsider. The Society has proved itself to be no dormant and theoretical Brotherhood. Many are the persons known to me—narrow though the circle of my acquaintance is—whom the Theosophical Society has reclaimed from vice and sensuality. The establishment of Sanskrit schools throughout India which the Society is aiming at is an object, in my opinion, the noblest and the most necessary that could be thought of at this present juncture of Indian denationalization and materiality. Spirituality will follow an extensive Sanskrit education as day follows night. There is already one school in every large city in Southern India. Ere long similar will be the aspect of Northern India. The Theosophical Society, discarding all notions of sham patriotism, is trying hard to build a solid foundation for the Indians to stand upon as a Nation worthy of respect and admiration in some future time. An Indian who keeps back his helping hand from lending support to such a grand movement for the moral and spiritual regeneration of his country, must surely stand accused of cold indifference verging on torpidity and even failure of one's duty towards one's brothers. Indeed it was chiefly through a purely patriotic motive that I first joined the Society. But upon this portion of Theosophy it is not my present object to dilate. I mean to say a few words on occultism, its science and philosophy. My conviction in occultism and its masters was brought home to me in a two-fold way. Firstly, by the ratification of the occurrence of what are commonly called "phenomena" by men of very great intelligence, sagacity and truthfulness—many of them being among my personal acquaintances and friends and even witnessing a number of them myself. Secondly, by a study, however limited it may be, of our Aryan science and philosophy, the grandeur and the harmonious nature of which struck me quite forcibly. I argued that such a complete system of philosophy, in which one could find perfectly satisfactory answers to all those questions which are supposed to be beyond the human ken, could not have been framed by men in the same stage of development as the ordinary mankind is. Reason, unaided by the higher powers in man undeveloped in the present race of

mankind, could not have soared into the domains of the "Great Unknown and the Unknowable"—and, if men more perfect than ourselves could exist in times gone by, there is no reason why they could not exist now. The fresh accessions to that grand system which we are now getting through the Theosophical Society leads to the belief that such men do exist. I shall first deal a little more fully on the phenomenal side of the question and shall then try to show in a very rough and general manner—since a subject like this requires to be and has been dealt with by men far abler than myself—the incomparable superiority over the modern science and philosophy of the Esoteric doctrine, the faintest approach to the completeness and harmony of which has never been made by any philosophical system of the West, on the very pinnacle of intellectual development as it is.

Phenomena, as I understand them, have no intrinsic value. They can only amuse except in so far as they prove to us the existence of some extraordinary powers and hence leading us to a belief in the corresponding extraordinary knowledge of the laws of Nature not necessarily in the performer—(for a boy often may work the steam engine without knowing as to how it works,) but certainly in some Beings who are the masters of this Occult Science. It is with this view I doubt not that phenomena were shown to the world by Madame Blavatsky when the Founders first came to India, and it was for this loving desire of theirs to lead men up to the higher truths that they were called names by almost all the scurrilous Anglo-Indian newspapers. I for one have ceased to hanker after phenomena, being once convinced of the fact that Occultism is a true and noble science worth pursuit at any sacrifice. My friends will not be surprised to learn I hope that only a few months before joining the Society I was as great a sceptic as any of them though there were two incidents in my own experience besides many others which I had heard from reliable sources, that my knowledge of the physical sciences could not explain. The first was the suspension in air of a boy of about 14 years of age I saw seven years ago. The second was the projection of the double or the *Mayavirupa* of my old grandfather at the moment of his death and its appearance before a Vedantin Yogee (certainly more than 100 years old), who lived in a jungle near Benares and for whom my grandfather had great respect and admiration. But a study—meagre as it is—of the A. B. C. of Occultism has enabled me to look upon these incidents to be as natural as the repulsion of the North pole of magnetic needle when a similar pole of another magnet is brought near it, or its attraction in the vicinity of the south pole of another magnet.\* The first work on Theosophy which I read was the *Occult World*. It helped much to break down in me that dogmatism of rejecting as untruth all that modern science has not yet discovered though indeed that very book is read by most Europeans without the slightest effect. But a Hindu mind differs from a Western mind. A Hindu is born in a land where phenomena are so common as to attract the attention of even a passing observer though many times they are passed over as feats of jugglery. Then again his manners and customs and even his habits of daily life point to the existence of a science wholly unknown and undiscovered in the West. The spirituality of his forefathers, transmitted to him by the principle of Atavism (heredity) is in him, though latent. Hence he is more capable than an European of comprehending the grand truths of the science, which these phenomena lead us to. I never did nor can ever believe in miracles. I think with Professor Huxley that the word in itself is a misnomer. How can we state that a particular phenomenon is a transgression of the laws of nature, before we have ascertained all the laws of nature and all that can be produced by them. The highest priests of the sanctuary of modern science own that the wider their researches extend, the more keenly do they realize the painful truth that they have yet got only a minute drop from the vast shoreless ocean of knowledge. Hence there is no *a priori* evidence against the existence of facts in nature, unknown and unsuspected in the scientific land of the West. The phenomenon occurring under test conditions mentioned in the "*Occult World*" and others mentioned in the "*Hints on Esoteric Theosophy*" attested by men of reputation and influence partially inclined me to believe in the existence of occultism and its teachers. Since joining the Society, the accumulative effect of all that has come under my experience has been so great as to fully confirm me in my belief. I have seen several letters received by several of my friends at different places under different mysterious circumstances from the venerable Mahatma, to whom the "*Occult World*" is dedicated, all similar in writing and even style. One evening at one of our ordinary meetings all of us were engaged in discussing and thinking about a certain subject. After a few days one of our

\* The suspension in the air is explained by the fact that, by a certain process, the polarity of the feet is changed. Our feet are ordinarily charged with S. magnetism, owing to inductive action of the Earth's N. pole. Hence we cannot fly off. The feet being once made N. poles, repulsion from the body of the earth naturally follows.

The *Mayavirupa* at the time of death is drawn towards a certain person owing to the affinities the Ego cultivates or generates during its subjective existence.

\*Mr. Gyanendra N. Chakravarti, F. T. S., is a gentleman of considerable attainments, having passed through a successful career in Calcutta University. In 1883 he graduated in Physical Science and obtained the degree of Master of Arts with First Class Honours and University Gold Medal. It is with pleasure we learn that our friend and brother has been appointed Professor of Mathematics and Physical Science in Barcilly College.—Ed.

friends received a letter from the Mahatma mentioned above, quoting the very words in which he had thought and directing him on the subject. I may as well state here that the worthy founders of the Society were then at the Head Quarters. Another evening while we were at a public meeting a respected European friend of ours saw the *Mayavirupa* of a certain Mahatma present in the hall. On returning home we found the fact corroborated by a *chela* who was, a short time before we came in, *en rapport* with the Mahatma in question, without telling him as to what our friend had seen. On another occasion a friend of mine, a graduate of the Calcutta University, a Bengali gentleman of sound education, heard distinctly the known voice of a Mahatma speaking to him while he was alone in his room in Calcutta, neither Colonel Olcott nor Madame Blavatsky being in Northern India. This fact alone ought to give a crushing denial to the slanderous charge often brought against the founders of the Society that they produce phenomena by jugglery. All my experiences about phenomena will be too numerous and even useless to relate in an article like this. Hence I shall conclude this portion of the subject by telling my readers that besides Mr. Ramaswamier two of my friends, one of them being not even a *chela*, saw in the first place the portrait of a Mahatma, then *Mayavirupa*, and lastly in his physical body. If I do my friends for whom I have very great respect the justice of supposing them to be men of ordinary veracity—and indeed intentional lying is incompatible with the purity of character which they possess), I ought to believe in the existence of the Mahatmas, since the chance of my friends being themselves deluded is much reduced. Without stopping to conjecture how far what I have said about phenomena will be convincing to the public, I pass on to say a few words on the Science and Philosophy of Occultism. I must confess that according to my peculiarly constituted frame of mind this latter phase of Occultism did more towards bringing about my conviction and then creating in me the attraction for it which I now have than what I formerly called phenomena. Even the letters from the Mahatmas quoted in the Occult World impressed me with the idea that there must be lying hidden in the snowy ranges of the lofty Himavat, a great science unknown and unexplored, the glimpses of which are to be found in our own Shastras and which can even be discerned, dimly though it be, through the translucent veils of our daily habits and customs as enjoined by the Rishis of old. The study of the "Fragments of Occult Truth" and "Esoteric Buddhism" left no room for doubt. Therein I found a theory of evolution so complete and so grand that compared to it the recent one of Darwin cannot but be thought of as an ugly torso. That science of evolution is not only free from the defect visible in all western scientific investigations of leaving out the spirit quite in the cold, but considers the spiritual development of beings as the only circumstance which can explain so great changes of form which local circumstances and sexual selection can hardly account for. The very satisfactory explanation of the missing link which Western Science has so long striven for in vain to furnish is based entirely upon this fact. Once the human form is evolved from the ape, the spiritually developed entities find tenements of flesh ready for them, and hence there is no more necessity for the animal form to be forced up into human ones. Hence the intermediate links die out. The Fragments do not stop only with telling us that the mineral kingdom is evolved from fiery Nebulae through intermediate forms and then develops into vegetable, animal and human kingdoms; but goes to give us an outline, faint though it is, of the life after death, the future destiny of man and the higher states of existence to which man kind is running up. It furnished me with the grandest philosophy I could conceive. The Eastern philosophy, I may here let the readers know, differs entirely from what is called by the same name in the West, in the fact that it is not only based upon but is identical with science. The Western philosophy and metaphysics are founded wholly upon conjectures. They are generally the fumes of one's imagination, seasoned perhaps with a little of reasoning. Eastern philosophy is the result of accurate observation by the higher powers of man, and whatever it tells us are not conjectures but scientific facts. Eastern Science is not antagonistic to Western Science, but the latter falls short of the former. In fact the legitimate conclusions at which modern science has arrived are the lower steps of the Occult Science. The sphere of the Occult Science indeed is incomparably wider, and hence such a repository of knowledge can wield powers immeasurably greater. It is a dogmatism of the orthodox scientists to think that no higher powers than what they possess can be attained by man; just as an ignorant ploughman refuses to believe that a message could be sent from one quarter of the globe to another in almost no time. The origin of this doggedness and obstinacy lies in the unwarranted supposition (though perhaps unconsciously assumed) that all the Laws of Nature have been discovered. The methods of investigation in the East and West are entirely different. In the West as many facts as possible are noted down as in a Day Book, and then from these we arrive at truths by means of deduction and induction. So that, as is repeated constantly, the West can only get knowledge indirectly through the media of the physical senses, which are so unreliable. The Eastern method stands in need of no *via media*. The Ego takes cognisance of things direct. An Adept Guru does not reason out the truths with his *chela* but

makes him see. In the pursuit of this method one has to develop his intuitive faculties and then one can observe the truths. In this act of observation there is no inference or reasoning, and as stated by William Stanley Jevons in his Principles of Science, in an act of pure observation even by the physical senses there can be no mistake, if we do not, instantaneously though it be, reason and also infer. Even the chief discoveries of modern science are due, as I conceive, to intuition. Orthodox scientists will no doubt object to this assertion of mine. But I humbly ask them how the greatest truths in the physical sciences, comprising of course Mathematics, the most perfect of them, have been arrived at. They are not got certainly by any process of ratiocination or even of what is called accurate induction. The method of difference, the most perfect of the laws of induction as laid in John Stuart Mill's System of Logic, has been acknowledged by that eminent thinker himself to give us the least number of truths. But does he not together with a whole host of other Scientists own that the most wonderful triumphs have been performed by hypotheses? Hypotheses may indeed undergo the process of verification and then seem consonant with reason and physical experience; but the truths are no doubt due to hypotheses. And the catching hold suddenly of a particular hypothesis as the true one is—due to intuition. The discovery of the poet Goethe, that the skull is merely the expansion of the spine, and that flowers are but transformation of leaves, will throw light on the subject. To explain esoterically: all the truths that have been and will be discovered are imprinted on *akasa* and suddenly a certain truth passes before the intuitive eyes of some thinker and enables him to make a discovery and thenceforward to be admired as a man of extraordinary intellectual capacities. Complete verification as regards truths obtained by the higher and developed intuition is not practicable, because it encompasses things which are invisible to the physical eye. That one can take cognisance of things unseen by the physical eyes is well established by the phenomena of psychometry, clairvoyance and thought-reading. In the last case one can read through his inner sense the inscription on the *akasa* made by a certain person's thought, which is material, and a form of energy or a mode of motion just as heat is. Having said that Eastern and Western sciences are not antagonistic, it remains for me to add that it is only by a study of the occult sciences that we can effect that marriage between Science and Religion which mankind are thirsting after and which cannot but be productive of wonderful results. Let me remind my countrymen that our old and, in their eyes, antique religion is based entirely upon science; and Theosophy is trying to show that more or less every religion in its Esoteric aspect is so based. It is impossible to explain in a short article like this that a knowledge even of the elementary principles of the occult science is necessary in order to understand the full import of our manners and customs. The students of vital magnetism do know it partly. But the cardinal doctrines of Hinduism and Buddhism—the *Karma* theory and the theory of *Moksha* or *Nirvana* find their origin and sanction in the Occult Science. Nor has the Western Science to say a word against them. The former affords another instance of the universal Law of causation and the latter of the cyclic law—the law that things return to the place from which they started. As exemplified in the physical phenomena of the rotation and the revolution of the Earth. We come out of (are evolved from) the Universal Spirit or Parabramha through various forms and states of existence, and shall at the end merge into Him and attain the blessed *Nirvana*. I shall close this paper with this assurance to my readers, that daily I am learning to look back upon the hour I joined the Theosophical Society and became earnest in its cause with greater delight and appreciation, and sincerely wish that such an hour may not be far off for them.

### Our New Branches.

MR. S. RAMASWAMIER, B. A., our indefatigable friend and brother, formed two Branch Societies at Periya-Kulam and Dindigul in Madura District, on the 17th February and 1st March 1884, respectively.

DR. F. HARTMANN formed two Branches at Vellore and Chittoor in the North Arcot District, on the 14th and 17th April 1884, respectively.

### Official Reports.

#### ADDRESS.

THE members of the Society of Occultists of France at the commencement of the year of Hermetic Magism, beginning on the 21st of March, express to the Parent Theosophical Society at Madras their profound admiration for the work which has already been accomplished by their labours. The organizers of this great movement may look with pride upon their numerous followers.

There is nothing more grand and useful than a Society, whose object is to search for the highest truth. At all stormy epochs in the history of humanity, in the midst of celesto-planetary catastrophes and amongst the devastations caused by war, there always appeared certain revelators, which a certain Genius had selected as the guardians of revealed science. We rejoice at the reawakening of the old Orient, whose race has remained pure, and which has perpetuated itself through the ages by observing the laws of Atavism. Those physiologic forces are the best protections against that degeneration, which leads the people of the Occident to their destruction. We welcome the occult Orient which, inspired by an exalted sentiment of Fraternity, has today revealed to us the science of psychic physiology, especially the seven principles which constitute man as he is now and as he will become during his future transformations on his way towards immortality.

Let us continue our work with firmness, and we shall establish, in the midst of the troubles and trials by which our modern world is affected, a permanent production, against which will dash in vain the waves of reactions. Doctrines and hypothetical assertions will pass away, but to *Scientific Truth alone belongs the Future.*

This is signed by twenty-one members of the section for occult research, with the approbation of the two other sections, which constitute the Society of the Occultists of France.

PARIS, March 21st, 1884.

#### THE ATMA BODH THEOSOPHICAL SOCIETY.

The first Anniversary of the Atma Bodh Theosophical Society, Moradabad, N. W. P., was celebrated on the 17th February 1884.

#### NOTICE.

It is hereby notified that the connection of Mr. A. Theyaga Rajier, of Venkatesa Naik's Street, Triplicane, Madras, with the Theosophical Society, has ceased from 1st April 1884.

(By order of the Board of Control.)

DAMODAR K. MAVALANKAR,

*Joint Recording Secretary.*

#### THE SATYA MARGA THEOSOPHICAL SOCIETY.

[At the time of the celebration of the first anniversary of the Branch during Col. Olcott's last visit to Lucknow, the following report was handed to him by the President of the local Society.]  
HONORED SIR,

I have the pleasure to submit a report of the working of the Satya Marga Branch of the Theosophical Society during the first year of its existence.

Hitherto, the attention of the Branch has, owing to its comparative infancy, been mainly occupied with the organisation of plans and the establishment of a working order of things, and accordingly a review of the work does not so much show actual results, as it reveals plans which are, I am glad to say, in a fair way to success.

The first real impetus that was given to the cause of Theosophy at Lucknow may well be attributed to the Lecture that you delivered in this very Hall in March 1882. There had no doubt been some stir in this city a few months previous to your last visit but no substantial result had followed. But the Lucknow public had no sooner heard your exposition of the principles of Theosophy than it gradually began to show unmistakable signs of taking interest in the movement. In the following few months we received as recruits to our ranks some of the most intelligent and educated Hindu gentlemen of the station. About the middle of July 1882, we found that the number of Hindu members was sufficient to form a Branch of their own, and with your kind permission we applied for a Charter to form an exclusively Hindu Branch under the title of the "Satya Marga Theosophical Society." The Charter was issued to us on the 27th of July, and our Branch then received formal recognition,

In treating of the work done by this Branch in the course of the last year, it would be convenient to divide it into two portions.

(1). Work within the pale of the Society.

(2). Work considered in its bearing upon the outside public.

Under the first head the point that I have to notice first is the establishment of a Library for the use of the members.

Limited as our means were, we have from time to time devoted such sums as we could spare towards procuring books on Theosophical subjects. We intend in the present year to enlarge the Library, and especially to add to it a collection of Sanskrit and Persian books dealing with Occultism.

It would not be out of place to notice in this connection a plan that we have proposed for placing Theosophical works within the reach of such non-theosophists as may be desirous of information, by instituting a Circulating Library, to which every one who pays a monthly subscription of 4 As. could have access.

Our Branch has held its ordinary meetings on Sundays, when it has been customary for some competent Theosophist to read to the other members assembled, part of some standard work on Theosophy and to explain to them the difficulties therein. A free discussion always follows which serves to clear up all misconceptions. We have found this system to be very advantageous, inasmuch as, in addition to the many other circumstances in its favor, it fully carries out the real object of the Theosophical Society, namely, that one member should profit by the experience and the researches of another.

The point which next deserves attention is the "study of Sanskrit." In these Provinces unfortunately Sanskrit is almost wholly discarded. The state of things in this respect is so very bad that people whose learning is confined simply to a knowledge of Sanskrit, are scarcely considered to have polite education—a knowledge of Persian and Urdu is deemed essential to a gentleman, and Sanskrit is considered to be intended only for those who seek a precarious livelihood by following the now much degraded profession of a priest, the sum total of whose knowledge generally consists in the mechanical memorising of mantras, the meaning of which is quite unintelligible to him, and which he can with difficulty pronounce at all and very seldom correctly. The establishment of the Calcutta University, which has adopted Sanskrit as one of the second languages in its curriculum, has no doubt given an impetus, though a very feeble one, to the study of that language, but even now in the colleges and schools in the N. W. Provinces and Oudh, there will with difficulty be found four students that take up Sanskrit to the ninety-six that read Persian or Urdu; and even in the case of those four, scholarship is not a thing to be thought of. In the face of such circumstances, the members of our Branch came to appreciate fully the importance of a revival of the study of Sanskrit; which Theosophy has ever since the organisation of the Society proclaimed in loud and clear accents. Many of them, despite the varied demands upon their time, commenced learning Sanskrit. Two of them in particular have engaged a Pandit, and besides studying with him themselves, have made him to impart instruction gratis to the boys in the neighbourhood. Another highly satisfactory point in the working of the Branch is the moral progress evinced by the members. There are few among us who do not find a decided improvement within themselves. The consciousness of our duties towards our brethren at large is dawning upon us, and we are beginning to be disenthralled from the all-engrossing selfishness which reigns predominant in men so long as they are wholly occupied with their own self-aggrandising worldly pursuits.

I will now remark upon that phase of the work done by the Branch, which concerns the general public.

We have not been idle in propagating Theosophical knowledge. At different times during the last year, our members have visited various places, where in discussions they have propagated the ideas of Theosophy. Among others, I may mention Pandit Kishen Lal Misra, High Court Pleader, whose efforts in the furtherance of Theosophy have resulted in the formation of a Branch at Rai-Bareilly in this Province. Our Vice-President, Pandit Paramashree Dass, who lives at Bara Banki, has established there the Gyanodaya Theosophical Society, of which he is now the worthy President. Babu Purnu Chandra Mookerjee, an archæologist in the Government service and a member of our Branch, has in various official tours done

good work at Nainital and Sitapur. Our President, Pandit Pran Nath, has visited Allahabad, Mumsuri, Dehra Doon and Furruckabad, and in all these places has addressed large gatherings of educated people, and tried to impress upon them the immense importance of Theosophy. Besides these gentlemen all the rest of us have also been trying to widen the sphere of the Society as far as we could.

Some of our members have from time to time contributed articles on Theosophy to the Vernacular journals of the Province. Under this head, the names of Pandit Sheo Narain of the Canning College and of Babu Raja Bahadur deserve special mention. The articles of these two gentlemen have disseminated the principles of Theosophy in this Province to an extent which could not have been accomplished were we to depend solely on the flying visits that our members paid to outstations. To the same two gentlemen is due that translations of parts of the "Occult World" have appeared in the *Mirat-Ut-Hind* and *Murakai Tahzeeb*, two local journals, whose editors have always courteously inserted Theosophical correspondence.

Our Branch also made it a rule to invite the Lucknow public at occasional intervals to hear lectures on Theosophical subjects in English and Urdu. Some of these lectures were printed and circulated free of cost.

Some of our members have undertaken the study of Mesmerism simply for the purpose of treating diseases. Two of them have in but a short time met with remarkable success. Pandit Devi Prasad, F. T. S., our present Vice-President, and Pandit Sheo Narain, F. T. S., have succeeded in curing diseases of long standing, and the former has also convinced one or two Europeans upon whom he operated of the real efficacy of his mesmeric powers. He has obtained from some of the patients certificates, which state the immediate relief they felt on being mesmerised by him.

Lastly, our Branch has lately mooted a proposal for the establishment of two Anglo-Sanskrit schools. Our Vice-President, Rai Narain Dass, Judge of the Small Cause Court, has devoted himself to the carrying out of this enterprise. The success that has hitherto been attained in this direction is due to that gentleman alone. We have now to appeal to the patriotism of the Lucknow public for help in this movement. Could we get a few more of the nobility and gentry of this station to do what Munshi Nawab Kishore, Babu Brij Boshan Lal and Badra Bansee Lal Singh have so nobly done, success would be ours in no time. We are confident, nevertheless, that in a very short time the school will be established on a firm footing.

It is also under consideration to carry out your suggestion and start in Lucknow a few Sunday schools where Hindu Theosophists can impart religious instruction to Hindoo boys.

In conclusion, I should like to notice one fact which offers a very strong proof as to the real good that Theosophy has done in this city. It is observed that the majority of the graduates and under-graduates are beginning to respect ancient Aryan knowledge and philosophy. Instead of regarding the West to be the only repository of learning, they are now beginning to have a proper respect for the researches made in time past by their own illustrious ancestors. In corroboration of the statements here made, I would refer to the kind sympathy which has been shown to our Branch ever since its formation by the Cashmere National Club, which is composed mainly of young Cashmere Pandits, who are receiving instruction in the local college. This Club, when it learnt that our Branch was going to form a Theosophical Library, immediately gave us a donation of Rs. 20, asking us to accept the sum as a token of sympathy from its members. Lately, when it came to the knowledge of the said Club, that the Branch Society had proposed a scheme for an Anglo-Sanskrit School, it at once passed a resolution that the Club ought to help the Society in such a laudable undertaking. Subscriptions for this purpose, to an amount which is large when we consider that the Club is mainly composed of students, were realised on that very day, and it was also proposed to collect money for the school from outstation members. Are not these facts strong proofs to show that the young gentlemen who are receiving College education are in sympathy with us?

I have nothing further to say, but only hope that the work shown by the above account, incomplete as it is, may, in consideration of the many extenuating circumstances, give you satisfaction. I may as well assure you, honored Sir, of

the unflinching determination of every member of the Satya Marga Theosophical Society to offer what little help he can towards the regeneration of India—a task which you and your respected colleague, Madame Blavatsky, have so nobly undertaken.

I have the honor to be,

Sir,

Your most obedient servant,

JWALA PRASAD SANKHADHARA, F. T. S.,  
Secretary, Satya Marga Theo. Society.

LUCKNOW,  
5th. November 1883. }

#### THE PERIYA-KULAM THEOSOPHICAL SOCIETY.

The Officers elected for the Periya-Kulam Theosophical Society for the current year are:—

M. R. Ry. S. Mahadeva Iyer *Avergal*, B. C. E.,—*President*.  
" C. Viswanatha Row " *Secretary*.

#### THE DINDIGUL THEOSOPHICAL SOCIETY.

The following Officers were elected for the Dindigul Theosophical Society for the current year:—

M. R. Ry. S. R. Seshiah *Avergal*, *President*.  
" A. Aiyasami Sastrial " *Secretary and Treasurer*.

#### THE CHITTOOR THEOSOPHICAL SOCIETY.

The Officers of the Chittoor Theosophical Society for the current year are:—

Mr. H. M. Winfred, ... .. *President*;  
M. R. Ry. C. Srinivasa Mudlyar *Avergal*, *Vice-President*;  
" A. Raju Mudlyar, " *Org. Secretary*;  
" T. Ponnoswamy Pillai, " *Recg. Secretary*;  
" P. Krishnasawmy Mudlyar " *Treasurer*.

#### THE VELLORE THEOSOPHICAL SOCIETY.

M. R. Ry. S. Narainsawmi Mudlyar *Avergal*, *President*;  
" S. Masilamoni Mudlyar " *Secretary*;  
" V. M. Ratnavelu Pillay " *Treasurer*.

#### THE FYZABAD THEOSOPHICAL SOCIETY.

Babu Chandra Mohan Mukerjee has been elected President of the Fyzabad Theosophical Society, vice Babu Gokul Chand Khanna, resigned.

#### THE MIDNAPORE THEOSOPHICAL SOCIETY.

Babu Krishnadhan Mukerjee, M. A., B. L., has been elected Secretary to the Midnapore Theosophical Society.

#### CIRCULAR.

It is hereby notified for the information of the Presidents of all the Branches of the Theosophical Society in India and other Theosophists that from the 1st day of May 1884 no applicant for admission into the Theosophical Society should be initiated until the sanction of the Head-quarters is obtained, except in cases of emergency, such as the short stay of a candidate at the place where he is to be initiated. The Presidents of Branches should submit a statement regarding the applicant in the accompanying form, with every recommendation for permission to initiate a candidate as soon as practicable after receiving his application:—

Name of the applicant.	Age.	Residence.	Occupation.	President's opinion regarding the Candidate.	Names of the sponsors who recommended him.	Remarks.
1	2	3	4	5	6	7

This Notice will not apply to those who have been or who will be specially authorized to initiate candidates by a written order issued from the Head-quarters.

By order.

DAMODAR K. MAVALANKAR,  
Joint Recording Secretary.

THEOSOPHICAL SOCIETY, }  
ADYAR (MADRAS), }  
21st March 1884. }

#### SPECIAL ORDERS OF 1884.

CAMP, PARIS, FRANCE, March 27th, 1884.

THE aspect of European public opinion making it evident that the interests of the cause represented by the Theosophical Society demand the presence in Europe of the Founders for a longer period than had been at first contemplated, Notice is hereby given that the Provincial Council which was to have been held at Calcutta about the 1st of August next, will not be convened. It will be left to the General Council to determine at the Annual Convention in December as to the time and place of the Provincial Convention for 1885.

The President-Founder has great pleasure in making known to the Society that the cause of Theosophy has already a large number of devoted friends in France, and that a considerable accession has been made to our membership since his arrival in this country.

The Paris Head-Quarters have been established at No. 46, Rue Notre Dame des Champs, where communications may be addressed.

The President-Founder expects to reach Head-Quarters at Adyar some time in August.

By the President-Founder,  
MOHINI M. CHATTERJI,  
Private Secretary.

### Requies.

#### THE ARYA SAMAJ AND NEW DISPENSATION.\*

THIS pamphlet, which has been lying on our table for some time, enumerates the four essential points of difference between the Arya Samaj and the New Dispensation section of the Brahmo Samaj. The first complaint against the former is, that although they preach against caste, no member of that body has the boldness to openly give it up. Now we have nothing to say against the sincere beliefs of any individual. It is the cardinal principle of our Association that the beliefs of our fellowmen, if sincere, should be respected. But we believe it is moral cowardice and hypocrisy for any one to do that which he believes to be wrong, especially if he puts himself forward as a reformer and thinks that what he denounces is a real evil retarding the progress of his country. For ourself, personally, we do not cry down the caste system, nor wish its entire demolition. Every evil has its bright side and every good, its shadowy. For certain reasons, into which we need not enter here, we hold that what is essentially necessary for the regeneration of India is not the abolition of caste, but its reconstruction upon a philosophical and scientific basis as it was in the days of the ancient Rishis. What has ruined India is not the introduction of the caste system, but its abuse by the selfish and the ignorant. This is however a digression. The second charge against the Arya Samaj is that they assume the infallibility of the *Veda*. The New Dispensation stigmatises it as sectarianism. We cannot, however, allow to pass, without a protest, the assertion of the latter that side by side with truth there is error in the *Veda*. Our readers are well aware that we have always urged that the *Veda* have three distinct meanings, one is literal, the other is esoteric, and the third, that indicated by the *Swara*. If some fifty years ago the theory of *Vimana* were propounded as it is in our Sacred Scriptures, erudite scholars of the New Dispensation type would probably have denounced it as an error. But now one, who knows what a balloon is, will wait long before condemning the Aryans for believing in such a

\* Reprinted from the *Liberal* by a Punjabi Brahmo of the New Dispensation. Printed at the Tribune Press, Lahore: 1883.

superstition as an aerial conveyance. And time will show that what "educated and civilised men" call error in Hinduism is after all scientific truth. We do not imply that all or any one known interpretation of the *Veda* is necessarily correct. But what we have the weakness (if you please to call it so) to believe is that the *Vedas* are the encyclopædia, so to say, of all knowledge attainable by mankind on this planet in this Round, for it is the gift of the "gods." Let the reader not misunderstand us. We do not say God but *gods*. Our meaning will be plain to him who is an earnest student of the WISDOM-RELIGION. Let not the New Dispensation talk of the error in the *Veda* so long as it has not got the key to open its secret treasures.

The third point for which the Arya Samaj is taken to task is its belief in transmigration. If that belief be correctly represented, then the author has succeeded in his work of destruction. But that is all. Our readers are quite familiar with what the Esoteric Science has to say upon the subject. That is a matter which is much more fully entered into in all Theosophical literature than any other. The fourth and the last point of difference between the Arya Samaj and the New Dispensation is that the former admits the co-existence of souls and matter with God. As both of them start upon the premiss of creation, it is quite clear that an evolutionist must necessarily disagree with both. It is needless for us to repeat here all the arguments for or against creation or evolution. They have been over and over dealt with in various philosophical works. When it comes to a matter of "faith," all argument must cease.

BHARGAVA SARMA.

### Personal Items.

#### THE FOUNDERS OF THE THEOSOPHICAL SOCIETY.

News have been received from the President, Col. H. S. Olcott, and Madame Blavatsky to the effect that they have safely arrived at Marseilles, and have been received at the landing with every possible attention by Baron Spedalieri and Captain Courmes of the French Navy. They have been overwhelmed with invitations from all parts of Europe. According to the latest news they stopped at Nice, being the guests of the Countess of Caithness at the "Pallazio Tiranty." From thence Colonel Olcott will proceed to London, where a great field for work awaits him. We wish our beloved President all possible success, and our revered Madame Blavatsky a speedy recovery of health, and both of them a happy return to India, the land of their adoption, where thousands are anxiously waiting for their blessings.

BABOO MOHINI M. CHATTERJEE has arrived at Paris and is trying his best to inculcate the difficult problems of the Eastern Philosophy into materialistic Western minds.

#### OBITUARY.

M. R. Ry. J. Purnaya Pantulu Garu, Secretary, Krishna Theosophical Society, Guntur, reports:—  
"I have the painful duty to report to you the death of our Brother Yadavalli Lakshminarayana Garu, a young man of about 25. He led an exemplary life as a Theosophist."

#### SATYA MARGA THEOSOPHICAL SOCIETY, LUCKNOW, SECRETARY'S OFFICE.

Lucknow, the 27th of March 1884.

DAMODAR K. MAVALANKAR, ESQ.,  
Joint Recording Secretary,  
Theosophical Society, Madras.

DEAR SIR & BROTHER,

It is with the utmost grief that I have to report the untimely death of our Vice-President, Pandit Rawat Devi Prasad, F. T. S., who breathed his last yesterday at about 6 P. M. To our Society his loss is one which cannot be easily replaced. This is the first calamity of this sort that has befallen our Branch during its two years of existence. The occurrence is doubly lamentable when we consider the early age of 32 years at which the Pandit died, and the fact that he leaves a wife behind him to mourn his loss.

The Pandit was ill during the last fortnight and no one ever thought that he would succumb to the disease.

Yours fraternally,  
JWALA PRASAD SANKHADHARA, F. T. S.,  
Secretary.

# "THE SECRET DOCTRINE,"

A NEW VERSION OF "ISIS UNVEILED."

WITH A NEW ARRANGEMENT OF THE MATTER, LARGE AND IMPORTANT ADDITIONS, AND COPIOUS NOTES AND COMMENTARIES,

BY

H. P. BLAVATSKY,

*Corresponding Secretary of the Theosophical Society.*

ASSISTED BY

T. SUBBA ROW GARU, B. A., B. L., F. T. S.,

*Councillor of the Theosophical Society and Secretary of its Madras Branch.*

## PUBLISHER'S NOTICE.

NUMEROUS and urgent requests have come from all parts of India, to adopt some plan for bringing the matter contained in "Isis Unveiled," within the reach of those who could not afford to purchase so expensive a work at one time. On the other hand, many, finding the outlines of the doctrine given too hazy, clamoured for "more light," and necessarily misunderstanding the teaching, have erroneously supposed it to be contradictory to later revelations, which in not a few cases, have been entirely misconceived. The author, therefore, under the advice of friends, proposes to issue the work in a better and clearer form, in monthly parts. All, that is important in "Isis" for a thorough comprehension of the occult and other philosophical subjects treated of, will be retained, but with such a rearrangement of the text as to group together as closely as possible the materials relating to any given subject. Thus will be avoided needless repetitions, and the scattering of materials of a cognate character throughout the two volumes. Much additional information upon occult subjects, which it was not desirable to put before the public at the first appearance of the work, but for which the way has been prepared by the intervening eight years, and especially by the publication of "The Occult World" and "Esoteric Buddhism" and other Theosophical works, will now be given. Hints will also be found throwing light on many of the hitherto misunderstood teachings found in the said works. A complete Index and a Table of Contents will be compiled. It is intended that each Part shall comprise seventy-seven pages in Royal 8vo. (or twenty-five pages more than every 24th part of the original work,) to be printed on good paper and in clear type, and be completed in about two years. The rates of subscription to be as follow:—

	Indian.	Foreign countries,
		£ s.
If paid Monthly ... Rs.	1 4 0	0 3
„ „ Quarterly ... „	3 0 0	0 8
„ „ Half yearly ... „	6 0 0	0 16
„ „ Yearly ... „	10 0 0	1 7

Subscriptions payable invariably in advance, and no name entered on the list nor Part forwarded until the money is in hand. All applications to be made and sums remitted to the "Manager, Theosophist Office, Adyar (Madras), India;" at which office money orders must be made payable and always in his favour. In making remittances it should be noted that no other amount should on any account be included in the drafts or money orders, except that intended for this work. Should nothing unforeseen happen, and should a sufficient number of subscribers be registered, the first Part will be issued on June 15th.

## REPORT OF THE EIGHTH ANNIVERSARY

OF THE

### THEOSOPHICAL SOCIETY.

AT which were present Delegates from Branches in America, England, Ceylon and all parts of India from North to South and East to West.

Price four annas per copy; postage and packing charges:—India, one anna; Ceylon, three annas; all other Foreign countries, four annas.

Apply, with remittance, to the Manager of the THEOSOPHIST, Adyar (Madras).

## ESOTERIC BUDDHISM.

(CHEAP EDITION—PRICE RUPEES THREE.)

THE Manager of the *Theosophist* has received a supply of the paper-cover edition of Mr. Sinnett's *Esoteric Buddhism*. Like the *Occult World*, this work also, in its second edition, has been made cheap for the convenience of the Indian Subscribers.

MESSRS. NICHOLAS AND Co. have made a splendid photograph of a group comprising eighty-three Delegates attending the Eighth Anniversary celebration of the Theosophical Society, together with a view of the portico of the Adyar Head-quarters Building. Every portrait is excellent. Copies may be had at Rs 2-8 (6s.) each, inclusive of packing and postage. Fellows of the Theosophical Society may also obtain cabinet size photos of Madame Blavatsky, Colonel Olcott and a group consisting of Madame Blavatsky, Messrs. Subba Row and Dharbagiri Nath at Rs 1-12 (4s.) per copy, inclusive of packing and postage.

APPLY TO THE MANAGER OF THE *Theosophist*.

THE 108 UPANISHADS in original Sanskrit with an abstract of the same by Siddhanta Subramania Sastrial, together with Mahavakia Ratnavali, Brahma Sutras, and a short abstract of the Philosophy expounded therein and Bhagavat Gita—edited by Siddhanta Subramania Sastrial, Price Rs. 8-6 per copy including postage.

Apply to the Manager, Theosophist Office, Adyar, Madras.

or

S. Subramania Sastrial, Kanaresa Pandit, Presidency College, Krishnama Naidu's Agraharam, Black Town, Madras.

[Family motto of the Maharajahs of Benares.]

## REINCARNATION.

(From a private letter to WILLIAM Q. JUDGE, F. T. S.,  
published in the "Platonist.")

You ask me what is my belief about "reincarnation?" Well, as it is a complicated question, I must give you a plain statement of my full belief. To begin with, I am a Pantheist. I believe that *the whole universe is God*. You must, however, well understand that the word "God" does not convey to me any meaning attached to that word by the Westerns. When I say "God," I understand it to be nature or universe, and no more. Therefore I might more appropriately be called a "naturalist." To my mind there is no possibility of the existence of an extra-cosmical Deity. For if there were, the harmony or equilibrium of nature could not be preserved, and the whole universe, instead of being one harmonious whole, would be a Tower of Babel. This harmony can be kept only by the working of the Immutable Laws of Nature. And if the laws of nature be immutable, they must be blind, and require no guiding hand.\* Hence the existence of an extra-cosmical Deity is impossible. This is, as far as I can understand, the chief teaching and principle of Aryan philosophy. As the position is logical, I must accept it in preference to the Semitic theory, which rests on blind faith alone.

Some of the Pantheists recognize the existence of two distinct entities, viz., Matter and Spirit. But thinking deeply over the subject, has led me to the conclusion that their position is not quite logical; for, as far as I can understand, there can be but one Infinite entity and not two. Call it either matter or spirit, but it is one and the same. Who can say that this is spirit and that matter? Take an instance: Ice is a gross form of matter. If a little rarefied it will be water, which is still matter. Higher still, it is vapor; still matter. Higher, gas; it is still matter. Further, it becomes ether, but it is still matter; and then you may go on *ad infinitum*. Thus becoming more and more sublimated, it will reach its climax by the way of spiritualisation. But still it does not become nothing. For if it does, there must come a time, when the whole universe will be nothing. If it is so, it is not infinite, as it has an end. If it has an end, it must have had a beginning; if it had a beginning, it must have been created; and thus we must

assume the existence of an extra cosmical Deity, which, as said above, is not logical. Then we thus logically find that this highest sublimated form of matter cannot be nothing. In this case matter has reached that climax of sublimation or spiritualisation when any further action would make it grosser, not finer. What is commonly understood by the word *spirit* then, is nothing but that highly etherealised form of matter, which we, with our finite senses, cannot comprehend. But it is still matter, inasmuch as it is still something and liable to be grosser.

There is then *only one* eternal infinite existence, call it either spirit or matter. I will, however, call it by the latter name, as that is most suited in its common understanding for what I am to state. Matter, as you know, we call *Maya*. Some say that this thing does not really exist; but I do not agree to that. In my opinion, it is called *Maya* simply on account of these transformations. It is never steady. The process is ever working. The one infinite agglomeration of matter is in some of its modes becoming grosser, while in others becoming more sublimated. The circle is ever turning its round. Nothing goes out of that circle. Everything is kept within its bounds by the action of the centripetal and centrifugal forces. The forms are changing, but the inner substance remains the same.

You will ask: "What is the use of being good or bad, our souls in proper time will be etherealised?" But what is a soul? Is it material or immaterial? Well, it is material for me, and there is nothing immaterial, as said above. As far as I can think, it is an agglomeration of all the attributes together with that something, which gives us the consciousness that we *are*. But in the case of the ice, it was not sublimated until touched by heat. The centripetal force was strong in its action, and it required the centrifugal force to refine the ice. Just so with man. The action of the centripetal force keeps us to our gross forms, and if we have to etherealise ourselves, we must supply the centrifugal force, which is our *Will*. And this is the first principle of Occultism. We must study and know the forces of nature. Every result must be in proportion to the cause producing it. We are every instant emitting and attracting atoms of matter. Now a person, who is not an occultist, will have various desires, and unconsciously to himself he will produce a cause which will attract to him such atoms of matter as are not suited for his higher progress. The same way, when he is emitting others, he may give them such a tendency that they will mix with others evilly inclined; and thus other individualities, which are thus formed, will have to suffer for no fault of theirs. But an occultist directs both. He is the master of the situation. He guides them, and by knowing their action he produces such conditions as are favorable to his obtaining of "Nirvana."

But what is *Nirvana*? By *Nirvana* I mean a *state*, and not a locality. It is that condition, in which we are

\* As this sentence is likely to be misunderstood, the attention of the reader may be drawn to the article on "The Metaphysical Basis of Esoteric Buddhism," published in the last month's *Theosophist*. What is meant is that the inherent impulse acts blindly, i. e., without any extraneous or extra-natural power meddling with it as a "guide" or in any other way.

so etherealised, that instead of being merely a mode of the Infinite Existence as at present, we are merged in totality, or we become the *whole*. Another thing about the advanced occultist is that he is in a better position to benefit humanity.

The particles of which I am formed, have always existed; yet I do not know in what form they existed before. Probably they have passed through billions of transformations. Why do I not know these? Because I did not supply the force, that would have prevented the disintegration of my individuality. I will, if I attain Nirvana, remain there, till the action of the force that put me there ceases; the effect being always in proportion to the cause. The law of Exhaustion must assert itself.

In passing through this process of etherealisation, you all along give a certain tendency to the particles of which you are composed. This tendency will always assert itself; and thus in every cycle, or reincarnation, you will have the same advantages which you can always utilise to soon be free, and by remaining longer in the Nirvana state than the generality of humanity, you are comparatively free. So every consciousness, which has been once fully developed, must disintegrate, if not preserved by the purity of its successive Egos till the Nirvana state is attained. Now I believe that the full development of my consciousness as Krishna, is possible only on this earth, and therefore if I die before that is done, I must be reborn here. If I reach the Nirvana state, even though I am in another body, I shall know myself as Krishna.

Now I suppose this is sufficient for you. It is difficult to put such ideas on paper. Such things are to be understood intuitively.

### STRAY THOUGHTS ON SOUL.

(From an unpublished letter of Eliphas Levi.)

God planted a garden, and it is soul who is the gardener therein.

Moral defects are the thorns of creation. It is given to man to pluck them out.

God made a clock, whose wheels may go wrong unless man winds them up. Man is unable to perform the work of God; God does not undertake to do the work of man. Help yourself, and God will help you.

Nature left to herself produces sterile trees, monsters, and infectious swamps. It is the duty of man to straighten plants, to control the elements, to tame and perfect the breed of animals, to destroy infection and fecundate the soil with putrid matter.

Evil exists only by default, and defalcation is always evil to man. Man is born to labour, and unless he labours he must suffer, for nature drags those who will not walk.

It is the Soul that commands the starry host. Planets become diseased whenever inhabited by erratic intelligences. The flood was the natural result of human vices, and a universal conflagration may be the consequence of the wickedness of its inhabitants.\*

The fatal, or rather blind Electro-magnetism is regulated by the intelligent Electro-magnetism, and the fluidic emanations of vicious circles are the alimentation of thunder.

Since shadow is necessary that light may be produced; since action borrows all its strength from resistance; nothing is useless in the universe, not even the demons, not even the damned who are the convicts beyond the grave. Hell works for Heaven, the beasts for man, the wicked for the just men. One can do injury to oneself; one can injure others, but no one can do absolute and definite injury. He who murders, kills himself; he who

oppresses another, oppresses himself; he who ruins others, is himself ruined; he who rescues, saves himself; he who teaches, instructs himself. That action that has the most influence upon ourselves is the influence we are exercising upon our neighbour. Thus it would be literally true to say that selfishness well ordained, begins with other people. In truth, we live in each other, and this is the reason why we feel happy in doing good to others. The misery we cause to our brother gnaws our heart: we have to expiate their sins and we are rewarded for their virtues. Vices are contagious and good qualities are propagated by human relations. Verily and indeed, life is a universal communion.

That communion becomes more perfect as the soul is being disengaged from its terrestrial sheaths. Then it is no longer limited by space and time. It remembers Eternity and feels dilated in the infinity. The animal does not think, but, under our influence, it acts as though it did. Our soul animates and directs its body, and this kind of magnetism is known to the tamers.

We can fix our will even on inanimate objects, and all the science of talismans depends on that principle.

I had a rose-bush to which I had fixed the remembrance of an absent friend. It began withering whenever that person was ill, and bloomed into renewed life together with her convalescence.

### ARE CHELAS "MEDIUMS" ?

ACCORDING to the newest edition of the "Imperial Dictionary," by John Ogilvie, L. L. D. "A medium is a person through whom the action of another being is said to be manifested and transmitted by animal magnetism, or a person through whom spiritual manifestations are claimed to be made; especially one who is said to be capable of holding intercourse with the spirits of the deceased."

As Occultists do not believe in any communication with the "spirits of the deceased" in the ordinary acceptance of the term, for the simple reason that they know that the *spirits* of "the deceased" cannot and do not come down and communicate with us; and as the above expression "by animal magnetism" would probably have been modified, if the editor of the "Imperial Dictionary" had been an Occultist, we therefore are only concerned with the first part of the definition of the word "Medium," which says: "A Medium is a person, through whom the action of another being is said to be manifested and transmitted;" and we should like to be permitted to add: "By the either consciously or unconsciously active will of that other being."

It would be extremely difficult to find on earth a human being, who could not be more or less influenced by the "Animal Magnetism" or by the active Will (which sends out that "Magnetism") of another. If the beloved General rides along the front, the soldiers become all "Mediums." They become filled with enthusiasm, they follow him without fear, and storm the death-dealing battery. One common impulse pervades them all; each one becomes the "Medium" of another, the coward becomes filled with heroism, and only he; who is *no medium* at all and therefore insensible to epidemic or endemic moral influences, will make an exception, assert his independence and run away.

The "revival preacher" will get up in his pulpit, and although what he says is the most incongruous nonsense, still his actions and the lamenting tone of his voice are sufficiently impressive to produce "a change of heart" amongst, at least, the female part of his congregation, and if he is a powerful man, even sceptics "that came to scoff, remain to pray." People go to the theatre and shed tears or "split their sides" with laughter according to the character of the performance, whether it be a pantomime, a tragedy or a farce. There is no man, except a genuine block-head, whose emotions and consequently whose actions cannot be influenced in

\*This is a hint at the Cabalistic doctrine that our Earth passes through regular and periodical cataclysms—from fire and water in  
—Transl.

some way or other, and thereby *the action of another be manifested or transmitted through him*. All men and all women and children are therefore *Mediums*, and a person who is not a *Medium* is a monster, an abortion of nature; because he stands without the pale of humanity.

The above definition can therefore hardly be considered sufficient to express the meaning of the word "*Medium*" in the popular acceptation of the term, unless we add a few words, and say: "A medium is a person through whom the action of another being is said to be manifested and transmitted to an abnormal extent by the consciously or unconsciously active will of that other being." This reduces the number of "*Mediums*" in the world to an extent proportionate to the space around which we draw the line between the normal and abnormal, and it will be just as difficult to determine who is a medium and who is not a medium, as it is to say where sanity ends and where insanity begins. Every man has his little "weaknesses," and every man has his little "*mediumship*;" that is to say, some vulnerable point, by which he may be taken unawares. The one may therefore not be considered really insane; neither can the other be called a "*medium*." Opinions often differ, whether a man is insane or not, and so they may differ as to his *mediumship*. Now in practical life a man may be very eccentric, but he is not considered insane, until his insanity reaches such a degree, that he does not know any more what he is doing, and is therefore unable to take care of himself or his business.

We may extend the same line of reasoning to *Mediums*, and say that only such persons shall be considered *mediums*, who allow other beings to influence them in the above described manner to such an extent that they lose their *self-control* and have no more power or will of their own to regulate their own actions. Now such a relinquishing of *self-control* may be either active or passive, conscious or unconscious, voluntary or involuntary, and differs according to the nature of the beings, who exercise the said active influence over the medium.

A person may consciously and voluntarily submit his will to another being and become his slave. This other being may be a human being, and the medium will then be his obedient servant and may be used by him for good or for bad purposes. This other "*being*" may be an *idea*, such as love, greediness, hate, jealousy, avarice, or some other passion, and the effect on the medium will be proportionate to the strength of the idea and the amount of *self-control* left in the medium. This "*other being*" may be an elementary or an elemental, and the poor medium become an epileptic, a maniac or a criminal. This "*other being*" may be the man's own higher principle, either alone or put into rapport with another ray of the collective universal spiritual principle, and the "*medium*" will then be a great genius, a writer, a poet, an artist, a musician, an inventor, and so on. This "*other being*" may be one of those exalted beings, called *Mahatmas*, and the conscious and voluntary medium will then be called their "*Chela*."

Again, a person may never in his life have heard the word "*Medium*" and still be a strong *Medium*, although entirely unconscious of the fact. His actions may be more or less influenced unconsciously by his visible or invisible surroundings. He may become a prey to *Elementaries* or *Elementals*, even without knowing the meaning of these words, and he may consequently become a thief, a murderer, a ravisher, a drunkard or a cut-throat, and it has often enough been proved that crimes frequently become epidemic; or again he may by certain invisible influences be made to accomplish acts which are not at all consistent with his character such as previously known. He may be a great liar and for once by some unseen influence be induced to speak the truth; he may be ordinarily very much afraid and yet on some great occasion and on the spur of the moment commit an act of heroism; he may be a street-robber and vagabond and suddenly do an act of generosity, etc.

Furthermore, a medium may know the sources from which the influence comes, or in more explicit terms, "*the nature of the being, whose action is transmitted through him,*" or he may not know it. He may be under the influence of his own seventh principle and imagine to be in communication with a personal Jesus Christ, or a saint; he may be in rapport with the "*intellectual*" ray of Shakespeare and write Shakespearean poetry, and at the same time imagine that the personal spirit of Shakespeare is writing through him, and the simple fact of his believing this or that, would make his poetry neither better nor worse. He may be influenced by some Adept to write a great scientific work and be entirely ignorant of the source of his inspiration, or perhaps imagine that it was the "*spirit*" of Faraday or Lord Bacon that is writing through him, while all the while he would be acting as a "*Chela*," although ignorant of the fact.

From all this it follows that the exercise of *mediumship* consists in the more or less complete giving up of *self-control*, and whether this exercise is good or bad, depends entirely on the use that is made of it and the purpose for which it is done. This again depends on the degree of knowledge which the *mediumistic* person possesses, in regard to the nature of the being to whose care he either voluntarily or involuntarily relinquishes for a time the guardianship of his physical or intellectual powers. A person who entrusts indiscriminately those faculties to the influence of every unknown power, is undoubtedly a "*crank*," and cannot be considered less insane than the one who would entrust his money and valuables to the first stranger or vagabond that would ask him for the same. We meet occasionally such people, although they are comparatively rare, and they are usually known by their idiotic stare and by the fanaticism with which they cling to their ignorance. Such people ought to be pitied instead of blamed, and if it were possible, they should be enlightened in regard to the danger which they incur; but whether a *Chela*, who consciously and willingly lends for a time his mental faculties to a superior being, whom he knows, and in whose purity of motives, honesty of purpose, intelligence, wisdom and power he has full confidence, can be considered a "*Medium*" in the vulgar acceptation of the term, is a question which had better be left to the reader—after a due consideration of the above—to decide for himself.

#### THE LAST OF THE ALCHEMISTS.\*

I HAVE been much interested with Mr. T. E. Austin's able and graphic letter in a contemporary, of the life of Mr. Kellerman, the last of the Alchemists, that little more, I believe, is known of him. In my boyhood days, when red cloaks with hoods were worn by our grandmothers, I occasionally visited the pretty and secluded village of Lilley, lying picturesquely at the foot of Lilley Hill, near the "*Roaring Meg*," celebrated in the history of the neighbourhood, and a much loved seat of the pleasure-seekers at Pegsden Barns, in the old Roman Icknield way. The home of my ancestors was in the centre of the village, and then known as the Sugar Loaf Inn, now the "*Sowerby Arms*," and exactly opposite stood a substantial-looking house of some pretension, the solitary home of the Alchemist, Kellerman. I can picture how as seated round the old primitive settle, enveloped in tobacco smoke, with tankard before

\* A few particulars regarding the life and labors of Kellerman, of Lilley, Alchemist, Artist, Florist, &c., giving an interesting interview between the Alchemist and Sir Richard Phillips. With full description of the Home at Lilley, Luton.

In forwarding the MSS., Mr. Peter Davidson, F. T. S., writes:—  
"These are all the details I have been able to collect regarding Mr. Kellerman. Of course his ire towards Sir R. Phillips is easily accounted for, as it was subsequent to his visit and after Sir R. had published his grotesque account of Mr. K. Luton is a small village in Bedfordshire (England). This MSS. has been chiefly derived from papers which appeared in the *Luton Reporter* several years ago."

them, the villagers talked of the mysterious occupier of the house over the way, each having some new story to communicate to his fellows. In the course of my pilgrimage, I have seen a picture of the old Dutch type, of one of these places of mystery, with its stuffed crocodile suspended from the ceiling, and weird manipulator, surrounded by mystic bottles, black cats, and crucible, but I have never seen the veritable interior of the home of the Alchemist. It is said that he failed in extracting gold, after some years' trial, for want of keeping his fire burning, and I don't know if, like the noble Palissy, the Huguenot potter, he burnt up his furniture to fuel his furnace, to accomplish his object in giving to the world some of the finest works of art, whereas they say Kellerman, the alchemist, failed to achieve success, in extracting gold from coal, or other substances.

Besides being an excellent florist, shoeing his own race-horses, and making his own harness, he must have been a turner, for after some years, this singular place was opened, when a great many varieties of foreign woods were sold, such as rosewood, satinwood, mahogany-wood, boxwood, and some ivory, with a lathe and other things. At the demolition of the old house, and on deepening the well, a discovery was made of a quantity of mixed metals, found at the bottom. It is certainly refreshing to have a little of the marvellous brought out of oblivion, and whither he went we know not, but he was said to have retired to his West Indian plantation.

Astrology, Magic, and Alchemy, will be found to converge, and in the search after the objects which these presented, the grandest intellects of the middle ages undoubtedly wasted much time, but they also discovered many truths, and they did so, let it be observed, in a philosophic spirit. The religious tone, too, of that period breathes out in all these works, and it requires far more Christianity than the *savants* of the present century possess, to comprehend the principles on which they were written. Accepting, as their authors did, that God was in all and above all, they held that the keys of knowledge were in His hand, and that He rarely gave them save to those who would benefit mankind, by the result of their labours. Believing that an Evil Intelligence existed, gifted with far more than human intellect, and profoundly versed in the laws of that material universe, at the birth of which he had been present, they deemed it far from impossible that in his capacity of Tempter, he might offer to man knowledge forbidden by Heaven, and knowing how deep and insatiable was the thirst for knowledge, they saw no improbability in the "evil heart of unbelief," being led thus to seek satisfaction for its cravings. These, and many reasonings of like nature, tended to throw an air of spirituality over even their natural science, and to account for the admission, expressed or implied, which meets us at every time in their works, of a close connection between the visible and invisible worlds.

One of the most deeply interesting narratives on record, is that of the contest of Moses with the Egyptian Magicians, and to read this without feeling a strong and laudable desire to know more of the men of whom such extraordinary facts are related, would indicate a very lethargic state of mind. Histories of dreams and their interpretations, of prophecies and their accomplishment, of witchcraft and its suppression, through the pages of the sacred volume, and all requires an interpretation far different to that which is frequently fixed upon them. Saul's visit to the witch of Endor, the powers supposed to be inherent in Seraphim, the oracles of the Urim and Thummim, and many of the provisions of Jewish codes. It will be scarcely necessary to say more in vindication of a subject like our own. Interesting to the theologian and to the natural philosopher, and to the metaphysician and the moralist, the romance of science requires to be known to be appreciated.

In reply to a contributor to "Golden Hours," Mr. Austin writes to the *Luton Reporter*:—"In reply to your inquiry respecting the late Mr Kellerman, the last of the Alchemists, I have much pleasure in giving you all such particulars of his history, as I can remember. My earliest recollection of him was that he was residing at Lill-y, about the year 1820, but he had perhaps resided there some years before that, in a good house with a walled garden. He was then, I believe, known on the "Turf," and he trained his horses on "Lilly Hoo," and made his horses' shoes himself. He was a highly learned man, and of a very ingenious turn of mind. When the Kaleidoscope was first introduced, he made large numbers of them, and took up many other novelties as they arose. He was a first rate gardener, and astonished the professors of the art by the magnitude and beauty of his productions. To aid him in his pursuit of the philosopher's stone, he employed two young men at Lilley, named Fowles, I believe, who were, I think, blacksmiths, one of whom he kept alternately watching his fires, and protecting his laboratory from the agents of the Government, which he imagined always kept up a staff of spies to discover his great secret. His house was barricaded; hurdles were placed on the top of the boundary wall, and nobody was admitted through the outer gate, until he had himself interrogated them, through a little barred door in the gate, and he always carried pistols in his very numerous pockets. The only persons I ever knew who were received into the house was Mr. Waller, the surgeon, for whom he seemed to have a high regard; and with whom he conversed much upon chemistry; the late Mr. Williamson, and my late uncle. He quarrelled with the Fowleses, and afterwards used to have up our late ingenious townsman, John Brigg, an iron founder, but soon discharged him upon a suspicion that he had made a very weak padlock to his laboratory door, in order that the Government spies might easily break in. He frequently went to London, I believe, and I happened to be visiting Dr. Waller one day, when he returned from London, and he called at my house. This must have been during Napoleon's exile, or immediately after his death, when the young king of Rome was much talked about. Kellerman had a fine portly figure, dark hair, I think black, a piercing and intelligent eye, and spoke with great fluency and energy upon every subject. Two of the principal topics which excited him were, I remember, young Napoleon, whom he regarded with much enthusiasm; and the other was the late Sir Richard Phillips, publisher and author, for whose especial benefit he carried a strong supple jack, to be applied to the knight's shoulders whenever he met him. I am happy to say that I never heard that they did meet, for if he used the stick with as much earnestness as he flourished it before me, when speaking of him, the poor scribe must have been speedily annihilated. I forgot to say that Kellerman was a West Indian proprietor, and I have heard that he was a brother of General Kellerman, one of Napoleon's men of renown. As I promised to tell you all I could remember, you will pardon my adding that for his friends, he always had a good supply of the best wines and spirits, especially Jamaica rum. I presume he was a smoker, and I had a present of a dozen of his pipes from Dr. Waller—and noble specimens they were indeed—the whole of the tubes deeply embossed, and the bowls bearing the coat of arms of the King of the Netherlands.

I have been told that he professed to have made gold. I never however heard of any one who believed it. I think Sir Richard Phillips said he showed him a small bottle of what he called "the *Elixir of Life*," but did not trust it in his hands, and that he told him he had made gold. I do not know what became of him, but I presume that his riches melted away under the combined influence of his crucibles, and depreciation of West Indian property. All I know is that he left Lilley,

and all his property was sold, and it was afterwards said he was working underground, like Wayland Smith, at some place in Germany."

The following interesting account is from a work by the Rev. H. Christmas, M.A., F.R.S.:—"A few years ago a person who pretended to have discovered the philosopher's stone, was living at Lilley, near St. Albans. Sir Richard Phillips, in his "Personal Tour," gives an account of a singular interview which took place between the two philosophers. Having heard of this gentleman, whose name was Kellerman, Sir Richard called upon him, and gives the following account of his reception:—

"I lament that I have not the pencil of Hogarth, for a more original figure never was seen. He was about six feet high, and of athletic make; on his head was a white nightcap, and his dress consisted of a long great coat, once green, and he had a sort of jockey waistcoat, with three tiers of pockets. His manner was extremely polite and graceful; but my attention was chiefly absorbed by his singular physiognomy. His complexion was deeply sallow, and his eyes large, black and rolling. He conducted me into a very large parlour, with a window looking backward, and having locked the door and put the key in his pocket, he desired me to be seated in one of two large arm chairs, covered with sheep-skins. The room was a realisation of the well-known picture of 'Tenier's Alchemist. The floor was covered with retorts, crucibles, alembics, jars, bottles in various shapes, intermingled with old books, piled upon each other, with a sufficient quantity of dust and cobwebs. Different shelves were filled in the same manner, and on one side stood his bed. In a corner, somewhat shaded from the light, I beheld two heads, white with dark wigs on them. I entertained no doubt, therefore, that among other fancies, he was engaged in remaking the speaking brazen head of Roger Bacon and Albertus. Having stated the reports which I had heard relative to his wonderful discoveries, I told him frankly mine was a visit of curiosity, and stated that if what I had heard were matters of fact, the researches of the ancient chemists had been unjustly derided. He then gave me a history of his studies, mentioned some men whom I had happened to know in London, who he alleged had assured him that they made gold; that having in consequence examined the works of the ancient Alchemists, and discovered the key which they had studiously concealed from the multitude, he had pursued their system, under the influence of new lights, and after suffering numerous disappointments, owing to the ambiguity which they described in their processes, he had at last happily succeeded; had made gold, and could make as much more as he pleased, over to the extent of paying off the National debt in the coin of the realm. When asked to produce some of it, he said, 'Not so, I will show it to none. I made Lord Liverpool the offer that if he would introduce me to the King, I would show it to His Majesty; but Lord Liverpool insolently declined, on the ground that there was no precedent, and I am therefore determined that the secret shall die with me. It is true, that in order to avenge myself of such contempt, I made a communication to the French Ambassador, Prince Polignac, and offered to go to France, and to transfer to the French Government the active advantages of the discovery; but after deluding me and shuffling for some time, I found it necessary to treat him with the same contempt as the other. The world, Sir, is in my hands, and my power.' With respect to the universal solvent, the attempt to get a sight of it succeeded no better than the former one to see the gold. Mr. K. accounted for having shut up his house and guarded the walls, by saying that all the Governments of Europe had endeavoured to get possession of his secrets. To prevent this he had burnt all his writings, and placed a spring-gun at the windows, by means of his combustibles he could destroy a whole regiment of soldiers, if sent against him. He then re-

lated that, as a further protection, he lived entirely in that room, and permitted no one to come into his house while he had locked up every room except that, with patent padlocks, and sealed keyholes. The house was in a most dilapidated state, surrounded by high walls, with hurdles on the top.

The village of Lilley has undergone a change for the better in its general appearance. Neat Gothic detached villa-like residences have sprung up here and there, instead of the old thatched cottages, and a new church and vicarage have recently been built. The question is to be decided whether in those days, when the villages had many little homesteads, of their own centre of home attachments that do not now exist, and which now leave an aching void the present cannot fill up."

Kellerman burnt his writings and disappeared.

### JAMES PRICE, M. D., F. R. S., AND ALCHEMIST, GUILDFORD.

By P. DAVIDSON, F. T. S.

As a sequel to my article, "Pure Gold artificially made," which appeared in the January and February Numbers of the *Theosophist*, for 1881, I now subjoin the following:—

In the Parish Church of Stoke, next Guildford, is a marble monument with the following inscription:

Near this place are deposited the remains of  
James Price, M. D., F. R. S., son of James  
and Margaret Higgenbotham, who departed  
this life ye 31st of July 1783, aged 25 years.

'HEU! QUALIS ERAT!'

This man inherited the fortune, and assumed the name of his maternal uncle, James Price, Citizen, of London. He entered himself at Oriel College, Oxford, where he took a bachelor's degree in Physics. In 1782, he published an account given in the *Theosophist*—of some experiments in Mercury, Silver and Gold, made at Guildford, in May of that year, in presence of Lord King, and many other gentlemen, to whom he appeals for the truth of his account, without the slightest fear of contradiction. Mercury was put into a crucible, placed on a fire, and after some ingredients had been added, a certain *red powder* furnished by him was put in. The crucible in due time was cooled, and broken, when a globule of yellow metal was found at the bottom, which proved to be pure gold. In other experiments, a *white powder* produced silver, and in others the *red powder* transmitted the silver into gold. His experiments and the respectability of the spectators of his manipulations procured him the degree of M. D., at Oxford, and an introduction to the Royal Society, of which he was made a Fellow. This Society required that the supposed pretensions of this new associate should be thoroughly sifted, and he was commanded, under pain of expulsion, to repeat his experiments before a special committee. Sick and weary of heart at such disgusting treatment, he took a draught of laurel water (prussic acid) and ended his troubled life at the early age of 25. In the reading-room of the Literary Institute of this town, is a very fine portrait of Dr. Price, in crayon, by John Russell, R. A., and in the library of the same institution, are the two editions of his *experiments*, in 1782, printed at the Clarendon Press in 1782 and 83.

### ASTROLOGY.

In the last number appeared the review of an elementary work on Astrology. It may not therefore be unprofitable to say a few words in regard to the subject itself. The popular idea seems to be that the planets and the stars exercise a certain influence upon the destiny of man, which the science of Astrology can determine; and that there are means within the reach of that science which can be used to propitiate "the evil stars." This crude notion, not philosophically understood, leads to two unscientific fallacies. On the one hand it gives rise to a belief in the doctrine of fatality, which says that man has no free-will inasmuch as every thing is predetermined, and in the other it leads one to suppose that the laws of Nature are not immutable, since certain propitiatory rites may change the ordinary course of events. These two

extreme views induce the "rationalist" to reject "Astrology" as a remnant of the uncivilized condition of our ancestors, since as a matter-of-fact student he refuses to recognise the importance of the saying, "Real philosophy seeks rather to solve than to deny." It is an axiom of the philosophic student that truth generally lies between the extremes. If one therefore proceeds in this spirit, he will find that there is yet not an unreasonable or unscientific hypothesis which can reconcile all these different views, and which, not unlikely, was what the ancients meant by Astrology. Although a study of this science may enable one to determine what the course of events will be, it cannot necessarily be inferred therefrom that the planets exercise any influence over that course. The clock indicates, it does not influence, the time. And a distant traveller has often to put right his clock so that it may indicate correctly the time of the place he visits. Thus, though the planets may have no hand in changing the destiny of the man, still their position may indicate what that destiny is likely to be. This hypothesis leads us to the question, "What is destiny?" As understood by the Occultist, it is merely the chain of causation producing its correspondential series of effects. One who has carefully followed the teachings of Occultism, as recently given out, concerning *Derachan* and future re-births, knows that every individual is his own creator or his own father, *i. e.*, our future personality will be the result of our present mode of living. In the same manner our present birth, with all its conditions, is the tree grown out of the germ sown in our past incarnations. Our physical and spiritual conditions are the effects of our actions produced on those two planes in previous existences. Now it is a well-known principle of Occultism that the ONE LIFE which pervades ALL connects all the bodies in space. All heavenly bodies have thus mutual relation, which is blended with man's existence, since he is but a microcosm in the macrocosm. Every thought, as much as action, is dynamic and is impressed in the imperishable Book of Nature—the *Akasa*, the objective aspect of the UNMANIFESTED LIFE. All our thoughts and actions thus produce the vibrations in space, which mould our future career. And astrology is a science which, having determined the nature of the laws that govern these vibrations, is able to state precisely a particular or a series of results, the causes of which have already been produced by the individual in his previous life. Since the present incarnation is the child of the previous one, and since there is but that ONE LIFE which holds together all the planets of the Solar system, the position of those planets at the time of the birth of an individual—which event is the aggregate result of the causes already produced—gives to the true Astrologer the data upon which to base his predictions. It should be well remembered at the same time that just as the "astronomer who catalogues the stars cannot add one atom to the universe," so also can no astrologer, no more than the planet, influence the human destiny. Perhaps the following beautiful passage from that exquisite work of Bulwer Lytton's—*Zanoni*—may help to make the meaning still clearer:—

"For the accomplishment of whatever is great and lofty, the clear perception of truths is the first requisite—truths adapted to the object desired. The warrior thus reduces the chances of battle to combinations almost of mathematics. He can predict a result if he can but depend upon the materials he is forced to employ."

This necessitates a consideration of the element of clairvoyance necessary to constitute a true astrologer.

The ancient *Rishis*, to condemn whose books without a hearing was till recently a general practice, had by observation, experiment and deep occult knowledge, taken account of all conceivable combinations of various causes and determined with mathematical precision almost to infinitesimal point their effects. But yet, since the cosmos is infinite, no finite being can ever take cognisance of all the possibilities of Nature; at any rate they cannot be committed to writing, since as *Isis Unveiled* says:—

"to express divine ideas, divine language is necessary." Recognising the truth of this most important but unfortunately often neglected axiom, they laid down as the first condition of success in astrology a pure life, physically, morally and spiritually. This was intended to develop the psychic capacities of the astrologer who could thus see in *Akasa* the combinations, not alluded to in the written works, and predict their results in the manner beautifully illustrated in the above extract from *Zanoni*. In short, true Astrology is a mathematical science, which teaches us what particular causes will produce what particular combinations, and thus, understood in its real significance, gives us the means of obtaining the knowledge how to guide our future births. True, such astrologers there are but few: but are we justified in condemning the science of electricity because there may be very few real electricians? We must not at the same time lose sight of the fact that although there are numberless combinations which must be determined by the psychic vision of the astrologer, there are yet a very large number of them which have been determined and put on record by the ancient sages. It is these cases which baffle us when we find that some astrological calculations prove correct while others are quite beside the mark.

## PRACTICAL INSTRUCTIONS FOR STUDENTS OF OCCULTISM.

### II.

#### THE POWER OF WILL.

The Will is the first of all powers; for through the will of the supreme cause all things came into existence.—*Van Helmont*.

The most abstruse metaphysical problems become sometimes comparatively easy to comprehend, if we continually keep in mind, that man is not an isolated individuality, separated from the other individualities by which he is surrounded; but that he is one of the central focusses of a universally diffused divine essence or "Mind;" that his "sphere" intermingles, influences or is influenced by not only every other individuality in the immediate vicinity of its central focus, called the physical body; but that his soul, like the sun which radiates its light to the most distant planets, sends its influence to a greater or less extent to all other souls, and is felt by them according to its power to give and, according to their capacity, to receive.

Will is the power, which Mind possesses over its own operations. Mind being an universally existing principle, must be able to exhibit its powers wherever Mind exists, and to put Will into action, wherever it can sufficiently concentrate the same. The action of the Will is therefore not necessarily confined within the limits of the material body; but as Mind expands, so expands the field of its activity, and if sufficiently developed, it will be able to exercise its influence at long distances upon animate and even under certain circumstances upon inanimate objects.

Occult science has long ago discovered the fact, and it has always been affirmed by the greatest thinkers of the ages, that there exists only *one absolute reality*, the supreme cause of everything that exists, and the ultimate of everything. In itself it is unchangeable, but it appears to us in different states and innumerable forms. Some call it God, some call it Matter, some call it Force, and others call it Spirit. It is to us necessarily as incomprehensible as absolute *Space*, *Motion* and *Duration*, because these abstract ideas refer to Infinity and Perfection and cannot be fully understood by finite and imperfect minds.

According to Plato, the primordial Being is an emanation of the Demiurgic Mind, which contains from eternity the idea of the "to be created" world within itself, and which idea He produces out of Himself by the power of His will. The Cosmos is looked upon as consisting of Will and its Manifestation.

The manifestations of that cosmic Will result either in formless exhibitions of power, or they take *forms*, which may be classified into the elemental, mineral, vegetable, animal, human or spiritual kingdoms, and which forms are always changing and therefore are called illusive. Whether their existence is confined to a second of time, or extended

over millions of ages, they are nevertheless unpermanent creations of the moment, and like a phantasmagoric picture thrown upon a screen by the rays of a "magic lantern," they dissolve, when the light, which forced them into existence, ceases to act, and the duration and solidity of their existence depend on the amount of time during which they are acted on by that light and on the amount of intensity of the same.

The natural universe itself is only a product of the eternal and universal mind, projected into existence by the omnipotent power of the same. It is the "materialisation" of a divine idea, and appears to man in an objective form. Such forms may be visible or invisible to the eye of man; because their *visibility* depends on their power to reflect light, and their *tangibility* depends on the density of their substance. Invisible gases, such as Oxygen and Nitrogen, have been solidified and therefore been rendered visible and tangible, and the most solid substances are made invisible and intangible by the application of heat.

The products of the action of the cosmic Will are therefore not all visible to us; in fact we can see under ordinary circumstances only a small part of their sum. No one doubts that there is an immense amount of invisible matter in the universe, whether cometary or otherwise; but there is also a superabundance of *invisible organised forms* in nature.

Bulwer Lytton in his "Zanoni" says:—

"Life is the one all-pervading principle, and even the thing that seems to die and putrefy, but engenders new life and changes to new forms of matter. Reasoning then by analogy—if not a leaf, if not a drop of water, but is, no less than yonder star—a habitable and breathing world—nay, if even man himself is a world to other lives, and millions and myriads dwell in the rivers of his blood, and inhabit man's frame as man inhabits earth, common sense (if your schoolmen had it) would suffice to teach that the circumference Infinite, which you call space—the boundless Impalpable, which divides earth from the moon and stars—is filled also with its correspondent and appropriate life."

And further on he says:—

"In the drop of water you see how the animalcules vary; how vast and terrible are some of those monstrosities as compared with others. Equally so with the inhabitants of the atmosphere. Some of surpassing wisdom, some of horrible malignity; some hostile as fiends to man; others gentle as messengers between Earth and Heaven."

Our "practical and scientific" age is only too ready to look upon the above quotation as the fanciful effusion of a prominent story-teller, whose object it was to amuse himself and the public; and the writer of this present article has neither the means nor the desire to convince sceptics, and to demonstrate to them the existence of the so-called elementals. He has, however, reason to believe that such invisible, but substantial and variously shaped, beings exist, and that they, by the educated will of man, can be made conscious, intelligent, visible and even solid and sometimes useful. This assertion is supported by the concurrent testimony found in the writings of Rosicrucians, Alchemists, Cabbalists and Adepts.

Will is a universally existing principle, and the reason why the scientific world generally has not yet come to an understanding of this principle, is because there is never to be found any arbitrary manifestation of the same, neither could there be any such arbitrary manifestation, because Will, guided by immutable laws, acts like a blind force. It evolves forms either consciously or unconsciously according to the principle by which it is guided, and is subject to law. If, guided by the higher cosmic intelligences, it must be subject to the law of harmony and justice and cannot be arbitrary. It will perhaps be well, here again to refer to Bulwer Lytton, when he exclaims: "How all our wisdom shrinks into naught, compared with that which gives the meaneast herb its virtues."

As the macrocosmic Will of the solar system consciously or unconsciously evolves forms, so does the Will of microcosmic man. If we form a concrete or even an abstract idea in our mind, we give it a shape and create an existence, which may either remain subjective or become objective, and even material according to the means applied for that purpose. Every thought creates a subjective form, which may be seen and perceived not only by the originator of that thought; but also by other persons endowed with abnormal faculties of perception. Mahatma K. H. in his letters to Mr. Sinnett says:—

"We see a vast difference between the two qualities of two equal amounts of energy expended by two men, of whom one, let us suppose, is on his way to his daily quiet work, and another on his way to denounce a fellow creature at the police station."

And further on he says:—

"Because every thought of man upon being evolved passes into another world, and becomes an active entity by associating itself, so-called we might term it, with an elemental—that is to say, with one of the semi-intelligent forces of the kingdoms. It survives as an active intelligence—a creature of the mind's begetting—for a longer or shorter period, proportionate with the original intensity of the cerebral action which generated it. Thus a good thought is perpetuated as an active, beneficent power, an evil one as a maleficent demon. And so man is continually peopling his current in space with the offspring of his fancies, desires, impulses and passions; a current which re-acts upon any sensitive or nervous organisation, which comes in contact with it, in proportion to its dynamic intensity. The Buddhist calls this his "Skandha;" the Hindu gives it the name of "Karina." The adept evolves these shapes consciously; other men throw them off unconsciously."

While writing these lines we notice in an American Journal a curious illustration of the above, and of which we will give the following extract from an account given by W. Whitworth:—

From my earliest infancy I was said to be an odd, queer tempered child, with exquisite sensitiveness to all outward impressions. I well remember the wonderful development that sprang into being, when I attended a musical party during my fourteenth year. A German professor was playing on an organ, when I was suddenly spell-bound, as my eyes became rivetted on a host of strange appearances moving about the keyboard, that seemed to dart up and flit about with each note and chord echoing forth. They were veritable beings—Lilliputian sprites, fairies or gnomes of astonishing smallness, yet as perfect in form and feature as any of the larger people in the room. They were clothed in the most fantastic garb, of every imaginable color, though white, red and green were largely predominating, along with a great deal of shimmering silver and gold ornaments, mingled with the gayest and most beautiful flowers.

It was also apparent that these strange beings were divided into sexes, as was shown in their different style of apparel and features. Not a note was struck that did not produce its separate sprite, either singly or in combined twos and threes, and which seemed to start up directly, each from its appropriate key, and move about in exact time and concert with the rest. The thought struck me: 'Are these the essence or soul of music?' They appeared and acted in such perfect accord with the measure and sentiment of the theme, moving to the pleasing rhythm of the waltz, the solemn tread of the funeral march or the swift coulted rattle of the jig-dance; their tiny throats giving voice to the tune, so that it seemed as if they must be the very spirit of the sounds peeling forth.

In the quick measures, how madly they danced, waving their plumed hats and fans in very ecstasy, and darting to and fro in inconceivable rapidity, with feet beating time in rain-like patter of accord. Quick as a flash, when the music changed to the solemn cadence of a march for the dead, the airy things vanished, and in their place came black-robed gnomes, dressed like cowed monks, sour-faced Puritans or nuns in the black garb of a funeral procession. Strangest of all, on every tiny face was expressed the sentiment of the music, so that I could instantly understand the thought and feeling that was intended to be conveyed. In a wild burst of sounding grief came a rush of mothers, tear-eyed and with dishevelled hair, beating their breasts and wailing piteous lamentations over their dead loved ones. These would be followed by plumed knights with shield and spear, and hosts of fiery troops, mounted and on foot, rehandled in the fiery strife of bloody battle, as the clang of martial music came leaping from the keyboard, and over as each change brought its new set of sprites, the old ones would vanish into the air as suddenly as they had come. Whenever a discord was struck, the tiny sprite that appeared was some misshapen creature, with limbs and dress awry; usually a hump-backed dwarf, whose voice was guttural and rasping, and his every movement ungainly and disagreeable.

In my twenty-fifth year I was just as suddenly transfixed in astonishment, by the appearance of such fairy like beings, coming from the lips of persons talking. With every uttered word darted forth one of these strange creatures, clothed, and in every action the very counterpart of the feeling conveyed in the uttered speech. It was on the occasion of hearing the conversation of two sisters, who had been long separated, and were now pouring forth their unchecked wealth of affection for each other. The little beings that trooped from their lips were transcendently beautiful, and fitly expressed in form, features and attire the words of love that seemed to bring them forth.

On one never-to-be forgotten occasion, I was a pained witness to a scene of living faithfulness on one side, and a treacherous double faced treacherous duplicity on the other. A fair young girl and her departing lover had met to exchange greetings, ere he went on a distant journey. Each word of hers gave forth the same beautiful radiant fairies I had seen from the lips of the sisters. But while the front half of his that were turned to the girl, were equally fair to look upon, and smiled with all the radiant seeming of undying affection, the rear half of each was black and devilish, with fiery snakes and red forked tongues protruding from their cruel lips, as gleams of wicked cunning danced in sneaking sidelong glances from the corners of the half-closed eyes. These dark backgrounds of the little figures were horrible to look at, ever shifting, dodging and seeming to shut up within themselves, as they sought to keep only bright and honest seeming towards the trusting girl, and hold the black deception out of sight. And it was noticeable, that while a halo of cloudless radiance surrounded the good outside seeming, a pall of thick vapor hung like a canopy of unbroken gloom above the other.

Most beautiful of all were the tiny sprites that flew from the lips of a fond mother to her only child. They seemed to float in a fleecy

cloud of whitest silver, and fall into the bonny curls of the child's head, sprinkling flowers and sweet incense in a ceaseless shower of blessing all down to its feet. But terrible was the change, when I saw the horrible imps that leaped forth from the cruel mouth of an ungrateful son. The tear-dimmed mother was softly pleading with him. The coarse sharp response of an ingrate brute darted forth in forms like fiery fiends, with hissing breath and lowering eyes; and as the long bladed barbed knives that seemed to tear and rend the soft white bosom of the mother to pieces, as it was thrust to the hilt with every uttered word, the sweet lowing sprites, that came from her quivering lips, were thrust aside and dashed to pieces on the walls beyond.

The double faced gnomes I saw come forth from scores of lips, from those of the time-serving, lying minister in the pulpit, from glad-hearted people, hanging around the bed of a wealthy relative, with hypocritical tears and false words of sorrowing regret, and from the deceptive utterances of deceitful friends.

In conclusion I would suggest: it may be that our every uttered word is an absolute living entity, sent forth for weal or woe, whose mission, once started, can never after be changed, but must go on through the ages, performing the work of good or ill we established with its birth; and that the fruits of this good or ill must be charged to those who sent it forth. In view of this fearful possibility, what a constant guard should we keep, that no word, however light in seeming, is launched forth on any other mission but that of good.

But it is asserted by the sceptic that such exhibitions of force have no objective existence, and that such forms are only subjective creations of the fancy. Let us therefore examine what is the difference between objective and subjective representations?

The terms "objective" and "subjective" are misleading, and the distinction between them is only imaginary. "Subjective and objective" express the distinction, which in analysing every intelligent act, we necessarily make between ourselves the conscious *subject*, and that of which we are conscious, the *object*. It follows, therefore, that whether a form appear objective or subjective to us, will only depend on the circumstances, under which such *existing* forms come to our consciousness, and it is a matter of choice whether we desire to consider them objective or subjective. Persons who cannot distinguish between ideal conceptions and materialized ideas are called hallucinated; but by the power of an educated Will their "hallucinations" may become more or less materialized, objective and visible to others. An idea once formed has an existence, and can take a bodily form, if the proper means to that effect are applied. On the other hand a person who declares that he does not believe in the existence of anything that he has not seen, declares himself to be insane; for if we accept his words as an honest expression of his opinion, such a man would not believe that he has any brains, because he has never seen them. However he believes that he has brains, and arrives at that belief by *logical reasoning*.

It cannot be truly said that only those things have any objective existence which we can perceive with our senses; for our senses continually deceive and mislead us. There are innumerable things the existence of which no sane person will deny; while that which we perceive with our senses frequently has no existence at all. In fact, we do not see, hear, feel, taste or smell any external object; we only perceive the impressions which they make upon our mind through the medium of our senses. We do not see the *real* nature of the things at all, but only their symbolical representations. Sight is a language by which nature speaks to our mind and our understanding, the same is a result of education and practice.

But it is said that "objective" is something belonging to what is external to the "mind." If man were an isolated individuality, and his "mind" only confined to the space in the human skull occupied by the brain, or if it were—as some physiologists will have it—only a "function" of the material brain, this definition might hold good, and we might then perhaps better say: "Objective is something belonging to what is external to our brain."

The latest modern authority on the Physiology and Pathology of the "Mind"\* says: "The brain is the chief organ from which the force called the mind is evolved." And "by mind, I understand a force produced by nervous action, and in man especially by the action of the brain." Such a narrow-minded definition of course excludes or renders impossible every explanation of occult phenomena, such as mind-reading, action of mind in the distance, clairvoyance and hundred other facts, which are denied belief by modern "scientists," because they do not conform with their theories, but which are at present disputed by nobody who has patiently investigated the same.

It is not our object at present to demonstrate the absurdities of modern science; it will be sufficient for our present purpose to say that "*Mind is a universal principle, which can be focalised in the brain, and the brain is at once the physical centre of attraction and the laboratory of the Mind.*"

If this is true, if mind is universal, and if its potentiality reaches out far beyond the limits of the physical brain, then it follows that everything that exists must exist within that universal mind, and it is only a question of what conditions are necessary to bring those things to the cognition of our consciousness in the silent laboratory of the individual brain.

The phenomena of sympathy, antipathy, clairvoyance, clairaudience, psychometry, etc., prove that the part of our mind which resides in the brain is capable of receiving impressions otherwise than by the avenues of the physical senses *only*. It is therefore simply a matter of *judgment* to say under what conditions the things which we cognize exist. What may appear subjective to one man or to one plane of existence, may appear objective to another, and there can be no real difference between the two states. The only difference that can exist between an idea formed in the mind, and one that is expressed in visible and tangible form, lies in their different planes of existence. In one condition the idea exists invisible to physical eyes, in the other the idea is more or less materialised, so as to be able to reflect light and thereby come to the cognizance of our physical senses. This materialisation is effected by the either conscious or unconscious action of the Will, or in other words: An idea exists as an image in the mirror of the Mind, and by the exercise of Will that idea obtains density proportionate to the amount of will-power exerted for that purpose, a form according to the desire which guides the Will, and a perfection according to the intelligence by which it is applied. How to develop this will-power will be the subject of our next discussion.

Or the Secret System of a Society of Unknown Philosophers.

#### IV.

#### RELIGION.

THE animal never rises above the sphere of its sensuous desires; but man only finds true happiness and contentment in the contemplation of that which is *above* that sphere. He feels an inward necessity to satisfy his desires for the Divine, and to give this satisfaction is the object of religion. Man rises up to God by means of his religious aspirations, and man's nature becomes elevated in the same proportion as his religious ideas become elevated, expanded and pure. An investigation into the relationship existing between man and religion, leads to the adoption of the following points:

1. Religion is *natural* and *necessary* for man, and an examination of ancient and modern history will prove the truth of this assertion.

2. Religion is *as old as mankind*. The principles of religious systems cannot be a result of invention or arbitrary presumption; their germ must be necessarily regarded as of divine origin. It has withstood all the revolutions of nature, and only its aspect has changed according to the various necessities or capacities of the people and the condition of their civilisation; but true religion is more than simply a code of morals.

3. *True religion can be only one*, and there can be only one true religion, because there is only *one* principle of perfection. *Unity*,—the law of true religion—requires a perfect harmony between sensuous and intellectual man.

The divine light, which illuminates man, is for every man one and the same, and the differences between the various religious systems, are caused by the *different aspects* in which this light is seen by different people.

*The truth is one*, but the forms in which it appears, differ. Every individual man, no matter where he lives or what he believes, can be a temple in which the divine spirit will reside. Wisdom is attainable to all, and the attainment of wisdom by all re-establishes unity.

4. Man rises up to the divine light of love and wisdom by means of his religious ideas, and becomes thereby more and more susceptible to beneficent influences. Man, like every other thing in nature, is subject to natural laws, and according to these he partakes to a certain extent of the nature of the influences with which he associates. There have been

\* Professor W. A. Hammond, "A Treatise on Insanity."

at all times men who rose higher than others to the divine source, and to whom we may look as upon our guides and teachers. The revelations and traditions which we have received from such men are laid down in the history and religions of all nations, and in all of them can a certain similarity and unity be traced. We may therefore look upon such men as *divine agents*.

5. Divinity can become accessible to man by means of these divine agents, or, in other words, the *divine ray* by passing through those media or agents becomes tintured with the color which is appropriate to each of them, else it would for ever remain incomprehensible to man. Some of the angels and prophets may have existed as human beings, but they all are representations or symbols of forces or perfections which primordial man originally possessed.

6. By means of these divine agents a *communication of thought* has been established from the highest to the lowest. A mode of *instruction* was thereby made possible, by which those who did not possess sufficient power to rise, could be lifted up by their guides, and by which they could receive information in regard to the nature of things and the history of mankind.\*

7. *The divine agents* or messengers selected in all times certain men, to whom they communicated their knowledge, and through those men the various colored light was shed over the different parts of the globe; partly by *oral instruction*, partly by *tradition* by means of *symbols, arts or usages*. These traditions have in the course of time become so perverted as to be often almost unrecognizable, and giving rise to innumerable *sectarian* differences.

8. The science and history of man comprise therefore the origin and object of *Mythology* and *Symbolism*. Much is fanciful in these systems, but in those of the oldest nations an *identity* can be traced.

A large part of these mythologies have their origin in superstition, and in others the true original meaning has been lost; but sufficient truth remains to show that the oldest inhabitants of our globe conceived the destiny of man to be a higher one, than simply to pass through certain chemical and physical processes. They are all relating to the *origin* of man, the *laws* of his existence and his *destiny*, and give us a more or less correct history of the visible and the invisible universe.

9. The celebrated ancient mysteries with their doctrines and initiations took their origin from these old traditions, handed down from antiquity by the *sages* and their disciples. The perpetuation of these mysteries was necessary, and the secrecy by which they were surrounded was due to the desire of guarding them against profanation and to keep them intact in their original purity.

10. One of the oldest and most reliable of the histories of antiquity is that of the Hebrews.† The *Cabala* gives a very clear conception of cosmogony, and the esoteric meaning of their symbolism is extremely beautiful. Unfortunately its *esoteric* sense is at present very little understood even by the Hebrews themselves or their Rabbis, and has been still more perverted and obscured by the imperfect translations made from the original text.

## V. SCIENCE.

The retrocession of Man, from the true source of light, has rendered it more difficult for him to obtain *true* knowledge, because to obtain that knowledge he must have the light of *truth* as a guide. Nevertheless a certain degree of true knowledge must be attainable to man, because every being is subject to a certain and unchangeable law.

The possibility of this attainment finds its basis not only in the *intellectual germ*‡ in man, which is as unchangeable in its intrinsic nature as the principle from which it originated, but also in the fact that man, in consequence of his two-fold nature, resembles a mirror, in which all the laws of the sensual and intellectual realms are concentrated. Therefore the *knowledge of man* is the *basis* of every other knowledge; he

\* These agents are the Dhyana Chohans. The first teacher who taught the principles of the ancient Wisdom-Religion on this planet, says the occult doctrine, was a Dhyana Chohan. A Dhyana Chohan will appear again on this planet as a teacher and guru at the end of the 7th root-race.—T. S.

† At the time this book was written, the mythology and traditions of the Hindus and Egyptians were little known.—Trans.

‡ The germ is in fact the 6th principle in man, in which his higher individuality resides.—T. S.

who perfectly understands *man*, understands the laws of the Intellectual and Sensual and can explain everything. In the study of man, however, we must be careful not to confound the Sensual with the Intellectual, and to ascribe to the one that which belongs to the other.

There is in fact only *one* science, it includes the Intellectual and the Sensual; and both realms have to be studied together. The arbitrary separation of the two parts of that *one* science has given rise to the birth and growth of so many false systems and doctrines and contradictory conclusions. Whenever man desires to arrive at the truth in regard to the intellectual without using the means given to him by nature for that purpose, he invariably falls into error; and it is no less dangerous to attempt to study the *sensual* without the light of the intellect. If we desire to use our reason properly, we must "*divinise*" our own heart and thereby enable it to approach the source of all light, which is higher than human reasoning.

The *false* study of the sensual gives rise to materialism; and the *false* study of the intellectual leads to superstition; but true science must deal more with principles than merely with the phenomenal aspect of things. Both extremes are dangerous; because in one case we crawl like a worm over our path without seeing to where it leads; in the other case we soar above it and become lost in the clouds. True knowledge can only be obtained by right *discrimination* and by taking into consideration the laws of the Sensuous, the Intellectual and the Divine, by which alone man can become free and return to the universal source of Light and Truth.

### *The Science of Numbers.*

The entire system of the universe rests upon certain primordial and basic *principles*, from which result the *substance, shape* and *action* of everything that exists. These basic principles are called the *numbers* of nature. Whoever comprehends them, understands the *laws* by which nature exists, the *proportions* of her component parts, the *manner* and *measure* of her activity, the connecting link of all *causes* and the *mechanism* of the Cosmos.

Those numbers are not arithmetical symbols, but true *principles*; they are the basis of all true science and of all intellectual understanding.

The subject under our consideration is of *infinite extent* and can only be understood by the infinite *Mind*, who encompasses within himself the chain of all causes, proportions and effects, and human language is too imperfect to fully express the same. Every effect is the result of an energy, and that energy the expression of a power. The quantity of power expended, corresponds to the *essential*, and the quantity of energy to the *potential* number. *Principle* and *Form* are two poles, which are united by the link of *Number*. By our senses we receive certain impressions from the *sensuous* action of things, and by our reason we receive ideas of their *invisible* positions and terminations, if we are able to grasp them. The Intellectual as well as the Sensuous has number, measure and weight, but they can only be comprehended by our reason or intuition.

The numbers of the universe are infinite, but their movement is simple and *straight*, because everything rests upon the primal numbers: 1—10. These numbers are contained in the *four basic numbers* (1+2+3+4=10) which fact indicates the sanctity of the *square*, the symbol of divinity in man.

### *A few remarks about the meaning of the numbers.*

I. The number 1 represents: 1. Absolute *unity*, the essence and the universal centre of all Being. 2. The centres or principles of all individual unities, which are not absolute and necessary; but only direct or indirect *eradiations* of the absolute unity.

II. Signifies: 1. The absolute unity in a state of *motion* or progression, as an *eradiation* or reflection of 1. 2. *Light*, or an emanating ray. 3. The *origin* of all things, the projection of the Divine into the Intellectual. 4. The double law of *action* and *reaction*, male and female, positive and negative, &c.

III. Is the number of *results*. 1. Without Three there can be no result, either in the Intellectual or Physical. From the I, the real *possibility* of existence, and the II, the *energy* and *reaction*, results III, the *product* or *form*. 2. The *constitution* of bodies, formed (a) of the bases of the three elements: *Earth, Water* and *Fire*; (b) the three actions. *Action, Reaction* and *Cause*. 3. The immaterial, but *not*

thinking universal principle (Will?). The number of unthinking, but immaterial beings (Elementals?) is represented by  $3 \times 3 = 9$ .

IV. Is the number of perfection. 1. It is the symbol of the *divine square*, the *thinking universe*. 2. The symbol of the square of time. 3. The representation of the intellectual man in his *primordial* condition; and 4, the symbol of the *universe*, North, South, East and West.

V. This number may be regarded either as  $1+4$ , or as  $2+3$ , or as  $4+1$ , and its aspect differs accordingly. Five is necessary for the harmony of a perfect accord; but in another aspect it is terrible and represents the *principle of evil* in its battle with good. It is the symbol of *idolatry*, *superstition* and *fear*, which can only become moderated by the combination with 6. It is the number of suffering and death, and whoever remains with it becomes a victim of the terrible power of 65.

VI. Is not a perfect number, but good for *sensuous* results. By 6 as the symbol of  $2 \times 3$  visible nature came into existence. It is the symbol of temporal and changeable existence.

VII. Consists out of  $3+4$ ;  $4+3$ ; or  $6+1$ . It represents the *seven principles* in their different combinations, the *seven planets* and many other things. Like 16 ( $4 \times 4$ )—and 9 ( $3 \times 3$ ) so is 49 ( $7 \times 7$ ) of great importance.

VIII. ( $2 \times 4$ ) Is the number of the *double square* of time and eternity; of the Intellectual and the Sensuous and contains the connection and antiphony of the same.

IX. ( $3 \times 3$ ) is the number of the *Sensuous*, of *Sensuality* and *Degradation*; of everything circular and material.  $4+9$  is the full number of nature. The relations of  $1-3-6-9$  and of  $1-4-8-16$  are very important.

X. Is the *completion* of every thing that exists. In it are combined all the double, ternary and quaternary relations, and it is the result of  $1+2+3+4$ .

*Occult Mathematics, or the application of basic numbers to the spiritual and physical world.\**

True mathematics is the basis of all true sciences. Ordinary mathematics is its shadow, and is only infallible as long as it occupies itself with *material* conceptions. All forms and images of sensuousness are the result of simple principles, and the origin of mathematics is therefore to be found in something on which the laws of the Sensuous, of Matter and Form depend; but which in itself is not material but intellectual. A man may be a very good mathematician on the ordinary plane, and yet incapable of solving an intellectual or physical problem as to its *genetic cause*. The true axioms of Mathematics are intellectual, and only by such can the regularity of all sensuous products be explained. In true Geometry we need a scale which can be applied to all kinds of dimensions; but such a scale can have no extension in itself. It can therefore not be found in ordinary Geometry, but must be searched for in the intellectual principle of extension; and consequently it will be impossible for ordinary Geometry to solve such problems, as for instance the *squaring of the circle*.

If we wish to measure a *curve*, it is above all necessary to have a correct idea about a *straight* and a *curved* line. The attempt to explain a *curved* line by forming a combination of infinitely small *straight* lines, is inadmissible and irrational and conflicting with the true laws of nature; for besides the moral proofs of infinite unity and perfection, there are other reasons, why two such opposites as a straight line and a curved one never can be united and why such an attempt should never be made. Every thing in nature has a number of differentiation, and this is also the case with both of these lines. *Emanation* into infinity is the object of one and *detraction* from infinite progression the aim of the other. Both are opposing each other, their numbers and actions must be different; their numbers are in the proportion of  $4-9$  and in all their gradations and potencies this proportion remains the same. This law explains the *generic* and *individual difference* between *intellectual* and *sensuous* natures, which although differing from each other, yet are nevertheless derived from the same source, possess the same original number, and are governed by the same law.

\* We refer the student to the footnotes on page 82 of the "Theosophical Miscellanies" (unpublished writings of Eliphas (Levi), which speaks especially about the sacred number seven.—Ed.

The arbitrary scale used in *common* Geometry is extremely useful for the purposes of *common* life, because it deals with proportions of matter; but if we attempt to apply the same for the measurements of *essential truths*, we are likely to be led into errors, the least of which may grow into extensive dimensions, while the numbers 4 and 9, as representations of the straight and curved lines will in their proportions remain unchanged, and they therefore constitute the proper scale for such truths.

It would be impracticable to apply *occult* mathematics and geometry to the measurement of *sensuous* perceptions and ordinary combinations of matter, neither can *common* Mathematics be applied to *spiritual* things. Matter exists only by and through *motion*, but matter is not the source of motion.

This source must necessarily exist in an *immaterial* principle, and the phenomena of extension and sensuousness are only results caused by the action of that principle. If the principles of matter are dependent on a higher action or reaction, how much more must this be the case with the evolution of such principles.

Although in the realm of the sensuous there is no motion without extension, still even the sensuous indicates a motion without extension; that is, an attraction of the bodies towards a common centre. The Sensuous is always guided by the Intellectual, and it follows that in the latter the cause of motion must exist. Both motions, taking an *inverse* direction, are guided by the number 4, which is the number of all motion. Therefore *no arithmetical* progression exists in the realm of the living nature, and the *geometrical* progression of the square is the only guiding one, because it is the principle of life and the activity of living beings.

The number of extension and also of the curved line is 9, because everywhere in nature, where we find extension, we also find curved lines and both are therefore *equivalent*. Every form in its last analysis approaches the form of an oval or a *sphere*. The number of the *straight* lines belongs to causes and principles; that of *curves* to products and results.

The numbers 4 and 9, the straight and curved line, represent therefore the *two principal laws* of nature, and the two should never be mistaken for each other. Man, ever since he ceased to be perfect, has vainly tried to unite the same and thereby unsuccessfully attempted to square the circle; or to understand a fourth dimension of space, problems which can be *intellectually* grasped, but cannot be demonstrated on the *physical* plane.

There must be a distinction made between the *natural* circle and the *artificial* one. The first one does not consist of a periphery of connecting points, but is formed by an expansion of energy from the centre.

The *square* is not to be regarded as a *geometrical extension*, but as a *symbol* of a universal creative principle. This principle only reveals itself by the *triangle* formed by the three immaterial principles which cause forms and bodies, and this triangle in combination with the unity of the first principle forms the basis of all possible phenomena in the realm of the Sensuous. The *action* of the principle however is a *straight* line.

The four allegorical sides of the square represent:

The *first* one, the basis and root of the others, is the symbol of the first and only cause, whose number is absolute *unity*.

The *second*, emanating from the first, is the first ray, the Adam Kadmon or primordial man, who in his double capacity is symbolized by two numbers, also called the "Son of God."

The *third* completes the *trinity* of all existing forms in the visible and invisible universe; and the *fourth* represents the *essences* of all classes and kinds, whether they are possessed of intellectual powers or restricted to the realm of the sensuous, and it finally stands in intimate relation with the mysterious nature of man.

(To be continued.)

(From the Harbinger of Light.)

HISTORICAL RESEARCHES IN MAGIC.

TRANSLATED FROM THE FRENCH OF BARON DE POTET.

By C. W. ROHNER, BENALLA.

It was often a matter of the greatest surprise to me not to find anywhere in the vast literature of Spiritualism, but especially in that of the recently revived Theosophy and Occultism, the slightest notice taken of the numerous works

and speculations of M. le Baron Du Potet. And in this respect his book on "Magic Revealed" is a regular mine and storehouse of facts, illustrating the principles of occult science, worthy of the greatest attention and study of those modern thinkers who have made Occultism and Spiritism the principal object of their researches.

This great work of Du Potet, "La magie Devoilee, was published by subscription in 1852, and I doubt very much whether there is another copy of the book in Australia, except the one now lying before me, and from the third part of which I intend to place before the readers of the *Harbinger of Light* a few selections, in order to direct the more thoughtful minds of the Australian Spiritualists to a subject which offers a rich harvest of historical facts and psychological data of the utmost importance. With these few prefatory remarks I shall at once plunge *in medias res*.

Let us now see what is the real cause of the phenomena, the experimental operations of which we have now placed before the student; let us search in the records of antiquity for the opinions formed on this subject, by its most eminent thinkers. At the outset, it is certain that all facts of a recondite and elevated order were connected with magic. Let us, therefore, carefully study in what manner they comprehended and dealt with its principle—the active principle of magic.

The word magic, in its most general acceptance, can be taken both in a good and bad sense. It designates an attractive force, a spring which sets in motion either the supernatural (superhuman), the natural, or the inferior realm of spiritual existences; occult force or power acting upon the spirits or upon the bodies, and consequently also upon all strata of air, from the most ethereal and elastic to the grossest and densest.

Connoisseurs in this department of human knowledge distinguish five kinds of magic, not to reckon the varieties which may be found intervening between the principal divisions.

To begin with, we have the high, holy, and divine magic or attractive force of the *Verbum Deus*, which attracts to itself and adapts all that which in a purified state can be admitted and received into its divine essence. "When I am taken up from the earth I shall draw all men after me." This divine magic is in close rapport with faith, and its operation is closely allied to pure spirit.

There is also a natural or physical magic; the bodies attract one another mutually in accordance with laws calculated by Newton.

There is a carnal magic whose source is to be found in the appetites, desires, and passion of the lower faculties of man.

There is also an angelic, holy and pure magic without any admixture of foreign elements.

The ancients distinguished, moreover, a diabolical magic, and this is the kind by means of which large streams of human blood were made to flow.

This expression of magic is derived from the *Magi*, or the ancient sages of Persia and the Orient. These were the savants of those times and countries whose senses and spiritual faculties were more refined than those of the rest, and who consequently were enabled to penetrate more deeply into the mysteries of nature than their contemporaries. This moral and physical superiority supplied them with a higher order of knowledge both natural and spiritual. Such were also the sages of ancient Egypt. These men possessed a profound knowledge of all the phenomena of the universe, and were able to combine and produce their effects *ad libitum*. It is almost incredible what they have seen and what they were able to operate by means of this their profound and extended insight into the working of the universal forces. Zoroaster is believed to have been their chief and principal initiator. It is possible that the Latin word *imago*, our image, is derived from *magus* or *magaim*, because everything was depicted in the imagination of these magicians—the prophecies, the oracles, etc.

To write on all kinds of magic would make us lose ourselves in darkness and obscurity, for there are more than three hundred different kinds of the magical art and its varieties. Sorcery was one of its branches.

There was a physical, polygraphic and stenographic magic; a holy, oneirocratic magic, an astrological magic, there was pyromancy, erotomancy, hydromancy, geomancy, physiomancy, metoposcopy, chiromancy, capnomancy; there was also a political magic, the vulgar art of the aruspices, of the augurs;

sycomancy, the notary art, and theurgy, there were also forms of ceremonial magic, diabolic magic, necromancy, goetic magic, etc., etc.

The most advanced Christian philosophers never rejected the existence of magic; they were too well acquainted with the evidence of its phenomena submitted to their senses and also found detailed in the scriptures. They thought to explain and render it objective in the following manner:—Admitting the fall of man, they said: "Man, having lost the spirit of God, is blind and obliged to feel his way, so to speak, in the dark; and sighing for the light with an all-absorbing desire, he submits himself to the influence of his lower soul faculties; he becomes a prey to his diseased imagination, memory, and senses; he feeds on all the lurid lights which his mental faculties can supply him with, as a substitute for God and unity with God, in order to keep himself on a level and in close relation with the things and objects of this earth, and to become a fellow-citizen of this world of passing vanities. Thus the divine light is lost, and in its place appears a fire less pure, less refined, less celestial, from which he derives his heat and new light. This light has been called by profound thinkers the *astral light*, or fire, in analogy with the lights of the stars; a quintessence of fire allied with the material fire, but very impure and inferior in comparison with the fire and light that emanates from the spirit of God—a spirit which is the sublimest fire, the purest flame, and the most celestial light.

This Astral spirit, or astral fire or light, which represents the highest degree of the light of the spirits, is, however, superior to what is called the spirit of nature, of which it forms the force, the virtue, and relations.

This is the principal agent, the true cause of the facts of magic; it is a fire, a light, a force, which natural science does not acknowledge, and hence springs the powerlessness of that natural science of producing or imitating the wonderful works of the ancient theosophists and thaumaturgi. Let us take a glance at the opinions of the most enlightened philosophers of these distant times on this mysterious fire and light.

The stoic philosophers admitted the existence of a fire-ether—the basis of our intelligences; from that fire the spirits emanated, to that fire they returned.

The ethereal luminous substance was the foundation of the theology of the Christians, as we shall directly prove.

Pythagoras has designated a portion of the Divinity by the word light, calling God not only the Universal Force which circulates in all parts of the world, but he also joined with it the epithet of Luminous, to characterise the intelligence, as he has designated the principle of life by the same vivifying force which manifests itself in all the bodies of the world. Through this latter part man was connected with the animal; through the former he was united with the gods.

We can see in Cicero that the reason which made the ancients look upon the stars as intelligent and divine beings consisted in the fact that they were composed of the pure and luminous substance which forms the nature of ether. The reason of God was the luminous fire of which the stars contained a larger or smaller portion, a fire which is ordinarily called ether.

St. Augustine, in accordance with the principles of Varro, analyses the universal soul of the Great All, subdividing it into three parts: the animal soul, the sensitive soul, and the intelligent soul. He says of this latter, or intelligent soul, which he calls the third degree of soul that it is the fire-ether which constitutes the essence of divinity.

What the ancients understood by *spiritus orbis* (world spirit) was not what we call the element, air; it had nothing in common with it but its name; it was a far more refined and active substance having emanated from the ether, and which caused to flow in its current all the principles of motion and life manifested in animal creation. This was the ethereal fluid which circulates throughout all the stars and all the heavens whence all animals derived the principles of their life, shown in the heat and breath of all animated beings. Thus the fire-principle, eternal and Divine, enclosed in its substance the *spiritus* and the *logos*, or the universal intelligence of nature and of all its beings.

These ideas are in absolute conformity with the theology of Orpheus, who united in the sole fire-ether, which enclosed

the world, the three principles of divine nature, or the only divine force, under the names of light, counsel and life. Such is the *Verbum* amongst the Christians: *vita erat lux, et lux erat vita, et lux erat Verbum*.

"In the beginning," says Orpheus, "the ether was made by the first God. The ether existed in the bosom on the vast chaos, and in the awful night enveloped it from all sides. From the summit of the ether issued forth a ray of light which illuminated the earth and all nature. This light, the most ancient of all beings, the most Sublime Being, is the Inaccessible God which shrouds him in its substance, and which we call light, counsel, and life."

These three names designate but one substance.

The Gospel of John presents the Great God to us as enclosing within Himself the light and life, *id est*, the first principle, or the universal principle, which is subdivided into the principle of intelligence, which is light, and into the principle of life, which is what the Christians call *Spiritus*.

The theology of Zoroaster taught that when God arranged and organised the matter of the universe, he despatched His *will* under the form of a bright shining light; and this light assumed the shape of man.

The heresiarch Simon asserted that the Supreme God, the only One and Incomprehensible, is unknown and hidden in His ineffable light, in His inaccessible, infinite, and incorporeal luminosity, which emanates from Him and which is His residence; He is Himself this immensity of light.

The theology of the Phœnicians places also into the substance of the light the intelligent part of the universe, and that of our souls, who are emanations thereof. Its irradiation is regarded as the very act of the pure soul, and its substance as a being as incorporeal as intelligence itself.

Do not be surprised, my readers, if I insist here so much upon the reality of this light, guessed or seen by so many great men, for here lies our secret as well as the secret of every force or power. All the ecstasies, all somnambules, speak, as you know, of a luminous substance of brilliant lights. And do they not all alike see the magnetic fluid by which they are affected under the form of a light? And has Jesus not said, "I am the light of the world"?

Oh blind men, and in consequence of that blindness, unhappy, struck with poverty in the midst of the greatest of wealth; oh barren barons, though surrounded by unspeakable fecundity, when will you at last recognise and learn the infinite treasures in the midst of which you live? When will you perceive the wealth which you possess in yourselves and in your nature? When, for once reflecting on your own selves, will you learn to read by the aid of the eyes of your spirits and hearts in this book, which is yourselves, all that the Supreme Being has placed there in images? When will you be able to run over all these pages on which He has inscribed with His own sacred finger the truth of His being and of His mysteries?

See what the savants of our day have accomplished by simply gathering up all the dead forces spread throughout space; they are, however, nothing in comparison with the living and pure forces of which human magnetism is only a feeble ray! Do you see that light discovered by Mesmer flooding the bodies and enlightening the spirit by rousing it from its lethargic sleep? Do you see it also in your magnetised subjects who at certain times are illuminated by it? Breath of life, fire of all genius—Mesmer has discovered its SOURCE !!!

BENALLA, 14th February, 1884.

### THE AMERICAN UNIVERSITY AT BOSTON.

THE American University which has been organized at Boston and has held a three month's course of lectures in the months of April, May and June 1883, is a pioneer movement for the elevation of humanity above the plane of crime and selfishness, and the redemption of philosophy from the degrading influence of materialism, bringing it at the same time from the region of barren speculation into contact with the realities of life and the wants of humanity.

It was well said by the *Madras Herald* that "the whole subject of the relations between mind or spirit and body, is one of great difficulty, and the truth seems to be that science hitherto has been able to say very little about it"—and yet until this mystery has been explored,

there is no science of man and no system of Biology which can afford a solid foundation for the healing art. The attempt to develop a Science of Medicine without a full development of man has been a dismal failure in its practical results, which were often worse than a failure, being an increase of mortality. From this gloomy condition, the Medical profession has been slowly emerging in the past fifty years, by unwearied labor, blindly groping without the guidance of Philosophy.

What the world has called philosophy has been but barren speculation—a speculation that ignored the most conspicuous and important psychological facts, which have been known in Eastern lands and in Egypt for many thousand years,—occupying itself solely with verbal and speculative discussions barren of all value and having no relation to human life.

Still worse and more calamitous in its results, the system of education, unguided by any true philosophy or knowledge of the constitution of man, has been confined to the intellectual faculties, which it cramped and wearied to the entire neglect of manhood, in the practical knowledge and usefulness—so that the most highly educated man was often the most inefficient narrow-minded and useless citizen. All Europe under this meagre and paralyzing system of education has positively degenerated in morals and happiness during the last fifty years, as shown by the increase of intemperance, insanity, suicide, bastardy, theft, murder, pauperism and physical degeneracy.

Against all this the establishment of the American University is a protest. It proposes to introduce a complete education of soul and body—an education to develop the virtues, to give practical skill and energy in the industrial arts—to give independent originality of thought and healthy development of the body.

In Medical science it proposes to give a basic philosophy, and a system of treatment which recognises not only all the resources of medicine and of external appliances, but the safe and potent agency of animal magnetism, guided by the new science of *Sarcognomy*, which explains the location of all the nervous forces of life. To this is added the cultivation of *Psychometry* as the power which reveals the mysteries of disease, giving certainty and security in its treatment, giving also a power for the exploration of the *Materia Medica* and discovery of new remedies never heretofore known.

Against so fundamental a change as this all the organised forces of society are arrayed. The old universities, the medical colleges, the conservative pulpits and the unprogressive press resist and discourage every effort.

Nevertheless, the truth which I have presented, and which in reference to education is as clear and demonstrable as chemistry or astronomy cannot fail of ultimate success. Letters from the best thinkers commend these educational views as the most important that have ever been presented to the world, and hail my work on "Moral Education" as the beginning of a complete revolution. Buildings suitable for the purposes of the University have already been offered me in other locations in Connecticut and Pennsylvania, but I prefer to carry on the work in Boston as a more influential centre.

There are a few enlightened persons here who appreciate and sustain my labors, and I look forward to the time when in the light of all comprehensive philosophy and the warmth of the true religion which establishes the brotherhood of man, the old world and the new shall feel and recognize their community of thought and unity of purpose.

BOSTON, 29 FORT AVENUE, } JOSEPH RODES BUCHANAN.  
November 27th, 1883.

### CAN THE "DOUBLE" BE MURDERED?

THE question has been discussed, whether the "Double" can commit murder, and several instances have been cited, which seem to answer that question in the affirmative. We may now go a step further, and inquire: Can the

"Double" be murdered, or perhaps to express it better, can any injury be inflicted upon the "Double" of a person, in consequence of which the person whose double is injured, will be caused suffering or death. The ancient witch trials, if denuded from all irrelevant matter and read without prejudice, answer this question.

## I.

A small boy by the name of Richard Jones was one day touched by a woman named Jane Brooks. She passed her hands over his body, shook hands with him and gave him an apple. The apple was then cooked and he ate it, but after eating it he became immediately ill, and his illness took a serious turn. One Sunday as the sick boy was being guarded by his father and a witness named Gibson, he suddenly exclaimed, "Here is Jane Brooks." "But where," asked both. "Here," he said, "on the wall, at the end of my finger." Of course no one saw what the boy Richard pretended to see, and they supposed it was his fever that caused him to talk in that manner. Nevertheless Gibson rushed to the spot which the child indicated and struck at it with his knife. "Oh father!" said Richard, "Gibson has cut Jane; she is bleeding very much." When the boy's father and Gibson heard that, they went to get a Constable to whom they told the story, and all three went to the house of Jane Brooks. They found her sitting in a chair, supporting one hand with the other. They asked her what was the matter with her hand; but she refused to tell or let them examine it; and when the Constable tore away the bandage, they found her hand cut and covered with blood, for which circumstance she could give no satisfactory explanation. She was arrested, tried and found guilty of witchcraft on the 26th March 1658.

## II.

A woman named Juliet Cox, of about sixty years of age, came one day to beg at the door of a house. The servant girl who opened the door when she saw the beggar-woman, gave her a rather discourteous reply. "Very well, my darling," said the old woman, "You will soon be sorry for it." That night the servant girl fell into terrible convulsions. At her cries the people living in the house came to her room. During an interval of pain she extended her finger, as if pointing to an invisible being, and exclaimed: "Here is the villainous beggar that persecutes me." The attendants however paid no attention to what she said, believing her to be hallucinated or hysterical. But one day the servant girl, believing that the phantom of the witch would return again, armed herself with a knife, and as the double of Juliet Cox appeared, she struck blindly at the treacherous shadow. Those present saw the glare of the knife, saw her strike, and at the next moment they saw the bed covered with blood. "I have cut her in the leg," exclaimed the girl, "go and see." They all go to the house of Juliet Cox and rap at the closed door, but no answer comes. They burst in the door and find the woman prostrate, covered with blood, and with an ugly wound in her leg, which has just been freshly dressed. The knife is produced and its diameter corresponds exactly with the shape of the wound. Juliet Cox was arrested and burned alive.

MR. MONCURE D. CONWAY'S  
"A TOUR ROUND THE WORLD."

THE *Glasgow Herald* of April 11, 1834, contains 2½ columns devoted to the eminent London Ontologist to—"The Theosophists." "A dangerous subject taking it all in all, yet one that the traveller has handled in quite a masterly and dexterous manner. There is quite sufficient fairness in the article to satisfy the Theosophists, than whom there are few less accustomed to praise, and who, in the simplicity of their hearts, have entertained Mr. Conway, to the best of their ability, a whole evening at Adyar (Madras Headquarters of their Society); and quite enough of possibilities of vistas in the many world-be innocent innuendoes with which the article abounds, to make every enemy of Theosophy rejoice.

After carefully reading the narrative, we cannot refrain from exclaiming with Jerdon: "All men are apt to have a high conceit of their own understanding, and to be tenacious of the opinions they profess; and yet, almost all men are guided by the understanding of others, not by their own; and may be said more truly to adopt, than to beget, their opinions."

Now Mr. Conway is a sceptic. He prides himself on it, and, therefore, it is no wonder when he says that in coming to Adyar "he had no faith that anything lay for me (him) in occultism, after thirty years' observation of similar phenomena" in spiritualism. So much for his prejudice confirmed by an exhaustive examination of "nearly six hours" of a subject that he has never investigated; for spiritualism is no more occultism than his London "Church" of heterogeneous religions is a Methodist chapel. His investigation resolves itself, as we understand it, into three heads. *First*, the Adyar "lay chelas" would not shake hands with him; *Second*, these "graceful" but too credulous Asiatics presumed to prostrate themselves before the portrait of one whom they reverence in the presence of him who never revered anything or anybody; *Third*, his conclusion and broad hint that the "Shrine" phenomena were alleged to have ceased because the inhabitants of Adyar know of his coming.

Without losing time in commenting upon the first two grievances, we will simply remark that Mr. Conway's arrival at Madras and visit to Adyar were quite unexpected, the first intimation of it being his actual presence, and the letter of introduction from an Australian member of our Society which he brought with him. Nor had the forbidding of placing letters to be phenomenally carried away and the answers brought by the same method, anything whatever to do with our sceptical traveller. To the positive knowledge of all the Madras Theosophists the event had occurred several days before, on December 31, Mr. Conway—however eminent—not being taken by the Mahatmas into the slightest consideration on that occasion.

Notwithstanding our critic's definite prejudices, and, begging his pardon—"high conceit of his own understanding," he seems to be as willing as the rest of the mortals, perchance less intellectual than he is, to allow himself to be "guided by the understanding of others," even when the latter is flagrantly incorrect, provided his own ends be served. Thus, instead of "begetting" he indeed "adopts" another man's opinion when he says that he is "informed by an eminent Oriental scholar, that the name of Koothoomi lies completely outside the analogies of any language that ever was spoken in India." This is either (a) a deliberate misstatement of the writer, or (b) of his "eminent Oriental" informant. For being "eminent," as Mr. Conway says, he could not make such statement ignorantly. Mr. Conway is challenged to furnish the "eminent Oriental scholar's" name, or failing to do so—confess himself between the horns of a very serious dilemma.

The phonetic name Koothoomi, or Knthumi—however variously spelt, is one too well known in Indian literature and language to need help from any Oriental scholar, whether eminent or not. Koothoomi is the name of one of the Rishis, the author of one of the 20 remaining Codes of law, now in the Asiatic Society's Library in Calcutta; again, he is named as one of the 36 Rishis in the *Pudma Parvata*; and we would strongly advise Mr. Conway to consult these authorities, and Monier Williams' *Indian Wisdom*, for one, wherein Koothoomi is mentioned; so that his next lay sermon might not contain this very serious as well as ludicrous error. To conclude, Mr. Conway could never have seen an "autograph" of the Master signed "Kothume." Such a spelling—an impossibility with the prejudiced imagination of an Ontologist. There are many other little inaccuracies in Mr. Conway's chapter on the Theosophists which, for lack of space, we pass unnoticed.

## Answers to Correspondents.

O Tehsil Musopirkhana. Declined with thanks.

Bireswar Banerji, P. T. S. Declined with thanks.

M. M. A. Constantinople, S. R., St. Petersburg, S. T. India-napolis, U. S. A. and others. All that can possibly be given out, is now forthcoming in the "Practical Instructions for

*Students of Occultism*," and in the "Unpublished writings of Eliphaz Levi," published monthly in our *Supplement*.

A. K. Vienna. We have often attempted to explain that these "spirit materialisations" are usually nothing else but the Astral form of the medium. When the "spirit catcher" comes and creates a disturbance, the Astral form necessarily reunites with the body of the "Medium." There is nothing to expose except the ignorance of the exposor as well as that of the "Medium."

O. T. Benares. If the law of Karma does not suit your taste, we would suggest that you might join a "Christian" church. You will then be offered several plans of salvation, and have your choice between dipping, sprinkling and pouring.

Fyzabad. You say that in your opinion an imperative order as to what the members of the Theosophical Society should eat, is indispensable. We beg permission to differ. We can advise our members as to what is in our judgment the best course to pursue; but we leave it to their own judgment to follow our advice or not. The Theosophical Society is not a narrow sectarian society, but embraces men of different tastes and opinions. An imperative order as to what we ought to eat, would perhaps make another imperative order necessary as to what we ought to think and what we ought to believe, and we then would need a little tyrant or pope, and a secret police to enforce the orders. We do not interfere with individual liberty, and if a man be such a glutton as to eat the half a dozen eggs, &c., as you suggest for breakfast, it will be a matter which only concerns him and not the Society.

F. Ellen Burr, Hartford Conn. U. S. A. The stabbing and tearing of the "Theosophist" is due to the violent exercise of the petty authority of some imbecile quarantine officers. It is a piece of petty tyranny, to which we must submit, because we have no means of protecting ourselves. It is done for the supposed purpose of facilitating fumigation for disinfection. It is as unnecessary as it is useless and, like many other medical superstitions, proves that the majority of medical authorities, instead of being a benefit to mankind, are only a plague.

Vera. The poem is very beautiful.

B. Sooryanaraina Row, B. A., Bangalore. If your friend is a believer in a personal Jesus Christ, by whose assistance he expects to be saved, and which belief has been to him "the source of the greatest comfort and happiness," and if he at the same time attempts to identify himself with that Jesus Christ by acting up to his highest conceptions of justice and truth, it would be very wrong for you to shake his faith and entangle him in the meshes of a philosophy which he perhaps cannot understand; but if your friend prefers the knowledge of truth to the delightful dreams of a fool's paradise, you might explain to him that the real Christ principle is to be found within himself, or as the supposed Jesus said: "The kingdom of heaven is within you." This "Christ principle" is represented in all religions under different names. It is most beautifully represented in the Brahmical and Buddhist religions; but to explain it fully will require a long article, which we expect to present to our readers shortly.

## Letters to the Editor.

### A ROMAN CATHOLIC SAINT AT GOA.

ST. FRANCIS XAVIER was a Roman Catholic priest. His sacred corpse is lodged at Goa, and exposed every third or fourth year to the public view, when several miracles are wrought. He must, without doubt, have been a true believer in Roman Catholicism, which religion forbids us to join secret societies. This being so, how can the Theosophists put down Roman Catholicism in their monthly Journal? Will the *Theosophist* please to give the public its views about this Great Saint in India.

SAMUEL JONATHAN.

Civil Court, SALEM, April 13th 1884.

Note:—We regret that we have had no opportunity of forming the acquaintance of St. Francis Xavier; neither were we given the chance to investigate any of the "miracles" performed by his corpse; but as our correspondent, according to the address given by him, is connected with the Civil Court,

it is reasonable to suppose that he is a lawyer, and therefore that he would not accept anything as true, unless he were fully convinced by the evidence brought before him. He tells us that

1. The corpse of St. Francis Xavier is occasionally exposed at Goa.

2. On such an occasion "miracles are wrought."

As to the first assertion, we are quite willing to believe that the corpse exposed at Goa is really that of St. Francis Xavier and no other. Besides it would make no difference; for even if the corpse exhibited in that costly shrine at the Church of *Bom Jesus* were that of the cruel bigot Don Fro Alexo de Menzes, or of one of the many miserable victims of the loathsome Inquisition who died in the dungeons of the *Casa Santa*, or that of some unknown criminal, it would make no difference as far as the working of "miracles" is concerned, as long as the true believers can furnish sufficient faith to believe seriously in the efficacy of the fetich. We fully believe in the mysterious power of faith.

Besides the body of St. Francis Xavier, there are plenty of other "miracle-working" relics in the world. "A monk of St. Anthony," says Stevens, "having been at Jerusalem, saw several relics, among which was a bit of the finger of the Holy Ghost; the snout of the seraph that appeared to St. Francis; one of the ribs of the *Verbum caro factum* (the word made flesh); some rays of the star that appeared to the three Kings of the East; a phial of St. Michael's sweat that exuded when he was fighting with the devil";\* and up to this day there is a church in Italy, where a feather out of the wing of the Angel Gabriel is exhibited.

All these things work "miracles," especially cures, provided the patient has sufficient faith. Neither is it at all necessary that such fetiches should be relics of Roman Catholic saints. A tooth of Buddha, a backbone of Confucius, a toenail of Gladstone, a boot of Col. Ingersoll, a tail of a monkey, or any other thing, will and must have just the same effect, if believed in with sufficient strength. Jesus Christ gives the desired explanation after making a cure. He does not say "I cured thee," but he says: "Thy faith has made thee whole, go and sin no more." Many Yogis are buried in India and cures are wrought at their graves. Thousands of Mahomedans go annually to Mecca to visit the tomb of the Prophet for that purpose, and all the patent medicines and quack nostrums derive their efficacy principally from the faith of imaginary or real invalids. The powers of Imagination and Faith are almost omnipotent, and if our correspondent desires to know how they act, we advise him to study theosophical books, and especially to read the lectures of Eliphaz Lovi published monthly in the Journal of the Theosophical Society. The Theosophical Society is no secret society, she invites every body to investigate her doctrines.

As to the second point, it is useless in this enlightened age to say that a real miracle can occur. Originally a "miracle" meant something supernatural, or something that goes against the laws of nature. At one time thunder and lightning were supposed to be works of Jupiter or of the devil, and therefore miraculous; but we are inclined to believe that our correspondent is sufficiently intelligent to know all this, and that by "miracle" he probably meant "a wonderful thing." There are plenty of wonderful things, but they are not supernatural, and can all be explained by a proper application of our intellectual faculties.

"But," says our correspondent, "you try to put down Catholicism." We say: "We do no such thing. We do not try to put down Catholicism, but to raise it up and purify it. We want to make the Catholic church still more Catholic; instead of wishing her to remain only *Roman* Catholic, we want her to become *universal* Catholic; but to become such she must have priests instead of bigots, knowledge instead of relics, love instead of hate, freedom instead of tyranny, truth instead of superstition, and a pope who is endowed with supreme wisdom. If she arrives at that point, we shall join her in her efforts to extend her dominion all over the earth."

If we attempt to cleanse a noble statue from filth, do we destroy the statue, or destroy the filth? If we try to remove superstition and ignorance, which hide the truth, do we try to put down the truth? Forms change, principles are lasting. He who adores a form is an idolator; he who admires the principle is the true worshipper. The Roman Catholic

\* See Isis Unveiled.

Church is getting old; the principle has left, the form remains. The priests have lost the key to their sanctuary; they cannot explain their own mysteries and do not want them explained. They worship forms, out of which the spirit has fled, and, unless they awake from their slumber, a new and universal religion will arise and conquer the world, while the mummified body of the Roman Catholic Church will be laid away in its tomb and forgotten like the dried up old body of St. Francis Xavier in its shrine at Goa.

### KARMA.

It is generally supposed that animals are not under the operation of the law of Karma, as applied to human beings. If so, how can we explain the difference between the position of an animal exposed to all the torments that can afflict sentient beings, whipped almost to death, starved out of existence, and that of another, enjoying all the luxuries of the material world, fed with the best of food and treated with extreme kindness? How again can the cases of animals born blind be explained? We do not actually mean to invest them, with as much responsibility as human beings, but can they not be supposed to possess it in a far less degree? A solution from you on this point will go much towards elucidating our ideas on the subject.

GYANENDRA N. CHAKRAVARTY,  
(of Cawnpore)  
*Professor, Physical Science.*

*Note*:—The error often committed, is to mistake the general law of cause and effect for the law of merit and demerit. If we ask, why has one animal an easy life to lead and another a hard one, we might ask also, why is one tree cut down before it is grown up, while another tree is allowed to die of old age? Why is one pair of shoes made to adorn the feet of a lady in a ball room, and another pair to be dragged through the mud by a boor? No one will maintain that minerals and plants have any moral responsibility. Neither have animals, children, idiots or the insane any such moral responsibility. This is a fact recognized by human legislation, and it was reserved for the ignorance of the 14th century to judicially try and punish animals according to a Jewish law, laid down in Exodus xxi. 28, which says: "If an ox gore a man or a woman that they die, then the ox shall be surely stoned, and his flesh shall not be eaten, but the owner of the ox shall be quit." According to that law in 1386 the judge of Falaise condemned a sow to be mutilated in the leg and head, and afterwards to be hung, for having torn the face and arm of a child and then killing it. This was a Draconian infliction of punishment. This sow was executed in the public square, clothed in a man's dress.

The law of Karma is a moral law, and where no moral responsibility exists, there can be no application of the law of Karma; but the law of cause and effect applies to all departments of nature.

A celebrated writer says: "Suffering is heaven's divine medicine." The law of *compensation* is also active in the animal world. A dog, that has to exercise its own sagacity to find food, will sooner develope psychical powers in that direction, than one that does nothing but eat and sleep, and the individual or differentiated monad of the former will sooner reach the condition necessary to enter the human kingdom. The rudiments of hope, patience, faith, fidelity, confidence, etc., are found in the animal kingdom. By putting them into exercise, they will become stronger, and as no effort in nature is ever lost, they will find their uses. If we understand the laws of the universe, we shall have no occasion to find fault with them, and become convinced of the uselessness to attempt to improve or correct Supreme Wisdom, or "God."

### ADEPTS AND POLITICS.

THE communication in your December number from Chhabigram Dolatram, headed as above, is a piece of special pleading, directed against the adepts, and flowing from a source not friendly to either the cause of Theosophy or to the Masters. Personally, I do not believe Mr. Dolatram wrote the article; he simply allowed his name to be append-

ed to it. It is, to my thinking, the emanation of a European Christian and royalist mind.

It is quite true, as you say, in your comment that I referred in my article to *adepts in general*. But my own unsupported opinion was and is that the American revolution was a just one, started to accomplish a beneficial end, and that the Hindu or Tibetan Mahatmas would not be disgraced by any connection with it, notwithstanding the royalist and anti-republican feelings of the real authors of Mr. Dolatram's paper. That revolution was not degraded, in the American side, by the shedding of blood except in lawful battle for human rights.

Allow me to point to a historical fact in connection with the Count St. Germain, which will shed some light on the question of what, if any, connection do some adepts have with justifiable revolutions.

One of the well-known generals who fought with Washington, in the Continental army against the British, was General Fred. Wm. VonSteuben, a Prussian. In 1777 he was in Paris, and at the same time the Count St. Germain was Minister of War there. They were well acquainted with each other, and the Count induced VonSteuben to come over to America and offer his sword to Genl. Washington. He did so, was gladly received, and did splendid service in the cause of liberty. Everybody knows that St. Germain was an Adept, and the fact above detailed is set forth in many publications and letters of authentic force.

Mr. Dolatram picks up the expression "brother Franklin." I never heard, nor ever said, that Franklin was a Theosophist. He was a Freemason, and therefore a "brother," so was Washington and also Jefferson. A sincere mason will be a just man who reveres liberty and abhors a tyrant.

As Krishna says in the Bhagavad Gita of himself, we may hear the Adept saying: "I am manifested in every age for the purpose of restoring duty and destroying evil doing."

EX ASIATIC.

### ESOTERIC BUDDHISM AND HINDUISM.

I SHALL be deeply obliged to you by your giving publication in your journal to the following observations suggested by a perusal of Mr. Sinnett's "Esoteric Buddhism." I think they fairly represent the views of many a Hindu Theosophist on the subject.

According to the author the book contains the teachings of the Himalayan Mahatmas, communicated to him under exceptional circumstances by means of letters transmitted to him mostly by occult means in response to certain questions put by him at random on scientific subjects. They have been arranged and presented in a systematic form suited to a scientific treatment of the subject by the author himself from the apparently meagre materials supplied to him by MSS. in the handwriting of the Rishis, so that his work may be compared to a lively portrait got up and finished from the bare outlines hastily drawn by a master artist.

The author further states that these teachings do not belong to any particular creed or faith, but embody the universal truths common to all religious systems alike, revealed under ordinary circumstances only to regular initiated disciples, and thus sacredly guarded from generation to generation from the unsympathetic masses. Under such circumstances there is not much reason to believe that the Mahatmas themselves have especially thought it proper to identify these doctrines with any creed or religion, since they have no special predilections whatever to any particular form of faith. The selection of the title of the book and of the peculiar phraseology adopted in it to express these eternal and fundamental truths, must therefore have been the result of Mr. Sinnett's own choice, and his previous acquaintance with Buddhism and Buddhist scriptures must have had a great deal to do with it. Why Mr. Sinnett should have considered the system of Esoteric Science and Philosophy treated of in his book to be more closely allied to Buddhism than Hinduism is not very clear, unless the following passage extracted from the preface to his work be considered to throw some light upon the alleged superiority of exoteric Buddhism to exoteric Hinduism:—

"Exoteric Buddhism is in closer union with the esoteric doctrine than any other popular ancient creed."

Now by crediting exoteric Buddhism with greater proximity to the esoteric doctrine than any other ancient religion, Mr. Sinnett must have meant either of two things, (1) the moral, religious or spiritual development of the great mass of religious votaries, or (2) the religious creed embodied in the popular sacred literature. Now on the former supposition it may be safely asserted (not to speak of the fact that the Hindus are unlike any other people in the world, Christian or Buddhist, in being strictly a vegetarian people) that popular Hindu notions of man's destiny after death and other problems having to do with the mysteries of existence, embody to a great extent the doctrines propounded in "Exoteric Buddhism," and are thus calculated to strengthen the moral propensity of any people who are familiar with them. It is only when these beliefs had to undergo a terrible wreck at the hands of western education and a variety of other circumstances, that their influence came to be less felt, when, thanks to our revered Mahatmas, the Theosophical Society began to shed its beneficial influence as the saviour of Hindu Society and nationality. And the popular wisdom of the majority of the Hindus to this day is more or less tinged with the esoteric doctrines taught in Mr. Sinnett's book misnamed "Esoteric Buddhism," while there is not a single hamlet or village in the whole of India, in which people are not more or less acquainted with the sublime tenets of the Vedanta Philosophy, notwithstanding the frequent onslaught of them by Missionary bodies and other destructive agencies. The effects of Karma in the next birth, the enjoyment of its fruits, good or evil, in a subjective or spiritual state of existence prior to the reincarnation of the spiritual monad in this or any other world, the loitering of the unsatisfied souls or human shells in the earth (kāmāloka), the pralaye and manvantaric periods, the seven or rather fourteen rounds of humanity in this planet, the existence of other worlds besides the one we inhabit and of other states of existence, the spiritual constitution of man and the descending or incarnation of the Planetary Beings or Guardian spirits of the world from time to time to preserve the spiritual wisdom from becoming extinct in the world, and many other subjects entirely untouched in "Esoteric Buddhism," are not only intelligible, but are even familiar to a great many Hindus, floating even in ordinary colloquial language under names different from those made use of by the author of "Esoteric Buddhism." As many close observers of Hindu and Brahmanical habits of thinking of the present day will sufficiently testify to this fact, it is useless to dilate upon it any more.

On the second supposition, however, by taking the word "exoteric" to refer to the popular religious literature, it may be maintained, without any fear of contradiction, that all or nearly all the Hindu sacred books contain the very essence of esoteric truths. And considering that the author frequently repeats the statement that he does not lay claim to Oriental scholarship, the reason is not evident why he should regard exoteric Buddhism as *more esoteric* than any other ancient Eastern religion. Perhaps it may after all only indicate that he has too much modesty to aspire to the coveted distinction of an Oriental scholar or he might have greater acquaintance with the exoteric doctrines of Buddhism than with those of Hinduism, and has taken greater pains in studying and getting information about exoteric Buddhist writings. Hindu sacred writings, on the other hand, from the Vedas to the Purānas, contain almost all the spiritual truths that the Mahatmas have revealed. To avoid any ground for misapprehension on the part of my brethren, I have respectfully to submit that I do not belong to that class of shallow-minded critics who, in a spirit of intolerant bigotry, accuse the Founders of the Theosophical Society of partiality to Buddhism, without feeling grateful for the inestimable blessings which Theosophy has already conferred upon India during so short a period, by infusing a spirit of patriotism into the hearts of its people, and by uniting men of diverse races and creeds in bonds of brotherly sympathy. Neither is it my intention to dispute the truth of the doctrines themselves, or the fact of their having emanated from the sacred source from which they are professed to have been inspired. In fact there is nothing to be questioned in the doctrines so ably and scientifically expounded by the author, which are held sacred both by Hindus and Buddhists, for they form but a portion, and not even the greater portion of that

perfect system of Esoteric Science, which cannot be claimed to have been the exclusive possession of any religious system in particular, but which is identical with the Wisdom-Religion of antiquity, so often referred to in Theosophical writings as the common foundation of all religions. This humble paper is only meant as a protest against Mr. Sinnett's attempt to identify the Esoteric Doctrine in the keeping of the Great Himalayan Teachers with any exoteric creed, however much favored of him. That such an identification is against the whole tenor and aims of the teachings of the *Theosophist*, is evident from the following editorial note (Vide March *Theosophist*, p. 150) which is worthy of careful consideration:—

"Surely, without in any way lowering down the Christ system, or even the *ideal* Christ, we can say what is but too easy of proof, that, properly speaking, there is no 'esoteric Christianity,' no more than there is esoteric Hinduism, Buddhism or any other 'ism.' We know of one Esoteric Doctrine—the universal secret Wisdom-Religion of old. The latter embraces every one of the great creeds of the antiquity, while none of these can boast of having it in its entirety. Our mission is to gather all these scattered rays, bring them back to one focus, and thus help those who will come after us to unveil some day the glorious sun of Truth. Only humanity must be prepared for it—lest it should be blinded by the unexpected splendour. The true Theosophist, he who works for the sake of truth—not for his own self and personal predilections—ought to respect every religious system—*pander to none.*"

What the profound and respected Editor in the above passage affirms with respect to partiality to any religious system in general and Esoteric Christianity in particular, is even more pertinent when applied to Mr. Sinnett's undue partiality, if not pandering, to the Buddhist religion: Substitute in the preceding quotation "Buddhism" for "Christianity" and *vice versa*, and it exactly conveys the force of my criticism. Mr. Sinnett is at perfect liberty to explain his Esoteric Buddhism, as any Theosophist is to explain the religion which he thinks to be the best. And it will be quite unjust on my part to find fault with Mr. Sinnett on the score of his inquiring into the sublime truths of Buddhism and setting forth their transcendental value before the world, *as his own individual opinion*; but I am fully confident that I am not one inch deviating from the Theosophical programme, when I charge him with having interpreted the teachings of the Great Himalayan brothers as supporting one form of faith in preference to another. Buddhism is not of very ancient growth. It is professedly an offspring of Hinduism, and one that was introduced into the world in comparatively recent times by Lord Buddha. Lord Buddha, according to popular Hindu tradition and literature, is an Avatar (Planetary spirit?) of Vishnu. His venerable name is chiefly associated with having taught mankind the principle of benevolence to all sentience, in fact, Universal Brotherhood in its widest sense. The Hindus have no idea of his having taught the mysterious doctrines embodied in Mr. Sinnett's work. His mission was to raise the moral status of the masses of the Society to whom he accordingly addressed himself. Perhaps he might have taught the secret doctrines to the inner section of his disciples, as Christ did, who is said to have spoken to his pupils in parables. The works of Sankarācharya, Ramanujācharya and Madhvācharya, do not recognise Buddhism as having been associated with these sublime doctrines, but discuss some of the tenets of the Buddhāchāryas or disciples of Buddha, such as Yōgachāra, Mādhyamika, &c. And as there is no religion in the world which has not some portion of 'divine truth' in it, the mere fact of the Buddhist religion having a core of solid truth underlying it, would not entitle one to say that *this* is the religion which the great occult teachers of the Himalayas have so long and so zealously guarded. Hindu students of Occultism will be much benefited if the esoteric truths are explained and illustrated by the familiar phraseology of their own Sastras, the works of their greatest Mahatmas. For Mr. Sinnett has positively obscured his work by using a phraseology quite unheard of hitherto, such as Devachan, Avitchi, Dhyan Chohans, &c., which are not found in the writings of the greatest Mahatmas. Nor do I wish that the esoteric doctrines should be exclusively claimed for Hinduism in preference to Buddhism. On the other hand, Sanskrit being the language in which these

ideas have been invariably expressed from time immemorial, there is no use in effecting a regular linguistic confusion of names by mingling together such terms as Devachan, Dhyan Chohans, &c., with Karma, Pralaya, Manvantara and other well established names. It is therefore highly desirable that the ideas of "Esoteric Buddhism" should be definitely transferred to the Vedic and Vedantic cosmogony of Vedavyasa. For instance, the seven planetary systems may refer to (1) the seven planets of astrology, (2) the seven Locas भूः, भुवः, सुवः, महः, जनः, तपः, सत्यः, (3) the seven dvipas, or (4) the seven worlds अतल, सुतल, वितल, रसातल, तलातल, महातल, पाताल, &c. The Dhyan Chohans may mean the Gods, the Demi-gods, the Supta Rishis, the Adityas or Suryas, the Pitris, the Rudras, the Vasus, the Manus, the Prajapatis, the Lokapalas or Dikpalas, or the 49 Maruts, or all of these combined. Or they might correspond to the 33 crores of divine beings of the Puranic Literature. Again, the septenary constitution is utterly obscure. It is not certain whether it refers to the seven classes of *Tattvas*, such as Mahat, Tanmitra, Ahankara, &c., of the Sankhya Philosophy of Kapila, or to the *panchakosus* or five envelopes of the soul, viz., अन्नमय, प्राणमय, मनोमय, चिज्ञानमय, आनन्दमय, explained at length in the Brahmanandavalli of the Taittiriya Upanishad. In the same way many other doctrines of Esoteric Buddhism may be variously interpreted, and no light will be thrown on any of them unless it is clearly explained to what terms of Vedic cosmogony they respectively refer.

In conclusion, I have respectfully to suggest that a great boon will be conferred on the Hindu section of the Theosophical Society if the system of Esoteric Science and Philosophy, propounded in such obscure phraseology in Mr. Sinnett's book, be explained and interpreted in your Magazine, by adopting terms from the works of Vedavyasa, Sankara Charya and other great Mahatmas and Rishis, for the Hindu Theosophists to ponder over the striking coincidences of the teachings of their Sastras, with the identical teachings of the great and illustrious Mahatmas of the Himavat.

A BRAHMAN THEOSOPHIST.

TREVANDRUM, }  
17th March 1884. }

NOTE.—We print the above letter as it expresses in courteous language and in an able manner the views of a large number of our Hindu brothers. At the same time it must be stated that the name of *Esoteric Buddhism* was given to Mr. Sinnett's latest publication, not because the doctrine propounded therein is meant to be specially identified with any particular form of Faith, but because *Buddhism* means the doctrine of the *Buddhas*, the Wise, i.e., the WISDOM-RELIGION. At least that was the understanding on which the name was permitted to be used. We have now only to make one remark in regard to what our correspondent says concerning *Esoteric Hinduism*. The Hindus have devoted ages to a study of religious problems. Hence all possible phases of thought are propounded by different schools. Extreme materialists, positivists, theists, dualists, non-dualists, &c. &c., can, one and all, quote some ancient authority or other in their favour. Hence it is extremely difficult to say whether exoteric Hinduism is nearer the Esoteric Doctrine than any other Faith. One can say that a particular form of Hinduism approaches the Occult Doctrine much nearer than any other; and that is all. We must say a few words more. Although the book of Mr. Sinnett employs a Buddhistic phraseology, our correspondent must have noticed that the *Theosophist* almost invariably uses the Vedantic form of expression. Thus readers of the Theosophic literature will see that, although the two Faiths may use different phraseology, the ideas underlying the same are identical.

D. K. M

We are in a position to state that Mr. Sinnett never intended to maintain that Buddhism, as popularly conceived, is the nearest approach ever made to the ancient Wisdom-Religion. His assertion simply means that the Tibetan form of Esoteric Buddhism is in closer connection at present with the Esoteric Doctrine than any other popular religion on account of the presence of the great Himalayan Brotherhood in Tibet, and their constant guidance, care and supervision. The name given to Mr. Sinnett's book will not be misleading or objectionable when the close identity between the doctrines therein expounded and those of the ancient Rishis of India is clearly perceived. As the writer of the foregoing article seems to be in a state of doubt as to the position occupied by the septenary constitution of man as expounded by Mr. Sinnett, in the Aryan Hindu

Occult System, we shall herein below state in a tabular form corresponding principles recognized by the Vedantic teachers:—

Classification in Esoteric Buddhism.	Vedantic classification.	Classification in Tharaka Raja Yoga.
(1.) Sthula sarira.	Annamaya kosa.	Sthulopadhi.
(2.) Prana.	Pranamaya kosa.	
(3.) The vehicle of Prana.		
(4.) Kama rupa.	Manomaya kosa.	Sukshmapadhi.
(5.) Mind { (a) Volitions & feelings, &c. (b) Vignanam.		
(6.) Spiritual Soul.	Anandamaya kosa	Karanopadhi.
(7.) Atma.	Atma.	Atma.

From the foregoing table it will be seen that the 3rd principle in the Buddhist classification is not separately mentioned in the Vedantic division as it is merely the vehicle of prana. It will also be seen that the 4th principle is included in the 3rd kosa, as the said principle is but the vehicle of will power which is but an energy of the mind. It must also be noticed that Vignanamaya kosa is considered to be distinct from Manomaya kosa, as a division is made after death between the lower part of the mind, as it were, which has a closer affinity with the 4th principle than with the sixth and its higher part, which attaches itself to the latter, and which is in fact the basis for the higher spiritual individuality of man.

We may also here point out to our readers that the classification mentioned in the last column is for all practical purposes connected with Raja Yoga, the best and simplest. Though there are 7 principles in man, there are but 3 distinct Upadhis, in each of which his *Atma* may work independently of the rest. These three Upadhis can be separated by an adept without killing himself. He cannot separate the 7 principles from each other without destroying his constitution.—T. S.

THEOSOPHY AND CHRISTIANITY.

I REGRET to see that "An American Buddhist" finds, in some humble sentences of mine regarding Theosophy, a misconception of the meaning of its name. Ill defined terms are the cause of so much confusion of thought, that disciples of truth must be always thankful for correction of them. In saying that Theosophy seeks to develop the power of spiritual vision, I think I owned it to be Light, while holding that Christianity manifests a tempered radiance of glory which is satisfaction for sight, but, in defining Theosophy as "search for divine wisdom" merely, I hasten to own that I failed to express its full claims. While writing the phrase, I had in my mind the latter half of a definition given by Colonel Olcott in his letter to the *Epiphany* of Sept. 22nd. "Theosophia is 'divine' wisdom, I believe, and a Theosophist one engaged in its research," and I perceive that my phrase should rather have stood—Theosophists search for wisdom; Christians hold themselves incorporate in its very Being.

But while revealing to me the inadequacy of my definition, the critic demands an explanation of the meaning attached by myself to the term Christianity. He rightly argues that by that wide name I defined no separate portion of the church universal, of which each truly incorporate branch performs, we are taught, the diverse functions necessary for the well-being of the whole! But in the quotation by which he would define my meaning as "the doctrines and precepts taught by Jesus Christ," I beg to explain that he falls very short of what I meant.

Christianity, or the Holy Catholic Church, is the mystical "body of Christ," and as such I hold it to be the developing expression throughout earth of that power of life which is the true Theosophia—the wisdom of God. The terms, if I mistake not, stand to each other in the relation of cause and effect.

This mystical corporation claims to be in itself a living and growing development of Truth, whose Head is that Holy One whereby vision and audience and speech with the Infinite grow possible and the human and divine are atoned in one. The thoughtful author of "Life after Death" teaches that "spirits united by their mutual possession of some element or idea of the true, the beautiful, or the good in its eternal purity, will remain united for ever, sharing for ever the same spiritual property. In the same measure, therefore, as the higher spirits comprehend the eternal ideas, they will grow together in larger spiritual organisms; thus spiritual world

in its perfection, is not a simple gathering together of spirits, but it may be likened to a living tree of spirits with its roots in the earth and its crown reaching throughout the heavens and this sacred union of the living and the dead with the one Head in the one body through the one spirit, was my meaning of the term Christianity; the mystical manifestation of the Lord Christ, informed with His mind, instinct with his spirit, animate with the eternal life whereby he lived, and whereof doctrine and precepts, although emanating from himself and fundamentally necessary to its constitution, are but the bare organism that sustain it.

Would that unprejudiced seekers of the True would study Christianity in the pure thought of the mighty medium St. Paul, of its initiated teacher or of its divine Founder, as well as in its uncomprehending and noisy opponents. Then surely many must own that "pure Christianity divested of all extraneous matter" is, in the words of the critic, "nothing else but pure Theosophy," or, in other words, that its life is the "wisdom of God," and that "the real founder of Christianity cannot have been anything else but a being full of divine wisdom," which is surely manifestation of the supreme.

"An American Buddhist" concedes that Theosophy, or divine wisdom, is the underlying life of pure Christianity, but we submit that it is a misconception to suppose that Christians are willing to extract from the sacred body its animating principle, the very Sophia of its logos, its saviour from spiritual death, and to cling to its garb alone. Take away from the Holy church the element of Divine Wisdom, which is its very breath, and nothing vital would survive; and wherefore are we supposed to desire it?

No Christian is, at heart, content to cling to earthly trappings, rather than to the pure beauty of the divine form which is soul's legitimate expression.

Yet Christianity teaches that forceful spiritual energies must develop form, whereby they find expression, and it is a deep philosophical truth which announces that unto earth a child is born, its form Humanity, its head Emmanuel Christ, the power of God and the wisdom of God.

Christian faith is spiritual perception of that mystical corporate life, developing in earth's midst as the negative principle at one with her Lord and Head, the positive power in the higher spiritual plane, through whom is communicated the eternal life, which is the knowledge of God.

And, if our claims for the Church of Christ seem too wide, we can but appeal to facts; cast our glances across the continents, to Australia, America, Europe, South Africa, and see how, through five hundred year's union to the numerically stronger factor for Truth, her members evidence a vital power of thought, of energy, and of endeavour which attest to energy of life.

The divisions of Christendom, so long as they vitiate the pure beauty of love, wherein alone is the vision of the eternal, are a most true cause of offence, but it must be remembered that life implies friction, sadly as such excrescences militate against the perfection of its form, there is nevertheless a sign of the vigour of the life, which throws out the offending impurity, rather than allow it to stunt its growth or stifle it in the uniformity of death. Dead pebbles on the seashore, as Robertson long ago taught, manifest uniformity but life implies variety in unity. Nevertheless when the churches are no more a religious body, pure Christianity will prevail, for it recognises but one Holy Church as essential Truth, to whose development the present disunited members tend. It is, I humbly submit, a mistake to say that "the intelligent classes," in England at least, "have retired in disgust from the arena of controversy," except so far as their close assimilation of religious thought begins to obliterate the arena itself. Men everywhere, I think, begin to perceive that Truth is wider than they thought. Verily not intellectual reasoning but spiritual wisdom is the indwelling impulse that leads to Truth,—that way which is life, the "Christ in us, the hope of glory." If it be true that to understand what Theosophy means is to become a Theosophist, to be incorporate in the mystery of Christ's spiritual body,—His energising Karma form contains promise of growth in spiritual life, not limited to the understanding, although corroborated by reason and depending for audience, for vision, for speech with the supreme, not on our own individual powers alone, but as quickened by the power of the mystical body, wherein we dwell, nourished and cleansed by the energy of its sacred coursing life power, and that indwelling life is, if

I mistake not, the Light and the Theosophy of Theosophists, which if they care to search they will find expressed in Christianity.

E. C.

*Note*.—We have nothing of importance to object to the above letter. If all "Christians" would define the term "Christianity" in the same manner as E. C., in that case the "Christians," instead of opposing the "Theosophists," would unite and co-operate with them, because a true and enlightened Christian, or a true and enlightened Brahmin, or Jew, or Parsee, or member of any other church, if he seeks for the truth, unhampered by superstition and fear, necessarily becomes a Theosophist; because there can be only *one* truth; and whether that *one* truth of light is tinted by the color of the ray of light coming from Buddha or Christ, or Confucius or Sankaracharya, makes no essential difference. But unfortunately the majority of "Christians" have an entirely different conception of the term "Christianity." They believe Christianity to mean a certain set of church-dogmas and ceremonies, at the head of which stands a personal saviour, who saves them by vicarious atonement, if they will accept a certain proposed "plan of salvation." Those Christians refuse to look behind the absurdities of their own myths and allegories, and prefer to take them in their literal sense. It is those "Christians" that belittle and calumniate other religious systems, and desire to "convert" better and more enlightened men and women to their narrow creeds. It is only the superstitions and the bigotry of nominal Christians, that we contend against; but pure Christianity, enlightened by wisdom, is nothing else but Theosophy.

To show that "Christians" generally have a different conception of the word "Christianity," we append the following from the *Christian World*. (Jan 11):—

#### DISCARDING A MISSIONARY.

On Monday last the Committee of the Church Missionary Society came to the resolution of expelling from their employment one of the ablest and most useful missionaries in their service in consequence of his public adoption of the Doctrine of Life in Christ, which involves the denial of inherent immortality, and of the doctrine of endless misery. Mr. Dening has embraced these views after long and careful study of the questions concerned, and in full experience of their bearing on the faith of Buddhists and Confucianists. The Committee required his presence at home, in order to give an account of his change of belief. Leaving his wife and family on the other side of the globe, he returned to England, to learn within a fortnight, and without a hearing before the General Committee, that the Church Missionary Society will tolerate no teaching in its stations among the heathen, except that of natural immortality, and the endless torments of the unsaved. Mr. Dening has laboured for ten years in Japan, has translated works such as "Mozley on Miracles," into Japanese, and has gained a stronghold upon native scholars of the upper classes, as well as on the common people. It now remains only for Mr. Dening to make an appeal to the Christian public to enable him to continue his work in Japan.

## Reviews.

(Concluded from the last Number.)

### LA LINGUISTIQUE DÉVOILÉE.

BY M. L. LEVY-BING.

(Third Notice.)

Eriopoles, P. T. S.

PART III.

Now let us discuss how the explanation is sought of the hitherto puzzling coincidences of Aryan with Semitic roots, not to speak of the coincidences or similarities of words, for our science is extremely chary in the acceptance of them, as they are more often fortuitous and accidental than not.

This discussion leads us to a higher plane of research—a grander and therefore more difficult field to work in—namely, that of the Origin of Language in general as an instrument of human thought. Various have been the theories propounded by the devotees of our science, and as this subject trenches upon the domain of metaphysics—controversial battles have been many and arduous, as some of the best thinkers of the age are the belligerents with their armies of followers ranged against one another in philosophical combat, in no way devoid of interest to the students of philosophy and philology in all their bearings. It would be almost out of place in this contribution to enumerate and give

a short sketch even of the various theories of the origin of language; but there is one which I should like to dwell upon at some length as being the most reasonable and acceptable, and already becoming so far successful as to attract many a deserter from the opposing camps. It is the theory of the present leading school of German philology as represented by Heyse in his "System der Sprachwissenschaft" (System of Speech-science i. e., Philology). The English exponent of this theory in England is Canon Farrar, whose invaluable book "Chapters on Language," is a lucid and masterly treatment of the theory in question, a succinct analysis of which would, I trust, be not out of place here in our enquiries.

According to this theory, which completely discards the idea of Language being a gift of God, directly imparted to our "first parents," man is endowed with the faculty of speech just as he is endowed with other faculties or senses—but of a higher and more perfect order than the brutes from which he has evolved. This superiority he owes to the perfection and pliability of his vocal organs, and to their extreme adaptability to the requirements of his mundane wants. Armed with these implements and with the faculty of imitation which plays a most significant and useful part in all that concerns humanity from its very infancy upwards, human speech enters the path of development, and Language is the result. It then becomes, in time, of great use to man in the easy intercommunication and exchange of his thoughts, thus accentuating the differentiation that has been progressing between him and his immediate ancestors—or, as some believe, his collateral cousins, the Anthropoid apes. Now three things play an important part, according to Heyse, in the formation of Language. These are:—

1. Interjections.—These are first used as signs to express sudden emotions and are natural involuntary cries. Being so used for some time, by the law of association the sound recalls the feeling to the mind. Eventually by taking a farther step the sound begins to signify that feeling and rises to the dignity of a word or root.

2. But there are other Interjections which differ from the former in not being used as the former are in "a concentrated soliloquy" (to use Farrar's words) beginning and ending with the utterer. They are sounds which are used to convey a meaning to others in the way of a desire or command like *st! ps! pshaw! hist! pooh! &c., &c.* These are called vocal gestures by Heyse in his expressive mother-tongue, the German, *Lautgeherden*, literally sound-gestures, or *Begehrungs laute* or Desire-sounds.

3. Onomatopœia.—This is the method of forming words by imitative sounds. A sound is perceived and reproduced and gives to the Intellect "a fixed mark of the object perceived." In process of time when this imitative natural sound is firmly held as a sign of, and then as a name for, the representation, it becomes a word, and this method is onomatopœia.

These then are the principal factors in the formation of human language, and as the last, viz., Onomatopœias are by far the most numerous in all primitive languages, this theory is called the Onomatopœic Theory.\* Professor Max-Müller

\* To the speculative student of Occult Philosophy, I doubt not but that the Onomatopœic Theory of the origin of Language will be acceptable. It is the distinguishing feature of all our speculative men of science, especially in this age of freedom of thought, to soar higher and higher into the origin of all that concerns Humanity. But their adventurous flight is unfortunately impeded by their being handicapped by the bugbears of their methods of research, the imperfection and inadequateness of which have yet to be removed by methods that can only be supplied by Occultism. They wantonly and recklessly ignore or are helplessly innocent of. Noise or external natural sounds being the very "Fons et origo" of the Onomatopœic Theory, Occultism would show them that there are many more sounds than "what meet the ear" physical. These sounds are the products of the ethereal and highly subtle vibrations of the Universal *Akash* of the Occultists that can only be perceived by the trained ear of the "clairaudient" Chelas and Adepts, and therefore of the progenitors of the human race whose psychic clairaudient powers far transcended those of the audience and consequently imperfect powers which we are at present endowed with. These primitive Progenitors had therefore inexhaustible materials from which they could frame Language, for to them everything in nature was sonorous, ringing, speaking in no subdued accents. Nay more—even the thought-processes, cerebral, intellectual, must have emitted no uncertain sounds easily audible to their supremely sensitive auditory nerves. Hence it is that the higher Chelas and our illustrious Gurus are great thought-readers. I have indulged in these speculations, solely because I think they are confirmatory of the Onomatopœic Theory which has yet to win its spurs to merit acceptance at the hands of all philological scholars.

who has done more than any man living to popularize the science of Language—an exotic if I may say so from his own metaphysical Fatherland—in England, the country of his adoption, opposed this theory at first and warmly rejected it as being inadequate to prove the origin of linguistic phenomena. But he has in his later lectures gradually yet imperceptibly veered round, and although not actually adopting it in all its integrity, has, in not a few places, given it a greater importance and weight than he was inclined to do at first. This change of front has been clearly demonstrated by Canon Farrar in his chapters on Language. M. Levy-Bing cannot but adopt this theory, as his pro-Semitic predilections must compel him to do so almost instinctively, for the Semitic languages, being more primitive in their structure, and therefore less developed in the scale of linguistic growth than the Aryan languages, are extremely onomatopœic in their roots and verbal forms. This fact again does him yeoman's service, and he is never tired of citing it as an additional argument *more suo* to prove that the Aryan speech was derived from the Semitic. But he seems to forget, or rather, I cannot help saying with all due deference to his great learning, to advisedly ignore the fact that if Onomatopœias play such an important role in the formation of language, it is but natural and easy to account for the similarities and coincidences which he has taken so much pains to fish out, between Aryan and Semitic roots and words. My humble idea is that if a Chinaman well up in the morphology of the Chinese—a language which is neither Aryan nor Semitic—were to deliberately sit down and use M. Levy-Bing's method of investigation, faulty and illogical as it has been shown above, he would no doubt prove in his own way that both the Aryan and the Semitic families were derived from his favourite Chinese. Nay, he would go further and more safely than M. Levy-Bing by asserting that the characters he uses are but slightly modified hieroglyphics or picture writings, and are therefore more primitive than the Phœnician. What would M. Levy-Bing say if he—our hypothetical sinologue—were to draw the same conclusions with respect to his language as he himself has done with respect to his favourite Phœnician *Credat Judæus non ego*.

At this stage of our enquiry it would not be amiss, were I to give the readers a few specimens of etymological curiosities—or rather monstrosities which he has with his unwieldy and clumsy hammer beaten out on his Phœnician anvil with so much ado. We shall only pick but a very few of his specimens out of this Semitic curiosity-shop, and hold them up for the edification and instruction of the numerous readers of this journal. Out of this congeries of savoury philological polyglott Pot-pourris let us take the Sanskrit word *Devanagari*—the designation recognized of the Sanskrit characters very commonly used in this country—which M. Levy-Bing dissects with his Phœnician scalpel with all the zeal of a Linguistic vivisectionist.

The word *Devanagari* he maintains consists of the essential parts *Deva, na, ga*. *Deva* proceeds from a Semitic root *dae*, meaning to fly, to cut the air, to soar, to hover. He then remarks that the word *div* or *diva* signifies in Sanskrit the air, that is to say, the space in which birds fly, soar or hover; and compares the extended meaning to the Greek *Zeus, dios*, which also signify the sky, the air, and to the Latin idiomatic expression *sub-dio*, which he believes is equivalent to *en plain air*, in plain air to suit his theory, but which would rather mean "in broad day light." He then quotes four texts from the Jewish Bible, in which the root *dae* has only the signification of flying or hovering on wings. He, in the face of all well-known opinions, thinks that the Aryan root *div*, to shine, has only an extended or rather derived signification for the Indians raised themselves from the idea of air to that of ethereal light, the Empyreon, the luminous region. They soared still higher, he says, and *dev* was made to mean God. The second element *na* he derives from a Semitic root *nua*, meaning to refuse, to annul, to annihilate. The third element *ga* he traces to the Semitic root *gal* or *ga*, meaning elevation, growth, and maintains afterwards with no small modicum of obscurity that these significations are correlated with the idea of wandering, going to and fro, also the idea of leading and conducting. *Naga*, he then says, is something immobile, and as a consequence it has the signification of a mountain, a tree, a city and a citizen, and then of something that is polished or civilized. This idea is so

far generalised by the Indians, he says, that in Sanskrit it means writing and even reading too—I suppose as a mark of civilization. He then self-complacently laughs at the clumsiness of the Indian in forging such a laborious expression to designate his system of writing. This overstraining, not unmixd with a deal of ratiocinative obscurity, would, I venture to believe, make any Sanskrit or philological scholar creep out of his skin, to say the least of it, either through sheer vexation or through mere bewilderment.

In his chapter on the discovery of the Sanskrit, which no doubt is a red flag to the equanimity of our author, he combats *inter alia* most unmercifully against the view which eminent philologists take of the Sanskrit alphabet as being highly scientific, and as being consonant with the “physiology of the human voice.” He believes that his Phœnician (he means Hebrew) alphabet, of not half the number of letters as the Sanskrit, is decidedly superior—an assertion unsupported by any argument or any proof or any illustration, raising almost a doubt in the mind of the intelligent reader as to the author’s familiarity, even in a small degree, with the Sanskrit alphabetical system. Although it would be unscientific to maintain, as I have heard some bigoted Shastris doing in this country, that the Sanskrit alphabet represents *all* the sounds of the human voice, yet a mere tyro in Sanskrit will be able to perceive without an elaborate effort how rich the alphabet is, and how adequate it is to represent the articulate sounds not only of the Sanskrit but also of many a language, European and Asiatic, whilst the pretensions of the Phœnician alphabet remind one of those of a gnat before an elephant as the Persians would say.

In the chapter devoted to the “Standard Alphabet” of Prof. Lepsius of Berlin, the author is still unfortunate in his assertions. This alphabet was invented by that eminent German *savant* as a convenient means of transcribing in Roman characters, with, of course, diacritical points, the sounds of the unwritten languages, chiefly African and American, and has been adopted by Christian missionaries and other pioneers of civilisation in savage countries. This alphabet which had been approved by a committee of German philologists, Bopp, J. Grimm and others, before its universal adoption, is disparagingly spoken of by M. Levy-Bing, as too cumbersome, as it unavoidably contains a hundred and eighty letters. But what does he propose as a substitute and as a solvent of all alphabetic difficulties? \* Of course, his Phœnician alphabet with modifications *en tres petit nombre*, very few indeed. As is usual with him he asks us to believe him without adducing a tittle of evidence or argument—an unscientific assertion highly reprehensible in a *savant* of great learning, as he no doubt is, and in an author who is never tired of using the word “scientific” for his methods. But to crown the whole he winds up this chapter by naively saying these words! “Neither the Israelites nor the Christians will be able to blame us for citing here a text from the old Testament, which tallies exactly with the object of this chapter.” He then quotes the following from Isaiah, lxvi. 19.

“The isles afar off that have not heard my (Jehovah’s) fame, neither have seen my glory, shall declare my glory to the Gentiles.”

He then proceeds to say that “thus the great prophet, in saying that the nations left strangers to civilization, would know the name and glory of God, appears to announce that some day the missionaries of God would come in contact with barbarians, would transcribe their diverse languages, and would be able to reveal to them the greatest truths. Isaiah elsewhere (xix v. 18) calls the sacred language, “*Sepelth Kenaen*, language of Canaan, *i. e.*, the Phœnician. “Above all he prophesied without doubt that this language of Canaan would be considered one day the best and the most suitable to communicate to the most distant nations “the word of God.” With the light vouchsafed unto us in these degenerate matter-of-fact days, I fancy that M. Levy-Bing shall have to wait long, and most probably have to wait in vain for this consummation, which he thinks is devoutly to be wished,—for this fulfilment of the obscure Jewish prophecy. Now I should like to ask any intelligent person whether these words appeal with even a mere shadow of success to the scientific instincts of a student of this blessed

\* To the curious student, it will be interesting to know that far surpassing in precision Dr. Lepsius’s Standard Alphabet,—a system devised by an Englishman, called Bells’ Visible Speech, that, as is said, accurately transcribes all and every sound that the human voice is capable of emitting.

Nineteenth Century, not to speak of the implied identity of Christianity—a “decaying and dying creed,” and of Judaism, an already obsolete and almost dead creed that originated from the worship of a tribal god, Jehovah or rather Javeh?

At this stage of our long, but I hope, not tedious, inquiry, it would be, I venture to think, interesting to the readers of this journal to see how the Semites get over the difficulty presented by the strange myth of the Tower of Babel and the confusion of Languages, and still continue to maintain the, to us, absurd allegation that it was the Hebrew which God taught Adam and Eve, “our first parents.” The Masorites,\* those Hebrew doctors who are known to Hebrew students for their exegetical zeal in determining with scrupulous care the purity of the Hebrew text of the Old Testament, have not failed to sweep this difficulty away with their ingenious broom from the dusty domain of Biblical interpretation. In our present case the text:—“And all the inhabitants of the earth were of one language,” (Genesis xi. 1)—is their *corpus vile*. The two Hebrew words for “one language” the numerical value of whose letters is 409, are changed into two words *lason-ha-kadosh*, meaning “the Hebrew language,” as they think, the numerical value of the letters of the latter being also 409.

Now supposing for one moment that these learned doctors were right, without enquiring further into the plausibility of this ingenious exegesis, may I be allowed as a student of Occultism to indulge a little in a Theosophic speculation concerning the two words given above? They literally mean the “language of the Kadosh,” *i. e.* “the holy,” a name which the Hebrews as “the elect of God” may have applied to themselves in after ages for Kadosh “means holy,” as a fact borne out in Hebrew Lexicons. † I therefore beg to suggest that that primitive language—the name of which I have learnt from the esteemed Editor of this journal, but has not yet been published—*was* and *is* the language of the *holy*, the immortals, the Dhyani Chohans, our Param Gurus. In connection with this subject I cannot resist the temptation of quoting the highly suggestive passage from Farrar’s Origin of Language which closes his book:—“If all men be hereafter of one speech, it can only be after they have arrived at a condition when knowledge has superseded the necessity of inquiry, when intention supplies the place of discovery, and certainty has been substituted for faith.”

As far as the science of philology can pronounce an opinion, we must infer that the familiar line will remain true henceforth as heretofore:—

“Polloi men thnetois glottai, mia’ d’ Athanatoisi.

Mortals have many languages, the immortals one alone.”

*Revenous à nos montous phœnicieus.*—It is highly amusing to find our author demolishing at one stroke, as if by a magician’s wand—the work of Bopp, Grimm, and other philological scholars—giants I was going to say—with reference to the origin and growth of the grammatical terminations used in the ancient and modern Aryan languages. The Mantras that M. Levy-Bing uses with his self-complacent self-confidence, are but a few Semitic words which he twists and otherwise manipulates in a manner highly original and unscientific. This ruthless onslaught on the honest work of really great men reminds one of the hallucinations of the celebrated hero of Spanish Romance running full tilt against a huge windmill, vainly imagining it to be a redoubtable army of warriors worthy his steel and lance. As his fanciful conclusions are of a piece with those similar ones already animadverted upon, I will deny myself the temptation of quoting instances. But the question arises in the mind of the reader as to whether this wonderful essay, after all the strange deductions of the author, has any value to the student of philology. I seriously cannot help saying that it has—the learned and talented writer,

\* From *masora*, a Hebrew word meaning *tradition*. These, besides fixing the text, counted and noted the number of verses, the words, and even the letters, all of which they looked upon as highly mystical. They had also other modes of interpretation of the sacred texts—not unknown to the students of the Kabala. Their Prototypes of the Alexandrian School, called the *Diaskeuastai*, treated the poems of Homer in the same fashion. See Farrar’s Families of Speech, p. 308. Note.

† For the lay student it may be mentioned that each letter in the Hebrew as well as in the Arabic and other Semitic languages has a numerical value. It was so in the Greek also. This is called by the Arabs the law of *Abjad* with which students of Hindustani and Persian in this country are familiar.

‡ Compare the Arabic “Kuds” which means Jerusalem, also called *beit-ul-mukaddas*, literally the “holy house.”

much as I differ from him, has not to my mind wasted his energies in vain. M. Levy-Bing has done a great service to the cause of Modern Philology, by insisting on the attention of students the existence of a variety of coincidences and similarities which exist side by side on both the Aryan and Semitic grounds, serving as landmarks to the future investigator in the still unexplored but still higher regions of Philology, where the two streams take their rise and flow on in one volume. To the student of Hebrew, on the other hand, this book will afford very valuable assistance in his studies, as he would find in it innumerable coincidences, whether fanciful or otherwise, which will serve him as so many "Aids to Memory"—mnemonical pegs, as it were, to hang the words or roots he may have to con in his daily progress.

I will conclude this review by translating from the original French a characteristic passage at the end of his book from a letter he writes to the Editor of the *Frankfurter Zeitung* (*Frankfort Times*), as a critique on an essay by a German *savant* on the relationship of Linguistics to Anthropology:—

"I believe, sir, that you belong to the race of the Semites; you must have been seized with astonishment and with grief at the news that more than one European nation has been suddenly overtaken by hatred recently against the Israelites. If it is religious fanaticism which lets loose (qui déchaîne) the Antisemites against us, they ought at least to have remembered that the founder of Christianity was a semite. But evidently we should find in this unmerited persecution a political and social reason, which, I believe, I ought not to speak of at this moment. I should rather like to say that my work—which restores to the Jewish nation the glory of having given to civilised nations all the creative elements of their diverse tongues, may commend itself to your favour, and I would particularly be flattered by obtaining your suffrage as well as your support in the eyes of your readers."

#### POSTHUMOUS HUMANITY.

BY ADOLPHE D'ASSIER.

(Reviewed and translated from the French.)

ABOUT fifty years ago the fall of meteoric stones (aerolithes) began to attract the attention of the scientists. Before that time they refused to believe in such "absurdities and superstitions," and it is well-known that Lavoisier peremptorily denied their existence, and proclaimed, in the name of the Academy of Sciences, the ominous sentence, which was to settle the disputed question for ever: "*No stones can fall from the sky, because there are no stones in the sky.*" In spite of this authoritative decree, and with little respect for the dignity of the Academy of Sciences of France, there fell on the 26th day of April in the year 1803 an enormous body from the sky. It fell near L'Aigle (Orne), burst with a great deal of noise, and its fragments covered more than 40 square kilometres of ground. Several thousand people witnessed that phenomenon, which occurred in plain day, the Academy could ignore the fact no longer, and they sent one of its members, Mr. Biat to investigate the matter. He went to the spot, returned with a bag full of samples, and proved to the Academy that stones can fall from the sky, although the professors said there were no stones in the sky. To save the reputation of the incredulous professors, Laplace produced calculations to show that it was the moon who was doing the mischief, and who by means of his volcanoes was bombarding the inoffensive earth with stones. By and bye it was found out that innumerable such stones were circulating around the earth, and to-day any one, who would deny their existence, would be laughed at for his ignorance.

We should suppose that a lesson like the above, which is by no means an isolated one, would have not been lost, and that scientists generally would be more careful in regard to expressing their opinions as to the possibility or impossibility of an occurrence; but such is not the case. Almost everybody has been told of or has himself heard and witnessed certain noises without any visible cause, that often occur in houses where a person has recently died; and the scientists, instead of investigating their causes, only deny the facts. The well established phenomena of haunted houses, stone-throwing, raps, and of the appearances of spectres and ghosts, refuse however to be disposed of in such a summary manner, and demand an investigation. The theory, that they are produced by the "spirits" of mortals, who, no matter

how well behaved and sober they may have been during life, after death suddenly become cranks and return from their state of bliss to scare their wives, friends and children into fits by playing foolish pranks and to pass away their time in tossing tables and spelling out messages, the stupidity of which is often undeniable, is more difficult to believe than the occurrence of the facts themselves. The author, therefore, after having convinced himself of the facts, went with an unbiased mind to investigate their true causes, and he found them to lie in a living but as yet only little known principle, which in certain cases and within certain limits is able to exhibit all the manifestations of an active force; a principle which is not only found in man but also a higher species of the animal creation. This principle represents not the *spirit* of the deceased, but his animal part, and this animal part is a natural result produced by the processes of life. The study of this principle leads us into an investigation of animal magnetism, and to an understanding of the physiological and moral nature of ghosts and apparitions. It brings those phenomena back to the realm of science and liberates mankind from the hallucinations of spiritualism.

There exists an almost unlimited amount of well authenticated facts, which prove the reality of such occurrences; and the book of Mr. Adolphe D'Assier is well supplied with such as have been selected to illustrate his explanations of these phenomena, but the limited space of a review renders it necessarily impossible to reproduce more than a few of those that appear the most remarkable, and as they all are very remarkable, such a selection becomes rather difficult from superabundance of material, from which to select.

One of the best known histories of that kind, is that of the Abbé Peyton, who died at Sentonac, and who afterwards was not only almost daily heard to make noises in the sacristy of the church, such as he used to make in taking snuff, opening wardrobes, moving furniture, &c.; but who was also frequently seen in plain day, reading his breviary, &c., and who was spoken to by various persons, however without eliciting an answer, and which persons, when they saw the apparition, were not influenced by fear or excitement; because at the time when they spoke to it, they had no intimation that they were talking to a ghost. There is one fact, however, very prominent in this as well as other similar histories, and which indicates that ghosts like to perform such actions, or perform them instinctively, as they have been accustomed to perform during life.

Sometimes the personality of the defunct is recognised by his manner of walking. Steps and other noises, sometimes of extraordinary violence, are heard in closed rooms; but if we open the door everything is quiet and in order. The "spiritual" papers are full of accounts of such facts, and most frequently they occur soon after the death of a person in or near the haunted locality, and they sometimes as suddenly cease as they began.

Very often these "ghosts" seem to like to amuse themselves by pulling the bed-clothes away from people that are lying in bed, whether asleep or awake, so that they have to be retained by force to keep the parties from being uncovered, to pass "materialized" hands over their faces, to touch people in different ways, etc. These manifestations occur usually at night, but also in day time; sometimes at regular intervals, sometimes irregular. Sometimes they last periodically for months and even for years, and sometimes they cease suddenly after the compliance with a certain wish of their invisible producer.

A young man who was very fond of arms, and who had a great collection of swords, etc., became insane, and was removed from home and died in an asylum. On the night of his death, and on many subsequent nights, a great noise was heard, as if somebody in his room was amusing himself with fencing, swords were apparently thrown down with a clash, the tramping of feet was heard, and the people in the house became so accustomed to it that they ceased to take any notice of it, and simply said, whenever the noise began: "Here is the fool again." Whenever during the greatest noise the door of the room was opened, everything was found to be in order and all quiet, only to commence directly again.

Usually those "physical manifestations" take place only in the dark and cease immediately, when light is introduced upon the scene. The explanation of this we shall see further on.

Actual apparitions in the human shape are less frequent, still they sometimes occur either at the time or soon after the death of the person whom the apparition represents. The

following is told by Madame D..... "When I was a young girl, I slept with my older sister. One night we had just gone to bed and I blew out the light of the candle. The fire in the chimney was still glowing, and there before it, we saw a well-known priest sitting in a chair before the fire and warming his feet. Thinking I was hallucinated, I woke my sister, who saw the same apparition. We then screamed for help, but, when our father came, the apparition had disappeared, and the next morning we received news that the said priest had died during the night."

In such cases, distance seems to be of no consequence, and a young man who died in Africa was seen the same evening in Foix (France). Mr. Bonnetty saw one evening the apparition of a friend in America, who spoke to him and told him that he was about to die. The peculiar pattern of the waistcoat of the apparition attracted his attention, and when soon after the letters arrived, informing him of his friend's death, he inquired about that waistcoat and found that identical pattern.

These apparitions sometimes appear to us while we are awake, at other times when we are sleeping, and in the latter cases we are liable to believe them to be meaningless dreams, whose reality however may become established by subsequent events, such as the receipt of letters, etc. The reality of the existence of a posthumous personality is proved by the occurrence of thousands of such facts, occurring at all times and amongst all nations; and which we must try to explain. They evidently originate from the living personality of which they form, so to say, a copy or continuation, showing the form, shape, prejudices, inclinations and habits of the deceased person. Let us, therefore, see whether there is not in man a certain principle, which, when the vital forces leave the physical body, separates itself from the same and continues for a time the activity of the human personality?

Numerous facts attest the existence of such a principle. A woman who with her husband and child emigrated from Alsace to Rio de Janeiro fell sick on board of the ship. After having been for a while apparently without consciousness, she awoke and said to her husband: "I die contented; because I have just been at Rio de Janeiro and saw our old neighbour standing at the door of his house. I showed him our daughter and he consented to take care of her. When you arrive he will recognize her." She then died. At that time the neighbour in question was standing at the front of his door in Rio de Janeiro. To his surprise, he saw a woman with a child in her arm standing at the other side of the street, and intently gazing at him. He recognized in her the wife of his friend in Alsace, but not believing his eyes, he called one of his workmen, who also saw the woman, before she disappeared. When the ship arrived, he immediately recognized the child.

An English officer, returning from India, saw a stranger on board going from one cabin to another, looking into all and seeming disappointed. He told the Captain about it, who recognised, in the description of the stranger, his own father. When the Captain arrived in England, he was informed that his father had died; but that, on a certain day, corresponding with that of the occurrence on board, the patient had recovered from a delirium and said: "Where do you think I have been? I have been on board of the ship of which my son is commander. I have looked in all the state rooms, but could not find him in any."

On another steamer, a stranger was seen to write at the Captain's desk. The figure disappeared, but there were the written words: "Steer to the North-west." The Captain followed the advice from curiosity, and three hours afterwards he came in sight of an iceberg with the wreck of a ship from Quebec. Amongst the passengers of that wreck was the identical man whose figure had been seen writing, and the captain of the unfortunate ship said that three hours before, that man had been sleeping; but that, when he awoke, he said that they all would be saved. On comparison, the man's handwriting was found to be identical with that of the inscription in the steamer. In this case, that passenger, however, did not exactly remember what he had done during his sleep, but he said that the interior of the steamer looked familiar to him, although he never had been (physically) on board of the same. The remembrance of what has been done during the separation of the "double" is here indistinct and confused. These phenomena present the various stages from a simple dream up to the full and living appearance of the human form. These manifestations depend evidently on the

degree of moral energy, tension of the spirit towards a determined object, the physical constitution and the age of the man; and probably from other causes, which are as yet unknown to us. Some people remember exactly what has been going on during their trance, others have a dim recollection, and others again do not remember anything at all.

Jung Stilling tells of what happened to Baron de Zulya, chamberlain of the king of Sweden. The Baron came home late at night. As he arrived at the entrance of the park leading to his house, he was met by his father, who was dressed as usual and had a walking cane in his hand. They spoke together for a long time and went together to the house and to the bedroom. On entering the bedroom the baron saw his father in bed, undressed and in a deep sleep, while the apparition disappeared at the same time. When the father awoke and was informed of what had happened, he did not seem surprised, but said that such things had happened to him before.

In this case we see the human phantom endowed with the power of speech, while in the preceding one it was only able to write. This difference does not astonish us, if we consider the fact that such a phantom is continually in relation to the physical body from whence it is projected, and with which it is connected by a kind of fluidic communication. This fluid or force is at one end of the line required to keep the vital processes of the man in action, while at the other it produces the manifestation. Its maximum point is at the place from which it departs, it becomes weaker as the distance, in which it travels, increases, and after it passes over certain limits it becomes zero. The phantom of the father in the park, did not have to travel so far as that of the man on board of the steamer, and was therefore stronger; but a case is told in detail by Jung Stilling, where the phantom of a man in the neighborhood of Philadelphia went to London, found a sea captain in a certain coffeehouse, spoke with him, told him about the anxiety of his wife in America for his safety, and inquired of him when he intended to return. The man, after waking from his trance, told the astonished wife, who had seen him asleep all the time, of what had happened and reassured her, and, when her husband returned, he recognized in the man that stranger, with whom he had spoken in the coffee-house in London.

In the preceding cases a deep sleep is necessary to produce this separation of the "soul" from the body, but certain constitutions, who have a very refined constitution, can send their "souls" away at a distance without falling asleep. Such constitutions are rare, but Moses, Apollonius of Tyana, Simon Magus, Merlin, Swedenborg, Cagliostro and the Seeress of Prevorst are historical examples, and if any one will take the trouble to investigate, he will find many people in India and other places endowed with similar powers. The human phantom does not only possess legs and hands to act, eyes to see and a voice to speak, it also possesses all the other organs including a stomach, for it can drink a glass of water, and that water will pass into the stomach of the person from whom the phantom proceeds. There are several such cases known\*; and they prove that the phantom-body is the ethereal counterpart of the physical body, and stands in an intimate although invisible connection with the same. It is true that this seems to go against all known physical laws. We cannot understand how an aeriform or gaseous recipient can without breaking be the recipient of a heavy substance like water, and, what is still more perplexing, how such a heavy substance can be transported to a distance without any visible means of communication. The "fluidic" world obeys laws, which are not yet fully known to us, and which seem to belong to those which govern the rarefaction of matter; † but there are not wanting certain analogies in nature. We refer to waterspouts on the ocean, to the cord which attaches the child to the womb of the mother, etc. There is nowhere in nature a separation of continuity, the human phantom does not break its connection with the body, invisible links chain it to the source from whence it comes, and whatever happens at one end of that chain is felt at the other end. The "double" of a person can therefore under certain circumstances actually injure or benefit a person at a distance, or a person can injure or benefit another by acting on his or her "double," and an impartial and unprejudiced reading of the history of witchcraft and witchtrials will prove the truth of this assertion.

\* See the "Living Vampires and Vampirism of the Grave" in the April (1884) number of the "Theosophist."

† To understand them we must know the power of Will.

The body of a person and its double has often been seen at one and the same time and Robert Dale Owen gives several interesting accounts.

On one occasion forty-two young ladies in a boarding school at Neuvelke saw at the same time one of their number, Miss Emilie, walking around in the garden and gathering flowers, while at the next moment they saw her sitting in an arm chair in the room. They looked again into the garden, and there she was again; but they noticed that she seemed to be weak and suffering. Two girls, more courageous than the others, went up to that "double" and attempted to touch it. They felt a slight resistance, such as muslin or gauze would produce. One girl even passed through a part of the figure and the phantom disappeared afterwards gradually. This was repeated on several occasions, during a year and a half. The more distinct and apparently material the double seemed to be, the more the real person appeared suffering and feeble; but when the appearance of the double became weak and indistinct, the patient seemed to regain her strength. Emilie herself did not know anything about such a bicornporeity, and was informed of it by the other girls. She never saw her double herself; but her condition disquieted her parents and they took her home.

The action, which such a phantom-form can produce, and the resistance which it offers to the touch, prove that it is not simply an optical delusion or projection of light; but these circumstances give us an idea of the nature of its substance, and show that, far from being an ideal conception, it must be composed of material atoms; belonging however to a higher state of matter. We know that highly attenuated gases, such as Hydrogen, can pass through certain metals, and these phantoms glide through walls and closed doors. The double apparition of Emilie presents another important point. Her image was not produced suddenly but appeared gradually and grew stronger by degrees; and the stronger it grew, the more the real Emilie became weak.

The law, which causes this, is well-known in nature as the correlation of forces and the organic equilibrium. Where one organ grows abnormally, the others diminish proportionately in power. The existence of an invisible "magnetic" cord between the body of a person and its phantom cannot be reasonably doubted. If this cord breaks or is violently broken, the life in the physical body becomes extinct, the phantom becomes a separate entity, and instead of being only so to say the reflection or the counterpart of its living source, it becomes a posthumous phantom or a ghost.

Is the possession of an ethereal counterpart of our physical body a privilege belonging only to man, or does it belong to the entire animal kingdom? We believe it belongs to all, and our belief is based upon experiments and facts. The appearance of so called animal "spirits" at "spiritual seances" is nothing unusual; but the following instances render the matter still more plain: A young man went home one evening, when, passing by a field, he saw an ass grazing in the oats. He approached, took the ass by the halter and led him to the stable. As he opened the stable door, the animal disappeared before his eyes; and an inspection, in the morning, of the field of oats showed no visible sign of any nocturnal asinine visit whatever. Two custom-house officers were making their rounds one night when they saw at a short distance from the village a mule loaded with goods. They approached, but the mule ran away. Giving chase, they drove him into the village, not without awakening the villagers by their noise. They finally succeeded to drive him into a corner, but as they were about to lay their hands on him, mule and baggage disappeared into the air. In both cases, the night was clear and the men sober, and many other similar facts could be cited if our space would permit.

We have seen that the posthumous human phantom exhibits the habits, instincts and peculiarities of the man. The same may be said of animal phantoms. The ass grazes peacefully his imaginary oats, is patient enough to be led away, but when the stable door is opened and he is expected to enter into his prison, his asinine nature revolts and he disappears. The phantom of the mule acts like the living mule; and in both cases a little further investigation in the vicinity would probably have brought to light the body of an ass who recently died in the neighbourhood, and the carcass of a mule who dropped dead under his load in charge of some smugglers.

In certain cases, however, of which we shall speak further on, it appears that man's inner personality, according to its fluidic and elastic nature, and in consequence of some as yet unknown laws, can take bestial forms, and that when we are apparently in presence of a ghost of an animal, we may have a real case of lycantropy before us; in which case, however, its actions will differ from the habitual actions of the animal it represents.

The mineral and vegetable kingdoms have also their representatives in the phantom world, and the Seeress of Prevorst could perceive them at will, as well as the "doubles" of animals, and we may conclude that the possibility of a separation of any material thing from its ethereal counterpart, depends only on a knowledge of the laws which regulate the conditions under which they exist.

If we consider the attributes of these posthumous visitors, we find that they are the exact counterpart of the living body; that they can penetrate through walls, closed doors or cracks and keyholes; that they can in an almost incredibly short space of time traverse immense distances; and one attribute especially seems common to all, their aversion to light.

An eminent jurist, Alexander of Alexandria, writes: "In a haunted house in Rome we were annoyed every night by the appearance and noise of a hideous and entirely black spectre of menacing aspect, who seemed to want our assistance. No one before my arrival dared to live in that house. I took several friends with me, night came on, and I closed the door and tied it with a silken cord. I was lying on my bed awake and dressed and the light was burning. Suddenly I heard the spectre tapping at the door, trying to open it, and at the next moment, to my horror, I saw it come in through the cracks and clefts. As soon as it entered, it went gliding under my bed with a quick movement. My disciple, who was with me and saw it, was screaming in terror; but as I saw the door was still locked and tied, I tried to persuade myself that what I had seen was only the effect of my imagination. Just then a long and dark arm projected from under the bed towards the light, its fingers clutched the lamp and extinguished it, and at the next moment everything was in an uproar. Books, furniture, in fact everything in the room, was tumbled and turned over, the house resounded from the tumult and the wailings of the spectre, the neighbours were awakened by the noise and came with lights, and as they came we saw the spectre disappear through the door."\* Here we see a phantom with sufficient intelligence to use means to extinguish the light before exposing itself to its influence. Every one knows that light produces vibrations on the ether, and we believe that the ethereal body of the phantom becomes disintegrated by the action of light. During the day it may remain in the darkness of its tomb or in some other dark place, but even there diffused light may penetrate. The phantom can prolong its existence, but not prevent the end. Gradually the luminous, caloric or electric influences of space will dissipate the phantom, and its long agony is illustrated by the nature of the manifestations, which are at first strong, then become feeble, and finally die out, as the agents, which produced them, become reabsorbed into the cosmos.

The next curious circumstance in the appearance of ghosts is, that they are not always dressed in their grave clothes, but often in such clothes as they used to wear during life. But this fact becomes explainable, if we remember that the Seeress of Prevorst beheld in everything its material counterpart. Furthermore, these posthumous visitors often exhibit great grief or a desire for something, and by making noises they seem to wish to attract attention and to ask for assistance or sympathy; and the popular expression of "troubled souls" is perhaps a very proper and significant name.

One of the most remarkable things is the amount of force sometimes exhibited in these phenomena. Heavy stones are often hurled about, tables lifted and overthrown, etc. If the person has recently died and if the noises are confined to raps or tipplings of tables, the phenomenon might be explained by the fact that life does not always cease to exist at the moment when the heart ceases to beat, because certain organic forces continue their action, and some corpses that have been exhumed have shown a growth of hair and nails during the time they were interred; but after the person has been dead for weeks and months, another explanation is needed; there must be another reservoir of energy from which to draw force, and such a reservoir seems to exist in the bodies of the living, especially those of parents and

\* This was evidently an elementary.

friends. The Seeress of Prevorst ate very little, and, when asked, said that she drew strength from the bodies of those that came to see her, especially from her relatives, because their constitution was more congenial to her; and, in fact, such visitors, having stayed a few moments with the patient, often complained of feeling weak and faint.

One point seems very difficult to explain. The heavy stones thrown at people seldom produce any harm. They are often thrown with great force at windows without breaking the glass, etc., and the effects which they produce seem to contradict all the known laws of gravitation or mechanics; and often these missiles are invisible and are only recognised by the great noise which their fall produces. But if we remember that all objects, even stones, have their ethereal counterparts, we may suppose that, in some, especially the latter cases, it is the ethereal counterpart which is thrown, and which of course cannot hurt any one. The noise which results is often the acoustic effect produced by the throwing together of the ethereal counterparts of vessels and glassware. We hear the noise, run into the kitchen, expecting to see everything destroyed, but find everything in its place. Sometimes however the material objects are thrown and broken.

If material objects are thrown, their movement seems to indicate rather that they are carried by a force, than thrown by an impulse. We may suppose that their flight through the air is caused by a magnetic fluid which comes from a "medium," and we shall soon see that this magnetic fluid infused into objects changes the gravity of those objects by changing their magnetic polarity.

It will be asked: Will every person after his death become such a phantom? And at first sight such seems to be the case, because every one of us has an ethereal counterpart or a double, which belongs after death to the realm of the shadows; but these phantoms very rarely give any indication of inherent intelligence, memory or knowledge, other than is reflected upon them by their surroundings. The phantom is in itself inert and needs some kind of an exterior stimulant, or a sort of completion by some other agent of an organism, which infuses it with energy and consciousness. The examination of this dynamic energy will be taken up in our next investigations.

(To be continued.)

### THE MARATHI THEOSOPHIST.

THE conductors of the above Journal, which is being published at Poona as announced last year, have been doing some really good work. They would, however, make their publication much more beneficial and useful, were they to treat philosophically and metaphysically the rites and ceremonies to which they refer, in their independent articles. They will surely agree with us that superstition is as dangerous as scepticism, and that therefore every attempt should be made to remove the slightest cause that may engender ignorant superstition. Scepticism is in fact the necessary outgrowth of superstition; for, the ordinarily educated mind, unable to at once dive to the substance underlying those rites, &c., feels disgusted with the outward form in which it may be clothed and which it cannot penetrate. The duty of those, who are working for the promotion of the cause of theosophy, is, therefore, to expose, as far as practicable, the mistakes of both the parties going to extremes, and bring to light the truth hidden under the mask of various rites and allegories, for common good.

### THE COSMIC PSYCHOLOGICAL SPIRITUAL PHILOSOPHY AND SCIENCE.

THE above is the title of a book just published by the *Sannyasi*, author of "*The Philosophy of Vedantic Raj Yoga*," reviewed on page of the *Theosophist* for March 1884. As the present work contains almost all that is put forth in the previous publication, it is needless to repeat here the same remarks made thereon in the *Theosophist* above referred to. All that has now to be said is that the few additions, which the new book contains, are not in Queen's English, and, hence, quite unintelligible to the "uninitiated." On account of its attractive title, we took the pains to go through the treatise very carefully and, we must own, were sadly disappointed. In most parts, the language is entirely meaningless and, where any sense can be attached to the phrases used, there is neither philosophy nor metaphysics to be found in them. Some *Hatha Yoga* practices are given at the end, but none, who are not already familiar with them, can comprehend the author's ideas.

### NOTICE.

WE regret to announce that, owing to unavoidable causes, the publication of the *Secret Doctrine* has to be delayed for two months more. The first Number will therefore be out on the 15th of August, instead of 15th of June as originally announced.

### SPECIAL NOTICES.

It is now evident that the *THEOSOPHIST* offers to advertisers unusual advantages in circulation. We have already subscribers in every part of India, in Ceylon, Burmah, China and on the Persian Gulf. Our paper also goes to Great Britain and Ireland, France, Spain, Holland, Germany, Norway, Hungary, Greece, Russia, Australasia, South Africa, the West Indies, and North and South America. The following very moderate rates have been adopted:—

#### ADVERTISING RATES.

First insertion.....16 lines and under.....1 Rupee.  
For each additional line.....1 Anna.

Space is charged for at the rate of 12 lines to the inch. Special arrangements can be made for large advertisements, and for longer and fixed periods. For further information and contracts for advertising, apply to

MANAGER, *THEOSOPHIST*, ADYAR, MADRAS.  
MESSRS. GRAVES, COOKSON AND CO., MADRAS.  
PROPRIETOR, *INDUSTRIAL PRESS*, 3, HUMMUM STREET, FORT, BOMBAY.  
MESSRS. COOPER MADON & Co., MEADOW STREET, FORT, BOMBAY;  
TO SUBSCRIBERS.

The Subscription price at which the *THEOSOPHIST* is published barely covers cost—the design in establishing the journal having been rather to reach a very wide circle of readers, than to make a profit. We cannot afford, therefore, to send specimen copies free, nor to supply libraries, societies, or individuals gratuitously. For the same reason we are obliged to adopt the plan, now universal in America, of requiring subscribers to pay in advance, and of stopping the paper at the end of the term paid for. Many years of practical experience have convinced Western publishers that this system of cash payment is the best and most satisfactory to both parties; and all respectable journals are now conducted on this plan.

The *THEOSOPHIST* will appear each month. The rates, for twelve numbers of not less than 48 columns Royal 4to. each of reading matter, or 576 columns in all, are as follows:—To Subscribers in any part of India, Ceylon, Straits Settlements, China, Japan, and Australasia, Rs. 8; in Africa, Europe, and the United States, £ 1. Half-year (India, &c.,) Rs. 5; Single copies Rupee 1. Remittances in postal stamps must be at the rate of annas 17 to the Rupee to cover discount. The above rates include postage. *No name will be entered in the books or paper sent until the money is remitted; and invariably the paper will be discontinued at the expiration of the term subscribed for.* Remittances should be made in Money-orders, Hundi, Bill, Cheques, (or Treasury bills if in registered letters), and made payable only to the PROPRIETORS OF THE *THEOSOPHIST*, ADYAR, P. O., (MADRAS) India. Subscribers wishing to have receipts, in acknowledgment of their remittances, should send reply post-cards for the purpose.

Subscribers for the Second Volume (October 1880 to September 1881) pay Rs. 6 only in India; Rs. 7 in Ceylon; Rs. 8 in the Straits Settlements, China, Japan, and Australasia; and £ 1 in Africa, Europe and the United States. Vol. I is now entirely out of print.

AGENTS: London, Eng., Messrs. Trübner and Company, 57 and 59, Ludgate Hill; Bernard Quaritch, 15 Piccadilly, W.; Paris, France, P. G. Leymarie, 5, Rue Neuve des Petits Champs; New York, Fowler and Wells, 753, Broadway; Boston, Mass, Colby and Rich, 9, Montgomery Place; Chicago, Ill., J. C. ## LECTURE V.

*The Pope and the Sphinx.*

*The Pope.* Who are you, and what do you want, unclean animal? You, who has the face of Astarte and the wings of Lucifer?

*Sphinx.* I come to teach you the truth, which is disguised by your enigmas. I am God, I am Nature, I am Man.

*Pope.* Avaunt Satan, You do not even know what God is.

*Sphinx.* I wish you would explain it to me.

*The Pope.* God is an eternal and infinite spirit. He is one in three persons, a father, a son and a personified spirit of love. The father does not create the son, he begets him, and the son is just as old as the father. The person of the holy spirit of love comes from the father and the son. Each person is God, but they are not three gods; these three persons are all contained in each of the three. Do you understand?

*Sphinx.* I understand everything. God reveals himself only through humanity and humanity solves your enigma. Collective man is without a beginning and without end, at least as far as we can comprehend; because we know neither where God commences, nor where he will end. He is a spirit, because he thinks; he is a unity in three persons, which are the father, the mother or personified love, and the child or son. The son in collective humanity is just as old as the father; because we cannot conceive of the existence of a man in any other way than by admitting a father and a son. Humanity is complete in each personification, but this does not make three humanities. The love of the mother proceeds from the father and son; universal man is not a creator, but he begets through all eternity. Your enigma expresses the great Christian Arcanum. The mystery of Man-God is the cultus of the living God in place of the worship of phantoms; it is divinity, descended from the paradise of dreams, to live in human realities. Do you not say that the son consists of the same substance as the father, and that he was born before the beginning of time? But the abstract idea of the divine principle admits not substance, matter or form; but he, who is eternally born, is Man. You go still further. You call the mother of the son of Man the mother of God. All that you say about God, must be applied therefore to Man, and to Man only; because he is the divine realization in the sum of the works of intelligent nature; and, therefore, Christ spoke of the bread which becomes the flesh of humanity. "This is my flesh," and of the wine: "this is my blood. When you eat my flesh and drink my blood, think that you communicate with my spirit, because I will establish human unity, and there will be no salvation for the world outside of this unity, which is my congregation or my church." Do you yourself understand it now, old man? Did I not give you the true explanation of your enigmatical dogma?

*Pope.* Oh you monstrous animal! I excommunicate you; because you are to me the apocalyptic beast, full of blasphemy.

*Sphinx.* And you are ever the same blind man of Thebes. I am the genius of nature and humanity, and if you excommunicate me, you will have to give up your sovereign power and to send yourself once again into exile.

*Pope.* The world where you live is exile for me; and my country is there, where I shall not meet you.

*Sphinx.* You will meet me every where, and I cannot go away from you, because I am in your symbols. You spoke of the Apocalypse. Did you forget the Cherubims of Ezekiel, which are animals like myself? Hybrides, composed of a man,

an eagle, a lion and a bull, and which can be found again in the Apocalypse? I prepare my bed upon your four gospels. St. Mathew serves me as a pillow for my man's head; St. Mark is in my lion-clutches; my flanks of a bull rest upon the book of St. Luke, and upon my eagle wings I carry the ecstasy of St. John. The enigmas, which you repeat without comprehending the same, are those which I have composed myself, and I am therefore the only one who can explain them. Besides this grand idea of divine humanity and human divinity, which is the totality of Christianity, you have borrowed from the sanctuary of the ancient world all your mysteries and all your dogmas. The Jewish Kabbala is the key to all symbols, and Ezekiel speaks in the language of the Hierophants of Memphis and Thebes. Osiris changing his name and form has at one time a human head, at another an eagle's head or that of an Ibis; again he has the head of a bull or a lion's head. Are the four animals of your evangelists not the same as those which preside over the four cardinal points of heaven? On account of that fact, you have hunted up with such fury and burned with such cruelty the books of ancient initiation, and followed the example of St. Paul, that Jesuit who lived before Ignatius. You wanted to be looked upon as eternal, and have therefore destroyed the cradle of your childhood, and you cannot see that the smoke and ashes of your fires increase still more the contamination of your breath. You have walled up all around you the doors of your sanctuary, and now as science approaches it with a light, which perhaps will set it on fire, you are unable to save yourself.

*Pope.* We do not want to save ourselves, and God will preserve us if it is necessary, in the midst of the flames, like the children in the fiery furnace; and it is you, Satan! who will burn in the eternal fire.

*Sphinx.* Why do you call me Satan? Satan means calumniator, and I never calumniated any body; but who has calumniated God by representing him as an eternal hangman who kills his weak creatures? Who has calumniated Nature by saying she was perverted and criminal? Who has calumniated humanity by denying the virtues of ancient sages and declaring her inherently devoid of any good. Who has calumniated, accused, condemned, tortured and burnt so many great men for no other cause as because they had reasoning powers? If I have done all these things, then I deserve the name of Satan; but you know very well that I do not deserve it, because you know the real culprit. You speak of hell as if we were still in an age where people believed the earth to be flat, with a hell beneath and a heaven above like a crystal ball.

Do you know what hell-fire means? Hell-fire is hate, just as fire from heaven is love. Throughout all nature reigns love and everywhere ignorance produces hate; but do you not yourself teach hate to nature, do you not yourself preach the breaking off of the affections, the esteem of widowhood, the isolement of the heart? What fire has kindled the faggots of the inquisition, if it was not hate? What do we find in the writings of your most ardent defenders, but the rancour of hate? Where can implacable hate be found, if not in the heart of bad priests? Do not then threaten me with hell-fire, because it cannot touch me; for I do not hate but pity you.

*Pope.* Do you not hate me, you hypocritical monster? You, who attempt to destroy me; you who kill and devour without pity all those who cannot divine you?

\* According to the statement of Llorente (see American Encyclopædia) from 1483 to 1808 there were burned alive 31,912 persons; burned in effigy 17,659, tortured and imprisoned 291,450. All that in the name of "Jesus Christ" and by the supreme authority of the Pope, who appointed the "apostolic" judges of the inquisition. This is not "attacking Christianity," but simply stating historic facts.—Transl.

*Sphinx.* The four elements of life, whose symbols are represented in me—the air, earth, water and fire, devour all those who do not know how to master them. I do not seek to destroy you; on the contrary, I wish to instruct and transform you for the purpose of preserving you. I desire that instead of being the blind despot of the ignorant, you may become a light for the wise, and therefore you must become reconciled with science, and march at the front of civilization.

*Pope.* You know that I shall do no such thing.

*Sphinx.* The civilization will then march over you and select another guide.

*Pope.* And what sort of a legitimate guide could the children of the church accept, if it were not the successor of Peter?\*

*Sphinx.* Perhaps not all the successors of Peter will betray their master. If they use the sword, do they not deserve to perish by the sword?

*Pope.* Have I then betrayed my master, I who have proclaimed the immaculate conception of his mother, who is still a virgin?

*Sphinx.* This is another enigma, which I will explain to you. Christ is the divine type of man, and Mary the divine type of woman.

The dogma of the immaculate conception is modified by that of the original sin, which sin can be imputed to nobody, if a single individual could have the privilege of being exempt. If we accept the birth of the living god into humanity, the woman who has been conceived without stain, conceives without contamination. Moreover the collective woman is for ever a virgin and a mother in a single type, just as collective man represents a father, mother and child in one single humanity. The original purity of the new Eve effaces the ancient curse. Christianity, by affirming the divine humanity and human divinity, sanctifies and renders somewhat divine the works of generation. Mary is not merely a woman; she is the *regenerated* woman; symbolical Jesus is not only a man, he is *perfect* man. All men participate of his merits by the law of reversion and solidarity; because all men live a double life, an individual and a collective life; which Christianity calls communion.

Ah, old man! If your eyes could be opened, you would be able to understand that it is necessary to extend the Catholic communion to all the people of earth, and not restrict them by insensate excommunications. You would then revoke all your maledictions which your predecessors perpetrated; you would proclaim the unity of the dogma and moral, disfigured by ignorance and by the errors of nations and of ages, but which are fundamentally and everywhere the same. You would affirm their rigorous normal and orthodox form, and you would call all men together to your communion, giving rise to a truly universal jubilee, lavishing the treasure of your indulgences upon all dissenters, opponents, and even upon Jews and idolators with a general absolution for all the living and dead. You would disarm your enemies by blessing them, and by showing yourself the father of mankind, you would become its master. Did I say anything to make you laugh?

*Pope.* Yes. I see that all this is madness beyond all measure; and what would the great Rabbis, Muftis, Ulemas, Grand Lamas, Patriarchs, Presbyters, etc. say?

*Sphinx.* They would remain at home, astonished and blessed; but as to you, even when banished from the Vatican and despoiled of all you possess, upon a shaking rock in the ruins of the Colosseum; the encyclica which I suggested to you would move the world. Every town would open its door to you and the people would come again as did those of Jerusalem to meet the Saviour with the branches of palm-

\*Eliphas Levi being a Catholic, still cherishes the idea that the Pope of Rome is really the successor of Peter, who was made Bishop of Rome by Jesus Christ. If it is admitted that Peter really was the first Pope, then it follows logically that the "Roman Catholic" church is really the only Christian church that has any legitimate existence, and all the so-called protestant churches are only so many heresies that ought to be rooted out; but biblical criticism has shown that Peter had nothing whatever to do with the foundation of the Latin church. "Petroma" was the name of the double set of stone tablets used by the hierophant at all initiations during the final Mystery; and the designation "Peter" (in Phœnician and Chaldeic, an interpreter) appears to have been the *title* of this person. The majority of critics show that the "apostle" Peter never was in Rome,—and besides it is almost certain that the real "Jesus" of the gospels, whose name was "Jehoshua, the Nazarene," lived a hundred years before the Christian era.—*Transl.*

trees; cloaks would be spread down before you to prevent your bare feet from touching the earth; each city in which you would consent to dwell would be a "Rome," and become the capital of the Christian world.

*Pope.* But tell me, you stupid reasoner, how do you want me to bless lies, heresy and error?

*Sphinx.* If you would bless the sick, would you be blessing the sickness? No; you would bless them to assist in their cure. Your encyclica would have two objects: *First*, to rigorously determine the terms of orthodoxy; and *second*, to bless all those that err, by inviting them honestly to seek the truth, by affirming your paternal power over all peoples by this very benediction,—not giving up a single sheep of your flock, unwilling that a single soul could get lost to your authority, and giving your indulgences, whether they want it or not, to those who sneer at your severities.

*Pope.* Only a madman would consider seriously such an extravagant proposition.

*Sphinx.* I wish that some one of your successors or very holy fathers may have enough of wisdom to attempt such a madness.

*Pope* (Rising and putting the tiara on his head): "Hear fabulous monster that which I have to reply: I have listened to your advice to see how far you would push your insolence. Know now that I am not blind. I am the only clear-seeing and infallible one in the world. It is *my* privilege to ask questions and to dictate their answers. I am the legitimate king, not of fabulous Thebes, but of spiritual Rome, the only mother of the true initiations. You have pretended to explain my dogmas. I will now myself explain them to you, to force you once more to throw yourself, not into the pit of Thebes, but to break to pieces upon the angular stone of the church of Jesus Christ. I have known thee a long time, and I know thy real name. Thy name is Socialist, thou art Anarchist and Atheist; thou hast a human mouth to utter blasphemies, hoofs of a bull to kick under the spur, claws of a griffin to tear the purple of kings, and wings like Satan to attack heaven. I renew the anathemas of popes and councils and throw them at thee; I condemn thee, as one of my predecessors has condemned the Knight Templars, who worshipped thee. I damn thee as I have damned and continually damn the Freemasons who perform thy rites and have thy symbols. I contradict all you have said, I excommunicate those who will read it and believe it. Avaunt and let me alone."

The Pope here stretched forth his hand with a terrible gesture of reprobation; the Sphinx trembled, bit himself and tore himself apparently to pieces. His four forms became separated; the eagle flew towards the North and with his two wings spread, covered Germany and Russia; the lion ran off in the direction of Venice; the bull, blowing fire and rubbing his horns against the trees, walked away; and the Man, being left alone, turned his back to the Pope, took up a spade and began to work, while singing a gay song of liberty.

## THE PHANTOM DANCERS

IN A

### HAUNTED HOUSE IN HATTON GARDEN.

[Extracts from Mrs. Hardinge Britten's forthcoming work  
"NINETEENTH CENTURY MIRACLES."]

As a final example of hauntings, especially of that kind which subsequently connected itself with the intelligence manifested at spirit circles, we shall cite a history furnished to the author some years ago by a party of her personal friends, amongst whom was a gentleman of probity and scientific acumen, well remembered amongst dramatic writers and musicians, as Mr. Lenox Horne. This gentleman, being in somewhat embarrassed circumstances about the year 1829, took up his abode temporarily in apartments offered to him at a very moderate rent in an old house near Hatton Garden, long since pulled down. At the period of which we write the house was large, the rooms spacious, especially one, supposed to have been a banquetting chamber, which Mr. Horne used as a music room. As all the lower chambers were either appropriated to the storing of goods, or rented to legal gentlemen as offices, there were no persons sleeping in the house except Mr. Horne, and a porter who occupied a small room on the ground floor. The building had long borne the reputation of being haunted; it was fast

falling to decay, and the former occupants of Mr. Horne's chambers were seldom known to remain long within the gloomy precincts. Report alleged that the place had once been the residence of Sir Christopher Hatton, and the weird reputation that attached to the antique domicile, connected itself with the magical practices attributed to his unfortunate lady.

Mr. Horne had tenanted these apartments some months before he was aware of the phenomena occurring within his own premises. At length he was apprised by Mr. March, a police officer with whom he was acquainted, that for several consecutive nights he and a number of persons invited to share his watch, had remarked that long after the hour when Mr. Horne was accustomed to retire to rest, the great banquetting room, which he had no means of lighting up, and therefore never entered except in daylight, could be seen from the court below *brilliantly illuminated*. Whilst acknowledging that he had often been disturbed by strange noises, odd music, loud laughter, and footsteps, for which he could not account, Mr. Horne—at once the most fearless and least superstitious of beings—strenuously combated the idea of the lights, and it was only when, after watching several nights with March and his associates, he himself beheld every window of his own apartment, one that he had left closed, locked, and in total darkness, lit up as if by a multitude of gas jets, that he could be brought to believe in the story his friends narrated to him. On several succeeding occasions the same party beheld this spectacle repeated, and whilst some of their number remained below to watch that no intruder passed out from the one entrance of the house, the others would hasten to examine the apartment, to find it enveloped in thick darkness. One of the curious features of this appearance was the invariability with which the lights disappeared from the eyes of the watchers below at the moment when the apartment was opened by the searchers above. Only on one occasion was this rule reversed, and that was on a certain night in February, when a larger number of persons than usual had assembled in the court below to watch for the phantom lights.

They blazed out suddenly and in full radiance about one o'clock in the morning, when, after observing them for some five minutes, Mr. Horne, Mr. March, and a nobleman whose name we are not at liberty to mention, determined to ascend the stairs and open the door of the haunted room; and as they did so they agreed to give the signal of a whistle to those in the court below. At the moment when Mr. Horne threw open the large door of the room in question, he and his companions were thunderstruck to perceive that it was full of company.

One of the three observers had given the signal agreed upon of the whistle which he held in his hand, as he gazed upon the extraordinary scene that met the eye. The vast company seemed to be in the act of dancing. They represented ladies and gentlemen, arrayed not in the Elizabethan style attributed to the Hatton period of the mansion, but in the costume of the reign of Charles the Second, and the whole air seemed to be full of waving plumes, fluttering ribbons, and sparkling jewels. The three witnesses, who subsequently compared notes with each other and found their own observations fully corroborated by those of the others, affirmed that the particulars of the whole scene as above related were plainly, clearly defined, in addition to which, all three declared that every one of these splendidly attired revellers wore, or appeared to wear, *a mask, resembling some disgusting animal*.

Before the astounded witnesses could sufficiently collect their senses to take any action on what they saw, the lights began to pale and shimmer, the whole scene quivered, melted out slowly and gradually, as in a dissolving view, and at length, that is, in the space of a few minutes, the apartment was seemingly empty and in total darkness. The watchers below reported to those above, when at last they had sufficiently collected themselves to descend, that the lights were stationary for about five minutes after the whistle sounded, and disappeared *more gradually* than usual.

Immediately after this vision, the house became wholly uninhabitable even to Mr. Horne, and the two friends who volunteered to share his quarters with him.

Heavy poundings were often heard during the day, for which no account could be given. But these were nothing to the Saturnalia which ensued as soon as darkness had set in. Tramping of feet, clashing of arms, the clinking of glasses, the crash of broken china; all the sounds attending drunken revels, rude brawls, and even murderous fights, were heard, at times with horrible distinctness. Low moans, wails, and bitter sobs, were still more frequent, and the rushing as of blasts of winds, from unknown sources, was a frequent feature of these frightful disturbances.

The witnesses, and they were many, represented their experiences to their friends only to encounter the usual sneer of incredulity and scornful derision. Two or three clergymen volunteered to offer prayers, and one zealous Catholic went through the formula of exorcism in the possessed mansion; but always to encounter such a storm of blows, laughter and hideously derisive sounds, as drove them in horror from the place, a retreat in which they were shortly imitated by the tenants, who never after recurred to their painful experiences without a feel-

ing of deep awe, solemnity, and an earnest entreaty that their narration should not be met with the ordinary methods of rude denial, and insulting jest.

Despite what he had already witnessed, Mr. Horne had no knowledge of, or belief in, the reputed modern Spiritual manifestations, the spread of which, since the year 1848, he had noticed but never investigated.

About the year 1853, being invited to spend the evening with some musical friends residing in Holloway, London, Mr. Horne was there introduced to Madame Albert, a French lady, who was accompanied by her little daughter, a child of some eleven years of age. During the evening the hostess proposed that they should try the experiment of "table turning," which was at that time, the technical expression used for evoking Spiritual manifestations. Madame Albert had, it seemed, or developed mediumistic powers, whilst little "Josephine" was reported to be a fine somnambulist or trance medium. When the seance was first proposed, Mr. Horne laughingly alleged his entire ignorance of the subject, but at once placed himself *in position* at the table under the direction of the attendant Sybils, "to see what would come of it." No sooner were the party seated, than Madlle. Josephine, seizing the pencil and paper which had been placed on the table, wrote in an incredibly short space of time, in a large bold hand, the following communication, addressed "To M. Lenox Horne," a name which the child up to that moment had never heard. The writing was given in English, a language, it must be remembered, of which the little medium was entirely ignorant.

"You say you know nothing of spiritual existence or the soul's power to return to earth. Oh, my friend! Why will you reject the light that has already dawned upon you? In your own house, you have heard the sounds, and seen the sights, which bore witness to the presence of human spirits. Have you forgotten the phantom dancers, whom you and your companions thought wore animal masks? Those dancers were my companions in vice and wickedness. They and I lived amidst scenes of revelry too shameful to be detailed. We were associates of the frivolous *roué* that occupied the throne of England,—Charles the Second,—and in the house where you found shelter, we often used to hold such revels as demons alone could take pleasure in. When we became spirits, the base passions with which our lives on earth were animated, became so engraved upon our spirits, that all who looked upon us from a higher plane, beheld us transfigured into the semblance of the animals whose natures we partook of. Shocking as this disclosure of our true natures may be, it haply may help future generations to account for the idea of the doctrine of the transmigration of souls. Unhappily that doctrine is not true. We might be happier as the animals whose limited instincts we represent, but oh, unhappy that we are! we are at once the human beings we ever were, with the additional humiliation of knowing that we take to others the semblance of the lower creatures, whose passions we have imitated. Friend Horne! Our hell is, *not to pass into other states*, but to live in *our own*, and by the knowledge of what we have made ourselves, to grow into higher conditions. You thought we wore masks. Alas! We had only dropped them and exchanged the mask of seeming for the face of reality. In the spirit world, all its inhabitants are known for what they are, and the soul's loves take the shape of angelic beauty, or brutish ugliness, according to the tendencies of the life within. On the night when you beheld our revels, we were obliged, by the law of our being, to go through the earthly scenes which we had taken too much delight in. On earth such revels were our heaven; in the spheres they are our hell. Their enforced enactment was part of our penance; but thank God! I have seen the errors of the past, and henceforward I am atoning for it, and living my wasted life over again. I am on the road of progress, and even this humiliating confession will help me forward, and aid me to become stronger to save others and myself from the vices, the memories of which still cling to me like a garment. Farewell! My earthly mission is done; there will be no more haunting spirits in the old house in Hatton Garden."

The signature to this singular communication was, "One who was known in the day and time of Charles Stuart as the finest woman of her age—Lady Castlemaine."—(*Light*.)

#### THE PERSONAL JESUS.

MR. GERALD MASSEY, in a letter to the *Medium and Daybreak*, gives an account of his historical researches, from which we make the following extract:—

"The Christian cult did not commence with our Canonical Gospels, nor with a personal founder supposed to be therein portrayed.

"The Jehoshua of the Talmud was undoubtedly an historical character. According to a tradition preserved in the "Toledoth Jehoshua," he was related to Queen Salome, the wife and later widow of King Jannæus, who reigned from the year 106 to 79 B. C. She is said to have tried to protect Jehoshua from his sacerdotal enemies, because she had been a witness of his wonderful works. One Jewish account asserts that this man, who is not to be named, was a disciple of Jehoshua ben-Perachia. It also

says he was born in the fourth year of the reign of Alexander Jannæus, notwithstanding the assertions of his followers that he was born in the reign of Herod. That is about a century earlier than the Christian era, which is supposed to have been dated from the birth of Christ. Jehoshua is described as being the Son of Pandira and of Stada, the Strayed One.

"The Rabbi ben-Perachia is likewise an historical character. He had begun to teach in the year 154 B. C.; therefore he was not born later than 180 to 170 B. C. But it is also related that this Rabbi fled into Egypt during the Civil War in which the Pharisees revolted against King Alexander Jannæus. This was about the year 105 B. C.; and as Jehoshua ben-Pandira accompanied the Rabbi as his pupil, he may have been born as early as 120 B. C. We learn from Tract Shabbath, of the Babylonian Gemara to the Mishna, that Jehoshua ben-Pandira was stoned to death as a wizard in the city of Lud or Lydda, and was afterwards crucified by being hung upon the tree on the eve of the Passover. Another tradition records that Jehoshua was put to death during the reign of Salome, which ended in the year 71 B. C.

"Jehoshua is the sole historical Jesus known either to the Jews or the Christians. For, Epiphanius in the fourth century actually traces the pedigree of his Jesus the Christ to Pandira, who was the father of that Jehoshua who lived and died at least a century too soon to be the Christ of our Canonical Gospels. This shifts the historic basis altogether; it antedates the human history by a century and destroys the historic character of the Gospels, together with that of any other Jesus than Jehoshua ben-Pandira whom both Jews and Christians agree to identify as the sole human personality. The traditions further show that Jehoshua was a Nazarene in reality, and not because he was born at Nazareth, which never could have constituted any one a Nazarene!

"Now the Book Abodazura contains a comment on the Apostle James, in which it describes him as 'a follower of Jehoshua the Nazarene,' whom I have shown to be that 'other Jesus,' who was not the Jesus or Christ of Paul. Here then opens the great rift between an historical Jehoshua, the magician, preacher, and the mythological Jesus of the Canonical Gospels; a rift that has never been bottomed, and over which I have attempted to throw a bridge."

Another writer, speaking of the above remarks, says:—

"The admirers and lovers of the character of Jesus, of whom I am one, do not really lose anything in having the facts as to his real existence established. Did they love the real Jesus, they would desire to have all falsehoods concerning him cleared away; the accumulations of centuries of misleading teachings, for which the so-called "Fathers of the Church" are alone responsible. But they mistake the nature of that spirit of allegiance which has called forth the especially dogmatic letters of some of your correspondents, who seem to think their *ipse dixit* is sufficient for the whole world, and who have a triumphant way of 'putting their foot down' in writing, which is amusing, but not admirable; the effect of which goes no further than to make one marvel over the egotism of such an infancy of knowledge. Were these individuals sufficiently humble lovers of truth to sit at Mr. Oxley's feet and learn of him, the public would be spared a tournament of words, which can only end in the discomfiture of those who have thrown the glove in the cause of the much belied, and misrepresented Jesus. These doughty combatants are fighting for their dear old idols, and the Jesus they have made for themselves,—not the real divine man.

"He, whom Eliphaz Levi calls 'the most powerful of Initiates'—might well cry out (could the petty mental turmoils of human life, the hysterical follies and eccentricities of his putative worshippers, rise into the serene regions inhabited by his glorified spirit) 'save me from my friends!'—for these, in the selfish exactions of a love they pour out with effusive enthusiasm at the feet of the baseless fabric of their dreams, which they call 'Jesus,' would make the veriest servant, if not slave, of him. He must be at their beck and call whenever they take a fancy for his presence, either, as they fondly imagine, 'materialized' (!) or in some other semi-earthly objective shape, as a light, a puff of wind, a voice, or a vision. Thus they seek to drag him down to their condition, instead of trying to lift themselves up to him in *spirit*, in which state alone he is to be found,—a purely subjective, not objective state. And it is sacrilege, or crime, to endeavour to convince these dear, devoted victims of self-flattering delusions, of the error of their ways. If they could not stab you to the heart, they certainly would themselves, ere they would accept the truth, and acknowledge themselves self-deceived. Devotion to Jesus would be very beautiful, did it not so often take the form of mere egotism, self-righteousness, and the assumption of favours from a supposed divinity, not accorded to others.

"The Eastern Adepts, the Himalayan Brothers, are the only beings on earth who can give true information concerning this really divine man, who was one of that brotherhood of the 'Sons of God,' as some of the Magians or Magi of old were deservedly called. For these men ascended to the greatest heights of spirituality and divinity it is possible for man to attain in the body during the present period of human evolution on our planet, and that period has already lasted more than a million years—so

slow is the evolution of the human race,—I mean the evolution of all that makes man spiritual, divine, *really man*. The Eastern Adepts, though fully recognising the spiritual greatness of this teacher and reformer, Jesus (a member of the great fraternity of Adepts, which has existed through all time that we know anything of), 'do not recognise Jesus at all in the Christ of the Gospels.' (See *Theosophist* for July, 1883.)

"In 'Isis Unveiled,' students of the origin of Christianity, and the life of Jesus, will find nearly all the information they require. But they must bring clear, unprejudiced minds to the study; and when they have finished 'Isis,' I do not think there will remain in their minds any further doubt but that the Christian *sect* was founded by a set of men who had no scruples against falsification, and deceptions of a very serious nature. We cannot alter facts, and the facts are there.

"There is but One Religion, and that is the Ancient Wisdom-Religion, which the real Jesus doubtless knew, and whose truths he taught; for it has always been enshrined in the Hermetic Brotherhoods, and can only be taught by Initiates of those Occult Schools."

We hope that, by copying the above, we shall not expose ourselves to the absurd charge that we are "attacking Christianity"; while we attempt to defend the spirit of true Christianity against superstition and clericalism. We are all followers of "Christ"—not of a Jew by the name of "Christ," who probably never existed, and from whom we may expect favors; but of a *principle*, which that name represents. Some call that principle "Christ," others call it "Buddha," others "Christna," "Logos," "The Son of God," some call it Spirit, others call it "Matter" (in a transcendental sense); the occultists call it "the seventh principle," and the most expressive name for it is perhaps "The Divinity in Man."

Its action is beautifully illustrated by the ancient allegory of *Psyche's* (the soul's) fall after drinking the beverage, offered her by *Venus* (passion), her subsequent imprisonment in *Hades* (materiality), and her final restoration by the saviour *Eros* (or Divine Love in Man.)

A. B.

#### MESMERISM IN A DEN OF LIONS.

BY W. H. HARRISON.

I TRANSLATE the following narrative from the *Journal de Geneve*, of this day, January 10th, 1884. The *Journal de Geneve* may be considered the chief newspaper of Switzerland:—

"The following scene took place on Thursday last, at Rheims, in Pianet's Menagerie, in consequence of Monsieur de Torcy, who gives experimental lectures on Mesmerism, having announced that he would exercise his power in a den of lions.

"The lion tamer Pianet entered, his wand in his hand. He ordered in five or six lions who leapt about in a fashion not reassuring, but under the gleam of the eye and the order of their master, they crouched in a group at one corner of the cage.

"M. de Torcy then entered, and throwing a glance at the terrible group advanced to the front of the cage, saluted the observers, named the conditions under which he proposed to perform the bold experiments, and gave his programme of the coming performances. The tone of the mesmerist was more determined and his speech more precise than usual. Without doubt, notwithstanding his courage, he had not the power at that solemn moment and in the face of such a terrible responsibility, to shake off passing apprehensions easy to be understood.

"In a moment, Mademoiselle Lucia appeared; she was of strange beauty, with long hair, and dressed in a white tunic; a subdued shudder then passed through the observers. She advanced and gave a smiling salute. The group of lions remained at rest under the gaze of M. Pianet.

"Then the operations began. M. de Torcy put Mdlle. Lucia gradually to sleep by his passes, while sweet and languorous music was played on a violin. She passed into the various stages of a mesmeric ecstasy. Then, while the subject with extended arms appeared to be under the influence of ravishing delight, M. Pianet made the lions rush rapidly backwards and forwards in the narrow space between Mdlle. Lucia and the bars of the cage, a space so narrow that one of the lions ran violently against Mdlle. Lucia, who was smiling in an extatic attitude.

"Enough! enough!" cried the shuddering crowd, applauding with enthusiasm. M. de Torcy breathed strongly on the forehead of Mdlle. Lucia, who awoke and appeared all astonished at finding herself in such a situation.

"But the most difficult, the most terrible rest was to come.

"The mesmerist again put his interesting subject to sleep, and threw her into a cataleptic state of tetanic rigidity. He extended her horizontally, with her head on one chair and her feet upon another. This operation was not without some danger, because in placing the subject M. Pianet had to help M. de Torcy, and to cease for a moment to fix his attention upon the pensioners.

"But all was well done. Then at the word of command, the lions passed and repassed, sometimes one at a time, sometimes all together, beneath the poor demoiselle Lucia; this fantastic steep-chase lasted for several minutes, which seemed very long to the observers.

"At the close, at the demand of M. de Torcy; M. Pianet made two of the lions stand upon the rigid and inanimate body, and as one of the two would not put himself there willingly, the lion-tamer, in forcing him to do so, received in the struggle a slight blow from the lion's paw, which caused his face below the right eye to be marked with blood.

"Here the applause was frantic. 'Enough! Enough!' was again the cry. M. de Torcy woke up his subject, who rose and bowed.

"'Have I kept my word?' said M. de Torcy.

"'Yes,' was the exclamation from all parts. One voice, that of a betting man, no doubt, exclaimed:—'I have lost, but I do not regret it.'"

Such is the report in the *Journal de Geneve*. Probably this Mdlle. Lucia is the Mdlle. "Lucie," whose powers—weaknesses perhaps is the proper word—as a mesmeric subject, I witnessed several years ago in the Salon Louis Quinze, at Paris, and described at the time in *The Spiritualist*. A fantastic story about her mesmeric trances, which story probably had some foundation in fact, was once published in *Truth*.

LUCERNE, January 10th, 1884.

#### WHERE ARE THE MISSIONARIES?

[G. R. SIMS in the *Illustrated London News*.]

A SATURDAY night in the great thoroughfare adjacent there are three corner public houses which take as much money as the whole of the other shops on both sides of the way put together. Butchers, bakers, greengrocers, clothiers, furniture dealers, all the caterers for the wants of the populace, are open till a late hour; there are hundreds of them trading round and about, but the whole lot do not take as much money as three publicans—that is a fact ghastly enough in all conscience. Enter the public houses and you will see them crammed. Here are artisans and laborers drinking away the wages that ought to clothe their little ones. Here are the women squandering the money that would purchase food, for the lack of which their children are dying.

One group rivets the eye of an observer at once. It consists of an old gray-haired dame, a woman of 40, and a girl of about 19 with a baby in her arms. All these are in a state which is best described as "maudin"—they have finished one lot of gin, and the youngest woman is ordering another round. It is a great-grandmother, grandmother and a mother and her baby—four generations together—and they are all dirty, dishevelled, and drunk, except the baby, and even the poor little mite may have its first taste of alcohol presently. It is no uncommon sight in these places to see a mother wet a baby's lips with gin and water. The process is called "giving the young 'un a taste," and the baby's father will look on sometimes and enjoy the joke immensely.

But the time to see the result of a Saturday night's heavy drinking in a low neighbourhood is after the houses are closed. Then you meet dozens of poor wretches reeling home to their miserable dens, some of them rolling across the roadway and falling, cutting themselves till the blood flows. Every penny in some instances has gone in drink.

One dilapidated, ragged wretch I met last Saturday night was gnawing a baked potato. By his side stood a thin-clad woman bearing a baby in her arms, and in hideous language she reproached him for his selfishness. She had fetched him out of a public-house with his last halfpenny in his pocket. With that halfpenny he had bought the potato, which he refused to share with her. At every corner the police are ordering or coaxing men or women to "move on." Between 12 and 1 it is a long procession of drunken men and women, and the most drunken seem to be those whose outward appearance betokens the most abject poverty.

Turn out of the main thoroughfare and into the dimly-lighted street and you come upon scene after scene to the grim, grotesque horror of which only the pencil of a Dore could do justice. Women with hideous distorted faces are rolling from side to side shrieking aloud snatches of popular songs plentifully interlarded with the vilest expressions. Men as drunk as themselves meet them, there is a short interchange of ribald jests and foul oaths, then a quarrel and a shower of blows. Down from one dark court rings a cry of murder, and a woman, her face hideously gashed, makes across the narrow road pursued by a howling madman. It is only a drunken husband having a row with his wife.

#### THE COSMIST RELIGION.

[*London Correspondence Boston Advertiser*.]

A FEW weeks ago a man refused to take an oath as a witness in one of the London Police Courts on the ground that he was a "Cosmist." I have seen a programme of this latest of the religious and semi-religious bodies that are so numerous in

this country, and I reproduce its principal points for the benefit of any who are seeking for a new religion. The motto of the Cosmist is, "Deeds, not creeds," the principle, the service of humanity is the supreme duty. "The design of Cosmism is to join all men and women into one family, in which the principle of equality, together with that of brotherly love (that is, love of the human race), is the predominant one, and the moral and material welfare of all the sole aim and purpose." The Cosmists are enjoined to act as follows: "To give one another encouragement and aid, both material and moral. To cultivate all their faculties. To contemplate all mankind as brethren. To be courteous and forbearing to each and all. To practise charity, without publicity or ostentation." There is nothing very new in these ideas, but they show how dissatisfied many are with our existing civilization; and as such they may be recorded as among the curious phenomena of a curious age. What with secularists, and collectivists, and positivists, and anarchists, and cosmists, one gets a little bewildered.

#### NOTICE.

WE call the attention of our readers to the following Notice:—

"The Special Moral and Religious Classes for the benefit of the English-speaking Hindu Young Men are re-opened under the auspices of the *Hindhoo Shraiyobhivardhani Sabha* of Madras, in the Premises of the "Hindu Excelsior Reading Room," Black Town. Instruction in the leading points of HINDU ETHICS and THEOLOGY is given *gratis* to caste-Hindus only, every Sunday, from 3 P.M. to 5 P.M. Sectarian disputes are carefully avoided. Gentlemen anxious to join the classes are requested to apply soon to—

R. SIVASANKARA PANDIAH, B. A.,

Honorary Principal Instructor."

CASTLE OF DILIGENCE, 6th April, 1884.

#### Letters to the Secretary.

#### AN APPEAL.

To

ALL THE MEMBERS OF THE THEOSOPHICAL SOCIETY.

Almost every branch of the Theosophical Society, in every part of the globe, has now selected certain scientific subjects for the investigation and special study of its members, and has also taken up certain works for the good of their countries and fellow-beings. I beg to ask them to add one more to their list of benevolent works—I mean the prevention of cruelty to animals.

Many domestic animals in cities and in large towns are almost daily subjected to various sorts of cruelties, and in some instances to cruelties which are heart-rending. And who will not feel it a great pleasure, nay, a great relief, in doing something for the removal, or at least for the mitigation, of this evil? No one will deny that a very large amount of the sufferings of these dumb creatures could be mitigated if all our fellows, or some members of every branch, undertake it as one of their special works, when we have already such a large number of branches, specially in India, and their number is increasing so rapidly. In fact no other Association is better, or so well qualified for the work as the Theosophical Society.

I think there is no need of my dwelling on the desirability, amounting almost to necessity, of this noble work being taken in hand by the members of our Society. Such a good work will commend itself to every true Theosophist.

As regards the details of the working and its procedure, the members of each branch will be the best persons to determine the course according to the circumstances of their respective localities. In India there is a Legislative enactment on the subject, and where that Act is in force the procedure must be guided by its provisions. Where there are Societies already existing for the prevention of cruelty to animals, the co-operation of our members will be of great help to those Societies. Should it be found necessary, steps might hereafter be taken to extend the provisions of the Act to places where it is not in force at present.

J. N. G., F. T. S.

Note.—We sympathize to the fullest extent with the appeal of our brother. There is no place that we know of where there is a more inviting field for a Society for the Prevention of Cruelty to Animals than Madras. It is a shame to see those half-starved animals, shadows or skeletons of

what is intended for a horse, pulling heavy loads through the streets; but we have also seen those who would cry "shame!" to dispute about the price with the driver of a "jutka," and to finally engage the services of his horse for a mere pittance. If the driver gains nothing, he cannot buy food for his horse, and cruelty to men is not less wicked than cruelty to animals. Reform is absolutely necessary; but where shall it begin?—A. B.

### AN APOLOGY.

To the Editor of the "Theosophist."

As to the pamphlet, entitled the "Theosophical Society, and its Founders, an honest inquiry into their aims and proceedings," printed in 1882, at the Anglo-Vernacular Press, Bombay, I beg to inform you that the pamphlet has been wholly withdrawn long ago. I declare withdrawn any articles that I may have written to newspapers, &c., on matters concerning the Theosophical Society, not wishing to mar the feelings of any one, and wishing to be on good terms with all, I express an apology for, and withdraw, what I may have written to any one respecting the Society. I wish to mention this point that I associated with the missionaries for the past three years and upwards, I no more associate with them. In conclusion, I hope you will do me the favour by permitting this letter to appear in next month's (May's) *Theosophist*, understanding beforehand that your journal will not refer to any individual or particular missionary, or mission society.

3, MALABAR HILL, AMBAWADY, }  
BOMBAY, 6th April 1884.

H. BURZORJEE.

### Phenomenal.

I was at the Head-quarters in December last to take part in the Anniversary celebration. Soon after my arrival I went upstairs to pay my respects to Madame Blavatsky. She greeted me cordially and received me with warmth and friendliness ever so characteristic of her. I requested her to let me see the "shrine". Without getting up from her seat she gave me a key and told me to open the "shrine" myself. I did so, and being asked by Madame Blavatsky whether there was anything in the shape of a letter in the "shrine," I searched and told her there was nothing. Then she told me to examine minutely every thing connected with the "shrine" and insisted upon my doing so, although she knew I was not a sceptic. I looked round carefully and found nothing in the shape of electric wires, traps, &c., which, as sceptics in all their "wisdom" assume, might aid her in her "juggling tricks" as they would say, to delude her friends. I closed the "shrine" at her bidding afterwards and we were conversing on various topics. After some time she asked me to open the shrine again. On my doing so what was my surprise when I found that there was a letter from a Mahatma in which was wrapped up the sprig of a plant. It was in the familiar hand-writing of my Guru Deva K. H. Here is a copy of the letter written on Chinese paper which I have in my possession—"To H. R. From one who will ever watch over and protect him if he goes on in the path of duty to his country and righteousness to his Brethren.—K. H."

After perusing this I again sat down not far from Madame, the "shrine" being again shut by me. We were talking together when Madame said—"Are you quite sure there was nothing else in the 'shrine'?" Go again and see, there may be something more for you." I got up and walking up to it I felt something striking against my foot, not far from the ground. I felt for it with my hands, and to my infinite astonishment I found something solid sewn up to the skirt of my long robe. I looked wistfully at Madame, who asked me to undo the threads and there was a medallion or coin with Thibetan characters. On my telling Madame that it was not perforated to enable me to wear it on my person, she promised me that she would perforate it herself with an instrument by and by. I left her afterwards to join the many Brethren that were in the large hall. She came there within an hour when I was showing the present to them and describing all the particulars of the phenomena I had just been witnessing upstairs. When they also noticed that the medallion was not perforated, Madame said "you give it to me," and put it in her pocket. Our President soon joined us and wished to see the medallion, whereupon Madame took it out, and lo! it had a nicely made hole near its edge.

Before starting for England, Madame was good enough to pay my country-seat (Varel) a visit, accompanied by my esteemed friends, Dr. Hartmann, Mr. Mohini Chatterji and Mr. J. N. Unwala. One evening before dinner we were all seated together hearing my musicians singing in Hindi tunes, a few hymns that I have composed in honour of our Mahatmas. We were interpreting these to Madame, when a curious, unusual sensation crept over me and a sweet-toned bell tolled over the heads of the musicians and was heard by all, Theosophists and non-Theosophists. I wonder how the sceptics who read this will explain away this phenomenon not unknown, but familiar to the people at the Head-quarters as I have since learnt. At din-

ner again we all distinctly heard once a similarly silver-toned bell just over-head above the centre of the table we were seated at.

Another phenomenon to me still more interesting personally may be described. Some time after the Founders had left India, I was at the Head-quarters very often during my sojourn lately with my esteemed friend H. H. the Thakore Sahib of Wadhwan, at Madras, whither we had gone for the celebration of his marriage with the daughter of the Honorable Rajah Gujpati Row. One day I asked brother Damodar, to let me put a letter in the "shrine." It was in a closed envelope and was regarding personal private matters. Brother Damodar allowed me to put the letter in the "shrine." The day after, I visited again the "shrine" in company with my wife. On opening the "shrine" I did find my letter unopened, but addressed to me in blue pencil whilst my original superscription "My Reverend Master" had a pencil line running through it. This was in the presence of Brothers Damodar, Dr. Hartmann and others. The most noteworthy thing was that the envelope was intact, in no way opened. I opened it, and on the unused portion of my note was an answer from Guru Deva K. H. in the same familiar hand-writing. I shall transcribe one significant sentence from it; of course I omit private matters with which others have no concern. "...Though I have no right to confer favours, I may give advice to whomsoever needs and deserves it...." He then gives me encouragement and valuable advice that I was in very great need of. My letter and the Illustrious Master's reply to it with the identical envelope are with me now.

I should very much like to know how our friends (!) the bigoted spiritualists, who assume without any evidence that our respected sister Madame Blavatsky is a medium, could explain away this phenomenon, when as a fact she was thousands of miles away from us with our esteemed President Colonel Olcott.

VAREL, 17th May 1884.

HARISINGHI RUPISINGHI.

### THE OPINION OF EUROPEAN PRESS ABOUT THE THEOSOPHICAL SOCIETY,

OR

WHAT THE EUROPEAN PRESS SAYS OF OUR FOUNDERS.

THE *Pall Mall Gazette* had a long article in its March (29th) number on the subject of Theosophy. Mr. Sinnett's Letter XVI--*Centres of Spiritual Activity*, contains as subject-matter "The Theosophical Society—London Lodge, Lincoln's Inn," etc. It is such an unusual—we may as well say—unprecedented—fact for even a liberal London paper of note to mention theosophy in any other but a spirit of chaff or angry contumely, that we hasten to quote nearly the whole of the article.

After a brief paragraph as *entrée en matière* in which the Theosophical Society and its two founders are introduced to the public by the writer, he goes on as follows:—

"It is impossible to go a step further in describing the subsequent establishment of the society in London and India—where it now numbers nearly a hundred branches, and is rapidly expanding—without explaining who and what these Masters are.

"The adepts of occult science are concentrated in Asia. The hierarchy of occult initiates is recruited from all nationalities. Englishmen belong to it, and men of other European races; but by the time an initiate in occult science has attained certain altitudes of psychic development, his progress, besides investing him with new faculties, renders him sensitive to influences of which most of us are unconscious. He is compelled, practically, to move away from communities still throbbing with physical passions and materialistic aspirations. In civilized cities his higher senses would be relatively useless, as the sense of sight is all but rendered useless in a thick fog. So the higher initiates have retreated now to some of the least frequented regions of Central Asia, where they are able to work freely at their most important task, the preservation and advancement of the highest knowledge in the world, held by them, so to speak, in trust for mankind at large, against the time when the race shall be ready to receive it.

"That any sort of knowledge can exist in the world for which the civilization of the nineteenth century is not yet ripe, is an unintelligible proposition at first. Bigotry is powerless now to persecute science. Thought is free, and intellect in perfection! Whatever knowledge a man may gain, we generally hold it his duty to share this with his fellows; and if it is scientific knowledge, to share with us his proofs and methods. The adepts think differently; for their knowledge invests men with powers we have hitherto played with only in imagination, calling them supernatural. To put these in the hands of men still animated by selfish motives and physical desires would be to injure, not to benefit, society. A man with the powers of an adept and the passions of an unregenerate nature could slay and rob with impunity, for he would need no physical appliances for the perpetration of any crime. Those to whom the adepts impart their knowledge—their regular disciples—are tested by long years, perhaps by half a life-time of probation before they are entrusted with abnormal powers. By casting utterly aside all modes of life which are concerned in any way with material enjoyment, the candidate for occult teaching must first prove that lower motives

have no hold upon his nature, that his own spiritual development and the service of the spiritual interests of mankind are all-important in his sight, and then by degrees he is entrusted with the enlightenment which puts it in his power to lead an altogether more exalted spiritual existence than the world at large can yet attain to. That such enlightenment also puts in his power an insight into the thoughts of others which no dissimulation can baffle, a faculty of cognizing events which range beyond the reach of the physical senses, almost to infinitude, a control over material objects by the exercise of forces ordinary science has not yet discovered—that all these and many other attributes the possibility of acquiring which is but gradually dawning on the modern Western mind, come to him in the course of his progress, is a circumstance that embodies for the occult pupil no temptation to do wrong. He has got above the region of the desires in which such powers could operate as a temptation. He has become a co-worker with Nature for good.

“But the adepts of spiritual science, spoken of in Indian literature and usage as Mahatmas, and by modern Theosophists as ‘the Brothers,’ have latterly conceived the time ripe for giving out some part of the ‘esoteric doctrine,’ of which they are the custodians. They are not yet prepared to relax the rules which guard the powers of adeptship from misuse, but for various reasons quite intelligible to those of us who have studied the Theosophical publications of the last few years, they are now taking a somewhat new departure in their relations with the world at large. While their policy till recently has been to keep their very existence a secret from all but devotees of the occult life, they are now ready to let the nature of adeptship be known more widely, permitting pupils who have personal relations with them to acknowledge this in the world at large, and not unfrequently giving proofs of their existence and abnormal powers to persons who are not even pupils, in the sense of being pledged to follow the occult life of self-denial and purity. And it was to inaugurate this new policy that they founded the Theosophical Society.

“For Mme. Blavatsky, who was the outward and visible founder, is one of their pupils, and a very advanced pupil, with abnormal powers which have even more often excited the wonder and admiration of her friends who have beheld their exercise, than the derision of sceptics who have picked up stories about them... Splendidly seconded by her earliest ally, Colonel Olcott, she has achieved the immense result before us. The Theosophical Society has now become a potent agency in the moral progress of India, and has latterly reacted back on this country to an extent which holds out a large promise of future consequences.

“During the earlier progress of the society in India the branch established in London about seven years ago was dormant and inactive. Its time had not come, for the attention of the founders was absorbed by their work in the East, and this work was not yet of a kind in which the London members could co-operate. In India the first thing to be done was to get the society on to a foundation which should be common to all creeds, so that it should not be suspected as a sectarian propaganda leaning to one more than to another of Indian exoteric religions. To establish the society as a body, resting on the principle of a universal brotherhood, and concerned with the study of all philosophy which might illuminate the inner meaning of any ancient faith, and trace the identity of modern religions in their essence, was a work that could not be jeopardized by haste. The hundred branches of the society in India, in which representatives of all castes and creeds unite in friendly communion, are so many monuments to the success with which the work was eventually performed. And now, by degrees, the Brothers have found means through the *Theosophist*—the magazine of the society, published in Madras—and in other ways, to communicate such a considerable block of esoteric teaching to the world generally, that persons keenly awake to the interest and importance of this, here in London as well as in India, gather fast round the nucleus which has so long been awaiting the conditions favorable to its expansion. The Theosophical Society now has something definite to do. It has a mass of doctrine to study, which is recommended to its notice as an exposition of the real absolute truth of things—as far as it goes—concerning cosmogony, the origin and destinies of man, the nature of his spiritual growth and development, and which in fact constitutes a science of religion and a religious interpretation of science. Here, as in India, of course, the founders of the Theosophical Society are anxious that the movement shall not be regarded as pledged to the acceptance of any definite view of things. It is an association for philosophical study, specially connected with the revival of research in the direction of occult science and the latent faculties of humanity. Persons have been and are prominently connected with it who prefer other lines of study than those marked out by the information that has so far been obtained from the Brothers, and their association with the society serves to emphasize the Catholic sympathy with all spiritual aspiration by which its true founders are governed. But the present statement as to the circumstances in which the society took its rise will indicate the general drift of its operations.

“A considerable volume has been written to state with the simplest brevity the theory of nature which the Brothers teach.

This teaching will not, of course, put its students in possession of practical occult faculties. It is a long and a toilsome road by which these are reached. Nor is it possible to sketch the doctrine itself in the course of this brief explanation. That constitutes a widely ramifying and complicated study; but if that which the disciples of the Brothers are fully persuaded of is true, it is a study which introduces mankind to the beginning of the transcendent knowledge destined to be the glory of the human race in its maturity. Unlike an ordinary religious community, the Theosophists cannot be pointed out to inquirers as holding their meetings at such and such an address. Engaged in pursuits of a very serious nature, and careful in their progress along an unknown path, their meetings have hitherto been open to their own members only, and fellowship with the society has been procured by regular recommendation and election, as in any other society. But none the less have they been readily accessible for inquirers approaching them in a sympathetic spirit. Probably the London public will shortly hear more of them, as Colonel Olcott, the President and Founder of the Society, whose permanent home is now in India, is about to pay a short visit to this country.”—*Pall Mall Gazette*.

Another fashionable paper of Nice and Cannes—the resort of all European aristocracy, *The Anglo-American*, has the following article:—

“Our town has been lately honoured by two very distinguished visitors from Madras, India, who left for Paris on Thursday last.

“Colonel Olcott and Mme. Blavatsky are the founders of the Theosophical Society which is under the guidance and direction of the so-called MAHATMAS of the Himalayas, a Brotherhood of Eastern adepts gifted with what we in Europe would consider supernatural powers, but which really are psychic possibilities latent in human nature and can be developed in each individual by a long course of proper training.

“This Society has acquired great importance in the East, and has already established more than a hundred branches in India and Ceylon, and is now gaining ground in the West, having first established several Societies in New York and other cities of America.

“The London and Paris Societies count amongst their members some of the most celebrated names of Science and learning, such as Professors Crooks, Wallace, Camille Flammarion, etc., etc.

“The President and Founder Colonel Olcott and Mme. Blavatsky, a Russian lady, authoress of a most learned work called ‘ISIS UNVEILED,’ and who has from the first acted as Corresponding Secretary and Editor of ‘THE THEOSOPHIST,’ the organ of the Society, have been the guests of Lady Caithness, Duchesse de Pomar, who is President of the ‘Société Théosophique d’Orient et d’Occident’ of Paris.

“During their short stay in Nice they held several very interesting conferences and were surrounded by a group of intellectual minds from amongst whom they initiated eleven persons as members of the Society, which has for its principal object to form a nucleus of universal brotherhood of humanity without distinction of race, religion or colour. Secondly to promote the study of Eastern literature and occult sciences. And thirdly to investigate the hidden mysteries of nature, and the psychical powers latent in man. How important these occult powers are for the blessing of mankind Colonel Olcott gave very evident proof in healing in a short time through his highly developed magnetic powers long standing diseases and infirmities amongst those who so eagerly sought his aid during his short stay in Nice.

“Colonel Olcott and Mme. Blavatsky have made this long journey to Europe for the express purpose of visiting their brothers of the European branches, principally those of Paris and London, but Colonel Olcott will probably extend his tour to Germany and Russia before returning to the head-quarters of the Parent Theosophical Society at Madras.”

We may add, without committing great indiscretion, that the new “eleven” members of our Society contain names of the highest Russian and English aristocracy as well as those of European savants of fame. A “Serene Highness,” a Russian Princess, and a General on the staff of the Russian Emperor, as also a well known English Colonel, late of India, and his lady have joined our ranks among others. The Society spreads and lectures and “Conferences” upon theosophy are in preparation in the highest intellectual circles of Paris. Instead of one we have now two Societies in England, the “London” and the “Hermetic” Lodges of the T. S. The former numbers over eighty members; and Mr. W. Crookes, the world renowned physicist and chemist is elected as one of the five councillors of the “London Lodge.” We give his name with his permission.

Since the above was in type, we have noticed with pleasure, in the *Pall Mall Gazette* (London), two articles concerning Mme. Blavatsky and Col. Olcott, speaking of them in respectful and appreciative terms. We regret we cannot copy them here, for want of space.

## THE FOUNDERS IN PARIS.

THE arrival in Paris of Madame Blavatsky, Colonel Olcott, and a Hindu Chela, is an important event for those of us who for two or three years have been watching the progress of the Theosophical Society with the greatest interest.

Paris is not only the gay, superficial, worldly city, known to some foreigners. Paris is everything and all at once. One can find in it the highest in intellect, the best in art and culture, as well as the deepest blindness of thought, the lowest degradation in the same art and literature, and the grossest selfishness typified by the corruption of morals. One is certain to find in that large city exactly what one is aspiring to; in other words, what one is oneself. I pity those who leave our town with no other impression than that of its corruption. Had their aspirations been high and powerful enough, they would have felt the heart of our true Paris beating even under the mud of its suburb, or the glittering elegance of its boulevards.

Along with the Paris which you can see daily driving through the Bois de Boulogne; parading in the theatres, running races at Longchamps, or dining at the "Maidan d'Or," we have the intellectual Paris crowding at the Sorberme, or the *Collego de France*, attracted by the brilliant eloquence of our celebrated professors; political Paris following with a keen interest day by day the debates in the *Chambre des Deputes*; scientific Paris shut up in its laboratories in search of the last word in chemistry or physics, which it hopes will become the first letter of the mysterious word of life; religious Paris—which has not yet deserted its old churches, as though it vaguely felt that there may be yet a meaning discovered in the long dead dogmas and the mummery of its priests; philanthropic Paris ever erecting schools, hospitals, and asylums, yet hardly spelling that beautiful word—*charity*—corrupted as it now lies under the pressure of intolerant sectarianism.

In the midst of this turmoil of restless activity, material progress and intellectual development, there are lonely thinkers, earnest seekers after truth, who, repulsed by the narrow religious creeds, can no more be satisfied with the hazy hopes given out by the Spiritualists and the few remaining theists than they can be with the desperate negations of materialism. For such, the ideas propounded and taught by the Theosophical Society came as a refreshing dew on the parched desert. During long years these solitary thinkers had been anxiously looking around them, wondering from whence light would come, and great was their joy upon hearing the long desired answer—from India . . . To some of them the first call came in the words of the Master, who inspired the *Occult World*. Mr. Sinnett is entitled to our best thanks for having forwarded that living word to us. This work fell into my hands in the spring of 1882, when, recovering from a severe illness, I experienced, together with the exulting sensation of renewed physical life, a deep feeling of sadness. Why should I be recalled to health and activity if I was doomed to be still wandering without compass or helm, if, after seeing the beliefs of my youth fall on the ground like so many dead leaves, I was to sink back in the dark abyss of negation! The social questions to which I had devoted the best of my abilities and leisure became more and more complicated owing to my doubts and despair.

How was I to speak of justice and fraternity to those suffering classes condemned to a miserable and hopeless fate, if I had nothing to offer to them in exchange for their blind faith and orthodox heaven but the prospect of total annihilation?

Such were my thoughts, and they are those of many in France when I heard for the first time the voice of the MASTER.....

Since that time I have heard a good deal of criticism and discussion about the Mahatmas of the Himalayas; I have seen the cruel, abusive articles in the spiritualistic papers of England and America; I have received warnings from charitable friends who tried to persuade me that the way I was pursuing could lead me but to disillusion or—madness; but nothing has been over able to shake my faith or to dim the light of that radiant star which I saw shining in the East. Then appeared Mr. Sinnett's "Esoteric Buddhism" raising a storm of controversy and criticism. There were some who wanted to prove that such a doctrine was only leading to that rank materialism that we had wished to oppose.

Though still unshaken in my faith, I was expecting with an ever increasing anxiety the visit of our Indian friends, and it is with real joy and a feeling of deep gratitude that I may now state the complete fulfilment of all my expectations. A Hindu gentleman, a Chela of the Master, was the first who arrived in Paris. Madame Blavatsky and Colonel Olcott had gone for a few days to Nice on a visit to the Duchess de Pomar, the President of the Theosophical Society "d' Orient d'Occident" of Paris. "Chela" Mr.—will not blame me for speaking so highly of him; he knows that in verity every token of admiration and respect he may receive is addressed, in reality, to his Master, of whom he is a worthy disciple. In the remarkable teachings he was kind enough to give us, we found realized our most sanguine expectations. He made clear to us all the dark points in Mr. Sinnett's book; he showed us how the occult doctrines were in perfect accordance and harmony with the latest discoveries of

science, and how they open, in fact, the way to new solutions. And what is of the greatest importance in relation to our actual social state—he gave us a glimpse of that splendid prospect how a firm and absolute ground to morality may be discovered in the immutable laws that govern the Cosmos. All those, who have had the privilege of hearing him, have been deeply impressed with the far reaching importance of the Theosophical movement, as well as struck with the powerful logic, and the large range of knowledge possessed by this young student of Occultism. To every question put to him—whether scientific, philosophical or moral—he gave a clear and satisfactory answer. But there is yet another thing to be considered in reference to Mr.—one of no less importance than his intellectual powers. We not only wanted a confirmation of our beliefs with regard to the doctrines of the Masters, but also a justification of the faith we had in them in reference to our spiritual aspirations. Though Mr.—calls himself only an humble chela of a great Master, we had reason to logically expect that a ray of the wisdom of the Master should come to us through his disciple. In our western language I would say that in the Pupil we were searching for a reflection of the soul and heart of the Teacher.

If we consider that, according to occult philosophy, the sign of a high degree of spiritual development is to love Humanity in ourselves, and ourselves only in Humanity, we may say that Mr.—'s teachings, the thoughts he expressed on those vital points of social reform, and especially the pure spiritual magnetism of his personality, have helped us to realize in some measure the holiness of his venerated Master. And now, to those who ask us "What reasons have you to put such a faith in those adepts?"—we may answer: because they not only teach that which, according to our reason, seems to us to be the truth, but also because they live up to that truth; and that again in all ages such has been the sign of a true Initiate. Humanity can never cease appealing to some authority; but we will accept no authority which is not justified by the life of those who represent it.

On all sides we hear that the Theosophical movement has come at the right time to answer the needs and the aspirations of the West. This is no wonder for us, who know whence the impulse had come.

We are all aware that Christianity under the guise of Catholicism is fast declining in France, and that all the philosophical minds seem to be unconsciously attracted towards the religions of the East, the more so, since the said philosophies seem to offer many a point of contact with the modern theory of evolution.

On the other hand, those who have been all their lives engaged in struggling against the intolerance of the churches, and who had set all their hopes on the present form of Government, which is fast putting an end to ecclesiastical abuses, begin to perceive that our institutions are not adequate for developing progress and morality. They perceive in terror, and with a deep sense of their helplessness, the flowing tide of materialism; but though finding no solid ground under their feet in their attempt to resist the flood, they still cling intuitively to their sense of justice and humanity.

May we not believe that such aspirations as these are worth being taken in consideration by the founders of the Theosophical Society and their Inspirers.

We have good reasons to think that the lecture which Colonel Olcott is to give in Paris in May, will attract the notice of many thinkers and scientists of our City; and for us, who have the privilege of private and confidential conversations with Mme. Blavatsky, there is no doubt whatever that the Theosophical Society, especially through the medium of its splendid Magazine, "The Theosophist," is destined to have an immense influence on the progress of modern thought.

And, I would say in the words of Count Goblet d'Alviella, in his recent work "L'Evolution Religieuse":—

"If India helps us in the religious crisis we are now passing through—and she is, perhaps, the best conditioned to do it—all those who take some interest in the harmonious development of civilization must remain greatly indebted to her."

"Jko..." F. T. S.

## Official Reports.

## THE SARV HITKARI THEOSOPHICAL SOCIETY.

OWING to the transfer of Pandit Saligram, President of the "Sarv Hitkari Theosophical Society," Gorakhpur, N. W. P., the following officers have been elected for the current year:—

Thakar Ganesb Singh,	... President.
Mr. M. J. Jacob,	... Vice-President.
Mr. Abdul Rahman,	... Secretary.
Thakar Shankar Singh,	... Joint Secretary.
Babu Jogeshwar Roy, L. M. S.,	... Treasurer and Librarian.

From a report received from the above Branch, it appears that the members are endeavouring to purchase a permanent head-quarters for their Branch in Gorakhpur. They have nearly gained their object and we wish them success, hoping that their attention will be more directed towards the practical and useful work of the Society than mere transient shows. Means are no doubt necessary to accomplish the end, but in endeavouring to be in possession of those means, one should never lose sight of the ultimate end in view.

#### THE SATYA MARGA THEOSOPHICAL SOCIETY.

Babu Khetter Chandra Bose has been appointed Vice-President of the "Satya Marga Theosophical Society," Lucknow, vice Pandit Devi Prasad, deceased; and Babu Kundan Lal Bhargava, B. A., to be Assistant Secretary, for the current year.

*Proceedings of an extraordinary meeting of the Satya Marga Theosophical Society, held on the 29th of March 1884.*

*Resolved 1stly.*—That in remembrance of the active energy displayed in every good and patriotic cause, by the late much lamented Vice-President of this Branch, Rawat Devi Prasad, this Branch should give a prize annually to the students of any local Sanskrit school. This prize to be designated the "Devi Prasad Memorial prize of the Satya Marga Theosophical Society."

*Resolved 2ndly.*—That, if practicable, a portrait of the deceased should be ordered by the Branch and kept in the meeting room along with a short sketch of the deceased's character.

*Resolved 3rdly.*—That a Committee composed of the President, the Secretary, Rai Narain Dass, Babu Gulab Chand, Babu Bhavani Prasad, Munshi Sujjad Hussain and Mr. S. J. Padshah, deliberate upon these resolutions and report at the next ordinary meeting upon the best method of carrying them out.

*Resolved 4thly.*—That a letter be written by the Secretary to the family of the deceased expressing the heartfelt grief of the Branch for the untimely death of one whose loss it will be difficult to fill up, and to communicate the resolutions passed at this meeting.

JWALA PRASAD SANKHADHARA,  
Secretary, S. M. T. S.

#### A PRAISEWORTHY EXAMPLE.

The Secretary of the Satya Marga Theosophical Society of Lucknow reports that Babu Ram Sahai, a Taluqdar of Unao (Oudh), has presented five villages, valued at about Rs. 50,000, with an annual income of Rs. 3,000, for the benefit of the Anglo-Sanskrit College our Branch Society is striving to establish. Many persons seem to have a wrong idea of wealth, mistaking the material coin, which is nothing more than a merely convenient medium of exchange, for real wealth which is intellectual labour and harvest. Babu Ram Sahai, therefore, in giving his coin, is usefully employing it, inasmuch as he is thus creating real wealth and thereby adding to the prosperity of his country and to human progress, by assisting the cause of enlightenment and education.

#### SANSKRIT SCHOOL AT JUBBULPORE.

I AM glad to report that a Sanskrit school was opened here on the 4th April with due ceremonies in the presence of a large number of native gentlemen, who were invited on the occasion. A report of the aims and objects of the school, written in pure Hindi, was read by Pandit Balwant Rao Gokhle, Superintendent, Male Normal School, who, among other things, informed the audience that the Sanskrit school which was going to be opened that day was entirely due to the stirring appeal that Col. Olcott, the worthy President of the Theosophical Society, made on the occasion of his last visit to this city, and that all Hindus must feel grateful to Col. Olcott for his disinterested labour in the cause of their well-being. After the ceremonies were performed the school was declared open.

From next week the Sanskrit Pundit will explain Bhagavat Gita on every Sunday.

NIVARAN CHANDRA MOOKERJEE,  
Secy., Branch Theos. Society.

#### THE JAMALPUR THEOSOPHICAL SOCIETY.

I beg to report that our respected brother Babu Navin Krishna Banerjee, President, A. B. B. Theosophical Society, Berhampur, in company of our brothers Babu Shama Charan Bhutta, Dina Nath Ganguly, Kali Prasanna Mukerjee and Srinath Goswami, arrived on Friday morning the 11th Instant at Bhagalpur, and thence came to Jamalpur the following morning, being accompanied by Babus Tarapada Ghosal, M. A., F. T. S. Secretary, and Upendranath Sarvadhicary, F. T. S. of the Bhagalpur Branch. The party consisting of 7 brothers was received and greeted at the Railway station just on arrival of the upmail train and forthwith accommodated at the house of our brother Babu Kali Bhusan Roy,

In accordance with the programme circulated for public information previously by this Branch, Bengalee gentlemen began to gather at Kali Babu's from 6 A. M. to hold interviews with our guests and to talk on "Theosophy." Various questions were put and they were explained satisfactorily by Nabiu Babu, Sham Babu and Dina Babu. The meeting dispersed at about 11-30 A. M.

Again after 1 P. M. a few gentlemen came and resumed the subject.

In pursuance of the notice a public meeting was held in the Jamalpur Native Institute at 5 P. M. Babu Nihuaadhab Bhuttacharga, a non-Theosophist, was voted to the chair. Babu Dinanath Gangooly was requested first to answer the questions *in re*: "Theosophy" put forward by a correspondent in the March issue of the "Motherland," a new weekly pice paper published at Benares. Dina Babu answered the questions *seriatim* in English to the satisfaction of those who could understand him. Then Babu Shama Charan Bhutta explained the points in Bengali in order to be more clear. The lectures delivered were highly satisfactory and won the hearts of the audience. The Institute hall was filled up with intelligent men. On the lecturers resuming seat, Babu Rakal Das Sen, a non-Theosophist, President of the Monghyr *Savitri Sancharini Sava* attached to the "Arya Dharma Pracharini Sava," spoke very highly on "Theosophy." He observed that it is the "Theosophy" which is bringing back the Hindus educated in Western science and literature to Hinduism, and thanked the Founders. At about 7-30 P. M. the meeting dissolved.

JAMALPUR, 22nd April 1884.

RAJCOOMAR ROY,  
Asst. Secretary.

#### THE MADRAS THEOSOPHICAL SOCIETY.

A MEETING of the above Branch of the Theosophical Society was held at its premises in Triplicane, on the 8th May 1884, for the election of office-bearers for the ensuing year, and for the transaction of other business.

On the motion of the President, M. R. R. Dewan Bahadur R. Ragoonath Rao Garoo, the members of the Branch elected M. R. Ry. T. Subba Row Pantulu Garoo, B. A. B. L., as the President for the ensuing year. Dr. F. Hartmann, of the Parent Theosophical Society, thanked the retiring President for his zeal and energetic work during the time he held the office.

The following gentlemen were elected as Vice-Presidents:—

M. R. Ry. Dewan Bahadur R. Ragoonath Row Garoo.  
" G. Muttusamy Chetty Garoo.  
" P. Sreenevas Row Garoo.  
" C. V. Cunniah Chetty Garoo.  
" P. Aroomooga Moodalyar Avergal.

One of them, Mr. P. Sreenevas Row, was also elected Secretary, together with M. R. Ry. L. Venkata Varadarajooloo Naidoo Garoo, and M. R. Ry. H. R. Jayaraja Row Garoo, B. A., as Assistant Secretaries.

At the suggestion of Mr. Sreenevas Row, two resolutions were passed, one of which was to the effect that a meeting of the Branch should be held on the evening of the first Saturday in each month, for giving Lectures or reading Essays.

After the transaction of some other work the meeting was dissolved.

MADRAS,  
9th May 1884. }

P. SREENEVAS ROW,  
Secretary.

#### THE MADRAS THEOSOPHICAL SANSKRIT SCHOOLS.

IN the month of April 1884 I inspected all the four Theosophical Sanskrit Schools in four suburban centres of the city of Madras, namely, Mylapore, Triplicane, Peddoonakpett, and Chintadripett.

The first three schools are those established exclusively by the Madras Branch of the Theosophical Society, and the last one in Chintadripett is an Anglo-vernacular School, the proprietor of which has opened a Sanskrit class and placed it under the supervision of the Theosophical Society, in consideration of the latter giving him pecuniary help every month.

The students on the Rolls are 25 in the Mylapore School, 81 in the Triplicane School, 35 in the Peddoonakpett School, and 130 in the Chintadripett School;—so that in all there are 271 children receiving Sanskrit education under the auspices of the Theosophical Society in the city of Madras. The average number of daily attendance is of course less than that aggregate number, and this is owing to the general causes, and also to the prevalence of small-pox to a rather unusually great extent in this city this year. But, with all this, there is a tendency to rise in the strength of the schools.

Further, considering the short time during which the schools have been existing, the infancy of most of the students, and other circumstances which tend to obstruct the course of improvement in all new undertakings,—I think I can safely assert that the schools have made a fair progress, and promise to yield bright results in future.

In the course of my inspection it grieved me sore to find that a very few children of the Theosophists attended the schools; indeed so very few that they may be counted on the fingers. This apathy on the part of our Theosophical brethren is quite unaccountable; and I request that the Educational Committee of the Theosophical Society will be pleased to adopt the necessary steps to remedy this great defect.

While this is so, I have to notice with great pleasure the meritorious act of two gentlemen, who have taken a great interest in the cause of our Sanscrit Schools, although they are not Theosophists. One of them is Mr. S. Sankariah, B. A., who is both the proprietor and Head Master of the Anglo-Vernacular School in Chintadripett. He has made the study of Sanscrit compulsory in all the classes, comprising 130 boys; and has with a laudable self-sacrifice admitted about one half of that number into the Sanscrit branch free of any charge or fee whatever; and has moreover subjected this branch to the supervision of the Theosophical Society. The other gentleman I refer to is Mr. V. Appadoray Pillay. He has placed one half of his house free of rent at the disposal of the Theosophical Society for the use of the Peddoonnikpetta School; and takes a lively interest in its progress. The thanks of our Society are due to these gentlemen for their unselfish aid in this great cause.

I need hardly mention that of the two other schools, the one in Triplicane is located in the premises of the Madras Branch of the Theosophical Society, and the one in Mylapore is located on the upstairs of the house of our esteemed President Dewan Bahadur, R. Raghonath Row Garoo, who, I am happy to notice, has furthermore opened three Vedic classes in which three trained Pandits teach the Rig, Yujur and Samá Vedas to about 15 Brahmin children, gratis of course.

One more point which I have to note here is that the pecuniary means at the disposal of the Committees of our four schools are too limited to admit of much more improvements being made in this great cause. I am afraid that unless the staff of teachers is increased, we shall not be able to receive any more students for instruction. I trust that the Educational Committee of our Society will be pleased to give their best consideration to this all-absorbing matter.

P. SRENEVAS ROW, F. T. S.

MADRAS, 25th April 1884.

#### THE ROHILKUND THEOSOPHICAL SOCIETY.

The following resolution was proposed by Pandit Choda Lall, B. A., and seconded by Rai Pyare Lall, and carried unanimously:—

That this meeting records its deep gratitude to the President of the Branch, Babu Nil Madhub Banerjee, for his indefatigable work in the cause of Theosophy, and his utmost efforts for improving and increasing the utility of this Branch in particular, ever since he joined it and took up his office. It further expresses its extreme regret at his being withdrawn from the Branch at a time when his help is most needed in the maturing of the different schemes of Theosophical work which the Branch has laid out.

The retiring President, then, in a few words, conveyed his thanks to the members, and expressed great sorrow at parting.

The office of the President having fallen vacant, an immediate re-election was found to be necessary, which could only be done according to Rule XIII of the General Rules of the Branch. Exception being taken by some of the members to the words "with the consent of the President-Founder," in that Rule, all the members present, with one exception, voted that the words "subject to the approval of the President-Founder" be substituted for them.

The following Office-bearers were then elected:—

Raja Madhorao Vinayek Paishwa, *Patron.*  
Rao Pyare Lall, *President.*  
Pandit Choda Lall, B. A., *Vice-President.*  
Babu Gyanendro N. Chackerbuti, M. A., *Secretary.*  
Pandit Gaidan Lall, B. A., *Assistant Secretary.*  
Pandit Chandra Shekhar, *Librarian.*  
Munshi Buldeo Sahni, *Treasurer.*  
Pandit Bhugwan Das, *Councillor.*

GYANENDRO N. CHACKERBUTI,  
*Secretary.*

BAREILLY, 4th May 1884.

#### THE RAJSHAHYE HARMONY THEOSOPHICAL SOCIETY.

The following Officers were elected for the current year for "the Rajshahye Harmony Theosophical Society":—

Babu Kali Prosonno Mukerji,.....*President,*  
,, Barada Prasad Basu,.....*Vice-President,*  
,, Sreesh Chunder Roy,.....*Secretary,*  
,, Sree Nath Ghose,.....*Treasurer & Acct.*

#### THE COMBACONUM THEOSOPHICAL SOCIETY.

M. R. Ky. K. Narainasamy Iyer *Avergal* has been elected Secretary, vice M. R. Ky. S. Krishna Swami Iyer *Avergal* resigned.

#### PROVISIONAL RULE.

*Theosophical Society,*

PRESIDENT'S OFFICE,

LONDON, April 21, 1884.

A QUESTION having arisen at various places where Branches of the Society are established with respect to fellowship in more branches than one, the President-Founder, upon a re-consideration of the whole subject, declares, on behalf of the General Council, that no Fellow of the Society can be a member of more than one Branch at the same time. A member of a Branch becoming a member of any other Branch *ipso facto* gives up his previous membership.

Fellows of the Society, who at the date of this rule are members of more than one Branch, must therefore at once declare to which Branch they elect to belong when this rule is brought to their notice. In the absence of such declaration they will be deemed to belong to the Branch to which they last joined.

(Signed) H. S. OLCOTT,

*President, Theosophical Society.*

(True copy).

MOHINI M. CHATTERJI,

*Private Secretary.*

#### SPECIAL ORDERS OF 1884.

Miss F. ARUNDALE, of 77, Elgin Crescent, Notting Hill, London, is hereby appointed Assistant Treasurer of the Theosophical Society. She will have general charge in Europe of its financial affairs, and receive and receipt all monies payable to it, including Initiation Fees, and cash orders for the Society's publications not ordered through the recognised agents of the *Theosophist*.

(Signed) H. S. OLCOTT,

LONDON, April 30, 1884.

P. T. S.

(True copy).

MOHINI M. CHATTERJI,

*Private Secretary to the*

*President-Founder, T. S.*

A lecture on "*Theosophy and the Theosophical Society*" was given by Khan Saheb N. D. Khandalvala, B. A., L. D. B., President of the Poona Branch, at the Mahableshwar Native Library on Sunday, 11th May. Khan Bahadur Kazi Shabudin, C. I. E., Dewan of Baroda, took the chair. The hall of the library was crowded and many learned Hindu and Parsee gentlemen were present as also some Native Chiefs. The lecture was listened to with attention and created interest. Both the Chairman and Mr. Shankar Pandurang Pandit, M. A., Oriental translator to Government, said they sympathized with the objects of the Society, which they thought would be productive of good to this country.

The General Council of the Theosophical Society adopted, at its meeting held at the Adyar Head-quarters on the 14th of May 1884, resolutions to the effect that the connection of Mme. E. Coulomb and Mr. A. Coulomb be severed from the Theosophical Society, from that date.

#### NOTICE.

We regret to announce that, owing to unavoidable causes the publication of the *Secret Doctrine* has to be delayed for two months more. The first Number will therefore be out on the 15th of August, instead of 15th of June as originally announced.

# "THE SECRET DOCTRINE,"

A NEW VERSION OF "ISIS UNVEILED."

WITH A NEW ARRANGEMENT OF THE MATTER, LARGE AND IMPORTANT ADDITIONS, AND COPIOUS NOTES AND COMMENTARIES,

BY

H. P. BLAVATSKY,

*Corresponding Secretary of the Theosophical Society.*

ASSISTED BY

T. SUBBA ROW GARU, B. A., B. L., F. T. S.,

*Councillor of the Theosophical Society and President of its Madras Branch.*

## PUBLISHER'S NOTICE.

NUMEROUS and urgent requests have come from all parts of India, to adopt some plan for bringing the matter contained in "Isis Unveiled," within the reach of those who could not afford to purchase so expensive a work at one time. On the other hand, many, finding the outlines of the doctrine given too hazy, clamoured for "more light," and necessarily misunderstanding the teaching, have erroneously supposed it to be contradictory to later revelations, which in not a few cases, have been entirely misconceived. The author, therefore, under the advice of friends, proposes to issue the work in a better and clearer form, in monthly parts. All, that is important in "Isis" for a thorough comprehension of the occult and other philosophical subjects treated of, will be retained, but with such a rearrangement of the text as to group together as closely as possible the materials relating to any given subject. Thus will be avoided needless repetitions, and the scattering of materials of a cognate character throughout the two volumes. Much additional information upon occult subjects, which it was not desirable to put before the public at the first appearance of the work, but for which the way has been prepared by the intervening eight years, and especially by the publication of "The Occult World" and "Esoteric Buddhism" and other Theosophical works, will now be given. Hints will also be found throwing light on many of the hitherto misunderstood teachings found in the said works. A complete Index and a Table of Contents will be compiled. It is intended that each Part shall comprise seventy-seven pages in Royal 8vo. (or twenty-five pages more than every 24th part of the original work,) to be printed on good paper and in clear type, and be completed in about two years. The rates of subscription to be as follow:—

	Indian.	Foreign countries.
	Rs.	£ s.
If paid Monthly ...	1 4 0	0 3
" " Quarterly ...	3 0 0	0 8
" " Half yearly ...	6 0 0	0 16
" " Yearly ...	10 0 0	1 7

Subscriptions payable invariably in advance, and no name entered on the list nor Part forwarded until the money is in hand. All applications to be made and sums remitted to the "Manager, Theosophist Office, Adyar (Madras), India;" at which office money orders must be made payable and always in his favour. In making remittances it should be noted that no other amount should on any account be included in the drafts or money orders, except that intended for this work. Should nothing unforeseen happen, and should a sufficient number of subscribers be registered, the first Part will be issued on August 15th.

## REPORT OF THE EIGHTH ANNIVERSARY

OF THE

## THEOSOPHICAL SOCIETY.

AT which were present Delegates from Branches in America, England, Ceylon and all parts of India from North to South and East to West.

Price four annas per copy; postage and packing charges:—India, one anna; Ceylon, three annas; all other Foreign countries, four annas.

Apply, with remittance, to the Manager of the THEOSOPHIST, Adyar (Madras).

## ESOTERIC BUDDHISM.

(CHEAP EDITION—PRICE RUPEES THREE.)

THE Manager of the *Theosophist* has received a supply of the paper-cover edition of Mr. Sinnett's *Esoteric Buddhism*. Like the *Occult World*, this work also, in its second edition, has been made cheap for the convenience of the Indian Subscribers.

MESSRS. NICHOLAS AND Co. have made a splendid photograph of a group comprising eighty-three Delegates attending the Eighth Anniversary celebration of the Theosophical Society, together with a view of the portico of the Adyar Head-quarters Building. Every portrait is excellent. Copies may be had at Rs 2-8 (Gs.) each, inclusive of packing and postage. Fellows of the Theosophical Society may also obtain cabinet size photos of Madame Blavatsky, Colonel Olcott and a group consisting of Madame Blavatsky, Messrs. Subba Row and Dharbagiri Nath at Rs 1-12 (4s.) per copy, inclusive of packing and postage.

APPLY TO THE MANAGER OF THE *Theosophist*.

THE 108 UPANISHADS in original Sanskrit with an abstract of the same by Siddhanta Subramania Sastrial, together with Mahavakia Ratnavali, Brahma Sutras, and a short abstract of the Philosophy expounded therein and Bhagavat Gita—edited by Siddhanta Subramania Sastrial, Price Rs. 8-6 per copy including postage.

Apply to the Manager, Theosophist Office, Adyar, Madras.

or

S. Subramania Sastrial, Kanarese Pandit, Presidency College, Krishnama Naidu's Agraharam, Black Town, or to Mulukutla Venkatappiah, 170 Mint Street, Madras.

## MAHATMAS AND CHELAS.

A MAHATMA is a personage, who, by special training and education, has evolved those higher faculties and has attained that spiritual knowledge, which ordinary humanity will acquire after passing through numberless series of re-incarnations during the process of cosmic evolution, provided, of course, that they do not go, in the meanwhile, against the purposes of Nature and thus bring on their own annihilation. This process of the self-evolution of the MAHATMA extends over a number of "incarnations," although, comparatively speaking, they are very few. Now, what is it that incarnates? The occult doctrine, so far as it is given out, shows that the first three principles die more or less with what is called the physical death. The fourth principle, together with the lower portions of the fifth in, which reside the animal propensities, has *Kama Loka* for its abode, where it suffers the throes of disintegration in proportion to the intensity of those lower desires; while it is the higher *Manas*, the pure man, which is associated with the sixth and the seventh principles, that gods into *Devachan* to enjoy there the effects of its good *Karma*, and then to be reincarnated as a higher individuality. Now, an entity, that is passing through the occult training in its successive births, gradually has less and less (in each incarnation) of that lower *Manas* until there arrives a time when its whole *Manas*, being of an entirely elevated character, is centred in the higher individuality, when such a person may be said to have become a MAHATMA. At the time of his physical death, all the lower four principles perish without any suffering, for these are, in fact, to him like a piece of wearing apparel which he puts on and off at will. The real MAHATMA is then not his physical body but that higher *Manas* which is inseparably linked to the *Atma* and its vehicle (the 6th principle)—a union effected by him in a comparatively very short period by passing through the process of self-evolution laid down by the Occult Philosophy. When, therefore, people express a desire to "see a MAHATMA," they really do not seem to understand what it is they ask for. How can they, by their physical eyes, hope to see that which transcends that sight? Is it the body—a mere shell or mask—they crave or hunt after? And supposing they see the body of a MAHATMA, how can they know that behind that mask is concealed an exalted entity? By what standard are they to judge whether the *Maya* before them reflects the image of a true MAHATMA or not? And who will say that the physical is not a *Maya*? Higher things can be perceived only by a sense pertaining to those higher things. And who-

ever therefore wants to see the real MAHATMA, must use his intellectual sight. He must so elevate his *Manas* that its perception will be clear and all mists created by *Maya* must be dispelled. His vision will then be bright and he will see the MAHATMAS wherever he may be, for, being merged into the sixth and the seventh principles, which are ubiquitous and omnipresent, the MAHATMAS may be said to be everywhere. But, at the same time, just as we may be standing on a mountain top and have within our sight the whole plain, and yet not be cognizant of any particular tree or spot, because from that elevated position all below is nearly identical, and as our attention may be drawn to something which may be dissimilar to its surroundings—so in the same manner, although the whole of humanity is within the mental vision of the MAHATMAS, they cannot be expected to take special note of every human being, unless that being by his special acts draws their particular attention to himself. The highest interest of humanity, as a whole, is their special concern, for they have identified themselves with that Universal Soul which runs through Humanity, and he, who would draw their attention, must do so through that Soul which pervades everywhere. This perception of the *Manas* may be called "faith" which should not be confounded with *blind belief*. "Blind faith" is an expression sometimes used to indicate belief without perception or understanding; while the true perception of the *Manas* is that enlightened belief, which is the real meaning of the word "faith." This belief should at the same time be accompanied by *knowledge*, i. e., experience, for "true knowledge brings with it faith." Faith is the perception of the *Manas* (the fifth principle), while knowledge, in the true sense of the term, is the capacity of the Intellect, i. e., it is spiritual perception. In short, the higher individuality of man, composed of his higher *Manas*, the sixth and the seventh principles, should work as a unity, and then only can it obtain "divine wisdom," for divine things can be sensed only by divine faculties. Thus the desire, which should prompt one to apply for *chelas*hip, is to so far understand the operations of the Law of Cosmic Evolution as will enable him to work in harmonious accord with Nature, instead of going against its purposes through ignorance.

MAGICON,

Or the secret system of a Society of unknown Philosophers.

VI.

LANGUAGE AND WRITING.

PRIMORDIAL man was possessed of the superior advantage of being able to cognize the natures, qualities, powers and motions of things directly. His connection with the world of spirit and the world of matter was so intimate that he could read and understand the most secret thoughts of those that were superior as well as of those that were inferior to him; and man, even in his

present state of degradation, is still in possession of that power, but in an extremely small degree. This primordial power or language is known as the power of intuition.

It is man's duty to strive to regain this primordial language, by cultivating his intuitional powers and by the use of that small ray of light, which, in his present condition of darkness, only appears like the polar star instead of being his sun. He must do this by habitually collecting the primordial symbols and the true characters of things and grasping them with the powers of his mind. That means to meditate about the nature of things, to mentally penetrate into their centres and to understand their true meaning.\* This was the true object of the ancient hieroglyphic and of the picture writing of the schools of secret science. The farther the true symbols have receded from the true forms of nature, the more do they render it difficult to express the truth. But there have been at all times men who were able to read and write the original symbolic signs, and the true hieroglyphics are up to the present day in the possession and care of such men.†

### 1. *Nature and Origin of Language.*

Man's actions are his writings. By putting his thoughts into action he expresses them and records them in the book of life.

The source of language is in man; but the manner of its birth cannot be explained simply by organisation, tradition or instruction; the original language of the spirit is as old as man's intellectual powers and its source lies far back in the night of time, when man yet existed in his original purity. Man cannot use his intellectual powers without the influence or stimulus of a higher re-action; if left to himself, he would have no occasion to speak. If by "language" we simply mean the expression and revelation of his powers, then we find that everything in nature has its language;‡ because not only are the powers of each being intimately connected with the means of their expression; but between both exists the most exact proportion in regard to measure and condition; but to avoid mistakes and confusion, it is convenient to call "language" the expression of intellectual and moral powers, and in this aspect it can only belong to intellectual beings.

### 2. *Original Language.*¶

There is only one genuine language for man, the symbols of which are natural and must be intelligible to all, and it is either an interior direct communication of

\* In other words, he must learn how to write, before he can read.

† The Mahatmas.

‡ It would be an interesting study to investigate the relationship which exists between the faculties or attributes of beings, and the means with which they have to express their feelings.

¶ The word "language" must here be looked upon as conveying a higher sense than what is usually implied by it. "Language" means in this case an irradiation of divine light into the human mind and an exhalation from the same into the intellectual and physical realms. Man in a state of purity being an image and external expression of divinity, must be able to reflect and to reproduce divine truth in its original purity, and man's expressions therefore ought to be a perfect reproduction or echo of the divine impressions which he receives; but as man has become immersed in matter, he receives the divine rays only in a state of refraction and can therefore reproduce them only in an imperfect or refracted condition. The act of speaking presupposes an act of thinking, and one method of thinking will be found to be better than another method, but the best among all the methods of thinking is the most perfect one, being a pure reflection of the divine light. Thinking and speaking being closely related to each other and depending for their expression on certain symbols, it follows that the existence of a universal method of expression by symbols must be possible, and if we are capable of having thoughts and feelings, which we cannot express by symbols, it does not follow that such symbols do not exist, but only that we are not acquainted with them.

As the moon reflects the light of the sun, so does the mind of man reflect the supreme mind. The human soul is not a musical instrument which merely plays itself, but may be compared to a harp which is made to sound harmoniously, if touched by the hand of a master; she may be compared to a "samaritane tablet," upon which the thoughts of the Supreme are engraved in letters of light. The seers and prophets of all ages have heard and understood that divine language; but they could only reproduce it imperfectly through the imperfect languages of their times.—H.

thought, or an exterior expression through and for the senses. This interior language is the parent of the exterior one, and being caused by the irradiation of the supreme, which is unity and with whom all men are one, it follows that if that original irradiation of the supreme ray had remained unchanged in all men, all men would understand the same interior language and also the same exterior one, as the latter is only the sensuous expression of the former. Such is in fact the case. This original language, formerly spoken by all, but now lost to nearly all, is still in the possession of a few men, whose high degree of purity renders them capable of understanding the same. This language breathes, so to say, spirit, where common languages only use letters.

This language consists of non-ambiguous indubitable symbols, which are no arbitrary creations, but which are inherent in the nature of things and expressed by truth, and can be communicated by sound or by signs. He who understands that language can interpret not only the Divine, but he can unite all spaces and look into the most distant past. A knowledge of that primitive language would at once explain the process of evolution of secondary languages and the intimate connection existing between the development of the various languages and the progress of evolution of the various nations; and this will be the language of a certain but far distant future. Man in his present condition hears the voice which speaks that language, but does not understand it; he sees the sacred symbols, but does not comprehend them; his ear is accustomed to human words, he seeks for human writings in books, and is blind to the hieroglyphics of the divine. The key to that language is contained in the divine *logos*, the Christ (or the seventh principle of the Occultists).

Each word in that language is the character of the thing itself, a sign and symbol which men cultivate without knowing; the centre of each being, which is expressed by an indelible symbol, and whoever reaches that centre is in possession of the word and the sign. These symbols are the essential characteristics which distinguish men as such from other existences. An artist understands another artist by beholding the products of his art, without speaking with him in words, or meeting him personally. True spirit unites all distances of time and space and is independent of accidental relations.

There is a universal light which contains the light of all beings, and this light is the living organ of that universal language, the universal symbol and sound, the types and harmonies of which are offered by nature herself. Men have ever been desiring an universal language. Such a universal language cannot be arbitrarily established, or, if so established, would be more difficult to learn than any other. True language must express the harmony of our soul with the nature of things, and as long as there is disharmony, there cannot be one universal harmonious language.

There are many signs by which this language can be recognized, and many traces which lead us to the same. To study it, we need not go outside of visible nature, we must only seek its source in the same.

There is a threefold word of God; a physical, an intellectual and divine. The first is the language of nature, the second that of the divine agents, and the third the language of the *logos* or Christ. These signs are moreover contained in the nature of men, their products and imitations, and are pre-eminently visible in the creations of Genius as the expressions of the higher thoughts of poetry, music and art, and may therefore be considered as constituting the dialect of heroes and gods.

### 3. *Arbitrary Languages.*

As long as the light, which illuminated primordial man, continued in its original purity and perfection, his interior language could be expressed by corresponding symbols, in a plain and unmistakeable manner; but as

man's reason became involved in material pursuits, an endless variety of ambiguous, uncertain and unreliable inferior languages came into existence. All of them, however, have certain points of similarity which proves their common origin; but it is not our object to investigate this subject at present.

#### *Divine and Natural Writing.*

Supreme wisdom uses certain invariable symbols to express certain ideas and each divine thought is represented by a certain allegorical sign. Besides this, there is another fixed original language, consisting in the collective characters of nature, which, like an open book, are before our eyes. The first language relates to divine things and its alphabet consists allegorically of four letters, which are the four primitive numbers ( $1+2+3+4=10$ .) The second relates to intellectual and sensuous products and has 22 letters.\* Each being is a characteristic symbol and living exterior image of its interior, and the universe is a collection of such symbols, representing the natures, qualities, proportions, compositions, activities and passivities of things. Each body is the symbol of an invisible and corresponding power, and man, according to his origin, is the most noble expression of God and a perfect copy of his invisible divinity. Man is the most beautiful letter of the alphabets of earth, and he who is able to read and understand that letter has nothing further to learn; for he will have obtained the wisdom of the ages and be himself a God.

### VII.

Explanations of some of the principal allegories.

1. *The impenetrable armor.*—By this is meant the ethereal body of man, which surrounded his spiritual principle, before his immersion into matter made it necessary for him to be protected by a physical body. That primitive body was and still is indestructible, immortal and not subject to the inimical influences of the elements. It is not said whether that body corresponds to the shape of man's present form; but some philosophers consider it in its perfection as representing a radiant sphere (the sphere being the most perfect form) whose circumference however is without limits.

2. *The fiery sword* refers to his spiritual power, expressed through the living word † or the irresistible force of his Will, when put into action.

3. *The forest of seven trees*, symbolizes the seven primordial emanations or evolutions of the divine "logos," by whose influence everything lives and exists.

4. *The ten leaves of the book of life* represent the universe, or the abundance and completeness of everything. They are called *ten* leaves on account of the occult signification of that word. Primordial man could see and understand all the ten leaves at once, but we have to study painfully one leaf after another.

5. *The intellectual square* symbolizes the totality of all intellectual beings and their powers. In it everything is spirit and life and power. It is the throne of him, who is called the alpha and omega, the highest which thinking beings can obtain, a temple of activity and rest, pure light and enjoyment. It is also called the paradise with its four rivers (or Nirvana).

6. *The destroyed and to be reconstructed temple* of the spirit, means human nature in its original purity and the great work of reconstructing or regenerating the same. The columns of that temple are represented by the sages of all nations, those that are illuminated by

the true light; and the altar with the inextinguishable lamps refers to man's ever present power to exercise his divine rights of adoration, meditation and the practice of charity and self-sacrifice.

7. *The great name of the Hebrews*, refers to the Logos or Christ, the first emanation from deity, and the *holy names* represent the seven divine powers, which are the sources from which all life flows into the beings, and which are the first approaches to the inexpressible name, the supreme source of everything that comes into existence.

#### THE SILVER HATCHET.\*

BY A. CONAN DOYLE.

ON the 3rd of December 1861, Dr. Otto von Hopstein, Regius Professor of Comparative Anatomy of the University of Buda-Pesth, and Curator of the Academical Museum, was foully and brutally murdered within a stone-throw of the entrance to the college quadrangle.

Besides the eminent position of the victim and his popularity amongst both students and towns-folk, there were other circumstances which excited public interest very strongly, and drew general attention throughout Austria and Hungary to this murder. The *Pesther Abendblatt* of the following day had an article upon it, which may still be consulted by the curious, and from which I translate a few passages giving a succinct account of the circumstances under which the crime was committed, and the peculiar features in the case which puzzled the Hungarian police.

'It appears,' said that very excellent paper, 'that Professor Von Hopstein left the University about half past four in the afternoon, in order to meet the train which is due from Vienna, at three minutes after five. He was accompanied by his old and dear friend, Herr Wilhelm Schlessinger, Sub-Curator of the Museum and Privat-docent of Chemistry. The object of these two gentlemen in meeting this particular train was to receive the legacy bequeathed by Graf Von Schulling to the University of Buda-Pesth. It is well known that this unfortunate nobleman, whose tragic fate is still fresh in the recollection of the public, left his unique collection of mediæval weapons, as well as several priceless black-letter editions, to enrich the already celebrated museum of his Alma Mater. The worthy Professor was too much of an enthusiast in such matters to entrust the reception or care of this valuable legacy to any subordinate, and, with the assistance of Herr Schlessinger, he succeeded in removing the whole collection from the train, and stowing it away in a light cart which had been sent by the University authorities. Most of the books and more fragile articles were packed in cases of pine wood, but many of the weapons were simply done round with straw, so that considerable labour was involved in moving them all. The Professor was so nervous, however, lest any of them should be injured that he refused to allow any of the railway employes to assist. Every article was carried across the platform by Herr Schlessinger, and handed to Professor von Hopstein in the cart, who packed it away. When everything was in, the two gentlemen, still faithful to their charge, drove back to the University; the Professor being in excellent spirits, and not a little proud of the physical exertion which he had shown himself capable of. He made some joking allusion to it to Reinmaul, the janitor, who, with his friend Schiffer, a Bohemian Jew, met the cart on its return, and unloaded the contents. Leaving his curiosities safe in the store-room, and locking the door, the Professor handed the key to his sub-ordinator, and, bidding every one good evening, departed in the direction of his lodgings. Schlessinger took a last look to reassure himself that all was right, and also went off, leaving Reinmaul and his friend Schiffer smoking in the janitor's lodge.

'At eleven o'clock, about an hour and a half after Von Hopstein's departure, a soldier of the 14th regiment of Jäger, passing the front of the University on his way to the barracks, came upon the lifeless body of the Professor lying a little way from the side of the road. He had fallen upon his face with both arms stretched out. His head was literally split in two halves by a tremendous blow, which, it is conjectured, must have been struck from behind, there remaining a peaceful smile upon the old man's face, as if he had been still dwelling upon his new archaeological acquisition when death had overtaken him. There is no other mark of violence upon the body except a bruise over the left patella, caused probably by the fall. The most mysterious part of the affair is that the Professor's purse, containing forty three gulden, and his valuable watch, have been untouched.

\* We reprint this from a *Christmas Annual*, edited, we believe, by Messrs. Ward, Lock and Co., in London. The story, we have condensed, is worth perusal, since its subject is directly connected with occult sciences, the evil magnetism impressed upon any material object being shown, in its fatal influences, no idle superstition, but an occult, invisible power worthy of the most profound and careful investigation from our great scientific minds. The murderous influence impressed upon the hatchet, in this narrative, is of the same kind as the suicidal influence that lingered in a certain sentry box wherein over a dozen soldiers committed suicide, one after the other, a fact which happened in Germany, and the circumstances of which were well ascertained by official inquest.—*Ed.*

\* That means allegorically 2+2, or the intellectual and the sensuous. A new degradation of man would produce an alphabet of 68 letters; that is 8+8 signify a four times multiplied sensuousness, which would remove man four degrees farther from the source of light.

These three true languages are opposed by three false ones, of which the first one contains 2, the second 5, and the third one would have 10 (2 and 5 are the division of 4 and 10, and by division evil and darkness was created.) The third number relates as well to 5 as to 22.—II.

† Bulwer Lytton in his "Coming Race" calls it the "Vril."

Robbery cannot, therefore, have been the incentive to the deed, unless the assassins were disturbed before they could complete their work.

This idea is negated by the fact that the body must have lain at least an hour before any one discovered it. The whole affair is wrapped in mystery. Dr. Langemann, the eminent medico-jurist, has pronounced that the wound is such as might have been inflicted by a heavy sword bayonet wielded by a powerful arm. The police are extremely reticent upon the subject, and it is suspected that they are in possession of a clue which may lead to important results.

Thus far the *Pesther Abendblatt*. The researches of the police failed, however, to throw the least glimmer of light upon the matter. There was absolutely no trace of the murderer, nor could any amount of ingenuity invent any reason which could have induced any one to commit the dreadful deed. The deceased Professor was a man so wrapped in his home studies and pursuits that he lived apart from the world, and had certainly never raised the slightest animosity in any human breast. It must have been some fiend, some savage, who loved blood for its own sake, who struck that merciless blow.

Though the officials were unable to come to any conclusions upon the matter, popular suspicion was not long in pitching upon a scapegoat. In the first published accounts of the murder the name of one Schiffer had been mentioned as having remained with the janitor after the Professor's departure. This man was a Jew, and Jews have never been popular in Hungary. A cry was at once raised for Schiffer's arrest; but as there was not the slightest grain of evidence against him, the authorities very properly refused to consent to so arbitrary a proceeding. Reinman, who was an old and most respected citizen, declared solemnly that Schiffer was with him until the startled cry of the soldier had caused them both to run out to the scene of the tragedy. No one ever dreamed of implicating Reinman in such a matter; but still, it was rumoured that his ancient and well-known friendship for Schiffer might have induced him to tell a falsehood in order to screen him. Popular feeling ran very high upon the subject, and there seemed a danger of Schiffer's being mobbed in the street, when an incident occurred which threw a very different light upon the matter.

On the morning of the 12th of December, just nine days after the mysterious murder of the Professor, Schiffer, the Bohemian Jew, was found lying in the north-western corner of the Grand Platz stone dead, and so mutilated that he was hardly recognisable. His head was cloven open in very much the same way as that of Von Hopstein, and his body exhibited numerous deep gashes, as if the murderer had been so carried away and transported with fury that he had continued to hack the lifeless body. Snow had fallen heavily the day before, and was lying at least a foot deep all over the square; some had fallen during the night too, as was evidenced by a thin layer lying like a winding sheet over the murdered man. It was hoped at first that this circumstance might assist in giving a clue by enabling the foot-steps of the assassin to be traced; but the crime had been committed, unfortunately, in a place much frequented during the day, and there were innumerable tracks in every direction. Besides, the newly-fallen snow had blurred the foot-steps to such an extent that it would have been impossible to draw trustworthy evidence from them.

In this case there was exactly the same impenetrable mystery and absence of motive which had characterised the murder of Professor von Hopstein. In the dead man's pocket there was found a note-book containing a considerable sum in gold, and several very valuable bills, but no attempt had been made to rifle him. Supposing that any one to whom he had lent money (and this was the first idea which occurred to the police) had taken this means of evading his debt, it was hardly conceivable that he would have left such a valuable spoil untouched. Schiffer lodged with a widow, named Gruga, at 49 Marie Theresa Strasse, and the evidence of his landlady and her children showed that he had remained shut up in his room the whole of the preceding day in a state of deep dejection, caused by the suspicion which the populace had fastened upon him. She had heard him go out about eleven o'clock at night for his last and fatal walk, and as he had a latch-key she had gone to bed without waiting for him. His object in choosing such a late hour for a ramble obviously was that he did not consider himself safe if recognised in the streets.

The occurrence of this second murder, so shortly after the first, threw not only the town of Buda-Pesth, but the whole of Hungary into a terrible state of excitement, and

even of terror. Vague dangors seemed to hang over the head of every man. The only parallel to this intense feeling was to be found in our own country at the time of the Williams' murders described by De Quincey. There were so many resemblances between the cases of Von Hopstein and of Schiffer that no one could doubt that there existed a connection between the two. The absence of object and of robbery, the utter want of any clue to the assassin, and, lastly, the ghastly nature of the wounds, evidently inflicted by the same or a similar weapon, all pointed in one direction. Things were in this state when the incidents, which I am now about to relate, occurred; and in order to make them intelligible I must lead up to them from a fresh point of departure.

Otto von Schlegel was a younger son of the old Silesian family of that name. His father had originally destined him for the army, but at the advice of his teachers, who saw the surprising talent of the youth, had sent him to the University of Buda-Pesth to be educated in medicine. Here young Schlegel carried everything before him, and promised to be one of the most brilliant graduates turned out for many a year. Though a hard reader, he was no bookworm, but an active powerful young fellow, full of animal spirits and vivacity, and extremely popular among his fellow-students.

The New Year examinations were at hand, and Schlegel was working hard—so hard that even the strange murders in the town, and the general excitement in men's minds, failed to turn his thoughts from his studies. Upon Christmas Eve, when every house was illuminated, and the roar of drinking songs came from the Bierkeller in the Student-quartier, he refused the many invitations to roystering suppers which were showered upon him, and went off with his books under his arm to the rooms of Leopold Strauss, to work with him into the small hours of the morning.

Strauss and Schlegel were bosom friends. They were both Silesians, and had known each other from boyhood. Their affection had become proverbial in the University. Strauss was almost as distinguished a student as Schlegel, and there had been many a tough struggle for academic honours between the two fellow-countrymen, which had only served to strengthen their friendship by a bond of mutual respect. Schlegel admired the dogged pluck and never-failing good temper of his old playmate; while the latter considered Schlegel, with his many talents and brilliant versatility, the most accomplished of mortals.

The friends were still working together, the one reading from a volume on anatomy, the other holding a skull and marking off the various parts mentioned in the text, when the deep-toned bell of St. Gregory's church struck the hour of midnight.

'Hark to that!' said Schlegel, snapping up the book and stretching out his long legs towards the cheery fire. 'Why, it's Christmas morning, old friend! . . .

'And what is the news amongst the students?' asked Strauss.

'They talk, I believe, of nothing but the murders. But I have worked hard of late, as you know, and hear little of the gossip.'

'Have you had time,' inquired Strauss, 'to look over the books and the weapons which our dear old Professor was so concerned about the very day he met his death? They say they are well worth a visit.'

'I saw them to-day,' said Schlegel, lighting his pipe. 'Reinman, the Janitor, showed me over the store-room, and I helped to label many of them from the original catalogue of Graf Schullings's museum. As far as we can see, there is but one article missing of all the collection.'

'One missing!' exclaimed Strauss. 'That would grieve old Von Hopstein's ghost. Is it anything of value?'

'It is described as an antique hatchet, with a head of steel and a handle of chased silver. We have applied to the railway company, and no doubt it will be found.'

'I trust so,' echoed Strauss; and the conversation drifted off into other channels. The fire was burning low and the bottle of Rhenish was empty before the two friends rose from their chairs, and Von Schlegel prepared to depart.

'Ugh! It's a bitter night!' he said, standing on the doorstep and folding his cloak round him. 'Why, Leopold, you have your cap on. You are not going out, are you?'

'Yes, I am coming with you,' said Strauss, shutting the door behind him. 'I feel heavy,' he continued, taking his

friend's arm, and walking down the street with him. 'I think a walk as far as your lodgings, in the crisp frosty air, is just the thing to set me right.' . . .

The two students went down Stephen Strasse together and across Julien Platz, talking on a variety of topics. As they passed the corner of the Grand Platz, however, where Schiffer had been found dead, the conversation turned naturally upon the murder.

'That's where they found him,' remarked Von Schlegel, pointing to the fatal spot.

'Perhaps the murderer is near us now,' said Strauss. 'Let us hasten on.'

They both turned to go, when Von Schlegel gave a sudden cry of pain and stooped down.

'Something has cut through my boot!' he cried; and feeling about with his hand in the snow, he pulled out a small glistening battle-axe, made apparently entirely of metal. It had been lying with the blade turned slightly upwards, so as to cut the foot of the student when he trod upon it.

'The weapon of the murderer!' he ejaculated.

'The silver hatchet from the museum!' cried Strauss in the same breath.

There could be no doubt that it was both the one and the other. There could not be two such curious weapons, and the character of the wound was just such as would be inflicted by a similar instrument. The murderer had evidently thrown it aside after committing the dreadful deed, and it had lain concealed in the snow some twenty metres from the spot ever since. It was extraordinary that of all the people who had passed and repassed none had discovered it; but the snow was deep, and it was a little off the beaten track.

'What are we to do with it?' said Von Schlegel, holding it in his hand. He shuddered as he noticed by the light of the moon that the head of it was all dabbled with dark-brown stains.

'Take it to the Commissary of Police,' suggested Strauss.

'He'll be in bed now. Still, I think you are right. But it is nearly four o'clock. I will wait until morning, and take it round before breakfast. Meanwhile I must carry it with me to my lodgings.'

'That is the best plan,' said his friend; and the two walked on together talking of the remarkable find which they had made. When they came to Schlegel's door, Strauss said good-bye, refusing an invitation to go in, and walked briskly down the street in the direction of his own lodgings.

Schlegel was stooping down putting the key into the lock, when a strange change came over him. He trembled violently and dropped the key from his quivering fingers. His right hand closed convulsively round the handle of the silver hatchet, and his eye followed the retreating figure of his friend with a vindictive glare. In spite of the coldness of the night the perspiration streamed down his face. For a moment he seemed to struggle with himself, holding his hand up to his throat as if he were suffocating. Then, with crouching body and rapid noiseless steps, he crept after his late companion.

Strauss was plodding sturdily along through the snow, humming snatches of a student song and little dreaming of the dark figure which pursued him. At the Grand Platz it was forty yards behind him; at the Julien Platz it was but twenty; in Stephen Strasse it was ten, and gaining on him with panther-like rapidity. Already it was almost within arm's length of the unsuspecting man, and the hatchet glittered coldly in the moonlight, when some slight noise must have reached Strauss' ears, for he faced suddenly round upon his pursuer. He started and uttered an exclamation, as his eye met the white set face, with flashing eyes and clenched teeth, which seemed to be suspended in the air behind him.

'What, Otto!' he exclaimed, recognising his friend. 'Art thou ill? You look pale. Come with me to my—Ah! hold, you madman, hold! Drop that axe! Drop it, I say, or by heaven I'll choke you!'

Von Schlegel had thrown himself upon him with a wild cry and uplifted weapon, but the student was stout-hearted and resolute. He rushed inside the sweep of the hatchet and caught his assailant round the waist, narrowly escaping a blow which would have cloven his head. The two staggered for a moment in a deadly wrestle, Schlegel endeavouring to shorten his weapon; but Strauss with a des-

perate wrench managed to bring him to the ground, and they rolled together in the snow, Strauss clinging to the other's right arm and shouting frantically for assistance. It was as well that he did so, for Schlegel would certainly have succeeded in freeing his arm had it not been for the arrival of two stalwart gendarmes attracted by the uproar. Even then the three of them found it difficult to overcome the maniacal strength of Schlegel, and they were utterly unable to wrench the silver hatchet from his grasp. One of the gendarmes, however, had a coil of rope round his waist, with which he rapidly secured the student's arms to his sides. In this way, half pushed, half dragged, he was conveyed, in spite of furious cries and frenzied struggles, to the central police-station.

Strauss assisted in coercing his former friend, and accompanied the police to the station, protesting loudly at the same time against any unnecessary violence, and giving it as his opinion that a lunatic asylum would be a more fitting place for the prisoner. . . .

... He followed mechanically to the police-station, lost in grief and amazement.

Inspector Baumgarten, one of the most energetic and best known of the police officials, was on duty in the absence of the Commissary. He was a wiry little active man, quiet and retiring in his habits, but possessed of great sagacity and a vigilance which never relaxed. Now, though he had had a six hours' vigil, he sat as erect as ever, with his pen behind his ear, at his official desk, while his friend, Sub-Inspector, Winkel, snored in a chair at the side of the stove. Even the inspector's usually immovable features betrayed surprise, however, when the door was flung open and Von Schlegel was dragged in with pale face and disordered clothes, the silver hatchet still grasped firmly in his hand. Still more surprised was he when Strauss and the gendarmes gave their account, which was duly entered in the official register.

'Young man, young man,' said Inspector Baumgarten, laying down his pen, and fixing his eyes sternly upon the prisoner, 'this is pretty work for Christmas morning; why have you done this thing?'

'God knows!' cried Von Schlegel, covering his face with his hands and dropping the hatchet. A change had come over him, his fury and excitement were gone, and he seemed utterly prostrated with grief.

'You have rendered yourself liable to a strong suspicion of having committed the other murders which have disgraced our city.'

'No, no, indeed!' said Von Schlegel earnestly. 'God forbid!'

'At least, you are guilty of attempting the life of Herr Leopold Strauss.'

'The dearest friend I have in the world,' groaned the student. 'O, how could I! How could I!'

'His being your friend makes your crime ten times more heinous,' said the inspector severely. 'Remove him for the remainder of the night to the—But steady! Who comes here?'

The door was pushed open, and a man came into the room, so haggard and careworn that he looked more like a ghost than a human being. He tottered as he walked, and had to clutch at the backs of the chairs as he approached the inspector's desk. It was hard to recognise in this miserable looking object the once cheerful and rubicund sub-enrator of the museum and privat-docent of chemistry, Herr Wilhelm Schlessinger. The practised eye of Baumgarten, however, was not to be baffled by any change.

'Good-morning, mein Herr,' he said; 'you are up early. No doubt the reason is that you have heard that one of your students, Von Schlegel, is arrested for attempting the life of Leopold Strauss?'

'No; I have come for myself,' said Schlessinger, speaking huskily, and putting his hand up to his throat. 'I have come to ease my soul of the weight of a great sin, though, God knows, an unmeditated one. It was I who—But, merciful heavens! there it is—the horrid thing! O that I had never seen it!'

He shrank back in a paroxysm of terror, glaring at the silver hatchet where it lay upon the floor, and pointing at it with his emaciated hand.

'There it lies!' he yelled. 'Look at it! It has come to condemn me. See that brown rust on it! Do you know what that is? That is the blood of my dearest, best friend!'

Professor von Hopstein. I saw it gush over the very handle as I drove the blade through his brain. Mein Gott, I see it now!

'Sub-inspector Winkel,' said Baumgarten, endeavouring to preserve his official austerity, 'you will arrest this man, charged on his own confession with the murder of the late Professor. I also deliver into your hands, Von Schlegel here, charged with a murderous assault upon Herr Strauss. You will also keep this hatchet'—here he picked it from the floor—'which has apparently been used for both crimes.'

Wilhelm Schlessinger had been leaning against the table, with a face of ashy paleness. As the inspector ceased speaking, he looked up excitedly.

'What did you say?' he cried. 'Von Schlegel attack Strauss! The two dearest friends in the college! I slay my old master! It is magic, I say; it is a charm! There is a spell upon us! It is—Ah, I have it! It is that hatchet—(that thrice accursed hatchet!) and he pointed convulsively at the weapon which Inspector Baumgarten still held in his hand.

The inspector smiled contemptuously.

'Restrain yourself, mein Herr,' he said. 'You do but make your case worse by such wild excuses for the wicked deed you confess to. Magic and charms are not known in the legal vocabulary, as my friend Winkel will assure you.'

'I know not,' remarked his sub-inspector, shrugging his broad shoulders. 'There are many strange things in the world. Who knows but that—'

'What!' roared Inspector Baumgarten furiously. 'You would undertake to contradict me! You would set up your opinion! You would be the champion of these accursed murderers! Fool, miserable fool, your hour has come! And rushing at the astounded Winkel, he dealt a blow at him with the silver hatchet which would certainly have justified his last assertion had it not been that, in his fury, he overlooked the lowness of the rafters above his head. The blade of the hatchet struck one of these, and remained there quivering, while the handle was splintered into a thousand pieces.

'What have I done?' gasped Baumgarten, falling back into his chair. 'What have I done?'

'You have proved Herr Schlessinger's words to be correct,' said Von Schlegel, stepping forward, for the astonished policemen had let go their grasp of him. 'That is what you have done. Against reason, science, and everything else though it be, there is a charm at work. There must be! Strauss, old boy, you know I would not, in my right senses, hurt one hair of your head. And you, Schlessinger, we both know you loved the old man who is dead. And you, Inspector Baumgarten, you would not willingly have struck your friend the sub-inspector?'

'Not for the whole world,' groaned the inspector, covering his face with his hands.

'Then is it not clear? But now, thank Heaven, the accursed thing is broken, and can never do harm again. But, see, what is that?'

Right in the centre of the room was lying a thin brown cylinder of parchment. One glance at the fragments of the handle of the weapon showed that it had been hollow. This roll of paper had apparently been hidden away inside the metal case thus formed, having been introduced through a small hole, which had been afterwards soldered up. Von Schlegel opened the document. The writing upon it was almost illegible from age; but as far as they could make out, it was in mediæval German, which may be roughly translated:—

'This weapon was used by Max von Erlichingen for the murder of Joanna Bodeck. Therefore do I, Johann Bodeck, accurse it by the power which has been bequeathed to me as one of the Council of the Rosy Cross. May it deal to others the grief which it has dealt to me! May every hand that grasps it be reddened in the blood of a friend!

'Ever evil, never good,

Reddened with a loved one's blood.'

There was a dead silence in the room when Von Schlegel had finished spelling out this strange document. As he put it down, Strauss laid his hand affectionately upon his arm.

'No such proof is needed by me, old friend,' he said. 'At the very moment that you struck at me I forgave you in my heart. I well know that if the poor Professor were in the room he would say as much to Herr Wilhelm Schlessinger.'

'Gentlemen,' remarked the inspector, standing up and resuming his official tones, 'this affair, strange as it is, must be treated according to rule and precedent. Sub-inspector Winkel, as your superior officer, I command you to arrest me upon a charge of murderously assaulting you. You will commit me to prison for the night, together with Herr von Schlegel and Herr Wilhelm Schlessinger. We shall take our trial at the coming sitting of the judges. In the meantime take care of that piece of evidence'—pointing to the piece of parchment—'and, while I am away, devote your time and energy to utilising the clue you have obtained in discovering who it was who slew Herr Schiffer, the Bohemian Jew.'

The one missing link in the chain of evidence was soon supplied. On the 28th of December, the wife of Reinmaul, the janitor, coming into the bedroom after a short absence, found her husband hanging lifeless from a hook in the wall. He had tied a long bolster-case round his neck and stood upon a chair in order to commit the fatal deed. On the table was a note in which he confessed to the murder of Schiffer, the Jew, adding that the deceased had been his oldest friend, and that he had slain him without premeditation, in obedience to some uncontrollable impulse. Remorse and grief, he said, had driven him to self-destruction; and he wound up his confession by commending his soul to the mercy of Heaven.

The trial which ensued was one of the strangest which ever occurred in the whole history of jurisprudence. It was in vain that the prosecuting counsel urged the improbability of the explanation offered by the prisoners, and deprecated the introduction of such an element as magic into a nineteenth-century law-court. The chain of facts was too strong, and the prisoners were unanimously acquitted. 'This silver hatchet,' remarked the judge in his summing up, 'has hung untouched upon the wall in the mansion of Graf Von Schuller for nearly two hundred years. The shocking manner in which he met his death at the hands of his favourite house steward is still fresh in your recollection. It has come out in evidence that, a few days before the murder, the steward had overhauled the old weapons and cleaned them. In doing this he must have touched the handle of this hatchet. Immediately afterwards, he slew his master, whom he had served faithfully for twenty years. The weapon then came, in conformity with the Count's will, to Buda-Pesth, where, at the station, Herr Wilhelm Schlessinger grasped it, and, within two hours, used it against the person of the deceased Professor. The next man whom we find touching it is the Janitor Reinmaul, who helped to remove the weapons from the cart to the store-room. At the first opportunity he buried it in the body of his friend Schiffer. We then have the attempted murder of Strauss by Schlegel, and of Winkel by Inspector Baumgarten, all immediately following the taking of the hatchet into the hand. Lastly, comes the providential discovery of the extraordinary document which has been read to you by the clerk of the court. I invite your most careful consideration, gentlemen of the jury, to this chain of facts, knowing that you will find a verdict according to your consciences without fear and without favour.'

Perhaps the most interesting piece of evidence to the English reader, though it found few supporters among the Hungarian audience, was that of Dr. Langemann, the eminent medico-jurist, who has written text-books upon metallurgy and toxicology. \* He said:—

'I am not so sure, gentlemen, that there is need to fall back upon necromancy or the black art for an explanation of what has occurred. What I say is merely a hypothesis, without proof of any sort, but in a case so extraordinary every suggestion may be of value. The Rosicrucians, to whom allusion is made in this paper, were the most profound chemists of the early Middle Ages, and included the principal alchemists, whose names have descended to us. Much as chemistry has advanced, there are some points in which the ancients were ahead of us, and in none more so than in the manufacture of poisons of subtle and deadly action. This man, Bodeck, as one of the elders of the Rosicrucians, possessed, no doubt, the recipe of many such mixtures, some of which, like the *aqua-viva* to fana of the Medicis, would poison by penetrating through the pores of the skin. It is conceivable that the handle of this silver hatchet has been anointed by some preparation which is a diffusible

\* We recommend this latter portion to our readers and students.—Ed.

poison; having the effect upon the human body of bringing on sudden and acute attacks of homicidal mania. In such attacks it is well known that the madman's rage is turned against those whom he loved best when sane. I have, as I remarked before, no proof to support me in my theory, and simply put it forward for what it is worth.

With this extract from the speech of the learned and ingenious professor, we may close the account of this famous trial.

## SOLAR SPOTS AGAIN: OR ARYAN WISDOM

versus

### MODERN SCIENCE.

It will be in the recollection of your readers that in the course of our remarks (vide page 54, Nov. 1833, issue of the *Theosophist*) regarding the Madras Astronomer's theory about the recent change of the solar hue, we observed—"If the sun and moon should have presented the same appearance to our antipodes as to us here, it would go to show that the Government Astronomer's theory is untenable, unless he goes to the length of believing that Java smoke could travel round the globe."

Here is what Mr. C. H. Stockell of America writes about the subject.

Referring to the phenomena witnessed in India, and the explanation given by the Government Astronomer, it seems to me a great stretch of fancy to call it the sulphurous vapours from the recent volcanic eruptions 3,000 miles distant.

I cannot say that the sun and moon have been dimmed by any peculiar vapour in this country; but we have had for several weeks very brilliant skies at sunrise and sunset; for about three weeks they were a brilliant orange, and grow brighter just before sunrise and just after sunset, continuing in all before and after the sun at least half an hour. Then for the next three weeks the color was a fiery red and occasioned in nearly all the cities fire alarms. A portion of the time the whole horizon was of the color described and not confined particularly to the sun; later on it was apparently dependent on the sun. I was particularly struck with the brilliant orange tint extending round the eastern horizon, morning and evening, for weeks; brighter possibly when the sun was rising or when it was going down; but always more distinct in its color fifteen minutes to half an hour before the sun was in sight or after it had disappeared. Some of our astronomers hold that it is the tail of a comet we are passing through. I have not noticed it for several days owing to cloudy rainy weather. I was in Florida in October, and had a splendid view of it during the bright warm days. I found it here on my return, and it was the same on hot and cold days. The temperature seemed to have nothing to do with it.

Now the Madras Astronomer's theory only makes a feeble attempt at explaining the change in the solar color; while the American theory attempts to explain both solar color and solar spots. On the other hand, our theory accounts for solar color and solar spots as well as earthquakes and volcanic eruptions. Which of these is likely to be the correct theory if any one of them is correct at all, we leave your readers to judge. But this much is certain that modern science cannot give a correct explanation of the phenomena.

Modern science forgets its duty to treat with respect Aryan views on the subject—the result of the experience and observation of ages. For here is what a writer says in the *Liberal* :—

A Hindu astronomer contributes to the *Theosophist* several letters in which he endeavours to show that spots of considerable dimensions on the solar disc forebode famine in the land. This, he says, accords with the wisdom of the Aryans as displayed in the *Varah Mihira Sambita*, one of the Hindu sacred books, in which it is said that "when spots appear on the disc of the sun, the waters will get disturbed, the sky will be filled with dust, high winds, capable of turning down the tops of mountains and trees, will carry pebbles and sand along their course. The trees will fail to yield in their appropriate seasons, birds and animals will begin to howl; there will be an appearance of false fire all round, and lightning and earthquake will afflict mankind." How strange it is that the writers of the sacred books should know very little of the planet they inhabit. They can rant and rhapsodize about things that are undemonstrable, but only let them attempt to describe *terra firma* and they blunder like children. There are sun-spot years, but in none of them have the phenomena, which the Hindu sage describes, ever occurred. If spots on the sun caused these phenomena, the whole planet ought to be affected when the spots are most numerous, but this is not the case. Earthquakes, thunderstorms, lightning, disturbances of the ocean, volcanic eruptions, are all local phenomena, and spring from local rather than cosmic

We are as much surprised at the writer's ignorance of Aryan knowledge of earth as he is at the supposed Aryan ignorance of the same. We will take up the writer's several statements *seriatim* and examine what each is worth.

1. The writer's first statement is that the "Aryans know very little of the planet they inhabit, and that when they attempt to describe *terra firma* they blunder like children." We will now call upon the Aryans themselves to tell us briefly what they know of the Earth.

First, as regards the *shape* of the Earth. In Aryabhat-tiyam we find :—

वृत्तभूपंजरमध्येकक्षयापरिवेष्टितःखमध्यगतः ।

मृज्जलशिखिवायुमयोभूगोलस्सर्वतोवृत्तः ॥

The Earth situated in the middle of the heavens and composed of the five elements is spherical in its shape.

Again, in Bhaskara Charyar's *Goladhyaya*, we find :—

सर्वतःपर्वतारामिग्रामचैत्यचयैश्चितः ।

कदम्बकुसुमग्रन्थिःकेसरप्रकरैरिव ॥

On all sides of the Earth there are hills, gardens, villages and buildings which surround it just in the same way as the nut of the Kadamba flower (*Convolvulus pes-caprae*) is surrounded by its tender petals.

Again :—

समोपतःस्यात्परिधिःशतांशःपृथ्वीचपृथ्वीनितरान्तनीयान् ।

नरश्चतपृष्टगतस्यकृत्वा समैवतस्यप्रतिभास्यतःसा ॥

A hundredth part of the circumference of a circle appears to be a straight line. Our earth is a big sphere, and the portion visible to man being exceedingly small, the earth appears to be flat.

Again :—

ययत्रतिष्ठत्यवनीतलस्था मात्मानमस्याउपरिस्थितञ्च ।

समन्यतेऽतःकुचतुर्थसंस्था मिथश्चतेतिर्य्यागिवामनन्ति ॥

अधःशिरस्कंकुदलान्तरस्था च्छायामनुष्याइवनिरतीरे ।

अनाकुलास्तिर्य्यगधःस्थिताश्च तिष्ठन्तितत्रवयंयथात्र ॥

As every one imagines himself to be above the Earth, he fancies that one, who lives at the distance of a fourth part of the Earth's circumference, is at right angles to him; and he also fancies that one, that lives on the opposite side of the globe, has his head hanging below like the shadow of one standing on the margin of a lake. Just as we live here, so do the rest and feel in no way uneasy.

Again :—

लङ्कापुरेऽर्कस्ययदोदयःस्यात् तदादिनाह्वयमकाटिपुर्ष्या ।

अधस्तदासिद्धपटेऽस्तकालः स्याद्रोमकेरात्रिदलन्तदैव ॥

When it is sunrise at Lanka (on the Equator) it is midday at Java, sunset in America and midnight at Rome.

Again :—

सौम्यध्रुवंमेरुगताःखमध्ये याम्यञ्चदैत्यानिजमस्तकोद्धे ।

सव्यापसव्यंभ्रमदृक्षचक्रं विलोकयन्तिक्षितिजप्रसक्तं ॥

The Devas residing in Meru will find the North Pole in their zenith, and the Asuras residing in the south will find the South Pole in their zenith. The Equator forms the horizon of both, and both will find the Heavens move from left to right and from right to left respectively.

Secondly, as regards the *size* of the Earth :—

प्रीचकोयोजनसंख्ययाकुपारीधिः सत्याङ्गनादब्धयत्तद्वस्तः ॥

कुभुजचसायकभुवः सिद्धांशकेनाधिकाः ।

The circumference of the earth is 4,967 yojanas and its diameter, 1581 $\frac{1}{4}$  yojanas.

N. B.—A yojana being equal to 5 English miles, the circumference of the earth is 24,835 miles, and its diameter 7,905 $\frac{1}{4}$  miles.

Thirdly, as regards the *atmosphere*, we find :—

भूमेर्बहिर्द्विदशयोजनानि भूत्रायुरत्राम्बुदाविदुदाद्यं ।

The atmosphere surrounds the earth, and its height is 12 yojanas (60 English miles,) and the clouds, lightning and the like are all phenomena connected with it.

Fourthly, as regards the Polar days and nights :—

विषुवदृच्छुसदांक्षिति जत्वमितं तथा च दैत्यानां ।

उत्तरायाम्यौक्रमशो मूढाद्द्विगताध्रुवायतस्तेषां ॥

उत्तरगोलेक्षितिजादूर्ध्वं परितोभ्रमन्तमादित्यं ।

सव्यत्रिदशाः सततं पश्यन्त्यसुराः असव्यगं याम्ये ॥

To the Devas and the Asuras the Equator becomes their horizon. The North and South Pole stars are respectively in their zenith. The Devas, therefore, see the sun the whole period of its course on the north of the Equator, the sun being then above their horizon, and Asuras see the sun the whole period of its course on the south of the Equator, the sun being then above their horizon; and it follows from this that while the sun is visible to the Devas for six months, it is invisible to the Asuras for a like period and *vice versa*.

Fifthly, as regards earth's motion round its axis, in Vridharyabhattiyam we find :—

भयञ्जरः स्थिरो भूरे वावृत्यावृत्य प्रातिदैवासिकौ ॥

उदयास्तमयौ संपाद यतिग्रहनक्षत्राणां ।

The starry vault is fixed. It is the earth which, moving round its axis again and again, causes the rising and setting of the planets and stars.

And in Laghvaryabhattiyam :—

अनुलोमगतिर्नैस्थिः पश्यत्यचलं विलोमगं यद्वत् ।

अचलाभिभानितद्वत् समपश्चिमगानिलं कायां ॥

To one that travels in a boat, the fixed bank seems to move in the opposite direction; in the same way to one on the Equator the heavens will appear to move from east to west.

Sixthly, as regards the earth and other planets receiving their light from the sun :—

भूगृहभानांगालेर्धा निस्वच्छाययाविवर्णानि ।

अर्द्धानियथासारं सूर्याभिमुखानि दीप्यन्ते ॥

The earth, the planets and the comets all receive their light from the sun, that half towards the sun being always bright, the color varying with the peculiarity of the substance of each.

Seventhly, as regards the under currents, in Varaha-samhita we find :—

पुंसां यथाङ्गेषु शिरास्तथैव क्षितावपि प्रोम्नतनिसंस्थाः ।

Just in the same way as there are arteries for the circulation of blood in human body, the earth has under-currents lying one over the other.

2. The next statement is "there are sun spot years, but in none of them have the phenomena which the Hindu Sage describes ever occurred." In reply to this, we have only to direct the attention of the writer to the famine of 1876-77, when spots of considerable dimensions appeared on the disc of the sun.

The connection between solar spots and terrestrial famine is now a recognised fact (vide page 235, June 1882, issue of the *Theosophist*.)

3. The third statement is that the Aryans "can rant and rhapsodize about things that are undemonstrable." The writer evidently wants to know the rationale of the connection existing between solar spots and terrestrial disturbances. We ask him in return to show us the rationale of the Attraction of Gravity existing between matter and matter as discovered by Sir Isaac Newton.

4. The next statement is "if spots on the sun have caused these phenomena, then the whole planet ought to be affected." We might as well say if a man falls from a height, he must suffer a fracture of the bone in every part of the body. Besides, portions of the solar disc represent portions of our earth, just as the signs of the Zodiac represent parts of earth, *e. g.*, sign Gemini represents England. It therefore follows that only those parts of Earth will suffer which correspond to parts of solar disc in which the spots happen to appear (vide Koorma Vipaka Adhyaya of Varaha Samhita).

5. The last statement is that "Earthquakes and the like are all local phenomena and spring from local rather than cosmic causes." The statement amounts to saying that to shake the earth, the shaking agency must be inside and not outside the earth. The cosmic agency then that can move the earth through space at the immense velocity of 66,000 miles an hour, is powerless to produce a little jerk! Our Earth with its brother and sister planets is tied by the strong ties of gravity to the parent sun. It depends on the sun for light and heat for its very existence. If, in the face of such a dependency, modern science should really assert that the more important terrestrial phenomena have nothing to do with that great luminary, such a science is, without doubt, still in its cradle, and, when it begins to speak, it "blunders like children."

## PRACTICAL INSTRUCTIONS FOR STUDENTS OF OCCULTISM.

### III.

#### DEVELOPMENT OF WILL.

You may be master of the Cabala and Chemistry; but you must also be master over flesh and blood.—BULWER LYTTON.

In our last letter on "Practical Instructions" we have attempted to show that thoughts and ideas, passions and desires, are not what are commonly understood as evanescent or temporary states of the molecules of the brain; but things, which by associating themselves with the semi-intelligent forces of nature, may become living realities and powerful instruments for good or for evil. Thoughts create desire, desire sets the will in motion, the motion of the will produces force and force gives shape to matter or substance.

There are three possibilities by which we may deal with these forces. We may either allow them to control us and become subservient to them, or we may associate ourselves with them and thereby make them our co-laborers, or we may become their masters and command them by the power of our will.

A person that allows himself to be guided entirely by his lower impulses and animal desires, is either a criminal or a maniac, and it is very difficult to draw the line between the two. We read occasionally of cases where the most horrible crimes have been committed without any apparent provocation, and which can only be explained by the fact that the perpetrators either did not have the power or did not make the necessary efforts to resist such impulses.\*

The oftener man gives way to such impulses or influences, the less becomes his power of resistance. His condition finally becomes one of passive evil and, after death, his personality disintegrates and perishes in the eighth sphere. The second possibility is to associate oneself with the evil powers of nature, to enter into communication with or

\* See the story of "The Silver Hatchet" in the present number.

propitiate the elementals, to make them his co-operators in evil, or, in mediæval language, "to make a compact with the evil ones." Under this head come the practices of *Black Magic*, which, although they may require a certain concentration of Will, do not require any high or enlightened development of the same. Instead of expanding the mind, such practices produce a contraction of the same. They consist in establishing an extraordinary amount of selfishness and isolation. The will is made forcible by certain exercises, such as the careless endurance of physical pain, or by concentrating all mental energies upon some material object. By such practices the "Black Magician" may obtain the assistance of the elementals, and through them produce some occult phenomena. His condition becomes one of *active evil*, and the consequence is not only the final destruction of his personality, but also that of his individuality.

The *third* possibility, and the only method to be recommended, is to develop our will power, so as to make the forces of nature our slaves and to control them. To gain the mastery over these forces is the most important step for the student of occultism, and the great secret, without a knowledge of which no further advance can be made, and the only method by which that power can be obtained, is by continual practice; that is, by a continual exercise of the will in the right direction. This does not mean only a continual desire to suppress selfish desires, but a continuous effort to accomplish and accumulate such work as is useful for the real progress of mankind. Like everything else in its right place, the animal nature also has its uses, and the lower principles are necessary factors at a certain state of evolution. They are the soil into which the *tree of life* extends its roots, and from which the higher principles draw substance and strength. A man can be born without material desires and impulses, if the "Ego" or monad has already conquered them; but for *average* man to be born without material desires, would be in the present state of evolution neither desirable nor useful. A man, for instance, without any combativeness would have no courage or self-reliance and would be a moral as well as a physical coward, without destructiveness he would have little energy to subdue evil, without acquisitiveness he would acquire no knowledge, and an entire absence of amativeness would probably make him narrow-minded, self-centred and selfish. Neither is it at all desirable that the so-called "fall of man" (the descent of matter into spirit) should never have taken place; for in that case man would have remained in the state of blissful ignorance of an elementary spirit, while now he obtains knowledge and thereby becomes like God.

If the Will is a universal force, it necessarily follows that there can be only *one* supreme Will in the universe, although it may manifest itself in different forms, and the more we unite our individual Will with the supreme Will and co-operate with the same, the more our Will becomes powerful; while if we attempt to bring the action of our individual Will in opposition to the supreme Will, the consequences are necessarily disastrous to ourselves and lead to isolation and death. The Will to become powerful must become free from material desires. If we desire an object, we do not necessarily attract that object, but the object surely attracts us and we may become its slaves. Eliphaz Levi says: "The Will accomplishes everything which it does not desire," and illustrations of the truth of this paradox are seen in every-day life. We see people spending their whole lives in vain and useless efforts to obtain riches, and either dying in poverty, or even if they accomplish their object, craving for more, and leading a life more miserable and wretched than the homeless beggar in the street; we see the office-seeker desiring power, bowing before ruffians, and the result is frequently an ignominious failure; we see the fop who wishes to be admired by women usually ridiculed and rejected by intelligent women and we often see those who seek happiness in external pleasures becoming disgusted with life and ending it by their own hands. The safest way to become rich is by not craving for riches; because if we are contented with what we have, even if it be nothing, we shall be richer than the miser who possesses much and wants still more. If we desire power, we must rise morally and intellectually above others and be willing to sacrifice our own desires for their benefit, and power

will come to us unasked. If we desire love, let us distribute all the love we have to all mankind, and the love of all whose love it is desirable to possess will descend upon us like the rain descends upon earth. If we desire happiness, we must be willing to give up our selfishness and we shall find happiness within ourselves.

A consideration of the above makes it evident that the development of the will and the attainment of occult powers is simply a natural result of evolution. Many incarnations may be necessary for average man to arrive at the state of perfection attained by the Adept, but the process may be hastened by a continuous effort of the will. Man in his youth longs for the material pleasures of earth, for the gratification of his physical body. As he advances in age he throws away his playthings and reaches out for something more substantial. He enters perhaps into intellectual pursuits, and not, unfrequently, after a lifelong study, comes to the conclusion that he has been wasting his time by running after a shadow. Perhaps love steps in and he may think himself the most fortunate of mortals, only to find out sooner or later that ideals can only be found in the ideal world. He then becomes convinced of the emptiness of the shadows he has been pursuing, and like the winged butterfly, emerging from the chrysalis, he stretches out his feelers into the realm of the infinite spirit, and is astonished to find a radiant sun where he only expected to find darkness and death. Some arrive at this light sooner, others arrive later, and many are lured away by some illusive light, which they mistake for the sun, and scorch their wings and perish.

Life is a continuous battle between good and evil, between the results of a previous Karma and the efforts of the Will to overcome them, between man's higher nature and his lower impulses and man's future depends on which will come out victorious. But this battle does not last for ever if determined efforts are made by the will. A set of animal impulses, once thoroughly subdued, are not liable to assert themselves again, and the more man exercises his will the more will he gain in strength.

There are two gigantic obstacles in the way of true progress: the misconception of what we believe to be *God* and the misconception of what we believe to be *Man*. As long as man believes in a personal God who distributes favors to some and punishes others,—a God that can be reasoned with, persuaded or pacified—he will keep himself within the narrow circle of his ignorance and his mind cannot sufficiently expand. To be selfish and at the same time to continually think of some place of personal enjoyment or heaven, does not assist in man's progression. If such a man desists from doing a wicked act or denies himself material pleasure, he does not do so from any innate love of good, but either because he expects a reward for his "sacrifice," or because his fear of God makes him a coward. We must do good because we want to do good, and not from fear of punishment or from hope for any personal consideration. The gods help those that help themselves, and the wise expect nothing but *justice*. The wise man knows that he is only a part of the universal whole; that by doing good to others he also benefits himself, and that by injuring others he becomes his own executioner. To love all is to him a necessity, and the love of self appears to him illusive and foolish.

The knowledge of God and the knowledge of Man are ultimately identical, and he who knows himself, knows God. If we understand the nature of the divine powers within us, it will not be difficult to unite our Will with the supreme Will of the cosmos; we shall then be no longer subject to external influences, but we shall control them; instead of being the slaves of Nature, we shall become her masters, and instead of being ruled by demons, we shall become rulers and gods.

This is, however, a doctrine which is liable to be misunderstood, and a misunderstanding of which may lead to consequences of a most serious nature. To unite our will with the universal will, does not simply mean a sentimental acquiescence with the decrees of an inexorable fate and a patient indifference to whatever may happen; much less does it mean a submission of our will to the will of an ignorant or wicked person; but it means a strong and active desire to accomplish whatever may be in our power for the good of humanity. An old doctrine which often turns up in the Middle Ages, and was especially prevailing among the

Convents of France and Spain, says: "The devout having offered up and annihilated their own selves exist no longer but in God. *Thenceforth they can do no wrong.* The better part of them is so divine, that it no longer knows what the other is doing." This has been misunderstood by the numerous monks and nuns of these times, who thought that after they had worked themselves to a certain degree into the favor of God by confession, castigation and penances, they might thenceforth do as they pleased and commit the most outrageous acts of profligacy and injustice without being made responsible for their acts; and as the clergy were considered to be the especial favorites of Divinity and God's deputies, the people would often submit entirely their own wills to the desires of clerical scoundrels, who did not hesitate to assert their authority by torture and fire. They became indeed irresponsible beings, because by associating themselves with their animal natures they became brutalised, and the "better part of them" did no longer know what the other was doing, because having separated themselves from their higher principles and having merged themselves into the lower ones, they had no "better parts" any more. They became "devils" instead of becoming "gods."

To sacrifice one's self means to subdue the *lower* desires and strengthen the higher ones; to unite one's will with the divine will, is to want nothing else but the good, to live up to one's highest conceptions of justice and truth, and to have one's actions always guided by a universal love for humanity. It means not only to *desire* the good, but to *dare* to do it. To accomplish this, it is necessary that our highest conceptions of such abstract ideas should be correct. It is sometimes said, that it does not make any difference what a man believes, so long as he acts rightly; but a person cannot be certain to act rightly, unless he knows what is right, and we therefore often see the most horrible acts of injustice committed in the name of justice. The belief of the majority is not always the correct belief, and the voice of conscience and humanity is often drowned in the clamor of a superstition based upon an erroneous theological doctrine. An erroneous belief is undoubtedly detrimental to progress, and a belief to be useful must be based on knowledge. The true development of will depends therefore on the attainment of knowledge, because knowledge establishes faith and without faith the will cannot have much power.

#### IS THE DESIRE TO "LIVE" SELFISH?

THE passage "to Live, to live, TO LIVE must be the unswerving resolve," occurring in the article on the *Elixir of Life*, published in the March and April Numbers of Vol. III of the *Theosophist*—is often quoted, by superficial readers unsympathetic with the Theosophical Society, as an argument that the above teaching of occultism is the most concentrated form of selfishness. In order to determine whether the critics are right or wrong, the meaning of the word "selfishness" must first be ascertained.

According to an established authority, selfishness is that "exclusive regard to one's own interest or happiness; that supreme self-love or self-preference which leads a person to direct his purposes to the advancement of his own interest, power, or happiness, without regarding those of others."

In short, an absolutely selfish individual is one who cares for himself and none else, or, in other words, one who is so strongly imbued with a sense of importance of his own personality that to him it is the acme of all his thoughts, desires and aspirations and beyond that all is a perfect blank. Now, can an occultist be then said to be "selfish" when he desires to live in the sense in which that word is used by the writer of the article on the *Elixir of Life*? It has been said over and over again that the ultimate end of every aspirant after occult knowledge is *Nirvana* or *Mukti*, when the individual, freed from all *Mayavic Upadhi*, becomes one with *Paramatma*, or the Son identifies himself with the Father in Christian phraseology. For that purpose, every veil of illusion which creates a sense of personal isolation, a feeling of separateness from THE ALL, must be torn asunder, or, in other words, the aspirant must gradually discard all sense of selfishness with which we are all more or less affected. A study of the Law of Cosmic Evolution teaches us that the higher the evolution, the more does it tend towards Unity. In fact, Unity is the ultimate possibility of Nature, and those who through vanity and selfishness go against her purposes, cannot but incur the punishment of total annihilation. The Occultist thus recognises that unselfishness and

a feeling of universal philanthropy are the inherent law of our being, and all he does is to attempt to destroy the chains of selfishness forged upon us all by *Maya*. The struggle then between Good and Evil, God and Satan, *Suras and Asuras, Devas and Daityas*, which is mentioned in the sacred books of all the nations and races, symbolizes the battle between unselfish and the selfish impulses, which takes place in a man, who tries to follow the higher purposes of Nature, until the lower animal tendencies, created by selfishness, are completely conquered, and the enemy thoroughly routed and annihilated. It has also been often put forth in various theosophical and other occult writings that the only difference between an ordinary man who works along with Nature during the course of cosmic evolution and an occultist, is that the latter, by his superior knowledge, adopts such methods of training and discipline as will hurry on that process of evolution, and he thus reaches in a comparatively very short time that apex to ascend to which the ordinary individual may take perhaps billions of years. In short, in a few thousand years he approaches that form of evolution which ordinary humanity will attain to perhaps in the sixth or the seventh round during the process of *Manvantara*, i. e., cyclic progression. It is evident that average man cannot become a MAHATMA in one life, or rather in one incarnation. Now those, who have studied the occult teachings concerning *Devachan* and our after-states, will remember that between two incarnations there is a considerable period of subjective existence. The greater the number of such *Devachanic* periods, the greater is the number of years over which this evolution is extended. The chief aim of the occultist is therefore to so control himself as to be able to control his future states, and thereby gradually shorten the duration of his *Devachanic* states between his two incarnations. In his progress, there comes a time when, between one physical death and his next re-birth, there is no *Devachan* but a kind of spiritual sleep, the shock of death, having, so to say, stunned him into a state of unconsciousness from which he gradually recovers to find himself reborn, to continue his purpose. The period of this sleep may vary from twenty-five to two hundred years, depending upon the degree of his advancement. But even this period may be said to be a waste of time, and hence all his exertions are directed to shorten its duration so as to gradually come to a point when the passage from one state of existence into another is almost imperceptible. This is his last incarnation, as it were, for the shock of death no more stuns him. This is the idea the writer of the article on the *Elixir of Life* means to convey, when he says:—

By or about the time when the Death-limit of his race is passed HE IS ACTUALLY DEAD, in the ordinary sense, that is to say, that he has relieved himself of all or nearly all such material particles as would have necessitated in disruption the agony of dying. He has been dying gradually the whole period of his Initiation. The catastrophe cannot happen twice over. He has only spread over a number of years the mild process of dissolution which others endure for a brief moment to a few hours. The highest Adept is in fact dead to, and absolutely unconscious of, the World—he is oblivious of its pleasures, careless of its miseries—in so far as sentimentalism goes, for the stern sense of DUTY never leaves him blind to its very existence.....

The process of the emission and attraction of atoms, which the occultist controls, has been discussed at length in that article and in other writings. It is by these means that he gets rid gradually of all the old gross particles of his body, substituting for them finer and more ethereal ones, till at last the former *sthula sarira* is completely dead and disintegrated and he lives in a body entirely of his own creation, suited to his work. That body is essential for his purposes, for, as the *Elixir of Life* says:—

But to do good, as in every thing else, a man *must have* time and materials to work with, and this is a necessary means to the acquirement of powers by which infinitely more good can be done than without them. When these are once mastered, the opportunities to use them will arrive....

In another place, in giving the practical instructions for that purpose, the same article says:

The physical man must be rendered more ethereal and sensitive; the mental man more penetrating and profound; the moral man more self-denying and philosophical.

The above important considerations are lost sight of by those who snatch away from the context the following passage in the same article:—

And from this account too, it will be perceptible how foolish it is for people to ask the Theosophists "to procure for them communion with the highest Adepts." It is with the utmost difficulty that one or

two can be induced, even by the throes of a world, to injure their own progress by meddling with mundane affairs. The ordinary reader will say—"This is not *God-like*. This is the acme of selfishness"... But let him realise that a very high Adept, undertaking to reform the world, would necessarily have to once more submit to Incarnation. And is the result of all that have gone before in that line sufficiently encouraging to prompt a renewal of the attempt?

Now, in condemning the above passage as inculcating selfishness, superficial readers and thinkers lose sight of various important considerations. In the first place, they forget the other extracts already quoted which impose *self-denial* as a necessary condition of success, and which say that, with progress, new senses and new powers are acquired with which infinitely more good can be done than without them. The more spiritual the Adept becomes, the less can he meddle with *mundane, gross* affairs and the more he has to confine himself to a spiritual work. It has been repeated, time out of number, that the work on a spiritual plane is as superior to the work on an intellectual plane as the one on the latter plane is superior to that on a physical plane. The very *high* Adepts, therefore, do help humanity, *but only spiritually*: they are constitutionally incapable of meddling with *worldly* affairs. But this applies only to very high Adepts. There are various degrees of Adeptship, and those of each degree work for humanity on the planes to which they may have risen. It is only the *chelas* that can live in the world, until they rise to a certain degree. And it is because the *Adepts do* care for the world that they make their *chelas* live in and work for it, as many of those who study the subject are aware. Each cycle produces its own occultists who will be able to work for the humanity of those times on all the different planes; but when the Adepts foresee that at a particular period the then humanity will be incapable of producing occultists for work on particular planes, for such occasions they do provide by either giving up voluntarily their further progress and waiting in those particular degrees until humanity reaches that period, or by refusing to enter into *Nirvana* and submitting to re-incarnation in time to reach those degrees when humanity will require their assistance at that stage. And although the world may not be aware of the fact, yet there are even now certain Adepts who have preferred to remain *statu quo* and refuse to take the higher degrees, for the benefit of the future generations of humanity. In short, as the Adepts work harmoniously, since unity is the fundamental law of their being, they have as it were made a division of labour, according to which each works on the plane at the time allotted to him, for the spiritual elevation of us all—and the process of longevity mentioned in the *Elixir of Life* is only the means to the end which, far from being selfish, is the most unselfish purpose for which a human being can labour.

#### THE FUNDAMENTAL TENETS OF CHRISTIANITY AND THEOSOPHY.

Much interest has of late been exhibited in European as well as Asiatic newspapers, especially in the *Madras Mail*, in regard to the subject of Theosophy in its relation to Christianity. Clergymen have delivered lectures on Theosophy, and their lectures exhibited a deplorable want of information about the subject on which they lectured. Learned correspondents displayed great skill in asking, in the space of a few lines, many more questions than could be satisfactorily explained in so many columns, and when in the course of the controversy we attempted to demonstrate that an arbitrary forgiveness of sins was an impossibility and an injustice, our adversaries charged us with an intention to overthrow the fundamental doctrines of "Christianity." They declared that such an attack on Christianity would "hurt their feelings," they threw up the sponge, sounded the bugle for retreat, and would listen no longer.

We argued that Theosophy is not opposed to *true Christianity*; but only to that which is false in the *Christian doctrines*, and we attempted to prove that many of the Christian doctrines are false or misunderstood; but it is impossible to argue the question without coming into antagonistic contact with the feelings of those whose emotional natures cling to these doctrines by force of education and habit. New ideas and new truths are not borne into the mind without pain. Those

would-be investigators, who prefer the sweet dreams of old superstitions to a painful revelation of glorious truths, cannot investigate properly and must be contented to wait until sooner or later their minds ripen to understanding, and their eyes are opened to see the light that has already dawned around them.

The age of superstition is passing away and the age of reason advances. Old superstitions and fetichos are laid away amongst the rubbish of the past, and we bestow a pitying glance upon the playthings which helped to amuse us in our youth, but which now have become useless. A religious system based upon ignorance can exist no longer, and unless it is followed by a religion based upon reason, its destruction will be followed by irreligion, materialism and spiritual death.

The civilised world is teeming with journals, exposing the fallacies and absurdities of many of the Christian doctrines; they treat us *ad nauseam* to an endless repetition of childish Bible-stories by dishing them up in their exoteric sense; while they apparently do not even suspect that an esoteric sense is hidden behind; and that the Bible no less than the tales of "Thousand and one nights" contains great truths, if we only know where to look for them. The apostles of materialism express their disgust at those fables and the public applaud them; but those apostles have only come to destroy, they do not build; they have nothing better to offer, and the public that applauded them, standing before the unbridged gulf of dark materialism, recoils in horror and clings again to its weakened creeds.

*Christian Theology* says: "You must believe the stories of our bible, no matter how impossible they may appear to you."

*Materialism* says: "The stories told in the bible are unreasonable, absurd and ridiculous, and he who believes them is a fool."

*Theosophy* says: "Many of the bible-stories are purposely made absurd, so that no one should take them in their literal sense. We must try to understand their esoteric meaning, and we shall then find many important truths hidden in them."

*Christian Theology* says: "We believe that there is an old bridge somewhere, which spans the gulf that separates time from eternity. It is said that our forefathers have passed over that bridge, although none of them has returned; its material may be rotten, but in want of anything better we must trust to it."

*Materialism* says: "Fool! there is no such bridge. We all shall have to jump into the chasm and we can do nothing better than to resign ourselves to our fate."

*Theosophy* says: "The gulf is of your own creation. No bridge is necessary, because you have wings to fly over it, and it is only fear that holds you back. Spread the wings of your soul and trust to your powers, and you will be safe."

The *Christian doctrine* says: "God is a loving father. He created the heaven and the earth out of nothing; he made Adam out of a piece of clay and Eve out of one of Adam's ribs. He is the engineer who turns the wheel of the world and he can make it go or stop it as he pleases."

*Materialism* says: "Nonsense! Everything that exists is ruled by blind laws, and these blind laws have come into existence by chance. If other conditions had prevailed, other laws would have been the result. There is no intelligence in nature. Man developed out of a monkey and the monkey out of protoplasm."

*Theosophy* says: "The whole universe is God. It evolved out of itself and by its own divine will; being itself the supreme, infinite and incomprehensible source of all wisdom, power and intelligence. The laws of nature must be unchangeable because they are perfect and just; and although man's present form is a result of his evolution from inferior forms, his physical evolution is accompanied by a corresponding spiritual evolution, in which also the law of the "survival of the

fittest" prevails. It says that primordial man before his descent into matter was bisexual, and that the allegory of Adam and Eve hides a great truth, which is also found in the sacred books of the most ancient religions."

*Christian Theology* says: "Jesus Christ is our personal saviour, who can save whomsoever he pleases, if we only believe in him."

*Materialism* says: "Jesus Christ has never existed and can therefore not save you. Historical evidence proves this."

*Theosophy* says: "Christ is a principle which exists within you, and you must save yourself by clinging to that higher principle and by crucifying your lower passions and animal desires. This Christ principle has never died and is the only thing in us which is immortal. If we separate ourselves from that principle by following the attractions of matter, we shall surely (spiritually) die; but if we assimilate ourselves with it, we shall become immortal."

*Christian Theology* says: "You must pray loud enough, so that God will hear you, and you must pray with skill, so as to persuade him to do as you please."

*Materialism* says: "Your God is a creation of your own imagination and no amount of shouting will have any effect on him; he cannot hear you, because he does not exist."

*Theosophy* says: "You are Gods yourselves, and it is in your own power to grant your own prayers. The right way to pray is to act. Matter clings to you only so long as you cling to matter, and it depends on your own efforts to become free."

*Christian Theology* says: "You must do right, because that pleases God and he will reward you; but if you act wrongly the devil will catch and punish you."

*Materialism* says: "Individual happiness is the highest object of life, and we must do all we can to obtain that happiness while we live; but we must be careful by doing so not to interfere with the rights of others, because the police constable might catch us and then our happiness would come to a premature end."

*Theosophy* says: "Man as such has no permanent individual existence and cannot injure another without injuring himself. It says that selfishness is the greatest evil, and that we cannot benefit ourselves except by benefiting others; because we are all only inherent parts of one universal whole."

*Christian Theology* says: "Never mind, if you happen to do wrong, your sins will be forgiven you, provided you repent and ask God to forgive them."

*Materialism* says: "The ideas of right and wrong are only results of our education. What is considered wrong in one country, may be called right in another. If our conscience suffers in consequence of having acted wrongly, it is only because we imagine such acts to be wrong; if we imagined them to be right, we would be proud of them."

*Theosophy* says: "A sin can be outgrown but cannot be forgiven. The law of justice is eternal and cannot be changed, and every act, whether good or evil, has its corresponding good or evil consequences. A man may forgive an injustice done to him, because the magnitude of that injustice depends entirely on his own estimation of the same; human law may be changed according to the persuasiveness or the cunning of a lawyer, the sympathies of a jury or the partiality of a judge; but moral law is unchangeable, because it is eternal."

*Christian Theology* says: "This is the time of grace; after this life is over, everlasting joy or endless misery awaits you."

*Materialism* says: "Nothing awaits you and there is no life after death."

*Theosophy* says: "As night and day, labor and rest follow each other in succession, so follow one upon another the different states of existence. There is no

death for the spirit but only a period of rest and subjective enjoyment of his merits, after which a new and objective life begins. One life is too short for the evolution of a perfect man; but nature is not stingy and has provided for us by the law of reincarnation."

*The Christian* says: "Oh Lord! save my soul and the souls of the men and women that belong to my church, but destroy our enemies."

*The Materialist* says: "We have no souls; but it is advisable that we should live together in peace, because that will be more comfortable for all."

*Theosophy* says: "All men have from nature equal and sacred rights, but all men are not equals. We all are members of one family, and it is the duty of those that are higher to assist to rise those that are lower. Selfishness is the root from which grows all evil, and whatever we do should be done for the benefit of the universal brotherhood of humanity."

But it will be said: "If you take away all these doctrines from Christianity, what will there be left?" We answer: "The truth will be left. If you understand the symbolical teachings of Christianity, you will see that we have taken away none of them; but that they are essentially the same as the teachings of Theosophy. We have destroyed nothing but error, because truth is eternal and cannot be destroyed. There can be only one truth and consequently only one religion, because there is no religion higher than truth."

#### WHAT'S IN A NAME?

IN the beginning of a discussion of any subject a correct or fixed definition of terms is the first necessity to avoid misunderstanding. The greatest wars have been caused and thousands of people have lost their lives simply in consequence of a misunderstanding of terms. Servetus was roasted to death on a slow fire at the instigation of Calvin, simply on account of a misunderstanding of terms; for while the one maintained that Christ was the eternal son of God, the other insisted that Christ was the son of the eternal God; and it is probable that neither of them knew what was exactly meant by the word "Christ" or "eternal," nor can it be proved that either of them knew what "God"—much less "the son of God"—meant.

Superficial minds are only too willing to judge about the nature of a thing by the name it bears, and it would therefore be very useful if we would always call things by their right names,—a thing which is very seldom done in practical life. Wherever we look, we see people assuming pompous titles or names, while at the same time they do not at all come up to the standard which their titles imply, or are perhaps even ignorant of the signification of the same. We see India full of "Brahmins," whose only Brahminism consists in the observance of some—to them—meaningless ceremonies, while the very meaning of the term "Brahmin" is unknown to them; we see the Western world thronged with so-called followers of Christ, who would be the first to send their professed teacher and god to jail or to the lunatic asylum, if he would appear amongst them and attempt to follow the precepts which the "Christians" profess to believe. We see the world full of "Doctors"—which term means "a learned man, or one skilful in his profession," while with a vast majority of them the name "Doctor" is simply an academical title behind which they may shield their ignorance and throw sand into the eyes of a confiding public. We see "Judges" to whom the principle of justice is something "unknowable," and whose only occupation seems to be to pervert the law for the purpose of thwarting the ends of justice, and there are "Divines," who far from being divine or spiritual, are not even human; but who, according to their animal propensities, ought to be classified amongst the brutes. A photographer who, without the least comprehension of the laws of light and shadow, does the mechanical work of producing pictures, or a painter who manufactures villainous daubs, is called an artist, a man that sets people wild by scratching a fiddle, or one who teaches children the A. B. C., is said to be a "professor," and so on *ad infinitum et absurdum*.

Now what can be the possible use of giving a man a better name than what he deserves? We can see justice in this, only

if we consider a title not as actually intended to signify what the man *is*, but what he ought to be. Names and titles are ornaments, and unless the man fits the ornament, the ornament will not fit the man. A Brahmin, a Doctor, a Judge or a Divine with the manners of a pig does not look any less ridiculous than a pig would look wearing the order of the "garter" or the cross of the "legion of honor." A man who possesses a title ought to attempt to live up to that which that title implies or, in other words, to become worthy of it.

And now we will bring what has been said above, home to ourselves and see how it applies to the "Fellows of the Theosophical Society." It is nothing unusual for one, who has joined the Theosophical Society, to call himself a "Theosophist," and it has happened that such a "Theosophist," when interrogated about the meaning of the term, did not even know what a "Theosophist" is or is intended to be. Theosophy, as has often been demonstrated, means *Supreme Wisdom*, and a "Theosophist" is a human being who is full of divine wisdom, one who has entirely subdued his animal nature and united himself more or less with his spiritual soul. It will therefore be seen that besides the Mahatmas there are few people in the world who can lay any just claim to be called "Theosophists," and for a vicious person or a dunce to call himself a "Theosophist" is simply absurd. We recommend to all members of the Theosophical Society to consider the above suggestions, and ask themselves whether or not they are worthy to be called "Theosophists." If they are not worthy of that name, let them strive to become worthy of it, and if they are unable or unwilling to do so, let them drop that title, and simply call themselves F. T. S.

H.

## Answers to Correspondents.

DINANATH P. DRUME (*Bombay*):—A study of the Laws of Karma and of Affinity, so often discussed in the Theosophical and other Occult literature, gives a satisfactory solution to your questions about "the ties of relationship." The physical, moral, intellectual, and spiritual faculties—which the incarnated entity possesses, after its *Devachanic* period is enjoyed,—are the results of the actions produced on those different planes by that entity in its previous incarnation. By the Law of Affinity, it is attracted, at the time of birth, only where those particular facilities may have grouped themselves by the Law of Karma and of Cause and Effect.

E. WOLLEB (*San Francisco*):—When Col. Olcott speaks of the possibility of "earning the right to command the presence of a Mahatma," he does not use the word "command" in the sense of the pupil being able to order about his Master. All he implies, evidently, is that the MAHATMA being but an humble servant of Nature, any one who follows the natural law "commands" its servants, just as we speak in ordinary language of being able to "command" Nature, although we well know that all we command is the knowledge which we utilise for the purpose of producing the desired effect, having first learnt the operations of the Law of Cause and Effect.

A person may by certain practices gain what are vulgarly called "powers" without acting up to the "seven precepts" enjoined on the *Chelas*, although these "powers" are of a very low nature compared to the high possibilities of the Esoteric Science. These low "powers," being of a psychomaterialistic nature, are very dangerous in the hands of the wicked and the ignorant, although with our present march of progress these may become commonly known in time. A sensible man, one who has the real good of humanity at heart, will always try to keep dynamite out of the vulgar reach, although he may try to gradually educate people to a correct apprehension of its functions and properties. But until he is satisfied that they will never misuse it, either through ignorance or wickedness, for any purpose resulting in public harm, he will never touch them its *modus operandi*. And the purpose of the observance of the said "seven precepts" by the *Chelas* is to dispel their ignorance and eradicate their lower animal nature, which alone can abuse those "powers" for base purposes. But when the pupils have proved themselves out of that danger, they are taught the *modus operandi* of what they knew before, only theoretically. Of course, the higher powers, which are of a purely psychological nature, are beyond the reach of ordinary men until they evolve their higher psychological faculties.

*Akasa* may be said to be a physical or a mental force, or a combination of both, according to the meaning attached to the latter two terms. All space is called *Akasa* in the Hindu Philosophy, although this *Akasa* must not be confounded with the "Abstract Space," of which the book of Kiu-te speaks as the only eternal reality.

N. M. ADARÉ (*Jubbulpur*):—The "miraculous" cure would probably have also taken place, if the patient had been left alone. Many such "cures" seem "miraculous," because a false diagnosis is made.

K. (*Campore*):—We must not judge our enemies too severely. We know by experience that they often become our most useful friends after they find out their mistake. K. B. B. is fully entitled to stick to any creed he chooses, so long as he will grant to others the same freedom of choice.

D. F. L. (*Guatemala*):—We too believe in prayer (active meditation) and sacrifice (of selfishness).

A. SYMPATHISER (*Calcutta*):—We prefer to print original matter. Your letter has already appeared in the *Indian Mirror* of 15th June.

HEMANTHO KUMAR MUKHOPADHYAYA (*Bhowanipore*):—You will find the answers to your questions in "Isis Unveiled."

L. LIOTARD (*Simla*):—Declined with thanks.

T. R. SUBRAMANIA SASTRY (*Negapatam*):—Declined with thanks.

A person, vain enough to want to be called a "Doctor of Theosophy," would be a sorry kind of a "Theosophist."

## Letters to the Editor.

### THE USES OF SCIENCE.

We believe that we know that a good Karma, with all its ulterior results, is principally acquired on this earth, by a good behaviour, by high morality, purity, honesty and benevolence.

But all this has not precisely for its object knowledge and learning.

Now the knowledge that study can give is of two kinds; terrestrial science, and that which busies itself with things of the higher world.

The first use of the former is to advance one's own affairs; it gives a worldly position and maintains it. It also serves as a certain gymnastics for the soul; but as the data of terrestrial science are in many cases inexact, it is liable to alter judgment, and, at any rate, does not help to reach the knowledge of the real universe.

On the other hand, the more or less advanced study of esoteric science, acquired in certain conditions, does not generally lead to our enfranchisement from corporeal death. Yet it shows us things as they really are and not as they appear to our senses to be; it draws one to that very region of the IDEA where every true notion is preserved in its germ; it increases in the long run the potentialities of the soul, and the more rapid progress of the individual monad toward the superior stages of existence which come before the eternal aim of man—the ABSOLUTE.

To sum up. Terrestrial science seems to fulfil more comfortably the part assigned us here by our preceding Karma; and eventually it serves, though not without risk, as an exercise; but it requires to be completed by the divine or superior science which alone profiteth absolutely to spirit.

D. A. COURMES, F. T.

Toulon, France.

### VARIOUS QUESTIONS.

1. What is the ultimate origin of the Law of Karma?

2. The theory of previous and after-births being established, how are we to view the mountains and stones, &c., as a birth (if at all), and if so how is their redemption to be effected? When I ask you to view the stones, as a state or birth, the question may perhaps seem a little ridiculous, but I have seen stanzas in the works of Sages of the south, saying that it is possible for man so to degenerate himself as to be born in his next life, as a beast, a tree, a stone, &c.

3. Could Mahatmas speak any language that they please?

4. In almost all the Vedantic books of the south (Tamil) that I have seen (including the works of Agastya Rishi), I have always seen them enumerating some six figures (Chakras) from Kundali upwards. The figures differ from each other and have separate letters assigned to them. Special deities are located in those places, and special colors are also assigned to each of those figures. I need not name the *Chakras* or give the figures in detail, since the book called *Atma deapiki* fully describes those things, and I believe that you are aware of them. Of course, I know that theosophy recognises these *Chakras* as the nervous centres, but I want to know what the object of the sages was in localising those centres with popular deities, &c.

5. What is your opinion as regards the letters and mantras that a *yogee* adopts while inhaling, exhaling and suppressing, &c. (Rajaka, Puraka, Kumbuka) ?

6. I have read in many Vedantic books that after some years, a Vedantic Raj Yogi, &c., experiences a certain kind of Amridam or nectar flowing to him from some part of his head. I beg to know if there is any esoteric meaning for this, or whether it is to be literally taken.

7. Is it possible for a Mahatma to transport his physical body to any place at his option? If not, how are we to distinguish between his astral body and physical body?

8. What is the relation of the Law of Karma to the worldly prospects of a man in this world and to his spiritual development? Can he become what he likes, even if he endeavours his best for it? Would not the Law of Karma step in and obstruct his endeavours also?

9. What is your opinion of Sabapathy Swami's book on Raj Yoga?

N. M. DORASAMI PILLAY.

#### NOTES.

1. We have heard of an ultimate end but never of an ultimate origin.

2. If a personality becomes so depraved, that its higher principles desert it entirely, that personality will disintegrate and be re-absorbed into the cosmos, when it will have to begin its round again as an elemental force in a stone, tree or animal, etc. This is what is meant by being born in the next life as a beast. The human monad as such does not become a beast.

3. Yes, by putting themselves *en rapport* with the 5th principle of a man, who speaks that language, or by other means well known to eastern adepts.

4. The object was to give those centres certain symbols by which their relative powers may be allegorically illustrated. The popular deities are in fact the personified powers of nature.

5. Those letters and mantras are intended to guide the currents of astral fire emanating from Muladharam.

6. The statement is literally true, but the technical sense, in which the word Amritam is used, can only be ascertained from a practical Raja Yogi.

7. He can travel to any place he pleases if he is advanced enough to have a thorough control over Akasa. *Sukshmasarira* can penetrate solid matter, while the *stulasarira* cannot.

8. The course of a man's life is the resultant of two forces, namely, his former Karma and his will power.

9. Unprofitable.—Editor.

#### NIRVANA.

We are told and have also read a great deal about the number seven. We are told that the chain of worlds to which the earth belongs consists of seven planets; in short, the number seven is of great import; but I do not understand why we should consider ourselves confined to our own chain of worlds, which is only one of a number of chains of worlds belonging to our sun, and why we should consider Nirvana as the final goal.

Now if we consider, the number seven does not only end with the chain of worlds explained to us, but that there are seven such chains attached to our sun: Are these not our homes also? We find one planet larger than the other, we find them at greater or less distances than our earth from the sun. We find Mercury and Venus nearer to the Sun than our earth; and Mars, Jupiter, Saturn and Uranus further. Are we then to suppose that we shall get Nirvana after the seventh round on our Earth and its chains of worlds and then,

remain to end of time retaining our individuality? Admitting that we go on, in progress of time, through all the planetary systems of our sun, do we stop there and remain satisfied with our progress?

H. C. NIBLETT, F. T. S.

ALLAHABAD, May 17, 1884.

Note:—Ordinarily, a man is said to reach Nirvana when he evolves into a Dhyana Chohan. The condition of a Dhyana Chohan is attained in the ordinary course of Nature, after the completion of the 7th round in the present planetary chain. After becoming a Dhyana Chohan, a man does not, according to the Law of Nature, incarnate in any of the other planetary chains of this Solar system. The whole Solar system is his home. He continues to discharge his duties in the Government of this Solar system until the time of Solar Pralaya, when his monad, after a period of rest, will have to overshadow in another Solar system a particular human being during his successive incarnations, and attach itself to his higher principles when he becomes a Dhyana Chohan in his turn. There is progressive spiritual development in the innumerable Solar systems of the infinite cosmos. Until the time of Cosmic Pralaya, the Monad will continue to act in the manner above indicated, and it is only during the inconceivable period of cosmic sleep which follows the present period of activity, that the highest condition of Nirvana is realized. We further beg to inform our correspondent in this connection that our Mahatmas have not yet affirmed that there are exactly 7 planetary chains in this Solar system.—Ed.

#### "EVIL SPIRITUALITY."

The expression "Evil Spirituality" has occasionally been made use of lately, especially in Mr. Sinnett's "Esoteric Buddhism," to indicate a possibility of the most "exalted" human development, and as this use of the expression is certainly misleading, it may be worth while to enquire, whether or not the phrase can be said to have any meaning at all.

In the letters from a Mahatma quoted in "Esoteric Buddhism," two passages occur, which may have seemed to warrant the expression. The first on page 61 is as follows: "when your race, the fifth, will have reached its zenith of physical intellectuality and development, its highest civilization (remember the difference we make between material and spiritual civilization), unable to go any higher in its own cycle, its progress towards absolute evil will be arrested....." The second passage occurs on page 84: "Avitchi is a state of the most ideal Spiritual wickedness."

The first passage refers to the collective condition of a race, while the second relates to the state of an individual monad. Now the "progress" mentioned in the first passage is clearly nothing more than progress in the duration of physical activity, for true progress of the race, *i. e.*, advance in the direction towards which humanity taken as a whole is and must necessarily be permanently tending, is impossible, since as it is stated the race is "unable to go higher in its own cycle." Thus what had to be "arrested" was the birth and development of a retrograde action in the whole race, a reaction resulting as it were from the congestion of the various channels and centres of spiritual activity, and it is evident that this reaction if not checked at the right moment would necessarily lead to the formation of a more or less serious block in the way of further evolution of higher life, not only on this planet but in the whole system of our planetary chain. Such a block, leading as it naturally must, to great additional trouble and suffering, could of course be properly described as an "evil;" consequently the "progress towards absolute evil" cannot be taken to indicate any real advance in human evolution towards the ultimate goal. Turning now to the second quotation, we must bear in mind as stated above that the Avitchi condition of "ideal spiritual wickedness" refers solely to the consciousness of an isolated individual. This state of a strongly developed personality with evil tendencies may be imagined to be one of abstract suffering resulting from the slight development of the "ego's" spiritual consciousness so as to enable him to realize the utterly hopeless failure of his various machinations and schemes, the futility of all his efforts; he is conscious of a sense of defeat, and perceives dimly that he has brought himself into a fearful state of entanglement, and that a desperate struggle will be necessary to get himself freed from the effects of his evil Karma. It is obvious therefore that true and lasting progress cannot be "evil" under any circumstances, but that on the contrary "evil" may be regarded as the synthesis of all those forces, active or passive, which tend to retard or undo any progress accomplished towards unity or perfection.

Therefore if the word spirit be taken to signify that *ultimate* goal towards which evolution is constantly tending, that reality into which the human monad is finally merged, then most assuredly Mr. Sinnett's statement in "Esoteric Buddhism" that the human Ego may seize on the "high opportunities" of development by attaining either "sublime spirituality for good or sublime spirituality for evil," is contrary to the truth if not altogether void of sense.

### "CHRISTIAN TOLERATION" IN AUSTRALIA.

(Extract from a letter to the Editor.)

I studied our various orthodox Christian sects and found one more absurd and ridiculous than the other. The dogma "Salvation by faith" particularly disgusted my mind, which gave rise to many a bitter discussion between priests, ministers and myself.

The phenomena of modern Spiritualism attracted my attention, which I eagerly grasped and followed, but I again felt keenly the disappointment, as the best works, the best mediums, and my own experiments, failed to satisfy me. Happily the writings of Madame Blavatsky having dispersed the gloom from my mind, I am now a happy follower of her Guru, in company with a dozen more brothers, not counting the members of our branch in Brisbane. We are surrounded here by selfish people. Many hard and bitter appellations and even threats have been and are still applied to us personally. Two German clergymen showed their persecution to such an extent, as would scarcely have been expected on this side the dark ages. They excommunicated us publicly from all Christian church benefits, although we did not belong to any church nor had any connection with them. They seriously injured my business, and their community thought and expressed the opinion that I ought to be locked up in my house and burned alive. Such are the troubles we have to contend against here. We feel pity for the poor bigots, and wish that the day may be at hand when the scales will fall from their eyes, and that they will receive that tranquillity of mind we have gained from the teachings of Theosophy.

C. H. HARTMANN,

Pres., Queensland Theosophical Society.

TOOWOOMBA, QUEENSLAND,  
Australia, Feb. 15, 1884. }

### THE CUSTOM OF KEEPING A FIRE IN PARSEE TEMPLES.

Am I right in saying that the custom of keeping a fire constantly in Parsee Temples is to symbolise the immortality of the soul as well as the impermanent nature of man's mortal body? What is the real occult meaning?

Nausari Station.

S. H. HODWALA.

Note.—In addition to the reasons given in the correspondent's letter for this custom, a few other reasons may also be mentioned.

1. The divine fire, which the Parsees are called upon to worship, is the divine fire known under the name of Atharvana-agni or Samvartak-agni to the Hindu adepts. This fire in the Cosmos is always blazing and is never, can, or will be extinguished. In order to indicate to the fire-worshippers of the Parsee faith that the fire which they worship is not the ordinary fire, this custom has been introduced.

2. Moreover, in ancient times, whenever it was thought necessary to worship this fire, an adept or a magian used to invoke it and attract it from akasa. But, an adept, who could perform this difficult and dangerous operation with success, was not always ready to attract this divine fire for its worshippers. Hence, when once the heavenly flame was kindled by a real adept by his occult power, it was kept up for a considerable length of time without being extinguished.—Ed.

### WHAT IS "GOD"?

1. "THE Theist says that God is a person infinite, eternal, omniscient, omnipotent, all-perfect, creator and ruler of the universe. The Atheist does not say 'There is no God,' but he says, 'I know not what you mean by God; I am without idea of God; the word 'God' is to me a sound conveying no clear or distinct affirmation. I do not deny God, because I cannot deny that of which I have no conception, and the conception of which, by its affirmer, is so imperfect that he is unable to define it to me. If, however, God is affirmed to represent an existence which is distinct from the existence of which I am a mode, and which it is alleged is not the

noumenon, of which the word 'I' represents a speciality of phenomena, then I deny 'God' and affirm that it is impossible 'God' can be. That is, I affirm that there is one existence, and deny that there can be more than one.' What is the difference between the atheism spoken of above and Theosophy, so far as its negative side of knowledge is considered?

2. "A moving molecule of inorganic matter does not possess mind or consciousness; but it possesses a small piece of mindstuff. When molecules are so combined together as to form the film on the under-side of a jelly fish, the elements of mind-stuff, which go along with them, are so combined as to form the faint beginnings of sentence. When the molecules are so combined as to form the brain and nervous system of a vertebrate, the corresponding elements of mind-stuff are so combined as to form some kind of consciousness; that is to say, changes in the complex which take place at the same time get so linked together that the repetition of one implies the repetition of the other. When matter takes the complex form of a living human brain, the corresponding mind-stuff takes the form of a human consciousness, having intelligence and volition." How does "the mineral monad" differ from the above theory of matter broached by the late Prof. Clifford?

3. In what respects does the metaphysics of Theosophy differ from that of Schopenhauer or Hartmann?

4. Do the Theosophists believe like M. Renan\* that, though there was no God in the beginning of the world, there will be gods in process of time produced by nature?

A TRUTH-SEEKER.

Notes.—Q. I. Esoteric Theosophists are gnostics, not agnostics. They affirm that they can know by spiritual perception Parabrahman or Adi Buddha, which is the universal spiritual principle, the origin and the basis of all Cosmic Evolution. It is the one element and the one energy of which every form of existence is but an expression and a manifestation. And there is no personality or God beyond this principle.

Q. II. This theory will harmonize with the occult doctrine upon the subject if, in addition to the molecules, the existence of the one life is postulated, whose manifestation is consciousness, when the upadhi in which it acts is of the required molecular combination.

Q. III. Schopenhauer's theory is imperfect, as it does not take into account those principles in man which are higher than mind or the 5th principle.

Q. IV. Yes, if the word God means a Dhyhan Chohan.—Editor.

### QUIQUIS.

(Continued from the last number.)

### POSTHUMOUS HUMANITY.

BESIDES the appearance of the human phantom there are many occult phenomena of various kinds. Mesmerism produces manifestations analogous to somnambulism, ecstasy and mediumship; and it is often difficult to say whether the cause of such a phenomenon is related to the internal personality or to the nervous fluid, or to a combination of both.

There is a *universal ether* whose actions are often mistaken for those of magnetism. Its existence is no longer doubtful, and has been proved by experiments made by Arago. P. Secchi and others have demonstrated that universal gravitation is caused by the qualities of that ether, which fills all space, in which the worlds are floating, and to whose modes of action light, heat, electricity, magnetism and chemical forces owe their existence.

The *nervous fluid*, or magnetic ether, belongs to all animals, who have a sufficiently developed nervous system. Under normal conditions it flows from the body in proportion as it is formed by physiological processes, or after it has reached a certain tension; but under certain circumstances its existence becomes manifest by certain acts of volition, such, for instance, as the producing of magnetic sleep by a mesmerizer. The nervous fluid proceeds from the spinal marrow and flows from the fingers of the mesmerizer until its energy is exhausted. The mesmerizer will then have to rest until it has accumulated again. This fluid not only passes to the mesmerized person, but becomes diffused through the room and may be there present in such a quantity, that certain persons of a nervous temperament feel it to a disagreeable extent, as it interferes with their free respiration.

This nervous fluid not only acts through the fingers, but also through the voice or through the eyes, or wherever it is sent by the will. Small birds or animals can be charmed

\* Dialogues and Philosophical Fragments.

and killed by it, snakes use it to catch animals, and the belief in the "evil eye" is well founded on facts. The action of the electric eel is well known, its electric discharges become less powerful the oftener they are repeated within a certain time. Girls at the age of puberty especially present certain magnetic phenomena, on account of an abnormal development of nervous fluid, and females are less in danger of being injured by strokes of lightning than males. The majority of so-called physical mediums are females. Manifestations of an invisible mechanical power are often seen in the presence of such "mediums," the columns of the daily journals are often filled with accounts of them, and they are known to everybody except the "savants." In the case of Angelica Cottin in 1846, such phenomena exhibiting an immense force were witnessed by thousands of people, doctors, clergymen, scientists, lawyers and others for nearly a year; Arago witnessed them and brought the matter before the Academy of Sciences; but when that Academy finally sent a committee (whose minds were sufficiently prejudiced to produce a force which would counteract the one that caused the phenomena) for investigation, that force was exhausted, and the investigation had no result. There are also plants which exhibit magnetic phenomena, especially in the American species of *Phytolacca*, (Snake-root) which, on being cut, gives a slight electric shock and also deflects the magnetic needle. Its magnetic force varies according to the hour and is the strongest at about 2 P. M. Dr. Kerner gives interesting accounts of an exhibition of an invisible power in the mountains of Wurtemberg, which often suddenly produces a great turmoil amongst the cows, making them quite furious, and what is still more wonderful, produces movements of inanimate objects such as furniture or other things, which fly away at your approach.

Whenever such phenomena were exhibited, the exaltation of sensibility in the "Seeress of Prevorst" was quite remarkable. Electric effluvia seem to be especially preponderating in the United States of America, and it is perhaps due to this fact that such a large number of "Mediums" is to be found in the United States. It is to be regretted that the qualities of this nervous fluid have not yet been fully investigated; but we know that like the universal ether, which it resembles, it travels with the rapidity of thought, acts at long distances, passes through solid bodies, and makes the objects which it impregnates susceptible to attraction or repulsion. By changing their magnetic polarity such objects lose their weight, tables float in the air, pianos can be lifted up by a child, ecstasies walk through the air or upon the water. It may make combustible objects fireproof and produce various phenomena, which may or may not exhibit a guiding intelligence. It may remain for an almost infinite period in objects which have been impregnated with it, and many apparently "miraculous" cures can thereby be explained. Its durability seems to be contradicted by the velocity with which it travels; but this apparent contradiction may be explained by an investigation of the nature of the molecules which are thrown out by the nervous system. Perhaps the aggregates resulting from a grouping of these complex atoms are not all of a homogeneous nature; the more subtle ones pass through the walls to a distance, while others, serving so to say as a matrix to the former, remain attached to objects.

The causes which set that nervous fluid into motion are of various kinds and difficult to analyse; but we may say that it is set into action by a mechanical action coming from the nervous system, that this action is caused by thought, and that the force of its action is proportionate to the intensity of the thought or the will. A fixed idea or concentration of mind produces somnambulism; an ascetic life gives occult powers, a natural predisposition makes "mediums," some physiological processes produce epilepsy and catalepsy, narcotics produce the dreams as well as the realities of sorcery, and in all these cases we see that mysterious person, called the inner man, grow larger in proportion as the nervous fluid becomes more abundant and active, which proves that these two mysterious agents are related to each other by the same parentage.

Persons in a somnambulant condition do, as is well known, a great deal more than simply walk about. They instinctively perform such actions as they are accustomed to perform; a writer will write in his sleep, a hostler curry his horses, a seamstress sew, etc., and they do those things in the dark and without being conscious of their actions,

but nevertheless they seem to be guided by some sort of intelligence, because they avoid obstacles put in their way, give answers to questions, follow directions given by others, etc., but when they awake they have no recollection of what happened during their sleep; while during their next sleep they remember what happened during the preceding ones. In fact, they exhibit all the phenomena of a double consciousness, of which the one is quite independent of the other, as the following occurrence will show: A man was informed by his friends that his wife in the preceding night had been seen on the roof of a church. At noon, while she was asleep, he asked her about her nocturnal perambulations, and she gave him an account of the same with all the details; telling him also that she had hurt her left foot against one of the projecting nails of the roof. After she awoke, she was surprised to hear her husband ask her whether she felt any pain in that foot, and still more surprised, when, upon examination, she found a wound, of the origin of which she could give no account.

From our experiences in somnambulism we may draw the following conclusions:

1. Somnambulism being spontaneous in some, is latent in all, and can manifest itself under the influence of a moral commotion or other physiological causes.

2. The extraordinary feats performed by somnambules prove the existence of an active and intelligent force, or a personality different from the waking personality, and which seems to have its centre in the nervous ganglions of the epigastrium. This explains why the somnambule in the sleeping condition does not even recognise the most familiar voices, and in the waking state remembers nothing of what happened during her sleep. Furthermore no immoral acts have ever been performed to our knowledge by somnambules during their trance, and it seems that this mysterious inner man is free from the chains of animality.

3. This inner personality seems to have an equal if not a higher intelligence than the other one, but very often it seems to act without any intelligence, imagining a chair to be a horse, a stick of wood a snake, etc.

4. Somnambulism is due to disengagement of nervous fluid caused by a disturbance of the equilibrium of physiological functions, of which the nervous system is the centre. If little nervous fluid is present, the results of its action are undefined and may resemble dreams; but if much force is set into action, the internal personality appears and acts like a man who is awake and guided by intelligent energy.

If this nervous fluid is transferred upon another, a new order of results appears. The "magnetised" person falls asleep, becomes clairvoyant and answers questions. All sensation disappears, the "subject" hears only the voice of the magnetiser or of those who are "en rapport" with him, he feels no pain, and the most painful surgical operations have been and are often performed in that condition. Enfeebled nerves are more liable to be influenced by magnetism, and therefore somnambulism is more prevalent among the female sex. If the "subject" becomes clairvoyant he can see his own body with all its internal organs, predict the time and course of his disease and prescribe for himself as well as others, and it would be well, if educated physicians, instead of decrying mesmerism and leaving it in the hands of quacks, would study the same and make it useful by taking it into their own hands.

Not only the character of the internal personality seems to be different from the external one, but even its physiognomy is changed. It speaks of its other self as of a different person, does not know its own name and often takes the name of another, after the manner of obsessed people and "mediums." The ordinary personality seems to be centred in the brain, and the magnetic personality in the solar plexus, whence sometimes her voice seems to proceed. Sometimes, either in consequence of a natural predisposition, or from the intensity of the nervous fluid, the magnetic personality (astral body) becomes full of energy, and separates itself apparently from the physical body. The latter then appears like one dead, perhaps for hours and even for days; and when the somnambule returns to his senses, he will talk of long voyages which he made and extraordinary visions which he has seen. However this lucidity is not always free from error, and very often what he says is much intermingled with mistakes. This may perhaps in some cases be attributed to the influence of the magnetiser, who frequently exercises such a strong influence, that the somnambule only like a mirror reflects his own thoughts,

or in other words, the fixed idea of the mesmerizer passes into the brain of the subject; but such cases do not destroy the validity of those, where a true and marvellous clairvoyance is exhibited, many of which are now sufficiently well known. Some especially gifted persons exhibit this second sight sometimes even in their waking state, and the cases of Apollonius of Tyana, seeing the murder of the tyrant Domitian; of Swedenborg at Gotbenburg seeing a conflagration near his house at Stockholm, etc., are too well known to need repetition, and many instances are known where even amongst common people such a spontaneous clairvoyance manifested itself; especially such instances as refer to the affairs relating to the members of one family, however great the distance may be by which they are separated. One man in France was startled from his sleep by the report of a gun, and saw his uncle rolling in his blood; soon after, the news arrived that at that moment the uncle, who was far away, was shot by a mob. It seems, therefore, that if two persons are connected together either by family ties, magnetism, friendship or love, their spheres become intermingled and capable of interchanging impressions. Cases of clairvoyance during ordinary sleep are also quite common. There is furthermore no doubt that somnambules often can predict future events. Every event can be considered as the result of a certain number of moral or physical forces; and "accident" is only a word which hides our ignorance of the causes which put those forces into action; but the lucid somnambule can read those causes in the waves of the cosmic ether and divine the results. A Scotch Highlander described the battle of Culloden at the very spot where two years afterwards it took place. Other such cases are known in history.

As a clairvoyant may see the future, so may he see the past; and tell us of events that happened even thousands of years ago.\* Nothing in nature is ever annihilated, every motion produces an effect. Every vibration, whatever its origin may be, can be compared to those which are emitted by a luminous body and are held fast in the ether.

More than thirty years ago a moral epidemic broke out in the United States of America, whence it extended to Europe. Knockings and raps were heard in a house at Hydeville occupied by one Weckman, and afterwards by the family of John Fox. The raps, by the manner in which they came, indicated an intelligence, and, when questioned, answered that they were caused by spirits. So came spiritualism into existence. Those that never saw the phenomena denied their existence, and those that were convinced of their reality accepted the explanation given by the "spirits," without troubling themselves to search for another. The Fox-girls were evidently magnetic persons, the rappings and knockings were caused unconsciously by themselves, and the answers, which were given by the pretended defunct, were dictated by the same intelligence that made tables jump and pencils write, that is by the above mentioned magnetic personality of the "mediums" or the persons present. The history of spiritualism is well known. The Academies of sciences had a few short lived triumphs when the unconscious cerebration theory, the involuntary muscle movement and the toe snapping theories were invented; but their joys were of little duration, and, unable to explain things which they did not like to examine, they were driven to their usual last resource, which is to hide themselves in their dignity and to deny the facts, because they are inconsistent with their theories.

The answers given by the "spirits" are generally correct. If the table is asked your age, it will be of no use for you to deny the correctness of the answer it gives; the pencil will write down how much money you have in your pocket, although you may not yourself know the amount, and if you will afterwards count it, you will find the answer correct. At the close of one "seance" a person asked, "how many ears are in this room?" The table said sixteen. But there were only seven persons present; repeated questions to the table elicited the same answer to the great perplexity of the sitters, until finally one of them discovered the cat sleeping in a corner, and so the riddle was solved. Occurrences like this happen in spirit circles every day; the "spirits" manifest an intelligence even superior to that of the sitters, just as the intelligence exhibited by a person in the somnambule state is superior to her every day intelligence. Indeed the two phenomena are interchangeable.

Somnambulists become "Mediums," and "Mediums" become somnambulists. The one writes, the other talks, but both are acted on by the same mysterious agent. If the "spirit" is asked to identify himself, he either says he is simply a spirit, or he gives his name as that of a deceased person. He will talk like that person, act like him, and, if invited to write, the handwriting and even the orthography will resemble that of the deceased. The "spirits" of Shakespeare, Goethe and Schiller, etc., will come and perhaps through the hand of an ignorant person write poetry imitating the style of those poets. Some "spirits" will come and introduce themselves to us as angels or devils. They usually do not know much, and if we ask them, they hesitate and become embarrassed, and, if we press them, they become offended. The *personal equation* in a spiritistic circle is always a prominent feature. If we go to a seance in Ireland, which is held under the patronage of St. Patrick, and inquire about religious matters, the answers given by the "spirits" will be strictly Catholic; in a circle in England we shall be told by the same "spirits," that "no popery is wanted," and that the Pope is the anti-christ and Rome the modern Babylon. In France and Germany the "spirits" are more liberal and seem to be free-thinkers, but in Russia they become orthodox and schismatic. In Constantinople they are Mahomedans, orthodox Buddhists in Ceylon, and in India, if permitted to speak, Brahmans. In a circle composed of people of education they are generally polite and serious: while in a circle composed of bores, they become frivolous and ignorant, talk about trivial matters, and their jokes become rough, impertinent, and perhaps have the odor of the dunghill.

The phantoms invoked at spirit circles, whether made to talk through the table or to write, or even if they take an objective form, resemble therefore a mirage, similar to that which the somnambule is made to see by the will of the magnetiser. Let us call the High Priest of spiritualism, Allan Kardec, as witness and see what he says in his "Book of Mediums." He takes it one day in his head to call the spirit of Tartuffe. Tartuffe comes and exhibits his classic characteristics. It is indeed the person represented by Moliere with his sweetish and hypocritical language. A sharp examination follows, and the medium is convinced of the spirit's identity. "But," says he, "how did you come here? You know that you never existed?" "It is true," says the ghost, "But I am the spirit of an actor who often played Tartuffe."

The following, told by Allen Kardec, is still more conclusive: "A gentleman had a nest of small birds in his garden: One day the nest disappeared, and he wanted to know what had become of the little birds. He went to a medium and a circle was held. The spirit of the old bird came and said: 'Do not worry, my young ones are all safe. The house-cat happened to knock the nest down this morning, as she jumped upon the wall, but you will find them at the foot of the wall in the grass.' The gentleman went right away home and found the birds all safe at the designated place. It is to be supposed that, if the spirit of a stone had been called, it would have appeared as well as the spirit of Tartuffe and the bird."

We now see that the active principle in the medium and in the somnambule is one and the same. In the first it obtains its greatest accumulation of energy, because it draws from the medium as a centre of production that vital force which produces the magnetic effects; while the second, borrowing from a foreign source, receives that vital force in a limited and diluted form. Spiritualism produces the same wonders as the magnetic sleep, and even greater ones, having a larger source of power to draw from. The "medium" thereby becomes clairvoyant, speaks different languages, composes poetry, writes lectures, reads the thoughts of others, sees the past and may predict the future. Spiritualism is a branch of the science of Magic and was known amongst the ancients to such an extent, that kings prohibited its practice under severe penalties. The fathers of the church fulminated against table-tipping and rapping, and amongst Asiatic people it has been known from time immemorial.

Among the "miracles" of the Catholic Saints, there is none more interesting than that of St. Francis Xavier, by which he was visibly present during a storm in two ships, being in different localities. He was going from Japan to China in the month of November 1571, but seven days after the departure a storm broke out, and one of the boats of

\* See Prof. Denton's "The Soul of Things."

the ship with fifteen men in it was carried away and disappeared. For three days nothing was heard of the boat, and everybody believed it to be lost; but St. Francis Xavier assured the captain that in three days the boat would return and prevailed on him to wait. On the third day the missing boat returned, and as it arrived, its occupants before stepping on board insisted that Saint Francis Xavier should have the honor to climb the ladder first, and they all affirmed that he had been with them during the three days of the storm, and cheering them and giving them good advice. Evidently it was the "double" of the Saint that piloted them back to the ship.

The "Acta Sanctorum" are full of such miracles, and show that the more a person is given to contemplation, the more such occult but nevertheless natural powers may become developed, especially if assisted in their development by an ascetic life. People in a high degree of mental exaltation or ecstasy have been seen floating in the air and history is full of such accounts. At the time of Phillip II. a Dominic monk named Jesus Marie rose bodily up into the air, when breathed upon by the King. Joseph De Copertino, an Italian monk, exhibited the same phenomenon, holding a crucifix in his hand and floating over the lighted candles in the church, without his clothes being set on fire by them.

Sometimes instead of the ecstatic rising through the air to an object which he contemplates, the object is attracted to him. Crosses and images of saints have in this manner descended from the walls to the devout contemplators, doors have opened before ecstasies, books and furniture changed their places, etc. But besides the phenomenon of attraction, there is that of repulsion. Mysticism has two poles, ecstasy and obsession. If a timid believer commits a sin, which he dares not tell his confessor, the weight of his remorse, the disgrace which he fears, the damnation which he expects, fill him with dark visions. The nervous fluid, which under such circumstances issues from his brain, is necessarily the antithesis of that of an ecstatic; and he is repulsed from things to which he was attracted before. He exhibits extraordinary muscular power and can only be restrained by force.

A young Spanish monk in the Convent of Morcrala had run away, but repented and returned voluntarily. His remorse produced all the symptoms of obsession. He gnashed his teeth, his mouth foamed, he uttered horrible blasphemies, disputed with those who came to exorcise his "devil," etc. At another time he became ecstatic, believed himself to be surrounded by saints amongst whom was Saint Bernhard, he assisted in the mass and sang a "magnificat," which he had never heard before, in the most beautiful manner, etc. After the mass, Saint Bernhard approached him, blamed him for having stolen some apples in the garden and exchanged words with another brother without permission, and ordered him to receive the discipline. The monk then undressed and administered to himself the usual but now imaginary flagellation until he fainted, and the monks present believed him dead; but he recovered, read fluently the epistle in a loud voice, although he was hardly able to spell; he then went asleep, and when he awoke he was cured, as well of his obsession as of his ecstasy.

There is no doubt that the so-called "miracles" increase in frequency as the belief in them increases; while an atmosphere of scepticism, giving rise to the secretion of a different quality of nervous fluid, is antagonistic to their occurrence. During the middle ages, when the country was dotted with convents and nunneries, each convent or nunnery acted as a centre of energy, or as a point for the accumulation of the forces necessary for the production of occult phenomena. Many legends may be accredited to hallucination or to the invention of monks, but to deny them all would be a ridiculous and puerile attempt to deny history. Faith seems to be a necessary factor in their occurrence, and we may see every day, how in so-called spirit circles the entrance of a sceptical or antagonistic person can hinder the phenomena or destroy the power which produces them. Therefore with advance of rationalism and unbelief, so-called "miracles" have become less frequent; while amongst those peoples that have more religious fervour these phenomena are well known. The Mahomedans, Buddhists and Hindus have their "Acta Sanctorum" as well as the Catholics; the missionaries cannot and do not deny them, but they ascribe such works to the action of the devil. But even at the present day such things occur in the West as well as in the East, and

only a stubborn ignorance can ignore them. Madeleine de Pazzi did the finest needle work and painting with bandaged eyes and in perfectly dark rooms, and many others do the same. Saint Frances Romana became perfectly stiff during her trances, so that her arms could not be bent without breaking them. She was deaf to all prayers and threats uttered by her superiors, but as soon as her confessor entered and spoke to her, she understood him, answered his questions and obeyed his orders, exhibiting in this manner all the phenomena manifested by the action of a mesmerizer upon his subject. Fakirs and Brahmins have often been seen to float in the air; Saint Theresa was frequently lifted up in the same manner by an invisible influence which she found it sometimes difficult to resist, and the case of the "medium" Homo is well known. Baron Du Potet says that doors often opened or closed before him without any visible cause; while probably this invisible cause was nothing else but the fluidic personality of Du Potet himself, and Louis Jacolliot tells us of many similar occurrences produced by Fakirs in the presence of English officers and without any possibility of cheating.

The action of the nervous ether to render objects combustible is well known. Some people can put their fingers in molten lead or some other metal without being burnt. Some scientists have attempted to explain this phenomenon by the theory that the water contained in the skin forms spheroidal globules by the action of the heat and so protect the epidermis; but we have yet to see the first scientist who would be willing to submit himself to an experiment illustrating his theory, and we have no doubt that if such an one should be rash enough to attempt it, he would get horribly burnt. In the middle ages this phenomenon was very well known, and gave rise to the well-known ordeal by fire.

The fact that animal magnetism adheres for a long time to the objects which are impregnated with it, explains many phenomena of which we are told in the history of the saints as well as in tales of sorcery. A missionary, who lived long amongst the North American Indians, says that on a certain occasion the Indians wanted to call the "spirits." They made the Europeans go out of the place where the ceremony was to take place, because although being ignorant of the laws of mesmerism, they knew that the presence of a sceptical stranger would destroy the power. For several hours they performed their usual ceremonies without obtaining any result. This made them suspect that a stranger was hidden somewhere in the place, and when search was instituted they found in a corner the coat of a Spaniard. After this coat was removed the "spirits" appeared. "Obsessed" people often become furious at the approach of a relic of some saint, or some other object, even if that object is secretly brought near, and a case is known of a somnambule child, which came into its normal condition everytime a piece of a blessed sprig was put in its bonnet.

The cures which have been effected in the cemetery of St. Medard, upon the grave of the Abbé of Paris, belong to the same order of phenomena. Soon after the pilgrimages to his tomb had commenced, it was found that the entire cemetery was magnetised. A few grains of the same taken at random would produce phenomena with certain persons. Can we believe that all that magnetism came from the remains of the Saint? We think not. It is more rational to believe that the superabundance of that magnetic fluid came from the multitudes of believers that were engaged in prayers, ecstasy and contortions at that place. The recent occurrences at Lourdes and other places can be explained in the same manner. If an impulse is once given, the credulous people will go to such a place, and filled with faith, stimulated by incense and music, and under an intense excitement they diffuse the very magnetic aura which they seek, and which will adhere to places or springs or pools as long as the belief or the excitement lasts. The patient, already magnetised by prayers, confessions, fasts and communions, arrives, and if his disease is caused by some nervous derangement, he may expect a cure. Such a cure is not always durable; but if the vital force is strong enough it may become permanent.

If we wish a more direct proof of the power of magnetism, produced by a collective force, we can see it every day in so-called "spirit circles," not only in all civilized countries, but also amongst the savages. Certain South-sea Islanders have yearly meetings to which the tutelary deities

of their villages are invited. In the middle of a large room is a boat, around which the people assemble. Each god is then called by name and requested to show his power by making the boat move. Of course all the inhabitants of the village in which the ceremony takes place desire to see their god win, and thereby concentrate all their will power upon that boat, which, after a while, begins to move forward or backwards. After this, another deity takes her turn, and the one who moves the boat the longest distance is declared victorious. The missionaries of course say that it is the work of the devil.

In all these instances we see either the direct action of the magnetic ether, or the mysterious personality to which the same gives rise. Ecstasy and an ascetic life produce an abnormal quantity of that fluid; especially is this caused by a celibate life, which leads so to say to a plethora of vital electricity, and under favourable circumstances to a separation of the "double" from the physical body.

(To be continued.)

#### THE HOLLOW GLOBE. BY M. L. SHERMAN.

LEAVING aside the question of the supposed origin of this book as a spirit communication (the "Spirit" may have been an "Adept") its central idea is that this globe of ours is constructed in the form of a hollow sphere, with a shell some thirty to forty miles in thickness, and that the interior surface, which is a beautiful world, in a more highly developed condition than the exterior, is accessible by a circuitous and spirally formed aperture, that may be found in the unexplored open Polar Sea, and this opening affords easy navigation by a broad and deep channel leading from one surface to the other, and that the largest ships or steamers may sail or steam either way, with as much facility, as they can pass through any other winding or somewhat crooked channel.

As the author has not seen himself the interior of this inner world, but depends in giving his details about the same on clairvoyant examinations, and as no Polar expedition has yet reached the pole, although some expeditions came very near to it, and there being apparently nothing to prevent them from reaching it, unless indeed it may have been the exercise of some occult power—the author of course cannot positively prove that the globe is hollow and inhabited, but he does this negatively by proving that it cannot be otherwise.

He first shows that every noted event in history has occurred in exact order, and in its proper time and place, in regular succession; so that it could not have possibly occurred sooner, nor longer delayed. Each event took place in exact accordance with man's condition at the period of its occurrence. Gunpowder, steamships, printing presses, electric telegraphs were inventions born of the time when necessity called them into existence. When Catholic supremacy and intolerance overran all Western Europe, an obscure young sailor was deeply impressed with an idea that finally resulted in the discovery of what was termed a new world, new western countries became settled in proportion as old eastern countries became overpopulated, the ever surging tide of emigration has steadily rolled on in its onward course from Central Asia through the continent of Europe, then across the Atlantic to the Eastern shores of America, through the wilderness and across the desert plains and precipitous mountain ranges, until it finds itself opposed by the broad waters of the Pacific Ocean, with a densely populated country on the other side.

Emigration like revolutions never moves backward if it can no more reach forward to the West; it must spread to the North and South. The coming emigration to the North has already been foreshadowed by the purchase of the Russian Possessions in North America by the United States. Alaska seems to be the future halfway station between America and the North pole, where the extensive steamship lines, which at no remote period will be established, will take in their supplies of coal. At the present rate of increase, in less than a hundred years from now, America will have a population of over 400 millions and a new territory must be found to accommodate them. Such a territory will be found by following the warm Kuro Siva current of the Pacific ocean through Behring's Strait into the open Polar sea.

Having once penetrated the frigid belt, we find there an ocean of some 1,200 miles in diameter with a temperate climate. Man seems to be irresistibly attracted to it, for in

spite of all the failures, caused mostly by serious blunders of scientific men, Polar expeditions will be continued, until we finally shall succeed in entering the charmed circle, which is bordered by a frozen zone of some ten degrees latitude, generally ranging from 70 to 80 degrees. Within this circle the climate cannot be dependent for its temperature to any considerable extent upon those causes that regulate the changes of the seasons south of the glacial belt, by which it is surrounded. For if dependent upon such, it would for ever remain locked in the frozen embrace of the vast fields of ice, that would accumulate from year to year and from age to age. Those great formations would have naturally encroached upon the temperate latitudes, thus extending their area and depth, until all the waters upon the face of the earth would have been attracted thither to swell the increasing glaciers of the Arctic regions, and all the solar and other influences operating in the temperate zones could not have prevented the catastrophe, had not the great presiding mind overruled it differently, by arranging this globe so that a temperate clime might also exist at this polar extreme. This makes the open Polar Sea a necessity, and it seems rather strange that navigators have never entered the same. Some of them declare that there was nothing in view to hinder, for, as far as their eyes or glasses would reach towards the North, all was open; no impediments in the way; but they did not go on. Some inexplicable reason prevented those parties from pursuing where the road lay open before them, and has prevented their successors from finding any open pathway, and the great geographical enigma of our globe still remains unsolved, waiting for a Columbus to solve it.

Captain Parry in 1810 saw no visible signs of ice in the very highest latitude he reached; Wrangle in 1820, far to the north and east of Behring's Straits, saw no appearance of ice, but for some strange reasons these navigators did not prosecute their explorations. Whalers and others insist on having seen the open Polar Sea, and the Kuro Siva and Gulf stream are positive proofs of its existence. Its temperate climate may be attributed to the longitudinal electro-magnetic currents, converging into a common focus at or near the pole and their entering the shell. These converging activities, passing through water or the more solid earth to the interior surface, must necessarily produce considerable heat, doubtless sufficient to prevent the freezing of the waters of the entire polar circle.

The defenders of the igneous theory of the interior of the earth describe the same as an immense bombshell, filled brimful with intensely molten lava, surrounded by a crust from twenty-five to sixty miles in thickness. In support of their views, they tell us of the increasing temperature as we go downwards into the earth, the igneous formation of granite, the supposed action of hot water upon the lower sedimentary rocks, the large extent of territory affected by earthquakes, the vast amount of lava thrown from volcanoes and the continuous activity of the same.

The prominent argument for the existence of this scientific hell has been the increase of temperature as we penetrate the earth, generally about one degree in fifty or sixty feet; but it has been found that in deep soundings of the ocean the water was colder as they approached the sea bottom. The ocean has given us access to a point 37,000 feet nearer this terrible imaginary furnace, but that tremendous depth failed to present any indications of increasing temperature. Lately an artesian well was sunk in the city of St. Louis, Missouri, to the depth of 3,843½ feet, and by so doing the question of increasing temperature has been settled for ever. It not only did not support the theory of internal heat, but proved exactly the opposite and established the theory of internal cold. Instead of placing below our feet the most active and dangerous materials, that would be constantly making disturbance, the controlling intelligence has placed there the most inactive, that would lie still. It was found that at the boring of that well the heat increased until they had measured 3,209 feet, where the temperature was 107 degrees F. It then began to sink, and at 3,817 feet it showed a temperature of 106 degrees—and at 3,827 the thermometer fell to 105 degrees. At this rate we would arrive at a depth of about nine miles a temperature somewhat below zero, and doubtless still farther below we should find the foundations of this globe in that frozen negative condition that will induce them to lie still until all the great destined changes can take place upon and

near the surface, that have been provided for in the vast programme of the world's past and future history.

If we construct a sphere of eighty inches in diameter instead of 8,000 miles with a shell of four-tenths of an inch in thickness, we would have the relative proportions of the earth's interior and its crust as given by our fire-philosophers. We may now place within the interior liquid fire at 7,000 degrees—which, says Prof. Hitchcock, is sufficient to melt all the materials of the rocks; and no intelligent person could be found, who would not arrive at the conclusion that the shell itself would soon become a liquid mass as its entire contents are only one thirty-fifth part of the fire within.

It is difficult to conceive of an idea more repugnant to our natures, or one more horrible to contemplate, than that the vast interior of our globe, which might easily have been fitted up so grandly and beautifully, and subserve the glorious purpose of producing and sustaining human intelligence, should have been so miserably ruined by being filled, brimming full of incandescent lava.

We pass for the present to a consideration of the supposed igneous formation of the granite rocks, and come to that period where it is said that in consequence of great internal heat the earth's surface produces a wonderful prolific growth of vegetation of gigantic proportions, such as enormous tree ferns, calamites, sigillaria and numerous varieties that have left their fossil remains on top of the Devonian and immediately below the coal formation. It appears that this immense flora was found upon the top of a very extensive formation, which is still above another of fossiliferous rocks that had been the residence of organic living beings for untold ages before this growth existed. Now the difficulty seems to be, not to produce the extensive growth of vegetation, but to obtain the amount of heat from the internal source that would transform these forests into bituminous and anthracite coal and still permit the existence of vegetable and animal life to continue. A heat, sufficient to produce even charcoal, would not be considered conducive to healthy growth of such life, and it is evident that many ages previous to the coal period these forms of life existed and flourished as all the paleozoic rocks testify. After the crust has so cooled down as to produce vegetable and animal life, it would be impossible many ages afterwards to get up a heat that would make the world a universal coalpit. The causes of the great coal fields that now supply our manufacturing, steam engines and dwellings with fuel, must be looked for in some other direction, which the author explains, but which space does not permit us to examine.

Volcanoes are supposed to be vent holes or chimneys that reach from the surface to the great fire within, contrived for the purpose of safety valves that may permit any surplus gases or dangerous elements to escape. No one will deny that a globe of molten lava, that has an area of nearly 200,000,000 square miles, and a heat of over 7,000°—F. and only enclosed by a frail crust of about forty miles in *depth*, would require at least all the open chimneys that are known to exist in the shape of active volcanoes upon the globe. But these active volcanoes are neither numerous nor regularly distributed, and the disturbed and explosive elements might some day be found unwilling to go very far out of the way to accommodate any portion of the outside world. A certain able but eccentric geologist tells us that a large portion of the active volcanoes have been extinguished by the sea running into the crater and extinguishing the fire, and, to show that he is serious, he intimates that there are men in New England who, for a suitable compensation, would undertake to construct a subterranean tunnel from the Mediterranean to Mount Vesuvius, to let in a stream of water of sufficient magnitude to quench that infernal monster. He thus resembles the incompetent engineer, sitting on the safety valve of his engine, to increase the pressure of steam, and if the igneous theory is correct, we may expect to see our globe torn to pieces at any time by some blundering scientist.

But fortunately we are not in such a precarious situation. There are other and better reasons to explain the causes of the existence of volcanoes and earthquakes. We are told that volcanoes belch forth volumes of dense smoke with lurid flames and ashes in enormous quantities, cinders, scoria, and mud, steam, sand, lapilly, rocks of various dimensions, and lava; and it is somewhat remarkable that the lava is not very thoroughly melted. These materials must have come from reservoirs where they severally had an existence; they

could not have been brought from any place where they did not exist, and we often see that when such reservoirs have become exhausted, the mountain is swallowed up in the vacancy thus produced. Moreover many of the substances thrown out are combustibles. Why have they not been consumed at a heat that may be 10,000°? Smoke and cinders are the result of the combustion of organic substances, and certainly no organic substance can have existed at a temperature that will melt granite rock. These substances must have been the results of evolution after granite was formed. Neither could there be any water or mud. The force which throws out rocks at the distance of 6,000 feet above the summit of Cotapaxi, which is nearly 18,000 feet high, must necessarily be backed by something more permanent than a liquid globe of molten granite, as the explosive force in a volcano must act in the same manner as it does in a gun; it must have a solid resisting basis to receive the recoil. It is therefore clear that the origin of volcanoes must be looked for amongst the great fires that are kindled in cavities in the interior of earth's crust, and such cavities have been discovered. But these cavities have a solid bottom, and far below them is the region of undisturbed repose. The causes of volcanoes can be found in the oil-bearing rocks, which, according to Prof. Denton, are of great thickness and vast extent, and some of the petroleum shales are so rich, that sixty gallons of oil may be distilled from a single ton.

As the igneous theory does not explain the existence of volcanoes, so does it not account for the phenomena of earthquakes. If earthquakes are caused by the quaking of an interior globe of molten lava, why do they not extend simultaneously all over the earth's surface? How can they be limited in extent? Space forbids us to go into a detailed account of the supposed causes of earthquakes, given by various authors, and which, on account of their absurdity, are more amusing than instructive. Some say that vast cavities exist between the rolling fiery mass and the superincumbent crust, and, from some impending cause, large rocks weighing millions of tons, become detached and fall into the boiling flood below, where they sink to the centre because the specific gravity of solid granite rock is greater than that of a homogeneous molten mass of the same material. But if so, how could the solid granite crust ever have been formed, and would not in such a case the interior of the globe be solid, and the outside liquid fire? But without entering into the details of such absurdities, we find in the exterior shell sufficient inherent powers to explain all the superficial tremblings and vibrations that ever occurred, and when the electro-magnetic currents of our earth are better studied the causes of earthquakes will also be understood, just as the causes of thunder and lightning in the atmosphere are no longer unknown.

The author then proceeds to speak about the positive and negative, male and female, material and spiritual elements and forces. He shows that they pervade the mineral, vegetable and animal kingdoms of our world. He says that there exists another force, more powerful than electricity, which he calls *Aura*, and which we suppose to be identical with the *Akasa* of the Occultists. If it were not for a continuation of these forces, the revolutions of our world would cease and motion be changed into inactivity. We must keep in view that these counter elements diffuse themselves throughout all things, and have done so from all eternity. The forces which pre-existed and gave form to the accretions of materialized particles, being invisible to us, may be properly termed the spiritual essences (elementals) that exist in all forms of matter, through which they express themselves to our vision, and if such forces may exist separate and independent of the visible material forms, then it follows that such forms or aggregated atoms do not add to the original power of the pre-existing spiritualized forces. Thus all forms or aggregations of matter must have had a spiritual (elemental) essence, which acted as a pre-ordinate cause for the production of form, and if so there must have been a spiritual essence or form to the globe we inhabit, containing all the forces that now exist in the structure; and the particles which compose our world have taken their respective places in accordance with these pre-existing forces, and these forces have been governed and directed by an intelligent power in a spiritual condition, exercising Will.

Magnetism and Electricity are the two great positive and negative powers in nature. They are contained in all substances and are evolved from the mineral kingdom. The

original granite contains all that there is in the universe. Hence it will be difficult to find the dividing line between matter and force; for both are one and the same indivisible element (the positive and negative poles of one eternal principle). Aura is evidently an element that bears a very close relationship to the above named forces, and being far more sublimated in its character, it acts in various capacities, where the magnetic and electric fluids would be powerless. The latter act on a lower plane, but there are higher duties which call for more refined and etherealized powers, and it has long been understood that the human organization was pervaded by an element variously called nerve aura or odylc force, which occupies the brain and extends to the remotest corners of the physical body. This etherealized essence is the offspring of the Electro-magnetic fluid, and frequently displays its glories in the polar regions of this hemisphere and is known as the Aurora Borealis.

The author discusses these various forces and their correlations at length, and gradually introduces us into the realm of life. He shows that wherever effects have been produced, there must have been causes adequate to produce them. He shows that the law of eternal progress pervades all nature, and that in the course of ages our material globe will become more refined and be the fit abode for a superior race. He examines the nature of gravitation, and shows that it is only the feeble arm of those universal Electro-magnetic forces that pervade all nature. Gravity is no traveller, rushing from planet to planet, to draw heavenly bodies from their predestined courses. It is only an inferior force inherent in matter and a condition of the same, changed, counteracted and superseded by superior forces, as we see every day in the growth of plants and animals, the rising of vapour, etc. Each material aggregation and molecular organization has a pre-existing elemental form, and each elemental form has within itself the inherent forces to attract the grosser materials, by which it manifests itself to the eyes of men. Matter attracts matter, and a sympathetic cord exists between the orbs of space; but the powers which have been ascribed wrongly to gravitation belong to Electro-magnetic influences, and gravitation cannot exist until there is a mutual relationship established between two material bodies, one apparently exerting power over the other in consequence of superior size and density. The larger body attracts the smaller one, and there can be no particular geometrical centre of attraction with gravitation any more than with cohesion, but that force lies in the general direction of the largest accumulation of particles, as is proven by pendulum experiments in the vicinity of mountains. All ponderable substances will be held upon the surface of our globe, whether it may be a solid globe and have but one exterior surface, or a spherical shell with both convex and concave surfaces. If you are on the inner surface of the spherical shell of our globe, you are so far as gravity is concerned, as much upon the upper side as you would be upon the exterior of a solid globe. There can be found nothing attached to the geometrical centre of our globe, that should make it a central moving point, from which gravity should proceed, any more than there is to any other point in space. Neither can the supposed gravity of the Moon be the cause of the tides, as the author explains.

The author next enquires into the nature of the sun, and demonstrates that the sun cannot be a fiery mass of molten matter. He enquires into the sources of light and proves that the emanation theory is wrong, and that the theory of undulations can only hold good within the limits of our atmosphere. All these theories present innumerable difficulties, but when we fall back upon the development theory, we find a harmonious explanation. All globes must have commenced their career in a feeble, infantile condition, as regards light and heat, very gradually developing out of that condition to a more advanced state, and hence it is that all globes or planets in all their several situations, are receiving just the amount they need, and no more than will correspond with their several circumstances.

The development of their inherent powers are such as to modify the solar influences, and these solar influences are simply caused by the Electro-magnetic relations existing between these globes and the sun. In the sun we behold an unfolding of those inherent powers that we possess, and always have possessed in a latent condition, that will ultimately render us less dependent upon the great orb of day, because we are developing the same powers that exist

in the sun in all their magnificence and glory. And if it is conceded that we have unfolded in any sense of the word that we have travelled a portion of the journey from the electric condition of the new formed moon, to the resplendent magnetic glory of the full grown sun, what shall hinder us from accomplishing the entire distance and becoming like the sun entirely dependent upon our own resources for light and heat? There can be no doubt, but the wisdom and power, that contrived the machinery of the solar system, can ultimately furnish the means for lighting and warming each planet independently, because we have the very same elements that are contained in the sun.

Electricity is expressive of coldness and inactivity. Magnetism is a synonym of life, heat, and activity. When the negative element becomes permeated to any extent with the positive, it becomes subject to change and becomes progressive; for the positive and negative, being male and female, reproduce themselves or their likeness, and whenever the two elements come into contact, from that moment change and progress commence. So if worlds in an infantile condition are almost purely electric and negative, then there can be very little magnetic or positive element within them with which the great fountain and head of these powers can affinity, in order to produce those activities and frictionizing processes, that result in heat and light. Hence we perceive that Mercury being younger and less developed, is, of course, more electrical and has more of cold, darkness and inactivity, and less positive active elements to assimilate with those contained in the sun; but she has some advantage in point of distance, and that fact assists in modifying her light and heat to suit her condition, and the quantity and quality of light, as well as heat depends almost exclusively upon the conditions of the several planets.

The only reason why darkness arises upon that side of our earth which is opposite the sun, is simply because the positive active elements of magnetism and aura, &c., are not sufficiently elaborated to produce the necessary activities independently of the energizing influences of the powers contained in the sun; but in a billion or more years, when our orbit is extended beyond the one in which Jupiter now travels, and the annual revolution of the earth shall equal twelve of our years instead of one, the feeble light producing elements upon this globe shall be developed to that condition, in which they will possess the power to furnish the necessary illumination upon every side and in all latitudes. This is already the case with other higher developed planets. Uranus and Neptune, according to the conditions existing on earth, could experience a change of season only once in respectively 84 and 164 years, and these changes must therefore occur on those planets independent of solar influences.

If all the elements of light and heat exist upon our earth, and if it is shown by reasoning from analogies of nature, that the interior of the shell of our earth is in a more developed condition than the exterior, the question of lighting and warming the interior surface of this shell will find its natural solution. Furthermore, light and darkness as appreciable conditions upon our earth are rendered so to us by the peculiar character of the construction of our eyes and are only relative, and a future race in a higher state of development will be dependent on higher conditions which we cannot comprehend, because we have not experienced the same; while they may exist all the same in that beautiful world yet unexplored by mortal man.

Our entire physical organization is inherited from this earth; the earth is our parent, both male and female, father and mother, and there can exist nothing in our physical organisation that does not exist upon earth. We may therefore properly consider the earth in some sense of the word an animal organization of vast dimensions. She has functions analogous to the animal race, the same inherent powers of locomotion around her axis and another around the sun. We have a net-work of electric wires in our system, constituting our nervous system; the earth has Electro-magnetic currents travelling in all directions. We have a circulation of blood, and so has the earth a circulation of waters by rivers and tides, and the winds are active agents to assist in the continual change. There are currents in the ocean as well as in the interior of the earth. In the animal organization there are constant currents passing to and from the interior, through apertures prepared for that purpose, and the great parent must have an analogous organization, and be supplied with it in the interior,

and the same elements and forces which exist here, must exist there. We generate the power by which we perform our movements within ourselves, and so does the earth; and she did not require the arm of an omnipotent being to start the machine by applying some peculiar kind of a force, that is not recognised within the realms of the natural universe, for the genius and wisdom, that could contrive and keep in operation a perpetual motion for so many long ages by natural causes, must have been abundantly competent to have brought to bear forces that would have started the machine within the range of natural causes also.

The interior surface of the earth, being in a more highly developed condition than the exterior, has become capable of generating its own light upon the same principle as the more developed planets, and the displays of aural light that are so frequently beheld emanating from the arctic circle, have thus far baffled all attempts of scientific minds to unfold their mysteries; while an aperture at the pole through which this light radiates to our exterior surface fully explains the phenomenon.

The author's views about the sun spots, of the invisible planets existing beyond the orbit of Uranus and of the world's builders have recently been to some extent corroborated in some of the "Fragments of Occult Truth" and other teachings given in the *Theosophist*, and they bear internal evidence of having been derived from the same source. Whether this view is correct or not, they show certainly a high grade of intelligence, and their conclusions are perfectly logical; but, like other works of a similar character this book has appeared, before the world was ripe enough to understand it, and it is therefore known and appreciated by only comparatively few. The author is now an old man but he still confidently expects (so we are told) to be one of the first ones to enter the interior of the earth through what is known as Cpt. Syme's hole, and we hope he will do so, if not in his present incarnation, then in the next, as a member of the sixth race, forerunners of which have already made their appearance upon this, the exterior surface of our hollow globe.

#### "ASHTOTTARA SATOPANISHADAH."

##### THE 108 UPANISHADS.

(In Telugu characters).

WE are glad to acknowledge the receipt of a copy of the above-mentioned work from its publishers, Messrs. S. Subramanya Sastry and M. Venkatappayya, and introduce the publication in question to our readers with a few remarks. The importance of the Upanishad-portion of the Vedas, for a correct understanding and appreciation of the ancient Aryan Esoteric doctrines, can hardly be over-estimated. It has all along been recognised by every great Hindu writer that these Upanishads form the foundation of the Hindu religion in all its higher aspects. Every authoritative work on Hindu religious philosophy, such as the "Brahma Sutras" and the "Bhagavat Gita," is constructed from the materials contained in them, and every prominent religious teacher has professed to draw his inspiration from them. Every exoteric form of faith and every sectarian dogma is likewise referred to some of these Upanishads. Consequently, a thorough investigation of these writings is indispensably necessary for ascertaining the doctrines of that ancient Aryan philosophy which has given rise to so many conflicting systems of religious faith in subsequent times. However, these Upanishads have not been published up to this time in a collected form either in India or in Europe; and it has been hitherto found very difficult to obtain correct copies of most of them. This difficulty is now completely removed by the publication under notice, and the enterprising and learned publishers are fully entitled to the thanks of the public. The summary of the philosophy contained in the Upanishads, the Brahma Sutras and the Bhagavat Gita, which is written by Mr. Subramanya Sastry in

a clear and concise manner and prefixed to the work as an introductory essay, will be found very useful. The Mahavakya-ratnāvali appended to the Upanishads is an excellent analysis of their contents and serves the purposes of an index. It is clear from the arrangement of the work that the publishers have tried their best to make it as useful and interesting as they can.

To such of our readers as have not seen any of these Upanishads we may give some idea of the variety of subjects discussed in these writings. Such Upanishads, as Isavasya, Kena, Katha, Prasna, Chandogya, Brihadaranyaka and Sweta-Swātara, treat of the general subjects connected more or less with every religious philosophy. Mandukya (with Goudapathakarika), Atharvasira, Atharvasikha, Sukarabasya, Thrisikhi Brahmana, Mandala Brahmana and other Upanishads of a similar character, are connected with Rajayoga. Hatayoga is explained in such Upanishads as Yoga Sikha, Thajo Bindu, Natha Bindu, and Thyra Bindu. The duties and practices of saniyasis and other yatis who have accepted the "Tureeya asrama" as it is called, are laid down in Naratha-Parivrajaka, Paramahamsa, Nirvana and similar Upanishads. Mantra Sastra finds its exposition in conjunction with the adoration of special powers and deities in such Upanishads in Maha Narayana, Thakshinamurty, Ramatapani, Thripura, Saraswathirahasya and other Upanishads.

In addition to those above enumerated, there are others of a miscellaneous character, which propose to explain various subjects connected with Hindu religion and philosophy. From the foregoing remarks it is evident that a study of these writings is highly essential for the progress of Theosophy and the work undertaken by the Theosophical Society; and we take this opportunity of recommending the work under review to all our Theosophists and to every reader of this journal who desires to study the ancient Aryan religion. Considering the usefulness and importance of the work and the amount of labour and expense involved in its publication, the price of Rs. 8 per copy (excluding postage) fixed by the publishers is not in our opinion very high. Intending purchasers may obtain copies of the book in question either from the Head-quarters of the Theosophical Society at Adyar, Madras, or from the publishers.

#### PEARLS OF THE FAITH OR ISLAM'S ROSARY.\*

EVERY one, interested in Oriental literature and religions, is familiar with Edwin Arnold's marvellous power of placing himself in the position of the follower of a Faith he may be writing upon, in such a manner as to present to the general public its purest and highest aspects. His *Light of Asia*, written from the stand-point of an Indian Buddhist, has passed through several editions during a very short period, and earned for him the just praises and rewards of all true Buddhists. His "Pearls of the Faith," which was published last year, now gives in their purity the teachings of the *Koran* and will be appreciated by every true follower of Islam. The author is thus promoting the cause espoused by the Theosophical Society, which avows a common foundation for all religions, namely, the truths of the *Esoteric Doctrine*. And he, who can find out this "common foundation," has the key to the secret treasures of Occult Philosophy. Hinduism and Buddhism preach the doctrine of *Karma*: the modern Scientist calls it the law of cause and effect: the Christian Bible says: "As ye sow, so shall ye reap:" and now the book before us expounds the same teaching. It also indicates clearly an understanding of the fact which occultism teaches, that 'the *Akasa* is Nature's Book of Record' otherwise called the 'Book of Life.' In order to show to the reader that this idea is beautifully illustrated in the "Pearls of the Faith," it may be mentioned that a wicked person—finding himself confronted, after death, with a hide-

\*Being the ninety-nine beautiful names of Allah (*Asmā-el Husnā*) with comments in verse from various Oriental Sources (as made by an Indian Mussulman): By Edwin Arnold, M. A., C. S. I., author of the *Light of Asia*, &c., &c. Published by Messrs. Trübner and Co., Ludgate Hill, London, England: 1883.

ous form, symbolizing his evil deeds—is made to go through the following dialogue:—

“Whence and what art thou, hateful thing?”  
 “Dost thou not know—who gav’st me birth?”  
 Replied the form; “thy sins on earth  
 In me embodied thus behold.  
 I am thy wicked work! unfold  
 Thine arms and clasp me, for we two  
 In hell must live thy sentence through.”

Thus, the above extract, at one and the same time clearly gives expression to two fundamental teachings of occultism, namely, the doctrine of *Karma* and the invisible book of Nature—*Astral Light*—recording faithfully the impressions and following the design of the mould set into operation by its creator, the living entity.

Then, the traces of a knowledge of the septenary mystery are visible everywhere, in the work under review. Again, the idea of two angels watching a soul, all the time, is very suggestive. Also the chapter of the destruction of *Sheddu* reminds the reader of the fate of the *Dougpas* at the end of every race when a terrible cataclysm, or rather a series of them, changes the face of the earth and makes the latter fit for habitation by fresh and more advanced races. The fight among four travellers, each of a different nationality, using a different word for grapes, until the sight of their desired object settled the dispute—and the lesson meant to be conveyed thereby, that *Allah* may be worshipped under different names by various people—reminds one of the teaching in *Bhagavat Gita*, where Krishna tells Arjuna that an offering made to him with a sincere heart, under whatever name, goes to him. The description of *Allah* too, throughout the book, now and then leads the reader to suppose that the author was giving the Vedantic definition of *Brahma*. Altogether the work can but confirm the belief of every Theosophist that every religion, in its purity, rests upon the same foundation. And, therefore, we have no hesitation in strongly recommending, to all our members and sympathisers, not only a perusal but a careful study of the book under notice.

#### GUJARAT AND THE GUJARATIS.\*

WE are indebted to the author, Mr. B. M. Malabari, for a copy of the second Edition of “Gujarat and the Gujaratis.” The opinions of the various English and Native leading papers, evoked by the publication of the first edition of the work, bears witness to the literary abilities of the author and the importance of the book. It undoubtedly presents a real picture of the life of the Gujaratis, which may more or less be applied to the generality of the Hindus. At the same time, we are inclined to believe that many of the social evils are confined, to the extent described in the work, to the lower classes who are, as a general rule, uneducated and grossly superstitious. It cannot, however, be denied that the upper classes too are affected to some extent by the same evil. For instance, the practice of “buying” wives, *i. e.*, the bridegroom paying the father-in-law some money as a price for the hand of the bride—as also of the bride being sometimes a good deal older than the bridegroom—both these practices are, we believe, limited only to Baniyas and Bhatias, but they are not decidedly in vogue among the Brahmins, and not in other castes, outside of Gujarat. The horrors of infant marriage and the miseries of child-widows are indeed too true and painful; but these social questions we would rather leave to be decided by the reformers. Legislation can but strike terror: it cannot uproot the evil. What is chiefly wanted is education, real and sound. The present phase of it may have produced a generation of lip-philanthropists, but it should not be forgotten that a steady increase in the number of educated men will undoubtedly have the desired effect of producing a class of genuine philanthropists. The present is but a preliminary stage on the path of enlightenment and progress, and although it may exhibit undesirable tendencies, they should be recognised as necessary evils, and means adopted, as far as practicable, to minimise the effects of such wrong directions.

\* By Behramji M. Malabari, Editor of the *Indian Spectator*, and of the *Voice of India*, Bombay.

The question of “charity” raised by the author is a most important one. It would be a very good thing if the reformers should organise regular charitable institutions wherein all beggars should be usefully employed and provided with the necessaries of life. There is a good deal of charity misplaced and a large portion of it is sham, being often the result of a desire to maintain their so-called “respectability.” On the other hand, many of the charitable people would no doubt contribute to the maintenance of an Institution if the work were undertaken by the right sort of people. Then could Government be asked to pass a Vagrant’s Act, prohibiting professional beggary. Such an institution would be profitable in every way, and in time it must be self-supporting if the beggars be made to turn out useful work.

The author’s exposure of religious shams and superstitions is very interesting. What he says about the Parsees is more or less applicable to the generality of mankind. The following extracts may be especially interesting to our readers:—

...Above all, they (Parsees) have to create or organise a new national church, founded on the simple tradition of *good thought, good word, and good deed*, bequeathed by Zoroaster. Let them weed their Scriptures of its verbiage, and then let them defy the threats of the levites. Let them see that neither greatness nor happiness is to be achieved by a compromise with conscience. But for true national greatness, sincerity in all we do, and some rational scheme of life, are essential.

...There is very little element of genuine devotion in the formula as at present gone through. There is no intelligent appreciation of the recitals. The priest says his prayers for hire. He mumbles a certain quantity of jargon without indicating the least appreciation. There is no solemnity, no dignity, often no decency in the performance of the hireling priest. He knows it all to be humbug, and he gets through it as fast as he can, to see if he can give the benefit of his services to another credulous client soon after. And the devout layman! How does he offer prayers? He recites, chapter after chapter of matter which he ought to read once in a way, which contains some excellent moral or philosophical dissertation, but which has as little of devotional merit as *Gulliver’s Travels*! He does not understand a word of what he recites, and therefore he does so necessarily without any intelligent appreciation.....Hence it is not infrequent to see the orthodox Parsee at prayer breaking out into abuse of his neighbour, into snatches of conversation or observation, and many other acts besides, which have nothing at all to do with the solemn affair in hand.....The fact is, the average orthodox Parsee has mistaken the scope and spirit of genuine devotion till he has drifted into a callous, selfish, presumptuous creature, unworthy of the name of Zoroastrian. And this is entirely owing to the mystery in which a crafty priesthood has hitherto shrouded his scriptures.....

And now after reading the above extract, let every theologian substitute his creed for that of the Parsees and see whether the same remarks are not equally applicable to his “ism.” The fact is that every theology has retained the outer shell, the external mask, while true religion, which is the basis of them all, is entirely lost. The true spirit, the divine light—Theosophy—is gone, neglected and forgotten. The superstitious followers blindly follow the dogmatic interpretations of the priests who are as ignorant as themselves of the WISDOM RELIGION.

The chapter on *Ramayana* is very interesting and instructive. The author highly appreciates the language, the style, and the sublime ideas of this “immortal” epic. The work under review is very valuable, and we would recommend a perusal of it to all interested in knowing the life, manners, &c., of Hindus in general and *Gujaratis* in particular.

#### THE MARATHI THEOSOPHIST.

WE are glad to notice that the April Number of this Magazine, just received, has adopted the suggestions in our issue of June. It would be well if the conductors would be regular and punctual and not make the subscribers wait till the middle of June to receive the April Number.

The explanations of some of the phenomena are no doubt instructive to the general reader. In a few cases, however, these do not appear to be quite scientific. The minor ones may be passed over, but attention may be directed to two points here.

In explaining the phenomenon of Dnyaneshwara having made a buffalo repeat the *Vedas*, it is stated that the Sage, by his Will-power, magnetised the nerve-centres of the buffalo’s brain and thus caused it to speak what he himself willed. Now, no occultist can create an organ; all he can do is to develop extraordinarily its latent capacity. For practical purposes, animals have no fifth principle, (even their 4th principle is not fully developed) for the germ of it, only *overshadows* the animal, just as our sixth prin-

ciple at present *overshadows* us, and we shall have it as a germ *within* us only in the fifth round. So, the animals will have the germ of the fifth principle *within* them when they enter into the human kingdom. So an ADEPT can make a Negro talk the greatest wisdom by temporarily expanding the capacities of his fifth principle, but he cannot do so with any creature so long as the germ of the fifth principle is not associated with its other principles. Thus Dnyaneshwar could not have made the buffalo repeat the Vedas. On the other hand, we have no reason to doubt the concurrent testimony of eyewitnesses, if the possibility of the phenomenon could be entertained scientifically. Now, that phenomenon could be explained by supposing that the sage repeated the Vedas himself, but by his will-power he created a *Maya* so as to make the spectators believe that it was the buffalo that was talking. For them the illusion was a reality, as the objective existence is also a reality for them. Or, he might have caused the required articulate sounds to emanate from Akasa pervading the animal, and appear as if they had actually issued from its mouth.

Another point is in regard to Changadeva. The minor questions need not be referred to here. He is said to have possessed what are called "powers." But his practical life, his vanity, his anger, his jealousy, his selfishness, all point to the conclusion that he could not have been a sage. He may have obtained certain occult "powers" of a psycho-physiological nature by certain practices, but he could never have been an "Adept of the good Law." If his life be contrasted with that of Dnyaneshwar as given out, we find the two representing the two opposite schools of occultism. The former may be classed among black magicians, while the latter was a real occultist of the good order. Black magicians, through the evocation and adoration of certain elementals may obtain some of the so-called "powers," while the white magicians, who are real occultists, obtain *psychological* powers which can proceed from a true knowledge of *spiritual* things. The first principle the latter realise is that *unselfishness* is the inherent law of our being and therefore they are incapable of harbouring feelings of envy, jealousy, &c. It would, therefore, be advisable to condemn such practices as those of Changadeva. We cannot too highly praise philanthropists and great men like Dnyaneshwar, and to compare them and put them on a par with Changadeva and others of his school, is to depreciate the real worth of the noble science of *Yoga Vidya*.

### THE OCCULT WORD.

SOME of the leading members of the Rochester Branch of the Theosophical Society have started a monthly journal, called the *Occult Word*, with a view to promote the spread of Theosophical knowledge. The first number, just to hand, contains the review of "*Mr. Isaacs*," an interesting novel noticed in one of the recent numbers of the *Theosophist*. It also quotes a few articles from this journal and some extracts from our other publications. The attempt is a laudable one, and we wish it every success. If our other members and branches will do something of a like nature, they will be assisting the cause a good deal. Applications for the *Occult Word* can be made to Mrs. J. W. Cables, F. T. S., No. 40, Ambrose Street, Rochester, N. Y., U. S. America.

### SPECIAL NOTICE TO CORRESPONDENTS.

(I.) No anonymous documents will be accepted for insertion, even though they may be signed "A Theosophist."

(II.) Any contributor not desiring his name to be made public, should give the necessary intimation to the Editor when forwarding his contribution.

(III.) Contributors are requested to forward their articles in the early part of the month, so as to allow the Editor plenty of time for correction and disposal in the pages of the THEOSOPHIST.

(IV.) All correspondence to be written on one side of the paper only, leaving clear spaces between lines and a wide margin.

Proper names and foreign words should be written with the greatest care.

### SPECIAL NOTICES.

It is now evident that the THEOSOPHIST offers to advertisers unusual advantages in circulation. We have already subscribers in every part of India, in Ceylon, Burmah, China and on the Persian Gulf. Our paper also goes to Great Britain and Ireland, France, Spain, Holland, Germany, Norway, Hungary, Greece, Russia, Australasia, South Africa, the West Indies, and North and South America. The following very moderate rates have been adopted:—

#### ADVERTISING RATES.

First insertion.....16 lines and under.....1 Rupee.

For each additional line.....1 Anna.

Space is charged for at the rate of 12 lines to the inch. Special arrangements can be made for large advertisements, and for longer and fixed periods. For further information and contracts for advertising, apply to

MANAGER, THEOSOPHIST, ADYAR, MADRAS.

MESSRS. GRAVES, COOKSON AND Co., MADRAS.

PROPRIETOR, INDUSTRIAL PRESS, 3, HUMMUM STREET, FORT, BOMBAY.

MESSRS. COOPER MADON & Co., MEADOW STREET, FORT, BOMBAY;

TO SUBSCRIBERS.

The Subscription price at which the THEOSOPHIST is published barely covers cost—the design in establishing the journal having been rather to reach a very wide circle of readers, than to make a profit. We cannot afford, therefore, to send specimen copies free, nor to supply libraries, societies, or individuals gratuitously. For the same reason we are obliged to adopt the plan, now universal in America, of requiring subscribers to pay in advance, and of stopping the paper at the end of the term paid for. Many years of practical experience have convinced Western publishers that this system of cash payment is the best and most satisfactory to both parties; and all respectable journals are now conducted on this plan.

The THEOSOPHIST will appear each month. The rates, for twelve numbers of not less than 48 columns Royal 4to. each of reading matter, or 576 columns in all, are as follows:—To Subscribers in any part of India, Ceylon, Straits Settlements, China, Japan, and Australia, Rs. 8; in Africa, Europe, and the United States, £ 1. Half-year (India, &c.) Rs. 5; Single copies Rupee 1. Remittances in postal stamps must be at the rate of annas 17 to the Rupee to cover discount. The above rates include postage. No name will be entered in the books or paper sent until the money is remitted, and invariably the paper will be discontinued at the expiration of the term subscribed for. Remittances should be made in Money-orders, Hundis, Bill, Choques, (or Treasurers bills if in registered letters), and made payable only to the PROPRIETORS of the THEOSOPHIST, ADYAR, P. O., (MADRAS) India. Subscribers wishing to have receipts, in acknowledgment of their remittances, should send reply post-cards for the purpose.

The Supplement to the "Theosophist" or, as it is now called, the "JOURNAL OF THE THEOSOPHICAL SOCIETY," is given free of charge to our Members who are subscribers to the "Theosophist." Members who subscribe only for the Supplement are charged Rs. 2 0 0 per annum.

To Subscribers who are not Members of our Society, the charge for the Supplement only is Rs. 5; for the "Theosophist" with Supplement, Rs. 13 per annum.

Subscribers for the Second Volume (October 1880 to September 1881) pay Rs. 6 only in India; Rs. 7 in Ceylon; Rs. 8 in the Straits Settlements, China, Japan, and Australia; and £ 1 in Africa, Europe and the United States. Vol. I is now entirely out of print.

AGENTS: London, Eng., Messrs. Trübner and Company, 57 and 59 Ludgate Hill; Bernard Quaritch, 15 Piccadilly, W.; Paris, France, P. G. Leymarie, 5, Rue Neuve des Petits Champs; New York, Fowler and Wells, 753, Broadway; Boston, Mass, Colby and Rich, 9, Montgomery Place; Chicago, Ill., J. C. ## LECTURE VI.

*What we should Will ; What we should Dare ; and about what we should keep Silent.*

We should will divinity to reign in humanity. We should will intelligence, love and eternal order, to obtain supreme glory in the harmony of the beings. We should will the existence of a republic without pretended republicans, of catholicism without pretended catholics, of a hierarchy without despots, and of a religion without idols.

We should will the establishment of perfect peace, which belongs to the royalty and divinity of the sages. All this we should will to exist ; first for the benefit of others, and next for that of ourselves ; because the right kind of egoism is to obtain good by doing good to others.

Divinity is the power for good, and it is man's vocation to exercise that power freely and so to say in an autocratical manner.

The "republic" or the "public cause" (*res publica*), is the absolute reign of that law which is made in the interest of all, it is the devotion of all for the benefit of each, and the devotion of each for the well-being of all. It is consequently the very opposite of insubordination, personal despotism, or insolence of the members, revolting against the head ; it is the opposite of materialism and anarchy ; but since 1793 up to the present time those men, who claimed to be republicans, were incapable of comprehending the meaning of "republic" and mistook the very antithesis of a true republic for the real thing. Their republic is to them the tyranny of popular passions and impulses, the despotism of envy, which overthrows by turns all dignities and powers, like the monster Saturn, which devours its own children.

A true republic means the conservative power of law, upheld by a general submission to that law ; it means the monarchic reign of order and peace ; the power of a people disciplined like an army ; and the soul of such a republic is supreme intelligence and indiscriminating justice. Let us dare to pronounce that word which is so often disfigured by error, but always consecrated by universal tradition : The soul of the republic is God.

God !—Not that capricious and invisible autocrat, who is just as dark as his mysteries, and just as cruel as his vicious ministers ; but that God which represents the good, the true and the just in the highest and most perfect ideal conception.

In the name of that God of humanity, who is not the God of priests, must catholicity without catholics become re-established. This grand religious event has been foreseen and truly predicted by Jesus Christ in his parable of the banquet. He says : "A king had a banquet prepared to celebrate the marriage of his son." The king is God, his son is man, and the banquet is the universal brotherhood of the peoples. "But at the hour of the feast the invited guests sent in their excuses, and did not come." The invited guests are those that pretend to have special privileges from God, the legitimate representatives of the synagogue and the church. "Then the king sent his servants out into the streets to collect all those whom they might meet ; even the deformed, and the invalids ;" that means those whose beliefs were imperfect or disfigured by error. "Soon the banquet-room was full, but the king then noticed a man dressed in mourning," (that is the expression which the evangelist uses) "this man had no marriage robe." This does not mean that he was not possessed of rich clothes, because the whole assembly was composed of people that had been picked up at random and even of paupers and lame beggars. The king asked that man : "How did you come here ?" He evidently was not one of those the king had sent for ; he was surely one who tried to make himself so to say at

home, and perhaps he thought that he was the master of the house and the king's favorite. "He did not know what to answer, and the king ordered him to be bound hands and feet, and that he should be flung out into the darkness." The bound feet signify the condition of a man who is no more able to advance or to retreat ; tied hands symbolise a man who is no more able to act.

Such has been the condition of the synagogue when Christianity was born ; such is now the condition of clerical catholicism in the presence of the new idea. The expression "out into the darkness" is remarkable and terrible ; it depicts well the state of blindness of those who put themselves outside of the realm of humanity. The evangelist adds to the above sentence : "where there will be wailing and gnashing of teeth ;"—that signifies sorrow without remedy and impotent rage, two expressions in which is summed up the totality of the reforming potentialities of the universe.

The term "Roman universe" has long ago become a lie ; the Roman world has reached its end, and catholicity must become for ever cosmopolitan. It cannot be contradicted that a religion, which proposes to be universal, cannot be exclusively Roman.

Still it is necessary to be on our guard, to entirely destroy the broken reed and to fully extinguish the still smoking wick. Inherited powers do not cease to act, except when given up voluntarily. As long as there existed a sovereign pontiff in Judæa, the ruler of christian society was nothing but the principal of the church. Jesus submitted unto death to the authority of the high priest ; lovers of justice can become martyrs, but they never become rebels.

By the side of abuses and even amongst abuses there are usages. We must respect usages, and for fear of eradicating them prematurely, we must moderate the zeal which urges us to protest against abuses. The shadow of an old dying tree protects for a long time the young growth at its base, and the dead leaves that fall from the paternal branches serve as manure to hasten the growth of the young.

The future confluence of all religious systems of the world into one universal religion of humanity has also been plainly predicted by Jesus Christ. Speaking of the second coming of the son of man, he says positively that at that time the Christ will not be a man, whom we can hear preaching in the wilderness or in some public assembly, but that a universal intellectual light will appear, resembling the lightning, which, while it shines at the East, will illuminate the West also. It will appear after great wars and terrible calamities have taken place. "But"—asked his disciples—"in which country will this happen, and where will this grand religious movement begin ?" "Where the carrion lies, there will the eagles assemble," answered the Master, speaking in his proverbial manner, as if he meant that where the truth will appear, which has so long been expected, there will the intellects go ; or perhaps we may interpret it to mean that when the great official church has become a corpse, the great council of men of science and natural genius, symbolised by eagles, will take place.

God made himself Man. He descended from heaven, he is no more lost in inaccessible spaces, he is upon earth and lives in our midst. If we desire to love God, we must love each other ; if we wish to serve God we must assist the poor ; if we want to see God, let us look at our brothers ; because no one ever saw God in any other way. "My little children"—said St. John—"love you one another. I have nothing else to tell you ; this is the whole religion and all there is of the law." And indeed this is the whole of Christianity ; and simple as it is, why has it not yet been understood ; and why do people not understand that Jesus Christ is God, and that we all are God in him and through him ; that there are no more infidels and heretics in the world, but souls, which have been bought by the blood of the just, and which claim

our interest still more, because they are sick? Why can we not understand that even he who has no faith must be saved by the faith of others; that the merits of all are revertible upon all, and that the universal solidarity makes sinners the creditors of the saints and gives more to those who have little, and doubles eternally the treasures of those to whom much has been given? Holy Evangel, when will you begin your revelations?

Did not Christ proclaim universal forbearance when he said, speaking of the adulteress: "Let him, who is without sin, throw the first stone upon her;" and again, when he said: "If you had understood the word of the scripture, which says, 'I want charity and not sacrifice'; you would never have condemned the innocents?" Now who are the innocents of whom the Saviour speaks? Are they not those whom the law of Moses declared to be guilty? If we deeply meditate about this doctrine, do we not come to the conclusion that the blood of the criminal, after it has been made to flow under the social knife, has become the blood of martyrs? But about these things we must keep silent, because society in its present condition is not worthy to hear them.

We have spoken of that which we ought to *Will*; let us now see *in what manner* we must will.

If the human will is well directed, it becomes identical with the will of God; that is, it becomes omnipotent; but we must believe in its power and this constitutes the faith, which, according to the figurative expression of Christ, uproots trees and removes mountains.

The most interesting and astonishing words, and which at the same time are the most significant of all the sayings, which the evangelists attribute to the Saviour, are contained in that prayer which he sends up to the deity during his last suffering: "Father, forgive them, for they do not know what they do." Here the human God shows himself superior to the inhuman God of Moses. It sounds, as if he would say: "Oh, you unmerciful father! can you not see how weak your children are? They do not know what they are doing, and is it necessary that we should inform you about their weaknesses; you, who created them, and who, while you were creating them, did not know what you were making? Forgive them, so that they may forgive you."

David, who is called the great forefather of the Messiah, predicted the coming of Christianity, when he said: "Men's hearts will become more elevated, and then God will become greater." *Accedet homo ad cor altum et exaltibus Deus.*—In this way he prophesied the incarnation of human divinity into divine humanity.

This is such an astounding prerogative, that at first it seems paradoxical and absurd. Man in some sort educates God! Does Man *will* God to be? God does nothing without means and intermedial causes, and he acts upon man through man and through nature; upon nature through laws; upon laws through numbers; upon numbers through eternal mathematics. In this way the will of Man can act with that of God. Whoever wants effects must seek for the causes; in the causes he must study the laws, and through the laws he can govern the forces; and this leads us to the consideration of the auxiliaries of the Will.

To *will* does not simply mean to form in our thought an imaginary desire; the will must have determination and object and real means. To will effectively is to act. Action cannot immediately effect the object in view as long as the activity has not commenced. To make a step in advance, does not mean to arrive at the end, but after we have made the desired number of steps continually in the same direction we shall infallibly arrive. The will is the power of the soul and, like the powers of the body, it must be developed by practice. There is a gymnastic exercise for the will, and for that reason the grand initiators of antiquity put the neophytes to long and difficult trials. Pythagoras prescribed five years of absolute silence. Crates made his disciples walk through the town and carry some ridiculous burden, for instance, a leg of mutton or a pot-ful of lentils. The initiations of the Egyptians were terrible; the Free-Masons, the continuators of the ancient mysteries, submit their adepts to puerile ceremonies, about which they have to swear to conserve the most rigorous silence. The old hermits used to put the perseverance of their disciples on trial by giving them orders and directions which were apparently nonsensical, such as to plant cabbages with the head downwards, or to water every

day a stick of wood stuck into the ground, and in this way they made saints, that means men drilled to make all sorts of efforts and willing to make sacrifices of every kind.\*

The superstitious contracts by his numerous repeated practices an indomitable stubbornness; the truly pious acquires by his daily acts of devotion a great power of perseverance. Almost all the moral power, which the catholic clergy possess, is due to the breviary, which the clericals have to recite every day; and even in the midst of the century in which we live, the political world is unconsciously influenced by the scapularies, the rosaries and the nine days' prayers of nuns and female devotees. Frequent confessions hand the souls over to the disposal of the clergy, and a number of insignificant religious usages form a magnetic chain which binds the people without hurting them, and extends its mysterious power much farther than is generally admitted.

The books used by wizards are full of ceremonies which must be made words which must be spoken; days and hours must be observed; they require fasting and waking, fumigations, instruments which are difficult to obtain, talismans which must be composed, cast and engraved with the hours of the planets. All this appears ridiculous and intrinsically it is ridiculous; but they possess one real virtue, one genuine power: they harden the will and make the fluidic projection of the operator contagious and often inevitable. The book of the sorcerer is his "breviary," and the sacrifices he makes to the "devil" fills his own soul with all the venomous power of the spirit of evil.

Jesus, who often spoke in a metaphorical and veiled manner, advised his disciples to importune God by incessant prayers, and told them that in this way they could obtain all they wanted; and he adds: "Ask and you shall find; knock, and the door will be opened for you;" that means true prayer is an act which strengthens and produces effects.

No effort of the human will is ever lost, if it is patient and persevering. The Fakirs in India have preserved their ancient symbolism. Diogenes living at the bottom of his barrel, shaped the public opinion of Athens, the Stylites of the dark ages astonished and held sway over the savages, and Marie Alacoque has already three times succeeded in making the French revolution miscarry and fail. Do not the fanatics of the *terror* attempt to make an apotheosis of Marat by uniting his heart with the heart of Jesus? Oh, holy heart of Jesus! Oh, holy heart of Marat! This is their cry, and in this way they combine an absurd and bigotted formula with an oath of *père Duchesne*.

The human will is a lover who attracts and radiates. If we desire to invest this lover with a great force, we must exercise that will. A man, who is a perfect master of himself, is a master over others; he does not need to go to others, they will come to him; everything arranges itself in a natural manner, according to his desires; if any attempt is made to injure him, the injury rebounds upon its authors; those, whom he condemns, perish; those, whom he protects, are safe; he is loved to the same extent to which he loves, and although he possesses nothing, all the possessions of the others are at his disposal. He is what he *dares* to be, he is worth as much as he estimates himself, he is a pontiff and king, and no one is above him.

It is true that such a high moral dignity excites the envy and hate of beings ruled over by such a magnetism of evil, that it has become customary to call it the "devil;" and that for the purpose of escaping persecution the sage must know how to keep silent in regard to that which he *dares*, and he should always apparently remain inside the lines drawn by common life and within the current of common ideas; he must shun all public show and demonstration and avoid with great care to appear and to make people talk about him. Let others seek him and desire him instead of putting himself in an attitude before the public. *Noli ire, fac venire*, said the philosopher Rabelais.

Saint Paul said: "The sage judges all and is judged by none. Everything is permitted to me, but not everything is expedient. I am free from all restrictions, and I allow no one to subdue me" It means to *dare* a great deal, to speak in this manner under the reign of Nero, and it is not surprising that St. Paul was contradicted by many even amongst those that called themselves his true

\* Saints or fools?—Transl.

followers; and he finally had his head cut off; but we are not permitted to judge that impulsive apostle according to the laws of human wisdom. Changed suddenly from a violent persecutor of Christianity by a vision which throws him down; elevated at once, without knowing himself how it happened, into the third heaven, (he counted them); destroyer of the books at Ephesus, inquisitor at Corinth;—St. Paul may be more or less of a sage, but he certainly is not a man guided by reason. He himself glorifies the folly which he calls the folly of the cross, and pleases himself by always putting God into opposition to the sages of this world. St. Paul was a revealer, but not a guardian of the secrets of the universal sanctuary; neither can he, who substitutes a religious passion for religion, be called reasonable. Religious passion is a fanaticism which will excite the masses much easier than reason. The only apostle of Jesus, who was truly initiated, was St. John; but he presented us with a veiled language. He understood the law of silence, and his cryptology has ever remained unintelligible to the church of St. Peter and St. Paul.

We must dare to risk for the true and the good all that is good and all that is true; but we must act with prudence and never offend to their faces either the authorities or established prejudices. "I did not come to destroy the law of Moses," said Christ, "I came to fulfil it. Sooner let heaven and earth perish, than a single point of the law." And yet, who, even amongst the Jews themselves, obeys at present the whole law of Moses? The Jews, in spite of their resistance, and without knowing it, became influenced by the reforms brought forward by Christianity, and the Catholic clericals, who are still Jews without wishing or knowing it, must undergo that reform in their turn. For that reason we can exclaim, according to the example of Christ, and with a sincerity like his own: "Let heaven and earth perish, sooner than the single article of the Catholic faith." You will say: This is Jesuitism? Well; but as we now deal with the official society of Jesus, what else do you want it to be? Very bold indeed would he be, who would dare to say that the Bible, that venerable monument of ancient religion, is not a book full of the most sublime secrets and very high teachings; but very timid before his conscience and before his reason would he appear, who would not also dare to think that this same book favours at the same time the most monstrous and gross pretensions. What sort of a God is he who condemns to death all generations of man on account of an apple that has been stolen out of his garden, and who afterwards blesses the impostures of Jacob and the undeniable thieving of the Hebrews, when they carried away the vessels of the Egyptians; a God who punishes David for having taken a census of his people, and who does not even reprimand him for having caused the murder of the Ammonites, his allies, by sawing them to pieces alive, and crushing them under chariot wheels, on account of an insult offered to his ambassadors? The spirit of the Hebrews is ferocious, and if their books contain profound allegories and proverbs full of wisdom, their barbarous and unjust moral is almost always conspicuously exposed. Behold Loth getting beastly drunk at the time of a public disaster, and giving himself up to impurities with his two daughters; Ruth creeping into the bed of Boaz, to make a rich marriage; Judith seducing Holofernes for the purpose of assassinating him; David, a twofold traitor, entering the service of King Achis, an enemy of the Hebrews, next exterminating and pillaging the allies of that very king who overwhelms him with acts of kindness; Solomon, causing the murder of his relative Adonius, whose place he has obtained by usurpation; and all this without a single word of blame from the holy writer, because all that was approved by the priests.

Let us sum up in short. In the interest of truth, justice and charity, we must *will* that which is our duty, *dare* to accomplish what is in our power, and *keep silent* about our actions.

#### "HOPE AS A REMEDY AGAINST DISEASE."

DR. MORTIMER GRAVILLE writes to the *James's Gazette*:—"There is in ninety-nine cases out of a hundred a possibility of finding a *modus vivendi* with disease, even though it be organic and "incurable." Of course there are some maladies which must and will kill; but even these are longer about it when the organism is, as it were, suffused with the glow of cheerfulness and dinging with the energy of hope. The very first condition of life is hope:

"While there is life there is hope," and when hope dies, life is no longer "worth living." Nature is not an artisan but an artist; and, with the aid of the "ghost" (or spirit), she has contrived to put a good deal of "artistic finish" into her chief workman. This spirit is the life of the creation; and, it is a life with more than one source, if I may so say. Some men live by virtue of muscular vigour; others by sheer power of feeding—a vegetative existence. Many live by mental and nervous energy. The multitude of this last class of liver is very great: their bodies are wondrously weak and crippled, but their "go" and "spirit" are remarkable, and they live when those around them think they ought to die. Now, my first reason for believing that many persons who have incurable diseases may live on almost indefinitely, if they please, is: that when a man, who has hitherto lived by the aid, chiefly, of some part of his organism which is placed *hors de combat* by recent disease, begins to feel that his old life-prop has been knocked away from under him, he may, by an effort of the will, lean on some other. Say, for example, a man is told that he has "heart disease." Well, that is a great pity, to be sure; but Nature has given him other vital organs besides a heart. Let him leave the crippled circulatory system alone, and, instead of fretting himself into the grave, because "his heart is affected", set to work to make his lungs do such excellent work in the oxygenation of his blood that the defective flow of his blood through the organism may be of less importance than heretofore. This is not a vague suggestion. I am prepared to contend that what I have urged, can be done, and is being daily done, specific and common-sense measures of self-control within the power of any ordinary sufferer. I am not speaking of "living by rule," or eking out the miserable existence of a valetudinarian. Life is not worth living if a man cannot enjoy its rational pleasures; and I, for one, would never speak of hope to a patient who must perforce abstain from every comfort. Each case must be dealt with individually, but the task of finding a *modus vivendi* with "incurable disease" is not difficult; and if one be found, the very fact of relieving the diseased organ from the task of playing first rule in the drama of life will, in a majority of instances, help to check the malady by which it is affected. Another scientific reason for believing that hope will help to cure disease, or to prolong life under its depressing influence, is to be found in the fact that all vital energy has for its primary source and centre the nervous system. The brain is the central and principal organ of the nervous system. Hope is a brain function. When a man hopes, his brain is stimulated, his nervous system is healthily excited, his vital energy is increased. Is it not obvious that if the vital energy be increased disease may be conquered, or at least outlived and down-lived? Forgive me for being so prolix in trying to be plain.

#### AGNOSTICISM.

AGNOSTICISM is of the essence of science, whether ancient or modern. It simply means that a man shall not say he knows or believes that which he has no scientific ground for professing to know or believe. Consequently Agnosticism puts aside not only the greater part of popular theology, but also the greater part of popular anti-theology. On the whole the "hosh" of heterodoxy is more offensive to me than that of orthodoxy, because heterodoxy professes to be guided by reason and science and orthodoxy does not.—PROFESSOR HUXLEY.

#### A LECTURE ON "THEOSOPHY: ITS CLAIMS ON OUR ATTENTION" AT RAUCHI.

By BABU PARBUTY CHURN ROY, B. A.

[From our Own Correspondent.]

ON Tuesday, the 3rd of June, at Rauchi, Babu P. C. Roy addressed a mixed audience of earnest inquirers, scoffers and curiosity-mongers, on the claims of Theosophy. There was a fair attendance of Native gentlemen, but the Europeans—let our countrymen take note of the fact,—though especially invited, were conspicuous by their absence. Babu Rakhai Dass Haldar took the chair. As the subject was new to many, the lecturer had to tread on old grounds; much of what he said, however, was thoroughly original, and displayed a considerable amount of study and research. I can only give here a meagre outline of the speech. I may state in passing that Mr. Roy has it in contemplation to bring out the whole thing in the shape of a brochure.

After referring to his ill-health and debility, and to the difficulty of the subject, he warned his hearers that he was no enthusiast in the Theosophical cause; on the contrary, it was some time before he had accepted in part (a student of Western science as he was) the teachings of Madame Blavatsky, with whom he disputed every inch of his original position. Referring to the question—What is Theosophy?—he said that no dictionary could furnish the answer, which was to be found only in the pages of the Theosophical Journal and in the printed rules of the Society, from which he read out the three great objects of Theosophy. He insisted upon the fact that Theosophy was not a particular creed of religion, and that it was opposed to no religion. Amongst the members of the Society were to be found representatives of all the principal religions of the world. Referring to

the first object of the Society, he said that the idea of universal brotherhood had been heard of ever since the beginning of the historical age. The aim of the Theosophists was much the same as that of the Freemasons. Not many persons, however, could be Freemasons; they were thus an aristocratic fraternity. He condemned the dinners of the Freemasons and their drinking. They had not many branches in all parts of India; and they certainly did less good than they took credit for. Such objections could not be raised against the working of the Theosophical Society, which was really a philanthropic association. Speaking of the second object, he said that it would not have been necessary to insist upon its importance, had it not been that men of other religions had come from distant places and prejudiced the rising generation of Hindus against the ancient religion and literature of India. Practically speaking, however, he thought that the study of Sanskrit was of no great value. He warned his hearers at the same time that there were some men who cared little for worldly advancement, men who knew to appreciate the sublime and the beautiful: to such men, and to men like William Ewart Gladstone, who, in the seventy-fifth year of his age, found time in the midst of his arduous duties for the study of Homer, the study of ancient lore was to be recommended. The Theosophical Society was in that respect trying to accomplish the same thing as the Asiatic Society. The latter Society, however, like Freemasonry, was not a "People's" Association in the same sense as the Theosophical Society was. He then spoke of the useful work done by the journal of the Theosophical Society. The lecturer spoke of the third object as the grandest. Theosophy professed to prove the problem of the existence of the soul apart from the body, and of its survival after death. The solution of the problem by the different religious creeds was founded on Revelation and Faith—followers of revealed religions appealed to books (*e. g.*, the Bible and the Koran), while Theists appealed to inborn Faith. The lecturer then read extracts from Babu P. C. Mozumdar's *Faith and Progress of the Brahma Somaj*, showing that the Brahmans believed implicitly in the immortality of the soul. He then cited the opinion of J. S. Mill who held that that belief was not grounded on any scientific arguments. He referred at some length to the decline of faith, and read an extract from Froude's *Short Studies on great Subjects* running as follows:—"Faith is the cry of all Theologians; believe with us, and you will be saved; refuse to believe, and you are lost. Yet they know nothing of what belief means. They dogmatize, but they fail to persuade," &c. He then read the following extract from Carlyle's essay on the *Signs of the Times* :—

"The truth is, men have lost their belief in the invisible, and believe and hope and work only in the visible; or, to speak it in other words: This is not a religious age"\*\*\* The lecturer next cited Carlyle's views in reference to the decline in morality which followed upon the decline of faith. He then examined the attempts made by philosophers, ancient and modern, to solve the problem of the immortality of the soul. He read an extract from Addison's Cato, giving the opinion of Socrates, which begins thus :—

"It must be so—

Plato, thou reasonest well.

Else whence this pleasing hope, this fond desire,

This longing after immortality?"

He then gave the opinion of Carlyle, and read out the dying words of Harriet Martineau as expressive of the positivist view of the question. "I cannot think of any future as at all probable, except the 'annihilation' from which some people recoil with so much horror," &c. The lecturer then presented the views of Tyndall and Huxley, as the chief representatives of modern science, who are both agreed that "nothing can be proved or disproved respecting either the distinct existence, the substance or the durability of the soul."\* He then referred to the Theosophical solution of the problem, and read a paragraph from page 21 of the *Hints on Esoteric Theosophy* No. 2. He came next to consider the question as to who the Adepts were, and what the knowledge was that they had determined to share with mankind. In this connection he read extracts from Mr. Sinnett's *Occult World*, pp. 24—26. Referring to the control which the Adepts possess over the forces of Nature, he read an extract from page 15 of the same work. He then read an extract from page 19 of Mr. Sinnett's celebrated work, stating the definition of "soul" according to Occult Philosophy. Thus, he showed, while scientists and metaphysicians had given up the task in despair, Theosophy and Theosophy alone professed to prove experimentally the separate identities of the "soul and body." All religion was based upon the existence of the soul beyond the grave, and Theosophy, by furnishing direct proof of that, was rendering incalculable service to religion, and was not, as many people erroneously held, antagonistic to it. It was absurd to speak of the Theosophists as Atheists. They belonged to no particular creed. That was a sufficient refutation of the charge. It was true that some of the Theosophists were Buddhists. But Buddhists were not Atheists. They did not deny the Eternal, Infinite, Unknowable Reality. All that could be said was that they did not attempt to define the undefinable. That did not amount to atheism.

\* Huxley's *Life of Hume*,

What man required was a knowledge regarding himself—the soul and the laws of its development. That knowledge was supplied by Theosophy, and consisted in the great law of *karma* (self-development or evolution) whereby the future of a man was shaped by—

\* \* \* "All that total of a soul

Which is the things it did, the thoughts it had,  
The 'Self' it wove—with wof of viewless time,  
Crossed on the warp invisible of acts—  
The outcome of him on the Universe."

*The Light of Asia.*

The learned lecturer then proceeded to give some account of the Founders of the Society, of whose high character and aims the educated Natives of India now know well enough. The lecturer referred to the attitude of indifference or opposition in outsiders as natural. Such an attitude was also his when he first joined the Society. But along with such an attitude there should be—*First*, a desire to seek after truth, and *Secondly*, a readiness to accept truth when found. He pointed out the following advantages of joining the Theosophical Society :—

I.—The advantages which generally proceed from joining a Philanthropic and Scientific Association.

II.—As regards the Hindus, the special advantages proceeding from an awakening of interest in the literature, science, and philosophy of their forefathers.

III.—The advantages of belonging to a Society which is under the guidance of a Brotherhood of Adepts possessing immensely greater knowledge and powers than ordinary men.

The lecturer concluded with reading the last two pages of Mr. Sinnett's *Occult World*.

Babu Khettra Chunder Ghose, M. A., B. L., rose to state his objections against the third object of the Society. He had no faith in the existence of the Mahatmas, especially of Mahatma K. H. He knew that Yogis existed, but was sure they never had, and never will have anything to do with men. He could not question the veracity of Messrs. Sinnett and Hume, yet he could not help thinking that the phenomena, which they vouched for, must have been impostures. If the Mahatmas existed, what good had they been doing to the world? If they had been doing no good, we should have nothing to do with them. In expressing his doubts about the phenomenal powers of the Adepts, he specially referred to their unwillingness to produce a copy of the *Times*, as related in the *Occult World*. Babu Mohendra Nath Mukerji, Deputy Magistrate, while expressing his entire sympathy with the objects of the Society, stated his unwillingness to join it before ascertaining how much of truth lay in the third object of the Society, *viz.*, that relating to psychical powers. Babu Parbatty Churn Roy then briefly answered the objections thus raised.—*Indian Mirror*.

#### SIR JAMES MACKINTOSH ON ATHEISM.

In the necessary ascending progress of the understanding to divest the infinite perfect being of all resemblance to imperfection, he at length approaches every faint and imperfect personality. I acknowledge, indeed, that the heart has an equally inevitable descending progress, in which the divinity is more and more individualised, brought nearer, and made like to ourselves, that he may be more the object of affection. But, to confine myself to speculation, a person, commonly called an Atheist, might certainly feel the most ardent moral enthusiasm, or the warmest love of perfect virtue. He consequently has the feeling of which devotion is a modification or another name. This perfect virtue he must often personify. How small is the difference, in pure speculation, between the evanescent individuality to which the reasonings of the philosophical Theist reduce or exalt the divinity, and the temporary mental reality into which the imagination of him who is called an Atheist brightens his personification of virtue! Morality is usually said to depend upon religion; but this is said in that low sense in which outward conduct is considered morality. In that higher sense in which morality denotes sentiment it is more exactly true to say that religion depends on morality and springs from it. Virtue is not the conformity of outward action to a rule, nor is religion the fear of punishment or the hope of reward. Virtue is the state of a just, prudent, benevolent, firm, and temperate mind. And let me apply the same mode of examination to the other elements of religion, the doctrine of a future state. The foundation of that doctrine is the desire that beings, capable of an indefinite progress in virtue and happiness, may accomplish the destiny which seems open to them, and the belief that the interruption of that noble progress by death is only apparent. The fear of hell, or the desire of reward for ourselves, may, like the fear of the gallows, prevent crimes; but, at most, it can only lead to virtue; it never can produce it. I leave below me those coarse, rude notions of religion, which degrade it into a supplement to police and criminal law. All such representations are more practically Atheistical, more derogatory from the grandeur

\* For want of space, we cannot reproduce here, from the *Indian Mirror* of 19th June, a letter from "AN HUMBLY BRAHMIN," bearing upon these questions.

of religious sentiment, than any speculative system called Atheism. When the mind is purified from these gross notions, it is evident that the belief of a future state no longer rests on the merely selfish idea of preserving our own individuality. When we make a further progress, it becomes indifferent whether the same individuals, who now inhabit the universe, or others who do not yet exist, are to teach that superior degree of virtue and happiness of which human nature seems to be capable. The object of desire is the quantity of virtue and happiness—not the identical beings who are to act and enjoy. Now, the philosopher, who, for his doubts, is called an Atheist, may desire and believe the future progress of intelligent beings, though he may doubt whether the progress being made by the same individuals be either proved or very important. His feelings will scarcely differ at all, and his opinions very little, from him who is called a Theist.

### THE DESCENT OF ISHTAR.

N. B.—Ishtar is "Astarte," the Babylonian Goddess of the Moon, and her "descent into Hell or Darkness" is one of the earliest forms we have of that Myth. The other allusions will doubtless be plain to Theosophists.

I am falling—falling—falling!  
 Falling through the blank of the void.  
 Falling through the damp belts of the vapors—  
 Through the ranks of the children of the ether—  
 Through the heavy-smelling mists of the earth—  
 Through the dark walls of the clouds—  
 Down into the abyss of the blackness—  
 Where life and light is not.  
 So falleth Ishtar!  
 Why falleth Ishtar?  
 I fall because the circle is finished—  
 Because the days of darkness are come.  
 Because the obscurity of the night requireth me no longer,  
 And the wail of my lover cometh to me over the waters  
 of the past!  
 Therefore I go into the depths of oblivion to raise the light  
 that is gone!  
 Therefore falleth Ishtar!  
 The garments have been taken from me!  
 The jewels have fallen from my forehead!  
 Naked and bare I go to the depths of oblivion,  
 For the wail of my lover cometh to me over the waters of  
 the past!  
 And darkness reigneth over the fall of Ishtar.  
 Dost thou think, lord of death, to retain me  
 In the gloom of the everlasting?  
 To hide the light when the circle revolveth,  
 And Ishtar is requited from her prison?  
 Love and light shall melt up thy bronze gates,  
 And their heat shall disperse thy gloom-vapors!  
 No more hearing the wail of her lover—  
 With the glory of youth on her brow—  
 And the jewels returning unto her—  
 The destined destroyer of darkness—  
 The unconquered victim of death;  
 The death that dissolved at her contact—  
 And the world's all a joy at her coming—  
 So riseth Ishtar.

M. B.

### THE TRUE WEALTH OF INDIA.

A CORRESPONDENT of the *Indian Mirror* writes to that paper:—

Your editorial on the above subject in your issue of the 7th instant, will, I feel sure, appeal to the heart of every true Indian patriot. The chief point is that there is wealth in India, but we, the degenerate sons of the once mighty Aryans, do not know how to utilize it—nay, some of us believe no such treasures exist. Fortunately for us, the signs are changing; and if foreign influence from one quarter has led to our degeneration, foreign influence from another quarter has opened the eyes of some of us to our true position. Having awakened to a sense of our real worth, all of us must now unite together for a co-operation in the effort to regain our past glories. You have pointed out in your able article the different departments of nature in which the *Rishis* carried their knowledge to the highest extent, and what I would suggest is that the different Branches of the Association now working in our midst, should take up these different subjects for investigation, if the members be real patriots and philanthropists, as they profess to be. Many of them seem to be yet passing through the first phase of gaping with open mouths at the marvels, brought to their notice. Some have no doubt begun practical work by opening Sanskrit Schools. But what we would all wish is that they should have all one end in view, namely, the attainment of truth, which can be best done by a resuscitation of our Aryan treasures, and work up to that end in the best way possible, irrespective of personal considerations or phenomenal appearances.

The 17th March 1884.

AN ARYAN.

Evidently "An Aryan" refers to the Theosophical Society and to the practical work done by it through the unselfish labours of Mme. Blavatsky and Col. Olcott. The Indian Branches especially would do well to take up the suggestion and act upon it. The time for speechifying and ovations is nearly gone and what is now required is real work. The two so-called "foreigners" have done *their* share of the work of turning the attention of the sleeping and apathetic public to the "true Wealth of India." It is now the duty of the real philanthropists to search through the mines of such an invaluable treasure for the intellectual and spiritual benefit of humanity. "Knock and the door shall be opened." "Seek and ye shall find." If each person were to realize the significance of these two mottoes and do *his* part of the work, not waiting for the others, the practical good done would be immense.

D.

### HER HUSBAND'S DOUBLE.

A WIFE'S STRANGE EXPERIENCE—A REMARKABLE DIVORCE SUIT.

(From the *Philadelphia Mirror*.)

MARGARET LEEDS, a pretty little brunette and a native of PITTSBURG, became Mrs. Anson F. Clements on the 8th of last July. Her husband is a carriage upholsterer, and has always been an industrious, sober man. He was offered a better position in Philadelphia, and came here after a three days' honeymoon, leaving his bride with her mother. On the 15th of October, being assured that his position would be permanent, he telegraphed to his wife, and twenty-four hours later she was installed in a cozy little four-room house in the northwest section of the city. She had not been in her new home a week before she had written twice to her mother that she was too utterly miserable to live; that her husband, while one of the kindest of men living, was possessed of a strange affliction that made her life a burden, and certainly precluded the possibility of her living with him. The story she related to a *Mirror* representative was a terrible one, and was amply corroborated by her tears, and her pitiful expressions of regret about the compulsory parting. "I never knew how much I loved Anson," said she, "until after we were married, and I love him today better than ever. We were married at 7 o'clock in the evening at mother's house. The guests remained until midnight, and then we went to our room and retired. About 4 o'clock in the morning I was awakened by a noise in the room. I raised myself up in the bed and screamed. And what I saw was enough to make a brave man quake with fear. Standing in front of the bureau I saw the form of a man. He seemed to be shaving himself, for every now and then I could see the gleam of a razor as he wiped it on a piece of paper. 'Anson!' I shrieked, 'Anson! wake up for heaven's sake; there is some one in the room.' As I spoke, I placed my hand on my husband's face. It was as cold as the face of the dead. In my fright I began beating him on the chest and screaming at the top of my voice. Then the idea took possession of me that he was dead. His arms were rigid and I could not hear him breathe. My screams awoke the household. I can just remember seeing my mother and youngest brother rush into the room as I fainted. When I came to my senses, Anson was bathing my face with cold water and my mother was standing beside the bed. I looked toward the bureau, but the form I saw standing there had disappeared. I told the cause of my outcry, but they all laughed at me and said I had been dreaming. My husband seemed annoyed at something, but as the day wore on, he became good natured, and before night he had me in his arms, telling me how much he loved me.

"The next night and the next I slept soundly without being disturbed. On the fourth day after our marriage, Anson started for Philadelphia, and on the sixteenth of last month I arrived in this city. Anson was overjoyed to see me, and I need not say that I had the same feeling. I was tired and went to bed early. I don't think I shall ever forget that night as long as I live. Shortly after midnight, something caused me to awake, and looking up I saw the room door open and then I saw a man enter. He went directly to the bureau, and then, as true as heaven hears me, began shaving himself. There the man stood, with a razor in his hand, drawing it over his face again and again as calmly as though he was in his own home. He made no other motion and his movements were perfectly noiseless. I must have lain perfectly quiet for a minute, and then by a mighty effort I regained the use of my voice and limbs. I seized my husband by the shoulder and tried to awaken him. My fears must have given me double strength for I pushed him partly out of bed. Instead of arousing himself at my call, he lay like a dead man. I passed my hand over his face and was surprised to find that it was as cold and clammy as it was on our bridal night in Pittsburg. The man was still standing in front of the bureau, and did not appear to notice the disturbance in the least. At last my nerves gave way, and I fell back half fainting. The next thing I remember was Anson bathing my face and chafing my hands. I told him what had happened, and he said I had

been dreaming, but he did not seem as positive as before. On the third night of our stay in Philadelphia, the mystery was solved, or at least there was an unsatisfactory explanation of it. My husband and I had spent the evening at a theatre, and after coming home sat up and talked until nearly 1 o'clock. Then we retired, and I, with some misgiving, buried my head under the bed-clothes. I don't know how long I slept, but, as before, I was aroused by some mysterious influence, and knew the moment I opened my eyes that I was to go through another terrible ordeal. I was expecting to see the same intruder. And I did. He was standing in front of the glass shaving himself with the utmost unconcern. I jumped out of bed, and enveloping myself in the counterpane that I snatched up, I approached the man at the bureau. He never budged an inch. I turned up the gas and took a step nearer. The rays of the gas fell about the face of the figure and showed the reflection of his face in the mirror. "I looked quickly, and, great heavens! I saw the face of my husband staring at me. I turned around. My husband still lay in bed. His face was of a pallid, deathly hue. I sprang forward and touched his forehead. It was as cold as ice. Turning again, I walked toward the figure in front of the glass. As I drew near, it seemed to fade away, and when I looked again, it had gone. At the same moment, Anson groaned once or twice, turned over, then sat up in bed. 'Maggie,' he said, 'you know everything now. I have been enduring the torture of a thousand hells for the last ten minutes, and unable to move hand or foot. My God! Why am I not like other men? What you saw in Pittsburg and what you have seen here is no nightmare, no dream, but a terrible reality. You saw my double. It has been the curse of my existence for years, and seems to be a visitation upon me for some sin of my parents. I know perfectly well when my other consciousness is making itself visible to mortal eye, and have not the slightest control over it. Nevertheless, my thinking powers are not stupefied, but rather quickened, and the fright you experience I feel tenfold in agony of mind. I thought that marriage would change my condition, but it seems only to have made it worse.'

"Now, sir," said the young woman, "you can readily see that no matter how much Anson and I love each other, we cannot live as man and wife, when his shadow, or whatever you may call it, goes roaming around the house at midnight, and so we've concluded to separate."

#### A NEW EPISCOPAL VIEW OF HEAVEN.

A FEW weeks ago Bishop Burdon was kind enough to send to the editors of the newspapers in Hongkong a copy of a pamphlet containing four sermons he had preached a short time previously, in the Cathedral on 'The four last things'—Heaven, Hell, Judgment and Death. These four sermons have excited an exceptional amount of attention here. The fact is the views advanced in them travel somewhat beyond the orthodox notions on the subjects with which they deal. There is a more intellectual treatment of these subjects in the pamphlet than that to which we have been accustomed—a treatment more in consonance with the advanced thought of the day. The Bishop discards the idea that Heaven is a place for dazzling crowns, seraphic songs, and a delirium of felicity, or that Hell is anything like what Dryden depicted:—

Eternal torments, baths of boiling sulphur,  
Vicissitude of fires, and then of frosts.

The first of the four sermons is on Heaven, and we shall have to confine our remarks to it in this article. 'A training and disciplining of the spirit, making it tender, loving, noble, true, sympathizing, unselfish; deepening and ripening the character for the highest and holiest purposes of love and service is,' says the Bishop, 'the Christian's Heaven, begun here, perfected hereafter.' Heaven seems, in short, to be progressive goodness, commenced in this world and carried on in the next until perfection is attained. A few extracts from the Bishop's sermon will make his meaning clearer:—

The notions about the occupations or non-occupations of Heaven are equally foolish and therefore mischievous.

Heaven is a *State*: a state, that is, of mind and heart, a moral and spiritual state. This is limited to no place. It is possible to conceive of a place where the people are all of that state, or, in the language of Scripture, "where the people are all righteous," and this may be the case with Heaven ultimately. But *place* is in the meantime a very subordinate idea and a very immaterial one. *Character*, a character for good, is the fundamental idea of Heaven, wherever it may be. Bring together the teaching of Christ on what a man's life should be, and all the exhortations of all the letters of his Apostles, and you will find in them the sum and substance of the Christian's Heaven. So far then as we are concerned, heaven is a *State* of mind and heart, a *Character* begun here through faith in Christ and carried on when our present bodies are cast off. Any place will make Heaven, if the soul, that is the man, be in the right state.

Dante pictured Heaven as separated from Purgatory by a river, and rising upwards through nine spheres to the abode of the Supreme Being. The planets formed seven of the spheres, the Moon being inhabited by angels, Mercury by archangels, the Sun by the powers, and so on, the Supreme Being having his

abode in a sphere called the Empyrean. Milton followed the same divisions. Wordsworth described Heaven thus:—

The appearance, instantaneously disclosed,  
Was of a mighty city—boldly say  
A wilderness of building sinking far,  
And self-withdrawn into a wondrous depth,  
Far sinking into splendour without end!  
Fabric it seemed of diamond and of gold,  
With alabaster domes and silver spires,  
And blazing terrace upon terrace, high  
Uplifted: here, serene pavilions bright  
In avenues disposed: there, towers begirt  
With battlements, that on their restless fronts  
Bore stars—illumination of all gems.

Bishop Burdon tells us not to believe in any such Heavens as these. He regards pictures of this kind as having mischievous effects, so far as they give us incorrect ideas of the future state. The Paradises of Milton and Dante, highly wrought works as they are, afford an entirely wrong conception of Heaven. There are also no accusing spirits to fly up to Heaven's chancery with the *lapsus lingue* of mortals, and no recording angels to drop tears on the objectionable words as they are written down and blot them out for ever. These pretty ideas must be abandoned. The sermon is, we take it, a result of the increased enlightenment of the age. As knowledge and thought have progressed, men have formed higher ideas of the future state than those which satisfied people centuries ago. The Bishop's conception of Heaven is infinitely superior to that portrayed by Milton, or any other writer of his time. If history be traced back, it will be seen that intellectual progress has ever forced the expansion and refinement of religious ideas. It has raised us by degrees from the condition of the savage who find divinity in a lump of wood, to an enlightened status when we demand a nobler conception of Heaven than ceaseless psalmody or an infinity of celestial rapture.—*China Mail*.

#### THE HERMETIC SOCIETY.

The inaugural meeting of this Society was held on Friday evening, the 9th inst., at the residence of Francis Lloyd, Esq., 43, Rutland Gate. There was a large attendance of members and guests. The Secretary, Mr. W. F. Kirby, having read the prospectus of the Society, an interesting and able address was delivered by the President, Dr. Anna Kingsford, M. D. (Paris). She adverted to the appropriate significance of the day, St. George's Eve, on which the Society "chanced" to be constituted, giving the legend of the Champion Saint, and showing how it symbolised the overthrow of the Dragon of Materialism by spiritual illumination. Mr. Edward Maitland followed with an address, exhibiting the esoteric meanings of some passages in Scripture history, in their bearing on the objects and studies which the Society has been formed to pursue.

Colonel H. S. Olcott, the President of the Theosophical Society, was present, and was requested by Dr. Kingsford to address the meeting. This he did in a spirit of cordial encouragement to the new Society. Having given a brief account of the foundation, history, and aims of the Theosophical Society, he referred to the magnitude the field embraced by occult and mystic studies, recognising the value of associations for the elucidation of special aspects of the truth enshrined, or buried, in the most diverse forms and symbols. A vote of thanks was unanimously passed to Colonel Olcott for his presence and sympathy. Dr. Kingsford announced a series of discourses by herself at future meetings of the Society, explanatory of the terms of the Apostles' Creed.—*Light* (LONDON.)

#### THE CHURCH MILITANT IN SCOTLAND.

The publication of Mr. Peter Davidson's *The Divine Church* has raised a storm of controversy in some of the Scotch papers. What is most amusing is the fact that the hero who takes that opportunity to abuse and vilify the Theosophical Society is a clergyman. He says he was in India and knows all about the Society, while in reality he shows great ignorance by repeating the malicious slanders which have emanated from the fertile imagination of certain pious people, and which have over and over again been shown to be false. The text of the controversy is neither ornamental nor useful, and we will not inflict it upon our readers.

#### Occult Phenomena.

To answer the continual insinuations of the London "Light" and others of our spiritualistic friends, who, in the face of all demonstrations to the contrary, insist on believing that the so-called occult phenomena are produced by "spirits" through the "mediumship" of Madame Blavatsky, I will state that the occurrence of these phenomena has not ceased since the departure of Madame Blavatsky for Europe. She left Bombay on February 20, 1884, and since that time I have personally received three of the well-known occult letters in the

familiar handwriting of the Masters, and one of them (from K. H.) enclosed in an envelope with Tibetan characters. One of these letters was received on March 22nd through the astral form of a high Chela, another one on April 1st was written on a blank sheet of paper lying on a table, and the third one, containing very important information about a subject, which information was six weeks afterwards found to be correct, was transmitted to me through Damodar K. Mavalankar on April 28th. Besides many other phenomena have happened, while neither of us has yet shown any symptoms of being a medium in the usual acceptance of the term.

Dr. F. HARTMANN.

#### SPECIAL ORDERS OF 1884.

LONDON, May 13, 1884.

SEVERAL applications for power to form Branches of the Society in the United States of America having been received, the following rule is issued:—

Mr. William B. Shelley, President, and Mrs. Josephine W. Cables, Secretary, of the Rochester Theosophical Society, Rochester, New York, and Mr. George Frederic Parsons, of New York City, are appointed members of the General Council to fill vacancies caused by the departure from America of Mr. W. Q. Judge and the non-acceptance of Mr. M. Marble; and Mr. Elliott B. Page of St. Louis, Missouri, and Mr. Thomas M. Johnson of Osceola, St. Clair Co., Missouri, are appointed additional members of the same. The above five together with Major-Gen. Abner Doubleday, U. S. A., and Prof: J. H. D. Buck, M. D., of Cincinnati O., to constitute a Board of Control for America and have charge of the general direction of the Theosophical movement in that part of the world. They are hereby empowered to admit and initiate applicants, and, by consent of a majority, grant temporary Charters for new Branches without preliminary reference to Head quarters. Applications for Charters from parties east of the Alleghany Mts. to be made to Mrs. J. W. Cables, and those from persons residing in the territory west of the said mountains, to be made to Mr. E. B. Page, for submission in each case to their colleagues of the Board of Control.

As soon as practicable after receipt of this order, the Members of the Board shall agree upon a Chairman and a Secretary, through which latter officer a monthly return shall be made to the Recording Secretary of the Theosophical Society, Adyar, Madras, of the Board's transactions including reports of all Charters issued and new members admitted. The returns must be accompanied by the Application and Obligation Forms properly filled, and a Draft on London for the Initiation Fees. By the first returning mail, receipts will be sent direct to the new members for their Fees, and Charters forwarded to the Secretary of the Board of Control for transmission to the parties interested.

Each new Branch must empower at least one of its members to go to the Member of the Board of Control residing nearest to them, for instruction and initiation. He can then initiate the President of his Branch, who thenceforth will be empowered to initiate his colleagues and future applicants during the term of his office. His successors to have the same authority during their respective official terms.

The Board shall keep an accurate register of all American Branches, and their members, but the contents shall not be divulged to any non-member without the written permission of the President-Founder. A membership register shall be kept by each Branch after the uniform plan adopted at Head-quarters, particulars of which can be obtained through the Secretary of the Board.

To defray the petty expenses of the Board, for postage, printing, etc., a small per capita assessment should be annually voted by each American Branch.

H. S. OLCOTT,

President, Theosophical Society.

Attest:—

M. CHATTERJI,

Private Secretary.

#### THE FOUNDERS OF THE THEOSOPHICAL SOCIETY IN EUROPE.

For the benefit of our readers, we give below the two articles concerning Col. Olcott and Mme. Blavatsky, in the *Pall Mall Gazette* (London), referred to in our last issue.

#### A MIRACLE WORKER OF TO-DAY.

Colonel Olcott, President of the Theosophical Society, is at present in London on a mission from the Sinhalese Buddhists, who have considerable reason to complain of the manner in which they have been denied justice in their disputes with the local Roman Catholics. With that aspect of Colonel Olcott's mission, however, we do not propose to deal to-day. Suffice it to say that Colonel Olcott and the petitioning Buddhists ask

for nothing that should not be conceded as a matter of simple right to any body of religionists in any part of her Majesty's dominions. Much more interesting than the champion of the aggrieved Buddhists of Ceylon is Colonel Olcott as the Apostle Paul of Theosophy, an archaic philosophy which, taking its rise in the remote regions of Thibet, is destined, in the fervent faith of its disciples, to spread over the whole earth. Colonel Olcott's account of his conversion affords a key to the whole of his present mission. The Colonel—a New Yorker, a prosperous lawyer, well-to-do in this world's goods, and with a prospect, almost amounting to a certainty, of being appointed State Director of Insurance of New York, with an honourable record of gallant services performed in the American Civil War—was much attracted by the study of Eastern philosophy.

The reason why Colonel Olcott abandoned his professional career in the United States was as follows:—One night he had been meditating deeply and long upon the strange problems of Oriental philosophy. He had wondered whether the mysterious teachings of Madame Blavatsky were after all nothing more than the illusions of an overwrought brain, or whether they had really been revealed to her by those weird Mahatmas—a race of devotees dwelling in the remote fastnesses of the Thibetan Himalayas, who are said to have preserved intact for the benefit of mankind the invaluable deposits of archaic spiritual truth to be revealed in "the fulness of the times." His judgment inclined towards the latter alternative. But if theosophy as expounded by its latest hierophant were true, then was it not his duty to forsake all that he had, and leaving behind him the busy Western world, with its distracting influences which indisposed the mind to the perception of pure spiritual truth, hasten to the East, the chosen home of repose and speculative calm? Yet should a step so momentous be taken without ample confirmation; nay, without absolute certainty of the truth for which he was expected to sacrifice all? Could such absolute certainty be vouchsafed to mortal man? Colonel Olcott pondered long, revolving these and similar questions, when suddenly he became aware of the presence of a mysterious visitant in the room. The door was closed, the window was shut, no mortal footprint had been heard on the stair, yet there, clearly visible in the lamplight, stood the palpable form of a venerable Oriental. In a moment Colonel Olcott knew that his unspoken prayer had been answered. He was face to face with one of the mysterious brotherhood of the Thibetan mountains, a Mahatma who from his distant *ashrum* had noted the mute entreaty of his soul, and hastened across ocean and continent to remove his lurking doubts. The Mahatma entered into friendly conversation with his American disciple, and in the course of half an hour succeeded in convincing him beyond the possibility of doubt that Mme. Blavatsky's testimonies concerning the existence of the Mahatmas and the mission which invited him were simple transcripts of the literal truth. Ere the sudden visit was over, Colonel Olcott was a fast adherent of the new philosophy so strangely confirmed. But when the Mahatma rose to go, the natural man reasserted itself. "Would you not," he asked, "before you go, leave me some tangible token of your presence, some proof that this has been no *maya*—the illusion of overstrained sense? Give me something to keep that I may touch and handle." The Mahatma smiled a kindly smile; then removing his turban he wrought upon it a marvellous transformation. Colonel Olcott saw the shadowy folds of the Eastern headgear thicken and materialize under the fingers of his guest, until at last the shadow became substance, and a substantial turban rested on the head of the spectre. The Mahatma then handed the turban to the astonished Colonel, and vanished as mysteriously as he had appeared. That turban Colonel Olcott carries about with him to this day, he has it at the present moment, and it can be seen by the unbelieving, "the outward and visible sign" of the mysterious visit that completed his conversion. With that turban in his hand Colonel Olcott could doubt no longer. He ultimately threw up all his business engagements, and left New York for Hindoostan. There he has remained until recently a weariless apostle of the theosophic faith which has the Mahatmas of the Himalayas as its sage oracles and Mme. Blavatsky as one of its Delphic priestesses. Such is the story which is told concerning Olcott's conversion, and, however strange it may be, it is the only explanation which is as yet forthcoming as to how a shrewd Yankee editor—for Colonel Olcott edited the agricultural department of the *New York Tribune*, under the late Horace Greeley—has been for the last six years engaged in carrying on an active apostolate in India and Ceylon in favour of the ancient mysterious doctrines which are popularly known as theosophy. Colonel Olcott, who is at present, as we have already stated, in this country on an errand to the Colonial Office, in order to secure protection for the injured Sinhalese Buddhists, is about to undertake a mission through Burmah, on the invitation of his Burmese Majesty, with a view to purifying and reviving Buddhism. After this tour through Burmah he proposes to make an itinerary through Siam. Subsequently he may visit China and Thibet. Mr. Sinnett vouches for the fact that Colonel Olcott, in the course of his tours in India and Ceylon, performed more miracles—using that term, of course, in its popular and unscientific sense, for the theosophists stoutly deny that there are such things as miracles

*contra naturam*—than are recorded in the whole of the Gospels. Colonel Olcott himself modestly places the number of his psychopathic treatments at 8,000 in thirteen months. During that period he is said to have performed almost every cure as recorded in Old or New Testament. He has made the deaf to hear, the dumb to speak, the blind to see; the paralysed have been restored to the full use of their limbs, the cripples have walked; and, although he cannot boast of having raised the dead or healed a leper, he asserts that he cured a man suffering from elephantiasis, who was the nearest approach to a leper which he had to do with. Colonel Olcott is rather chary of speaking of these cures, fearing, not unnaturally, that his life may become a burden to him if it is known that a "miracle-worker" of such power is within hailing distance of the innumerable sick and afflicted of London. During his visit to our office, Colonel Olcott obligingly explained to our representative the method of healing, which he pursued. Its central principle seemed to be that of establishing a magnetic current between the right and the left hands of the operator, which traverses the patient and imparts the surplus vitality of the operator. Almost all disease, in Colonel Olcott's opinion, arises from deficient local vitality, and can be removed by influx of fresh life from another person. Of course, this in time, tells upon the vital force of the healer, and Colonel Olcott himself was at the close of his healing campaign nearly paralyzed, and would, he maintains, have been altogether so but for the timely warning of his watchful Mahatma, who ordered him to desist before the mischief had gone too far. As it was, he had paralysis for some time in the forefinger of his right hand; but he is now perfectly recovered. During his recent stay in Nice, he asserts, he was the means of effecting a very remarkable cure on the person of Princess W., a Russian lady who had been paralyzed in her right arm and leg for seventeen years. Colonel Olcott, in the course of fifteen minutes, was able to restore to her the perfect use of both limbs, on which physicians had so long experimented in vain. Of these gifts, however, Colonel Olcott makes but small account. They are incidental, nor does he think that he is exceptionally gifted in this respect. Similar powers may be exercised by almost any healthy person, provided they go the right way about it. The Colonel was even obliging enough to instruct our representative how to work miracles; but hitherto, whether owing to lack of experience on his part or to the uncompromising nature of the human material on whom he tried his newly acquired art, the experiments so far have not proved successful. Colonel Olcott, before he left India, enjoyed another remarkable experience in the shape of a visit from another Mahatma. It was at Lahore, when he was in his tent at night, that he was visited by the sage in question *in propria persona*. He recognized the person in a moment, and they entered at once into a lively conversation, at the close of which the Mahatma said, "You wanted something tangible when first you met your present teacher. You are going to Europe. Here, I will give you something to take to Sinnett as a message from me." With that the Mahatma encircled the Colonel's palm with the finger-tips of his right hand, and there gradually grew into substance, precipitated as it were out of the thin air, a letter written in English characters, enfolded in Chinese silk, and addressed to Mr. Sinnett. Of the labours of this gentleman on behalf of theosophy in the benighted West, the recluses in the Himalayas are gratefully conscious. Of these and many other wonders too numerous here to tell, as well as the story of the strange propaganda which this American Colonel is successfully carrying on in the remote East, we must say nothing at present. Colonel Olcott himself may take an opportunity, during his visit, of setting forth the latest light—the light of theosophy—in the midst of the modern Babylon. At present it is sufficient to repeat for the benefit of our readers the remarkable story which this American apostle of Eastern occultism is prepared to uphold against all the gibes of the sceptical capital of the Western world.—*Pull Mall Gazette*, April 21, 1884.

#### AN INTERVIEW WITH MADAME BLAVATSKY.

So much interest has been excited in so many different circles by the accounts which we have published of the Theosophical Society and Colonel Olcott, that the following report of an interview with Madame Blavatsky, the seeress who founded the new religion, will probably command some little attention. Our representative, who waited upon the modern prophetess at Mr. Sinnett's, writes as follows:—

Who is Madame Blavatsky? Madame Blavatsky is a woman of Mystery. Of her life in the past no one can speak. All that is known is that she is the niece of General Fadayeff, the well-known Pan-Slavonic leader who died the other day at Odessa, and is related to the Dolgorouki family, which is one of the oldest in Russia. Madame Blavatsky, however, is noble, not on account of her aristocratic origin or high descent, but from the part which she has played in the establishment of Theosophy in India. There is something inexpressibly bizarre and paradoxical about the strange religious movement of which Madame Blavatsky is the founder. That a woman—and that woman a Russian—should be the appointed agent for the revival of occult-

ism as a practical religious faith in our Indian Empire is one of the strangest phenomena of our time. Altogether apart from her peculiar claims as leader of a religious movement, which within the last few years has displayed an astonishing vitality, and while numbering its followers in every capital in Europe, is rapidly extending in Hindustan, Madame Blavatsky is a figure well deserving attention. One of the greatest travellers in the world—there is hardly any country which she has not visited—there are few languages which she does not speak. Her English is not less fluent than if she had been born in Westminster, and probably a good deal more correct. Her reading is extensive, and her knowledge even of the minutest details of English speculative and religious controversies is extraordinarily exact. Her book, "Isis Unveiled"—a new edition of which she is shortly to prepare for the Press—is written in English, and displays a vigorous grasp of our language, as well as a very great controversial vehemence. She is contributing, to the leading Russian review, studies of Indian social life and character, and she has long been known as a learned correspondent of the *Moscow Gazette*. But all these mundane distinctions, which entitle her to be regarded with the same interest as that which is commanded by Madame de Novikoff in a different sphere, are as nothing compared with those mysterious attributes with which, in the opinion of believing Theosophists, she is invested. For Madame Blavatsky is a woman, who has stood nearer than any other among mortals—outside Thibet—to the secret of the universe. She it is who, after passing through a long and toilsome novitiate, has been selected as the chosen vessel by which the mysterious Mahatmas have determined to communicate some portion of their jealously-guarded hoard of spirit-lore to a generation which as yet but dimly perceives the need of it. If we believe one quarter of the stories confidently repeated by those who have the honor of Madame Blavatsky's acquaintance, she lives in constant communion with the unseen. Time and space have no existence for her. While she is sitting on the divan in Mr. Sinnett's drawing-room, smoking her accustomed cigarette, she is holding converse with her chiefs and teachers, who in actual flesh are residing in the remotest glens of the Himalayas; nor is this communion purely spiritual. At times the message of the Mahatma will be committed to writing and a small triangular note neatly folded, bearing the strange Thibetan characters, will flicker into existence from the impalpable air and fall at her feet. To talk to Madame Blavatsky is like reading 'Zanoni,' with this difference, that Bulwer Lytton's hero is the creation of the romancing brain, whereas Madame Blavatsky in flesh and blood stoutly asserts that she herself has witnessed or exercised all the mysterious powers after which Zanoni sought. As for Vril, that fatal essence with which the "coming race" was to be armed, Madame Blavatsky is aware not only of its properties and the conditions under which it can be employed, but she sees potential Vril on every side, and can employ it, should the need arise for any beneficent purpose. To the uninitiate and to those who as yet are groping darkly about the outer portal of the Theosophic temple, Madame Blavatsky can necessarily speak but in enigmas. Even to Mr. Sinnett, the chief Theosophist of the London branch of the true believers, she is but allowed to communicate in part. Secrets too vast to be communicated even to him, lie hidden in her soul, nor dare she venture to unfold those occult mysteries, which if grasped by persons whose fitness for such powers has not been tested by a long series of probationary stages, might prove disastrous to the world. She moves among men much as one who knew the secret of dynamite might have lived in the middle ages, and she trembles as she thinks of the possibility that this dread secret may some time fall into unhallowed hands.

Madame Blavatsky is at present in Paris, but she expects to return to London in the course of next month. Within two hours' conversation which I had with this remarkable woman, she expressed herself in very energetic and confident terms concerning the prospects of theosophy in England. Of peoples, the English, she said, seem to be best fitted to embrace the new doctrine. Supreme in every English head is common sense and reason, the two faculties upon which Theosophists rely, while below there lies the deep basis of mysticism, a soil in which the pure spiritual truth can take root and flourish abundantly. Of all nations, the least prepared for the spiritual doctrine, which she teaches, are the French, whose shallow, scoffing nature is at once indifferent to reason and proof against all appeals to the inner depths. The Russians are too much given to extremes. They are either so pious and orthodox as to regard all Theosophy as begotten of the devil, or so purely materialistic as to deride the very conception of spiritual truth. Not that Madame Blavatsky is given to use the term "spiritual," for her contention is always that Theosophy is a science, appealing to the reason, more than a religion appealing to the emotions,—an exact science, based like any other science, upon the recorded result of centuries of experience. Her attitude towards European nations is strictly impartial, for as she frankly confesses, she loathes the Western world and all its ways. Christianity and civilisation are detestable hypocrisies. She dilated for nearly half an hour with much fervour and natural eloquence concerning the melancholy contrast between the pro-

feared creed of Christendom and the political actions of Christian nations, proclaiming herself on the side of the heathen whom they despise. She maintained that no European, who ever lived among the heathen, could call himself a Christian without a blush of shame. Christianity to the heathen—what is that but organised murder and wholesale burglary? "If your Christ were to come to life at this moment in London and to act as you say he acted, what would you do with him? Send him to gaol or shut him up in a lunatic asylum? Among all your millions of Christians is there one Christ—one who will act upon the principles laid down in your gospels? I do not know of one. And yet you marvel that the heathen world is not converted by your missionaries."

Madame Blavatsky, it may be mentioned in passing, does not believe in the historic Christ of the Gospels, but in a Christ who, she maintains, was crucified one hundred years before the date usually assigned. This Christ, of whom she always speaks in terms of the greatest admiration, and who, she avers, has suffered many things at the hands of those that call themselves by his name, was like Buddha and Zoroaster a great Mahatma, versed in the occult science, of which she at present is the chief authorized exponent. "With reverence," she said, "Gautama Buddha beyond all other Mahatmas, because he alone of all religious teachers has ordered his disciples to disbelieve even his own words if they conflicted with true reason." The Theosophical Society which she has founded aims, first, at the restoration of Buddhism to its original purity, and it is in this reformation of a corrupt Buddhism that Colonel Olcott has been assiduous of late. His Catechism of Buddhism is only one among many forms of activity, literary, and other, which his propaganda has assumed. After the reformation of Buddhism, the second great object of the Theosophists is to restore Brahmanism to the purer idea which finds expression in the Vedas: a herculean task, no doubt, but one in the accomplishment of which the Theosophists profess unshaken faith. The third great task, quite as formidable in its way as either of the preceding, is to combat a false materialism by the establishment of pure spiritual truth. As explained by Colonel Olcott and Madame Blavatsky, the essence of the spiritual truth consists in the cultivation of the inner life and the systematic sacrifice of the lower instinct of our nature to the higher law. The propaganda has met with unexpected success, and at the last conference of the society, which was held at Bombay, the muster included representatives from all parts of India, who were of all races, met on the common platform of truth, justice, and brotherhood. Madame Blavatsky is now advanced in years, but she displays remarkable vitality and vehemence in controversy which may well confound less vigorous opponents. That she is alive at all is, according to her own account, due to a semi-miraculous cure effected by the agency of her masters, as she calls the Mahatmas, repudiating the term "spiritual guide" with much indignation—for after the physicians had given her up as incurably ill with Bright's disease, she was completely healed in three days. Her will, however, she laments, is no longer so strong as it was in the old days, when she could rid herself of any disease by sheer will-power. Whatever may be thought of her philosophy or Theosophy, whatever credence may be attached to the account of the mysterious powers she claims to possess—powers upon which, it is fair to say, she lays no stress, nay, appears to regard with the supremest unconcern—she is a woman who, regarded from the purely intellectual stand-point, deserves more attention than she has hitherto received.—*Pall Mall Gazette*, April 26, 1884.

#### COL. OLCOTT IN EUROPE.

The presence of Colonel Olcott in Europe has been followed by signs expressive of the marked interest that has now for some time been evoked by the presentation of Theosophy to the public, and which has culminated both in London and Paris in a very serious investigation of the subject. The London Society founded in 1879 by Mr. Massey and a number of associates, consisted at that time of a few earnest and thoughtful members. By degrees it drew within its focus a small number of students who were able to perceive that a society having for its platform the broad basis of religious toleration, and, for its aim, the study of Eastern literature and the investigation of the powers of Nature, was a society that would play a great part by furthering the development of intellectual and spiritual progress. For some years this small group endeavoured to follow out the aims of the founders, but owing to a variety of causes; arising partly from religious prejudice, partly from ignorance of the right methods of investigation, and largely from neglect of communication with Headquarters, the society, instead of expanding and increasing as it should have done, became in 1882 almost defunct, being, in fact, a mere intellectual luxury for a few, without a practical result of any kind.

It was at this time, a change having been effected in the internal working of the Society, that one of the old members sought to re-animate the almost dead body, by putting forward its claim to receive teaching from the East, and on the basis of a desire on the part of the members to work in this direction, the Society was re-constituted in 1882. From that time forward, in spite of various drawbacks, there has been a steady accession

to its numbers, and, when Mr. Sinnett, on his return from India, published "Esoteric Buddhism" and gave the Society the benefit of his experience while in connection with the Parent Society in India, a new departure was taken, and not only were the members imbued with fresh energy for their own studies, but interest was excited in leading circles of thought in the outside world, and the Theosophical Lodge in London grew, from being a secret society of occult learning, into an organization taking its place as a pioneer in the path of progress and enlightenment.

A still further move in this direction, not only in London, but on the continent, has been effected by the presence of Col. Olcott and Madame Blavatsky. "Theosophy," to quote one of the many remarks that have appeared on the subject in the daily press, "has suddenly risen to importance," and the minds of many are occupied in trying to realise the fact that religion and science are not antagonistic, and that far away in a land which, as yet, has only been regarded as a field for material gain, there is a school of philosophy whose teachers possess the true wisdom of the ages, and whose methods of investigation into the powers of Nature, are as much superior to the ordinary methods of western Science, as their tolerance is to the sectarian bigotry of western theology.

Since Col. Olcott and Mr. Mohini have been in England, their time has been unceasingly occupied in endeavouring to satisfy the many claims made on them in the way of enquiry on philosophical subjects. The interest in Theosophy has permeated all classes from the scientists engaged in the laboratory, to those who frequent the fashionable drawing rooms of the upper social world. Colonel Olcott has paid visits to Oxford and Cambridge, the centres of academic learning, with the result of finding the representative intelligence of the rising generation, equally interested in the same subject and eager to pursue it. He has also delivered more than one address at social assemblages, which have put forward in clear and forcible language the true aims of the Theosophical Society, and Mr. Mohini has astonished all who heard him by his clear and precise answers to philosophical and scientific questions. On the 8th of May he went to Paris to meet a large circle of persons who are anxious to converse with him; and Col. Olcott will probably follow a little later on, when he has brought some of his Sinhalese affairs in London to a termination. Lady Caithness has opened her palatial house for a "Conférence" which is to take place on the 27th of May and at which will be present many leading Parisians of scientific and literary distinction.

Mr. Sinnett invited a very large number of representative people to meet Col. Olcott at his house and to hear him speak, on the 7th, and a more appreciative audience could hardly have been found. From this slight sketch of what is now being done in London, it will be evident that Theosophical ideas are gaining ground in the higher social circles of London life. To make the movement the success it is destined to become, a corresponding development in the great working masses of the country is needed. It is in vain that orthodox theology has sought to stifle the growing dissatisfaction which is the prevailing mark of the age;—it is there, and it remains for Theosophy to be so presented to the people as to give them a right standard of morality independent of theological dogma. It is for English Theosophists to find the best means by which this desirable object may be attained.

F. A.

#### THEOSOPHY IN FRANCE.

A LONG account has appeared in the *Gil Blas*, a Paris newspaper, of a Theosophical *soirée* at Lady Caithness' hotel. The statements of the reporter are on the whole in accordance with what he was told on the subject by Mme. Blavatsky and Lady Caithness. And he confesses that, although he went to the meeting with the intention of laughing at the whole movement, he found himself involuntarily obliged to treat it seriously. The writer evidently regards the movement from a purely social stand-point, and brings it into connection with the conservative and aristocratic tendencies of the Faubourg St. Germain.

(From the "Indian Mirror.")

We hear that Colonel Olcott's mission is a success in every way. The Theosophic movement in Europe may now be regarded as thoroughly well established. Theosophy is the topic of conversation in the clubs and all circles of society in London. The papers are all writing about the Founders and their party, both in England and on the Continent, Colonel Olcott was to give a lecture to the fashionable world of Paris in the drawing-rooms of the Duchess of Pomar. Babu Mohini Mohun Chatterji, M. A., B. L., has done splendidly at Paris and in London. Every body is charmed with his good breeding and thorough acquaintance with the Western as well as the Eastern Philosophy. Colonel Olcott visited Oxford, and there at the house of Lord Russell had a conversation, or rather discussion, with the nobleman and some Sanskritists of repute on the antiquity of the Vedas.

## Official Reports.

### THE KRISHNA THEOSOPHICAL SOCIETY (GUNTUR).

On the 13th April 1884, the 2nd public anniversary of the Krishna Branch of the Theosophical Society was celebrated at Jagannadham Pantulu's Choultry at Guntur.

The following officers were elected for the current year:—

M. R. Ry.	M. Singaravelu Mudliyar	<i>Avergal, President;</i>
"	C. V. C. H. Seetaramayya Garu,	<i>Vice-President;</i>
"	G. Paleyya Garu,	<i>do,</i>
"	J. Purnayya Pantulu Garu,	<i>Secretary;</i>
"	K. Vijayanna Garu,	<i>Librarian;</i>
"	P. Sriramulu Garu,	<i>Treasurer.</i>

} *Asst. Secretaries.*

### SANSKRIT SCHOOL.

A Sanskrit school has been opened in Chittoor in connection with the Theosophical Society of that place and the retired Telugu Pandit of the Government High School has been appointed as teacher.

A. RAJU MOODELIAR,  
*Secretary.*

CHITTOOR, June 12, 1884.

### VAIDIC HOSPITAL.

We are officially informed that Col. Olcott's visit to Lucknow resulted in the establishment of a Vaidic Hospital by Mr. Balajee Sukh Sagar. He adopts Charaka's system of medicine and that of Sarang Abar in the treatment of diseases and meets with very good success.

### THE LONDON LODGE OF THE THEOSOPHICAL SOCIETY.

Officers for 1884:—*President*:—Mr. G. B. Finch; *Vice-Presidents*: Mr. H. J. Hood and Mr. A. P. Sinnett; *Hon. Secretary*: Mr. A. P. Sinnett, 7, Ladbroke Gardens, W.; *Hon. Treasurer*:—Miss Arundale, 77, Elgin Crescent, Notting Hill, W.

The Theosophical Society, of which the London Lodge is a Branch, is permanently established in India, where its objects are (1) to promote the principle of a Universal Brotherhood of Humanity, without distinctions of race or creed; (2) to encourage the study of Eastern Philosophy, from which the Society believes that important truths are to be learnt; and (3) to investigate the psychic powers latent in Man. The special objects of the London Lodge are:—

(1) The examination of religious systems from an unsectarian standpoint, for the purpose of demonstrating the substantial identity subsisting beneath their apparent diversity.

(2) The revival of research connected with occult science and esoteric philosophy.

This Lodge is subject to the Rules of the Parent Society, and also to the following Bye-Laws:—

(1) The officers of the Lodge are a President, two Vice-Presidents, an Honorary Secretary, and an Honorary Treasurer. The offices of Secretary and Treasurer may be held by the same person, and the Vice-Presidents are eligible to them.

(2) The government of the Lodge is vested in a Council empowered to transact all business connected with its affairs, to appoint the general meetings, and to determine what papers shall be read at such meetings. The Council consists of the officers and of not less than five nor more than seven other Fellows, five to be a quorum. The Council has power to fill up vacancies in its own body, notice being given to all members when such a step is to be taken. Meetings of Council are held half-an-hour before every general or special meeting, and they may be summoned at any time by the President and Secretary, or by the Secretary on the requisition of three other members.

(3) The general meetings of the Lodge are those at which papers are read and discussed. The special meetings are those at which any other business of the Lodge is transacted. At all meetings the President, if present, takes the chair, or in his absence one of the Vice-Presidents or members of Council, as the Council may determine. Special meetings of the Lodge may be summoned by the Council at not less than seven days' notice. Any twelve members may also summon a special meeting by sending a requisition to that effect to the Secretary. The Council then fixes the date of such meeting, at not less than 7 nor more than 14 days from the receipt of the requisition; The first meeting of the Lodge, held in January, is the annual general meeting, and the election of officers takes place at such meeting.

(4) The subscription to the Lodge is £1 a year, payable in January for the current year. Persons not already members of the Theosophical Society become such on being elected to the Lodge, and pay an initiation fee of £1, which is sent to the Head-Quarters of the Society in India. Such persons are only required to pay half subscription to the Lodge for the first year of their membership thereof, or, if joining the Society after the 1st of October, do not pay any subscription for that year. Persons already Fellows of the Society merely pay the local subscription on joining the London Lodge, and if they join after the 1st of July they pay only half subscription for the current year.

(5) Fellows are elected by a majority of two-thirds of the Council present at any of its meetings. Fellows of the Society at large, not members of the London Lodge, may attend as visitors at any of its general meetings not specially declared by the Council to be meetings for members only, and may take part in the discussions and proceedings

of the Lodge on the invitation of the Chairman. The Council may elect as members for limited periods Fellows of the Society visiting London, who shall be entitled to all privileges of membership, except the right of voting and eligibility to offices or to the Council.

(6) Notice, in writing, of retirement from the Lodge must be given to the Secretary before the 31st of December, or liability to the subscription for the succeeding year will be incurred. Members can be expelled from the Lodge by a unanimous vote of the Council, or by a vote of two-thirds of a Special Meeting of the Lodge called to consider the question.

(7) Any alteration of the Rules or objects of the Lodge must be made either at the annual general meeting or at a special meeting convened for the purpose. The above list constitutes the Code of Bye-laws of the Lodge in force at this date.

A. P. SINNETT,  
*Honorary Secretary.*

21st April 1884.

### PRIZES FOR THE TRANSLATION OF THEOSOPHICAL LITERATURE.

THE Mahatmas of the Himalay have been pleased to give information, about occult science and its discoveries, through the medium of English. Sanskrit works on Gupta Vidya treat the subject in a veiled abstruse manner. Only close students of persevering habits can gather scanty knowledge by studying different and voluminous works. While, on the other hand, the information that is now given through the medium of English, is direct and open. The Theosophical Society's literature is now useful to English-knowing natives only. The former and the present Presidents of our Branch, Babu Nil Madub Bannerjee and Rai Peary Lal, Munsiffs, consequently offer inducements to the public to undertake the translation of theosophical works. Babu Nil Madub Banerjee, Munsiff, will give a prize of Rupees 200 for the best Urdu translation of "Esoteric Buddhism," and Rai Peary Lal, Munsiff, will award Rupees 100 for the best Urdu translation of the "Occult World." All translations should reach the "Rohilkund Theosophical Society, (Bareilly)" by the 1st January 1885. Only those translations will be rewarded, which may be considered best by the "Rohilkund Theosophical Society." Rejected translations will be returned to their respective translators. The copyright of the approved translations will be the property of the "Rohilkund Theosophical Society," and the profits arising from their publication, will be made over to the Head-Quarters to form part of the "Permanent Fund." In addition to the above, Rajah Madho Row Vinayek Peishwa, F. T. S., a Councillor of the Theosophical Society, has been pleased to offer (subject to the conditions mentioned above) the following prizes for the best Urdu translations of the following books, to wit—(1) Rupees 150 (one hundred and fifty) for the translation of "Hints on Esoteric Theosophy, 2 parts," and (2) Rupees 50 (fifty) for that of "Elixir of Life." I hope some of our well-to-do brothers, members of the different branch societies in these and other Provinces, will see the necessity of supplementing these prizes with other more handsome ones for translations of our Theosophical literature into the different languages at present spoken in this Peninsula. To acquire knowledge ourselves and not to impart it to others, simply because they happen to be ignorant of the language in which we have obtained our knowledge—is selfishness. Knowledge must not be the speciality of a privileged few—but must be disseminated far and wide.

GAINDUN LALL, B. A., F. T. S.,  
*Assistant Secretary,*  
BAREILLY, N. W. P. }  
May 28th, 1884. } "*Rohilkund Theosophical Society.*"

*Note.*—The proposal has the hearty approval of the Parent Society.

### OBITUARY.

The Secretary to the Bellary Theosophical Society reports the death of M. R. Ry. Rutham Narrain Chetty Garu, F. T. S.

The Secretary to the Trichinopoly Theosophical Society reports in his letter of the 11th June 1884, the death of M. R. Ry. V. Krishna Rao Garu, F. T. S.

The latest Number of *Light* (London) brings us the news of the death of Mr. Samuel Ward, an energetic Member of our Branch at London.

The Secretary to the Coimbatore Theosophical Society reports the death of M. R. Ry. B. Padmanabiah Garu, F. T. S.

# "THE SECRET DOCTRINE,"

A NEW VERSION OF "ISIS UNVEILED."

WITH A NEW ARRANGEMENT OF THE MATTER, LARGE AND IMPORTANT ADDITIONS, AND COPIOUS NOTES AND COMMENTARIES,

BY

H. P. BLAVATSKY,

*Corresponding Secretary of the Theosophical Society.*

ASSISTED BY

T. SUBBA ROW GARU, B. A., B. L., F. T. S.,

*Councillor of the Theosophical Society and President of its Madras Branch.*

## PUBLISHER'S NOTICE.

NUMEROUS and urgent requests have come from all parts of India, to adopt some plan for bringing the matter contained in "Isis Unveiled," within the reach of those who could not afford to purchase so expensive a work at one time. On the other hand, many, finding the outlines of the doctrine given too hazy, clamoured for "more light," and necessarily misunderstanding the teaching, have erroneously supposed it to be contradictory to later revelations, which in not a few cases, have been entirely misconceived. The author, therefore, under the advice of friends, proposes to issue the work in a better and clearer form, in monthly parts. All, that is important in "Isis" for a thorough comprehension of the occult and other philosophical subjects treated of, will be retained, but with such a rearrangement of the text as to group together as closely as possible the materials relating to any given subject. Thus will be avoided needless repetitions, and the scattering of materials of a cognate character throughout the two volumes. Much additional information upon occult subjects, which it was not desirable to put before the public at the first appearance of the work, but for which the way has been prepared by the intervening eight years, and especially by the publication of "The Occult World" and "Esoteric Buddhism" and other Theosophical works, will now be given. Hints will also be found throwing light on many of the hitherto misunderstood teachings found in the said works. A complete Index and a Table of Contents will be compiled. It is intended that each Part shall comprise seventy-seven pages in Royal 8vo. (or twenty-five pages more than every 24th part of the original work,) to be printed on good paper and in clear type, and be completed in about two years. The rates of subscription to be as follow:—

	Indian.	Foreign countries.	
		£	s.
If paid Monthly ... Rs.	1 4 0	0	3
„ „ Quarterly ... „	3 0 0	0	8
„ „ Half yearly... „	6 0 0	0	16
„ „ Yearly ... „	10 0 0	1	7

Subscriptions payable invariably in advance, and no name entered on the list nor Part forwarded until the money is in hand. All applications to be made and sums remitted to the "Manager, Theosophist Office, Adyar (Madras), India;" at which office money orders must be made payable and always in his favour. In making remittances it should be noted that no other amount should on any account be included in the drafts or money orders, except that intended for this work. Should nothing unforeseen happen, and should a sufficient number of subscribers be registered, the first Part will be issued on August 15th.

## REPORT OF THE EIGHTH ANNIVERSARY OF THE THEOSOPHICAL SOCIETY.

AT which were present Delegates from Branches in America; England, Ceylon and all parts of India from North to South and East to West.

Price four annas per copy; postage and packing charges.—India, one anna; Ceylon, three annas; all other Foreign countries, four annas.

Apply, with remittance, to the Manager of the THEOSOPHIST, Adyar, (Madras).

## OCULT WORLD.

(Third Edition)

BY

A. P. SINNETT,

(Author of "Esoteric Buddhism.")

Cloth, Rs. 3-6-0.

APPLY TO THE MANAGER, "THEOSOPHIST" OFFICE.

MESSRS. NICHOLAS AND Co. have made a splendid photograph of a group comprising eighty-three Delegates attending the Eighth Anniversary celebration of the Theosophical Society, together with a view of the portico of the Adyar Head-quarters Building. Every portrait is excellent. Copies may be had at Rs. 2-8 (6s.) each, inclusive of packing and postage. Fellows of the Theosophical Society may also obtain cabinet size photos of Madame Blavatsky, Colonel Olcott and a group consisting of Madame Blavatsky, Messrs. Subba Row and Dharbagiri Nath at Rs. 1-12 (4s.) per copy, inclusive of packing and postage.

APPLY TO THE MANAGER OF THE *Theosophist*.

THE 108 UPANISHADS in original Sanskrit (in Telugu characters) with an abstract of the same by Siddhanta Subramania Sastrial, together with Mahavakia Ratnavali, Brahma Sutras, and a short abstract of the Philosophy expounded therein and Bhagavat Gita—edited by Siddhanta Subramania Sastrial. Price Rs. 8-6 per copy, including postage.

Apply to the Manager, Theosophist Office, Adyar, Madras.

S. Subramania Sastrial, Kanarese Pandit, Presidency College, Krishnama Naida's Agraharam, Black Town, or to Mulakutla Venkatappiah, 170 Mint Street, Madras.

## PEOPLE FROM THE OTHER WORLD.

(CHEAP EDITION—PRICE RUPEES TWO.)

THE publisher gives notice that only fifty-two copies of this book, wherein Col. Olcott gives an account of his wonderful experiments in spiritualistic phenomena—now remain in stock. After those are exhausted, no more copies can be had, as the work will then be out of print.

"TRANSLATION (in English) of *Isavasyopanishad* including its commentary by Srinat Sankarā Charya."

APPLY TO

S. RAMASWAMIER, F. T. S.,

District Registrar, Madras.

## OCCULTISM IN MODERN LITERATURE.

PART I.

BY MIAD HOYO-RÀ KORÀ-HON.

DURING a recent conversation it was remarked that if the Mahatmas were doing little else for Europeans, they certainly were making use of the pens of novelists to spread a taste for Occultism! Without offering any opinion on this remark, I take occasion to mention that both others and myself have been struck with the increasing use writers of fiction are making of the branches of science termed occult. In former years, the utmost that was done in this way was to introduce a ghost, a witch, a fortune teller and more rarely a mesmerist. Examples of this may be found in Scott's *The Pirate*, &c. But, commencing with the late Lord Lytton, a wave of taste for the occult and mystic in fiction arose, which still seems to gather impetus. And one result thereof is, that nearly every branch of occultism, from Adepts and Mesmerists, to Black-Magicians and Spiritualists, has found more or less of an exponent in some specimen of the ordinary novel.

Members of our own and kindred Societies must now and then be startled by the wonderful accuracy of some descriptions, that crop up in what are presumably works of imagination—descriptions too that they fondly believed were in the sole possession of a few select initiates. In some cases the operations narrated are so real, that one almost feels convinced that the writer must be an initiate (of course this actually happens sometimes); at other times they will come across passages which read as if they were translations from the Bhagavat Gita, or perhaps a *histoiette* filled with the most graphic details of some ceremony, which, from its evil intention and often terrifying result, can leave no doubt as to what particular branch of occultism it is meant to illustrate.

An example of this last,—though not a very recent one—is to be found in "The Ingolds by Legends," under the head of "a singular passage in the life of the late Henry Harris, D. D." In this story a young student obtains from a young girl a lock of her hair, which he makes use of in a certain way so as to summon at will the double of the unfortunate girl, which he causes to materialize. In doing so he compels her to become a partaker in what she describes, a short time before her death, as "detestable pollutions" and "unhallowed proceedings of horror and shame." Her friends believe, and try to convince her, that it is only some kind of hallucination or nightmare. A clergyman is called in (who

happens to be the student's grand-father) and by way of comforting her, he tells her that he had had a fit of epilepsy two years before; and, on recovering from it, that it was with the greatest difficulty that he could persuade himself that he had not visited and conversed with his grandson in his rooms at Oxford. However he stated that he "failed entirely in shaking the rooted opinion which possessed her, that her spirit had by some nefarious and unhallowed means, been actually subtracted for a time from its earthly tenement."

Now, it must be admitted, whether it be an effort of the *writer's* imagination or not, this story is one which strongly affects the imagination of the *reader*. If he be mystically inclined, the use made of the lock of hair must recall many things he has read of,—if not experimented. He will remember how locks of hair have been used in conjunction with the powers of Psychometers and clairvoyants, it will remind him perhaps of the fairy stories, which so enthralled his imagination in his younger days, in which locks of hair, if properly treated, were supposed to "keep in check not only ghosts and fairies, but living men as well." And lastly, if he is a resident or native of India, the story will recall to him certain Tantric ceremonies which do not pertain to "the right-hand path" and need not be further mentioned.

Another branch of occultism is touched upon in the charming tales of the late Nathaniel Hawthorne ("The Scarlet Letter," "The House with the Seven Gables," &c.) and in the as charming "Laughing Mill" and "Calbot's Rival" of Mr. Julian Hawthorne. This is nothing else than will-development, more commonly known as Animal Magnetism or Mesmerism. In spite of the many attempts to portray this study in a ridiculous light and more as an imposture and superstition than as a reality, these tales at least represent it as something that truly exists—not merely as a metaphysical abstraction—but the mighty power for good or evil that it is. About "Calbot's Rival" there is something that reminds us strongly of Lord Lytton's "Haunted House." But the appearance of the "ghost" of "Calbot's Rival" in broad daylight carries us a step beyond the "lights" and noises of the "Haunted House;" while each gives a sufficiently true picture of the effects of the human will concentrated for the production of definite results.

It may be noticed that in both the above instances the actual formulators of the malignant intentions were dead; and yet the intention, concentrated on a Talisman (in the one case a jewel, in the other a magnetic needle) for the purpose, continued to act. Eliphas Levi (in his "Dogme et Rituel de la Haute Magie," p. 120) says with regard to talismans—for I take it these "storage batteries" of human Magnetism are practical talismans—"The ceremonious consecration" (*i. e.*, deliberate charging with magnetic aura) "endues it most forcibly with the intention of the operator, and establishes between the talisman and him, a true magnetic 'connection.'" That goes to explain the action; but I have never yet chanced upon

an authoritative statement as to the limit of its continuance. This perhaps some learned brother can supply.

"Kildhurn's Oak" and "The New Endymion," by the same able author, give good evidence of how interesting a slight flavor of magic can make a story. If Mr. Hawthorne be not conversant with the Indian belief of certain trees being the chosen habitations of a particular class of beings, then the Rosicrucian ideas about "wood-nymphs" *et hoc genus* mixed with the North British legendary lore (which tells how special families have trees in some mysterious way in sympathy with them which prognosticate family events in divers manners) have been made use of by him to good purpose in "Kildhurn's Oak." "The New Endymion" brings in alchemy, astrology and astronomy in the most mystically fascinating way; and I am certain it has been the source of all manner of queer speculations among its readers.

Indeed if some of my brother members would only confess, I think it would turn out that no small number were first led to inquire whether such a thing as occultism existed, by reading such a story as this. It is however to be regretted that neither of the Messrs. Hawthorne have thought fit to give an illustration of the concentrated Human Will *acting for good*, or as a beneficent instead of a demoniacal power.

In "Cobwebs" by Miss Mabel Collins, "The Romance of the White Lotus" is a beautiful story of a seer during the latter days of the Egyptian Priesthood. No Occultist can read this tale without feeling that there is some indefinable ring of truth in the descriptions. And, long before I had the honor of being introduced to this delightful authoress, I suspected that this story was not a work of imagination (in the usual sense of that term), since I have learned that it is the result of a curious vision about which I have only to say that I hope she will be favoured with another vision of the same kind soon, which will result in the continuation of the tale.

The vision of the goddess Isis at the sacred Lotus-pool in the Temple garden is one of the clearest and finest descriptions of the action of the natural, higher clairvoyance I have ever met with. Those of us, who like myself have powers of that sort—either natural or induced—will I am certain endorse this opinion.

The priest Agmahd and his party were apparently, at that time, the party of the left-hand path in Egyptian Occultism, and the story goes to illustrate the beginning of a struggle between the White and Black magicians—such as we are told happened in Atlanta—which probably preceded the fall of the ancient Egyptian greatness and which is the end of the civilization of all races from the beginning of time.

I now turn to the novel which, since the publication of Lord Lytton's "Strange Story," has perhaps the best claims to our attention. This is "John Inglesant" by Mr. J. H. Shorthouse. The hero was born during the reign of Charles I. and was involved in the turmoil of that and the succeeding reign.

Imagine a young man almost suckled upon Plato and Proclus, who finds pleasure in meditation, and who is endowed naturally with conscious clairvoyance! Does not this seem to be the very man of all others, to succeed in occultism? The author of this work assumedly never imagined an incident more calculated to attract an occultist than this—"After supper they were sitting in front of the fire with the master of the house and several more. The conversation turned upon the faculty of second sight, and the numberless instances of its certainty, with which the Highland gentlemen were acquainted. While they were thus discoursing, the attention of the gentleman, who had come to meet Inglesant, was attracted by an old Highlander who sat in the large chimney, and he inquired whether he saw anything unusual in the Englishman, that made him regard him with so much attention. He said he saw nothing in him fatal or remarkable more than this, that he was much mistaken if that

young man was not a seer himself; or, at any rate, would be able before many months were over to see apparitions and spirits" (Vol. I, p. 116).

It may not be amiss for me to remark that persons in the possession of second-sight say that they are able to recognise that faculty in others, by what (from description) seems to be a particular disposition of the magnetic aura, but, whether from the shape, size, or color, of the same, I am not yet certain: and recently, in a letter a learned English occultist (a Hon. Member of our Society) remarked to me that he had once asked a clairvoyant why he (the occultist) was not sensitive to "spirit" influence. It is noteworthy that the reply was, "that he" (the clairvoyant) "saw those who were sensitive or clairvoyant with a *dispersed* cloud of aura about the head, and in others (who were not sensitive) he saw it in pyramidal form, which prevented 'spirit influence' making itself felt." Perhaps the accomplished Editor will kindly throw some light on this subject?\*

And before he could tell how (at p. 44 *et seq.*, Vol. II) Inglesant's clairvoyance was excited by the charmed sound of music, the author must either have had practical personal experience of clairvoyance, or, both read and pondered deeply, before he so nearly laid bare the secret power that resides in the choruses of the ancient Egyptian and Greek priests, the incantations of Magicians, and the Sanskrit Mantras!

A man—who speaks of "figures that live in sound and pass before the eyes, only when evoked by \* \* \* melodies,"—must at some time or other in his life have heard some stray notes of Appollo's lyre, such as Hormotimus of Clayoméne listened to aforetime.

And not less interesting is Inglesant's interview with the astrologer, (p. 288, Vol. I) though the astrologer's assertion that clairvoyance by means of the crystal is "a mode of inquiry far more high and certain than astrology" is one, that students of the latter science may be inclined to dispute.

(To be continued.)

### THE EUROPEAN PRESS ON THE THEOSOPHICAL MISSION IN EUROPE.

So much interest has been manifested by the European press in the presence of the Founders of the Theosophical Society in England and France, that some record of the fact in the *Theosophist* will be of interest to its numerous readers in India and elsewhere. Wherever Colonel Olcott and Madame Blavatsky have appeared, they have been the centre of attraction, and Theosophy an absorbing subject of conversation. The press has accorded in the main generous treatment to them and their mission in Europe, and among many other things said, are the following which our readers will perceive to be more or less mixed with error.

From the *Pall Mall Gazette* (April 26th, 1884).

Madame Blavatsky, apart from her peculiar claims as leader of a religious movement numbering its followers in every capital in Europe, and rapidly extending in Hindostan, is a figure well deserving of attention. One of the greatest travellers in the world—there is hardly any country which she has not visited—there are few languages which she does not speak. Her English is not less fluent than if she had been born in Westminster, and probably a good deal more correct. Her reading is extensive, and her knowledge even of the minutest details of English speculative and religious controversies is extraordinarily exact. Her book "Isis Unveiled"—a new edition of which she is shortly to prepare for the press—is written in English, and displays a vigorous grasp of our language as well as a very great controversial

\*The statement is, in our opinion, correct. In the case of a medium, the odic aura of the brain is rather poor and is constantly subject to fluctuations and disturbances by the surrounding astral influences, just like a flame of fire which loses its pyramidal form when fanned. But in the case of one who is not mediumistic, and especially in the case of an adept, this aura is compact and concentrated. Mahatmas such as Buddha, are generally represented in Eastern pictures with a pyramidal crown upon their heads. This crown is made up of purified, concentrated and undisturbed odic aura.—Ed.

vehemence. She is contributing, to the leading Russian review, studies of Indian Social life and character, and she has long been known as a learned correspondent of the *Moscow Gazette*...

To the uninitiated and to those who as yet are groping darkly about the outer portion of the Theosophic temple, Madame Blavatsky can necessarily speak but in enigmas. Even to Mr. Sinnett, the chief Theosophist of the London branch of the true believers, she is but allowed to communicate in part...

The Theosophical Society which she has founded aims, first, at the restoration of Buddhism to its original purity,\* and it is in this reformation of a corrupt Buddhism that Colonel Olcott has been so assiduous of late. His Catechism of Buddhism is only one among many forms of activity, literary and other, which his propaganda has assumed. After the reformation of Buddhism, the second great object of the Theosophists is to restore Brahmanism to the purer ideal which finds expression in the Vedas: a herculean task, no doubt, but one in the accomplishment of which the Theosophists profess unshaken faith.

The third great task, quite as formidable in its way as either of the preceding, is to combat a false materialism by the establishment of pure spiritual truth. As explained by Colonel Olcott and Mme. Blavatsky, the essence of this spiritual truth consists in the cultivation of the inner life and the systematic sacrifices of the lower instincts of our nature to the higher law..... Whatever may be thought of her philosophy or Theosophy, whatever credence may be attached to the account of the mysterious powers she claims to possess—powers upon which, it is fair to say she lays no stress, nay, appears to regard with the supreme unconcern—she is a woman who, regarded from the purely intellectual stand-point, deserves more attention than she has hitherto received.

*From the Paris Morning News (April 21st, 1884).*

About the beginning of next month there is to be a great gathering in Paris of Theosophists, a mysterious body of men and women, moving down from America and from Asia upon Europe. Colonel Olcott, of the United States, will soon be here. Mme. Blavatsky, the Russian, who started the society in council with a mystic circle of the Wise somewhere up in the Himalayas, is actually with us, and a great Hindoo, a most learned man of the East, is expected from day to day. These new philosophers have already effected a lodgment on the other side of the Channel and France is their next objective point....

Theosophy is a very aristocratic creed, a belief for the highest nobility in the order of mind; and while it is very earnest for the brotherhood of man, it has no special mission to the proletariat. The Theosophists believe that there are two worlds, material and spiritual,...and that we may reach the spiritual world by physical research..... There is an inner and an outer doctrine, and only a select few are permitted to read the higher mysteries. They are like doctors who heal, but keep their science of healing to themselves. The cure in its perfection is to unite all religions, and to bring men into a common brotherhood.....

All this is brought into Parisian drawing rooms, and one may safely predict for it that it will make at least the sensation of a season. The Society is peculiarly well equipped for work in these latitudes in having so many women among its members. The Parisian Secretary is Mme. de Morsier, of 71 Rue Claude Bernard; and the Parisian President Lady Caithness, Duchesse de Pomar, mother of the eccentric novelist, who often lends her luxurious apartments in the Rue de Grammont for the meetings. Finally, Mme. Blavatsky, who is also of noble rank, has left the immense house and park in Madras to give a further impulse to the movement in France.

*From a Correspondent of the Kensington (Eng.) News (May 10th, 1884).*

Col. Henry S. Olcott, the Founder and President of the Theosophical Society, is at present in England, whither he has come on a mission from the Buddhists of Ceylon; and, feeling that some information about a man—who, no matter whether he be right or wrong, has in recent years largely influenced the current of thought among the natives of India—would be of general interest, I obtained an introduction to him, and called upon him at the residence of Mr. A. P. Sinnett, in Ladbroke-gardens, where he is staying.

I was shown into Mr. Sinnett's drawing-room, and informed that Col. Olcott would speedily join me. I scarcely know why, but I was prepared to find that a man who had exercised so great an influence in the East would prove to be of somewhat Oriental appearance. I was wrong, however; within a few minutes, a short, broad-shouldered, well-built, pleasant looking grey headed gentleman entered, and extended his hand. "Col. Olcott, I presume," said I; and, indeed, I was in the presence of the Founder of the Theosophical Society. . . . He expressed his pleasure at seeing me, and, when I told him that I was invading his privacy with a view to making public some information about himself and the Society, he became very cordial, and said that years ago he too had been engaged in journalistic work and had, in fact, been connected with the "New York

Tribune" in the days when it was conducted by Horace Greeley. "We have been a good deal attacked," he continued, "in America as well as here and in India; but chiefly by men who have not given us a fair chance and a fair hearing. I wish that people, before they attack us, would come and see me. I like to answer questions. They take me for a humbug; they begin by jumping at that assumption. But I don't think that I look exactly like a humbug; and, indeed, no matter how I may be ridiculed, attacked, and insulted, I mean to press on, and try to the best of my ability to benefit my fellow creatures so long as I can stand in my shoes. You know the objects of the Theosophical Society. It does not interfere with any man's religion, and it has nothing to do with politics. Here am I, a Western, and, by religion, an Esoteric Buddhist; yet, associated with Madame Blavatsky and we in the movement are Jains, Hindoos, Parsees, Mohamedans, and Christians. . . . We all work together, tolerating each other's faiths, and yet I don't want you to understand that our members have not strong and even bigoted religious opinions of their own, but they are united in the search after truth." . . . Having talked in the most genial fashion with me for more than an hour, he introduced his private Secretary, Mr. Mohini Mohan Chatterjea, a Brahman gentleman, and having begged me to put to the latter any questions which I might not like to put to him, he left the room. Mr. Mohini, though now paying his first visit to England, speaks English perfectly, and seems to be tolerably well versed in European modes of thought. I asked him for a few facts about the antecedents of the leaders of the movement, and having obtained satisfactory replies, questioned him, first as to his reasons for believing in the existence of the Mahatmas, and then as to his reasons for supposing that the Mahatmas sanction and direct the proceedings of Colonel Olcott and Madame Blavatsky. His answers were as clear and straightforward as I could wish for. He had personally taken an interest in the Esoteric Science before the establishment of the Society; and he was personally acquainted with a Mahatma, who, when the Society was founded, referred him to it, and recommended him to associate himself with its leaders.

*From a Paris Correspondent of the (London) World.*

*Paris, Sunday, May 11.*

*Embarras de choix.* Last night Madame Anbemon, who used to be called *la precieuse radicale* when Papa Thiers was the chief ornament of her *salon*, offered a grand amateur theatrical performance, with half the French academy and all elegant and literary Paris in the audience; the Countess of Caithness, Duchesse de Pomar, President of the "Societe Theosophique d'Orient et d'Occident," offered something far more novel, namely, a Theosophical conversation, at which were present that amiable arch-sorceress and profound metaphysician Madame Blavatsky, and a Brahmin, Mr. Mohini M. Chatterjea, . . . a *chela* and the envoy of the Himalayan Mahatmas to the Theosophists of the West. Hesitation was out of the question, the attraction of high magic and occult science was irresistible, the more so as the Broken, in this case, was one of the most sumptuous and luxurious mansions of the Faubourg St. Germain. It is curious to remark that Theosophy is presented to the compatriots of Voltaire under the most aristocratic auspices. The meeting was most interesting, and the envoy of the Himalayan Brothers gave us all the explanations we desired concerning the objects of the Theosophists—the establishment of a universal brotherhood of humanity, the study of the science of religion, and the investigation of the hidden side of nature and the spiritual side of man by the light of the traditional wisdom of the East.

*From the Literary World (London, May 2nd, 1884).*

Theosophy has suddenly risen to importance, and its priests and prophets (if they will pardon our so describing them) to notoriety in London Society. The movement implied by the term Theosophy is one that cannot be adequately explained in a few words, but its general drift is well known to most of our countrymen in India, and is fast becoming known, thanks to the *Pall Mall Gazette*, in this country. Those interested in the movement, which is not to be confounded with spiritualism, will find means of gratifying their curiosity by procuring the back numbers of *The Theosophist*, and a very remarkable book called *Isis Unveiled*, by Madame Blavatsky...

*From the (Geneva) Tribune (April 24th, 1884).*

The Theosophists, who have already established their headquarters in England, are going to begin next month their work in Paris, and the first will be a meeting in the beginning of May. They are waiting for the arrival of one of their leaders, Col. Olcott, an American, and a Hindoo, "the most learned man in the country", and during that time Madame Blavatsky, a Russian who holds a high station in their Society, is preparing the ground in Paris where she lately arrived. . . . The Theosophists believe that there exist two worlds, the world material and the world spiritual, and that we can arrive at the spiritual world through psychical research. . . . In India Theosophy counts its adherents by thousands, and who are subdivided in as many branches as there are towns in the great Asiatic Peninsula. When Col. Olcott or Madame Blavatsky go about in India they move the whole population. The

\* The restoration of all the ancient religions and philosophies to their purity is equally our object.—*Eds. Theos.*

Rajahs receive them in solemn audience, offering to them pots of confections, the same as to the British Resident or the Sovereign; the houses are illuminated, and the festival lasts throughout the night. Madame Blavatsky has, like all Russians, the gift of languages: she speaks English without any foreign accent, French like a Parisian, and as to Hindustani, it appears that in it she is quite fluent...

(To be continued.)

### THE THEOSOPHISTS' WELCOME TO PARIS.

At a meeting of the Société Theosophique d'Orient et d'Occident held in Paris, on the 4th day of May, 1884, at the residence of Lady Caithness, Duchesse de Pomar, Mme. Emilie de Morsier, the Secretary, delivered the following address (translated by Bertram Keightley, F. T. S.):—

LADIES AND GENTLEMEN:—I must first apologise for speaking at this meeting. It is not to me that this honour should belong, but to our amiable President who has had the kindness to make her drawing-room an intellectual centre for the Society, which we represent here. Since Lady Caithness, from a want of confidence in herself, which is entirely groundless, is unwilling to address a few words to you in French, she must permit me to commence by speaking of her.

It is my desire to express to her our gratitude, for having lent the support of her name and high station to a cause, which, however noble, must yet suffer the fate of every thing new. Paris knows no mercy; every idea, which is to acquire public prominence, must necessarily pass through the sieve of discussion, opposition and ridicule. The Duchesse de Pomar has therefore given a proof of moral courage, in consenting to become our President; but I have no need to tell her that all great convictions carry with them their own reward, for she knows it better than I do.

The Theosophical Society has been, perhaps, especially favoured here, by the fact that its Indian representatives have arrived, just at one of those psychological crisis when Paris, tired of a period of relative calm, was ready to welcome any thing new. In any case, the fact remains that the press has kindly taken notice of us, without our having done any thing to induce its representatives to do so. It is doubtless to this eagerness, that we owe our being treated with honours, which are not our due, and which our love of truth makes it our duty to decline.

It has been said, Ladies and Gentlemen, that we had the pretention to wish to plant in France a new religion; we have been mistaken for a Buddhist mission, a warlike ardour of proselytism has been attributed to us, which we in no way possess, by calling us "*The Nirvana Army*." Finally, people have gone to the length of speaking of us as advanced sentinels, keeping guard, for I know not what imaginary conqueror. Verily! a great complication of hypotheses for a very simple matter. No! We are none of all these things, but we are, perchance, something more. We are simply travellers *en route* for the land of discoveries, but who think that different roads may lead to the same end; we are hard and persevering workers, who believe that all the diamonds, hid in the bosom of the earth, have not yet been brought to light; we are students who think that the professor knows more than the pupil, and that the first condition for learning is to reject no hypothesis without examination.

That is the reason why, however great our respect for the Professors of the Sorboune, we have lent an ear to these voices from the East; believing that they were telling us something, which is not as yet taught in the Universities of the West. And what struck us, on entering into relations with these Hindu savants,—whose names even are not known by our Orientalists—is that they are ignorant of none of the work, none of the discoveries, none of the doctrines, in one word, they are ignorant of none of all the developments of modern western Science. We heard a young Brahmin, of high birth, a fellow of the Theosophical Society and a pupil of the

Thibetan Masters, unfold before us, for hours together, the philosophy of his School, indicating, at the same time, its points of contact with the conclusions of our western masters, the Darwins, Spencers, Mills, Comtes, Touillers, Shopenhauers and others. Truly, the auditors of the young professor must have smiled on learning from the Press that these delegates from India were come to preach to us a new and infallible dogma, revealed only to a few elect. But, Ladies and Gentlemen, the doors of the Theosophical Society stand wide open; and if our Society has a *Credo*, it seems to me broad enough to rally the whole world to its flag, those, at least, in the world who think, who work, and who love humanity.

This is our *Credo*:—

1st—To form a Brotherhood of humanity, without distinction of faith, of colour, or of race.

2nd—To encourage the study of the literature, the religions and the science of the East, and to show their importance.

3rd—To investigate the hidden laws of Nature and the psychic powers latent in man.

What can be found, I ask, to blame or to ridicule in these three articles, which contain our whole programme?

I grant you that it shows no small ambition, but what would become of the dignity of man, if he abandoned the search after truth, because truth seems to him beyond his reach? Is it not for him, rather, to put himself under the conditions necessary for its attainment? Our colleagues of the Theosophical Society will understand me. And besides, what else does science do, I beg, but seek to solve problems, which successive generations have declared insoluble?

Men of Science, Gentlemen, are the greatest Utopians in the world. From the savant, bending over his microscope and studying the infinitely small, to the astronomer, who calculates the orbit of a comet across the infinity of space, which he will never see with his eyes, never touch with his hands; from the patient economist, tracing on his paper the curves representing the immediate interests of men, to the bold philosopher seeking in the depth of his own thought and consciousness how the law of cause and effect can fulfil itself, so as to satisfy that craving for social and individual justice which ever torments humanity; from the popular bard translating into his simple song the dreams and aspirations of man, to the sublime poet who sings to us the drama of human life and weeps over all its sufferings, or to the artist whose burning and impassioned soul finds words too feeble to express that which lives and moves in him, and who paints for us, in ever flowing floods of harmony, the tragic struggles of the evolution of worlds and of souls;—are they not all still searching after those unknown truths, of which the discovery will one day perchance reveal the secret of human destiny? Then, knowing the law which rules all life while fulfilling all justice, the humanity of the future will be able to realise that Universal Brotherhood which we only perceive by glimpses to-day.

And this is an answer to those, who, on the other hand, accuse us of being an intellectual aristocracy, caring but little for the needs and sufferings of the masses. Ah! Ladies and Gentlemen, is there not enough to do, on this earth, to allow every one to work according to his own aptitudes and powers? And if you doubt the sentiments which animate the Inspirers of our Society, listen to these words of one of the Thibetan Masters, and tell me if they are those of an Egotist or an Indifferent:—"Though we may be sensible to the emotions, the pleasures, the interests of the general current of humanity, still, the more we progress, the more they lose their hold upon us, until, to crown the whole, all purely individual and personal feelings, all ties of blood, and predilection of race, disappear to melt into one universal sentiment, the only true, sacred, generous and eternal,—Love, a boundless love for humanity; for it is humanity which is the great orphan, the only disin-

herited one on this earth, and it is the duty of every man, capable of a generous impulse, to do something, however little, for its good."

Ladies and Gentlemen, there are subjects which lie outside the purview of our Society; but still permit me to give expression to a thought, which will not be out of place here. While the so-called advanced civilisations are carrying their science to distant lands, to the roar of cannon and the clash of arms, we love to welcome these peaceful messengers, who come to tell us of a civilisation, a science yet higher, for they affirm that transcendental knowledge cannot be acquired without the development of the higher principles which are in man, without the respect of each for the other, and the annihilation of selfishness.

In speaking here, before the foundress of the Theosophical Society, I am addressing myself to our Indian Brothers, for that country is the adopted father-land of Mme. Blavatsky, whom we cannot sufficiently thank for having brought to our knowledge through her remarkable Magazine that land of marvels, which is also the home of lofty thoughts and truly humane sentiments. The study of the Aryan philosophies will not be useless, if it teaches us to understand that truly universal Brotherhood which embraces not only the race of men, but every thing which lives upon earth.

If the West can boast of having written the scientific history of evolution, it seems to me that the great thinkers of India have, from the remotest times, comprehended and understood its spirit.

I beg Madame Blavatsky to transmit to her colleague, Colonel Olcott, and to our Indian Brothers the homage of our profound gratitude.

#### COL. OLCOTT'S MISSION FOR THE BUDDHISTS.

It will truly gratify every friend of the Theosophical Society and of its President, to learn that the mission to London, with which Colonel Olcott was honoured by the Buddhists of Ceylon, has proved a complete success. The text of his correspondence with Lord Derby, which we had hoped to receive in time for this number, shows that he has carried his main point by getting the Imperial Government to admit that a grievous wrong was done to the Buddhists by the local Crown legal authorities, and that if he should file fresh evidence about the responsibility for the Riots of Easter Sunday last year, Government would order the prosecution of the Roman Catholic ringleaders. It was the evident disinclination of some Ceylon officials to see justice done to the innocent Buddhists, that drove them to despair and caused them to turn appealingly for help to their best if not their only white friend, Colonel Olcott. Personally all of us, his associates, feel a joyful pride in this result of his delicate and responsible mission—a result which has been reached by his tact and judgment in avoiding the least approach to sensationalism, and presenting the case of his clients in the simplest and clearest terms. Not only has the major point at issue been attained, but there is additionally every reason to hope that his appeals to Government may secure the lesser benefits of having the Birthday of Lord Buddha made a legal holiday for Buddhist public servants, and of having Buddhist registrars of marriages, births and deaths, appointed for the service of their co-religionists, to say nothing of the question of the right to use tom-toms in religious processions—to the Singhalese people a matter of great consequence.

#### ADEPTS AND MAGICIANS.

OCCULTISM IN INDIA. BY D. D. K.\* \* \*

FROM very ancient times spiritual culture has been practised in India. Adeptship is the efflorescence of this cultivation. But there are in India certain isolated individuals who have, by their own exertions, been able to develop their psychical powers up to a certain point.

In the first place I shall speak of the real adepts, who are masters of the occult philosophy and science. They belong to a great brotherhood which has branches all over the world; its head-quarters are in Tibet. The brothers do not all live in Tibet, but some of them in India itself. To this brotherhood our great MASTERS belong. Their pupils are scattered all over India, and are now being brought to a focus by the Theosophical Society.

The Druses of Mount Lebanon are in connection with them, through one of their number, who on certain occasions throws the "shining form" on them—this is known as the Hansa. It is only the highest of the Druses that have any knowledge of the superior initiations.

Then there are the Fakirs who are not scientific but "quacks," if the expression may be used here, in this science.

They do not know the real philosophy, but by a sort of rule of thumb, they develop some of the higher psychical powers.

These powers, however, are not of the very highest order; the highest of them being only accessories to the still greater amount of wisdom and goodness, which belong to the most exalted branch of the science. The Fakirs keep themselves isolated and do not, in the least, influence the world for its good. A large number of these persons call themselves Yogis and Sadhoos, the appellation of "Fakir" belonging properly only to Mussalman devotees.

I know of a school of such second-rate Yogis whose headquarters is at a hill station in the Himalayas, where they study and develop themselves.

A person of this class once described his training to me. First he met a man belonging to this Brotherhood, who had come to a place near Calcutta; and begged of him to be allowed to accompany him to the place whither he was going; and so he was taken there accordingly. He was to begin with the Vedas and the philosophy, but these Occultists had mere exoteric knowledge, and did not know the true interpretation. Thus they performed only certain practices, such as the regulation of the breath and postures by which they obtained some psychical insight. We have three different sets of faculties for the perception of facts: physical, psychical and spiritual. The first is altogether material. The second gives clairvoyance, while the third enables us to recognise spiritual truths and not merely facts in nature. After thus practising for six months, he felt that he could not project his double, but could only transfer his consciousness outside of his body; he felt as if locked up, at such times, in a room with open doors and windows, but which he could not get out of.

These persons have very strong mesmeric powers. On one occasion, he told me how a Saanyasi of this type, said to possess marvellous powers, on being asked to put them into action, at first refused, but finally consented to be taken to a room, without a single window. They locked the door and sat outside it, to watch how long he could remain without food and air. One of the witnesses went out of the house and there he found the same person sitting by the road-side. Then, some more ran to the place outside the building, while others opened the door and found no one in the room, but the man, as said, was found outside; no sooner had they come up to him than he got up and ran away. Search was made after him but in vain.

There is another class of men called Hatha Yogis who acquire powers, not merely by the study of philosophy, but by the performance of certain ceremonies, which consists mainly in the retention of the breath.

To begin with, when a person is agitated by strong feeling, he breathes hard. The ordinary length of man's breath is just a span, but under excitement, this becomes much longer. When a person has got rid of all passions and anxieties, the length of his breath greatly decreases, but these men think they can obtain the same result by shortening the breath only; they mistake the consequence for the means.

Now it has been found that no human being ever breathes at the same time through both nostrils.

The breath through the left nostril is called the moon, and that through the right nostril, the sun. Two letters, Ha and Tha, stand in Sanskrit mystical literature for the sun and moon; the practice is, in consequence, called Hatha Yoga. More or less, the principal feature of this Yoga is the regulation of the breath. The art of breathing has been reduced by the practitioners of Hatha Yoga to a Science. These persons are

able to tell whether a man is in perfect health or not by finding out through which nostril he breathes at any given part of the day.

By regulating the breath, a kind of trance is produced, which renders a man to a certain extent clairvoyant.

But all these are of no avail, because not being spiritual gifts, they perish at death. They are only useful as opening up some regions of investigation unknown to ordinary students of science.

There are others who perform a kind of ceremonial magic: persons living a family life, and forming a kind of sect, masonic society. One such sect has become very well known in India by the connection with it of a prominent government official. There are persons in various parts of the country, who belong to this sect which is referred to by Mr. Sinnett in the last edition of his "Occult World." Its founder, who was a man possessed of certain gifts, led his followers to regard him as the incarnation of the Divinity, so that now he is supposed, though dead, to be present with them always in his spirit. Probably they are developing a kind of mediumship as most of these independent investigators do.

But there is another kind of persons—whom we may term "lay Yogis:" isolated but true occultists, and scientific students of the philosophy. There are some to be found in Southern India. They are born Vedantists; they look below the surface of things to a certain extent, and try to assimilate the truth thus found. They lead a pure life and thus arrive at a point, when by that means they bring themselves to the notice of the Masters, who then appear to them, announcing that the time has come for them to receive definite instruction and take them as regular pupils.

Not a few give up their hopes of spiritual progress in this life, while others go so far as to give up all the powers thus obtained without teachers, for some great purpose of national or humanitarian importance.

I know of a man who, to recover the lost books in Sanskrit and collect the most important works on occultism, has so sacrificed himself in this life. Of course he will be taken care of, and his next incarnation moulded so as to put him beyond the struggles and difficulties generally encountered and perhaps found necessary to reach instruction.

These are the principal types of irregular occultists in India.

There is also a class of Mahomedans called Sufis, who, though not Hindoos, hold doctrines which, though incomplete, are, so far as they go, identical with the teachings of the Adwaita philosophy. The Sufis keep themselves separate from the other sects of Islam, and go through certain ceremonies for the practice of magic.

On one occasion, a Sufi mystic was asked to come to the house of the Nawab of Arcot. He was taken to the female apartments; and there, on a little child being brought to him, he said the child was sure to die within two years and a half. The mother got angry and wanted him to be turned out of the house. But the Nawab gave him a present which he threw away among the crowd and would not come to the house again. When the child died and the Sufi was brought back once more, there was another child which he said would not be so short-lived as the other. This child is the present Nawab of Arcot.

There is still another class of men who believe that they are studying occultism. They train their will in a very violent way, and thus become able to perform a few phenomena of the lowest kind; these are the ordinary Hindu and Mahomedan fakirs, some of whom can stand on one leg for six months at a time, and who practise all manner of self-tortures with no other object than to develop such a potential will.

In Bengal there is a class of mediums, the followers of a person who attained celebrity as the unsuccessful claimant for one of the richest estates in Bengal. Every Friday there is a meeting of this sect at which the following course, adopted for inducing trance, is:—certain mystical syllables are communicated to the neophyte, which, while holding his breath, he has to repeat a given number of times; the number being gradually increased till trance is produced. This is only another way of practising Hatha Yoga. These men know very little of philosophy and only study it from an exoteric stand-point. They are quiet, harmless people, who will do good if they can without going out of their way for the purpose.

Other classes belong to the "left hand path," whose members are more nearly sorcerers than occultists. Generally, they are known as black Tantrikas, though there are white Tantrikas as well.

The black Tantrikas, including Kâpâlikas, Aghoris, &c., go through all the mystical ceremonies that can be imagined and have horrible rites and incantations, invoking the aid of some of the worst principles in nature,—dangerous elementaries and still more vile and dangerous elementals. They act independently, using their powers for the purpose of punishing their enemies or gratifying their own personal feelings of passion and revenge, believing this to be a meritorious act enjoined by the gods, and the only way to obtain salvation.\*

There is a regular school of black magic in India, with chelas, adepts, &c. They acquire powers by practising ceremonies, or, without them, if they are adepts in the black art. The great difference between them and ordinary occultists is, that their power can be set in motion only by the force of a concentrated selfishness. They have accentuated their personality, the fifth principle, and therefore it is only through the help of this principle that they can set these forces in motion. Before they are adepts, they have to perform horrible ceremonies, which were known to a certain extent in Europe during the Middle Ages. They are on the look-out to injure men, as the adepts of the good law are to help us profane mortals. And whenever a person makes good resolutions, these black adepts try to put obstacles before them, to influence them for evil, and in every way to injure them. Even persons—who have advanced considerably in the true science, if not properly attentive—are liable to be injured by such magicians. I know of cases in which high chelas (students) have been injured by these malefic practices. It is one of the duties of our Masters to counteract the evil work of these dangerous men—the Brothers of the Shadow.

It sometimes happens that many of the Mahatmas, and even Chelas, are engaged in frustrating some vile plot set on foot by the Black Tantrikas. They have great powers; and though they cannot generally injure the good and pure, whose moral nature is strong, yet the danger from them is very great to all who indulge in some one leading passion in life. This danger exists especially for such as study occultism, so long as there is a weak point in their moral armour, because through this loop-hole these sorcerers can pour in all sorts of harm.

There is one other class of Hindus who just dabble a little in occult matters and perform the so-called "fakir's tricks." They generally accomplish their feats through extraordinary mesmeric powers.

Now to a kind of adeptship, which, though true and orthodox at first, has, by the sacrifices of the spirit to the letter, fallen nearly as low as the black Tantrika practices. In this as well as in every other school of Occultism, a person begins as the Chela or disciple of a proficient master, and attains the different degrees of initiation in proportion to his progress.

According to the knowledge of the Hindoos, there are ten degrees of initiation. The tenth is not attained on this earth. As soon as a person is qualified for the tenth degree, he passes away from the earth. It is symbolized in a very impressive manner.

A woman is seen standing on an unblown lotus, who with one hand clasps a tuft of her hair, and with the other cuts off her own head. Then, she is represented as holding that severed head in her hand, with women similar to her, standing on either side. Three streams of blood flow out of the trunk of the decapitated woman. One falls into her own mouth, and the other two into the mouths of her two companions.

The meaning of the symbol is this:—the lotus is always the symbol of the Cosmos which is unblown, *i. e.*, not fully known, and incomprehensible to man until this last state is reached by him. The cutting of one's own head shows the necessity of getting entirely rid of one's egoism; and the three streams of blood indicate that when a person has thus got rid of his personal selfishness or self-love, instead of the one head he obtains the power of infusing life into the three worlds, which stand for the whole of the universe.

\* The "Holy" Inquisition did the same. What the Tantrikas do in the name of their Gods, Christian Popes and Bishops did to satisfy the anger of their Jehovah the "jealous Gbd."—Ed.

The first of the degrees of initiation is symbolized as follows:—On the ground you see the prostrate body of a man. It is entwined round by serpents. With feet planted on its breast, stands a dark woman of hideous aspect. Weapons are seen in her hand, and her ornaments consist of a garland of decapitated heads of Asuras (Giants) and a waistband of their dismembered limbs with blood streaming out of them. It is Kali, or Bhawani, the deity so misconceived and abused by the Thugs, of vile memory.

Here the serpents symbolize wisdom, by the help of which the neophyte binds his physical body, represented by the prostrate figure which his awakened spiritual nature has trampled down. The true man, ordinarily inactive and therefore fitly typified by the woman, the spouse of the physical man, then, with a terrific struggle, throws off the yoke of her tyrant lord, and cutting down the host of Asuras—the passions and cravings of our earthly nature—decks her person with their dismembered limbs.

The whole symbol represents the terrible aspect of the endeavours of a person to get rid of the bonds of flesh. It also means that an adept has to contend with all the evil powers in nature; not only his own but their correlatives in the world represented by forces of a very malefic character.

When a man gets to this stage he becomes a member of the secret brotherhood and prepares himself for other higher degrees. The man is also symbolized as a beggar who has nine jewels, each of which represents symbolically one of the degrees of initiation, the way in which it is achieved and the results that follow it.

#### MEDIUMS.

Intercourse with the dead in India is considered a very undesirable and even a wicked thing. Necromancers are dreaded and abhorred. There is a kind of mediumship which takes place accidentally, a congenital gift or qualification, due to physiological idiosyncracies, and of which many remarkable cases occur in India, but which have developed to such an alarming extent in America, and in Europe though in a lesser degree. There is another kind of mediums—persons who can throw themselves into a sort of trance during which they are brought into rapport with and in a large way governed by elemental forces in nature; while in that state, they can foresee things, read people's thoughts, prescribe remedies for diseases, and so on. There is such a man now near Calcutta. A person coming to him, has to tie up some rice, a betel-nut, and a copper coin together in a bundle. In doing so, the question required to be answered is to be steadily thought of. A person, whom I knew, wanted to be told how to cure one of his children, who was ailing. The medium fell into a state of trance and after some time declared that the man before him had come from a certain place to be told the means of curing his child; then he advised him to consult a pundit whose name was given, use various remedies he named, and the child would be cured. All of this happened as he had said. People also go to this man to recover things lost and stolen.

Another class of mediumship consists in intercourse with, and a power of, commanding the elemental forces of nature. There was a remarkable case of this kind in Calcutta some time ago. A man, a Mahomedan, and a very disreputable character, could, if a person only so desired, produce fruit out of season, or such that could not be procured within two or three days' journey. This was effected in the following wise:—the man goes to a corner, the lights are turned down, and in a short time turned up again; and there is the thing required. On one occasion he burnt a bank-note, took the ashes and then asked where the original note should appear. The audience said in a locked box. A few minutes later at his request they fetched down and opened the box which was upstairs, and the note was found in it. In course of time this man fell into bad habits and lost all his mediumship. He became afraid of his powers, so that if a bottle of wine was brought into the room he would be afraid of being struck by it. I hear he is now in a lunatic asylum.

I knew another person who told me that there was a man who lived near Calcutta in a place celebrated for the practice of Tantrika rites. He used to sit near a corpse and practise incantations. A friend of my informant, who had discovered the Tantrika, learnt some secrets from him, and, armed with this power, became very successful in life, and is now practising in one of the law-courts. My informant gave up meddling with such things very soon. After using these arts for two or three days, he got terribly frightened

by a hideous figure appearing before him. Had he persevered, the consequence would have been that he would have found himself irrecoverably lost, because powers in black magic require an amount of determined selfishness that must render a man lost to every sense of moral obligation.

The above is necessarily a very fragmentary account of a subject as vast as it is interesting. The object of the present paper will, however, be gained if it directs thoughtful attention to a field of investigation hitherto completely unexplored.

#### AN INTERESTING ADVENTURE.

(From the "Psychische Studien.")

My uncle, Mr. J., an old bachelor and a great sceptic in regard to the supernatural, is in the habit of taking a walk before retiring at night. Sometimes he visits his favorite nephew and remains with him until near midnight, after which, accompanied by him, he returns to his home. Sometime ago the uncle and nephew were approaching the house of the former on such an occasion, when they both were surprised on seeing the library of the uncle which was situated on the first floor, lighted up. "Strange," said the uncle, "that there should be a light in my room." Both went up to the window, and, looking through the same, they beheld my uncle himself in his night clothes sitting in a chair. After a few minutes the uncle (or his double) arose, took the burning candle from the table, went with the same into the adjoining bed-room, closed the curtains of the door and the window, and the light disappeared. My uncle was really frightened by what he had seen, and in spite of the requests of his nephew to enter the house to investigate the matter, insisted on returning to the house of the nephew and spending the night in his room.

At daybreak, the next morning, the old servant of my uncle came in great haste, pale and trembling, and inquired of the nephew's servants, whether his master was there, and having received an affirmative answer, requested to be admitted immediately. He then told us that the heavy ceiling above the bed of the uncle had fallen down. The apparition undoubtedly saved my uncle's life.

A. DEMJANENKOWA.

#### THE FUTURE OCCULTIST.

A CORRESPONDENT of the *Indian Mirror*, an influential daily paper at Calcutta, writing under the heading of "Proper Education for our Ladies," says:—

Your editorial on the above subject in your issue of the 22nd instant, raises one of the most important questions:—"What constitutes real education?" The true aim of education, philosophically considered, should be the enlightenment of the mind. It should expand the mind, the breadth of vision and perception, and not limit it to a narrow circle. On the ordinary physical plane, reading and writing are, no doubt, a great help for education, for they place before one various ideas to be taken cognisance of. At the same time, however, it must not be forgotten that they are but means to the end. One should, moreover, remember that there are other necessary means to the same end. One of these, and the most important, is the continued attention to the phenomenal side of nature in such a manner as to enable one to arrive at its noumenal side, by viewing it in all its aspects. Our ancient *Rishis* have placed within our reach, if we would but have them, the means whereby we can study the relation of the manifested to the unmanifested, and trace the effect to its primal cause. It is such a broad and comprehensive education that we want, and not the present mockery of the same. If, in ancient days, the Aryans learnt at the feet of their mothers, and if their character and destiny "were formed even in gestation and with the sucking of the mother's milk"—it must have been due to the fact that the education of those days was of a cosmopolitan nature. We have undoubtedly to elevate the woman, but we have to elevate ourselves too. We have to endeavour to hasten the approach of the day when the scientific aspect of the "immaculate conception" will be realised. It would not be unprofitable here to quote the sentiments of an Eminent Occultist, published in the *Paradoxes of the Highest Science*:—

".....Woman must not be looked upon as only an appanage of man, since she was not made for his mere benefit or pleasure any more than he for hers; but the two must be realized as equal powers, though unlike individualities.

"...Woman's mission is to become the mother of future occultists—of those who will be born without sin. On the elevation of woman, the world's redemption and salvation hinge. And not till woman bursts the bonds of her sexual slavery, to which she has ever been subjected, will the world obtain an inkling of what she really is, and of her proper place in the economy of nature...\*

"...Then the world will have a race of Buddhas and Christs, for the world will have discovered that individuals have it in their own powers to procreate Buddha-like children or demons. When that knowledge comes, all dogmatic religions, and with these the demons, will die out..." (Page 115.)

In short, one may say that what mankind has first to get rid of, are the base passions and desires which appeal to their sensual appetites. The woman has to cease to be a slave; so has the man to become free; both have to break loose from the bondage of animal tendencies. Then will their natures be elevated; then will the woman be able to put herself *en rapport* with *Prakriti*, and man with *Purush*: the union of these two will produce a race of *Buddhas*, the children of the Virgin "without sin." These are our ideal men and women, but philosophy recognises that "the imagination realizes what it invents," a paradoxical truth beautifully put forth by Eliphas Levi. And if those Hindus, who blindly worship their sacred books as also those who sneer at those latter without realising the meaning of what they contain, were but to turn to them with an enlightened eye, and comprehend their teachings by reading them between the lines, they will take the right step in the cause of progress, which should be the real scope of education.

A HINDU.

26th March 1884.

The above letter raises certain important questions. Some enquire how the world is to go on if all were to become occultists, one of the vital conditions of that order being celibacy. Others say that the ancient Rishis married, quoting some of the names mentioned in the Hindu religious books; and argue therefrom that celibacy is not an essential condition for progress in practical occultism. Generally, they put a literal interpretation upon what is beautifully conveyed by means of an allegory and insist upon the dead-letter sense being correct, whenever such a course is profitable in their narrow interests. They find it difficult to control the lower animal desires; and, in order to justify their conduct of persistence in hankering after sensual pleasures, they resort to these books as their authority, interpreting them in a manner most convenient to themselves. Of course, when any passages, even in their exoteric sense, conflict with the dictates of their "lower self," then others are quoted, which *esoterically* convey the same sense, although *exoterically* supporting their peculiar views. The question of the marriage of the *Rishis* is one of such disputed points. The readers of the *Theosophist* may recall here, with advantage, a passage occurring in the article under the heading of "Magician," where one of the occultists is said to have rejected the hand of a beautiful young lady, on the ground of his having taken the vow of celibacy, although he himself confesses further on to be courting a virgin whose name was "Sophia". Now, it is explained there that "Sophia" is wisdom or the *Buddhi*—the spiritual soul (our sixth principle). This principle is everywhere represented as a "female," because it is passive in as much as it is merely the vehicle of the seventh principle. This latter—which is called *Atma* when spoken of in connection with an individual and *Purush* when applied in its relation to the Universe—is the active male, for it is the CENTRE OF ENERGY acting through and upon its female vehicle, the sixth principle.

The occultist, when he has identified himself thoroughly with his *Atma*, acts upon the *Buddhi*, for, according to the laws of Cosmic Evolution, the *Purusha*—the universal seventh principle—is perpetually acting upon and manifesting itself through *Prakriti*—the universal sixth principle. Thus the MAHATMA, who has become one with his seventh principle—which is identical with *Purusha*, since there is no isolation in the spiritual monad—is practically a creator, for he has identified himself with the evolving and the manifesting

\* The writer in the *Indian Mirror* has omitted the most important passage from the remarks of the "Eminent Occultist." The passage reads:—"Old India, the India of the Rishis, made the first sounding with her plummet line in this ocean of Truth, but the post Mahabharata India, with all her profundity of learning, has neglected and forgotten it." This remark will show that the present article treats of a practical reality and not of a fanciful theory.—Editor.

energy of nature. It was in this sense that the *Rishis* are said to have married. And the union of *Siva* and *Sakti* represents the same allegory. *Siva* is the *Logos*, the *Vach*, manifested through the *Sakti*; and the union of the two produces the phenomenal creation, for until the Son is born, the Father and the Mother are non-existent. Now *Sakti* being a female principle, it is fully manifested through a woman, although, properly speaking, the inner man is neither male, nor female. It is only the preponderance of either of the two principles (positive and negative) which determines the sex. Now, this preponderance is determined by the Law of Affinity; and hence in a woman is manifested abnormally the occult power represented by *Sakti*. She is moreover gifted with a wonderfully vivid imagination—stronger than man's. And as the phenomenal is the realisation or rather the manifestation of the IDEAL, which can be properly and strongly conceived only by a powerful IMAGINATION—a WOMAN-ADEPT can produce high occultists—a race of "Buddhas and Christs," born "without sin." The more and the sooner the animal sexual affinities are given up, the stronger and the sooner will be the manifestation of the higher occult powers which alone can produce the "immaculate conception." And this art is practically taught to the occultists at a very high stage of initiation. The "Adept," whether the *Sthula Sarira* be male or female, is then able to bring a new being into existence by the manipulation of cosmic forces. *Anusuya*, a female adept of the ancient times, is thus said to have conceived immaculately *Darvasa*, *Dattatraya* and *Chandra*—the three distinct types of Adeptship. Thus it will be seen that the marriage of the occultist (who is, as already explained, neither male nor female) is a "holy union," devoid of sin, in the same manner as Krishna's union with thousands of *Gopies*. Sensual-minded men have taken this fact up too literally; and, out of a wrong interpretation of the text, has arisen a sect which indulges in the most degrading practices. But, in fact, *Krishna* represents the seventh principle, while the *Gopies* indicate the innumerable powers of that principle manifested through its "vehicle." Its union "without sin," or rather the action or manifestation of each of these powers through the "female principle" gives rise to the phenomenal appearances. In such a union the occultist is happy and "without sin" for the "conception" of his other-half—the female principle—is "immaculate." The very fact, that this stage pertains to one of the very highest initiations, shows that the time—when ordinary humanity, during the course of cosmic evolution, will, in this manner, be able to produce a race of "Buddhas," &c, born "without sin"—is yet very, very far off—perhaps attainable in the sixth or the seventh "round." But when once this possibility and the actuality of this fact is recognised, the course of living and education may be so moulded as to hasten the approach of that eventful day when on this earth will descend "the Kingdom of Heaven."

#### PRACTICAL INSTRUCTIONS FOR STUDENTS OF OCCULTISM.

##### IV.

##### KNOWLEDGE.

"In dreams commences all human knowledge."—*Bulwer Lytton*.

THE Mind, which has been purified from all selfish desires and is filled with a strong will and determination to learn the truth, is thereby duly and truly prepared to enter the temple of knowledge, which signifies the attainment of experience coupled with a clear perception of causes and their effects. There are two ways open to the attainment of knowledge. One, comparable to the slow and tedious work of ascending a river from its mouth, is to investigate effects and to try to find out their causes; the other is to ascend mentally through all the brambles and briars which matter put in our way, to the infinite source of all, and from there to trace the courses of the laws and their actions and witness the effects. The first method is that usually followed by modern science, and resembles the wanderings of a man around the periphery of a large circle attempting to find its centre. The occultist, although not neglecting the inductive method of reasoning, prefers to unite himself with the centre of the universe, and from thence to survey the infinite all; in other words, he attempts to bring his whole being in consonance with the universal mind, to enter mentally into the very centre of things, and thereby to obtain true knowledge.

To do this requires an immense effort and perseverance, and the average scientist, finding it easier to perfect his physical instruments than to perfect his morals and educate his spiritual faculties, can only obtain imperfect knowledge or a knowledge of a few details.

To bring oneself in harmony with the Divine Mind does not mean to think occasionally of "God" and "Heaven," or to go through a prescribed form of worship or ceremony, but to establish a continuous identity of molecular vibration between the spiritual part of man and the universal spirit; it means to continually live in one's higher consciousness which is the object of true *contemplation*.

To make this more clear, it will be necessary to speak again of the constitution of man and his states of consciousness. Every one, whose nature has not become thoroughly brutalised, knows that he has at least two sets of feelings and attractions. One set drags him down to earth and makes him cling with a firm grasp to material necessities and enjoyments; the other set, lifting him up into the region of the unknown, makes him forget the *allurements* and *distractions* of matter, and by bringing him nearer to the realm of abstract ideas of the good, the true and the beautiful, gives him satisfaction and happiness. The greatest philosophers and poets have recognised this fact of double consciousness; and, from a mixture of the two, results the normal consciousness of the average human being.

The *animal consciousness* of man is that unreasoning brute instinct, which impels him to continually seek for the gratification of his own material desires, irrespective of the rights of others. A man, under the predominant guidance of his material desires, has his mental energies mainly concentrated in his lower consciousness, and is proportionally unable to distinguish between right and wrong. He may be held within certain bounds through fear of punishment or hope of reward, but if his impulses become stronger than his hopes and fears, he becomes a maniac or a criminal. The condition of a person, who is fully subjugated by his animal consciousness, is forcibly illustrated in cases of so called obsession. In such cases the impulses of rage, greed, jealousy, &c., are predominant, while the reasoning faculties are entirely dormant. The "subject" will use foul language, act like a brute, and it is not surprising that people, unacquainted with psychology, should believe such a person to be possessed by the devil.

The *spiritual consciousness* of man is the other extreme, and is exhibited in the highest states of ecstasy or trance, which ecstatic state must not be confounded with the cataleptic state of the "obsessed." In that exalted state the mind of man enters the higher consciousness of his spirit and unites itself temporarily more or less with the spiritual soul. The ecstatic utters exalted ideas in proportion as his spiritual union with that consciousness is complete, exhibits a knowledge of things, which, in his normal condition, he is unable to understand, and it is not to be wondered at, that the spiritualist should regard persons in such a condition as being "possessed" by a superior spirit or a "departed soul;" and as the drunken imbecile or epileptic, on awaking from his state of "obsession," is often horrified when told about his conduct during that condition, of which he remembers nothing; so the "medium" will remember nothing of the sights seen or the language uttered during the trance.

Between the animal and spiritual consciousness is that which in the present state of evolution of mankind may be considered the *normal consciousness* of man. There was a time in the history of man's evolution, perhaps millions of years ago, when he was entirely guided by his lower impulses; there will be a time—and it is our business to try to hasten its arrival—when man's spiritual consciousness will be his normal one; but at present man is placed about midway between the animal and the "god," and is neither entirely guided by his instincts and impulses, nor entirely by his conscience and intuition. He is guided more or less by his reason, the middle ground between instinct and intuition; but his reasoning cannot be perfect so long as it is not based on perfect knowledge, which can only be obtained by contemplation, meditation and experience.

By "contemplation" we do not mean a rendering "passive" of the mind, but the study of an idea. If we merely "contemplate" or look at an *object*, without exerting our mental faculties, we simply render the Mind a blank; and open it as a play-ground for, and subject to, the very forces we desire to control. The laws of the revolution of planets, the principles of light and electricity, the relations between

spirit and matter, &c., were not discovered by staring at a spot on the wall, but by a deep study of cause and effect. To contemplate, far from signifying a passivity of the mind, means to bring it into the highest state of activity, to elevate oneself mentally into the region of thought and to cultivate a scientific and artistic imagination.

A high degree of that state is true *active clairvoyance* or *Divine illumination*, and is very different from the ordinary clairvoyance, which is induced by drugs, narcotics, anaesthetics or mechanical means, by which the ties which fasten the astral part to the physical body, become loosened, and allow the former to attain imperfect impressions from the *Astral Light*. A pure and well developed somnambule may come near that state; but while the somnambule is dependent on a magnetiser, and on awaking from her slumber remembers nothing of the impressions received during that state, the adept, who has assimilated his spiritual consciousness with his normal state, enters that condition at will and remains in full possession of the impressions received. P. B. Randolph says:—

"No curtain hides from view the spheres Elysian;  
Save those poor shells of half transparent dust;  
While all that blinds the spiritual vision,  
Is pride and hate and lust."

But there is furthermore a difference between seeing a thing and understanding it. Even if the veil were suddenly withdrawn from the eyes of the uninitiated seer, he would only be dazzled like a man who has been born blind, and is afterwards made to see. Overwhelmed by new experiences and unfamiliar sensations, he would be unable to judge and discriminate properly; but the adept, whose powers have grown with his knowledge, not only understands what he sees, but having learned the laws which govern the universe, he uses the same and becomes a co-worker with nature.

To know we must learn, and to learn we must use such means as are best adapted to our present condition. A pure but ignorant person, if thrown into the highest state of conscious ecstasy, would not comprehend what he sees, and would probably be made insane; while the most fearless and learned man, as long as his mind is clouded by selfishness and prejudice, cannot enter that state. For this reason the inductive and deductive methods of learning must go hand in hand, and great learning must be combined with a corresponding freedom from selfishness. If it was exacted from the ancient student of occultism that he should be well versed in mathematics and music, it was intended that his mind should have been habituated to intense reasoning and his soul attuned to the divine harmonies of the universe. We therefore do not depreciate or belittle the accomplishments of modern science; we consider them as extremely useful and necessary to obtain that state which leads to the initiation into higher truths that are inaccessible to modern science; but we deny that the inductive method of modern science alone can do more than lead us to the approaches of true knowledge.

An ancient sage says: "The first step towards obtaining knowledge is to know that thou art ignorant." A scientist, who thinks that he already knows everything to perfection, except perhaps some details, will be unable to learn much more than these details; but the Adept knows that normal man, in his onward progress from the beginning of his existence up to his final goal, has only arrived at the half way station: he knows that we have only reached the fourth step on the "Jacob's ladder" of seven steps, that lead to perfection, and that it is almost as impossible for us to imagine what the ultimate attributes of man will be, as it is impossible for the acorn buried in the ground to foresee its future condition as an umbrageous oak into which it may develop. Modern science deals as yet only with the two lowest principles of man, while the remaining five higher principles are unknown to her. Modern science knows of only four states of matter, but the Adepts tell us of seven. The eyes of modern science can see only through a limited space in the world of phenomena, and her investigations end near the line where perception through the physical senses ceases; but occult science steps from the realm of phenomena into that of noumena. She teaches that man is not the only intelligent being in the universe, that there are spaces within spaces, globes within globes, wheels within wheels, she shows that the number of things yet unknown to us is infinitely greater than the number of those we know, and reaches up in her researches to the supreme source of wisdom, the eternal and infinite

origin of all, the existence of which physical science ignores, because she cannot see the utility or profit of enquiring into it.

But the occultist not only believes in a *Supreme Cause* or "*The Absolute*," but he knows its manifestations in all departments of nature. He says that nothing exists which is not *God*, and everything that exists is *God*, although we cannot see the essence of *God*, but only perceive it in its manifestations; for the things we perceive by our physical senses are not the things themselves, but only their attributes. The occultist therefore denies that matter in any shape can have any real existence, and says that the world of forms is only the unpermanent and ever-changing result of cosmic ideation, or the symbols by which the divine ideas are represented to our mind. Ancient and modern philosophers have expressed that truth in different words, all agreeing that objects and ideas are ultimately identical, and it has been proclaimed ages ago by the Hindu sages, that nothing exists but *Brahma*, and that all things are the result of the action of the Divine Mind, which evolves them out of itself, and forms them into shapes by the power of His own Will and according to certain and immutable laws called the laws of nature.

If this is true, then the power of that Will is omnipotent, and whoever acts in harmony with it partakes of its powers, and the exercise of those powers depends on a knowledge of the laws of nature. But man himself as well as all nature is only the expression of a divine idea; his consciousness is the ultimate result of cosmic ideation, and MAN is therefore himself Divine. The knowledge of the universe and its laws depends on a perfect knowledge of man, not of man only in his present average condition, but of perfect man in his ultimate state. But no one can obtain perfect knowledge without experience, and to obtain experience of perfect man, he must become perfect himself. This state of perfection may not be obtained in one life on earth, but it is a state which in the course of evolution will be the normal condition of those that have come out victorious in the battle between spirit and matter.

A. B.

#### MR. GLADSTONE AND "THOUGHT-READING."

THE smoking-room of the House of Commons presented a most unusual aspect last night (June 19) an hour before midnight. It was crowded with members from every part of the House, who had assembled in obedience to a summons from Mr. Labouchere to witness a "thought-reading" performance by Mr. Stuart Cumberland, Mr. Irving Bishop's rival in the art of what may be called muscular divination. Every party sent representatives—Ministerialists, uncompromising Radicals from below the gangway, supporters of the Opposition, Parnellites, old-fashioned Whigs, members of the Fourth Party, and Mr. Ashmead-Bartlett, were mixed up together in a narrow space to form one of the most remarkable audiences that an ambitious thought-reader could desire. Mr. Waddy was voted to the chair, and Mr. Cumberland began with some simple experiments in finding objects thought of by Mr. Puleston, Mr. Coleridge Kennard, and one or two other members. Just as Mr. Cumberland, after a breathing space, was seeking for a pin, his observations were interrupted by a burst of cheering as the Prime Minister entered the smoking-room and seated himself in a chair offered to him by Mr. Healy. Mr. Cumberland was introduced to Mr. Gladstone, who manifested the greatest curiosity in the matter, and some of the early experiments were repeated. Then came the turn of the bank-note test. Mr. Edward Clarke produced a bank-note; a row of figures was fixed to the tiled wall by postage stamps, and Mr. Cumberland, holding Mr. Edward Clarke's hand, succeeded, after a couple of trials, in reading the number correctly. After another successful attempt with another note and Mr. Edward Stanhope for medium, Mr. Cumberland requested to be allowed to experiment on Mr. Gladstone, who consented very readily. "I am not," said the Prime Minister, addressing the audience, "a very easy or sympathetic subject," a confession which was greeted with positively Homeric applause. Mr. Gladstone was to think of three numbers, which Mr. Cumberland,

blindfolded and holding Mr. Gladstone's left hand, was if possible to read. Mr. Cumberland took the Prime Minister's hand, and, after a few seconds' pause, called out the numbers 366, which the Prime Minister admitted, amidst enthusiastic applause, to be correct. The Prime Minister, after a few minutes of animated conversation with Mr. Cumberland, left the smoking-room; and as Mr. Cumberland declared himself to be too tired for further experiments, the party broke up at midnight, and Mr. Biggar lost the finest opportunity fate ever offered him of calling Mr. Speaker's attention to the fact that there were not forty members present in the chamber.—*Madras Mail*, 10th July 1884.

#### CAN THE MAHATMAS BE SELFISH?

IN various writings on occult subjects, it has been stated that *unselfishness* is a *sine qua non* for success in occultism. Or a more correct form of putting it, would be that the development of an unselfish feeling is in itself the primary training which brings with it "knowledge which is power" as a necessary accessory. It is not, therefore, "knowledge," as ordinarily understood, that the occultist works for, but it comes to him as a matter of course, in consequence of his having removed the veil which screens true knowledge from his view. The basis of knowledge exists everywhere, since the phenomenal world furnishes or rather abounds with facts, the causes of which have to be discovered. We see only the *effects* in the *phenomenal* world, for each cause in that world is itself the *effect* of some other cause, and so on; and, therefore, true knowledge consists in getting at the root of all phenomena, and thus arriving at a correct understanding of the *primal* cause, the "rootless root," which is not an effect in its turn. To perceive anything correctly, one can use only those senses or instruments which correspond to the nature of that object. Hence, to comprehend the noumenal, a noumenal sense is a pre-requisite; while the transient phenomena can be perceived by senses corresponding to the nature of those phenomena. Occult Philosophy teaches us that the seventh principle is the only eternal Reality, while the rest, belonging as they do to the "world of forms" which are non-permanent, are illusive in the sense that they are transient. To these is limited the phenomenal world which can be taken cognisance of by the senses corresponding to the nature of those six principles. It will thus be clear that it is only the *seventh* sense, which pertains to the *noumenal* world, that can comprehend the Abstract Reality underlying all phenomena. As this seventh principle is all-pervading, it exists potentially in all of us; and he, who would arrive at true knowledge, has to develop that sense in him, or rather he must remove those veils which obscure its manifestation. All sense of *personality* is limited only to these lower six principles, for the former relates only to the "world of forms." Consequently, *true* "knowledge" can be obtained only by tearing away all the curtains of *Maya* raised by a sense of *personality* before the *impersonal Atma*. It is only in that *personality* that is centred selfishness, or rather the latter creates the former and *vice versa*, since they mutually act and react upon each other. For, selfishness is that feeling which seeks after the aggrandisement of one's own egotistic personality to the exclusion of others. If, therefore, selfishness limits one to narrow personalities, absolute knowledge is impossible so long as selfishness is not got rid of. So long, however, as we are in this world of phenomena, we cannot be *entirely* rid of a sense of personality, however exalted that feeling may be in the sense that no feeling of *personal* aggrandisement or ambition remains. We are, by our constitution and state of evolution, placed in the "World of Relativity," but as we find that *impersonality* and non-duality is the ultimate end of cosmic evolution, we have to endeavour to work along with Nature, and not place ourselves in opposition to its inherent impulse which must ultimately

assert itself. To oppose it, must necessitate suffering, since a weaker force, in its egotism, tries to array itself against the *universal* law. All that the occultist does, is to *hasten* this process, by allowing his Will to act in unison with the Cosmic Will or the Demiurgic Mind, which can be done by successfully checking the vain attempt of *personality* to assert itself in opposition to the former. And since the MAHATMA is but an advanced occultist, who has so far controlled his lower "self" as to hold it more or less in complete subjection to the Cosmic impulse, it is in the nature of things impossible for him to act in any other but an unselfish manner. No sooner does he allow the "personal self" to assert itself, than he ceases to be a MAHATMA. Those, therefore, who being still entangled in the web of the delusive sense of personality charge the MAHATMAS with "selfishness" in withholding "knowledge"—do not consider what they are talking about. The Law of Cosmic evolution is ever operating to achieve its purpose of ultimate unity and to carry the phenomenal into the *noumenal* plane, and the MAHATMAS, being *en rapport* with it, are assisting that purpose. They therefore know best what knowledge is best for mankind at a particular stage of its evolution, and none else is competent to judge of that matter, since they alone have got to the *basic knowledge* which can determine the right course and exercise proper discrimination. And for us who are yet struggling in the mire of the illusive senses to dictate what knowledge MAHATMAS shall impart to us and how they shall act, is like a street-boy presuming to teach science to Prof. Huxley or politics to Mr. Gladstone. For, it will be evident that, as soon as the least feeling of *selfishness* tries to assert itself, the vision of the spiritual sense, which is the only perception of the MAHATMA, becomes clouded and he loses the "power" which *abstract* "knowledge" alone can confer. Hence, the vigilant watch of the "Will" we have constantly to exercise to prevent our lower nature from coming up to the surface, which it does in our present undeveloped state; and thus extreme activity and not passivity is the essential condition with which the student has to commence. First his activity is directed to check the opposing influence of the "lower self;" and, when that is conquered, his untrammelled Will centred in his higher (real) "self," continues to work most efficaciously and actively in unison with the cosmic ideation in the "Divine Mind."

#### SCIENTIFIC VERIFICATION OF "SPIRITUAL" PHENOMENA.

[EXTRACT FROM A LETTER FROM "C. C. M." IN *Light*, (LONDON).]

SCIENTIFIC verification supposes that the conditions of an experiment are ascertained, that they can be regularly provided and the experiment be repeated at pleasure. For this qualification I was taken to task by the late Mr. Epes Sargent. And yet it is justified upon the very hypothesis which gives these phenomena their principal value in the eyes of spiritualists. For if they are dependent on the will of free intelligences, how can we provide that indispensable condition at our own will, how *reduce* the experiments to physical certainty? I say nothing of the immediate agencies who may be uniformly well disposed, or (as I think is the better statement), uniformly responsive to the sympathies of the medium and circle. But there are the possibilities of opposition; and, again, of a controlling power which may economise these evidences in relation to the intellectual receptivity of the world. When some one suggested to (MAHATMA) Koot Hoomi that a copy of the *Times*, produced in India on the day of publication in London would be a conclusive test to all the world, the wise Adept is reported to have replied that for that very reason it ought not to be accorded. Mankind must not be dragooned by facts for which it has no conceptions ready. (See "The Occult World," p. 95, *et seq.*) As long as these facts are filtered, as it were, through private channels, and even thus with a provoking uncertainty, intellectual progress has time to adapt itself to their reception. But let them be scientifically verifiable on all hands, let doubt be impossible, and we should see,

not the enlightenment desired, but the consequences so clearly described by the Eastern Sage in the passage above referred to.

It is not the case that even a favorable disposition, or a mind singularly free from every shadow of prejudice, will guarantee successful results in this investigation. It may not be a very scientific conjecture that such disappointments are of design, there being men of such great influence in the world that it would be premature, and therefore dangerous, to convince them—or rather to force their testimony. But if that is not the explanation, then we must suppose conditions, physical or psychical, of greater subtlety than any yet suggested, or a quite incalculable caprice on the part of the agencies at work. In either case we cannot put these experiments on a par with scientific results as regards individual means of verification.

The true position to take up, I maintain to be that the evidence of testimony may be and is now, in this whole department, raised to such a power that no rational and candid mind is any longer entitled to demand personal experience. Of course the facts will go on occurring, and the evidence accumulating. But there must be a point at which we can declare to "inquirers" that their understandings have no longer a *right* to the evidence of their senses. That we shall not thus convince the world—lazy, illogical, or prejudiced—I am well aware. It is so nice and easy to see, when there is anything to be seen, and so troublesome to study and think. But we shall avoid a false position and a comparison not perfectly legitimate. We are, in fact, so far from being already able to provide the conditions at will, that the very object of our researches is to ascertain whether these conditions really belong to the "Scientific" order—that is, are dependent on laws in fixed and regular operation—or are in part subject to the will of intelligences which we cannot control.

#### CONTEMPLATION.

##### II.

Notwithstanding the article on the above subject in the February *Theosophist*, many of its readers still seem to imagine that "contemplation" is a particular form of gazing or staring at something, which process, when undergone a set number of hours every day, will give psychological powers. This misunderstanding is apparently due to the fact that the main point discussed has been lost sight of. Instead of realising that there is but one chief idea meant to be conveyed by that article by arguing it through many of its phases, it seems to be imagined that almost every sentence expresses quite a distinct idea. It may not therefore be uninteresting or unprofitable to revert to the subject and put forward the same idea from another stand-point and, if possible, in a clearer light. It must first be borne in mind that the writer of the article did not at all mean to imply the act of gazing by the word "contemplation." The former word would have been made use of, were that the idea. "The Imperial Dictionary of the English Language," (1883)—defines the word contemplation thus:—

(1) The act of the mind in considering with attention; meditation; study; continued attention of the mind to a particular subject.  
Specifically—2 Holy meditation; attention to sacred things.

Webster's dictionary thoroughly revised—also gives the same meaning.

Thus we find that contemplation is the "continued attention of the mind to a particular subject," and, religiously, it is the "attention to sacred things." It is therefore difficult to imagine how the idea of gazing or staring came to be associated with the word contemplation, unless it be due to the fact that generally it so happens that when any one is deeply absorbed in thought, he apparently seems to be gazing or staring at something in blank space. But this gazing is the effect of the act of contemplation. And, as usually happens, here too the effect seems to be confounded with the cause. Because the gazing attitude follows the act of contemplation, it is at once assumed that gazing is the cause which produces contemplation! Bearing this well in mind, let us now see what kind of contemplation (or

meditation) the *Elixir of Life* recommends for the aspirants after occult knowledge. It says:—

"Reasoning from the known to the unknown meditation must be practised and encouraged."

That is to say, a *chela's* meditation should constitute the "reasoning from the known to the unknown." The "known" is the phenomenal world, cognisable by our five senses. And all that we see in this manifested world are the effects, the causes of which are to be sought after in the noumenal, the unmanifested, the "unknown world:" this is to be accomplished by meditation, *i. e.*, continued attention to the subject. Occultism does not depend upon one method, but employs both the deductive and the inductive. The student must first learn the general axioms. For the time being, he will of course have to take them as assumptions, if he prefers to call them so. Or as the *Elixir of Life* puts it:—

All we have to say is that if you are anxious to drink of the *Elixir of Life* and live a thousand years or so, you must take our word for the matter, at present, and proceed on the assumption. For esoteric science does not give the faintest possible hope that the desired end will ever be attained by any other way; while modern, or the so-called exact science laughs at it.

These axioms have sufficiently been laid out in the articles on the *Elixir of Life* and various others treating on occultism, in the different numbers of the *Theosophist*. What the student has first to do is to *comprehend* these axioms and, by employing the deductive method, to proceed from universals to particulars. He has then to reason from the "known to the unknown," and see if the inductive method of proceeding from particulars to universals supports those axioms. This process forms the primary stage of true contemplation. The student must first grasp the subject intellectually before he can hope to realise his aspirations. When this is accomplished, then comes the next stage of meditation which is "the inexpressible yearning of the inner man to 'go out towards the infinite.'" Before any such yearning can be properly directed, the goal, to which it is to be its aim to run, must be determined by the preliminary stages. The higher stage, in fact, consists in realising practically what the first steps have placed within one's comprehension. In short, contemplation, in its true sense, is to recognise the truth of Eliphaz Levi's saying:—

To believe without knowing is weakness; to believe, because one knows, is power.

Or, in other words, to see that "KNOWLEDGE IS POWER." The *Elixir of Life* not only gives the preliminary steps in the ladder of *contemplation* but also tells the reader how to *realise* the higher conceptions. It traces, by the process of contemplation as it were, the relation of man, "the known," the manifested, the phenomenon, to "the unknown," the unmanifested, the noumenon. It shows to the student what ideal he should contemplate and how to rise up to it. It places before him the nature of the inner capacities of man and how to develop them. To a superficial reader, this may, perhaps, appear as the acme of selfishness. Reflection or contemplation will, however, show the contrary to be the case. For it teaches the student that to comprehend the noumenal, he must identify himself with Nature. Instead of looking upon himself as an isolated being, he must learn to look upon himself as a part of the INTEGRAL WHOLE. For, in the unmanifested world, it can be clearly perceived that all is controlled by the "Law of Affinity," the attraction of one to the other. There, all is Infinite Love, understood in its true sense.

It may now be not out of place to recapitulate what has already been said. The first thing to be done is to study the axioms of Occultism and work upon them by the deductive and the inductive methods, which is real contemplation. To turn this to a useful purpose, what is theoretically comprehended must be practically realised. It is to be hoped that this explanation may make the meaning of the former article on this subject clearer.

D. K. M.

## THE ORIGIN OF NATURE AND THE ORIGIN OF SCIENCE.

A THEISTIC contemporary has, under the above heading, copied an extract from a book called "Is God Knowable?" by the Revd. J. Iverach, M. A., with the remark that it "deals in a very interesting way with the attempt of Agnostics to show that Nature is without a Personal Author." The chief argument consists in the idea that all the discoveries in Science are traceable to certain individuals and are thus of a personal origin: consequently Nature's origin is personal too. Before going further, it may be well inquired what is meant by Nature. Some confine that term to the visible phenomenon, forgetting probably the fact that what is objective to one state of existence is subjective to another and *vice versa*. In philosophy, therefore, the term nature has invariably been applied to both the visible and the invisible, the phenomenal and the noumenal aspects and as such includes THE ALL. Call it Nature, Cosmos, universe, God or whatever else you like, it is infinite and eternal, and to talk of an existence beyond infinity is a logical absurdity. Now, if there can be a sense of personality, it must imply a duality—the subject perceiving the object. As both the subject and the object together constitute the infinity, either of these two by itself must perforce be finite. A conscious creator, "the loving Father" of the Theists, cannot therefore but be finite. And hence it is that the Adwaita philosophy says that *Iswara*, the creative *energy* of nature, is finite; and, in the Arhat Philosophy, *Iswara* corresponds to *Awalokiteswara*. Both these philosophies moreover teach that every man has, within himself, the latent potentiality to rise to that spiritual eminence. These considerations are generally lost sight of, by theologians, when they try to put forth the idea of a *personal* God. The discovery of a scientific fact may imply a discoverer, but that does not prove that the Law of Cosmic Evolution cannot exist without a *personal* Lawgiver. Philosophy recognises the truth of Plato's words, "Ideas rule the world," and says that the ideas inherent in the cosmic or the Demiurgic Mind strike various individuals during the process of cosmic evolution whenever the minds of such individuals are sufficiently developed. Hence it is that the same discoveries have been made by different individuals at different epochs of time or sometimes even simultaneously, without the discoverers being, in the slightest degree, acquainted with one another or having ever exchanged their ideas by any possible means. It must here be remarked that the Demiurgic Mind means the synthetic aggregation of the minds of all the Dhyana Chohans and all men, that were, that are and that will be, since past, present and future are only relative terms, having no absolute reality in Eternity. It will be apparent that to attach *personality* to the infinite is to dethrone the awful Reality from its high and incomprehensible position.

AN ADWAITEE.

## Letters to the Editor.

### THE FUTURE BUDDHAS.

ON page 144 of *Esoteric Buddhism* we have the following:—

"A Buddha visits the earth for each of the seven races of the great planetary period. The Buddha with whom we are occupied was the fourth of the series, \* \* \* \* The fifth or Maitreya Buddha will come after the final disappearance of the fifth race, and when the sixth race will already have been established on earth for some hundreds of thousands of years. The sixth will come at the beginning of the seventh race, and the seventh towards the close of that race."

Later on we find on page 146:—

"The first Buddha of the series, in which Gautama Buddha stands fourth, is thus the second incarnation of *Avalokiteswara*—\* \* \* and though Gautama is thus the fourth incarnation of enlightenment by exoteric reckoning, he is really the fifth of the true series, and thus properly belonging to our fifth race."

According to this latter interpretation then, if we are to accept our enlightened Gautama as the fifth Buddha, it is not understood what the author means by saying "the fifth or Maitreya Buddha will come after the final disappearance of the fifth race," &c., &c. If, however, it is meant that the Maitreya Buddha will then become the sixth, it will thereby necessitate an eighth Buddha to complete the series, which I believe is not the case.

Again, just after the passage first quoted, the author points out a difficulty likely to arise in the minds of his readers. "Here we are in the middle of the fifth race," he says, "and yet it is the fourth Buddha who has been identified with this race." But his explanation does not clear the point. He explains how after the end of an obscuration and beginning of each great planetary period, when the human tide-wave "arrives at the shore of a globe where no humanity has existed for milliards of years," a teacher is required to impress "the first broad principles of right and wrong and the first truths of the esoteric doctrine on a sufficient number of receptive minds, to ensure the continued reverberation of the ideas so implanted through successive generations of men in the millions of years to come, before the first race shall have completed its course." But the difficulty remains all the more unsolved as to why that very necessity does not exist in the case of subsequent races, each of which is said to be separated from its predecessor by cataclysms, and why it is that the fifth Buddha or teacher will come after the final disappearance of the fifth race, the sixth at the beginning of the seventh race, and the seventh at the close of that race.

BELGHORIA, } KHETRA MOHANA MUKHOPADHYAYA,  
12th June, 1884. } F. T. S.

Note.—What Mr. Sinnett meant by the two passages on pages 144 and 146 of his *Esoteric Buddhism*, was that *Gautama* was the *fourth Buddha*, i. e., "enlightened," while he was the *fifth spiritual teacher*. The first "teacher" of this "Round" on this planet was a *Dhyān Chohan*. As a *Dhyān Chohan*, he belonged to another System, and was thus far higher than a *Buddha*. As, however, in ordinary language, all spiritual teachers are called "*Buddhas*," Mr. Sinnett speaks of *Gautama* as the *fifth Buddha*. To be more accurate, it must be said that *Gautama* was the *fifth spiritual teacher* in this "Round" on this planet, while he was the *fourth* who became *Buddha*. The one who will appear at the close of the seventh race—at the time of the occupation of the next higher planet by humanity—will again be a *Dhyān Chohan*. The passage of humanity into a planet and its going therefrom to another—are two critical junctures, necessitating the appearance of a *Dhyān Chohan*. At its first appearance, the seed of "spiritual wisdom" has to be implanted and then carried on to the next planet, when the period of the obscuration of the inhabited planet approaches. The intervening disturbances, caused by racial cataclysms, on the globe, do not destroy that seed and its growth is ensured by the appearance of the intermediate *Buddhas*.—Editor.

### THIEF OR "MEDIUM?"

I forward herewith an extract from the *Assam News* of 9th June 1884 for favor of publication in the *Theosophist*.

I shall feel myself highly obliged by an expression of your opinion as to whether any other cause can be attributed to the phenomenon other than that arrived at by the Magistrate and the Judge Mr. L. Johnson.

RANJAN VILAS RAI CHAUDHURI, F. T. S.

Dacca, 16th June 1884.

A somewhat singular case was lately tried by the Assistant Commissioner of Golaghat. A person, whose name we do not remember, was robbed of some property. Not being able to find any clue either to the thief or whereabouts of the stolen property he resorted to what is called in Assam *Houka-Mela* or cane-moving for the discovery of the property. He applied to a well-known cane-mover, named Muhidhar, who came to his house, and, a cane being produced, uttered a certain incantation over it in due form. A man named Rohpur was then asked to hold it. The latter complied with the request, held the cane and ran out of the house like a mad man followed by a large crowd. He went straight to a tank, not far from the house of the person whose property had been stolen, and pointed, with the stick, to a part of the tank; one of the spectators jumped into the water and found a portion of the stolen property. Encouraged by the success that attended the operation, the owner of the property had the same ceremony performed by the same persons for the discovery of the remaining portion of the property on the following day. The formula of uttering the incantation having been gone through, Rohpur held the stick, and ran out as before, and stopped at a place near the house of the person robbed; and on digging the ground the remnant of the property was found; whereupon the Police, who always show great skill in doing mischief rather than their legitimate duties, interfered and arrested Rohpur whom they sent up to the Magistrate charged with theft. The accused pleaded not guilty, and stated that

he had neither stolen the property, nor had he known its whereabouts before he held the cane, and that when he pointed out the places where the property was found, he was in a state of insensibility; he stated further that he had not gone to the places of his own accord, but had been led to them by the enchanted cane, and that therefore he was not guilty. There was no evidence whatever to bring the commission of the crime home to the accused, but the Magistrate solely upon the proof that he had pointed out the places where the property had been found convicted and sentenced him to imprisonment for one year, and in appeal the conviction and sentence were upheld by our new Judge Mr. Lutman Johnson. A layman, as we are, we can agree neither with the Magistrate who punished the accused nor with the Judge who upheld the sentence. Of course a strong suspicion would arise in the mind of every person who is not blinded by superstition that the prisoner had either stolen and concealed the property himself or was a privy to the act, and in either case he would be guilty; but it must be remembered that more suspicion is no evidence, and that therefore no person ought to be convicted upon suspicion only.—*The Assam News*.

Note.—We have not sufficient information about this case to decide whether or not the action of the Magistrate was justifiable. It is quite possible that the accused was a cheat, and it is also possible that he was a "medium." It is highly desirable that lawyers and judges should study the laws of psychology, so as to avoid errors in similar cases.—H.

### NOTES ON "THE BEST FOOD FOR MAN."

In the beautiful essay on "The Best Food for Man," Mrs. Kingsford, M. D., F. T. S., arrives at conclusions based upon science. This subject was discussed among some friends. One of them raised an objection that the Lapps cannot be made vegetarians. In the first place, their country does not produce any vegetation on which the people might subsist; and secondly, if they be made to feed on vegetables, the race would soon become extinct.

The answer to this question is plain enough. The question is whether the Lapps were originally flesh-eaters. Their present condition, brought about by the influence of climate, is out of consideration. Darwin in his "Descent of Man" comes to the conclusion that the habits of the progenitors of man were arboreal. Man's first habitation must have been some tropical country. The Bible also says that man first lived in the garden of Eden watered by many lovely streams. Hence the first habitation of man must have been a country adorned with all the grandeur of vegetation. Therefore the Lapps also must have proceeded from a country where 'grew every tree that was pleasant to the sight, and good for food.' As habit is second nature, the dreary and cold latitudes habituated the Lapps to flesh-eating.

Though I cannot quote the passage, I remember it well that it says that the Africans leave some kind of liquor, made of plantains, under trees frequented by monkeys. When the monkeys are intoxicated with the beverage, the hunters catch them. In Europe it has been tried that the monkey might get into the habit of drinking alcohol. They drink it the first time and make merriments, but they cannot be made to drink it the second time. Here the monkey is guided by his instincts, and hence drinking alcohol is repulsive to that tribe. As alcohol was first brought into use in Arabia, man got into the habit of drinking it. From this it is plain that if man were guided by his instincts, he would prefer milk and fresh water to all other liquors. Of course milk is the first drink of all mammals.

The carnivorous animals drink water by taking it with their tongues, as the tiger, dog, &c., and the animals that feed on vegetables draw their breath at the time of drinking water, as the horse, cow, &c. Many a time, by the side of streams, I have seen the monkeys drink by applying their mouths to the water. While so doing, they rest upon their hands. Travellers say that there are some savages who do not use any bowl or cup in drinking water; but they go to a river, rest on their knees and hands, and lower their mouth to the surface of the water and drink it like monkeys. Man also draws his breath at the time of drinking water.

Proceeding upon the foregoing facts, one must come to the conclusion that man must have been originally a vegetarian.

JUBBULPORE, }  
4th June, 1884. }

B. G.

Note.—By the same kind of argument, it is easy to "prove" that man "must have been originally" *carnivorous*. Man has evolved under various conditions; it would be well, therefore, while trying to arrive at what is best for man, to abandon the false notion that he was "originally created" with any specific attributes.—L. F.

## INTERVIEW WITH A MAHATMA.

I HAD the pleasure of seeing in several issues of the *Theosophist* articles describing my interview with a Himalayan Mahatma. But I am sorry to see that you have been led or rather misled to form some strange, if not incorrect, notions about the fact, and also regret to find that some positive mistakes have been made by the writer in reporting the matter to you. In order to make the matter more clearly known to you, I beg to write the following few lines and trust they will meet with your approval.

At the time I left home for the Himalayas in search of the Supreme Being, having adopted Brahmacharyashrama, I was quite ignorant of the fact whether there was any such philosophical sect as the Theosophists existing in India, who believed in the existence of the Mahatmas or "superior persons." This and other facts connected with my journey have already been reported to you perfectly right, and so need not be repeated or contradicted. Now I beg to give you the real account of my interview with the Mahatmas.

Before and after I met the so-called Mahatma Kouthumpa, I had the good fortune of seeing in person several other Mahatmas of note, a detailed account of whom, I hope, should time allow, to write to you by and bye. Here I wish to say something about Kouthumpa only.

When I was on my way to Almora from Mansarowar and Kailas, one day I had nothing with me to eat. I was quite at a loss how to get on without food and keep up my life. There being no human habitation in that part of the country, I could expect no help but pray God and take my way patiently on. Between Mansarowar and Taklakhal by the side of a road I observed a tent pitched and several Sadhus, called Chohans,\* sitting outside it who numbered near seventeen in all. As to their trimmings, &c., what Babu M. M. Chatterjea reports to you is all correct. When I went to them they entertained me very kindly, and saluted me by uttering "Ram Ram." I returning their salutations, sat down with them, and they entered upon conversation with me on different subjects, asking me first the place I was coming from and whither I was going. There was a chief of them sitting inside the tent and engaged in reading a book. I enquired about his name and the book he was reading from one of his Chelas, who answered me in rather a serious tone, saying that his name was Guru Kouthumpa and the book he was reading was Rigveda. Long before, I had been told by some Pundits of Bengal that the Thibetan Lamas were well-acquainted with the Rigveda. This proved what they had told me. After a short time when his reading was over, he called me in through one of his Chelas, and I went to him. He, also bidding me "Ram Ram" received me very gently and courteously and began to talk with me mildly in pure Hindi. He addressed me in words such as follows:—"You should remain here for some time and see the fair at Mansarowar, which is to come off shortly. Here you will have plenty of time and suitable retreats for meditation, &c, I will help you in whatever I can." Having spoken in words as above for some time, I said in reply that what he said was all right, and that I would put up with him by all means, but there was some reason which prevented me from stopping there any longer. He understood my object immediately, and then having given me some secret advice as to my future spiritual welfare bade me farewell. Before this he had come to know that I was hungry that day and so wished me to take some food. He ordered one of his Chelas to supply me with food, which he did immediately. In order to get hot water ready for my ablutions he prepared fire by blowing into a cowdung cake, which burst into flames at once. This is a common practice among the Himalayan Lamas. It is also fully explained by M. M. Chatterjea and so need not be repeated.

As long as I was there with the said Lama he never persuaded me to accept Buddhism or any other religion, but only said, "Hinduism is the best religion; you should believe in the Lord Mahadewa—he will do good to you. You are still quite a young man—do not be enticed away by the necromancy of anybody." Having had a conversation with the Mahatma as described above for about three hours, I at last taking his leave resumed my journey.

\* The correspondent probably means "the Chutuktus" or the disciples? Chohans are the "Masters."

I am neither a Theosophist nor any sectarian, but am the worshipper of the only "Om." As regards the Mahatma I personally saw, I dare say that he is a great Mahatma. By the fulfilment of certain of his prophecies I am quite convinced of his excellence. Of all the Himalayan Mahatmas with whom I had an interview, I never saw a better Hindee speaker than he. As to his birth-place and the place of his residence, I did not ask him any question. Neither can I say if he is the Mahatma of the Theosophists. In short, I beg to ask the leaders of the Theosophic movement, Col. Olcott and Madame Blavatsky, why they are entertaining doubts as to his personality, why do they not refer the matter to the Mahatmas, with whom they can easily have communication. When they say they receive instructions from them in petty affairs, why do they not get them in a matter which has become a riddle to them. As to the age of the Mahatma Kouthumpa as I told Babu M. M. Chatterjea and others, he was an elderly looking man. Cannot the Mahatmas transform themselves into any age they like? If they can, the assertions of Babu Damodar cannot be admitted to be true when he says his Guru was not an old one. When the age of even a common man cannot be told exactly, how is it possible to be precise about the age of a Mahatma, specially when one believes that the Mahatmas have the supernatural power of changing their outward appearance and look. It must be admitted that our knowledge of them is far from being complete; and there are several things concerning them which we do not know.

It is said that

मनुष्याणां सहस्रेषु कश्चित् यततिसिद्धये ।

यततामपीसिद्धानां कश्चित्मात्रं तितत्त्वतः ॥

RAJANI KANT BRAHMACHARI.

ALMORA, 3rd June 1884

NOTE:—Although the correspondent begins by saying that certain "incorrect" notions have crept into the narrative of his interview with a MAHATMA, I fail to see a single statement of Babu Mohini M. Chatterjea contradicted by the Brahmachari. As the former gentleman is in Europe, he cannot give a reply to the above letter; but the reader can compare it with Mohini Babu's statement on pp. 83—86 of Vol. V of the *Theosophist*. All that the correspondent does now is that he gives a few additional facts.

As regards the Brahmachari's remark about my statement concerning the MAHATMA's age, the reader will perceive that the correspondent but repents, in other words, to a certain extent, what I have already said to be the reply of my MASTER (Vide page 62, Vol. V. *Theosophist*, col. I, para. 1). I may, however, add that since "intellect moulds the features," many of the comparatively young persons (if physical age be taken into account) look "elderly," such is the majesty of their appearance. The question has already been discussed at length in the article "Mahatmas and Chelas" in the last month's *Theosophist*, and in several other writings.

The question put by the correspondent to Col. Olcott and to Mme. Blavatsky, and the advice he offers them, are rather confused. But every reader of the *Theosophist* knows full well that the Founders collect and publish independent testimonies about the existence of the MAHATMAS, not because they have any doubt in the matter, but because they wish to put their case as clearly and as strongly as possible before an enquiring public. Nothing more need be said about it, as every searcher after truth—in whatever department—knows full well the weight and validity of evidence, especially concerning facts which are out of the reach, at present, of the ordinary run of mankind, although these facts may in the process of higher evolution come more and more within the grasp of a more developed humanity.—D. K. M.

## VEDANTISM AND BUDDHISM.

IN the review of the *Vedantasara* on page 318 of Vol. IV of the *Theosophist*, I find the reviewer asserting that Sankaracharya's Adwaita teaching is identical with the Buddhist exposition of Gautama Buddha, and that Sankaracharya "throughout his works keeps wisely silent about the esoteric doctrine taught by Gautama Buddha." He further challenges the *Arya* to disprove his statements. I now beg to draw the attention of the reviewer to page 76 of the *Arya* for this month, where a translation of Sankaracharya's remarks against Buddhism is given, and would like to know how he can reconcile this with his assertions.

9th June 1884.

AN ENQUIRER.

NOTE.—The translation in the *Arya* is of Sankaracharya's Commentary on the *Brahma Sutras* of Vyasa. The *Bouddhas*, therefore, referred to therein, could not have been the followers of Gautama Buddha who lived only about twenty-five hundred years ago, while Vyasa, who mentions the *Bouddhas* in his *Sutras*—against whom only does Sankaracharya argue—preceded him by several thousand years. Consequently the fact that Sankaracharya remains silent throughout

his works about the esoteric doctrine taught by *Gautama* Buddha, remains perfectly sound and unassailed. Probably the so-called "Buddhist" religion in the time of *Vyasa*, the writer of the *Brahma Sutras*, was degenerated as we find the Vedic Religion in our times. *Gautama* was one of the reformers, and although his followers may have been known by the same name, it does not follow that the opposition to a religion called Buddhist necessarily means antagonism to the teachings of *Gautama*. If that were the case, *Gautama* himself might be called an opponent of Buddhism, for he went against its abuses, and thus against the degenerated system known as Buddhism before his time. We maintain that the Arhat Doctrine of which the latest public exponent was *Gautama* Buddha, is identical with the Advaita Philosophy, whose latest public exponent was *Sankaracharya*. Hence the latter Philosopher's silence about the former's teaching. The objections urged by "An Enquirer" were already anticipated and answered by Mr. *Subba Row* in his article on "Sankara's Date and Philosophy." (See Vol. IV, *Theosophist*, page 306.)—D. K. M.

#### SYMPATHY.

In the President's review of Francis Galton's "Inquiries into Human Faculty and its Development" in the May number of the *Theosophist*, he refers to the well established fact that sympathies and antipathies exist between plants or trees and man.

It may interest some of your readers if I give the particulars of a case which occurred in my own family and under my own observation in corroboration of the already strong evidence on this point.

On the day on which my elder sister was born, my father was driving home through a village where some willow trees overhung a stream of water.

These trees had always been favourites with him on account of their exceedingly graceful growth. He stopped and cut several small branches from them which he planted in his garden.

Only one of the number took root, and this, after sending up a main stem for five or six feet divided into two branches, eventually developing into a fine tree. This tree was always called by my sister's name, and we children looked upon it almost as one of the family.

When my sister reached her eighteenth year, she was stricken with paralysis on *one side only*; within a few weeks her tree exhibited signs of decay in the *corresponding limbs*, which, in a short time, withered away.

During the period of her illness, which lasted for about three years, the tree faded as she faded, and within a week or two of her death her "vegetable foster sister" had ceased to exist.

EDMOND W. WADE.

LEE, May 1884.

#### AN ASPIRANT'S PERPLEXITIES.

TAKE the case of a person who is awakening to the sense of living a higher life, and finding the utter hollowness of pursuing worldly objects, such as money, position, &c., resolves that the remainder of his life should be devoted in engendering those affinities which shall hereafter—in this birth or the next—lead him to the attainment of his desire. But suppose he has got parents, who, like worldly men, wish that their son should act so as to enable him hereafter to acquire riches and support them in their old age, and are quite against the notion that he should live the life of an ascetic. The son, for fear of deeply hurting the feelings of his parents, outwardly complies with their wishes, but wholly neglects those studies which are to get him a living in the world. Now what I want to know is this:—

- (1.) Is not this kind of life a life of hypocrisy?
- (2.) Would he be justified in plainly breaking up with his family, and in leading the life which his highest aspirations urge him to do?

AN F. T. S.

*Note.*—We have taken the liberty to publish the above extracts from a private letter, as questions of such a nature, very often urged in private correspondence, had better be answered through the *Theosophist*. For obvious reasons, the writer's name is withheld.

We believe that until a man has evolved his higher ego which can work on a higher plane for the moral and spiritual benefit of humanity, he must perform his duties by remaining in the world. To have a right sense of duty, he should of course be continually striving to elevate himself, but to attempt to live the life of an "ascetic" at once or to run away into the jungle, is like attempting the absurd task of beginning at the uppermost step of the ladder. It has been emphatically asserted over and over again in this journal that it is the inward desire for physical gratification or personal and, hence necessarily, selfish advantage, that must be controlled. To guard self against self and to be

in the world, yet not be of it—are the two primary lessons which every beginner would do well to remember and to realize. It should not be forgotten that there are very advanced occultists who are carrying on their professional avocations, their higher evolution being due to the self-control they have achieved. The more the temptations in the way of the neophyte, the greater are the opportunities for him to strengthen his Will-power. Every *unselfish* labour carried on with a determined purpose must be crowned ultimately with success. The student must first have confidence in self and in the Law of Absolute Justice. If he works unselfishly and if he has evolved his higher ego, the circumstances will mould themselves and put him in the sphere he is prepared to live in. He must gradually become the master of his lower self, and nature will accomplish the rest.—B. S.

#### YOGA VIDYA.

THE word *Yoga* means to join, to meet, to concentrate, &c., one object to another. The term *Vidya* means knowledge. This knowledge points out the process by which one can concentrate his mind and put himself in direct communion with the ABSOLUTE ONE. This knowledge alone clearly shows the correct path to the travellers towards the destination, if they inherently adhere to and obey the guide.

The *Yoga Vidya* is a perfect science, given out to the world by the Mahatmas of different ages. This science is divided into several sub-divisions. The processes, laid down for acquiring the knowledge, are various and different, but the object of all of them is one—to strengthen the Will-Power. Of all the systems *Raja Yoga* stands first in order. The simple meaning and the principal object of the science is the mental as well as the physical training.

Theosophy has given out to the world clearly, distinctly and definitely, the constitution of man, the component parts of man, his ultimate destiny, and so on. This knowledge hitherto was known to *very few*, and those few kept it in great secrecy. It can be safely asserted that this science was not within the reach of ordinary mortals. The texts and tenets of the *Vedas*, *Upanishads*, *Gitas*, &c., contain masterly instructions to the effect. But the real meaning of those doctrines is so cleverly veiled as to convey double meaning, one diametrically opposed to the other. The ordinary readers, instead of diving deep to the real meaning, feel quite satisfied and contented with the exoteric meaning. The process of learning and acquiring the *Yoga Vidya* should engage the attention of every individual. What does this science teach? It tells us to strengthen and develop the *Will-Power*. Every human being, therefore, should arm himself with a firm and dogged resolution to learn the science and then fight out his own battle in the best way he can.

Theosophy has taught us that the human being is composed of seven principles. They are all connected with each other, and each has its own functions to perform. The fifth principle is the most important one of the whole lot. The whole success or failure entirely depends upon this principle—the *Manas*. The *Yoga Vidya* teaches us how one should develop his *Manas*, what course should be adopted to strengthen his Will-Power; and points out the impediments and difficulties, and the way to overcome them.

In the commencement of the journey, the traveller must be well provided and armed with a strong *will*, without which, all is useless. With that *will*, he should entirely devote himself to self-conquest and spiritual evolution. In doing this, he will find the animal soul his greatest and bitterest enemy. His first and imperative duty would be to defeat and subjugate the seat of all evil and vicious propensities. They are innumerable. All those should be checked and defeated, one by one, gradually and steadily, by *strong will*, so that they may *never find* opportunities to turn up again and disturb the equilibrium. (Our *Arya Guru Mahatma Sree Krishna* has given the splendid illustration, in the destruction of *Kali* serpent). In order to realize his object he has to watch the *Kamarupa* constantly and vigorously. His sole aim would be to weaken his enemy gradually, and afterwards "he must demoralize him and throw him into disorder," as said in the *Elixir of Life*. On the other hand, if both these principles (4th and 5th,) are provided with "breech loaders," the game is lost, the fall is inevitable, and the supremacy of the 5th over the 4th is quite out of the question. In short, the development of strong *Will-Power* is quite indispensable, which should guide the lower principles, particularly the 4th, and not be guided by them, to dictate and not to be dictated, to command and not to be commanded; and then success is quite SURE and CERTAIN.

FYZABAD,  
20th June, 1884. }

PARASH NATH CHUCKERBUTTY,  
F. T. S.

*Note.*—Although the correspondent begins by the definition of the word "Yoga," he does not show its practical application. "Yoga Vidya" is the knowledge which teaches the union, but of what with what? That knowledge shows us the path whereby may be effected the "union" of our fifth principle—wherein resides our individual consciousness—and the sixth with the seventh principle, which at present only *overshadow* us. Occultism therefore not only teaches us that the lower four principles should be controlled, but it adds that the most important achievement is to so control the lower portions of the fifth—wherein are generated the impulses which attract us earthwards—that all these four principles together with the lower half of the fifth, become merely like a cloak (which can be put on and off at will) covering the higher portions of the fifth—merged in the sixth and the seventh. When this union between our higher fifth principle—which gives us the consciousness "I AM I"—with the Spiritual Monad (the sixth and the seventh principles) is completely effected, the individual then attains *Nirvana* or becomes a *Mukta*—free from the chains of *Maya*, in which we are all more or less bound. Thus, not only physical and mental, but also moral and spiritual training form an essential part of Yoga VIDYA:—*Editor.*

We beg to acknowledge with thanks receipt of a *Calendar* for ascertaining any day of the week for any given time within the present century. It is designed by Babu Kali Blushan Roy, Jamalpur; and lithographed and printed by Messrs W. Newman and Co., Calcutta.

## Reviews.

(Concluded from the last Number.)

### POSTHUMOUS HUMANITY.

WE now come to a consideration of a different class of phenomena, which, although relating like the foregoing ones to an action of the magnetic ether, yet differ from them in the method of their production, being artificial processes by which the fluidic personality (the astral body) becomes evolved, and which are generally known by the name of *Magic*. The words "Magic" and *Miracle* have been misused so often that men of science have been induced to strike them both from their list, but nevertheless magicians and mediums continue to exist and if we strip the witch trials of the Middle Ages of all the superstition with which they were connected, there will still be a sufficient amount of facts left, which we cannot deny. We may flatter ourselves that we are possessed of a superior intelligence than that of our forefathers; but the age of Shakespeare included men that were not all fools. Lawyers then as now were intelligent, circumspect and shrewd, and our methods of administering law have been derived from them. They had the same love for truth, were very minute in their researches, and used almost the same language. Criminals were not convicted unless their crimes were confessed or their culpability proved, and although the ends of justice were often thwarted by superstition and bigotry, still many convictions were based on irrefutable proofs.

Why then has witchcraft disappeared from our midst? It is because the conditions for its development are not so favourable now as during the Middle Ages. At that time society was in a state of confusion and chaos. The countries were ruined by continual wars, famines and plagues, and the people prayed to the devil to obtain what they no longer expected to get from the gods. A nightmare was sitting on every one, and many looked to the performances of black magic as a means to keep them from starvation. When peace and order were re-established in Europe, the labouring classes could obtain bread, and the causes which produced witchcraft ceased to exist. On the other hand justice had over-reached her aims. One accusation gave rise to numerous others, every one beheld in his neighbour only a fiend and necromancer; as the belief in witchcraft increased, so increased the facts; but when the torturer and the hangman ceased their work, witchcraft was less thought of and disappeared with its persecutors. At present very few people will be found, who actually know what witchcraft is; but there are many people whose look or touch emits a moral poison, or, in other words, whose nervous fluid or magnetism is of a degenerate kind, and which may be injurious to children, small animals, or sensitive persons.

There are occasionally some persons to be found, who have the power to send out their "doubles" to perform mischief. Mirville gives the details of a case, where the invisible double of a shepherd by the name of Touret was wounded and asked for pardon, promising to come the next day to confess. The next day Touret came with a severe wound in his face, which his phantom had received the previous day, and asked to be forgiven. The fact is also well known that a nobleman by the name of M. Mompesson, being much annoyed by the noise which a begging vagabond made with his drum, took that drum away from him, and finding that the vagabond had a false passport, he turned him over to justice. The beggar, however, escaped; but for several years the house of Mr. Mompesson was disturbed nightly by great noises, which made it impossib'e for any one to sleep. Well might Mr. Mompesson with pistol in hand examine the house. The noise ceased as soon as he entered one room, only to begin furiously in another. Sometimes there was an interval of rest for a few weeks or even for a few months. The vagabond in the meantime had been several times arrested and put into prison for small thefts, and not only did he finally confess that he was the author of these disturbances; but it was also found that the period of rest corresponded to the periods of his imprisonments. The fact of the vagabond being powerless to act during his imprisonment may seem strange; but it becomes quite plain, if we consider that the beggar, being an ignorant person, was probably not acquainted with the laws by which he acted, and being in a depressed mental condition on account of his imprisonment, imagined himself powerless to act and therefore did not exert his power. The vagabond was afterwards executed, and from that moment all the trouble in Mr. Mompesson's house ceased.

The witch trials proved that many females attended the "witch-sabbath," by which nocturnal expeditions of the fluidic body are understood. These females said that they did not make such nocturnal visits in their imagination, but with their real bodies, and their fluidic or astral bodies were at such times real to them. To convince such females that they did not speak the truth, they were often allowed their liberty, because they could not go to the "witch-sabbath" while they were in prison, and the judges then caused them to be watched, either with or without their consent. Those females were seen to rub their bodies with the "witch-ointment" and then fall into a deep sleep; which resembled the magnetic sleep of mesmerised persons. They were insensible to pain and their limbs were of a cadaverous stiffness. When they awoke, they said they had been to the "witch-sabbath." In vain did the attendants prove to them that they had not left the room for a single instant; they insisted that they had been at certain places, told of certain events that had occurred at such places, asked the judges to go and see, and many times what they said was found to be true after investigation was made.

The "witch-ointments," which those females used, have been examined and found to consist of the juices of narcotic plants, such as hemlock, henbaue, nightshade and mandrake, mixed with grease or honey; sometimes opium and aconite were mixed up with it. On one occasion the executioner took a pot of such ointment from a "witch;" his wife having *neuralgia*, he rubbed it on her body and she fell into a deep sleep, lasting thirty-six hours. The use of the "witch-ointment" sometimes produced only simple hallucinations like the Hashish of the Orientals. Such persons would believe themselves to be going to the houses of the rich, to feast at their tables, and they would afterwards wake up as hungry as they were before they went to sleep; but sometimes the magnetic body would leave the physical body, the witch would enter certain houses and perform mischievous acts, and if the persons, to whom such mischief was done, used violence and struck at the phantom with a weapon, the witch would often be found with a terrible wound, the cause of which she would not or could not explain.

The "witch-ointment" was not the only means to send out the magnetic body; there were also narcotic beverages in use to produce the same effect, and all had the same object in view, which is a deadening of the outer life and a transference of the vital forces to the inner body. Besides these there were and still are various ceremonies in use amongst the different nations, such as inhaling of various gases or vapors, music, dances, noises, or various religious cere-

monies, but all serving the same purpose, which is to disengage either the entire magnetic body, or a great amount of nervous fluid, which may travel long distances and either impress the brain of a sensitive or carry impressions received in a kind of telegraphic manner back to the brain from which they emanated.

There is another class of phenomena as horrible as they are extraordinary, but, nevertheless, proved beyond doubt, which include the phenomena of the Incubus, Succubus and Vampire.

In a village in Somerset (England) there lived about fifty years ago an old woman, who was generally believed to be a witch. She was emaciated and wrinkled, bent from age, and had to walk with crutches. Her voice sounded rough, mysterious and hypocritical, and her penetrating eyes seemed to emit a light, which sent terror to the hearts of the beholders. A young man of twenty-two years, strong and of sound health, who lived in the same village, found himself suddenly tormented by an impure spirit, to such an extent, that his health suffered seriously, and at the end of three months he became pale, weak and exhausted, and in danger of death. He as well as his parents knew what was the cause of this evil, and they resolved to catch the witch. So one night the female spirit came and glided upon his bed, when he grabbed her with both hands by her hair, calling in a loud voice for his mother who was in the next room, to bring a light. A terrible struggle ensued between the boy and the "spirit;" but when the light approached, she tore herself with a terrible effort from his grasp and disappeared like a stroke of lightning. The young man was found by his mother almost exhausted, and with both of his hands full of hair. When he threw those hairs on the floor, they too disappeared. What may appear singular is that the female spirit during that struggle showed no signs of being a decrepit old woman, but her breath, actions and form proved her to be a young girl. This fact however, can be explained by the well based theory that the magnetic body does not necessarily take all the infirmities of the physical body, but can even appear in different forms. The spiritualists believe all Incubi and Succubi to be the "spirits of the departed"; but a posthumous being, having no source of vitality from which to draw strength, cannot well be supposed to be able to perform an act which requires an excess of vitality. A shadow is the antithesis of a satire, and we must look to the acts of the living for an explanation of such enigmas.

Goerès cites several such facts, and we find them very often amongst nuns who are shut up in convents, and amongst hysterical females as a result of a morbid imagination. Madelene de la Cruz, Superior of a convent at Cordova, confessed that for thirty years she had intercourse with an Incubus, who came to see her every night in the form of a Moor. The Moors were at that time quoted as the types of chivalry. A nun of the Order of Saint Francis acknowledged to have submitted for eighteen years to an Incubus who came to her under the form of a charming young man.

But we have other and similar occurrences which are not hidden behind the walls of a convent, but happen in day time, in public, and are subject to investigation. Not unfrequently a lady sitting in a "spirit-circle" is seen to give a start or a scream and to rise abruptly from her chair. If you ask her about the cause of her alarm, she will probably tell you that a "spirit" hand had touched her knees, and you will easily perceive that she only told you half the truth.\* The Dutch Major Révieux says, giving an account of a "spirit-seance":—"The ladies were all indecently touched...."

On another occasion, when only men were present, female "spirits" came... What followed cannot be described in this review.

We believe that the animal magnetism is the cause of these phenomena and furnishes the condition under which they occur, and that the Satires and Lamies which appear in those "spirit" circles come from the "doubles" of the "mediums," or the sitters themselves. They are their own fluidic personalities which change their sex according to certain tendencies inherent in the human phantom.

A young lady who was passionately fond of spirit-circles felt a great muscular strength growing in her, which enabled her to perform unusual athletic feats. One night, soon after

such a peculiar exaltation, she saw before her bed a good looking man, well dressed and of deathly palor. He overpowered her, and for three years he came every evening and remained with her all night. She finally became delivered from that horrible servitude, the actual reality of which she never hesitated to affirm to her friends. A case is known of a mesmeriser who had to give up his business, because as soon as he made passes over any woman, she would start up and complain of the indecent caresses of a satire. The apparition of "a man in red" is not unfrequently seen. He appeared twice to Swedenborg; not as a satire, but as a counsellor. If he comes to a woman, he generally appears as an Incubus. A woman was very fond of dancing; but one day as she was dancing alone in her room the "man in red" suddenly appeared and danced with her. She fainted and since that time visited no more balls. Sometimes during ecstasy the "man in red" takes the form of an angel resplendent with beauty. This happens often to girls after the "communion," when they expect to be united with their "divine husbands." He is very pleasing and persuasive and usually ends by overcoming the doubts of the "bride." After that she will go and tell her confessor, who will probably inform her that instead of seeing an angel of light she has been visited by the devil. In Oriental countries such cases are well known and the disease sometimes becomes epidemic. At Shanghai whole streets might be shown, where such practices are carried on in every house. After about five years of debauchery the victims usually fall into marasmus and die. In China it is called "the devil's disease;" the demon appears either as incubus or succubus according to the sex of the victim, and if they have once gained control over a person, resistance becomes impossible, they will have to submit to it until death. They know of only one remedy, which is to become baptized. The missionaries know that very well and have a good reason to say that the devil is their greatest converter. This, however, is in no way surprising to students of physiology. The candidate for baptism undergoes a great mental change; he is filled with enthusiasm; and with a new faith, his higher aspirations overcome his brutish passions and modify the quality of his nervous fluid; and the missionary, ignorant alike of physiology, psychology and mesmerism, ascribes a natural fact to a supernatural victory over the devil.

In the highest antiquity as well as in modern times we find a belief in persons being obsessed by the soul of a deceased, and such cases were especially frequent during the Middle Ages. Sometimes the "spirit" gives his name; at other times he gives fantastic names, and often he talks in a wild, foolish and incoherent manner, which leaves doubt about his real nature. A young lady at Vallombreuse became "obsessed," because she knew her parents guilty of a theft, and her cure was effected by a restitution of the stolen property. An orphan girl became "obsessed" in consequence of bad treatment received at the hands of her foster-parents, and Marie de Ranfain became "obsessed" in consequence of a "love-potion" administered to her by her physician. Some cases of so-called obsession have been cured by a sudden fright, others by some other mental emotion, and others by material remedies. Such cases of obsession have been attributed by some to diseases of the body, by others to the devil; but the physician and the theologian have shown themselves alike unable to cure them, and if one of the two has had more success than the other, it is the theologian who exercises his will power, while the physician usually only relies on ineffectual remedies. So-called obsessed people generally exhibit great muscular strength, so that often several strong men are required to restrain a weak woman from doing violence to herself or others. Sometimes they become clairvoyant, read letters that are hidden away, speak languages they have never learned, and are by no means polite. Their voice is often changed, they become furious if you approach them with things which are considered holy, and very often their physiognomy is so changed that they appear like different persons. In fact they exhibit all the phenomena of mesmerism and somnambulism. A young girl in a convent said she was possessed of thirty devils, and these "devils" promised that as they would one by one leave her, so they would extinguish one by one the thirty candles which were burning in the church; and they acted according to the programme. Appollonius exorcised a "spirit" from an obsessed person, and ordered him to give a sign of his departure. The "spirit" said he would throw down one

\* We remind the readers of a well-known case that happened not long ago in London, and also of the "spirit-wives" and "spirit-husbands" of certain New-England "mediums."—*Trans.*

of the statues standing on the portico; and so he did. Louis Jacolliot speaks of fakirs, who made inanimate objects move according to their will without touching them, and he saw one of them by a simple effort of will rendering a bucket of water so heavy, that the water-drawer could not raise it from the well.

Like electricity and magnetism, this nervous force has two opposite poles and modes of action. One is ecstasy, the other obsession. Things, to which the ecstatic is attracted, are repulsive to the obsessed and *vice versa*. When in 1857 in Morzine obsession became epidemic amongst the young girls, they acted violently, uttered indecent blasphemies and climbed trees like squirrels; but when the fit was over, they did not remember what had happened, and when told of it, were extremely sorry. The doctors of medicine had no success in curing the disease and left it to the theologians. The theologians had some success, but it was not lasting. The physicians, becoming jealous, accused the priests of causing the disorder, obtained an order prohibiting the interference of the priests, and the poor patients were left to the morbid influence of their mutual magnetism. The only remedy that could have done any permanent good, that of taking the patients away from the centre of infection, was never thought of, or if attempted, was not sufficiently enforced until later. When the epidemic was at its highest, the animals partook of the contagion, they refused to eat, cows gave no more milk, etc. Sometimes an interchange of symptoms took place between a girl and an animal. When a girl recovered, an animal fell sick and *vice versa*, and this fact alone ought to be sufficient to show that the disease could not have been caused by a "departed human spirit," but indicates an excess or a degenerated kind of nervous or mesmeric fluid of the same kind that acted on the cows in the mountains of Wuerttemberg, and is producing the phenomena of the spiritualists all over the world. Its rational mode of cure is to counteract the poisonous magnetism by a healthy one, directed with sufficient energy, and the separation of the patient from the herd of infection.

There are two elements at work in the production of such phenomena. The first is the fluidic being (astral body) which every one possesses, and the second is the magnetic ether. The existence of the first is proved by the appearance and the acts of the double, and on account of its existence people that have lost a limb often feel a pain in that limb, and that limb is seen by people possessed of interior sight. This fluidic body is passive and only becomes active under the stimulus of the vital force. This force has its seat in the nervous system. If by moral influences, diseases, emotions or other causes the vital force is, so to say, infused into that fluidic body, that body, as it were, awakes from its slumber and manifests its action in different forms so as to appear as an entirely new personality. Sometimes its energy is powerful enough to break its prison and detach itself from the physical body and to have an apparently independent existence. It can under certain circumstances become visible, and is then called the "double." As the "dedoublement" is only possible in persons of an exceptional sensitiveness, the appearance of the double must be proportionally rare.

There are persons in whom this fluidic being, although remaining invisible, performs independent and apparently voluntary actions. Such "mediums" exhibit a strange peculiarity. Their fluidic personality is their slave who is always ready to execute their orders. Sometimes, however, he threatens to disobey, and in such cases he becomes dangerous. M. de B... visited a young woman, known as the sibylle of the Etna, who was living at the foot of that mountain, and was so satisfied with what he saw, that he remained with her for a time. He would write his questions on a paper, the "medium" would then hold that paper near a fire, and instead of seeing, as he expected, the paper destroyed, the answers to his questions would appear on the same. She told him that a spirit of the Etna was at her command and was communicating with her through that fire. One day, however, M. de B... wanted to have an important question answered, but the sibylle told him that her demon required rest, and would not come on that day. M. de B..., however, was impatient, and the sibylle finally consented to try the experiment. As soon as her hand approached the flame, she fell as if struck down, uttering a horrible cry. Her demon "had caused her a severe burn,

and as if to revenge himself, left upon her arm the marks of a hand of fire."

The fluidic being can only write or act in some other way, if sufficiently infused with vitality or nervous fluid, and if from exhaustion of the system that fluid is not supplied, it must be permitted to rest. To extort labor from it, if in a state of exhaustion, must cause it to suffer and to become angry.

Let us return to posthumous phantoms. Their appearance is as scarce as that of the phantoms of the living, and is evidently due to the same causes. For the fluidic personality to become an independent and active personality, it is not sufficient that it should be separated by death from the physical body; but it must furthermore be infused with a certain amount of vitality. At the end of life, when death comes slowly, there is seldom enough of vitality left to vivify the phantom when it leaves its prison; in cases of sudden or violent death however this is possible, and in such cases the posthumous phantom may have sufficient vitality to act independently for a while.\* The posthumous phantom and the phantom of the living act in the same manner and produce the same phenomena, and it is often difficult to distinguish between the two.

The poet Simonides landing on a coast found a corpse on the shore and buried it. The following night the ghost of that dead man appeared to him and warned him not to embark the next day. Simonides remained on shore, while his companions embarked, and the ship with all on board perished before his eyes in a storm.

In this case the phantom of the dead man may have had a consciousness of his own, the death having been sudden, and the vitality perhaps not yet entirely gone; but the foretelling of the future was probably due to the poet's own intuition or clairvoyance. The seeress of Prevorst saw for several days a female phantom standing at a certain place. The place was dug up; when the dead body of a child was found, which was properly taken care of and the phantom disappeared.

There is also a kind of astonishing phenomena, which are called by the name of Lycanthropy, where the fluidic body appears in the shape of dogs, wolves or other animals. Many such cases are known. A miller by the name of Bigot had the reputation of being a sorcerer. One morning very early his wife told him that she was going to a certain place to wash some clothes. "Do not go," said he, "you will be frightened." "Why should I be frightened," enquired the woman. "Never mind," replied he, "you will see." The woman went, and while she was washing she saw an animal looking like a dog approaching her. She threw a club at it and hit it in the eye; after which the animal disappeared. At the same moment the children of Bigot were startled by a cry from their father: When they rushed to his room, and asked what was the matter, he said: "Oh the rascal! she has put out one of my eyes." From that day he remained blind of one eye. In this case the wound inflicted upon the fluidic body of Bigot, appearing in the form of a dog, was evidently reperculated upon the body of Bigot. These lycanthropic phantoms are generally of a harmless character.

This transmutability of the fluidic body into various forms is very remarkable, and can only be explained by the dynamic power of thought. It is nothing unusual to see "mediums" in a trance take the features of deceased persons; and even the weight of their bodies changes, as has been proved by numerous experiments.

We have attempted to prove that the posthumous phantom and the phantom of the living are of the same nature. Both seem to be led by certain instincts and habits and modes of thought. Posthumous phantoms usually seem to desire to have certain funeral ceremonies performed, in the importance of which they believed during life. The posthumous phantom of the European asks for burial, that of the Hindu for *Shraddha*. The posthumous Catholic wants masses read, that of the Chinese sacrifices to be performed, etc. If a person dies with a great desire to see some of his friends, his magnetic body may go there (if sufficiently infused with vitality) and appear to them, and carry the consciousness of having done so back to the dying brain. Hatred and revenge may influence the

\*The posthumous phantom may be however infused with the vitality of a "medium" and so to say be galvanized into a semblance of life.—H.

actions of the phantom, as well as jealousy, love for material pleasures or other things. A young man was for three years in love with a woman, but the latter rejected his offers. He became ill, and before he died he said he would haunt that woman for as long a time as she had resisted him. After his death the trouble began. Noises, laughers, sounds like pistol shots, etc., disturbed the place. The police tried to find the offender, but were powerless to act; the trouble lasted for three years. Another phantom of a man appeared to the object of his former love, and struck her some violent blows, the marks of which could be seen.

In the reign of Frederic II a catholic priest had a house-keeper. She died and the priest took another. But the presence of the latter was unnecessary, because all work was done as before, rooms were swept, furniture arranged, fires kindled, cooking done, etc., all by invisible hands. The king heard of it and sent a commission to investigate. As the officers composing the commission entered the place a military march was drummed. One of the officers exclaimed: "Here is the devil at work!" As he said this he received by an invisible hand a hit in the face, the king was informed, and being convinced that the house was haunted, gave orders to tear it down.

In 1659 in Crossen (Silesia) the clerk of an apothecary died. His name was Christopher Monig. A few days after his death his phantom was seen in the shop. Every one saw and recognised Monig. He handled bottles, examined and tasted drugs, weighed out medicines, filled prescriptions, took the money and put it into the drawer. No one dared speak to him, and he spoke to no one. One day he took a cloak, opened the door and went out. He passed through the streets without looking at any one he met, went to the houses of some of his acquaintances, looked at them without speaking and left. He met a servant girl in the cemetery, and said to her: "Go home and dig in the lower chamber, and you will find a great treasure." The poor girl was frightened out of her wits and fainted. He bent down and lifted her up and his touch left a mark on her arm, which was visible a long time. They dug at the indicated place and found an old pot containing a fine hematite or bloodstone, a mineral, which is said to possess occult powers. The princess Elizabeth Charlotte ordered the grave to be opened, and the body was found in an advanced state of putrefaction. The articles belonging to Monig were burned and the visitation ceased.

Often these phantoms disappear if the expiatory ceremonies in which they believed during life are performed. At other times they persist in coming in spite of everything that is done to appease them, until they finally, so to say, die of fatigue.\* Those phantoms always exhibit little intelligence and no knowledge of their future; they only talk about that which seems to pre-occupy them, and take no interest in other things. They will tell sometimes all about their previous life and the circumstances under which they died, but the most important questions about the future life, etc., they leave unanswered, and do not even seem to understand them. Their answers make a sad impression, and the phantom appears like one who is suddenly transplanted without arms or clothing into an inhospitable country, and in an inclement climate with just enough consciousness to feel their impotence and eternal isolation.

The existence of the posthumous phantom is of comparatively short duration. It decomposes under the influence of physical, chemical and atmospheric forces; sometimes however it attempts to struggle for its existence. In such cases such phantoms become vampires. There are many well-known cases of vampires, of which we select the following: In Kisilova, a village in Slavonia, a man died, and three days after his burial his phantom came to his son and asked for something to eat. The food was given and three nights afterwards the visit was repeated. It is not known whether on that occasion the son refused to give the food, but he was found dead in his bed next morning. On the same day six more people fell sick and died. Suspicion was aroused about six weeks after; the executioner opened the graves. The bodies of the six victims were found in a state of decomposition, but that of the vampire was of a fresh and natural color, having some respiration, with open eyes; yet dead. The executioner drove a stake into the heart of the body. One Peter Peogogowitz at Kisilova in Hungary

died. Six weeks after that his phantom appeared and choked several persons to death, so that in eight days nine persons died. On the urgent request of the people the authorities opened the grave, the body was found with fresh grown hair, beard and nails. The dead skin was in many parts replaced by a new one; the mouth was full of fresh blood, and when a stake was entered into the breast, a large amount of fresh blood issued from the mouth and the nose. The people burned the corpse. The vampire of one man who was dead thirty years came three times into his house in plain day, killed his brother, next one of his own sons, and finally a servant. The body was found with open eyes and a life-like look and without any signs of decomposition.

Accounts of such cases might be multiplied, and in the North of Europe they are well known. In such cases the fluidic person, instead of abandoning the body at the time of death, clings to the same, and a new life begins, in which the offices of the two are exchanged. Before death the physical body attended to the wants of its ethereal counterpart, but now as the corpse cannot leave the grave, the ethereal body must sustain the physical. In consequence of this we see the struggle for existence, the brutal and egoistic ferocity which characterises a vampire. He comes at night, chooses his victim and jumps at it like a tiger to suck its blood or its nervous fluid. He prefers the blood of members of his own family, and if he cannot get at a man he assails a beast. The nourishment which he absorbs is transmitted to the body in the grave and keeps an artificial life in that body. The popular instinct is in advance of the opinions of the professors of science. It knows that the protection against such horrors is the cremation of the corpse.

*Note.*—In the preceding review the action of the so-called "Elementals" is not taken into consideration. Spiritual phenomena cannot always be explained by the sole action of the "magnetic" body, because in the ordinary posthumous visitor (unless he is a "devil"), there is very little inchoate consciousness or power of action, and it is generally speaking as inoffensive as the physical corpse of a man, unless taken possession of by an "Elemental" (a semi-intelligent force of nature.) To speak of the destiny of the higher principles of man was evidently not the intention of the author of this essay.—H.

#### THE ORIGIN AND DEVELOPMENT OF THE ALPHABET.

THE above is the title of a very thoughtful work, in 2 volumes, written by Isaac Taylor, and published by Kegan Paul and Co., London. The style is quite attractive to the ordinary reader; while the illustrations and specimens of ancient alphabets of different nations, are admirably printed and arranged in comparative statements, which are easily comprehended at a glance.

Taking hold of the evolution theory, he says that the graphic art was not a result of arbitrary invention either of man or of God. It took its birth by a long and natural process from the picture-writing or Hieroglyphics, which the primitive man employed in recording or communicating his ideas. When man learned to speak, he felt the necessity of conveying his thought by other means than voice; and as he had, at the outset of his career, no knowledge of alphabets and syllabic combinations to form words and sentences, the most feasible process, that presented before his inexperienced sight, was the employment of rude pictographs, which, in course of time, grew into conventionalism in shape and sound, and began to mean other than what was originally intended.

Hence *ideograms* degenerated into *phonograms*, which, in their turn, developed into (1) verbal signs which stand for entire words, as in the case of the Chinese language, (2) syllabic signs, which compose words, and (3) alphabetic signs, which represent elementary sounds, into which the syllable can be resolved. The ideograms themselves are of two kinds, (1) pictures or actual representations of objects, and (2) pictorial symbols, which are used to suggest abstract ideas, the abstract generally developing into the concrete. It will thus be seen that the *graphic art* passes five successive stages, before it is perfected into the *alphabetic* writing. Here we must remark that the author has not taken cognizance of gestures, chiefly of hand, which must have formed a factor in the development of letter as also of speech: the Semitic *Yod* and *КАРНЕ*, the former being a letter symbolical of a palm, and the other, of fingers and thumb with the wrist turned to the left, on to the point.

\* An ordinary elementary is said to exist for twenty years or more.—*Transl.*

The author classifies the primitive systems of pictorial writing into five, each of which grew independently and branched off into many phonetic developments in the shape of letters and alphabets. They are (1) Egyptian Hieroglyphics, (2) Assyrian cuneiform writing, (3) Chinese ideograms, (4) Mexican ideograms, and (5) Hittite Hieroglyphics, of Carchemish, Asia Minor, Lycia, &c. Besides these five, the semi-savage tribes, such as the North American Indians, the Picts, the Laplanders, and the Eskimos possess ideograms of their own. This classification embraces all alphabetic systems, that are known and discovered; but it cannot be said to be exhaustive and to include all possible kinds of primitive ideograms, that are not yet known or otherwise lost. It would have been better, had the author attempted to find out the geographical centres of alphabetic origin, keeping an eye at the same time to all kinds of national development throughout the ancient world. Archæology and geology would have given all necessary aid.

That the author's classification is extremely faulty and unsystematic, is apparent, when we come to examine the genealogy of languages he has given. Though the book professes to treat alphabets of the whole world, mostly those ancient, it does not sufficiently deal with the Chinese, Assyrian and other letters; while within the compass of the Semetic group, the author has pushed in all the epigraphic materials of old. The Egyptian Hieroglyphic writing gave birth to two grand systems of characters, (1) the South Semitic and (2) the Phœnician. From the former the Juktanite was produced; thence came Omanite of Yemen; which, in its turn, is said to have given birth to old Indian, the Pali of Asoka, whence the modern alphabets of Hindustan and Further India are derived. From the Phœnician came into being the Greek, Latin and the modern alphabets of Europe on the one hand, and Hebrew, Pehlevi, Zend, Bactrian, Arabian, and Persian on the other. And this genealogy the author tries to establish with many a far-fetched and laboured argument throughout the two volumes.

We need not enter into details, in order to combat the author's theory. Our business is at present with the Indo-Bactrian and old Pali characters of Asoka; the former he derives from the Pehlevi, which is cursive, slanting, and written from right to left. The Kapur-di-giri inscription and the old coins of Cabul and Punjab are written in this script, which flourished from about 250 B. C. to 100 A. D. when it died out of the land. The introduction of this script is ascribed to the Persians, who are said to have invaded India from the North-West in about 600 B. C.; why, we might with equal reason attribute this introduction to Semiramis, the Assyrian queen, or the Greek Mythic Bacchus, who is also said to have come here. By this assumption of ours, we gain a respectable period of age which might reasonably explain the change, addition and alteration of letters in their transition, and final adoption from one country to the other.

Mr. Taylor derives the Indo-Bactrian characters, consisting of 45 letters, from the Aramean alphabet of the Semetic group, which had only 22, the increase being due to an elaborate system of differentiation, effected by the early Sanscrit grammarians, which, if it is a fact, considerably damages his evolution theory.

In the same way, the old Pali of Asoka's inscription is said to have been transplanted into India from Southern Arabia, where the alphabet then in use was Juktanite. The author says that Indo-Bactrian and the Asoka (old Pali) must have been developed out of two earlier alphabets, introduced at different times, about the 9th and 7th century B. C., respectively, from the north-west and south-west; both of them possessed insufficient number of characters for the necessities of the Indian speech. Here he admits that the Indian speech, that is to say, language, was formed into a system, while denying its basis of phonetic elements, as represented by characters,—an absurdity on the very face of it.

Besides, the arguments, the author uses, hold good with greater force, if we invert his theory, that is, if we affirm that from the old Indian, the alphabet of Southern Arabia and Ethiopia was derived, for these important reasons: (1) There are no Sabeen inscriptions of anterior date to those of Asoka. (2) The Sabeen character is written both from left to right, as also from right to left, which shows it to be the result of two foreign influences, presumably Semetic proper on one hand and Indian on the other. (3) Indian civilization was of far greater age than that of Arabia Felix

which had almost nothing. (4) When Ram of Anjodhya invaded Lunka (Ceylon?), the southern non-Aryans possessed arts in an eminent degree, which they must have carried, when they migrated to the valley of the Nile after their great defeat by the hero of *Ramayan*. (5) If the origin of alphabetic centres be in Egypt and Assyria, two contiguous countries, and another in China on the other end of Asia, why not find out a fourth in the valley of the Ganges, the cradle of a great civilization? (6) The Arabians have a tradition that they learnt their numerals from the Indians, which fact is confirmed by the similarity of figures; if the Indians are credited to have evolved these figures, now adopted throughout the civilized world, is it possible that they—the originators—did not possess collateral letters? (7) And if it is true that the language, religion and general civilization of the ancient Greeks, Persians, Phœnicians, &c., had their birth in India, it does not stand to reason that the Aryans borrowed the art of writing from an unimportant tribe, the most unknown and uncivilized at a time, when the world was younger.

Arguments against the author's theory might be multiplied, the more we think upon the subject. In short, the only conclusion that gains strength, is that the Indian alphabets must have originated out of a primitive indigenous pictography, as already suggested by Lassen, Thomas, Cunningham, and Dawson. The last of these authorities says that "the peculiarities of the Indian alphabets demonstrate its independence of all foreign origin," and that "it may be confidently urged that all probabilities and inferences are in favor of an independent invention."

The author's assertion that there were only two kinds of alphabets, the Indo-Bactrian and old Pali of Asoka, in ancient India, is also open to question; for not only there are records in old Sanscrit and Pali books of the existence of the different systems of the epigraphic art, but many inscriptions still remain, the unknown characters of which have not yet been deciphered.

Mr. Taylor admires the old Pali in no measured terms. "The elaborate and beautiful alphabet employed in these records (Asoka's inscriptions) is unrivalled among the alphabets of the world for its scientific excellence. Bold, simple, grand, complete, the characters are easy to remember, facile to read, and difficult to mistake, representing with absolute precision the graduated niceties of sounds, which the phonetic analysis of Sanscrit grammarians had discovered in that marvellous idiom. None of the artificial alphabets, which have been proposed by modern phonologists, excel it in delicacy, ingenuity, exactitude and comprehensiveness." These are facts not in unison with his theory.

With all the above-mentioned and many other defects, Mr. Taylor's work is a valuable contribution to a section of a yet not much known subject; and it will, let us hope, infuse a spirit of research into the minds of many a scholar who, with united effort, might arrive at the fountain-head of truth.

And for such a grand object, the Theosophical Society affords ample opportunities; for we have men and materials in the background, that will aid us in the solution of not only this alphabetic but many other problems, connected with the evolution of human species. And may that day draw near, when we, now degenerate sons of India, blind-folded in ignorance, might no longer grope on in darkness, but with the proper keys speed on in broad daylight towards the goal, under the unerring guidance of our most revered *Mahatmas*, in the same way, as the mariner, compass in hand, steers his course in consultation with his Polar Star.

P. C. MUKERJI, F. T. S.

LUCKNOW, }  
7th May 1884. }

MONA SINGH.\*

THIS little pamphlet affords good reading to an enquirer of what theosophy is. The author has succeeded in showing that true Christianity, true Hinduism, true Buddhism, true Zoroastrianism; in short all true religions, worthy the name, rest upon the same foundation, or, in other words, there is but one true religion underneath the various masks of external theologies. The

\* A sketch by D. M. S.—Published by Messrs. Thacker, Spink and Company, Calcutta (1884.) Price Re. 1-1 (including Indian Postage) Apply to the Manager, *Theosophist*, Adyar (Madras).

following extract may be useful for those who say that theosophy, being atheistic or pantheistic, is anti-Christian and irreligious, in as much as it does not recognise the existence of a *personal* God :—

.....the prominent (Buddhist) doctrine 'within yourselves deliverance must be found' was in many respects similar to the Christian idea of 'working out your own salvation,' and that the substitution of a Pervading Principle for a Personal God was not atheism.

As an answer to those who say that the "universal Brotherhood of Humanity" of the Theosophical Society is defective because it does not recognise the Fatherhood of a personal God, the author quotes various extracts from Theosophical publications, showing the untenableness and the absurdity of such an illogical objection.

Those dogmatic theologians, who wallow in the mire of externalism and insist upon the irreconcilability of world's faiths, without enquiring deep into the philosophy upon which they rest, will find ample food for thought in the little pamphlet under notice. The secret of the success of the foundation of an intellectual brotherhood of humanity lies in making people perceive and comprehend this grand truth and not in a mere appeal to their sentimentality which is a mere flash of the moment. The author therefore rightly observes that "all religious reform to succeed now must be intellectual and based on the widest and not the stupidest common sense." And further :—

Obscure and tortuous, as the study of arcane science is, yet I am convinced that its development will prove ultimately beneficial to our fellow creatures, and that, by belonging to a society, which encourages it, we are joining our forces to a noble army of philanthropists, fighting not only for immediate advantages, but that our sincere and humble efforts may form part of that great whole which will continue to effect the spiritual regeneration of man and his emancipation from an all absorbing materialism.

As the author has well said in his preface, the Theosophic movement "has, from time to time, been maligned by an irreverent press" (and, we may add, under the inspiration of dogmatic Theologians and selfish persons, whose material interests were threatened by the extensive operation of the Society)—and therefore every attempt made to elucidate truth and thus disarm the unhealthy opposition, is a great help to the cause, the promoters of the Institution have so nobly espoused. This pamphlet should not only be in every Theosophic Library, but should be circulated as extensively as possible. Our other Fellows of the Society and Branches should moreover try to bring out from time to time such works in behalf of the movement whose operations and beneficent influence they have pledged themselves to promote. For the additional support added by the author by his work under notice to the structure under construction, the thanks of every well-wisher of the cause are due to D. M. S., initials well-known to many Fellows of our Society.

#### THE ART OF BEING HAPPY.\*

THIS small treatise is compiled from the writings of Bishop Butler, Dr. Chalmers, Abercrombie, Paley, Combe, Bain, Rev. Hall Daper, &c. &c. Happiness is described to be "a feeling arising from an action on the part of an intelligent agent, in harmonious unison with the faculties of the mind and body." Man is said to be triune: physical, organic and moral. Therefore, in order to attain happiness, the laws pertaining to all these three departments must be thoroughly studied and scrupulously obeyed. The application of these laws is declared to be both individual and universal and their action is *immutable*. Considerable space is devoted to show that these three act independently of each other. However moral a man may be, he cannot transgress the physical and organic laws with impunity. The excuse of ignorance cannot be pleaded to avoid the consequences of any of the laws which produce their effects on the same

\*Compiled by Hari Narayan Somnay, Translator to His Highness the Gaikwad of Baroda, Printed at the Indian Printing Press, Bombay.

planes on which their causes are set in motion, namely, the transgression of a physical law is met by physical punishment, that of an organic law by organic suffering, and that of a moral law by the absence of mental pleasure which gives rise to true happiness. Further on, the immutability of the laws of Nature is thus explained :—

Every object and being in nature has received a definite constitution, and also specific powers of acting on other objects and beings. The action of each force in the same circumstances is so regular, that we describe the force as operating under laws imposed on it by God, but these words indicate merely our perception of the regularity of the action. It is impossible for man to alter or break a natural law, in this sense of the phrase; for the action of the forces and the effects they produce are placed beyond his control. But the observation of the action of forces leads man to draw rules from it for the regulation of his conduct, and these rules are also called 'natural laws,' because it is through nature that God reveals and prescribes them to the human mind.

Man is said to possess physical and organic faculties in common with animals; but differs from the latter in the additional possession of moral faculties. His intellect is the fulcrum and, from the way in which the author makes use of that word, he seems to imply thereby what the occultist calls his fifth principle or the human (physical) ego or consciousness. The book under notice says that when this intellect is under the sway of lower desires, then the man resembles an animal, and if he gives free scope to them he misses true happiness. On the other hand if his intellect is guided by high moral sentiments, he does what is right and thereby makes himself happy. The author therefore recommends that man should study all these laws of Nature, their relations to one another and to himself and also the influence which his faculties can exercise upon external objects and *vice versa*. He should not only obtain a theoretical knowledge of these subjects, but try to apply it to practical life. The attitude of theologians and that of the so-called men of science is condemned, for they try to widen the breach between religion and science, while the endeavour should be to make religion practical and scientific, and science religious and covering not only the physical but the other sides of Nature. The treatise, however, bristles with too many indications of the human tendency to anthropomorphise and personify the eternal, infinite, immutable, Absolute Reality. The author has confined himself mostly to the writings of Christian divines and Western psychologists, who can hardly be expected to completely get rid of their theological prejudices, and hence the reader searches in vain for that high philosophy and abstruse metaphysics which he has to laboriously study in order to comprehend the transcendentalism of Sankaracharya's exposition of the Advaita Philosophy and of Buddha's teachings of the Arhat Doctrine. Moreover, the author does not show that the effect produced on any of the three planes he mentions, must reach the other planes too, the extent of their operation depending upon all the other circumstances. It is an admitted scientific fact that a physical injury produces mental suffering and *vice versa*. However, the work seems to be meant for a public unaccustomed to any deep philosophical or metaphysical thought, and to supply the want of a guide for every day affairs in the world to be conducted in such a manner as would yield happiness in this as also in a future state of existence. For such, we would recommend this small treatise. We, of course, leave out of consideration here various points which might be disputed by an occultist, as those would call for a discussion which would be out of place in a review meant for a magazine article. We conclude this review with a recommendation that those who do not care to go deeply into philosophy or metaphysics, but yet want some practical suggestions for every day life, will find the work under notice very useful. Even those who may wish to prosecute their studies further, will find in it a basis upon which to proceed.

#### THE PANCHADASI.\*

WE have to acknowledge, with thanks, receipt of No. 1 of the series, being published in monthly parts. The notice, however, does not state the period within which the work is intended to be completed. The first number consists of 24 pages. The work proposes to discuss "fully and elaborately" what-

\*A Hand-book of Hindu Pantheism translated with copious annotations by Nandalal Dhole, L. M. S.—Publisher, Babu Heeralal Dhole, 12, Masjid Bari Street, Calcutta. Annual subscription Rs. 6 for 12 Rs. 7 for Ceylon; for Europe, Africa and U. S. America, 14 S.

ever the Aryan Philosophy says "concerning the *Atma* (Soul) and *Parabrahma* (Absolute)" with "critical notices of the other contending systems." If we may judge from the contents of the number under notice, the authors evidently are for the Adwaita doctrine of Srimat Sankaracharya. The arguments against the opponents of that system are undoubtedly strong; but they are not put forth with that clearness which would carry conviction to the mind of a dogmatic theologian. However, those superficial readers, who often venture to assert that Sankaracharya admitted the existence of a Personal God being at the same time infinite, will find a refutation in the *Panchadasi*. On page 5 occurs the following:—

The reflection of intelligence in *Maya* after having subdued it, is called the omniscient, *Iswara* (the Lord).

This passage, together with several others, shows that *Iswara* is not the infinite, eternal existence itself, but rather the reflection of the latter in *Maya*. Hence *Iswara* is finite and corresponds to the *Avalokiteswara* of the Buddhist Philosophers, while *Parabrahma* of the Vedantins (and *Adi Buddha* of the Arhats) is eternal, infinite and impersonal. *Iswara* is still tinged with *Maya*, while *Parabrahma*, the Absolute, is free from it. There are, however, a few points in which we cannot agree with the authors of the work under notice. The authors seem to hold the theory that the *Atma* is our real "self" entangled in the five *Koshas*. When the latter are destroyed, *Atma* is entirely free and enjoys felicity. The Adwaita doctrine, however, teaches otherwise. It says that *Atma* is already free in fact, for it is not imprisoned in any of the *Koshas*. In the *Koshu*, called the *Manomaya*, is centred *Ahankaram*, which gives the consciousness "I am I." The *Atma* only overshadows the individual. (It is merely a *Sakshi*.) The consciousness in the *Ahankaram* is of a dual kind, the lower portion dragging the individual downwards towards the lower *Koshas*, while the higher portion dragging it upwards to the *Atma*.

When the individual succeeds in cutting off the threads which bind him to the lower *Koshas*, then only does he succeed in identifying himself with his *Atma* and thus become an *Iswara*, or attains *Nirvana*, or *Mukti*, i. e., freedom from all that which causes reincarnation and suffering. Of course the *Para Nirvanic* condition is something still indescribably higher, but that need not be discussed now. As the future numbers of the series may give full explanations, it is needless to refer to other points here.

On the whole, the publication of the book under review is likely to do good, and we would recommend it to all who may be interested in a study of the *Aryan Philosophy*.

#### THE PEOPLE'S MAGAZINE.\*

If it may be permissible to judge of the future of the newly started monthly Journal, *the People's Magazine*, from its first Number, it may safely be asserted that it must prove a great power and an important factor for the good of the country. It is outside the legitimate province of the *Theosophist* to discuss politics in its pages; but it may be stated with gratification that the method the conductors of *the People's Magazine* seem to adopt is a thoroughly Theosophical one, namely, that of conciliation. They do not attack or abuse those who may disagree with them: but use a language of persuasive argument to put forth what they conceive to be the right view. Many a writer forgets or is ignorant of the fact that thought, being dynamic, has the tendency to repeat itself and to act and react. Should we therefore try to retort an abuse in a hostile spirit, we only create a useless havoc in the occult forces acting on the intellectual plane and thus do harm both to ourselves and to the cause we advocate. While, on the other hand, if we use a conciliatory, though powerfully argumentative and logical tone, in a friendly spirit—a pure desire to be guided by the Law of Absolute justice as far as it can be comprehended—we not only thereby appeal to the good sense of our opponents who are thus disarmed of their sting of hostility, but we moreover so arrange the occult forces on the intellectual plane as to produce beneficial results physically. This is the secret of true power which is the necessary concomitant of true knowledge, for the work on an intellectual plane is as superior to that on a physical plane as that on a spiritual

plane is superior to the one on an intellectual plane. The article of special interest to Theosophists is that on the Theosophic Movement. The writer charges Col. Olcott with being too severe in his criticisms upon the graduates. A reference to his address to the graduates delivered in Madras about two years ago will show that he exhorts them to their duty by reminding them of the fact that, as educated gentlemen, they are the natural leaders of the ignorant masses, and that they will be held accountable at the bar of Indian history, should they neglect the duty imposed upon them by their education. However, the article as a whole fairly represents the various phases of the Theosophic Movement, and, the thanks of every Fellow of our Society are due to the author for the appreciative tone in which he speaks of it. We cannot conclude this short notice without expressing the hope that the Theosophic method adopted by the conductors of *the People's Magazine* will ever be strictly adhered to, and that the journal will grow in power for the good of this country and of humanity at large.

#### THE MARATHI THEOSOPHIST.

AFTER our last number was published, we received during the course of one week the May and June issues of the above Magazine. We were glad to notice that the May number contains a condemnation of Changadeva on the same lines as pointed out in this journal, although not to the same extent. The June number completes their first volume. It reviews the work of the past year. They had to contend against various difficulties which they succeeded in gradually overcoming. At any rate, the journal was self-supporting during the first year of its existence, although pessimists warned them against the venture as they did in our case at the commencement. The very fact that notwithstanding the rigidity of the terms and the very limited extent to which the Marathi language is spoken, that in spite of these two obstacles the Marathi *Theosophist* should have paid its way during the first year of its career—this is a sufficient proof of the fact that the growth of the Theosophical Society is an evolution and a necessity of the times, and that the intelligent public is gradually but steadily awakening to a sense of the divine knowledge—Theosophy—handed down by the Rishis from one generation of the Occult Brotherhood to another. As the publication of the Marathi *Theosophist* is as much a labour of love for its conductors as it is for those of this Magazine, our friends will continue the journal for another year. Should the number of subscribers increase, the conductors purpose increasing the size of the journal. We would however suggest to them the translations into it of such articles in this Magazine as treat the subject of occultism in a scientific manner. This would secure to a large extent our chief end, namely to prove that the religious philosophy of the Rishis is highly scientific, in the noblest significance to be attached to the words "Religion" and "Science." We wish the conductors of the Marathi *Theosophist* every success, and hope they will continue their labour for the benefit of the Marathi-speaking public.

After the above was in type we received the first number of the Second Volume.

#### THE PHILOSOPHY OF MAN.\*

THE work was published about six years ago, and from the opinions of the press, collected together, it appears to have been well received, as it deserves. The author, speaking of "Man and his Relations," observes, that "we are the microcosm of all forces." In support of his proposition, he analyses the properties and functions of man and their relation to the forces of Nature. The author's study of the past six years in Occult Philosophy must undoubtedly have modified some of the views expressed in the book under notice, but he deserves praise for having so ably and succinctly elucidated various points puzzling the minds of not a few thinkers. Where he fails to reach the heights of the Esoteric Doctrine, he at any rate goes much beyond the point where the modern "scientist" halts. His remarks upon what is life and what is death are worth careful study:—

It is beautifully and well observed by Eliphas Levi, that *Death*, properly speaking, has no existence, for man never steps outside of

\* Edited by P. Ananda Charlu. Annual Subscription, rupees three, including postage. (For England, 8 shillings.) Apply to the Manager, National Press, 100 Mount Road, Madras.

\* Man considered Spiritually and Physically. By P. Davidson, F. T. S.; price, annas fourteen (inclusive of Indian postage.) Apply to the Manager, *Theosophist*, Adyar, (Madras)

universal life, and those whom we think dead still live in us as we live in them, for he who lives for humanity does more than he who dies for it.

He shows that exoteric Christian theologians in reality degrade Jesus Christ when talking of his having died for humanity. The philosopher, on the other hand, sees in that allegory a great truth—the redemption of the man through Christ, his immortal *Atma*. The above passage also gives the key to an understanding of the meaning of the mystery of the Trinity. In the Hindu mythology, *Brahma*, *Vishnu*, *Siva*, represent the Trinity, the three universal energies of creation, preservation and destruction, although these three are in reality the same power in its three different aspects of manifestation or rather the result from which we take cognisance of them. Almost every religion has its trinity in unity and its unity in trinity, and the vulgar followers of each "faith" have grossly materialised the sublime conception and degraded the spiritual to a physical plane.

In the second chapter, the author treats of "Disease, its true Nature and Origin." His idea is that disease is the result of the violation of the nature's laws; and in the two subsequent chapters he gives his views of dealing with it. He says:—

Poisons cannot expel poisons, impurities cannot deterge impurities, neither can nature throw off a multitude of burdens more easily than one. Drug-doctoring locks up the cause of the disease within the system and tends to induce chronic and worse diseases. The causes should be expelled, not retained. The remedial struggle—the disease—should be aided and directed, so that it may successfully accomplish its work of purification, not subdued, nor thwarted with poisons which create new remedial efforts or drug-disease and thus complicate and retard the vital struggle....

Mr. Davidson is evidently a great advocate of vegetable and herb treatment to which he devotes a special chapter. No reader can deny that his reasoning is based on logic and a collection of facts and figures he quotes, as also the experience of disinterestedly humanitarian doctors whose opinions he cites. The last chapter treats of the vaccination question. The author is decidedly hostile to the practice, and if his facts are correct—which there is no reason to doubt—the subject requires a very careful examination and study. He shows how vaccination has failed to prevent small-pox, how greater victims have fallen to the former, and how it has developed other diseases in cases where mortality was not apparently due to vaccination. In conclusion it may be suggested that certain extracts he gives from the writings of Rosicrucians bear a deeper meaning than is apparent at the surface. Those philosophers used a mystical language; and the words, which have a double meaning in their code, are invariably put by them in italics.

B. S.

### LA LINGUISTIQUE DEVOILEE.

A REPLY TO ERIPOLES, F. T. S. (INDIA),

BY M. LEVY BING, F. T. S., OF PARIS.

SIR,—When, in 1882, I had the honour of presenting "*La Linguistique Devoilee*" to the French Academy in competition for the Volney prize, which is offered as a reward for philological research, I merely fulfilled a duty, without hesitation, though without illusion. Thus the decision I had feared—or rather foreseen, neither surprised nor discouraged me.

"The system developed" in my "book was rejected by "examining Council as being contrary to the Scientific system followed hitherto."

Belonging to that Areopagus which condemns me, yet you have had the kindness to speak of my work with an esteem, by which I feel honoured, though it does not give me all the satisfaction I had hoped for.

I have waited until now for the completion of your study which you have announced in the *Theosophist*, and which has not yet reached me.

I trust, however, you will forgive me if I venture to communicate to you the impressions conveyed to my mind by your admirable criticism.

The matter is perfectly well known to you, and with an art, which I cannot but admire, you have exposed the cause which is, or rather which was, called in question, since your decision is pronounced before that Tribunal of which you are the judge.

Assuredly it would ill-become me to speak evil of a judge whose courtesy is equalled only by his authority, and I

demand your sympathy—only too flattering for me—in appealing to you against a very severe verdict.

Yes—it is true that I am effecting a revolution in the philological world, and that I am breaking as completely away from those who have preceded me in my career, as Galileo separated himself from the other astronomers.

Only I trust you will allow me to explain here the motives which lead me to believe that I may—nay, that I must, separate myself from the present school.

Let us consider honestly where we have been brought, or shall be brought by this science of the Indo-European languages, the only one which after all interests contemporary civilization? You know well—otherwise you would not have spoken of me—there is nothing certain or conclusive in that mass of documents accumulated in Germany, England and especially in France. And must we be condemned to hypotheses under the pretext that the reconstitution of roots, and that the unification of roots, must be submitted to Laws, (and what Laws?) and must we remain in ecstasy before these whole series of inductions which differ so much one from another;—before comparisons the very essential terms of which do not in reality exist?

You fear, Sir, that my method is based upon chance, that it is empiric and dogmatic—Well, it is not a challenge which I am offering you, it is an act of simple Justice which I demand.

Will you offer me as many words as you like from the different so-called Aryan languages, and when I have pointed out to you their essentially Phœnician character, you will cease to attack me on account of the article, a modifying particle, the essence of which is absolutely determinative and expresses neither being nor quality.

However I accept the contest even upon this ground; but this example—"taken from my book and from an innumerable quantity of others" is not calculated greatly to open the road for discussion, which I am calling upon you to grant me, from your love of truth and justice. However this may be, I thank you sincerely, and I feel assured that you will not delay in furnishing me with an opportunity of absolutely justifying myself both in your eyes, and also in those of that galaxy of learned men, to whom you have kindly presented me.

Meanwhile, I beg the editor, as a special favour, to insert in the *Theosophist* this first part of my defence; and I am convinced that I shall not be refused the means of developing personally the data of my convictions and the numerous documents upon which they have been firmly established.

L. LEVY BING F. T. S.

PARIS,  
55 Rue de la Victoire,  
28th May 1884.

P. S.—I have had the honour of seeing, in Paris, Colonel Olcott, the respected President of the Theosophical Society, and Madame Blavatsky, the General Secretary of this useful and brilliant Society, of which I am proud to have been admitted a member.

### OUR SIXTH YEAR.

WITH the issue of October next, will commence the sixth volume of this Journal. During the few years of its existence the influence and the circulation of the *Theosophist* have steadily increased, not only in the East, but especially in the West. The teachings of occultism which the MAHATMAS have recently given out, and some of which were written by themselves, during the last year, have attracted the attention of many of the leading thinkers of the West, from whom we have received appreciative and encouraging letters. The sympathetic response given by the intelligent public to these writings, promises a rich harvest in the future. The success of the *Theosophist* and of the Theosophical Society, is now an already established fact. We regret that we are not yet able to give the esoteric interpretation of the *Bhagavat Gita* as promised last year. We have, however, succeeded in getting over some of the difficulties in the way, and have every confidence of being able to begin the series next year.

*Translated from the French.*

LECTURE VII.

*Power and Forces.*

ALL power emanates from Will, and influences are born from the magnetism of the things. The forces of nature are influences, because they are conditional communications of power with reciprocity and certainty of action.

God creates\* things through the Word and animates them through the Spirit. The word is the eternal reason of numbers and forms; the spirit is the magnetic and motive power of the grand universal agent; it is "Od," "Ob" and "Aur."† Od is the equilibrizing force, by which the worlds attract and repulse each other. Od radiates, Ob absorbs, Aur equilibrizes. Od is light, Ob is darkness, Aur is twilight. Od is the breath of the angels, Ob the inhalation of the demons, Aur the atmosphere of the sages. Od illuminates the minds of the prophets, Ob produces the intoxication of the Pythonesses, and somnambules become lucid or tell falsehoods, according as to whether they have been magnetized through Od or through Ob. Paracelsus gives the name "*ebriecatum*" or artificial intoxication, to the states of frenzy produced through Ob. Robert Fludd symbolizes Od in the form of a luminous sphere, with the image of Phoebus, and Ob in the form of a dark sphere with the idol of Bacchus. The two spheres are equilibrated by a third one, the sphere of Aur, and carries as an emblem the tetragrammaton of Jehovah.

The power of God distributes harmonies through proportionate series and according to the inviolable laws of nature. Nature reproduces forces, at the same time, when beings or spirits subdue or direct the influences. There is no form without substance and no substance without force. Magnetism is not itself a substance; it is one of the four forces of the primordial and universal substance.

The forces of nature are themselves blind, and the wonderful effects, which they produce, are caused by their regulated proportions and their wonderful disposition, and in these facts becomes revealed to us the existence of a divine power in a manner so self-evident, that only a person who is entirely blind in understanding can refuse to believe in the same. The influences are born from the disposition of the forces, the forces are co-ordinated through power; and power is the very essence of spirit, because a spirit is a word or a cause in power. Man is the finite personification of an infinite cause, he is a spark gifted with volition, and he can, by selecting his place, become himself an immense focus of light or fire.

The physical action of man is limited by his organs; but his moral action is unlimited, provided that action is perfectly free, and therefore it resolves itself into light, it may become eternal light, and if it determines into fire, it becomes devoted to eternal fire.

But there is one thing of which the Theologians are ignorant: Hell is as jealous as Heaven and allows no mixture. One good action, a single well directed thought is sufficient to hinder damnation; just as a single sin, or one bad desire, puts an obstacle in the way of salvation. The elect of hell are therefore just as rare and perhaps still more uncommon than the elect of heaven. The possibility of their existence is sufficient to uphold the dogma (of hell), but in fact that

which absorbs after this life the great majority of men, is called the purgatory.\* The purgatory is not a place, it is a condition of the souls, which desire to be transformed by purification.

The human soul possesses two kinds of memories; the essential and the relative memory. The brain is the instrument of the relative memory; it is like an index or a ledger; but the will is independent of the brain, and the essential memory consists of the preponderating habitual determination of the will.

The inherent punishment of the souls of the wicked is their ingrown habit of a bad volition, and the salvation of the good is their instinctive habit of desiring the good. The recollections of the brain perish with the dying brain, like letters written in a book disappear with the book which is burned to ashes; but the moral effect of the book survives, and the soul remains impressed and modified by those lost recollections.

The soul may then still find again traces of such recollections in the brain of the living, with whom she may be connected through sympathy or remorse. For this reason it is of great importance that we should before death become reconciled with all and forgive all, so that we may not leave behind us any ferments of hate or sorrow, which might form an obstacle to our transformation and eternal rest. For that reason it is necessary to respect the memory of the dead, to salute without distinction all corpses, and not to harbour any feelings of resentment for those that have trespassed against us; otherwise we expose ourselves to obsessions, and this it is what makes the operations of necromancy so dangerous. He, who evokes the dead, lends them his brain; he identifies himself with the evoked persons, and by rites he ought to be made to expiate the faults or the crimes, whose memory he revives. Judging from this stand-point, Saul, who evoked Samuel, ought to have been cut to pieces together with his children at Gilboa like Samuel, who had cut to pieces the king of the Amalecites at Galgala. To call up the dead is to call up horrible misfortunes; such at least is affirmed to be the case, by all the most reliable traditions of Occultism.

A serious evocation of the dead (for we do not refer here to the experiences with turning tables) is a sacrilege comparable to a violation of a corpse. To make the dead return to earth, is to create a vampire. We might properly define the term "necromancy" as an act of pairing together a living body and a corpse.

Man has the power over inanimate objects; to vivify them with his own life. He can influence through the power of his will the instinct of animals and even the will of other human beings, such as are weaker than himself.

By "Genius" we understand the power of him, who knows how to rule over things and men; the genius of magnetism is in him who speaks and who radiates over the audience his enthusiasm and his conviction. The genius of medicine is the authority of the physician, who infuses faith into the sick and a salutary influence into his remedies. If you doubt your physician, you destroy the power of his treatment; the physician is the priest of the body, as the priest is the physician of the soul. Good alone is a power and must always come out victorious; but it may for a time be trammelled and, so to say, paralyzed by the influence of evil. Evil clings to good like diseases to health. Flies dirty by preference gilded frames and mirrors; dogs like to lift up their leg near precious clothes; and sorcerers pretend that, to force the devil to produce his stench, it is only necessary to offer him perfumes and to give him pearls.

\* The word "creatos" should not be understood as a making a something out of nothing. It includes in its wider sense evolution, emanation and formation.—II.

† Od, Ob, and Aur are the same thing, but in three different states. In man this principal is called Od, but in the Macrocosm it is called Astral Light.—II.

Great men have often great vices, and large cities, which are the focusses of light, are almost always great centres of corruption. We must never despise the good, because it is so closely associated with bad; we must know how to pick pearls out of the dunghill, and the physician must not allow himself to be repulsed by the bad odour and the horrible sight of ulcers. The power of good can never be more victorious than when surrounded by the influences of evil; and the writers of legends tell us that when hell celebrates its worst orgies, a single sign of the cross is sufficient to put to flight and make instantaneously disappear the whole phantasmagory of Sabbas.

This leads us to speak of the influence of signs and magnetised objects, for both are in fact the same. The Pope magnetises amulets and blesses them by taking them between his two hands and he attaches indulgences to them; that means he makes of them efficacious signs of good works that have been accomplished with reversibility of influences and merits. Now, the magnetism of the Pope is to those who believe in him the power of God acting in a sovereign manner in his church.

The man, who rejects the remedies of the church and denies to himself the privileges of the same, deprives himself of a very great power. Man does not put himself with impunity outside of all magnetic circle. If he does so, he may be compared to an insect, which attempted to take a walk between the wheels of a clock. He runs great risk, to be caught in some spring and to be helplessly lost. Therefore a celebrated seeress, Mad. de Kradener used to advise all those who consulted her, and even all that would consent to listen to her—for she preached like an apostle—to practise that religion in which they could believe. She wanted the Jews to go to their synagogue and to observe the Sabbath; she advised the Protestant to go to hear the preaching, and told the Catholic to go regularly to mass; and in fact, irreligion, being an isolation of the souls, is something very unsocial; and it is better to worship a fetich, than to worship nothing, because adoration being the sense of divinity in man, this alone distinguishes him from the brute and makes of him a moral existence.

There is certainly only *one* religion in the world; the different sects are only separated from each other by prejudices of race and priestly pretensions. Fundamentally the moral is everywhere the same, and all those ceremonies, that have any real effect, possess their power only through the faith which vivifies them and are only magnetic practices exercised by the wise. Catholicism is certainly amongst all sects that which produces the most wonderful effects. It alone claims to show us and make us feel God with our lips. It makes us eat him, and identifies us with him. The sacraments are masterpieces of High Magic; and whenever this beautiful religion will have broken the chains of clericalism, it will probably become the religion of the world. Protestantism is only a mutilated Catholicism, the Mohammedanism is a bastard of Judaism, and Judaism is only the copervator of the archives of Catholicity. The Greek Church is only a refractory section of the great universal church. The patriarch at Constantinople and the pope of Rome are two competing rivals, one of whom must necessarily either acknowledge the other one as his master, or dethrone him. It makes little difference in what manner that revolution will end; but we shall have to pass through such a revolution, and perhaps sooner than we expect.

The dogma, as it is explained to science, will remain mysterious to science, but science, comprehending the necessity of faith, will listen to it, instead of fighting against it.\*

The priests, for the purpose of maintaining their moral authority, will be forced to ally themselves with science, and will cease to materialise the symbols of faith; because science and faith have each their distinct and separate dominions and they cannot be united until people will cease to confound them together.† Pontifical authority has nothing to say

before the Academy of Sciences, and human science has no vote in clerical councils. The whole world would have the right to laugh, if the academy of science would decide that there are four persons in God, it had a right to laugh, when the inquisitors of Gallileo decided that the world does not turn.

The miracles of the gospel are to faith incontestable verities, and science has no right to reject them. Science can simply demonstrate that they are materially impossible, and it will then appear that they must be understood spiritually; and after they have been so understood, they will be attacked no more, because they will then be recognized as belonging entirely to the realm of faith.

Some day all the clerical schools will recognize the fact that the criticisms of Dr. Krauss have done an immense service to the church, and have helped Exegesis to make a giant step in advance.

Whenever faith comes out of her sanctuary, to trouble science in her quiet researches, science will have the right to take her politely by the hand and show her home.

And if faith, pretending to be absolute mistress in her own house, says: "I am unchangeable, but it pleases me to affirm to-day what I denied yesterday; to say to-day: 'this is a dogma,' while yesterday I said: 'it is not a dogma,' and while at the same time I insist that all dogmas are eternal truths, and that I have no power whatever to create them;" science will then say to her: "Be on your guard. If you throw stones in my windows, you will overthrow the fundamental laws of logic. You are then no more *above* reason, but you will come in conflict with her, and I have the right to defend her. Will you say that by doing so I destroy your authority? Just the contrary! I affirm your authority by abrogating all that you do against that authority. Can faith affirm or deny anything else but herself? Can she change according to the fancies of men? If you therefore speak against yourself, it is the same as if you did not speak at all, and we still believe to-day that which you taught us yesterday."

When will men comprehend that what brings forward the greatest opposition to the establishment of durable authority in the world, are the pretensions of despotism?

It is certain and evident that the gospels are still a dead letter, and that the reign of Christianity, which so many people believe to be nearly ended, has not even yet begun. The Catholicism, which is exclusively Roman, has been nothing else but a re-organisation of ancient sacerdotalism, and the Vatican has his altars even more bespattered with blood than the Capitol. The Rome of the priests has borrowed from the most barbarous peoples their horrible human hecatombs. St. Pius V. had no cause to envy the ancient Druids, and the autodafe's surpassed the gigantic idols stuffed with men, which were burned alive in honor of Teutates or Irminsul. However, the victims of the inquisition were not those that suffered the most cruel treatment. Their agonies were sooner ended, than the agonies of those unfortunates that were tortured in convents.

St. John, the evangelist, who was his favored apostle and knew the secret doctrines, wrote the mysteries of true Christianity in a book, which the official church cannot comprehend. He begins his evangel with those sublime words: "In the Principle was *wisdom*." He calls those Antichrists, who do not acknowledge that Jesus was truly a man. He says the whole law is that men should love each other, that nobody ever saw God, and that we must love God, whom we cannot see, by loving mankind, which we see; he was also disliked by the usurpers of churchal power, and they went so far as to excommunicate him. He did not dare any more to speak publicly to his followers; he speaks of a man who wants to be looked upon as universal primate, and who refuses to accept his letters. He calls him *Diotrephes*, that means nursling of Jupiter, a young offshoot of old idolatry, a pontiff who would be God; and these confidential communications of this misunderstood apostle are found in an epistle addressed to a Roman by the name of Cajus.

The doctrines of St. John have been preserved by secret societies, by illuminated Christians, orthodox gnostics, by the Rosicrucians of the middle ages, by the initiates of the Cabala, and by the misunderstood Grand-Masters of Free-Masons and Templars.

Religious power has been at all times fettered by sacerdotal influences; the priests know that divine power ought to

\*We beg to be permitted to differ. Theosophy will open the eyes of the Scientists as well as those of the Theologians. When the scientists will understand the mysteries, they will not simply tolerate them as a convenience, but accept them as a necessary truth; and the old superstitions will perish.—H.

† Again we must differ. There can be only one truth, and science as well as faith may lead to that truth. False science, which is ignorance, and false faith, which is superstition, may have different dominions; but true science and true faith are the complement of each other and are allied to each other.—H.

belong to them; and to obtain that power they want to dominate over royal power in a more easy way than by the supreme ascendancy of virtue. A priest like St. Vincent de Paul does more good even in a temporal order than a king could possibly do, and all the treasures of the world are at his feet; he can command everything, because he covets nothing, and the law, which makes him master over all, can be expressed in a short formula: "We must be above all things, if we wish to rule over them." We fully possess only those things, which we can easily forego; that which we need is necessarily our master, and we cannot truly rule, if we are bound with a chain. The poor people are consequently the only rich ones, and to take away from this sentence its paradoxical appearance, we must explain it with the words of Christ. The poverty, of which he speaks, is that sovereign poverty, which consists of an independent spirit and a complete emancipation from the covetousness of riches; the poverty of spirit, which must not be mistaken for intellectual clumsiness. Jesus has praised indifference, but he never gave any encouragement to stupidity.

To desire continually and peaceably the good in truth and in order, is to be powerful; but to render our desire or will peaceful and continuous, it must be free of all hope and all fear. Moral evil comes from different influences and is always more or less caused by fear or illusory hope; and good is the independent activity, which results in a profound peace. We never attract effectively things which we desire, that is to whose influences we submit; it is the things that attract us. Archimedes said: "Let me have a point, where I can attach my lever, and I will move the world;" and Jesus said: "The son of man must rise above the earth. If I have ascended above the earth, I shall attract everything to me." And again he said: "Seek ye first the Kingdom of God and His justice, and everything else will follow;" and when he said this, he did not promise any miracles; he simply revealed to his disciples one of those superior laws, which manifest God in nature, a law which we might call the attractive power of liberty governed by order, and order in liberty.

#### COL. OLCOTT IN EUROPE.\*

We hear that Colonel Olcott is overwhelmed with letters from leading men of England, enquiring about and actively sympathising with the Theosophical movement. The Society for Psychical Research has sufficiently asserted its importance, and is at last come to be realised as a necessity of the times. The sphere of its researches, and the magnitude of work turned out, make the Society worthy of attention. On the 28th of May last, Professor Henry Sedgwick, its President, delivered an address at the Garden Mansion. The Society for Psychical Research has brought out cumulative evidence to prove the genuineness of the phenomena of "Thought Transference." The President affirms that only ignorant people can rush to the conclusion that "Physiology would be overthrown," and thus sums up the results arrived at by his Society:—

"An instructed physiologist would know that—supposing it generally accepted that ideas and feelings can, under certain rare and special conditions, be conveyed from one mind to another otherwise than by the recognised channels of sense—all ordinary physiological research would go on exactly as before. No 'working hypothesis' of physiological method would have to be abandoned; no established positive conclusion of physiological inquiry—nothing that has been ascertained as the nature of the process by which visual, auditory, tactile, or other sensations and ideas are ordinarily produced in the mind—would have to be modified. What would have to be given up, would be merely the single negative conclusion that ideas and sensations could not be transmitted from one mind to another except in certain ways already known: it was very natural for physiologists to form this conclusion provisionally in default of evidence to the contrary but to abandon it in view of the presentation of such evidence would be a mere enlargement, not in any sense an overthrow of existing physiology."

It is not too much to expect, it is believed, that the Society for Psychical Research would, in course of time, prove strong enough to bring the modern physical science to accept the rudiments of the Theosophic doctrine.—*Indian Mirror*, July 3, 1884.

COLONEL OLCOTT has returned to town from an official visit to Paris, and is superintending the passage through the

press of a volume of his collected lectures and addresses upon "Theosophy, Religion and Occult Science," for which he is to write 48 pp. of new matter. A variety of subjects connected with Archaic philosophy and science are discussed by him in a popular and striking style. Mr. George Redway expects to publish the book forthwith. It will be in the style and of about the size of Mr. Sinnett's "Esoteric Buddhism."—*Pall Mall Gazette* (London), June 19, 1884.

## Psychic Phenomena.

### MIND-READING BY MR. STUART CUMBERLAND.

MR. STUART CUMBERLAND, after achieving a great success in Vienna and Paris, gave several very interesting experiments in the presence of a representative company, invited to meet him at the office of the *Pall Mall Gazette*. The guests were summoned at twenty-four hours' notice; and many of those who were most particularly invited, Professor Tyndall, Mr. Maskelyne, and Mr. Labouchere, among others, were unable, owing to prior engagements, to be present. The editorial sanctum in Northumberland Street was the scene of the experiments, and most of those present were in the requisite condition of healthy scepticism. Almost the only out-and-out believer in the company was Colonel Olcott, of the Theosophical Society, but he took no part in the proceedings beyond that of a passive spectator. As Colonel Olcott wore on his finger a ring which Madame Blavatsky, by her occult power, had caused to grow in the middle of a rosebud, and carried in his pocket a portrait of a seer, which the same remarkable woman had willed out of the "astral light" upon a piece of cardboard, Mr. Stuart Cumberland's divinations naturally appeared to him somewhat insignificant. Less favored spectators found them remarkable enough, for, as was observed by one of our guests, "Mr. Cumberland does all that Mr. Bishop ever professes to do, and makes no fuss about it." Among those present were representatives of American, Continental, London, and Provincial Press, Professor Ray Lankester, Professor Edmund W. Gosse, Mr. Grant Allen, Dr. Donkin, Mr. and Mrs. Ernest Hart, Madame de Novikoff, Mr. Andrew Carnegie, Mr. Oscar Wilde, Mr. W. Wilde, &c. Before describing the experiments, we may as well give a few extracts from their letters. One eminent scientist maintains that Mr. Cumberland should be blindfolded with pads of cotton wool. Mr. Edmund Garney, a well-known authority upon all these matters, wrote to say that "this power of delicate muscle-reading is a far commoner faculty than is ordinarily supposed. I have seen friends of my own give decidedly more startling exemplifications of it than those which have stood Mr. Irving Bishop and Mr. Stuart Cumberland in such good stead. The worst of it is that the public go away with the idea that these performances are thought-reading." To true thought-reading, which takes place without contact, and to the reality of which Colonel Olcott bears emphatic testimony, Mr. Stuart Cumberland lays no claim. Mr. Maskelyne wrote to say that, in the absence of trickery and collusion, he relies solely upon muscular indications given by the subject. This thought-reading is not at all difficult with practice. Mr. Labouchere wrote:—"Thought-reading may easily be accounted for. It simply means that with certain persons an indication of their thought may be obtained by—or rather through—the muscular action of their hand. In order, however, to make any use of these indications, it is necessary for the reader to be sharp and to fish for indications. What I mean is this. Suppose you were speaking, you would probably use some gesture and the gesture would precede the word. So when you think, 'this is right' or 'this is wrong,' just as the words half form themselves in your brain, or on your lips, so does the thought produce muscular contraction in the hand."\*

About five o'clock everything was ready for Mr. Cumberland's experiments. One gentleman had two brand new £5 notes fresh from the Bank, and sealed up in an envelope. But these were not used, as Mr. Cumberland became too exhausted during the hour-and-a-half that the sitting lasted. Lying on a shelf was a bundle of cotton wool with which it was suggested that Mr. Cumberland's sharp ears should be stuffed and his piercing eyes padded. Not only did a bold person make this suggestion, but he actually asked that the subject should be cotton-wooled in the same manner. Mr. Cumberland, however, objected to these suggestions as unnecessary precautions, "although, so far as I am concerned, I don't think it would make any difference." "Now, I do not profess," said Mr. Cumberland, "to give any illustrations of the supernatural. I simply claim that it is possible to read persons' thoughts under certain conditions, not abstract thoughts, mind you, that is impossible, absolutely impossible. If a person will concentrate his or her mind entirely and earnestly on a given object, I claim that the thought is conveyed to any person of sufficient quickness of perception by the action of the physical system, which, I maintain, is the only channel through which thought can possibly be conveyed. Of course, there is a percentage of failures. Some subjects are not sufficiently sensitive. Everything depends on the absolute concentration of the subject, and the absolute giving up of one self to the conditions of the experiment." Some professors of the art pretend to the power of thought-reading without contact, but that Mr. Cumberland says is quite impossible—a doctrine which Colonel Olcott, who was present, denied in toto.

Some thirty ladies and gentlemen composed the audience, all of whom were seated round the room. Mr. Cumberland stood at one end, braced himself up, looked round, and opened the ball by asking Mr. Oscar Wilde to be operated upon. Mr. Wilde, however, shook his head, and declared that he was not a good subject. Mr. Cumberland looked round once more, and his eyes fell on the face of the Chairman, who

\* In the *Theosophist* of this month will be found an account of the doings in Europe of the two Founders.

\* We do not endorse this theory of muscle reading as being applicable to the above described experiments.—H.

was quite ready. "A good subject," said Mr. Cumberland. "Now, Sir, please look round the room, and think of some object, which it is possible to get at. Don't try to resist any attempt to think of it, but surrender yourself entirely, all your thoughts upon the object." The Chairman did as he was bid, and apparently concentrated his thoughts. Mr. Cumberland's eyes having been bandaged with a white silk handkerchief, he took the subject's left hand into his own, put it on his forehead, and darted across the room, going first to a shelf on which were a number of books and papers. He stopped short suddenly, darted back, made another circuit of the room, and halted suddenly before a gentleman standing with his back to the mantel-piece, tore off the bandage, and pointed to the glasses of the well known London correspondent of the *Neue Freie Presse*. "Right," said the subject. "Now, why did I take you to the book shelves before to the eye-glasses?" "Well," confessed he, "I must tell you that I had first thought of a *Gazetteer* which caught my eye. The glasses were a second thought." This was over in a few seconds, thirty perhaps, and was quite satisfactory. It may be worth noting that Mr. Cumberland always desires his subject to think of the direction or the route to the article thought of rather than the article itself. "I now propose," said Mr. Cumberland, "to discover the seat of pain in one of you. I wonder whether Mr. Ernest Hart would consent to go out of the room, to stick a pin in some part of his body, and to return with a pain manufactured and ready to be discovered." Mr. Hart declared that his mission was to relieve pain and not to produce it, and asked whether it was necessary to stick the pin far up to the head, for instance. After a little pleasant trifling, Mr. Carnegie, the famous American millionaire and proprietor of English newspapers, declared with a trace of melancholy pleasure in his voice, that he had a pain ready made, and should be only too happy to place it at Mr. Cumberland's disposal. That is, if he could find it. The muscle roader gladly assented, again resumed the white silk fillet and stood up to Mr. Carnegie. Mr. Cumberland's hands traversed this subject from top to toe, running nervously down and eventually stopping at the finger. "The finger it is," said Mr. Carnegie as he took his seat amid applause. After a short rest, up spoke the gallant Cumberland again. "Professor Ray Lankester, you and I are old friends. Will you be my next subject?" Professor Ray Lankester smiled grimly and said: "Well you won't be successful with me, I know." "If you make up your mind that I *shan't* do anything I admit that my experiment will be useless." "I will give you every chance," said the Professor gaily. Mr. Cumberland left the room, a pin was fastened in the lapel of Mr. Aaron Watson's coat. Mr. Cumberland was summoned, blindfolded, and took Mr. Ray Lankester's hand, dragging him here, with much vigour. After a couple of minutes he evinced an affection for an easy chair, which he thought contained the secreted pin. Kneeling down, he poked and poked unavailingly until at last it was evident that the muscular indications of the subject were not sufficiently violent. Mr. Oscar Wilde, who had seen where the pin was hidden, then took Professor Ray Lankester's place; and Mr. Cumberland struck a bee line and had the pin in no time at all. "Professor Ray Lankester's individuality is too great," said Mr. Cumberland, resting after his labour. "If I don't do a thing immediately, I can't do it at all." Mr. Cumberland's pulse was not beating very fast, he admitted. At one sitting in Vienna it reached 175 beats in the minute, when he fainted. A lady, who was the next subject for Mr. Cumberland's experiment, was asked to think of some object in the room, and to give it mentally to the audience. The thought-reader and the lady went round the circle deliberately and sedately. Suddenly they stopped. Mr. Cumberland's hand was stretched forth, he seized a little vase of rhododendrons from a number of others. "Right," said his subject. "Now you have to give it to some one." He groped round once or twice, and then handed it to a lady in the audience. "Right again," said his subject; "you have read my thoughts admirably." Mr. Cumberland was then allowed to take respite, during which Mr. Oscar Wilde discoursed in his free and easy way on art, poetry, and culture. The confessedly modest decorations which were put up to hide the ink pots, the paste, and the scissors were, he said, unworthy of the darkest ages. The poet and apostle has a pleasant way of being disappointed. There was something wrong with the Atlantic, and Niagara was not quite up to the mark. Now he was disappointed with the arrangement of a few simple flowers of the field and a rather striking harmony in curtains which were brought in for the occasion. However, a lecture on art, from one so distinguished and so eccentric as Mr. Oscar Wilde, is worth hearing. And above all, he is a candid critic. "Your decorations," he said, "are absurd. There is no system obeyed. One thought, like harmony in music, should pervade the whole. Does it? No. They show no soul. Can you exist without a soul? No soul, no harmony, and no—" "Sun-flowers," suggested some one. "No. A flower is but an incident." In critical vein Mr. Wilde shook his shorn and curling locks, and, fanning himself with an expansive sage green silk pocket-handkerchief, proceeded to descant on the maps which hung round the walls. "A map should be a work of art, with azure oceans limned on its surface, laden with golden galleys, with poops of beauteous gold and purple sails. Let each continent show its rugged mountains, its stretching plains. Look at those seething seas of green hood calico, seas of erysipelas, with big blobs for mainlands and small blobs for islands." And thus was abuse showered upon those offending sheets. Mr. Wilde waved his hand with an attitude of despair, and brushing off a fly from his forehead with the sage green pocket-handkerchief, he lowered his slim form gracefully into the bosom of a yielding couch.

Strengthened by half an hour's repose, and cooled by ices, Mr. Cumberland consented to try a much more difficult feat. "It has been suggested," he said, "that something should be hidden out of the room. I think if the subject is sufficiently favorable, it would be as easy to find a pin in Regent's Park as here. Some one of you has thought of an object out of this room, I don't know whether it is in the next room, or indeed in any room. So I am seeking for an

unknown object altogether." Mr. Grant Allen then agreed to act as the subject of the final experiment. He was taken out of the room, and an object and a hiding place were fixed upon. Mr. Cumberland was told that the object was hidden without the precincts of the *Pall Mall Gazette* Office, but he refused to put on his hat, as it might possibly be in the way. This crucial trial of skill then began after he was once more carefully blindfolded. He, of course, went straight for the door, dragging Mr. Grant Allen after him. He turned the handle, and went down a short passage, followed by the more devoted spirits of the assembly. Down the narrow steps, the pair stumbled and into Northumberland Street, much to the astonishment of the passers-by, Hansoms, foot-passengers, Policemen, open-mouthed waiters, stopped to look at the strange procession. The windows of Northumberland Street were shut up with a rattle, maids and matrons in all of them wondering if the hatless Mr. Oscar Wilde was trying to effect the capture of the new pair of Siamese twins. Heedless of scorn, the Siamese twins went on until they came to No. 7, Northumberland Street. Here they stopped. Mr. Grant Allen afterwards explained that he was wondering how they would get in, whether Mr. Cumberland would ring the bell or knock at the door. Instantly, Mr. Cumberland responded to his thought by ringing the bell and knocking at the door. It was timely opened by a servant, who, seeing a blindfolded man, followed by a small crowd, promptly shut the door in his face. The only other person in the secret stepped up to Mr. Allen and whispered to him:—"Have you forgotten the house?" "Is this not it," he replied. "I thought it was the third door down." "No, it is next door." The conversation passed in a whisper inaudible to Mr. Cumberland. No sooner however had Mr. Allen thought of No. 6, than Mr. Cumberland dragged him up the street to the door. Upstairs they went, and straight into a room, usually used as the reception room by the interview staff of the paper, on the first floor. Mr. Cumberland at once went to a drawer in a writing table, but closed it in a second, and came round to ottoman standing near the window. He lifted the lid, put his hand down, and brought out the hidden object. A curious one enough. It was a dusty glass shade, under which was a brownish substance not unlike in shape a goodly bunch from a goodly loaf. Lifting the glass shade off, and examining it closely, its identity was revealed. It was a hunch of bread, an heirloom of the *Pall Mall Gazette*. The Amateur Casual who slept a night in the casual ward of a work-house received this piece of bread for his supper eighteen years ago.

A famous article exposing the ways of casual wards was written; it caused such a sensation throughout the civilized world, as no single article had ever done before, and finally led to great reforms. The bread was not to be thrown away. It was set upon wire, covered over with glass, and though a little hard, a trifle cobwebby, still finds a snug corner in the office, whither it was brought from Lambeth work-house some 18 years ago. This concluded the experiments much to every one's satisfaction. Mr. Stuart Cumberland is likely to appear on a public platform before long, but he will find it difficult to give more conclusive demonstrations of his ability to "read thought" by the delicate muscular action of the hand.—*Pall Mall Gazette* (London.)

#### A BUDDHIST "MORALITY."

MR. S. BEAL writes to the *Academy*:—"The following short story, translated from Kumârajiva's version of *Āśvaghosha's* sermons, is so striking in its point and character that I think perhaps you might be disposed to publish it in the *Academy*. It provides, as I think, another instance of probable contact between East and West at the time when it was written.

ĀSVAGHOSHA'S SERMONS, K. 10, P. 17 (TEXT).

"Again, 'Whatever deeds men do, they will receive the fruit thereof.'

"I heard some time ago the following story:—

A certain poor man resolved with himself,—'I ought to offer sacrifice to the gods, that my present store of wealth may be increased, and my possessions multiplied! Having thought thus within himself, he addressed his brother as follows:—"You must be diligent in cultivating the ground, and working for the good of the house, so that no want be felt!" Then taking his brother to the field, he said, 'in this place you are to sow millet, in this place rice, here you must sow corn, and here pulse!' Having thus made arrangements, he went to offer up his sacrifices; he offered up flowers and incense in profusion, and, morning and evening, bowed down prostrate before [the gods he adored], and humbly craved some present advantage and increase of his worldly substance. At this time the divine spirit (whom he adored) thought thus:—"I must look into the previous history of this poor man to see whether, in his previous career, he has acquired merit by almsgiving, and so I may be enabled to grant his prayer for increase of wealth." Having looked into the man's previous history, he found that he had never exercised the gift of charity, and so had no antecedent claim to the gratification of his wishes, and so he thought, 'This man, without any claim, still asks and prays that his wishes may be gratified, and that his cares may be lightened. I will now change myself and go to him, as he is engaged in sacrifice, under the form of his brother, and hold converse with him.' On this, changing himself into his brother's form, he went to the temple and stood beside him. Then his brother said, 'What are you doing here, instead of sowing the land?' On which the brother (in his assumed form) answered,

'I wished also to come to beg the gods to be propitious to me, and grant me food and raiment! and although I have not sown the seed, yet I doubt not the power of the god will produce fruit and increase!' Then the brother, upbraiding the other, said, 'How can you expect the ground, without being sown, to produce fruit? Such a thing is impossible!' and so he repeated the *gâtha*—

'Within the great sea-encompassed earth,  
And in every place alike,  
What fruit can be expected  
Where no seed is sown?'

At this time the brother addressed the other (in his assumed form) and said, 'In all the world how can it be that the land produce fruit where no seed has been sown?' Then the brother said, 'True! without sowing there is no increase!' At which time the Deva, reassuming his heavenly appearance, said,—

'Now, according to your own words,  
Without sowing there is no reaping;  
If, in your previous life, there has been no charity,  
What fruit can you now expect?  
Though now you endure self-affliction,  
And deprive yourself to offer me offerings,  
And so afflict your body with a view to propitiate my goodness!  
What is this but to trouble me with your services!  
How can I grant you the increase  
And the prosperity you desire?  
If you want to get wealth and treasure,  
Children and (rich) family connexion—  
Then learn to cleanse your body and mouth,  
And do worthy deeds of charity!  
To expect to reap advantage [religious profit] without sowing,  
Is as if we expected the sun, and moon, and stars  
[To shine] without illuminating the earth;  
For as they brighten the earth,  
We know it is the result of works done before! \*  
Above the heavens and below  
We may draw this distinction in all cases,  
Much blessedness from much virtue!  
Little blessedness from little virtue!  
Know, then, throughout the world  
All things result from previous cause;  
Charity brings increase;  
Moral conduct results in birth in heaven;  
But if there is no root [cause] of charity,  
Then happiness in consequence is scant,  
Wisdom and meditation bring deliverance [salvation]  
These three [charity, wisdom, and meditation] alone bring  
The "ten powered lord" [Buddha] speaks thus: [reward];  
"All things result from cause,"  
Trouble me not, therefore [with your prayers]!  
Practise virtue!  
Then you will reap beneficent fruit—!''

#### THE MEASUREMENT OF HUMAN FACULTY.

MR. FRANCIS GALTON, in lecturing at Cambridge recently on the above subject, said that although it had been a matter of controversy, whether a more complete measurement of man's capacity could be attained than was already discovered by means of examinations, which measured intellectual capacity, yet he would endeavour to demonstrate that as the capacity of man, taken in its widest sense, including character and physique, was finite, therefore it was measurable. The art of measuring human faculties was now occupying attention, and in it he perceived the dawn of a new and interesting science. It would be impossible for him, with the limited time at his disposal, to compress in one lecture even an enumeration of the means to be adopted to arrive at correct data, whereby rules could be laid down for the measurement of human faculty. In order to arrive at any conclusions, it was necessary that contrasts of men extending over a wide range should be made, but he would confine his remarks to contrasts of two kinds—*first*, temperament and character; and, *secondly*, other qualities, as height, weights strength, and the like. Temperament and character formed landmarks as bases for survey, and the first question to be solved, and which arose was whether temperament and character were liable to spontaneous changes, or whether man was constituted so differently that any measurement was based upon a fallacy, when we treat man as a mere conscious machine and endeavour to measure his capabilities as we would that of an engine. He had taken some pains to obtain new kinds of evidence, and the result of that evidence was that the actions of men were governed by cause and effect, but on the other hand, if the conduct of man was the result of some external influence, then such knowledge as he had obtained was of little service. His earlier inquiries, which were embodied in his work on "Hereditary Genius," led him to the conclusion that the son conducted himself in life in

\* Probably regarding the sun, moon, and stars, as *devas*; shining thus, in proof of their former good deeds.

much the same way as the father, was influenced by sin motives, possessed similar talents and similar failings; that man was not like a ship drifting, but arrived in due course by certain sure stages at a predestined port.\* The result of a long habit of introspective inquiry into one's actions in daily life demonstrated to him that the occasion when free will was exercised, was uncommonly rare, less than one instance in a day, and the general result of an extended habit of introspective inquiry was that man is little more than a conscious machine. The problem to be solved was what common incidents occurred in the lives of a given number of people, to select them, and briefly describe how the various persons acted when they occurred. One notable incident to all was emotional temperament, another temper. Taking a number of men, and comparing their conduct when emotional temperament or temper was excited, you would obtain statistics of each man's character in ordinary every-day affairs, and this would enable the scientist to accurately gauge and measure human faculty. But this measurement would be assisted and rendered more complete, if at the same time records were obtainable containing particulars regarding eyesight, color, sense, hearing, breathing, capability, height, span of arms, &c. At the John Hopkins University in America, physical education and hygiene were compulsory on all students, and although the physical measurements taken were not compulsory, yet few objected, and the result was that the most valuable statistics were collected, and in many instances good advice given to the students in what way to counteract the effects of any abnormal condition observed, such as irregularity of muscular development. The color of the hair and of the eyes also gave valuable *data* for measurement of human faculty. The color of the hair indicated immunity from and susceptibility to disease. At the time of the American Civil War, it was found out, of between 330,000 and 340,000 examined, that those who had light hair were more susceptible to disease than those with dark hair, in fact those with light hair were susceptible to all kinds of diseases, except chronic rheumatism. The lecturer concluded by suggesting that a laboratory should be opened at Cambridge to investigate this new science. The cost would be small; the result, he ventured to predict, would be large and beneficial, for, by the compiling of continuous records of health, growth, and disease, much useful knowledge would be acquired; and by a long series of observations on the lines he had indicated, it would be possible to measure the human faculty as accurately as, if not more so than, our system of examinations measures the intellectual faculty of man. At the conclusion of the lecture, Mr. Galton was awarded a vote of thanks by acclamation.

#### THE PEHLVI LANGUAGE.

WE commend the following from the *Bombay Chronicle* to the notice of our Parsi readers, especially Fellows of the Theosophical Society, professing the Zoroastrian faith:—

It is reported from Vienna that among the very valuable and interesting collection of Archduke Rainer's Egyptian Papyri there are several in the Iranic language. There are also some parchments and skins. Some of these documents are thought as being likely to furnish "the key to the Pehlvi language." The scholars of that language, specially the learned Parsi Daeturs in India, would be doing themselves and their co-religionists yeoman's service by early obtaining some insight into the contents of these important documents. Dasturs Peshotan and Jamaspjee of Bombay and Hosungjee of Poona are specially those to whom the Parsis would look for the display of some active and earnest interest in the matter. Dastur Jamaspjee has many friends amongst the distinguished European scholars and others knowing the Oriental languages. These would certainly be found to second the efforts of the learned Dastur, if he will show any real anxiety to obtain transcripts of the contents of some of the more important and valuable Egyptian documents of antiquity. We trust the worthy Dastur will pay some attention to our suggestion.

#### THE HYBERNATION OF A TOAD.

THE London Correspondent of the *Indian Mirror* (Calcutta), in his letter dated London, 12th June 1884, observes:—

... I have just heard from Paris of a very interesting experiment made by Monsieur Margelidet, the celebrated naturalist. M. Jules Lermiqua, Secretary to the International Literary Association, of which the venerable Victor Hugo is President, informs me that five years ago M. Margelidet placed a living toad in a hole in a block of granite, prepared for the purpose, and then covered it with cement quite impermeable to the air. No food of any kind was put in with the toad, who was thus shut up in a state of comatose insensibility, the usual condition of the animal during the winter.

\* Those, who denounce wholesale the Hindu caste system, may well ponder over this statement. There is a vast difference between trying to remove the abuses of a custom and endeavouring to sweep it off entirely, regardless of the grounds upon which it might have been originally based:—*Editor.*

On the 7th instant Mr. Margelidet called his friends to witness the exhumation of the toad from its granite bed, and its five years' burial. The experiment was made in the Paris Museum of Natural History, the same museum in which Buffan and Cuvier laboured for years, in times gone by. The excitement of the savants present was considerable, as the cement was carefully removed, and the toad brought to light after its five years' burial. The animal was alive and healthy, and in half-an-hour jumped about in a lively way. He rivalled some of the Indian *Yogis* in his long sleep and resuscitation....

#### THE LADIES' THEOSOPHICAL SOCIETY.

Says the *Indian Mirror* of 16th June 1884:—

".....As a burning example of the progress which female education has made in Bengal, we may mention that that high class Magazine, the *Bharati*, of which Babu Dijendro Nath Tagore was the Editor, is now being edited by his sister, Srimutty Surna Kumari Debi, daughter of Babu Debendro Nath Tagore, and grand-daughter of Babu Dwarkanath Tagore. The last issue of the Magazine fully sustains its early reputation. We should be glad to see other educated native ladies follow Srimutty Surna Kumari's example, and employ their time in enriching the national literature of their country. If such be the case in the experimental stages of female education, what is likely to be the result, when the experiment has been fully developed? Our native land has a glorious prospect before it with the dawn of a new literary age clearly setting in. Srimutty Surna Kumari Debi has a high reputation in Bengali literary circles. She is the authoress of several excellent Bengali works. Her literary talents are exceptionally great; and we have no doubt that the Magazine will do as well under her editorial management, as it did when it was conducted by her distinguished brother. We shall not be surprised if, at no distant date, Bengali ladies take to editing even Magazines and journals in the English language....."

Srimutty Swarna Kumari Devi is the wife of Babu Janaki Nath Ghosal, one of our most earnest members of the Calcutta Branch. She is herself the President of the "Ladies' Theosophical Society (Calcutta)" and an ardent and zealous worker in the Theosophical cause. To her Branch belongs Mrs. Anandibai Joshi, who is successfully carrying on in America her medical studies for the benefit of the Indian ladies. With a President like Srimutty Swarna Kumari Devi, and members like Mrs. Joshi, the "Ladies' Theosophical Society" is bound to be of immense benefit and good to the future of the country. Children generally imbibe their ideas with their mother's milk; and their early impressions are almost indelible. On the elevation of woman, therefore, depends largely the future greatness of man. And we have every confidence that the "Ladies' Theosophical Society" will be instrumental in sowing the seed of that future greatness which intellect, spirituality and moral force can alone attain to. The reader may here refer to the article on "THE FUTURE OCCULTIST", in this month's *Theosophist*.

#### "CHRISTIAN" ETHICS.

A VERY sad thing has taken place in Edinburgh, sad in itself, but sadder in the proof it gives of the brutality caused by centuries of Christian teaching. Mr. and Mrs. Chamberlain, the hall-keepers of the Secular Hall, had a daughter of weak intellect, fourteen years of age. This girl fell from the window on to some spikes below, and remained transfixed, three of the spikes entering her body. The poor mother rushed down stairs and tried to lift the child off the spikes, but she is a small woman and the girl was very big and heavy, and again and again she half raised her and let her slip back on to the spikes. A crowd gathered, and she appealed to the bystanders to help her to save her child; not one responded, but they all stood gazing at the writhing child and the agonised mother, while one man, standing close to them said: "It serves the Atheist right." Such is Christianity in the capital of Scotland, in the year 1884. At last a young girl, a Freethinker, came by, and she at once rushed to give help and the child was lifted off. She died on the following day. Well may Mr. Less write to me: "That such a scene was possible, I could not have believed, and it is scarcely possible to contain oneself to comment on it. The place in which this occurred is a better class working men's quarter of Edinburgh and the main reflexion left on my mind by it is that the effect of nineteen hundred years of Christian teaching has been to evolve a set of brutal savages in that class, for whose like we must search the darkest man-beast stage of humanity."

#### HOW LONG IT TAKES TO DREAM A DREAM.

An old locomotive engineer sat in the smoking car talking with the brakeman and some other railroad men. One of them asked him if he'd ever fallen asleep on his engine, and he replied:—

"Yes; thousands of times, I might say. Perhaps, not that many, but very often. When I'm doing extra hours, I fall

asleep for a second or two, and then start as wide awake as ever. I'm always dreading going to sleep, and I suppose it's that constant fear that has so disciplined my mind that I no sooner lose consciousness than I give a sort of muscular jump, and am aroused in a jiffy. Talking about how long it takes a man to dream, now I want to tell you something: I was running No. 4 into Chicago one morning, when I had been on duty eighteen hours and hadn't had any sleep for twenty-six. Just as we passed the little station at Utica, between Ottawa and La Salle—you know, No. 4 doesn't stop there—I dropped asleep. Then I had a dream—a great long one, about an accident. A train order was mixed up in it and, as it wasn't quite clear, I remember how I studied over the words, it seemed to me, for ten or fifteen minutes. Then I dreamed there was a collision: we struck, and it threw me up in the air thirty or forty feet clear of the engine. I mind how I felt up there, and I was wondering where I'd land, and if any of the passengers were killed. It wasn't a very pleasant sensation, either, you can imagine. Then it seemed I came down, and, strange enough, landed right on my seat, with my left hand on the throttle. At that very instant I woke, and it seemed so real that for a second I could hardly realize there hadn't been any collision and I hadn't been up in the air. Well, that dream was full of details, and a good deal of time appeared to elapse between its beginning and its ending; but when I looked out of my window, I'll be cursed if there wasn't the switch-light of Utica siding right ahead of me. You see I hadn't run fifteen rods while all that dreaming was goin' on, and I was making at least forty-five miles an hour."—*Chicago Herald*.

#### THE LOGIC OF PAIN.

(*Contemporary Review*.)

We are apt to regard pain as too exclusively an evil, and an unmitigated evil.

We regard it as the essential part of the primal curse; its endurance is part of servitude, or the fate of the vanquished amidst savage races. Pain deliberately inflicted was the weapon of the Inquisition. The pain, the Red Indian inflicted upon his white captives, roused feelings which have resulted in the extermination of the Indian over mighty tracts where once he was supreme. Pain was the chief means of government with oriental despotisms. Pain in disease has always been regarded as the great part of the cross we have to bear.

Yet the question may be asked, is pain an unmitigated evil; has not pain other aspects, other sides to it? Is the pain of disease, or of any injury not often highly, indeed eminently useful?

There are certainly forms of pain, indeed, to which animated beings are subject, which seem devoid of any good purpose, such as the pain inflicted by a cancerous growth. Cancer does not necessarily produce pain, and in nerveless regions its growth is not productive of suffering. But when a nerve-fibril gets caught by the progressing cell-growth of cancer, and is pressed upon by its remorseless grasp, then pain, persistent and agonizing, is the result. Probably no torture that was ever inflicted by man on man is more exquisite than that caused by the grip of a cancerous growth, where, as Montgomery wrote, "there is no temporary relief but in opium, no permanent rest but in the grave." Such pain lends to the sufferer the determination requisite to submit to the removal of the mass by the knife, where practicable, a measure by which life may be prolonged, even when the prospect ultimately is hopeless.

It would, however, be very erroneous and one-sided to regard pain solely, or even chiefly from the point of view here put forth.

Pain is the protector of the voiceless tissues! It tells us to desist from efforts when they are becoming injurious; it teaches us to avoid what is destructive to the tissues; it compels us to rest injured parts, and so to permit of their repair! Pain, then, is very far from an unmitigated evil. Without the sensitive skin in which our bodies are enclosed, injury would constantly be inflicted upon the tissues; and without the lessons taught us by pain, there is every reason to believe that most mischievous and injurious acts would be constantly committed.

To what injuries, blows, burns, contusions, &c., would not the framework of man and of animals be subjected if the slow lessons of consequential injury were left without the sharp reproof of pain! The suffering immediately attracts the attention, and consequently that which would do much damage is avoided, not from any rational consideration of the consequences, but from the pain directly produced. Without the advantages which thus spring from pain, animals and savage men would incessantly be inflicting much injury upon themselves, and indeed often be imperilling their existence. Pain from this point of view is distinctly preservative throughout the whole of animated creation. The utility of pain is seen in the membrane which sweeps the surface of the eye, for instance, in general animals, whenever any irritant particle is brought into contact with these delicate structures. The pain caused by the foreign body sets up reflexly a muscular contraction in this

membrane, and thus it is brought across the eye, sweeping the surface, and so the offending matter is removed. When the foreign body is too fixed to be so removed, disorganization of the eye follows, and amidst a general destruction of the organ the irritant matter is got rid of. Destruction of the eye in these animals would be a common occurrence if it were not for this muscular arrangement, and pain is the excitant; it is, as it were, the finger which pulls the trigger, and so the machinery already provided and prepared is set in action thereby. In man the suffering caused by a foreign body in the eye calls the attention to the part, and leads to its removal. If it were not for the pain so produced, irremediable mischief would often be permitted to go on unchecked, because unnoticed.

J. MILNER FOTHERGILL.

(To be continued.)

## Correspondence.

### A CURIOUS DATE-TREE.

I spent the first half of this month in my native village, Karmoor, in Kistna District, where I observed a curious phenomenon, for which I now seek explanation.

One evening I found a date tree (ಕಡಲೆ) bent to the north and its leaves rising lowest, being  $1\frac{1}{2}$  ft. above the ground. Next morning, when I repeated my excursion, the same phenomenon recurred. When I went there again at noon, I found the top of the tree a little lowered, and all the leaves drooping to the ground, the lowest reaching it. In the dead of night at 12 P. M. or so, the tree attained its normal height, the lowest leaf rising a yard from the ground. I have repeated my visits several times and have found the same strange phenomenon, with the additional one, namely that its top was turned from the north to the west. The tree is daily frequented by several people who are apprehensive that this alternate rising and falling of the date tree at an interval of 12 hours is the precursor of famine and pestilence, as a similar phenomenon was seen in a near village before the famine of 1877.

MASULIPATAM,  
21st June 1884.

### CHELAS.

HAVING read the different articles on Chelas and Lay Chelas, I do not see for a moment why any should think of attempting to become one, till he has thoroughly tested himself, in regard to his fitness for the same, in the ordinary routine of his daily life, and found out if he can successfully resist the temptations which surround him continually. Take the example of the athlete; his daily life is as regular as can be. And after many weeks or months of training in which tobacco, spirituous liquors or narcotics, or anything that is harmful to his physical health is strictly prohibited, he meets, in different contests, with men who have undergone a like preparatory training, and is or is not victor, as the case may be. And what is the result? A perfectly healthy body, existence and enjoyment, his will-power strengthened, in fact all of his faculties turned up to concert pitch. Of course the training of an athlete, and the preparatory training of the would-be Chela, are somewhat different; but I take the case of the athlete as an illustration of what a merely physical training can accomplish. I can attest in my own person the benefit to be derived from it, coming as I did from a consumptive family, my father dying of it at forty-five and sister at eighteen, while I am at the age of thirty, in perfect physical health, thanks to the trainings I have undergone for various amateur contests. But in the case of the would-be Chela, not only must the physical health be trained up to the highest pitch, but the moral, intellectual and spiritual man, must also be trained at the same time, and as he makes progress day by day, month by month, year by year, the Mahatmas may take him of their own accord, as a Chela, and he may find that the Rosy-Crux becomes and is not made. I think that the words of the Christian Initiate, Jesus, apply very forcibly in the case of the Chela. "Lay not up for yourself treasures upon earth, where moth and rust doth corrupt and where thieves break through and steal; but lay up treasures in heaven (or rather Karma) where neither moth nor rust doth corrupt, and where thieves do not break through and steal: For where your treasure is, there will your heart be also."

Hoping that the blessings of the Mahatmas may reach us in this far western country, and that Theosophy may spread its wings over the whole earth, I remain an humble seeker after the truth.

STANLEY B. SEXTON, F. T. S.

CHICAGO, U. S. A.

### THE GOOTY THEOSOPHICAL SOCIETY.

At Col. Olcott's instance our President, Mr. J. Sreenivasa Row, with the help of liberal sympathisers, founded here a Sanskrit school only last December. It is under the general super-

vision of the subscribers and the Managing Committee, and under the special care of the Executive Committee. The President of the latter Committee, Mr. T. Ramachandra Row, B. A., B. L., F. T. S., the Dist. Munsiff of this place, has recently donated Rs. 100 to the founding of this School. On behalf of the Gooty Theosophical Society, which has almost affiliated the said institution, I have to most thankfully congratulate the Munsiff on his liberal promise, and acknowledge the receipt of Rs. 30, contributed by Mr. T. Rajagopala Chariar, the Dy. Collector of this place. Along with these officials, we find the Vakeels co-operating in this noble cause of securing permanency to the school. Small and large contributions are equally acknowledged with thanks. The printed forms of *Appeals for Help* are being circulated amongst wealthy gentlemen in some parts of India. The said Vakeels, by their professional and personal influence, are gleaming money both in and out of Gooty. "Ask and it will be given," is their watch-word. Consequently I have to thank these men of the Bar.

The bungalow, which the Managing Committee bought for the school, is under repair. The work is briskly going on. It is intended to form therein (a) a Sanskrit School Hall; (b) a Reading Room; and (c) a School room. Now we have a few but promising boys studying Sanscrit.

Let me not lose this opportunity to note down one interesting fact. A young gentleman, who is a B. A., B. L., and a District Court Pleader, took fancy to read a few *Theosophist* Journals. Gradually he was delighted with that study—till at last after an intelligent and patient study of a few volumes, the touchstone of Theosophy turned the base metal of his once sceptical mind (pardon me for the harsh term) into the golden leaf of belief in Theosophy. He is a self-convinced, but formally uninitiated, Theosophist. What wonders cannot Theosophy, under the blessings of Mahatmas, work?

B. P. NARASIMHAIAH, F. T. S.

24th June 1884.

### ACKNOWLEDGMENT.

THOSE, who have any doubts as to the practical work done by the Theosophical Society in this country, may, with advantage, take note of the following utterance of Pandit Vuban Mohan Bidyaratna, the best *Nyaik Pandit* of Navadvip, in a public meeting held yesterday at Nababpur, Dacca. In this meeting, among others, Pandits from Benares, Navadvip, Calcutta and other places were present. Pandit Vuban Mohan (grandson of Pandit Gadadhar, the renowned commentator of Logic) said that, owing to the lectures of Colonel Olcott, thousands of Hindus were now earnestly endeavouring to revive Hinduism, rising from their lethargy, &c. The meeting was addressed by other Pandits.

RANJAN VILAS RAI CHAUDHURI, F. T. S.

### THEOSOPHY.

[TO THE EDITOR OF THE "INDIAN MIRROR."]

Sir,—At the meeting held at Ranchi, a few days ago, to hear a lecture on Theosophy, a report of which appeared in your issue of the 11th instant,\* it was asked by a gentleman of our so-called educated class what good the Mahatmas had been doing to the world. Permit me, through the medium of your much-esteemed journal, to ask the gentleman concerned, whether he has mastered all the laws which govern the visible and invisible operations of nature, and is thus in a position to judge for himself the works of those exalted personages, whose sphere of action, it has been authoritatively, repeatedly said, lies in the inner or noumenal world, which underlies or overflows, as you please, this visible phenomenal world of ours. And unless one can answer this question in the affirmative, one has no right to maintain that the supposed Masters of Occult Science can do no good to the world. I do not, however, dispute the position of the educated gentleman in regard to his objection to the third object of the Theosophical Society. He is perfectly at liberty to disbelieve in the practicability of such object, and to the existence of the Masters themselves, should such a course recommend to his mind. But these few lines are simply meant as a protest against the unfortunate attitude of some of my countrymen, who, without sufficient enquiry and on mere pretext, reject every new idea which does not suit their prejudice or predilection. While, in the present instance, this gentleman sets down all phenomena recorded in the "Occult World" as impostures, he specially refers to the unwillingness of the Mahatmas to produce a copy of the *Times* newspaper, as a proof of his assertion. But the explanations for such refusal, let me add, carry more conviction to a philosophic mind than the phenomenon itself, even if it were consented to be performed.

In this connection, I may remark that a very erroneous idea seems to prevail as to the way in which Humanity may be benefited. Western education and a material civilization have narrowed our conception, and many of us cannot think of any benefit other than that which is material in its nature. But our forefathers used to think otherwise. Material benefit was with them a matter of little importance, and many hoary-headed gentlemen of our own day might bear testimony to the fact that our ancestors led a life far more happy and comfortable than

\* Re-printed in the last month's Supplement (see pp. 96, 97).

we with our boasted civilization and proud education can aspire to live. But those days are gone by, and a so-called civilization has dragged us down to the mire of sensuality and selfishness. But unless we follow the footprints of our pious forefathers, there is no hope for the regeneration of our mother country at any day,—and neither some hundreds of thousands of miles of Railways, nor any number of proud edifices that may adorn British India, nor any bold enterprise for merchandise that may be set on foot, will ever make this degenerated land to bear the faintest resemblance to that glorious *Aryavarta*, where peace and love and contentment used to reign.

Yours, &c.,  
AN HUMBLE BRAHMIN.

## Phenomena.

I beg to place upon record certain phenomena noticed by me after Madame Blavatsky and Col. Olcott left Madras to proceed on their present European tour.

I. On the 17th February, 1884—(Madame Blavatsky and Colonel Olcott were then in Bombay)—I was favoured with a kind letter from our Master, Mahatma K. H. It was a long letter in the Mahatma's handwriting, showing me how the spread of Sanscrit literature was likely to prove advantageous to the country; directing me to assume the superintendence of the Triplicane Sanscrit School; and giving me wholesome instructions and advice as to the encouragement to be given to the school-masters and pupils, &c. The letter was handed to me personally by brothers Messrs. Damodar and Bawaji, who furnished the following particulars as to the way in which the letter reached them. That after-noon Mr. Bawaji—who was for some time writing at a certain table in the office room of the Head-quarters,—rose and approached the table at which Mr. Damodar was seated; but the latter,—acting upon the impulse which he just then had—immediately desired the former to go back to the table which he had left a few seconds before. Mr. Bawaji did as he was told; and found the above mentioned letter on the table at a place where there was no paper before. It was enclosed in a note addressed by the Mahatma K. H. to Mr. Bawaji himself, desiring him to hand over the letter to me personally—which was accordingly done; and I need hardly add that the instructions of the Mahatma have been duly followed by me. I may also add that the letter contained a reference to a certain fact about the then working of the School, of which nobody at the Head-quarters was or could be aware.

II. On the 4th March 1884—(Madame Blavatsky and Colonel Olcott were at this time on the Ocean, having left Bombay on February 20th for Marseilles)—I, owing to certain domestic afflictions, felt exceedingly miserable; could not take a morsel of food; and remained in the most wretched condition of mind all that day. But in the evening between 5 and 6 P. M. I proceeded to Adyar, in the hope of finding some consolation there; and was seated in the office-room of the Head-quarters, talking to Mr. Bawaji, without, however, mentioning to any body the circumstance of my being in an unhappy condition. In the meantime, Mr. Damodar stepped in; and I at once expressed to him my desire to see the "Shrine." He very kindly conducted me to the occult room upstairs forthwith; and unlocked the "Shrine." He and I were standing hardly five seconds looking at the Mahatma K. H.'s portrait in the "Shrine," when he, (Mr. Damodar) told me that he had orders to close the "Shrine;" and did so immediately. This course was extremely disappointing to me, who, as the reader will have perceived from the above, was sorely in need of some consolation or other at that time. But ere I could realize the pangs of this disappointment, Mr. Damodar re-opened in an instant the "Shrine" by orders. My eye immediately fell upon a letter in a Tibetan envelope in the cup in the "Shrine," which was quite empty before! I ran and took the letter, and finding that it was addressed to me by Mahatma K. H., I opened and read it. It contained very kind words conveying consolation to my aching heart; advising me to take courage; explaining how the laws of *Karma* were inevitable; and finally referring me to Mr. Damodar for further explanation of certain passages in the letter.

How my presence before his portrait attracted the instantaneous notice of the Mahatma, being thousands of miles off; how the Mahatma divined that I was miserable and was in need of comfort at his hands; how he projected his long and consoling letter from such great distance into the closed cabinet, within the twinkling of an eye; and, above all, how solicitous he, the great Mahatma, is for the well-being of mankind, and more especially of persons devoted to him,—are points which I leave to the sensible reader to consider and profit by. Enough to say that this unmistakable sign of extraordinary kindness on the part of the great Master armed me with sufficient energy to shake off the miserable and gloomy thoughts, and filled my heart with unmixed comfort and excessive joy, coupled with feelings of the sincerest gratitude to the benevolent Mahatma for this blessing.

III. Two days before the current new year's day of the Hindus (26th March 1884), I wrote a long letter to Mahatma K. H., soliciting instructions and advice in respect of certain important matters, and handed it to brother Mr. Damodar to be put in the "Shrine," at about 6-30 in the evening. And on the following day, at about 2 P. M., brother Mr. Damodar sent me a closed letter, which was in the familiar handwriting of Mahatma K. H., containing replies on all points referred to in my letter, besides valuable information on other matters which he considered necessary that I should understand. On enquiry I learnt that the aforesaid letter had fallen upon Mr. Bawaji's table during the few seconds which intervened between his leaving the table on some business and re-joining it afterwards in the office-room, the only two persons in this room, not having left their seats in the interval.

All these three phenomena, transpiring as they have done, during the absence of our Founders from Madras, speak volumes for themselves; and I record them for the benefit of my Brothers.

MADRAS,  
9th July 1884. }

P. SREENIVAS ROW.

## SPECIAL ORDERS OF 1884.

THEOSOPHICAL SOCIETY'S HEAD-QUARTERS,

PARIS, 3rd June 1884.

1. DR. FORTIN of Paris, and his associates, not having complied with the conditions required by the rules of the Society relative to the formation of new branches, the provisional charter granted upon his application is hereby cancelled, and the groups hitherto known as the "Société Scientifique des Occultistes de France" ceases to exist.

2. Members of this group who have complied with the provisions of Rule 12, and who may wish to attach themselves to any established branch, may do so by conforming to the By-laws of such Branch relating to the admission of members. Notification of such new relationships to be at once reported to the Recording Secretary of the Parent Society by the Secretaries of the Branches selected.

3. The names of the members of Dr. Fortin's group who have not complied with the conditions imposed by Rule 12, or who do not avail themselves of this privilege within thirty days from the date of this order, shall be stricken from the roll of the Society, and their diplomas cancelled.

4. The official relations of Monsieur P. G. Leymarie being of a nature to prevent his exercising the functions of President of a Branch of the Theosophical Society, the Provisional organization hitherto known as "the Société Theosophique des Spirités de France", is abolished. The members who have already signified their intention to enter the Branch presided over by Lady Caithness Duchess de Pomar, are entitled to do so upon compliance with the usual forms including acceptance in membership by that Branch. The remaining members will be registered as fellows unattached until they shall choose some Branch to unite themselves with.

By the President-Founder,  
MOHINI M. CHATTERJI,  
Private Secretary.

## Official Reports.

### THE TIRUPATTUR THEOSOPHICAL SOCIETY.

I beg to report that a Sanskrit elementary school was opened here on the 11th instant, consisting of 8 boys, of whom 7 are expected to make rapid progress in their study. As I said in my last letter, we think of appointing a teacher as soon as possible.

TIRUPATTUR, 14th June 1884. N. SREENIVASA IYER,  
Secretary.

### THE PRAYAG PSYCHIC THEOSOPHICAL SOCIETY, (ALLAHABAD).

DR. BROJENDRO NATH BANERJEE having resigned the office of Joint Secretary, Babu Beni Madhab Roy has been nominated Assistant Secretary.

### THE CHITTOOR THEOSOPHICAL SOCIETY.

I AM happy to report that a Sanskrit school was opened on the 15th June, 1884 at 9-30 A. M., in connection with our Branch. The gentry of the station was invited; and the meeting was largely attended, which surely points to the fact that we have enlisted the sympathy of the public here. The business of the day opened with an able lecture from Pandit Coopana Aiyangar on the advantages of Sanskrit study. This was followed by an equally interesting and exhaustive lectur

by Mr C. Masilamoney Moodeliar, F. T. S. Then the Theosophists and their children were initiated in the rudiments of the Sanskrit language. From the interest this movement has created in the town, it is hoped that many will be benefitted by the opportunity now afforded them for learning Sanskrit. In the evening the Pandit began to read and explain Bhagavat Gita. This will be continued every Sunday.

#### RULES AND BYE-LAWS.

The objects of the Chittur Theosophical Society are:—

- (i). To create a feeling of Universal Brotherhood.
- (ii). To encourage the study of Sanskrit and other Oriental literature and sciences.
- (iii). To cultivate as much as possible a knowledge of the occult laws of nature and the psychic powers latent in man, contributing to temperance and purity of life.

2. The affairs of the Society shall be managed by a President, a Vice-President, two Secretaries, a Treasurer and a Committee composed of seven Fellows.

3. The ordinary meetings of the Society shall be for the present held every Sunday, at the premises of the Society. The Secretary will be authorized to summon a special meeting whenever the President or the Vice-President desires him to do so, or at the request of seven members.

4. A Library shall be formed out of voluntary donations and of the surplus of monthly subscriptions, after the ordinary expenses for the support of the Society are defrayed.

5. Every member of the Branch shall pay in advance a monthly *First Class* subscription of not less than one rupee, or a *Second Class* subscription of eight annas. The managing Committee shall have the power of exempting any member from such payment.

6. The Secretary, besides a *File-book* and a *Correspondence-book*, shall keep an *Account-book* showing the receipts and disbursements of the Society; and he will show the financial condition of the Society at the first meeting of every month.

7. A Sanskrit Pandit will be engaged and paid out of a special monthly subscription to be collected from the members; and he will teach the language in Deva-Nagari characters, under the supervision of the President, Vice-President and Secretary, in the premises of the Society. Books and hours will be fixed by the managing body from time to time.

8. The Secretary will arrange for circulating periodicals and books among the members, who will keep them not more than three days each. He will be in charge of the books, periodicals and other property of the Society.

9. The connection of a member with the Branch Society shall cease, if he

(a). absents himself without a written excuse continually for three months;

(b). allows his subscription to fall in arrears for three consecutive months, or otherwise breaks the rules of this Branch.

10. If a member seriously misbehaves or infringes the rules and bye-laws of the Parent Society, his conduct shall forthwith be reported to the Head-quarters for orders.

A. RAJU,  
Secretary.

#### THE HYDERABAD (DEKKAN) THEOSOPHICAL SOCIETY.

The following gentlemen were elected as Secretaries and Treasurer:—

Mr. P. Iyaloo Naidu, to be Secretary, Captain Rughunath to be Assistant Secretary, and Mr. Hanumunth Row, to be Treasurer.

#### RULES AND BYE-LAWS.

In addition to the Rules and Bye-Laws of the Parent Society, the following have been adopted specially for this Branch:—

1. The Society shall be called and known by the name of "Hyderabad (Deccan) Theosophical Society."

2. A Managing Committee, consisting of 7 members, shall be appointed for the discharge of the ordinary work connected with the branch; five forming the quorum. The Managing Committee have power to increase their number if necessary.

3. The Managing Committee shall meet once a week or as often as it may be necessary.

4. A general meeting of all the members shall be convened on the last Thursday of every month at 8 p. m., for the purpose of formally sanctioning the work done by the Managing Committee during the period, as also for the general purposes of the Branch.

5. At the general meeting of the Branch, seven members shall form a quorum.

6. The Secretary shall be at liberty to convene weekly or fortnightly meetings at the request of any three or more members for the purpose of discussing any useful topic of social, moral, intellectual or spiritual importance.

7. Due notice shall be given by the Secretary to all the members of the Branch, of the date and place of the meeting, at least three days before the date fixed.

8. The Secretary of the Society shall keep a book for entering therein the proceedings of the general meetings and resolutions adopted at such meetings. This book will be open to inspection to any member at any time.

9. The Secretary of the Society shall be the ex-officio Secretary to the Managing Committee.

10. Any proposal which any member may have to make regarding the work of the Society shall be communicated in writing by such member to the Secretary who shall lay it before the General Meeting, and it shall then be decided by a majority whether such proposal or suggestion should be adopted or rejected.

11. All resolutions passed at the regular meetings shall be binding alike on all members present or absent at such meetings.

12. Such resolutions or amendments as are voted for by the majority present at the meetings shall be considered as resolutions duly adopted.

13. When votes are equal, the Chairman shall have the casting vote.

14. None but Fellows of the Society to be allowed at the meetings of the Branch. But persons learned or proficient in ancient sciences or philosophy, such as Yoga, though not members, may be allowed to attend, provided they are recommended by at least two members of the Society, and previous intimation given of the same to all the members through the Secretary, and provided also that no Society business is to be conducted during the presence of such outsiders at the meeting.

15. Every year during November, the annual meetings of the Branch Society shall be held, when the annual reports shall be submitted by the Managing Committee and the office-bearers for the next year elected, the accounts passed and any alterations, additions, &c., to the rules for the guidance of the Society be made; also if feasible, a sum may be spent in objects of charity in connection with the celebration of the anniversary.

16. Every member shall pay a monthly subscription of not less than 8 annas towards the formation of a General Fund to meet the general expenses of the Society; but it is optional with generous members to pay suitable monthly sums for necessary expenses. Members, unable to pay 8 annas, may be exempted from payment.

17. All payments on behalf of the Branch shall be made to the Treasurer appointed by the General Meeting.

18. The Treasurer shall keep a regular account of money received and disbursed on behalf of the Society, and shall submit the same every week for the inspection of the Managing Committee.

19. The Treasurer shall not be at liberty to spend any amount without previously obtaining the sanction in writing of the Secretary.

20. A Library consisting of useful works bearing on Theosophy, ancient Aryan Literature and Sciences, and such other works, should be formed for the use of the members of the Society, provided all the brothers of the Society give the pecuniary help for the purchase of books, &c.

21. Such Library shall be kept in the Society's Rooms in charge of the Secretary.

22. The books of the Library shall be considered to be the property of the Society.

23. Should any of the office-bearers vacate his place during the year by reason of transfer from the district or station, or any other cause, the members in General Meeting assembled shall have the right to elect another member for the vacant office.

24. Elections for office-bearers will take place once a year at the Annual Meeting assembled for the purpose.

25. Should any member by an improper or immoral conduct become an annoyance to the rest of the members or a disgrace to the Branch, and the efforts, and personal influence of other members fail to bring him back to the right path, his conduct should be brought to the notice of the Council of the Parent Society with a view to obtain instructions regarding the manner in which he should be dealt with in future.

26. It will be competent for the members assembled at a regular meeting, should the state of the funds of the Society allow it, to vote out of the same any sum or sums of money for any charitable purpose, be it for helping any individual or any local or foreign charity.

27. A book shall be kept for recording the proceedings of the Managing Committee's meetings, and such of their proceedings shall find entries therein as are to be brought to the notice of the general body of the members, which the Managing Committee decide to record therein. This book will also be open to the inspection of all members of the Society.

28. Should any person when joining the Society stipulate that his name should be kept secret, the same shall be done, provided the reasons for such a course appear satisfactory to the Parent Society.

29. The General Meeting shall have power to add to, or alter, modify or annul the above rules if found necessary.

30. Under any circumstances, if the Secretary is unable to attend the meetings or carry on the business, the Assistant Secretary will take up his place for the time being to execute the business.

HYDERABAD, }  
19th June 1884. }

DARABJE DASABHY,  
President.

### RULES AND BYE-LAWS OF THE GYANODAYA THEOSOPHICAL SOCIETY (BARA-BANKI).

IN addition to the Rules and Bye-laws of the Parent Society, the following have been adopted for the special purposes of this Branch:—

I. All members of the Branch shall cultivate and disseminate feelings of love and universal brotherhood.

II. They must live a life of temperance, purity and brotherly love.

III. They shall study Theosophical works and shall endeavour to promote the study of the ancient Aryan literature and science.

IV. They shall, individually and collectively, take an active interest in promoting and placing on permanent and sound footing the Sanscrit school in the station.

V. Every member of *this Branch* shall abstain from using publicly or privately intoxicating liquors or drugs and animal food.

VI. Every Fellow of the Society or of any of its Branches, wishing to join this Branch shall have to abide by the Rules and Bye-laws of this Branch; the admission of non-fellows being regulated by the Rules of the Parent Society.

VII. The Branch shall have a President, a Vice-President, a Secretary (also Treasurer) and a Council whose members shall for the present be four in number.

VIII. The Council shall consist of the President, the Vice-President, the Secretary and one other member. The office-bearers shall be elected annually.

IX. The Council shall be empowered to transact all ordinary business of the Branch. It may also, if unanimous, and with the sanction of the Branch, remove any of its members whose conduct and life be found inconsistent with the rules, objects and dignity of the Society. The result shall be communicated to the Parent Society for information.

X. The Council shall be in duty bound to take effectual measures to place the Branch in a position to represent itself at the annual or semi-annual conventions of the Theosophical Society, unavoidable cases being of course excepted.

XI. The Branch Society shall act up to the principles and objects of the Scientific Congress. Bye-laws and rules for the details of the working connected therewith shall be separately framed for the guidance of the Branch.

XII. Every member of the Branch shall have hung up in his house the Aryan Code of Morals to be prepared and adopted at a general meeting of the Branch.

XIII. Every Fellow of the Branch shall prudently exert all his possible might towards promoting the Permanent Fund.

XIV. In addition to the other fees and subscriptions, every member of the branch shall pay a monthly fee of (4) four annas to defray postage, stationery and printing expenses. It will, however, be optional for any member to pay more, and to any outsider to voluntarily give any donation to the Branch. Should any member be unable to pay the subscription, the Council may at its discretion exempt him. It will however be meritorious for any Fellow to pay any subscription for any indigent brother.

XV. Any member desiring to sever his connection with the Branch shall be competent to do so, provided he gives a

month's previous notice in writing, setting forth his reasons for doing so.

XVI. Members shall meet every alternate Sunday at the house of the President.

XVII. The President shall (a) preside at meetings, (b) receive applications and institute, if necessary, enquiries personally or by deputation into the qualifications of candidates for admission, and (c) be responsible for the proper working of the Branch Society.

XVIII. The President, or, with his knowledge and consent, the Secretary, or a body of at least 3 members, shall be competent to call for extraordinary meetings.

XIX. The Secretary shall keep a record of the proceedings of the Society, an account of its funds, a list of members, and carry on correspondence.

XX. In the absence of the President, the Vice-President shall take the chair. The Secretary shall be in charge of the Library.

PURMESHRI DASS,  
President.

### OBITUARY.

#### DEATH OF MR. SAMUEL WARD.

It is with deep regret that we have to announce the death of Mr. Samuel Ward, F. T. S. He was a rare and remarkable man in every way. By his success in social life he was known nearly in every part of Europe and America. Although an American by birth, he had made himself a real citizen of the world by his large-heartedness. His genial manners and his kind courtesy were warmly appreciated wherever he went, and won for him the affectionate title of "Uncle Sam" from the numerous body of his friends and acquaintances. During the first part of his life, Mr. Ward was a man of the world in the best sense of that much abused phrase. Comparatively late in life, when his mind was attracted by spiritual matters, he threw himself into the subject with that energy and singleness of purpose, which secured his success in other departments of his career. His disinterested endeavours in the cause of Theosophy were of great value. He brought the subject into prominence among the refined and cultivated classes of society, in which he moved; and created a great and wide interest in our cause by a judicious and extensive distribution of *Esoteric Buddhism* at his own expense. The remarkably cordial greeting given to Col. Olcott in English Society and on the Continent is in some measure due to the exertions of Mr. Ward to smooth the path. Our valued friend and colleague has passed away at a ripe old age, but the melancholy event is mourned by his surviving fellow-workers. We cannot do better than close this inadequate recognition of his work with the following tribute to his memory by M. A. (Oxon) in *Light*:—

I record, with much sorrow, the death of Sam, Ward, the familiar "Uncle Sam" of a very large circle of friends. His genial face and cheery voice will be long and widely missed. The Press of this country has borne testimony to his influence, and to the affectionate respect which he inspired on both sides of the Atlantic. He was cosmopolitan in his tastes and sympathies—a man of the world, in the best sense of that much abused term. But while the public journals have testified to this, they have unaccountably overlooked the fact that Mr. Ward was an old and experienced Spiritualist; and that of late years he had devoted much attention to the claims of Theosophy, being a member of the London Lodge of the Theosophical Society. It is no secret that he—Uncle Bellingham of the book—inspired "Mr. Isaacs," the successful novel of Mr. Marion Crawford. He was, indeed, a diligent student of the occult in all its phases. The very last time I conversed with him, he spoke much on these matters, and invited me to a seance which he was about to hold at his chambers in Piccadilly. He died at Pegli, after a somewhat long illness; and many friends will join in a sincere and affectionate tribute to the memory of a rare man.

The Secretary of the Bombay Theosophical Society reports the death of Mr. Krishnanath Govindnath Kothare, one of the oldest members of the Branch, who always "took a living interest in the Theosophical cause."

# "THE SECRET DOCTRINE,"

A NEW VERSION OF "ISIS UNVEILED,"

WITH A NEW ARRANGEMENT OF THE MATTER, LARGE AND IMPORTANT ADDITIONS, AND COPIOUS NOTES AND COMMENTARIES,

BY

H. P. BLAVATSKY,

*Corresponding Secretary of the Theosophical Society.*

ASSISTED BY

T. SUBBA ROW GARU, B. A., B. L., F. T. S.,

*Councillor of the Theosophical Society and President of its Madras Branch.*

## PUBLISHER'S NOTICE.

NUMEROUS and urgent requests have come from all parts of India, to adopt some plan for bringing the matter contained in "Isis Unveiled," within the reach of those who could not afford to purchase so expensive a work at one time. On the other hand, many, finding the outlines of the doctrine given too hazy, clamoured for "more light," and necessarily misunderstanding the teaching, have erroneously supposed it to be contradictory to later revelations, which in not a few cases, have been entirely misconceived. The author, therefore, under the advice of friends, proposes to issue the work in a better and clearer form, in monthly parts. All that is important in "Isis" for a thorough comprehension of the occult and other philosophical subjects treated of, will be retained, but with such a rearrangement of the text as to group together as closely as possible the materials relating to any given subject. Thus will be avoided needless repetitions, and the scattering of materials of a cognate character throughout the two volumes. Much additional information upon occult subjects, which it was not desirable to put before the public at the first appearance of the work, but for which the way has been prepared by the intervening eight years, and especially by the publication of "The Occult World" and "Esoteric Buddhism" and other Theosophical works, will now be given. Hints will also be found throwing light on many of the hitherto misunderstood teachings found in the said works. A complete Index and a Table of Contents will be compiled. It is intended that each Part shall comprise seventy-seven pages in Royal 8vo. (or twenty-five pages more than every 24th part of the original work,) to be printed on good paper and in clear type, and be completed in about two years. The rates of subscription to be as follow:—

	Indian.	Foreign countries.	
		£	s.
If paid Monthly ... Rs.	1 4 0	0	3
" " Quarterly ... "	3 0 0	0	8
" " Half yearly... "	6 0 0	0	16
" " Yearly ... "	10 0 0	1	7

Subscriptions payable invariably in advance, and no name entered on the list nor Part forwarded until the money is in hand. All applications to be made and sums remitted to the "Manager, Theosophist Office, Adyar (Madras), India;" at which office money orders must be made payable and always in his favour. In making remittances it should be noted that no other amount should on any account be included in the drafts or money orders, except that intended for this work. Should nothing unforeseen happen, and should a sufficient number of subscribers be registered, the first Part will be issued on August 15th.

## REPORT OF THE EIGHTH ANNIVERSARY OF THE THEOSOPHICAL SOCIETY.

AT which were present Delegates from Branches in America, England, Ceylon and all parts of India from North to South and East to West.

Price four annas per copy; postage and packing charges:— India, one anna; Ceylon, three annas; all other Foreign countries, four annas.

Apply, with remittance, to the Manager of the THEOSOPHIST, Adyar, (Madras).

## OCCULT WORLD.

(Third Edition)

BY

A. P. SINNETT,

(Author of "Esoteric Buddhism.")

Cloth, Rs. 3-8-0.

APPLY TO THE MANAGER, "THEOSOPHIST" OFFICE.

MESSRS. NICHOLAS AND Co. have made a splendid photograph of a group comprising eighty-three Delegates attending the Eighth Anniversary celebration of the Theosophical Society, together with a view of the portico of the Adyar Head-quarters Building. Every portrait is excellent. Copies may be had at Rs. 2-8 (6s.) each, inclusive of packing and postage. Fellows of the Theosophical Society may also obtain cabinet size photos of Madame Blavatsky, Colonel Olcott and a group consisting of Madame Blavatsky, Messrs. Subba Row and Dharbagiri Nath at Rs. 1-12 (4s.) per copy, inclusive of packing and postage.

APPLY TO THE MANAGER OF THE *Theosophist*.

THE 108 UPANISHADS in original Sanskrit (in Telugu characters) with an abstract of the same by Siddhanta Subramania Sastrial, together with Mahavakia Ratnavali, Brahma Sutras, and a short abstract of the Philosophy expounded therein and Bhagavat Gita—edited by Siddhanta Subramania Sastrial. Price Rs. 8-6 per copy, including postage.

Apply to the Manager, Theosophist Office, Adyar, Madras.

S. Subramania Sastrial, Kanareso Pandit, Presidency College, Krishnama Naidu's Agraharam, Black Town, or to Mulukutla Venkatappiah, 170 Mint Street, Madras.

## PEOPLE FROM THE OTHER WORLD.

(CHEAP EDITION—PRICE RUPEES TWO.)

THE publisher gives notice that only fifty-two copies of this book, wherein Col. Olcott gives an account of his wonderful experiments in spiritualistic phenomena—now remain in stock. After those are exhausted, no more copies can be had, as the work will then be out of print.

TRANSLATION (in English) of *Isavasyopanishad* including its commentary by Srimat Sankarā Charya, price four annas, exclusive of postage. Apply to the Manager, *Theosophist* Office.

## QUALIFICATIONS FOR CHELASHIP.

A PAPER READ BY BABU MOHINI M. CHATTERJEE, BEFORE  
THE *London Lodge T. S.*

THE power of the Adepts over forces of nature, not generally recognised, has been enlarged upon on various occasions, but no account of them can possibly be satisfactory without bringing into prominence their goodness and their solicitude for the welfare of the race, which an ordinary man can no more comprehend than the Polynesian savage measure the intellectual height of a Newton or a Galileo.

Surprise is often expressed that the philanthropy of the Mahatmas does not induce them to abandon their seclusion and work for men, among men. But the reason for such apparently strange conduct on the part of these god-like men is not very far to seek. The productive power of our energies varies in accordance with the plane on which they operate. A bricklayer labouring from sunrise to sunset produces work which, when estimated in money, will be found to be but a small fraction of the money-value of an hour's work by a man of science. The difference in the effects generated by a given quantity of energy on the physical and intellectual planes is thus apparent. Those who are acquainted with the laws of spiritual dynamics know that the work produced by a given amount of energy on the intellectual plane is in its turn immeasurably less than that produced by the same quantity of energy acting on the plane of spirit—the highest principle in man, according to the occult doctrine. It is more unreasonable, therefore, to expect an Adept to work with us on the ordinary plane than it would be to suggest to Sir William Thompson to turn shoemaker.

The value of a scientific discovery as an intellectual triumph can be best estimated by a proper study of the various steps which have led up to it. Similarly, the excellence achieved by an Adept can only be appreciated, though in a very rough and incomplete manner no doubt, by a careful consideration of his preliminary training.

According to the most authoritative treatises on that occult science of which the Adept is a master, verified by the experience of its living students, none are admitted into the inner sanctuary for instruction until they reach a certain stage of spiritual development; characterised by the attainment of what, in the Brahmanical books, are called the four "sadhana's" or accomplishments.

The first "accomplishment," which a neophyte must have, is the right knowledge of the real and the unreal. The object to be attained by the help of the "Great Science," as it is called, being the realisation of the true, and Adeptship being but the mark of a certain stage of this realisation, it is clear that the first step to be taken is to gain an intellectual apprehension of what the truth is. But what is the truth? It will not do for the neophyte to ask the question like the jesting proconsul, and refuse to wait for the answer. Had Pilate asked the question in Sanskrit he might have been answered out of his own mouth. For the Sanskrit word

itself offers a clue to the nature of truth. In that language truth and reality bear the same name, and reality is defined to be that which is unaffected by time, or, in the quaint phraseology of the original, remains witness of the three divisions of time—the past, the present, and the future. The first accomplishment, therefore, consists in an intimate intellectual conviction of the fact that all and everything which appears to have an existence separate from Parabrahm is merely illusion (Maya). Hence, it is clear that at the present stage of the theosophical movement the duty that lies upon the Society and all its members is to disseminate the knowledge of the Esoteric Doctrine, the true philosophy of the real and the unreal, as that alone is capable of laying the foundation of any progress whatsoever.

The second accomplishment marks the next step on the path, and is the permanent effect produced on the mind by the theoretical knowledge, which forms the preceding accomplishment. When the neophyte has once grasped the unreal character of the objects around him, he ceases to crave for them, and is thus prepared to acquire the second accomplishment, which is a perfect indifference to the enjoyment of the fruit of one's actions, both here and hereafter.

Exoteric students fall into a grievous error by their failure to catch the true spirit of the injunction against acting under the impulse of desire. They erroneously suppose that the best preparation for spiritual life is to forcibly repress all outward expression of desire, entirely losing sight of the fact that even the most rigid abstinence from physical acts does not produce inactivity on the higher planes of spiritual or mental existence. Sankaracharya, in his commentaries on the Bhagavat Gita, one of the most authoritative of the Brahminical sacred writings, says that such a conclusion is simply delusive. A hasty supposition might here be made that these considerations will have the effect of sanctioning persistence in evil, but when the desire for improvement is constantly present in the mind, and the character of the evil thoroughly realised, each failure to harmonise the inward with the outward nature will, by the revulsion of feeling thus produced, strengthen the determination to such an extent that the evil desire will be speedily crushed. This is why Eliphas Levi so vehemently denounces the institution of forced celibacy among the Romish priests. The personality of a man at any one moment is the result of all his previous acts, thoughts, and emotions, the energy of which constantly inclines the mind to act in a particular way. All attempts, therefore, to cure this mental bias by repressing its expression on the outer plane is as hurtful as to throw back into the circulation unhealthy blood, seeking a natural outlet. The internal desire is always forging fresh links in the chain of material existence, even though denied outward manifestation. The only way to free oneself from the bonds of Karma, producing birth and death, is to let the stored-up energy exhaust itself merely as a portion of the great cosmic energy, and not to colour it with personality by referring it to self. The Bhagavat Gita itself speaks on this subject with no uncertain sound. The great teacher Krishna reproves his pupil Arjuna for having expressed a disinclination to perform the duties pertaining to his sphere of life. The reason is perfectly plain: in reference to the great reality everything of this world is unreal; therefore, to renounce the duties entailed upon us by our birth for something equally unreal only accentuates the ignorance which makes the unreal appear as the real. The wisest course, suggested by

Krishna, is that Arjuna should perform all his duties unselfishly. "Thy right is only to the act," says the teacher, "it ends with the performance of the act and never extends to the result." We must perform our duty for its own sake and never allow the mind to dwell on the fruit of our actions, either with pleasure or with pain. Purified from the taint of selfishness, the act passes by like water over the lotus-leaf, without wetting it. But if the act is done as a means to the attainment of a personal end, the mind acquires a tendency to repeat the act, and thus necessitates further incarnations to exhaust that tendency.

From the above considerations it is abundantly clear that occultism enjoins upon its votaries the necessity of an ardent and sleepless desire for the performance of duty, the sphere of which is enlarged by the first accomplishment, which requires a thorough recognition of the unity of the individual with the all. It is not enough to have a sentimental perception of this great truth, but it must be realised in every act of life. The student, therefore, to begin with, must do everything in his power to benefit all on the ordinary physical plane, transferring his activity, however, to the higher intellectual and spiritual planes as his development proceeds.

This leads us to the consideration of the third accomplishment, which is the acquisition of the "six qualifications," in the order they are treated of here. The first of them is called in Sanskrit "Sama;" it consists in obtaining perfect mastery over the mind (the seat of emotions and desires), and in forcing it to act in subordination to the intellect, which has already been purified and strengthened in attaining the two degrees of development already dwelt upon. This done, the mind is thoroughly cleansed of all evil and foolish desires.

The injunction to chasten our minds before purifying our acts might at first sight appear strange, but the practical utility of the course laid down will be obvious on reflection. We have already seen how varying effects are produced by a fixed amount of energy, according to the plane on which it is expended, and certainly the plane of the mind is superior to the plane of our senses. In the next place, forced abstinence from physical evil goes but very little way towards the evolution of that energy which alone can give us the power of approaching the truth. Our thoughts, governed under ordinary circumstances by the law of association, make us contemplate incidents in our past life and thus produce as much mental disturbance and draw as much on our mental energy as if we had repeated the acts in question many times over. "Sama" then is really the breaking-up of the law of the association of ideas, which enslaves our imagination; when our imagination is purified, the chief difficulty is removed.

The next qualification, the complete mastery over our bodily acts ("Dama" in Sanskrit) follows, as a necessary consequence, from the one already discussed, and does not require much explanation.

The third qualification, known by the Brahmins as "Uparati," is the renunciation of all formal religion and the power of contemplating objects without being in the least disturbed in the performance of the great task one has set before oneself. What is here expected of the aspirant for spiritual knowledge is that he should not allow his sympathies and usefulness to be narrowed by the domination of any particular ecclesiastical system, and that his renunciation of worldly objects should not proceed merely from an incapacity to appreciate their value. When this state is reached, danger from temptation is removed. They alone, the Hindu poet says, are possessed of true fortitude, who preserve the equanimity of their minds in the presence of temptation.

Fourth in order comes the cessation of desire and a constant readiness to part with every thing in the world (Titiksha). The typical illustration of this, given in our mystical literature, is the absence of resentment of wrong. When this qualification is completely attained, there arises in the mind a perennial spring of cheerfulness, washing away every trace of solicitude and care.

Then is acquired the qualification called Samadhana, which renders the student constitutionally incapable of deviating from the right path. In one sense this qualification is the complement of the third as given above. First, all egotistical motives, tempting the man to travel out of his chosen path, lose their hold over him, and finally he perfects himself to such an extent that, at the call of duty, he can unhesitatingly engage in any worldly occupation with the certainty of returning to his habitual life after completing his self-imposed task.

One other qualification is necessary to crown the neophyte's work, and that is an implicit confidence in his master's power to teach and his own power to learn (Sradha). The importance of this qualification is liable to be misunderstood. An unswerving confidence in the master is not required as a means to build up a system of priestcraft, but for an entirely different reason. It will perhaps be readily granted that the capacity for receiving truth is not the same in every mind. There exists a saturation-point for truth in the human mind, as there is one for aqueous vapour in the atmosphere. When that point is reached in any mind, fresh truth becomes to it undistinguishable from falsehood. Truth must by slow degrees grow in our minds, and a strict injunction is laid down in the Bhagavat Gita against "unsettling the faith of the multitude" by a too sudden revelation of esoteric knowledge. At the same time it must be remembered that no man can be expected to seek after a thing, the reality of which is improbable; the dream-land of an opium-eater will never be a subject of exploration to any one else. The truth perceived by the higher faculties of the Adepts cannot be proved to one who has not developed those faculties, otherwise than by showing its consistency with known truths and by the assertion of those who claim to know. The sanction of a competent authority is a sufficient guarantee that the investigation will not be fruitless. But to accept any authority as final, and to dispense with the necessity of independent investigation is destructive of all progress. Nothing, in fact, should be taken upon blind, unquestioning faith. Indeed, the Eastern sages go so far as to say that to rely solely on the authority of even the Scriptures is sinful. The wisdom of the course actually followed is almost self-evident. Reason is the immediate perception of the fact that the eternal alone is true, and reasoning is the attempt to trace the existence of a thing all through the scale of time; the longer the period over which this operation extends the more complete and satisfactory is the reasoning considered to be. But the moment any fact of knowledge is realised on the plane of eternity, reason becomes changed into consciousness—the son is merged in the father, as the Christian mystic would say. Why then, it may be asked, should confidence in the teaching of the master be a requisite qualification at all? The reply lies on the surface. No one takes the trouble to inquire about what he does not believe to be true. Such confidence in no way demands surrender of reason. The second part of this qualification, the confidence in one's own power to learn, is an indispensable basis of all endeavours to progress. The poet uttered a deeper truth than he was aware of, when he sang:

"Yes, self-abasement leads the way  
To villain bonds and despot's sway."

The moment a man thoroughly believes himself incapable of realising the highest ideal he can conceive of, he becomes so; the conviction of weakness, that apparently supports him, really robs him of his strength: none aspire for what they consider absolutely beyond their reach. Occultism teaches us that infinite perfection is the heritage of man. He must not blaspheme against his innermost divine self, the Augoeides of the Greeks and the Atma of the Brahmins, by self-abasement, for that would be the unpardonable sin, the sin against the Holy Ghost. Christian doctors have tried in vain to identify this particular sin, the deadliest of all; its true significance lies far beyond the narrow horizon of their theology.

The last accomplishment required is an intense desire for liberation from conditioned existence and for transformation into the One Life (mumukshatva.) It may be thought at first sight that this qualification is a mere redundancy, being practically involved in the second. But such a supposition would be as erroneous as to conceive Nirvana as the annihilation of all life. The second accomplishment is absence of desire for life as a means of selfish enjoyment; while the fourth is a positive and intense desire for a kind of life of which none but those, who have attained the first three accomplishments, can form any adequate conception. All that need here be stated is, that the neophyte is expected to know the real nature of his Ego and to have a fixed determination to retain that knowledge permanently and thus get rid of the body, created by allowing the notion of "I" to fasten itself upon an illusory object.

We shall now pass to the consideration of the minimum amount of these accomplishments indispensable to a successful study of occultism. If the desire for liberation, which

constitutes the last accomplishment, is only moderately strong, but the second, indifference to the fruits of one's action, is fully developed and the six qualifications well marked, success is attained by the help of the Master, who moulds the future incarnations of the pupil and smooths his path to Adeptship. But if all the accomplishments are equally strong, Adeptship is reached by the pupil in the same incarnation. Without the second and fourth accomplishments, however, the six qualifications "water but the desert." In recent Theosophical publications two classes of the Mabatma's pupils are mentioned—accepted and probationary pupils (chelas). The first class consists of those who have acquired the four accomplishments up to a certain point and are being practically trained for Adeptship in this life; to the other class belong such pupils as are qualifying themselves, under the guidance of their Masters, for acceptance.

A few words may here be said regarding those who study occultism without any intention of aspiring for regular chelaship. It is evident that by theoretical study of the Esoteric Doctrine the first of the four accomplishments can be achieved; the effect of this in regulating a person's next incarnation cannot be overestimated. The spiritual energy thus generated will cause him to be born under conditions favourable to the acquirement of the other qualifications and to spiritual progress in general.

One of the greatest of India's occult teachers says on this point that a theoretical study of the philosophy, though unaccompanied by the requisite accomplishments, produces more merit than the performance of all the duties enjoined by the formalities of religion eighty times over.

### THE DANGERS OF BLACK MAGIC.

AN esteemed Swedish member of our Society sends a translation of a very striking article in the *Sydvenska Dogbladet Snällposten*, of July 2nd, contributed by its Paris correspondent. In giving it place in these pages, we take the opportunity it affords to point the moral which the startling narrative teaches. It would be difficult to imagine a clearer proof of the wisdom of keeping secret the science of the Esoteric Doctrine, save from those whose moral fitness has been amply tested. It is here shown beyond dispute that a mesmeric subject may be compelled by the mere whispered command of his mesmeriser, given him while asleep and physically unconscious, to commit any awful crime. The two persons, subject and mesmeriser, are to each other relatively negative and positive—passive and active. The one receives, the other imparts a psychic impulse. This is a hidden impulse, a resistless predisposition, a germ of future action, which lies lurking deep down to the region of sub-consciousness, unsuspected by the victim until it bursts out into action at the appointed instant. Then, his usual self-command, his conscientious scruples, his virtuous habits of life, lost in the mad tumult of the crisis, the unhappy victim robs, rapes, forges, even murders perhaps, without apparent cause and to the bewilderment of his family and most intimate friends. People talk glibly about "the springs of human action," but what do they know of them? How many of the offences against good morals and the well-being of Society have been committed by persons perfectly innocent of criminal intent, persons who were absolutely mesmerised by the powerful evil will of third parties—their neighbour, relative, friend, casual acquaintance, nay, even by some magnetically positive stranger who has brushed against them in the street, sat with them in the same room, or been brought into momentary proximity otherwise? A fine network of psychic influences weaves in all together; and in any given community or human group the aggregate moral tone of the whole insensibly saturates the being of the more sensitive ones, and they may equally well be converted artificially into criminals as into saints. In nine cases out of ten, "fallen women" are mesmerically intoxicated and psychically paralyzed before falling a prey to their seducers. Not long ago a case of this abhorrent nature was judicially tried before a French tribunal, and the mesmeriser who had thus ruined a 'subject' sent to the galleys. If Occult

Science were as easy to learn as Chemistry or any other branch of Physical Science, such crimes would be of daily occurrence. No father's life would be safe from the sorcery of a wicked son who longed to get hold of his money, no fair maiden's virtue from the wicked desires of the vicious libertine. The would-be assassin must now risk discovery in buying his weapon or his poison, but the sorcerer, who knows and can wield the mesmeric power effectively, can sit in his own room and send at his victim a deadly current through the *akasa*, which kills and leaves no trace. This has been dwelt upon before in these columns and elsewhere, but it is only in the face of such experiments as those ascribed to M. Liegeois, that the friendly warning acquires a terrible significance. The student of mesmerism cannot too vividly realize that the potency of the will may be used to injure and destroy as easily as to comfort and bless. There have been at all times the sorcerer, or practitioner of Black Magic, as well as the adept, or practitioner of White Magic. One is the enemy, the other the benefactor of humanity. The Chela of the "Good Law" is taught first to abstain from doing evil, next to extinguish the desire to do it, then to develop in himself the ardent predisposition to do and love to do the opposite. Then only can he be entrusted with these secrets of life and death and these transcendent psychic powers.

Prof. Liegeois has thrown by his experiments a strong light upon the question of "spiritual mediumship," and corroborated the opinion of such excellent authorities as "M. A. (Oxou)" and others, that indiscriminate public seances are most dangerous to the 'psychic,' besides being very unsatisfactory to the investigator. We can easily comprehend, in view of this fresh discovery of thought-transference, how perilous to the moral nature of the medium is the mesmeric aura of bad visitors of either sex. Once more our pity is excited for these victims to an insatiable and ignorant thirst for marvels and for news from the dead. A notorious case—that of Mrs. P.—a popular medium in America, thirty years ago: she was in appearance a refined, fair-faced woman, and in her ordinary state her conversation was blameless. But "under the influence" of her "guides," that is, the supposed spirits which got possession of her—she was transformed into a foul-mouthed drab, horribly profane and revoltingly indecent in behaviour. How many such martyrs to a sensitive organism there have been in all countries and ages, it is impossible for any man to compute. The lesson for us to take to heart is that the perfect shield and safeguard against every such danger is to eschew evil thoughts and desires, to cleanse the heart, and to get virtue as a positive not a negative quality in oneself. "*Etain Buddhannam Sussanain*—such is the doctrine of all the Buddhas." And it is the eternal law of nature.

H. S. OLCOTT.

The following is the article above referred to:—

"Paris is now under the influence of a new epidemic, a most wonderful discovery in the supernatural line. Perhaps it is intended to show Mr. Sumangala, the great Hindu Prophet, who is now on his way to Europe to convert Christians to the only road to salvation and faith, namely, the Theosophical teachings, that we in Paris are as well versed in the secret sciences as he and his disciples of the secret Himalayan Grotto. At any rate we march with a terrific speed, and an unfortunate individual with an ordinary head has difficulty in following the course. Scarcely has thought-reading taken the Seine capital by storm, when one is startled with the news that Mr. Cumberland's experiments are not to be compared to the wonders to which science has just arrived. To find a box of matches in a stranger's pocket or to go out of the Hotel Continental and to seek and find a pin in one of the trees in the Tuileries Gardens, or to fetch a book thought of by Alexandre Dumas out of his library, can altogether be a pleasant and amusing way of passing the time, but it is still an innocent child's play compared to the last new wonderful triumph over the supernatural which Mr. Liegeois can achieve. He takes a young man, magnetises him, and when asleep whispers to him that on such and such a day at a certain hour, he shall go to such a place and do such a thing. The young man wakes, knows

nothing, but in a week, a month or three months afterwards, he performs in a waking condition and with complete consciousness the order given, even were it to be to split open the head of his best friend, or to mix arsenic in the coffee of his betrothed.

Why he does it, he cannot tell, but he is obliged to do it, he cannot do otherwise, a secret force compels him to perform the act. This is something more than thought-reading, it is mystical, and so mystical that it causes the hair to raise itself on the heads of the most sceptical. And this wonder is performed without any conjuring, it is simply an advance on the path of hypnotism. There is no cheating, and experiments have taken place before the most distinguished men of science in France. M. Liegeois is a Professor at Nancy, and has lately before the Academy of Moral and Political Sciences given an account of his new discovery, and persons like Dr. Charkot, Bernheim Luzz, and others belonging to the medical faculty, have wondered over his experiments, and for more than one reason can one feel bewildered at the thought of them. That a strong magnetiser can compel his subject in the magnetic sleep to go and come where he will, to read sealed letters, and such like—we have all seen and have become accustomed to the phenomenon, but Mr. Liegeois shows it to us in another form. He says that those who find themselves in the somnambulistic state can receive orders to commit crimes, several hours, several days, even several months afterwards, in their waking state. And he shows an experiment by magnetising a policeman (a strong powerful man, just to show that he has the same power over all). He causes him to sleep and then says to him, "When you are awake you must take this piece of wood which is upon the table, it is a dagger, and go out into the hospital garden and stand before the fourth tree in the middle alley, it is the gardener. You must become mad and thrust this dagger into his breast, and when you have done that you must come back and tell us what you have done." The order was obeyed, when the soldier awoke, he went immediately to the table, took the piece of wood, and sought for an excuse to go out. No attention was paid to him outwardly, but all his movements were watched through the window. He went carefully into the garden, looked around him to see that he was alone, and then rushed forward and thrust the supposed dagger through the tree. For a moment he looked as if horror struck with his act, then rushed into the consultation-room, screaming out that he must be arrested, for he was a murderer and had killed an innocent person who had done him no harm. On being questioned why he had done so, his only reply was that he had felt compelled to act as he had done against his own wish, a sudden impulse which he could not conquer. Many such experiments have been performed by Mr. Liegeois, and he has convinced himself that it is not necessary for the order to be obeyed immediately the subject awakes, that a long space of time may intervene, even to three months. The complete passivity and obedience of his subjects has caused him to make other experiments. He has obliged the lame to dance, even when awake; and one most extraordinary case was that of a dumb person who received an order to make a speech and made it. Science will probably derive benefit from this discovery and in a double manner. It gives a scientific explanation of the marvels both ancient and modern with which Theosophists and Buddhists astonish the world, and the medical faculty should practically make use of this discovery as a means of curing their patients.

There is only one more step to take, and that perhaps is already taken, as Mr. Liegeois has found out the means of forcing any one, even the kindest and most peaceable man in the world, to perform a crime; this side of the question has for the moment caused much uneasiness in Paris. And this on good ground. What fearful consequences can follow this discovery! A new weapon is given to the underground society of Nihilists, Fenians, black hands and red republicans against the world at large. First dynamite, and now murders. In this way science makes them invincible. They only require to magnetise and put half a town to sleep, and then give them the order to kill the other half a fortnight afterwards, which will quietly give them time to go to another country out of the reach of vengeance and justice. With all honour for modern science, we must confess that it occasionally plays us unpleasant tricks."

#### CITATIONS FROM THE TEACHINGS OF GAUTAMA BUDDHA.

(From the "Dhammapada" or the "Path of Virtue.")

ALL that we are is the result of what we have thought; it is made up of our thoughts. If a man speaks or acts with an evil thought, pain follows, like a shadow that never leaves him.

If a man does what is good, let him do it again; let him not delight in sin; pain is the outcome of evil.

Let us live happily, then, not hating those who hate us! Let us dwell free from hatred among men who hate us!

Health is the greatest of gifts, contentedness the best riches; trust is the best of relatives; Nirvâna, the highest happiness.

He, who walks in the company of fools, suffers a long way; company with fools, as with an enemy, is always painful; company with the wise is pleasure, like meeting with kinsfolk.

Therefore, one ought to follow the wise, the intelligent, the learned, the much-enduring, the dutiful, the elect; one ought to follow a good and wise man, as the moon follows the path of the stars.

He who does not rise when it is time to rise, who, though young and strong, is full of sloth, whose will and thoughts are weak, that lazy and idle man will never find the way to knowledge.

He who, by causing pain to others, wishes to obtain pleasure himself, he, entangled in the bonds of hatred, will never be free from hatred.

The disciples of Gautama (Buddha) are always well awake, and their thoughts day and night are always set on Buddha.

The hard parting, the hard living alone, the uninhabitable houses, are painful; painful is the company with men who are not our equals.

Good people shine from afar, like the snowy mountains; bad people are not seen, like arrows shot by night.

He who, without ceasing, practises the duty of eating alone and sleeping alone, he, subduing himself, alone will rejoice in the destruction of all desires, as if living in a forest.

He who says what is not, will suffer; he also who, having done a thing, says, "I have not done it." After death both are equal; they are men with evil deeds in the next world.

Four things does a reckless man gain who covets his neighbour's wife:—a bad reputation; an uncomfortable bed; thirdly, punishment; and lastly, suffering.

Like a well-guarded frontier fort, with defences within and without, so let a man guard himself. Not a moment should escape, for they who allow the right moment to pass suffer pain.

They who are ashamed of what they ought not to be ashamed of, such men, embracing false doctrines, enter the evil path.

He who controls his mouth, who speaks wisely and calmly, who teaches the meaning and the Law, his word is sweet.

As a tree is firm as long as its root is safe, and grows again even though it has been cut down, thus, unless the yearnings of desire are destroyed, this pain (of life) will return again and again.

He whose desire for pleasure runs strong in the thirty-six channels, the waves will carry away that misguided man, namely, his desires which are set on passion.

The channels run everywhere, the creeper (of passion) stands sprouting; if you see the creeper springing up, cut its root by means of knowledge.

Wise people do not call that a strong fetter which is made of iron, wood, or hemp; far stronger is the care for precious stones and rings, for sons and a wife.

That fetter do wise people call strong which drags down, yields, but is difficult to undo; after having cut this at last, people enter upon their pilgrimage, free from cares, and leaving desires and pleasures behind.

Let a man leave anger, let him forsake pride, let him overcome all bondage! No sufferings befall the man who is not attached to either body or soul, and who calls nothing his own.

He who holds back rising anger like a rolling chariot, him I call a real driver; other people are but holding the reins.

Speak the truth, do not yield to anger; give, if thou art asked, from the little thou hast; by those steps thou wilt go near the gods.

He whom no desire with its snares and poisons can lead astray, by what path can you lead him, the Awakened, the Omniscient, into a wrong path?

Even the gods envy those who are awakened and not forgetful, who are given to meditation, who are wise, and who delight in the repose of retirement.

Hard is the conception of men, hard is the life of mortals, hard is the hearing of the True Law, hard is the birth of the Awakened (the attainment of Buddhahood).

Not to commit any sin; to do good, and to purify one's mind—that is the teaching of the Awakened.

The Awakened call patience the highest penance, long suffering the highest Nirvâna; for he is not an anchorite who strikes others, he is not an ascetic (Shramna) who insults others,

Not to blame, not to strike, to live restrained under the law, to be moderate in eating, to sleep and eat alone, and to dwell on the highest thoughts—this is the teaching of the Awakened.

Men driven by fear go to many a refuge—to mountains and forests, to groves and sacred trees.

But that is not a safe refuge, that is not the best refuge; a man is not delivered from all pains after having gone to that refuge.

He who takes refuge with Buddha, the Law, and the assembly; he who, with clear understanding, sees the four holy truths:—namely, pain, the origin of pain, the destruction of pain, and the eight-fold holy way that leads to the quieting of pain—

That is the safe refuge, that is the best refuge; having gone to that refuge, a man is delivered from all pain.

A supernatural person is not easily found; he is not born every where. Wherever such a sage is born, that race prospers.

Happy is the arising of the Awakened, happy is the teaching of the True Law, happy is the peace of the Church, happy is the devotion of those who are at peace.

He who lives looking for pleasures only, his senses uncontrolled, immoderate in his enjoyments, idle and weak, Māra (the tempter) will certainly overcome him, as the wind throws down a weak tree.

As rain does not break through a well thatched house, passion will not break through a well-reflecting mind.

The virtuous man is happy in this world, and he is happy in the next; he is happy in both. He is happy when he thinks of the good he has done; he is still more happy when going on the good path.

The thoughtless man, even if he can recite a large portion (of the law), but is not a doer of it, has no part in the priesthood, but is like a cowherd counting the cows of others.

Reflection is the path to immortality; thoughtlessness, the path of death. Those who reflect do not die; those who are thoughtless are as if dead already.

Follow not after vanity, nor after the enjoyment of love and lust! He, who reflects and meditates, obtains ample joy.

Not a mother, not a father, will do so much, nor any other relative; a well-directed mind will do us greater service.

He, who knows that his body is like froth and has learnt that it is as unsubstantial as a mirage, will break the flower-pointed arrow of Māra, and never see the King of Death.

Death carries off a man who is gathering flowers, and whose mind is distracted, as a flood carries off a sleeping village.

Hatred does not cease by hatred at any time; hatred ceases by love; this is an old rule.

What is the use of platted hair, O fool! what of the raiment of goatskins? Within thee there is ravening, but the outside thou makest clean.

He, whose evil deeds are covered by good deeds, brightens up this world like the moon when she rises from behind the clouds.

As the bee collects honey and departs without injuring the flower, so let the sage dwell on earth.

Let no man think lightly of good, saying in his heart, "It will not benefit me." Even by the falling of a water-drop the water-pot is filled.

Long is the night to him who is awake; long is a mile to him who is tired; long is life to the foolish, who does not know the true law.

If a traveller does not meet with one who is his better, or equal, let him firmly keep to his solitary journey; there is no companionship with a fool.

If any intelligent man be associated for one minute only with a wise man, he will soon perceive the truth.

Fools of little understanding have themselves for their greatest enemies; for they do deeds which must bear bitter fruit.

If you see an intelligent man who tells you where true treasures are to be found, who shows what is to be avoided, and who administers reproof, follow that wise man; it will be better, not worse, for those who follow him.

There is no suffering for him who has abandoned grief, and finished his journey; who has freed himself from all desires, and thrown off all fetters.

Let a man overcome anger by love, evil by good, the greedy by liberality, the liar by truth.

Some people are born again; those who are free from all worldly desires enter Nirvana.

All men tremble at punishment; all men fear death; remember that you are like unto them, and do not kill, nor cause slaughter.

He, who for his own sake punishes or kills beings longing for life and happiness, will not find happiness after death.

Do not speak harshly to any body; those, who are spoken to, will answer thee in the same way. Angry speech is painful; blows for blows will touch thee.

If like a trumpet trampled under foot, thou utter not, thou hast reached Nirvana; anger is not known in thee.

As a cowherd with his staff gathers cows into the stable, so do Age and Death gather the life of man.

Cut down the whole forest of lust, not the tree! When you have cut down every tree and every shrub, then, you will be free!

The fool does not know when he commits his evil deeds; but the wicked man burns by his own deeds, as if burnt by fire.

Not nakedness, not platted hair, not dirt, not fasting, or lying on the earth, not ribbing with dust, not sitting motionless, can purify a mortal who has not overcome desires.

After a frame has been made of the house, it is covered with flesh and blood, and there dwell in it old age and death, pride and deceit.

A man, who has learnt little, grows old like an ox; his flesh grows, but his knowledge does not grow.

Be not thoughtless! Your thoughts draw yourself out of the evil, like an elephant sunk in mud.

If a man becomes fat and a great eater, if he is sleepy and rolls himself about, that fool, like a hog fed on wash, is born again and again.

Self is the lord of self; who else could be the lord! With self well subdued, a man finds a lord such as few can find.

If an occasion arises, friends are pleasant; enjoyment is pleasant if it be mutual; a good work is pleasant in the hour of death; the giving up of all grief is pleasant.

The desire of a thoughtless man grows like a creeper; he runs hither and thither, like a monkey seeking fruit in the forest.

If a man is tossed about by doubts, full of strong passions and yearning only for what is delightful, his desire will grow more and more, and he will indeed make his fetters strong.

The fields are damaged by weeds; mankind, by passion; therefore a gift bestowed on the passionless brings great reward.

Without knowledge there is no meditation; without meditation there is no knowledge; he, who has knowledge and meditation, is near unto Nirvana.

He who has traversed this mazy and impervious world and its vanity, who is through and has reached the other shore, is thoughtful, guileless, free from doubts, free from attachment, and content, him I call indeed a Brahmana.

## ANCIENT OCCULTISM IN CALEDONIA.

BY P. DAVIDSON, F. T. S.

### PART I.

#### MAGICAL STONES OR CRYSTALS.

THROUGHOUT the long and hoary antiquity of very early ages has a faith in the effects of Magical charms, amulets, and talismans existed, even amongst nations the most widely apart and unknown to one another, whilst in our modern times the same belief in their efficacy and power is still entertained, not only amongst many of the natives of Asia and Africa, but also in Turkey, Italy, Spain, and Britain. Even in this country—Scotland—many practices remain, which primarily arose from, not only a belief in, but a knowledge of, Magic, and still those practices are carried on by the middle and higher classes of society, as diligently almost as they were thousands of years ago, but without the slightest notion of their magical origin amongst those who follow the decaying details of such. How often is the coral still suspended as an ornament around the neck of the Scottish child, by parties who have never dreamt of the magical and wonderful properties ascribed to it long ages ago by Dioscorde and Pliny, or the child's amulet—the coral and the bells—recommended in bygone days by Paracelsus, and Levinus Lemnius, as a remedy against fits, sorcery, charms, and poison. The Portuguese wear an article of a similar nature to the foregoing, in order to protect them against fascination. Pope Adrian, zealous to acquire as

many virtues as possible, wore an amulet, composed of a sun-dried toad, arsenic, tormentil, pearl, coral, hyacinth, smaragd, and tragacanth. Even now we still find amongst our countrymen the ancient Roman ceremony of the perforation of the egg-shell, by the spoon of the eater, after he has abstracted its edible contents; yet the ancient notion of becoming spell-bound is quite forgotten. The late popular anodyne necklace—which consists of beads, turned out of the roots of the white bryony and hung round the necks of infants to assist teething and prevent convulsions—was a genuine amulet, and in France, amongst the peasantry, it is a common thing to see a few shrubs of the white bryony, planted near their cottages, this plant being supposed to avert lightning.

No sensible person can deny that certain fountains of knowledge have been almost allowed to dry up, as the spiritual wells of our present-day Theologians, which are filled to the brim with the dust and ashes of the refuse-heap of dead-letter legends, but something infinitely more powerful than imagination has originated the rites and traditions that have descended to our own time. There is not the slightest reason for believing that the strange properties of the soporific, and other drugs, used by our ancestors have been exaggerated, and much less indeed were their effects purely *physical*. When Horace informs us that the cup of Circe transformed men into beasts, it is no falsehood we ponder over, any more than Plutarch's description of the Mysteries of Trophonius, or the rites of the Dionysia, or those again of Eleusis. Salverte informs us of a curious stone, possessing strange and mysterious properties, the *salagrama* or *smalagrama*, supposed to be found only in the Gandaki, in Nepal. It is of the size of a billiard ball, dark in colour, and usually perforated as if by worms. Its ancient possessor used to preserve it in a clean cloth, from which it was frequently taken, bathed, and perfumed. Bulenger (*de ratione divinationis*. III. 18) shows from Tzetzes that Helenus ascertained the fall of Troy by the employment of a magnet (*chil*. VI 57) and that if a magnet be washed in spring water, and interrogated, a voice like that of a suckling child will reply (*Id*. 65, 66). Orpheus relates at length this legend of Helenus. "To him," he says, "Apollo gave the true and vocal sideritis, which others call the animated ophites, a stone possessing fatal qualities, rough, hard, black, and heavy, graven everywhere with veins like wrinkles. For one and twenty days Helenus abstained from the nuptial couch, from the bath, and from animal food. Then washing this intelligent (*ἐχέφωνα*) stone in a living fountain, he fondled the divine stone in his hands, bearing it about as a mother bears her infant; and you, if you wish to hear the voice of the gods, in like manner provoke a similar miracle, for when you have sedulously wiped and dandled the stone in your arms, on a sudden it will utter the cry of a new-born child sucking milk from the breast of its nurse. Beware, however of fear, for if you drop the stone upon the ground, you will rouse the anger of the immortals. Ask boldly of things future, and it will reply. Place it near your eyes when it has been washed, look steadily at it, and you will perceive it divinely breathing. Thus it was that Helenus, confiding in this fearful stone, learned that his country would be overthrown by the Atridae." Another oracular stone was the *Bœtrelum*. Photius in his abstract of the life of Isidorus, by Damascius, gives an account of it. Its sounds proceeded as if from a shrill pipe, and the physician Eusebius himself interpreted the sounds. (1063. *Ed*, Schotti). Photius assures us that many of those  *bætylia* were to be found in Mount Libanus.

In Reginald Scot's "*Discovery of Witchcraft*, 1665," is given an old charm whereby "to go invisible by these three sisters of the fairies," Milita, Achilia, and Sibylia. You are "first to go to a parlor, or chamber, and on even ground, and in no loft, and from people, nine days, for it is better; and let all thy clothing be clean and sweet. Then make a candle of virgin wax, and light it, and make a fair fire of charcoal, in a fair place in the middle of the parlor, or chamber; then take fair clean water that runneth against the East, and set it upon the fire, and if thou warm thyself, say these words, going about the fire three times, holding the candle in thy right hand." I need not trouble transcribing the incantation, but the following is the effect produced. "And if they come not at the first night, then do the same the second night, and so the third night, until they do come,

for doubtless they will so come; and lie thou in thy bed in the same parlor, or chamber, and lay thy right hand out of the bed, and look thou have a fair silken kerchief bound about thy head, and be not afraid, they will do then no harm. For there will come before them three fair women, and all in white clothing, and one of them will put a ring upon thy finger, wherewith thou shalt go invisible. Then with speed bind her with the bond aforesaid. When thou hast this ring on thy finger, look in a glass and thou shalt not see thyself. And when thou will go invisible, put it on thy finger, the same finger that they did put it on, and every new  $\text{D}$  renew it again. For after the first time thou shalt ever have it, and ever begin this work in the new of the  $\text{D}$ , and in the hour of  $\text{Q}$  and the  $\text{E}$ ,  $\text{Z}$ ,  $\text{X}$ ."

The Bishop of Dromore has printed a curious receipt from the papers of some old alchemist, preserved in the Ashmolean Museum, at Oxford (8259. 1406. 2.) It clearly relates to beings of a similar nature, perhaps the bottle imps of the Germans. "An excellent way to get a fayrie, (for myself I call Margaret Barrence, but this will obtain any one that is not already bound.) First get a broad square cristall, in the bloude of a white henne, three Wednesdays, or three Fridays. Then take it out and wash it with holy ag., and fummigate it. Then take three hazle sticks, or wands, of an year growth; put them fair and white; and make them soe longe as you write the spiritt's name, or fairies' name, which you call three times, on every stick, being made flat on one side. Then bury them under some hill whereas ye suppose fairies haunt, the Wednesday before you call her; and the Friday following take them uppe and call her at eight, or three, or ten of the clock, where be good planetts and houses for that houre; but when you call be clean in life, and turn thy face towards the East. And when you have her, bind her to that stone, or glasse."

The triangular beautifully chipped flints, *Belemnites*, so numerous in Scotland, and which are often found in other countries, are popularly termed Elf-arrows. It was currently believed that the Elves shoot them at cattle, which, although the skin remains entire, instantly fall down and die, or recover from their convulsions by being again touched with the Elf-arrow by which they have been hit, and drinking of the water into which it has been dipped.

The Museum of the Antiquarian Society contains several magical charms, and amulets, principally in the form of amber beads, (which were held potent as a cure for blindness) perforated stones, and old distaff wheels, whose original use is now almost forgotten both *practically* and *occultly*. Amongst the most important magical relics in this collection, is the famous "Barbecks boue," a tablet of ivory, about 7 inches long, 4 broad, and about half an inch thick. It was long in the possession of the ancient family of Barbeck, in Argyleshire, and had the reputation over all the Western Highlands of curing all forms of insanity. It was formerly reckoned so valuable, that a bond of £100 was required to be deposited for the loan of it.

I shall now however revert to the chief subject of this Chapter, viz., several of the Charms, or Curing Crystals, or Stones of Scotland. Many of such have for long years retained their notoriety, although most of them now-a-days have fallen entirely into disuse for the cure of human diseases. In some districts, however, they are still used not only in the treatment of the diseases of domestic animals, but the crystals are still employed for "Fortune-telling" as it is generally termed.

Amongst the earliest historical works which have left us any reference in Scotland to such magical stones, is Adamnan's "*Life of St. Columba*." This was in all probability written during the latter years of the 7th century, Adamnan having died in A. D. 705. He was elected to the Abbacy of Iona, in A. D. 679, and consequently had the most favorable opportunities of becoming perfectly acquainted with all the existing traditions, and veritable records relating to St. Columba. Columba visited the king of the Picts, Brude, about A. D. 563, in his royal fort situated on the Ness, and discovered the Pictish potentate engaged in a Court, or Council, where Brochan presided as his chief Druid, or Magus. Brochan retained in captivity, as a slave, an Irish female, a country woman of Columba's. The 33rd Chapter of the 2nd book of Adamnan's work is entitled, "*Concerning the Illness with which the Druid (Magus) Brochan was visited for refusing to liberate a Female Captive, and his Cure when he restored her to Liberty*."

This ancient bit of Magic is told by Adamnan as follows:—

“About the same time the venerable man, from motives of humanity, besought Brochan the Druid, to liberate a certain Irish female captive, a request which Brochan harshly and obstinately refused to grant. The Saint then spoke to him as follows:—‘Know, oh Brochan, know, that if you refuse to set this captive free, as I desire you, you shall die before I return from this province.’ Having said this in presence of Brude the King, he departed from the royal palace, and proceeded to the river Nisa, from which he took a white pebble, and, showing it to his companions, said to them:—‘Behold this white pebble, by which God will effect the cure of many diseases.’ Having thus spoken, he added:—‘Brochan is punished grievously at this moment, for an angel sent from heaven, striking him sorely, has broken in pieces the glass cup which he held in his hands, and from which he was in the act of drinking, and he himself is left half dead. Let us await here, for a short time, two of the king’s messengers, who have been sent after us in haste to request us to return quickly, and relieve the dying Brochan who, now that he is thus terribly punished, consents to set his captive free.’

“While the saint was yet speaking, behold there arrived, as he had predicted, two horsemen, who were sent by the King, and who related all that had occurred, according to the prediction of the Saint—the breaking of the drinking goblet, the punishment of the Druid, and his willingness to set his captive at liberty. They then added; ‘The King and his Councillors have sent us to you to request that you would cure his foster-father, Brochan, who lies in a dying state.’

“Having heard these words of the messengers, Saint Columba sent two of his companions to the King, with the Pebble which he had blessed, and said to them:—‘If Brochan shall first promise to free his captive, immerse this little stone in water, and let him drink from it, but if he refuse to liberate her, he will that instant die!’

“The two persons sent by the Saint proceeded to the palace and announced the words of the holy man to the King, and to Brochan, an announcement which filled him with such fear, that he immediately liberated the captive, and delivered her to the saint’s messengers.”

The stone was afterwards immersed in water, and in a wonderful manner floated on the water, like a nut, or apple, and could not be submerged. Brochan drank from the stone as it floated on the water, and immediately recovered his perfect health and soundness of body.

“This little Pebble (further observes Adamnan) was afterwards preserved among the treasures of the King, retained its miraculous property of floating in water, and through the Mercy of God effected the cure of sundry diseases. And what is very wonderful, when it was sought for by those sick persons whose term of life had arrived, it could not be found. An instance of this occurred the very day King Brude died, when the stone, though sought for with great diligence, could not be found in the place where it had been previously left.”

In the first Chapter of Adamnan’s work, he again alludes to the strange properties of the stone:—“He took a white stone (lapidem candidum) from the river’s bed, and blessed it for the cure of certain diseases; and that stone, contrary to the laws of nature, floats like an apple when placed in the water.”

[*Light* (LONDON), July 5, 1884.]

NOTES BY THE WAY.

CONTRIBUTED BY M. A. (OXON.)

#### THE “KIDDLE INCIDENT” AS EXPLAINED

BY MAHATMA KOOT HOOMI.

IN *Light* of September 1st ult., Kiddle complained of an apparent plagiarism from a lecture which he had delivered at Lake Pleasant on August 15th, 1880. A passage from that address, slightly altered, appeared in “The Occult World” (pp. 101, 102) in the course of a letter there printed from [Mahatma] Koot Hoomi to Mr. Sinnett. It will be remembered that this incident evoked some sharp criticism, and that it was left unexplained. In a recent edition of his book, Mr. Sinnett prints the long-delayed explanation from [Mahatma] Koot Hoomi himself. The whole narrative is instructive, and want of space alone prevents me from presenting it *in extenso*. I fear it must lose in force by any

condensation, but I am desirous, as one who criticised the omission in the quoted passage of that reference to spiritualism which existed in the original, that the explanation should have the same publicity as was accorded to the criticism.

It seems that Mr. Sinnett communicated with [Mahatma] Koot Hoomi at the time when Mr. Kiddle’s letter appeared, and received from him in due course an explanation which (unfortunately, as I cannot but think) was given “under the seal of the most absolute confidence.” But it has been the policy of the Brothers throughout to ignore Western demands for enlightenment and information, and to shroud their dealings with us in what we regard as unnecessary and even suspicious mystery. It was not until partial explanations had crept into the *Theosophist* that Mr. Sinnett was allowed to use the letter conveying [Mahatma] Koot Hoomi’s explanation, and he did not elect to do so until a suitable opportunity occurred in the call for a new edition of “The Occult World.” The letter of [Mahatma] Koot Hoomi, as originally printed on pp. 101, 102 of that book, was inaccurate, and this new version of it is a proper and instructive correction of its errors. These errors were due, we are told, to the method by which it was taken down for transmission by the amanuensis (if such a term is fitly used in reference to an occult process such as I am about to describe) who “precipitated” the letter. This occult method consists in a species of thought transference—to use a new familiar term—between [Mahatma] Koot Hoomi and one of his chelas (pupils.) The Mahatma impressed by effort of will on the brain of his pupil the words which he wished to transmit; and the pupil impressed them in turn in paper which he, as I understand, *materialised* as a vehicle for the transferred words. The process is complicated, it will be seen, and there is much room for error. The Society for Psychical Research has thrown much light on the transference of thought. It has shown us that intense concentration on the part of the operator must co-operate with perfect passivity on the part of the subject to secure success. Mesmerism has taught the same lesson. The mind must not wander, or the impression sought to be conveyed to the subject is blurred and faulty. When to this source of error is added the materialisation of the substance on or into which the transferred thought is to be permanently fixed,\* it may be imagined that difficulties are greatly increased.

On referring to the letter in question as originally printed, it is obvious that some mistake had been made, though on a cursory reading it is not vague and unintelligible than many abnormal communications are. “It was framed by me,” writes [Mahatma] Koot Hoomi to Mr. Sinnett, “while on a journey, and on horseback. It was dictated mentally in the direction of and precipitated by a young chela not yet expert at this branch of psychic chemistry, and who had to transcribe it from the hardly visible imprint. Half of it was omitted; and the other half more or less distorted. When asked whether I would look over and correct it, I answered—imprudently I confess—‘Any how will do, my boy; it is of no great importance if you skip a few words.’ I was physically tired by a ride of forty-eight hours consecutively, and (physically again) half asleep. Besides this, I had very important business to attend to psychically, and, therefore, little remained of me to devote to that letter..... I had never evoked spiritually Mr. Kiddle’s physiognomy, never heard of his existence, was not aware of his name. Having, owing to our correspondence, and your Simla surroundings and friends, felt interested in the intellectual progress of the Phenomenalists, I had directed my attention, some two months previous; to the great annual camping of the American Spiritualists in various directions, among others to Lake or Mount Pleasant. Some of the curious ideas and sentences representing the general hopes and aspirations of the American Spiritualists remained impressed on my memory, and I remembered only these ideas and detached sentences quite apart from the personalities of those who harboured or pronounced them” [Mahatma] Koot Hoomi, present in the astral form at Lake Pleasant, hears these words of Mr. Kiddle. [Mahatma] Koot Hoomi in his distant home in Tibet, physically tired and psychically pre-occupied, uses them as a text for certain remarks which he imperfectly im-

\*As I understand the process, it appears that the recipient of the message manufactures the material substance which conveys the words impressed upon his brain. The writing does not appear on the surface of the paper, but is incorporated in its fibre, and forms an integral part of its substance.”

presses on the brain of an inexperienced operator, who "precipitates" that which comes to him most clearly, and hopelessly muddles up the rest. The clear part is the text of [Mahatma] Koot Hoomi's discourse: that on which he is going to hang his remarks—Mr. Kiddile's plagiarised sentences. This is—the situation as revealed by [Mahatma] Koot Hoomi.

When Mr. Sinnett's letter reached the Mahatma, he ordered an investigation into the original "precipitated" document. "Having restored the characters and the lines omitted, and blurred beyond hope of recognition by any one but their original evolver to their primitive colour and places," the letter assumes a very different complexion. "Plato was right. Ideas rule the world, and as men's minds receive new ideas, laying aside the old and effete, the world will advance..." is the original version; and I confess I could see no sense in the remark, nor indeed in much that followed. "Plato was right," seemed hopelessly disconnected both from what preceded and what followed it. When the gaps are filled up the sense is apparent. (The omitted parts are printed in italics)... "Phenomenal elements previously unthought of.. will disclose at last the secrets of their mysterious workings. Plato was right to readmit every element of speculation which Socrates had discarded. The problems of universal being are not unattainable, or worthless if attained. But the latter can be solved only by mastering those elements that are now looming on the horizons of the profane. Even the Spiritualists, with their mistaken, grotesquely perverted views and notions, are hazily realising the new situation. They prophesy—and their prophecies are not always without a point of truth in them—of intuitional provision, so to say. Hear some of them reasserting the old, old maxim that 'ideas rule the world'..." The whole letter is too long for quotation here, nor is full quotation necessary to show the explanation which is offered. This clears away, I am bound to note, the ground of complaint that I occupied in my criticism, a point that seemed to me most damaging—viz., that words originally intended to apply to Spiritualism had been distorted so as to apply to another matter altogether. In what I may call the revised version of his letter, [Mahatma] Koot Hoomi makes it clear that he is criticising the utterances of a Spiritualist, and he gives all credit for the ideas to their originator.

I have now set forth, I fear imperfectly, what Mr. Sinnett explains with admirable clearness in the appendix to his book. If I have made my narrative intelligible, it will be seen that it is an interesting and instructive explanation of a perplexing incident. Though the idea does not impress me in the same degree as it did Mr. Sinnett and some of his friends, it was undoubtedly a preposterous proposition that a person of the wisdom and power postulated for the Mahatma should plagiarise a commonplace from a spiritualist lecture which the *Banner of Light* had made common property. It was a foolish proceeding at best. And though I presume there will be critics who will regard this explanation as *ex post facto*, and will be moved to put it aside as ingenious rather than obviously true, I confess for myself that I welcome it as a relief from a perplexing position. There is in it nothing that greatly transcends my knowledge; nothing that seems to me antecedently incredible; whereas my faith in even an ordinary and common-place intelligence would have been shaken to the death if I could have supposed it capable of such stupidity. How much more when I must suppose this folly to co-exist with that which impresses many sincere and noble minds with reverence and trust.

"M. A. (Oxon)."

### THE BUDDHIST HEAVEN.

THE general name of the Buddhist Heaven is Nirvana. The term means, not a place, but a state. It is a name, rather than a local habitation. "The state that is peaceful, free from body, from passion, and from fear, where birth or death is not—that is Nirvana." Nirvana "puts an end to coming and going (transmigration of the soul is probably meant), and there is no other happiness." "It is a calm wherein no wind blows. It is the annihilation of all the principles of existence." "Nirvana is the completion and opposite shore of existence, free from decay, tranquil, knowing no restraint, and of great blessedness." "Nirvana is unmixed satisfaction, entirely free from sorrow." "The wind cannot be squeezed in the hand, nor can its colour be told,

Yet the wind is. Even so Nirvana is, but its properties cannot be told." "Nirvana like space, is causeless, does not live nor die, and has no locality. It is the abode of those liberated from existence." "Nirvana is not, except to the being who attains it." Mr. Alger, in his "Critical History of the Doctrine of a Future Life," altogether the best book on that subject yet written, says: "The etymological force of the word Nirvana is extinction, as when the sun has set, a fire has burned out, or a lamp is extinguished. . . . But take the term before us in its strictest sense and mark the result. When a fire is extinguished it is obvious that, while the flame has disappeared, the substance of the flame, whatever it was, has not ceased to be, has not been actually annihilated. It has only ceased to be in a certain visible form in which it existed before; but it still survives, under altered conditions. Now, to compare the putting out of a lamp to the death of a man, extinction is not actual destruction, but the transition of the flame into another state of being. That other state, in the case of the soul, is Nirvana."

Edwin Arnold, in "The Light of Asia," puts it thus:—

"I take my refuge in the Law of Good!  
I take my refuge in thy Order! Om!  
The Dew is on the lotus!—rise, Great Sun!  
And lift my leaf and mix me with the wave.  
Om mani padme hum, the Sunrise comes!  
The Dewdrop slips into the shining Sea."

In other words, the absorption of the individual soul into the universal soul—God.—*The Statesman.*

### REMINISCENCES OF THE COUNT DE ST. GERMAIN.\*

pp. 294...As the name of the Count de St. Germain has slipped from my pen, I will say a few words about him. It was in 1743 the rumour spread that a foreigner, enormously rich, judging by the magnificence of his jewellery, had just arrived at Versailles. Where he came from, no one has ever been able to find out. His figure was well-knit and graceful, his hands delicate, his feet small, and the shapely legs enhanced by well-fitting silk stockings. His nether garments which fitted very closely, suggested a rare perfection of form; his smile showed magnificent teeth, a pretty dimple marked his chin, his hair was black, and his glance soft and penetrating. And oh, what eyes!... never have I seen their like. He looked about 40 or 45 years old. He was often to be met within the Royal private apartments, where he had unrestricted admission at the beginning of 1768. He never knew Mme. du Barri, but he was present at the time of the catastrophe of the Duchess de Châteaurouse.

When that lady died, the king, who had only known the Count de Saint Germain a year, yet had such confidence in him, that he asked him for an antidote for the dying Duchess. The Count refused saying—"It is too late."

I was blaming him one day for this answer, asserting that it is never too late to try and stop the effect of poison.

If I had cured the Duchess, he replied, I should have become responsible for all the violent deaths which may have happened since. Every family would have summoned me to perform a miracle, and it would have gone hard with me, had I failed in the enterprise. Such is man; somewhat egotistical.

"So are you too."

"That is just because I resemble them."

That old, everlasting Countess de Georgy, whom death must certainly have forgotten upon earth, said once to the Count, before me:—

"Fifty years ago, I was Ambassadress at Venice, and I remember seeing you there looking just as you do now, only somewhat riper in age, perhaps, for you have grown younger since then."

"I have always thought myself happy in being able to make myself agreeable to the ladies."

\*Translated from "*Souvenirs de Marie Antoinette, par Madame la Comtesse d'Adhemar*"—a rare work kindly lent to us by the Count and Countess d'Adhemar, descendants of the author of the *Souvenirs*—and both Fellows of the Theosophical Society of Paris:—Ed.

"You then called yourself Marquis Balletti."

"And Countess Georgy's memory is still as good as it was fifty years ago."

"That advantage I owe to an elixir you gave me at our first meeting. You are really an extraordinary man."

"Had this Marquis Balletti a bad reputation?"

"On the contrary, he was in very good society."

"Well! as no one complains of him, I adopt him willingly as my grandfather."

I know that subsequently his answers to Countess Georgy have been misrepresented; I record them, as I heard them fall from his mouth.

Count Saint Germain was very strange in everything. The Marquis de Valbelle on going to see him, finds him occupied at his furnace; he asks my husband to lend him a six franc piece: my husband takes one from his purse and gives it to the Count, who places it on a "matras" and covers it with a black substance; then with this apparatus he exposes it to the heat of the furnace. M. de Valbelle saw the piece change colour, turn red, and after some minutes, the adept took it out of the furnace, let it cool down, and returned it to the Marquis. The piece was no longer of silver, but of the purest gold; the transmutation was complete. I kept this piece till 1786, when it was stolen from me in my Secretary with several other foreign or old French coins.

M. de Saint Germain never asked others to eat with him, and he even did not receive visits at his own house. To see him, an appointment had to be made for a fixed day. But he often visited people of distinction who wished to see him. He had two valets de chambre; one who had been in his service for 500 years; the other, a thorough Parisian, knew the Court and the town.

Besides these, his household consisted of four lackeys, in snuff-coloured livery, with gold braiding. He hired a carriage at 500 francs a month. As he often changed his coats and waist-coats, he had a rich and extensive collection of them; but nothing approached the magnificence of his buttons, studs, watches, rings, chains, diamonds and other precious stones. Of these he possessed to a very large value and varied them almost every week.

He claimed to possess the secret of melting several diamonds into one, and he cleaned those that were defective, without sensibly lessening their weight. He repaired one which belonged to Louis XV and increased its value by 3,000 francs. I am not aware what became of this valuable collection at his death, which is thought to have occurred in 1784, in Sleswick, at the Court of the Elector of Hesse-Cassel; however the Count de Chalons, on his return from an embassy to Venice in 1788, told me that he had conversed with the Count de Saint Germain in the Square of Saint-Mark, the evening before he quitted Venice to go on an embassy to Portugal. I too saw him again.

One evening the Count was relating an anecdote in which, as usual, he pretended to have played the principal part; but not recollecting clearly all the details, he turned to his valet and said—am I not mistaken, Roger?

"Monsieur de Comte forgets that I have only been with him for 500 years; I could not, therefore, have been present at that occurrence; it must have been my predecessor."

From that time Roger always went by the name of "The 500 years." The conversation never languished where the Count de Saint Germain was present; he animated it by relating numberless historical anecdotes; ghost stories, pictures of manners, choice and varied descriptions. Naturally reserved, he only seemed at ease in the very best company. He sat at table without even unfolding his napkin, for he never ate in public. But it was then especially that he amused us by his extraordinary stories. The last time we were together, he told us the following story.

In a northern city, which he did not name, a young nobleman of great promise, though of very loose habits, finding himself alone with one of his friends, confessed

to him that he had so many mistresses that he could not endure women any longer.

And now, he added, to shake off this heaviness, I must have a supernatural creature, a sort of female vampire.

You are mad, said his friend.

Be it so, but none the less, I am going to-night to the cemetery to invoke the dead.

His companion shrugged his shoulders and left him. Count R...went at midnight to the cemetery of the town; he surrounded himself with a magic circle, and there, by horrible imprecations, strove to trouble the peace of the tomb. All remained in a death-like silence, but the Count heard, at some distance in the country, a woman's voice singing a rustic ballad. The ring of the voice was so pure, so harmonious, that M. de R...forgetting the motive of his presence in the cemetery, left it, and ran to seek the person, whose voice had produced such an impression on him. It was a girl, young and beautiful; he accosts her, speaks with her, and insensibly guides her to the cemetery. Growing bolder, he tries to obtain favours, which she refuses him.

I can only belong to a husband, she says.

So be it, replied the Count, I marry you; there is my ring, give me yours in exchange, and we shall be engaged.

The proposition is accepted. Finding no further resistance, the Count remained until one o'clock in the morning in the company of the young girl. They then separated, promising to meet again the following night, at the same spot.

But the Count, having gratified his whim, at once forgot his promise, and her who was the object of it. So the following day, instead of going to the rendezvous, he very quietly went to bed. He had been asleep for an hour, when at midnight the door of his room opens.

Waking with a start, M. de R. hears the breathing of a human being, then the rustle of a dress. Some one slowly approaches his bed, the bed clothes are raised, and he feels slip in by his side, a body, soft and flexible, but cold as marble; and from which exhales a cadaverous odour.

The Count shudders; he tries to escape, but in vain .....he tries to cry out, his voice expires on his trembling lips.....an hour passes in this horrible torture,.... at last the clock strikes, and his cold bed-fellow rises and disappears.

The next evening, to drive away the thought of that fatal night, the Count assembled round him a numerous society; the most beautiful women of the town, a brilliant fete has been prepared, the rooms are hung with drapery and garlands, a multitude of candles, reflected in magnificent mirrors, make all surrounding articles sparkle; delicious music invites to dancing; the hours pass, and are forgotten.....M. R. alone counts each minute as it flies, awaiting midnight with anxiety.

Soon the twelve strokes resound, then.....an Italian princess is announced; she has letters of recommendation for Count R.—; people rise, surround her, she is beautiful, and magnificently dressed. The Count grows frightfully pale, for, in this pretended princess, he has recognised the young girl of the cemetery, his sinister companion of the previous night..... The phantom approaches and fixes on him a glassy and immoveable gaze; everywhere this gaze pursues him, he cannot escape from it. At one o'clock the Italian princess rises, her servants are waiting and she must leave, and the prince breathes freely once more.

Each succeeding night, wherever the Count may be, he is followed by this fearful vision; his health becomes exhausted, he longs for death, for life has become hateful to him. He was on the point of death, continued Count Saint Germain, when chance led me into his neighbourhood. Perceiving in him a hidden sorrow, I questioned him; at first he hesitates, at length he reveals to me his secret. When he had finished speaking:—Thank God, I said, for having met me: at midnight I will return; watch and pray till that hour.

Count R. looked at me with an expression which pained ; it was evident that all hope was dead in him. His hands, which I took, burnt mine. I spoke fresh words of consolation to pray, for his moral nature was more affected than the physical ; then I left him to occupy myself with certain necessary preparation. At eleven I returned ; he received me with delight, saying : " The fatal instant approaches..... " " Be calm, this night will put an end to your torments."

At a quarter to twelve I traced on the floor a solar triangle ; I perfumed it, and then placed the Count in the middle, forbidding him to leave it whatever might happen. That done, I waited in silence. Midnight strikes, the door opens.....The room was lighted with seven candles, and I held in my hand the rod of Moses, of which one of his great grand-children made me a present at Babylon, during the reign of Cyrus. The door opens, and I see entering a form human in appearance, but inanimate in reality. From it exhaled a fetid odour, and I hastened to burn some incense. The spectre advanced towards the bed ; but stopped at once, and then came in the direction of the Count as far as the limits of the triangle. Seeing that it could not pass there ;—

" He is my husband," said the spectre, in a hollow voice.

" By fraud, for you did not give yourself to him as an inhabitant of the other world."

The phantom was silent ; I touched it with the formidable rod, it shuddered, and its flesh putrified visibly.

" Restore the ring," I continued.

" Not here, but where I received it."

" Be it so, we will go there together ; but you must precede us."

It disappeared.

I need not tell you what we saw when we had entered the cemetery, nor the combat I had to sustain ; I was however victorious in it. The Count threw the ring on the tomb where he had sat with the phantom.

The spectre restored the one it had received, and then we were left alone.

It was late when we returned to the town. The following day, on awaking, a letter was handed me from the Count. On leaving me, instead of going home, he had gone and knocked at the door of a monastery, of which his ancestors had been benefactors. There he declared that he came to take the habit of novice, and he died in the odour of sanctity 35 years afterwards. ....Count Saint-Germain finished his letter here. Having thanked him for the fright he had caused us, we begged him to show us the rod of Moses. He began to laugh, and refused to satisfy our curiosity.

Another time, he told us, a charming woman attaches herself to his footsteps, she seems much in love with him, and writing him several letters, which he answers. One day she invites him to a masqued ball which she was going to give in a country-house aux Ternes. She adds that there would be a regular battle of luxury, and advises him to appear in all his magnificence. The Count puts on a certain apple-green coat, each button on which was a diamond worth 1,000 louis. The clasp on his hat had cost 300,000 francs, and the rest was in proportion. He pretends that he wore that evening more than 1,000,000 francs worth of jewels. Three lackeys stood behind his carriage, two on horse back lighted him, with torches. He arrives ....and sees no sign of a fête. He asks the Swiss at the door whether Mde. d'Esnermenil is at home, and on an affirmative answer, he enters.

" What wind blows you here ?" said that lady to him.

" I came to share in your fête."

" That takes place the day after tomorrow."

" You wrote to me that it would be to-day."

" You are mistaken."

" He then shows the invitation to Mme. d'Esnermenil."

" That is a mistake, said she, but no matter ; since you are there, stay and sup with me."

" Shall you be alone ?"

" Yes."

" I never eat except at home."

" But you drink, and I have some excellent currant syrup, which you must take."

A glass is brought, which I took mechanically in my left hand ; the goblet touches a precious stone set in one of my rings, and immediately bursts and is broken into a thousand pieces—the liquor which it contained was poisoned. Had I not known this property of my diamond, I should still have divined the poison by the stupefaction of the handsome widow.

So I seem to have fallen into a trap ; how escape from it ?.....

I heard the noise of a carriage ; it was mine which had been sent away. A lively waiting maid had come to tell my people that I would sleep at the house, and should expect them at 10 next morning. This I only learnt afterwards.

However, wishing to be sure that it really was my carriage which was leaving, I asked Madame d'Esnermenil what person was then leaving.

" An old relation of mine, she replied, who is returning to Paris."

I pretended to believe her ; we went on chatting, but she was absent and preoccupied, and scarcely answered me. All at once, I hear a sound of steps, Madame d'Esnermenil grew pale and rose.

" Where are you going," said I.

" Some one is waiting for me. I shall be back in a moment."

" No stay. I will it .."

Then, with a sudden and powerful effort of will, I put her to sleep by placing my hand on her forehead. Then I asked her :

" You wanted to poison me ?"

" Yes."

" And not having succeeded, you will have me assassinated ?"

" Yes."

" Where are your people ?"

" They are waiting till I pull the bell."

" How many are there ?"

" Five."

" What is your object ?"

" To steal your diamonds."

" You are a miserable wretch. Awake !"

She woke at once without any recollection of the revelation she had made in her sleep.

" I have been asleep, I think ?" said she, smiling.

" One or two minutes."

" Will you permit me to call my women, as you are leaving."

" As you please."

She rang sharply. Five men armed with cutlasses rushed into the room ; instantly I extended towards them my hand, in which I held a " philosophical pistol," pulled the trigger, the pistol went off, and the five rogues stood motionless and blinded. Then, covering with scorn the infamous widow, and enveloping myself with a protecting vapour, I hastened to abandon the den.

The next day, when the police, on my denunciation, went to arrest the brigands, they were found in the same situation, as was also their vile accomplice, none of them having been able to leave the spot. They were all hung.

PRACTICAL INSTRUCTIONS FOR STUDENTS  
OF OCCULTISM.

V.

FORBIDDEN FRUIT.

THE KNOWLEDGE OF GOOD AND EVIL.

AND THE EYES OF BOTH WERE OPENED, AND THEY KNEW  
THAT THEY WERE NAKED:—*Bible I Genesis iii. 7.*

THE knowledge upon which the different religious systems of the world are based is undoubtedly fundamentally true; but our modern religious teachers have obtained that knowledge neither by induction nor by deduction, and what they know rests mainly upon information, tradition and hearsay, mixed up with a great deal of their own conceptions, which are frequently erroneous. Such information, being not connected with any personal experience, can give no real knowledge. Not only are the sources from which that information has been received in many cases unknown or obscure, but the original teachings, no matter how true they may have been, are generally misunderstood and misinterpreted by a succession of promulgators.

This misunderstanding has been aided to a great extent by the allegorical and symbolical manner in which the original doctrines have been transmitted from one generation to another, so that in the course of time much of their true meaning was entirely lost and only the fables remained. Most of these fables seem to be purposely made absurd and unreasonable, so as to be protected against any acceptance in their literal sense; yet, nevertheless, the bigotted and ignorant frequently profess to believe them, and if literally believed in, without any explanation, they certainly form what has been properly called *vicious literature*. We copy the following from the American "*Truthseeker*":

VICIOUS LITERATURE.

There is a flood of humanity ever sweeping toward idiocy and insanity. Every day we read of the youth who has started westward after Indian scalps, and the man who has ended his life with the rope or dagger. Every paper that we pick up has in it an account of some insane wretch who has either murdered some of his family or committed suicide. Vicious literature is corrupting the human race. We are becoming mentally diseased by reading the fancies of others and believing them to be facts.

The boy who reads the tales of the West until he thinks they are real, and is inspired to be a desperado, is unfortunate; but the one that reads and believes a more ancient novel, which relates incredible incidents of war and bloodshed, not only of this world, but of other worlds in other spheres, is surely in a more deplorable condition. His imagination is always picturing celestial cities with diamond-paved streets and gates of pearl, inhabited by fairies which are half human and half bird. And in his dreams the poor maniac holds converse with these beaked and feathered vagrants of the skies, which exist only in his own fancy.

This novel, which gives accounts of battles between characters called angels, gods and devils, does more harm than all others together. It is taught to us from the cradle to the grave. No sooner has the child learned to talk than the parents begin teaching it to believe these fairy tales, and to ask favors of the boss fairy of god, and even to advise him how his affairs should be conducted.

The hero of this novel was very fond of meat. He did not eat it as we do; but while his slaves roasted the carcasses of rams and bullocks, he reached his head out over the edge of a cloud and let his divine nostrils feast on the ascending fumes.

Incredible as it may appear, the majority of people in so-called civilized countries believe this vile superstition to be actually true. And countries that are not called civilized believe traditions which are equally absurd. Vicious literature has its baneful influence on the whole world.

But we are living in an age when after the night of superstition during the Middle Ages, reason has again resumed its sway. Free thought and free speech are less dangerous than formerly, and we therefore see men like Bradlaugh and Robert Ingersoll giving voice to the public sentiment, which begins to regard those fables as dangerous superstitions, and the Western world seems to start up as if awakening from a dream that was disturbed by a hideous nightmare, and to find out that it has been led by the nose by the priests.

But if all these theological fables are nothing else but stupid tales, at the absurdity of which a child would

laugh, how could they dominate for so many centuries over the minds of the people? Is it not because great truths, not understood but intuitively perceived, were hidden behind those masks, and would it not be better to understand and explain them, than in attempting to destroy superstition, to destroy with it the accumulated wisdom of the ages. True knowledge is not dangerous as it is necessarily connected with wisdom, but knowledge obtained by information or intellectual reasoning only, without higher impulses to govern the application of such knowledge is the forbidden fruit, which it is dangerous to possess. If we are permitted to speak in allegorical language, we may say, that *God* wrote the "*Bible*" and the *Devil* published it, that is to say, that while there is a great deal of truth in the ancient *Kabala*, out of which the main part of the *Bible* has been formed, its publication and consequent profanation and its misinterpretation has led to great destruction of life and has for centuries been a curse to humanity.

Like the *Kabala*, other ancient religious works have been framed in a more or less symbolical language, to hide their true meaning from the eyes of the profane. Nearly all of them represent in some form or other the transition of Man from a state of original purity to a condition of degradation and his subsequent rise and salvation.

The *Kabala* represents this history of the "*fall*" under the allegory of original man and woman in *paradise*,—meaning a state of purity,—eating a fruit from a forbidden tree,—representing knowledge,—having been instigated to do so by the *devil*—symbolising *unholy desire*. This story, if taken in its literal sense, is extremely absurd, but if we examine its hidden meaning, we shall find that it covers a great occult truth.

Many of the occult symbols are liable to be interpreted in a twofold manner. One interpretation, in a wider sense, which refers to collective man, and another lying individually nearer and representing the possible experience of the individual. In its wider sense the *fall of man* represents the descent of spirit into matter, man's evolution, and his becoming in the course of the same provided with *clothes of skin*,—that means a *physical body*, to protect him against the injurious influences of his surroundings.

In a more restricted sense the fable refers to each individual man and to the dangers which he incurs by developing intellectuality at the expense of spirituality, and thereby obtaining knowledge without sufficient wisdom for its application, to prevent any misuse. A high degree of intellectual development is not necessarily accompanied by a corresponding morality, and without the latter that knowledge which gives power may and would be a still greater curse than superstition and ignorance. To what depths of moral degradation intellectuality without spirituality may lead, we see at the present time vividly illustrated in the unnecessary and brutal cruelty with which vivisections are conducted, and in most cases simply for the gratification of *idle curiosity*. To prove this, we have only space to insert the following few lines from an extract of testimony taken before a Royal Commission to investigate the practice of vivisection, which testimony only throws a faint light upon what is practised in thousands of places in the West.

2. Testimony of David Ferrier, M. D. (vivisector), Professor of King's College, before the Royal Commission:

"Question: What is your practice as to anesthetics? Answer: Except for teaching purposes, or convenience, I never give them.

"Q. Do you mean to say that you have no regard at all for the sufferings of animals? A. No regard at all! I think that a man who performs an experiment has no time for thinking what the animal will feel and suffer.

"Q. Do you believe in the general practice on the continent to disregard altogether the feelings of animals? A. I do.

"Q. Do you believe that the feeling is different in England? A. I do not think it is; not among physiologists."

4. *The Medical Times and Gazette* happily mentions an experiment on a living dog, which consisted in forcing half a pint of boiling water into the stomach, "in order to show that the animal tissue could be disorganized; and that the animal, after giving evidence of great suffering, vomited blood and died!"

5. Mr. Jesse B. Mills testified before the Royal Commission as follows:

"I am a veterinary surgeon in the Royal Artillery at Woolwich.

"Question: You went through college at Edinburgh? Answer. I did.

"Q. Were experiments made there on the occasion to which you refer, to discover any new facts? A. No; simply to demonstrate things that were perfectly well known to every student almost; and to gratify idle curiosity."

But such cruelty is not exhibited towards animals only; we see whole generations of men poisoned by the inoculation of filth, partly from a motive of greed, partly to uphold a mistaken scientific theory. The recent improvements of fire arms may have helped modern civilisation to spread, but they have not increased spirituality, and the humanitarian spirit exhibited during modern wars, represented in the person of *Florence Nightingale*, is not due to the ingenuity of intellect alone. The invention of the fulminates of mercury, of gunpowder and nitroglycerine has caused much suffering to a large part of humanity. Not that the substances applied or the forces which are liberated are intrinsically evil, but their misunderstanding or misapplication leads to evil results. If all men were intelligent enough to understand the laws which govern them, and wise enough to employ them for good purposes only, no evil results would follow.

If we proceed a step further and imagine intellectual but wicked and selfish people possessed not only of the power to employ explosives, poisonous drugs and medicines to injure others, but able to send their own invisible poisonous influences to a distance, to leave at will the prison-house of the physical body and go out in their *astral forms* to kill or injure others, the most disastrous results would follow. Such forbidden knowledge has been and is sometimes possessed by people with criminal tendencies, a fact which is universally known in the East, and upon the possibility and actuality of such knowledge the witch persecutions of the Middle Ages were based. That such witch trials were not always based upon hallucination and idle tales has been demonstrated on many occasions,\* and we are personally acquainted with a woman, who can throw a dog into convulsions, kill a small bird, and make a man sick by the simple effort of her will.

But not only to others, but also to the possessor of forbidden knowledge, may the result of such knowledge be detrimental. The first use that the average man would make of such knowledge, would be to produce "wonders," which would not only unsettle the reason of others but also his own. Even the modern discoveries in science have sometimes had such effects. And here we may add that if the Adepts in spite of the general clamour for the exhibition of occult phenomena do not produce them for the purpose of gratifying curiosity or to convince sceptics, the above may give a clue to the explanation. It has often been complained of, that those phenomena are often produced under circumstances which leave open the question of fraud, and it is this possibility of fraud, which may sometimes protect the investigator from lunacy.

Let us see what Baron Dupotet says in regard to the forbidden fruit:

"What is this tree of knowledge and this forbidden fruit? Is it perhaps that mysterious force, which is the object of our study? If we examine the sacred books, we find that they contain the knowledge of good and of evil. Man himself as well as his posterity is punished for overstepping certain limits, beyond which he is allured by a pernicious light. There is a great mystery. Man wants to obtain knowledge, which renders him equal to God."

We have seen that man is continually surrounded by unseen influences and that the *astral plane* is swarming with entities and forces, which are acting upon him for good or for evil, according to his good or evil inclinations, dispositions and attractions. At the present state

of evolution man has a reason to guide him and a physical body, which is admirably adapted to modify the influences from the astral plane and to shelter him against the "*monsters of the deep*."

Man's physical body is composed of elements similar to those of his material surroundings, and his astral form corresponds to, and attracts the principles of, the astral plane. If the physical body is in good health, it acts as an armour, and moreover man has the power by a judicious exercise of his will to make himself positive, or in other words to so concentrate the *odic aura* by which he is surrounded, as to render his armour impenetrable; but if by bad health, by a careless expenditure of vitality, or by the practice of mediumship, he renders himself negative, or, in other words, if he disperses through space the *odic emanations* belonging to his sphere, his physical armour will become weakened and unable to protect him; he becomes the helpless victim of elementaries and elemental forces, his mental faculties will lose their balance and sooner or later he will, like the symbolical *Adam and Eve*, know that he is naked and exposed to influences which he cannot repel, an idiot or a criminal, on his way to the lunatic asylum or to suicide. The former has been the deplorable fate of the celebrated medium *Chs. Forster* and the latter the end of *P. B. Randolph*, and many others have followed or preceded in their path. Such is the result for which those ignorantly crave, who wish to obtain knowledge without morality, intellectual acquisitions without spirituality, and who carelessly meddle with forces which they do not understand. To supply the ignorant or weak with powers of destruction would be like providing children with gunpowder and matches for play, and those who enter the temple of knowledge without due preparation pay dearly for their temerity. Our modern science is at present stretching out her hand for the forbidden fruit, and its attainment without the necessary sanction will bring on the destruction of our race.

The above considerations bring us back again to our starting point, where we said that intellectual development and spiritual enlightenment must go hand in hand, that abnormal growth in one direction is prejudicial to real progress. The development of the true Adept means therefore the development of all that is true and good in man by study and high aspiration, and the whole of the "practical instructions" necessary to know may be condensed into the few words spoken to the writer of this at the beginning of his career as a student of occult science by a high Adept, saying: "*Live up to your highest ideal of true manhood.*"

There are two gigantic powers of the mind, the *Will* and the *Imagination*. In the brute creation and in those nearest approaching to it, Imagination governs the Will. In the higher developed classes Will controls the Imagination. The ability to apply Will and Imagination so as to produce useful and harmonious results is called *Wisdom*, but wisdom cannot be imparted by words, it must be acquired by experience, and frequently the acquisition of such experience involves a large amount of personal suffering, which amount may be reduced by receiving and following out proper instructions.

Man is a product of circumstances. His Will cannot be said to be *free* as long as it is ruled by the imagination and the state of his imagination depends on his inclination and knowledge. Man can therefore not be considered a fully responsible being as long as his knowledge is deficient, this responsibility grows with his knowledge. When in the course of evolution his knowledge shall become more extended, he will then be better able to choose between good and evil, and if at the same time his imagination is pure, then will he become truly powerful and the "forbidden fruit" will become a divine gift. Man will then no longer need a physical body to protect him, because he will protect himself by his power. The *Devil* in the form of a serpent, symbolising the *Astral light* with its

\* See Review of "Posthumous Humanity" in the preceding number.

inhabitants, (the region of desire) will have its head crushed by the heel of the woman, allegorizing *Divine Wisdom* (the female principle, the spiritual soul), death will be conquered, good-will shall prevail throughout our planetary chain leading to a period of rest, in *Nirvana*, after which "the morning stars will again sing together for joy," to welcome a new day of creation.

A. B.

### A POSTHUMOUS VISITOR.

[EXTRACT FROM THE NINETEENTH CENTURY].

THE following is a case so strange that it is described as needing the high authority on which it comes to satisfy the reader that he has not passed unawares into the region of romance. It was received from Sir Edmund Hornby, late Chief Judge of Supreme Consular Court of China and Japan, who describes himself as "a lawyer by education, family and tradition, wanting in imagination, and no believer in miracles." He first narrates how it was his habit at Shanghai to allow reporters to come to his house in the evening, to get his written judgments for the next day's paper.

"They generally availed themselves of the opportunity, especially one reporter, who was also the editor of an evening paper. He was a peculiar man, reticent about himself, and I imagine has a history. In appearance he was also peculiar. I only knew him as a reporter, and had no other relations with him. On the day when the event occurred, in 1875 or 1876, I went to my study an hour or two after dinner, and wrote out my judgment. It was then about half past eleven. I rang for the butler, gave him the envelope and told him to give it to the reporter who should call for it. I was in bed before twelve. I am a very light sleeper, and my wife a very heavy one. Indeed, it is difficult to rouse her out of her first sleep. The bed—a French one—faced the fire-place, on the mantel-piece was a clock, and the gas in the chandelier was turned down, but only so low as to admit of my seeing the time at any time of the night,—for waking easily and frequently, I often smoked a cigarette before I went to sleep again, and always desired to know the hour.

"I had gone to sleep, when I was awakened by hearing a tap at the study door, but thinking it might be the butler looking to see if the fire were safe and the gas turned off—I turned over with the view of getting to sleep again. Before I did so I heard a tap at my bed-room. Still thinking it might be the butler, who might have something to say, I said 'come in.' The door opened, and, to my surprise, in walked Mr. T——. I sat up and said 'you have mistaken the door, but the butler has the judgment, so go and get it.' Instead of leaving the room he came to the foot edge of the bed. I said, 'Mr.—you forget yourself! Have the goodness to walk out directly. This is rather an abuse of my favor.' He looked deadly pale, but was dressed in his usual dress, and was certainly quite sober, and said, 'I know I am guilty of an unwarrantable intrusion, but finding that you were not in your study, I have ventured to come here.' I was losing my temper, but something in the man's manner disinclined me to jump out of bed to eject him by force. So I said simply, 'This is too bad, really; pray leave the room at once.' Instead of doing so, he put one hand on the foot-rail and gently, and as if in pain, sat down on the foot of the bed. I glanced at the clock and saw that it was about twenty minutes past one. I said, 'The butler has had the judgment since half past eleven; go and get it.' He said, 'Pray forgive me; if you knew all the circumstances you would. Time presses. Pray give me a précis of your judgment, and I will take a note in my book of it,' drawing his reporter's book out of his breast pocket. I said, 'I will do nothing of the kind. Go downstairs, find the butler, and don't disturb me—you will wake my wife; otherwise I shall have to put you out.' He slightly moved his hand. I said, 'Who let you in?' He answered, 'No one.' 'Confound it,' I said, 'what the devil do you mean? Are you drunk?' He replied, quietly, 'No, and never shall be again; but I pray your lordship give me your decision, for my time is short.' I said, 'You don't seem to care about my time, and this is the last time I will ever allow a reporter in my house.' He stopped me short, saying, 'This is the last time, I shall ever see you anywhere.'

"Well, fearful that this commotion might arouse and frighten my wife, I shortly gave him the gist of my judgment in as few words as I could. He seemed to be taking it down

in short hand; it might have taken two or three minutes. When I finished, he rose, thanked me for excusing his intrusion and for the consideration I had always shown him and his colleagues, opened the door and went away. I looked at the clock; it was on the stroke of half-past one.

(Lady Hornby now awoke, thinking she had heard talking; and her husband told her what had happened, and repeated the account when dressing next morning.)

"I went to the Court a little before ten. The usher came into my room to robe me, when he said, 'A sad thing happened last night, Sir. Poor——was found dead in his room.' I said, 'Bless my soul! dear me! What did he die of and when?' 'Well, sir, it appears he went up to his room as usual at ten to work at his papers. His wife went up about twelve to ask him when he would be ready for bed. He said, 'I have only the judge's judgment to get ready, and then I have finished.' As he did not come, she went up again, about a quarter to one, to his room and peeped in, and thought she saw him writing but she did not disturb him. At half-past one she again went to him and spoke to him at the door. As he did not answer, she thought he had fallen asleep, so she went up to rouse him. To her horror he was dead. On the floor was his note-book, which I have brought away. She sent for the doctor, who arrived a little after two, and said he had been dead, he concluded, about an hour.' I looked at the note-book. There was the usual heading:—

'In the Supreme Court, before the Chief Judge.

—V.—

'The Chief Judge gave judgment this morning in this case to the following effect'—and then followed a few lines of indecipherable shorthand.

"I sent for the magistrate who would act as Coroner, and, desired him to examine Mr.——'s wife and servants as to whether Mr.——had left his home, or could possibly have left it with their knowledge, between eleven and one on the previous night. The result of the inquest showed he died of some form of heart disease, and had not, and could not have, left the house without the knowledge of at least his wife, if not of his servants. Not wishing to air my 'spiritual experience' for the benefit of the Press or the public, I kept the matter at the time to myself, only mentioning it to my Puisne Judge and to one or two friends; but when I got home to tiffin, I asked my wife to tell me, as nearly as she could remember, what I had said to her during the night, and I made a brief note of her replies and of the facts.

(Lady Hornby has kindly confirmed the above facts to us as far as she was cognisant of them.)

"As I said then, so I say now—I was not asleep, but wide awake. After a lapse of nine years my memory is quite clear on the subject. I have not the least doubt I saw the man—have not the least doubt that the conversation took place between us.

"I may add that I had examined the butler in the morning—who had given me back the Mss. in the envelope when I went to the Court after breakfast—as to whether he had locked the door as usual, and if any one could have got in. He said that he had done every thing as usual, adding that no one could have got in, if even he had not *locked* the door, as there was no handle outside—which there was not. I examined the coolies and other servants, who all said they opened the door as usual that morning, turned the key and undid the chains, and I have no doubt they spoke the truth. The servants' apartments were separated from the house, but communicated with by a gallery at the back, some distance from the entrance hall.

"The reporter's residence was about a mile and a quarter from where I lived, and his infirmities prevented him from walking any distance except slowly; in fact, he almost invariably drove."

(Sd.) EDMUND HORNBY.

### THEOSOPHY IN EUROPE.

THE attention of Europe is being rapidly aroused by Theosophy, and the subject is discussed under every aspect. The Orthodox Christian papers are, of course, abusive and malicious, the French sceptical organs mainly flippant and hostile, the journals and authors of England enquiring, discussing and waiting. The Founders and Mohini Babu find their time constantly occupied with visits to make and visitors to receive.

Those with whom they are in friendly contact are among the brightest and cleverest of acknowledged contemporary thinkers. Theosophy is filtering through the upper strata of British Society. One of our pronounced enemies, Mr. Arthur Lillie, of the Royal Asiatic Society, confesses in his recent pamphlet, "Koot Hoomi Unveiled," that Theosophy is rapidly spreading, and that far more copies of Mr. Sinnett's books are sold than those of Max Müller and other recognized Orientalists! And the *Record*, a chief Evangelical organ of the Established Church, (issue of 20th June) admits, in an abusive leading article, that "in the West End of London"—that is to say, among the highest and most cultivated classes, "there must be a great opening for Colonel Olcott." And adds: "Buddhism is now the fashion. The Vedas have almost had their day; the recent attempt to recommend Mohammedanism failed completely; the unspeakable Turk, with his atrocities and his bankruptcies, could not be made palatable. But Buddhism? Who knows anything about it? Perhaps it may yet come to pass that on the Thames' Embankment a Theosophic temple may be reared, in which, as in Mongolia and Tibet, under the influence of Rishis and Mahatmas, Society may 'grind' the Vedas, the Shastras (sic), and the seven occult books of Sakya Muni, &c., &c." This is childish petulance, but it proves that British religious circles are much disturbed by the prospect of the spread of the Esoteric Doctrine. Mr. Moncure Conway has twice preached about it in his chapel. Mr. Sinnett has just been obliged to get out a fourth edition of his "Occult World," and Mr. George Redway's English Edition of Col. Olcott's Lectures and Addresses, and another volume by him giving a history of Madame Blavatsky's "Psychic Phenomena" in America, Europe and India, will probably have been published by the time this number reaches our subscribers. Meanwhile the London branch has about doubled its membership; a new branch has been organised in Scotland; the Parisian branches have been consolidated into one working organisation; the President Founder is shortly to meet at a central point in Germany—a number of eminent persons and constitute a Central Committee to translate our theosophical literature into the German language and carry on the work; he recently recrossed the Channel, from London to Paris, to hold a debate with M. Wes. Guyot, the distinguished French economist and philosopher, and some twenty other clever Materialists, upon the respective scientific value of Materialism and Theosophy; and two important persons—one a journalist and author, the other a man of high scientific reputation and standing, have crossed the Atlantic to meet the Founders and arrange with them for the formation of new American branches and the issue of new books upon Theosophy.

After the above was in type, we received news of the formation of a Branch Theosophical Society in Germany. We also read in *Tribune* (Lahore) of August 16, account of an open meeting of the *London Lodge Theosophical Society*, held on the 21st July, in Prince's Hall, Piccadilly. Although a select number of people were invited, the Hall was quite full with the *élite* of London. Col. Olcott gave a very impressive lecture on *Theosophy*, amidst loud applause and cheers of the audience. Babu Mohini Mohun Chatterjee then read a paper on the wisdom of the ancient Aryans. We shall give a fuller account in a future issue.

(Continued from the last Number.)

#### WHAT THE EUROPEAN PAPERS SAY.

Translated from the French.

THEOSOPHY.

*La Tribune de Geneva*, 24th April 1884.

If Parisians do not care to be saved and are sceptics, it is not for want of apostles. There are new prophets; their religion, or rather the stock of their belief, is called Theosophism, and they come both from the old and new world, from America and far remote central Asia. They already have their head-quarters in

England and next month will attack Paris, beginning by a great meeting. They are expecting one of their leaders, an American Colonel named Olcott and a Hindu, "the cleverest man of our time," and meanwhile a Russian Mme. Blavatsky, who has a high grade in their hierarchy, is preparing the ground in Paris. A Parisian paper *Le Matin* gives us some curious details of this sect and its ideas.

Theosophy presents this peculiarity that it does not call on to the mass; it is a sort of aristocratic worship trying to make adepts solely in the high classes. It is a sort of mixture of Spiritualism, Buddhism and Theological Brahminism. The Theosophists believe that there are two worlds, the material and the spiritual, and that we can reach the spiritual world by means of physical researches. They pretend to treat spiritualist theories with a scientific precision, and they look for their method of physical researches to the ancient religions.

Far away, far away in the Himalayas, in a mysterious place,—we are not told if it is a cavern—meet the wise men who know the depth of every thing in this world, for whom truth is unveiled, and who, careful not to dazzle common people by a too sudden and bright light, spread it with a wise economy. There are in fact two doctrines, one revealed to a few elected ones, to whom the mysteries of a high order are communicated. They are physicians who can cure, but who keep for themselves the secret of that art.

The ultimate aim of Theosophists is to unify all religions and to make of humanity an immense brotherhood.

Religious opinions are few; you have not to give up your faith in entering that sect. Nothing else is required from you but to be in a fit state to receive the new revelation. The Hindustani Theosophy has thousands of adepts and is divided in as many Branches as there are towns in the great Asiatic Peninsula. When Colonel Olcott and Madame Blavatsky travel through India the whole population is aroused.

The rajahs receive them with great honours and give them the 20 pots of jam as they do for English residents or sovereigns; the houses are illuminated and the festival lasts the whole night. In the eyes of the Indian people Colonel Olcott is reputed to be a *thaumaturge*. They say that he bids the paralytics to walk and cure all manner of diseases with a single touch of his hand. But lately he was forced to give up such exercises which exhausted his nervous strength. It is reported that once it happened to him to make a speech in the most correct and elegant French language, though he had never spoken it before in public. The paper of the Society is the *Theosophist* published in Madras and conducted by Madame Blavatsky. In one of the numbers of this Review are recorded more miracles than in the four Gospels. There it is spoken of *projection*, which means the temporary isolation of the *astral part* of our material being, and this isolation is so complete that it may happen to an *ordinary* man to see his *astral* soul walking before him if the said astral soul is in a hurry.

Generally speaking the astral man takes no heed of time and space. To go from the banks of the Ganges to those of the Seine is a mere fun for him. Once in New York sceptics asked for some proofs of these extraordinary feats; suddenly an astral band of learned Indians appeared before the window as if walking solemnly at a great height above the ground. They were arriving directly from Hindustan, and some of the disciples present knew them and recognized them quite well.

Theosophists pretend to have a very important part to play in the world. They were for a good deal in the independence of the United States of America. We find all that in the paper just mentioned, and besides we read there the fantastic history of a man tempted like the good St. Antoine by two dancing women, and who transformed himself into a serpent to escape the danger he was incurring. Another saint, an orthodox Brahman, went without any bad intentions in the harem of a Nawab to play on the flute for the pleasure of the ladies; the jealous tyrant wanted to kill him on the spot. The Brahman wrapped himself in his cloak and covered his head with it, and when they came to murder him they found in the cloak, instead of a man, the Ananda, the serpent of the Indian mythology.

Such are the things which are to be revealed to the Parisians, and Theosophists hope to find adherents among them, for they have succeeded in having women in their game. The Secretary is Mme. de Morsier, the President Lady Caithness Duchesse de Pomar, who receives the meetings in her splendid hotel.

And Madame Blavatsky, an aristocratic Russian lady, has left her splendid residence in Madras to come to Paris with the intention of quickening the zeal of her followers. Like all the Russians, she has the gift of languages. She speaks English without any accent, French like a Parisian, and knows Hindustani.

TO THE EDITOR.

*La Tribune de Geneva*, 28th April 1884.

Sir,—I read in the 24th of April of your paper an article entitled "Theosophism." Though the errors which exist in this article are not to be imputed to you but to that paper where you took your information,—I should be thankful if you would publish in your pages some words of rectification.

The Theosophical Society has no more to do with a sect than the Salvation Army with *science*, as you will see by the enclosed rules. It is a mere association for philosophical and scientific researches. Amongst its members are many scientists, Americans, Russians, English and Natives of India, who, having studied in the Western academies, can struggle with equal arms with all the modern men of science.

The members of the Theosophical Society do not accept one infallibility more than another. They think that the duty of all serious and sincere persons is to study all things and retain what is good. Such an attitude does no more resemble a religious sect than scientific dogmatism. The motto of the Review of Madras shows the true spirit which animates the Society:—"There is no religion higher than truth!"

To search for truth wherever it may be found is to aspire to the highest religion.

EMILIE DE MORSIER,

*Le Rappel (Paris), du 1 Avril.*

In an article bearing the title of *Threat of Invasion*, Mr. Victor Meunier, after having alluded to the article of *Le Temps* from his reporter in Ceylon, says the following:—

Did you hear of a Society lately founded in Paris under the title *Société Theosophique d'Orient et d'Occident*, whose aim and principles, as we see them exposed in its Rules, seem worthy of praise and approbation? This Society is but a branch of a General Societe Theosophique of Madras, and so intimately linked with the latter that the initial fee is to be given to the Madras Caisse. The French Society receives orders from the Indian Head-Quarters, and even to that effect that the French Rules have to be altered by decision of the President in India. This President who governs the Society as a regiment, is an English (*sic*) Colonel, author (notice that) of a Buddhist Catechism, so orthodox that Sumangala himself (says the reporter of the *Temps*) gives it to his visitors. This Catechism (be still more attentive) has been translated into French....

Three members of the French Theosophical Society had made a rectification to the article of the *Temps* to the effect that it is not Sumangala who is the Inspirer of the Theosophical Society, being only a devoted member of it. They say that the inspiration comes from higher, from the Himalaya, where a school of learned philosophers live apart from the world and pretend (no new things though ever sensational) that they are linked through an unbroken tradition to the esoteric doctrine (not secret) of the Initiates of Egypt, Persia, Greece and all the East this doctrine was lately expounded in two works which made a sensation in England and America: "The Occult World" and "Esoteric Buddhism" of Mr. Sinnett. Is this not, after all; a real Buddhism affair; this religion knocking at the door of old England, as well as at our own doors? The same writer of the letter to the *Temps* acknowledges that the reporter has well understood the importance of this philosophical movement which takes its ground (as they say) in science, but, owing to his too short conversation with the High Priest, he has not been able to see the philosophical and moral consequences of the doctrines professed by the adepts, Inspirers of the Theosophical Society.

This needs no commentaries! If we have not been keen enough to see Buddhism under the name of Theosophy, we do our *mea culpa*. But when one appeals to "all those who love humanity and wish the abolition of the hateful barriers created by races, intolerant creeds, castes or social ranks, and having so sadly impeded human progress" (such is the language of the Rules), could we not approve it whilst being faithful to our fathers, to our country, and to ourselves? In such a language we felt the inspiration of our own great Revolution, which is also that of the whole humanity, and we were giving our hands as if to brothers! But if we have before us Buddhists in short gowns, our attitude will of course be different.

This Buddhist mission remind us of the German colony before the wars; the invasion is at hand. Sentinels beware!

But why look on seriously on such a topic for caricature, *Buddhism in Paris*! I give the hint to my colleagues who use the pencil.

THEOSOPHY.

*Gil Blas (Paris), Wednesday May 7th, 1884.*

Theosophy, what is it? The lady who, in Paris, is at the head of this new religion is Lady Caithness Duchesse de Pomar.

Why should I not say it? There is some merit in being a free-talker. When I heard of Theosophy I smiled, expecting later to have a good laugh about it.

For us Parisians of the Boulevard, who really think that a new "premiere" at the Hippodrome is a real event—for us Parisians whose horizon is limited to the North by Tortoses, the South by Madrid, the East by Vissim, and the West by Weplus\*,—for us eternal boys with gray hair—it is our specialty to laugh at every thing we do not know and roar at what we ignore, to swear agreeably at everything new under the sun.

\* These are our fashionable restaurants.

This sentence is rather long, and the illustration exaggerated to make very plain confessions. I have laughed at Theosophy, *but I laugh no more*. Certainly I am not converted; scepticism is so strong in my brain that neither Lady Caithness nor Mme. Blavatsky will change in me the old man. But...I am disarmed... You will see why. The Duchesse de Pomar, after a call I had made on her, invited me in her splendid hotel with those whom my friend Baron de Vaux would call "Theosophists of the high mark." Mme. Blavatsky was there. She is a very remarkable woman, who has lived a long time in India. She has an aristocratic look in spite of an air *de bien garcée*. Her dress is peculiar, a black and loose gown, something like a child's *sarran* or a priest's robe.

The Duchesse de Pomar explains...to us who Mme. Blavatsky is... Colonel Olcott is in London with a young Brahmin,...educated at the Theosophical School—I nearly wrote Theological—of Madras, and who knows so well our western studies that you could put him any question in Schopenhauer, Stuart Mill, Comte. Lady Caithness Duchesse de Pomar is a true lady and her nature is *supra mondaine*. The Society was all aristocratic, including *avocats*, professors and doctors, all believers!

Theosophy is not a religion, far less a dogma; it is a philosophy, amiable and sweet, eclectic with a slight touch of scepticism, but giving (this seems contradictory) in the domain of sentimentality, mysticism and dream—not to say more. This contradiction is even expressed in the three aims of the programme contained in the rules. Are they not an agreeable dream, so agreeable, that it has been the dream of all philosophers?

But some practical idea would be better! Mme. Blavatsky in this aristocratic hotel and with that easiness... of a grand lady from Russia, was smoking light cigarettes and trying to present Theosophy to me as an attractive theory. All religions are alike, she said, one is copied on the other. "The essence is the same. Dogma has killed the gospel. The priest has killed the religion. This is the reason why we accept members of all sects. But we neither refuse materialists nor atheists. Why? because we believe that every thing, even *supernaturale*, may be explained by science. Those who lean on pure and abstract science are with us. Our Masters would reason with them on miracle as with a theorem of geometry."

This seems quite sensible, does it not? Why, alas, does the *esthétique* tendency and mystic spirit of the Theosophists re-appear, why are they not quite independent? If I discuss it, it is because Theosophy is making much progress in the aristocracy of Paris and our fashionable people deserve to be encouraged, after all, not to be only engrossed in festivals and worldly occupations, but to yield their attention to such dreams and utopias. Theosophy will have either a good or disastrous influence. Women are influential here. Our Society will have nothing more to do with apostles but with women priestesses perhaps.

Most of the Theosophists are Buddhists; however if all do not agree they are so tolerant that they become illogical philosophers; they do not accept to be called Pontiffs, systematic themselves, they are not sectarians. Their eclecticism is so great that they are spirits hid in their illogism, they attack the spirits in accepting the manifestations. Pure and simple *spirit* which they call the 7th sense, is certainly far developed in them; but I should not say so much of their *esprit de suite* (logical spirit).

All that could be accepted and, indifferent men like us, could agree in believing that with scepticism, religion and extravagance you can make a pretty good soup. But then they give us with that too strong pickles! I do not say that a certain life cannot develop certain faculties, but between such a truism and *occultism*, *Mahatmas*, *adept*, there is an abyss!

Who will accept in France, in Europe, what you call adeptship, that is to say, sort of *supra* world, perpetual ecstasy. Pardon me, but we will ask where those brothers of Thibet live and how you correspond with them?

I, says Mme. Blavatsky, get a message from them in two seconds. This is what Doctor Charcot calls direct perception, said a student. Ah! if he could say what he knows!

There would be no end to such talks, and in fact we began in the *astral body*, which is the perispirit of the spirit; on the *Devachan*, the Buddhist heaven, on subjective and objective life, on the theory of cause and effect, on *Nirvana*, which means the entire derivation of spirit on matter, etc.

A cup of tea and a smile of Lady Caithness brought us back to reality, and I thought Paris is the place for all surprise.

Who would have thought that in the Faubourg Germaine, full of old prejudice, a new religion would grow, leaning on one side on the old Hindu religion, and, on the other, on the discoveries of science.

*Le Temps (Paris) 2nd April 1884.*

Theosophism is not, after all, a new thing. Swedenborg, Saint Martin the "unknown philosopher," and Mme. deKender were long ago Theosophists. But the new comers present that

originality that they do not pretend to move the mass and address themselves to a few elected and refined ones only.

The chiefs of this new Theosophism, who has a paper and solidiers, are Colonel Olcott, an American, a good Brahmin, whose name we ignore, and a Russian lady, Mme. Blavatsky.

Mme. Blavatsky is the Mme. deKenduer of this new sect. She is the revelator of the celestial arcana, and explains in a special review the delight of the *de doublement* of the human being, the astral part of our person which comes out of ourselves as an umbrella out of its sheath, and walks, in the astral state, before one amazed body, and who has some reason to be amazed, I bot! This astral man is probably what Swedenborg called *the mental*.

Balzac, who was so much amused with such eccentricities of the human mind, and was, in some measure, a Swedenborgian, would certainly have sunk in Theosophism as a spectator if not as a sectarian. Mme. Balzac also, like Mme. Blavatsky, was attracted to the mystery of the unknowable. Russian women, and in fact all Russia, are passionately fond of mystery. A breath of strange idealism passes on that.... people and, in its steppes, could we find, after America, the greatest number of curious sects and astonishing religions. Theosophism, such as it is proposed to implant it in Paris, this land of scepticism, seems to me like a sort of Buddhism having passed through the country of Nihilism. Thirst of marvellous, hunger for what cannot be understood, for ever will then send thrills through the human beings. Though our century may see scientific miracles mathematically explained, it however craves for miracles. We want the unattainable; and a clever magician, who reads in the thought of people like Mr. Cumberland, will draw and captivate a hundred times more the crowd than a musician playing melodies or a poet reciting verses.

Mistral, for example, is in Paris; Frederic Mistral, incarnating in himself a whole race, a singer who in verses has expressed the soul of his country, well Mistral does not make so much noise in Paris as Cumberland. The *thaumaturge* is more appreciated than the poet of *Mireille*. Let me add that I do not make any other comparison between the two than the present one.

Who is then that Mr. Cumberland? He is a correct gentleman, a clever observer, catching quickly in the eye of every individual this *mental* of Swedenborg and guessing with strange luck the thought of the person he is speaking to. I may add that to make it possible that this thought should be seized by Mr. Cumberland, it must be directed towards a material object. The subject of the experiment—you are a subject at once if you accept the trial—thinks of a determinate object and, if possible, present; for instance of the watch of your neighbour (without any bad intention) or of this lady's fan, ring or chain. Mr. Cumberland guesses easily that your wish is to see Mr. A.'s fan pass in the hands of Mme. B., and that the ring of Mme. B. should travel to the finger of Mme. A. His (Cumberland's) divination does not go further than these material experiments which are already, it must be acknowledged, very curious. Really Mr. Cumberland guesses and reads your thoughts under your forehead in touching it with your hand. Does he know perhaps the fine researches of Dr. Luys on brain localisations?

There was an attempt to explain the fact in speaking of an extra-sensitiveness of the fingers. But how could he touch a thought? I rather think the explanation may be a great habit of following human look, and also one of those calculations of probabilities of which Mr. Joseph Bernard speaks in his last article in the *Revue des deux Mondes*.

\* \* \* \* \*

But after all why try an explanation, since there is neither science nor marvellous in the fact but only a special gift of the brain? Let us only admire. Mr. Cumberland is a specialist who will bewilder all Paris, though he makes mistakes, does not guess always correctly, and is incapable of reading a real thought. But that science which proceeds quietly without attraction and noise, pure science shows us more marvellous things. And, strange to say, there are people who doubt it whilst the most superior of conjurers, if he is clever enough, finds disciples everywhere. Is it not more extraordinary to see a thought passing through a wall, or to know that an idea once planted in a brain will stay there latent, to germ and grow suddenly when he who has put it there shall will it?

Such things happen.

You say to an hysteric girl who is sleeping, "to-morrow at such an hour you shall go here or there and do this or that." Awake, she has no memory of what happened; and goes on in her usual life.

The next day at noon she moves mechanically to the place mentioned and accomplishes there like an automat what she has been ordered to do. Had she been told *you shall kill*, she would have done it. Then we have the most terrible problem about responsibility in crime.

And is not this phenomenon, purely scientific, and realising strangely the dramas of mesmerism that sensational novels attribute to Cagliostro, much more astonishing than Mr. Cumberland's experiments?

Can Mr. Cumberland dictate an order to a woman in another room? No! and still this transmission of thought is practised every day in an hospital, where science alone is allowed to enter and such experiments are not meant for loungers (? *badanels*). I do not use this word to blame any one. Sauntering is a quality, we can call it the younger sister of curiosity, and curiosity is a virtue—a virtue, when it is well directed, no doubt. The man who possesses that curiosity is to the scientist what the amateur is to the artist.

Let us leave Mr. Cumberland to his experiments and Mme. Blavatsky to her Theosophism; we have enough to interest us in Paris.

#### THE THEOSOPHISTS.

*Le Defenseur*, Wednesday, 11th June 1884.

Whilst the Senate and the Chambre agree like two robbers in a market to shake the foundation of family, whilst our M. P.'s (Deputies) are indulging in fiery and useless discussions about the Corse affair; far away, on the border of our world, has grown an association of scientists who, it appears, are full of pity for us. Alas, though our pride may suffer from it, we must acknowledge that it is not the first time other nations were moved with a feeling of commiseration for us. Our errors are such that those minds who are full of anxiety for the fate of nations cannot be indifferent to us: some look upon us as if we were big children who ought to be amused and governed; others rather think we are dangerous beings who, for safety's sake, ought to be made powerless. Many are those who have such an opinion. The scientists, we allude to, think differently.

They consider that France is necessary for the equilibrium of our world, and they experience feelings of sadness in seeing our country rushing to its loss. They have resolved to save it if it can be saved! and have sent to us some of their partisans.

It will not be said that such men belong to the clerical party, for they belong to different religions accepted in our planet; but they believe in the existence of God, that belief which is so ardently attacked by our new institutions.

In their eyes the so-called science of Paul Bert, and other Popes of the official instruction, is but ignorance, and such school is the most dreadful agent for dissolution. "A little science takes you away from God, but much science brings you back to him." Such is the motto of those prophets called Theosophists, who have undertaken the mission to prove by science the existence of the All-Powerful.

They try to find here new adepts and they begin to form their association in France. Will they succeed? We hardly believe it, as they esteem materialism to be the foe against which we must fight, the first thing they ask of their associates is to give up self, and sacrifice private interest to general interest, to practise Christian virtues in fact! In a country where selfishness has reached its highest development, where self-love and the struggle for material comfort are the greatest preoccupation for individuals, how men, speaking such a language in the name of science, would they be more listened to than the ministers of religion speaking in the name of the Master of our universe?

Science is not in the scope of every one, whilst religion goes to the heart of the humblest as well as of the most powerful. Not that science which is taught in the schools of girls will bring the human mind to such a point where the laws governing the elements will have no more mystery for it. Theosophists affirm that loudly; but they hope that if, in the leading classes, they could create a current of thought in favor of their doctrines, France would be saved.

Any how the attempt is praiseworthy, and we hope for its success. The Theosophists practise the highest virtue, they despise material enjoyments so far that they are ascetics and devote all their time to study. Their science is deep: they specially study the forces of nature and everywhere show the hand of a Creator.

In a last meeting which was held in one of the most aristocratic hotels of Paris, which is also often opened to worldly festivals, they have demonstrated the void of the positivist philosophy. They have specially pointed to the isolation in which we live, in regard to intellectual questions, for want of a knowledge of foreign languages and literature. They have spoken of important books known everywhere except in France: we have exchanged some words with one of the leaders of the French mission. They said; Materialism is your sore. "Materialism is that rottenness disintegrating bodies and pulverising it into dust. Your state of decomposition is, alas, far advanced. The evil can be stopped, but you must break idols and dethrone false gods; that is to say, give up the worship of the *veau d'or* and of the ego and worship science and truth in its place. You must send away from the pulpit of your schools the vulgarizers of dangerous theories which have turned people into atheists and free-thinkers."

We share those ideas, and it is with a deep feeling of humiliation that we once more note the opinion of the world in regard to us. Shall we not find in ourselves the strength, the energy, to react against such evils which destroy us and call unto us the malediction or the tears of foreign land?

[Continued from the June Number.]

**HISTORICAL RESEARCHES ON MAGIC.**  
(From the French of Baron Dupotet; translated by  
C. W. ROHNER, BENALLA.)

WHY all these fears and apprehensions; why all this secrecy? Is it all a vain thing and a lie? Is there any need of hiding his ignorance or trickery? But before throwing out any suspicions or accusations, it is necessary to understand and to know. With regard to myself, I am free from any fear of the gods; I am not afraid of risking my life; I never had a master, no oath is binding me; free like a bird I can roam about at my own pleasure; I can speak of nature as I feel her, and as she reveals herself to me. Nevertheless, an inner feeling warns me and tells me that I am doing wrong to touch upon these matters. I do not know whence this feeling arises, and what gives it to me; possibly it may be inspired by what I see people practising in magnetism, by all those barefaced charlatans who pollute the truth, who soil the truth by exhibiting her in her nakedness on the public stage before the eyes and ears of the profane crowd. Nothing ever appeared to me so contemptible; and I say to myself, how would it be, then, if I were to reveal still greater mysteries to these unworthy men? What use would they make of them, great God! A fear overcomes me when I write or speak, for the bridle which holds me back in my confessions and demonstrations is not held in the hands of many persons, and truth may become dangerous if placed in the hands of certain people. If I listen to the voice which speaks in my soul, if I pay attention to the warnings of my conscience, I hear these words: leave undisturbed both souls and bodies, do not step beyond the limits of time, travel alone in the path which thou hast discovered; men of intelligence will soon follow thee; wait until their feelings have been stirred up, and until the seed sown has germinated in their hearts; let the men of science say and think what they like, they are far from the truth, their judgment is of no account; but especially keep clear from bold and daring men; they are the dangerous rocks ahead.

I was obedient to the clamour of this voice with great docility, and nothing until now has prevailed on me to hasten my steps.

The science of magic is based upon the existence of a mixed world, placed outside of us, but with which nevertheless we can enter into communication by the employment of certain processes and practices.

The field is vast, there is room for all ideas, for all conjectures, and, we may also say, for all dreams and reveries. The simple man believes in this world of spirits; the *savant* rejects it as one of the greatest errors of past times; the profound and honest thinker is led to this belief by an earnest examination of the facts of nature and of himself.

All ancient religions make it a duty for us to believe in this world of spirits. Our nurses who have rocked our cradles have planted in our soft brains the germs of all the badly understood ideas about this invisible world. Who amongst us has not trembled before he became perfectly assured about the extent of evil he might bring upon us? People advance in life by gradually and slowly throwing off what is called prejudices and errors; the writings and traditions of the past are rejected; doubt is cast upon this marvellous world, which our senses, in their cold and habitual exercise, can neither see nor handle. Everything appears to us imaginary, but we on our part are delighted with it.

Ghosts, in the opinion of *esprits forts*—strong-minded people—are nothing else but poor devils badly advised, whom we always detect in *flagrante delicto* of imposture. The souls of the suffering, the *ignis fatui* are only emanations, exhalations, phosphorescent lights, rising from decomposed bodies; in short, things natural, which, if closely examined, are at once recognised what they are, and what they are worth. The *esprits forts* have an easy game of it, for certainly very gross interpretations are often mixed up with these things; but they unfortunately confound and misapprehend, in their unbridled contempt, facts of a particular order which have remained hitherto unexplained, and which facts, if nature or science were suddenly to reveal them to these strong-minded *savants*, would stupefy them with their striking reality. These phenomena of an elevated order have for cause the existence of an unknow force—a force not less real to us than the electricity in our vicinity—which makes the earth tremble—a force which, if in activity in our vicinity, soon agitates and shakes our innermost being, makes our hair stand

on end, and fixes our eyes in their sockets immovably, our mouths stand open without being able to utter the least sound, the blood ceases to flow in our veins, and we feel as if life was altogether leaving us.

I smile at the sight of these brave and intrepid champions, who at a safe distance from danger speak with a loud and firm tone of voice; they reason glibly upon what they know without taking the slightest notice of other people's knowledge. Quite ready to dash themselves against unknown elements, they get angry and vexed that they are not challenged to mortal combat. These same men, however, soon get weak in a close and heated atmosphere; their senses become enlarged and their comb rises only in cold regions and temperate latitudes, but the slightest shocks their vessel receives render them irrecongnisable, and deprive them of their courage. But what does this matter, it does not enlighten them; they are unable to imagine that we are depending on the medium in which we live; that everything which changes or modifies this medium at once changes our mode of being, and that to judge of the unknown as we judge of what is known to us, leads to exposure and false judgments. I am not endowed with sufficient spirit to rectify the erroneous position of these *esprits forts*; and besides, of what use would it be? I do not see the necessity for it. Let them keep their doubts, as we shall adhere to our living and sincere faith. But let us return to our task.

There is around us in space an agent different from all the known forces; its properties and virtues have no analogy with the dead forces which the science of the schools has succeeded in discovering. It is this agent which furnishes the element of our life, which sustains it for a time, and which receives it again when its term of disengagement from the fetters of matter has arrived. Our inspiration, our knowledge, our intelligence, in fine, is derived from that agent. Between it and us there exists a constant mutual attraction, an unknown affinity and relation, and one which for this very reason has ceased to be efficacious. But all this is found again to day.

This is the magic element of which the thaumaturgists of all times and ages have made use; we know of no other which could put us in possession of a few rays of light illuminating the straight path to Occultism. Should even my opinion not be based upon a firm foundation, this would alter nothing with regard to the facts which it is my duty to record; for the mode of interpretation of these facts is of no importance so long as the phenomena related are positive, real, and important. The efficient cause of these phenomena is a merely secondary object.

Perceiving something superhuman in certain apparitions, which, let us say, were not pure creations of the brain, man has peopled space with genii; then he has turned to evoke them, to call upon them; he has given them names, qualities, a power, and every favour he received from this quarter he attributed to them and considered as due to them.

Was this an illusion, the result of an overheated imagination? Often, no doubt, this was the case. They attributed to God, to the genii, that which was in the regular course of nature. But there were men who were not mistaken; they discovered the point from where the error took its origin, and they also knew the source of truth; they permitted the masses to stick to the belief that they were on the right track, thus they removed from the eyes of all the sight of profound operations and of sublime secrets. The ignorant herd finding itself abandoned to its own resources, prayed, conjured, traced signs and circles, etc.; sometimes the beginning of a certain work was the result; an outline of facts, and that sufficed to make them fancy themselves sorcerers and magicians.

The man who first magnetised the point of a knife, and attracted with it steel needles, was bound to be a sorcerer, and perhaps the man elected to pass as one. He made a simple thing appear mysterious and a matter of no consequence was magnified. Thus it was with all arts and discoveries; they were carefully concealed in the beginning; chemistry and physics were at first only taught under the seal of an oath, and if we could produce a book containing the first operations in either of these departments, I am sure no *savant* of the present day would be able to comprehend them.

It is the same with magic; I could defy all modern sorcerers to reveal the true sense and meaning hidden under the figures and emblems which are contained in conjuring books or works of practical magic. If the key is lost both for them and us, the facts are still there; they have their meaning,

It is these facts which must serve as the basis for the reconstruction of the ancient science.

This is a difficult task; it is hard to make that intelligible which has no definite character, that which cannot be plainly narrated; one runs the risk of losing oneself in vague phraseology, utterly unintelligible. But just as one may be permitted to talk to the blind about light, of which they know nothing, in the same manner shall I endeavour to say something on this occult subject.

Amongst the facts stored up in the history of the past I was above all struck with accounts of levitation and ascension of bodies in space. What astonished me equally as much were accounts of material objects being upset or displaced by a force which was said to proceed from a good or bad spirit. All Christian works are unanimous on this subject; none reject it. Certain practices of Indian sages corroborated the existence of such phenomena, and proved their identity.

Seeing that the works on magic contained all alike most circumstantial accounts of operations implying a decided infraction of the laws of nature; seeing, moreover, that neither stake nor torture was able to extort any disavowal of these facts from the enlightened disciples of this science; I said to myself, how is it that men of science and knowledge should have consciously given utterance to lies in order to bolster up and pass as truths such freaks of extravagance? This, I said to myself, is impossible! And I read, and read again, the works of these philosophers, of these ancient sages, these precursors of our arts, of our sciences, men who advanced civilisations so far by wise laws, men who themselves gave the example of a life free from all vice and taint of immorality; I was stunned, confounded, for all these philosophers, all these sages, were magicians.

But what did they mean with such words as—Divine power, evil principle, spirit of light, spirit of darkness, angel and demon, God and devil, hell and heaven? What is the meaning of a power given to man by God, a power which nothing can resist, the faith which transports mountains, etc., etc. What lesson and what light can this long list of miracles, of men suddenly struck down, of walls demolished, of water changed into wine, of bread multiplied, and of so many other wonderful works performed by a secret power, convey to us? To reject them all as fables or myths appeared to me the work of a madman or fool.

There is something here, I said to myself, which escapes the reasoning faculties, but which nevertheless exists, for I see besides that the gift of healing diseases—one of the smallest wonders—is exercised through my hands without my comprehending by what means it is accomplished. This led me to the conclusion that if this faculty rested upon a basis of truth, all the rest of the faculties must be equally true. Science henceforth ceased for me to be a final guarantee against error. For, had science not denied the reality of the modest works of my hands, although they were a pale reflex of the works of the ancients? If science was mistaken so grossly with regard to the most common facts which were so easy to establish, could it not also be mistaken concerning all the other faculties of the human soul and the properties of life itself?

Proceeding from one reason to another, I reached at last the conclusion that it was my duty to search for the truth without allowing myself to be arrested in my search by any adverse judgment or mere opinion. But who knows the path leading to the truth? The man of science when interrogated on similar subjects remains silent, shows his teeth, and makes a face. A monkey would give a like reply.

"Seek and thou shalt find; ask and it shall be given to thee; knock and it shall be opened to thee."

Where? Whom? How? I did not know, and still *the powerful agent, the immortal force*, was going through its functions—before my very eyes.

Let the revolted ocean throw upon the strand the floating wreck constructed by man's hands to resist its wrath, we might have foreseen such a result and it might have humiliated our pride.

Let the same waves detach and break up tons of rocks which centuries have treated with respect—this does not astonish us.

Let the thunder shake the foundations of the most solid structures and strike terror into the hearts of men—this is only a sublime spectacle, the play of a blind force which man is able to a certain extent to resist.

Let the hurricane throw down and whirl about our habitations, uproot and carry to a distance, trees hundreds of years old—who now is astonished by such an event?

But let an element yet unknown in its nature shake a human being and twist him about like *the wind shakes and twists a reed*; let this element seize him and fling him to a distance; let this unknown element or force beat or touch him rudely in a thousand different places without its being permitted to him either to see or to defend himself against this new enemy, or to shelter his rights, his liberty, his dignity as a man against this inroad of a mysterious force; let, moreover, this agent have favourites who are not hurt by it, let it apparently obey the power of the human will, to the human voice, to certain tracings or signs, or perhaps to a positive order—then you will hear utterances of scorn, that such things are incomprehensible, that all human reason is and always will be against such matters. Yes, I am afraid human reason will, indeed, for a long time yet be against such speculations. Nevertheless, I beg here to affirm that I believe in these things, that I adopt them as proved, that I have seen them, and that to me they are an absolutely demonstrated truth—a truth never to be shaken by any scientific prejudices or blind opposition of the blind.

I have myself personally felt the attacks of this redoubtable power. One day, surrounded by a large crowd of people, I was making experiments based upon views of my own in connection with Mesmerism, when this power, which some would call the devil, after its evocation, shook my whole being; I fancied I was surrounded by a complete vacuum, and that I was standing in the midst of a slightly coloured vapour. All my senses appeared to have doubled their activity, and what could not be an illusion, my feet were twisted backward in such a manner that it caused me great pain, and my whole body, carried away by a kind of whirlwind, was forced, in spite of my resistance, to obey and to yield to this mysterious power. Other human beings, full of strength and bodily vigour, who had approached the centre of my magical operations (to speak as sorcerer) were still more rudely handled; and it was actually necessary to lay hold of them and fix them upon the ground where they were kicking and writhing in such a manner that the bystanders thought they would expire under the influence of their strange contortions.

The bond was made, the compact fulfilled; an occult influence came to my aid and united itself with my own force, and permitted me for once to see the *light*.

Thus have I discovered the path which leads to the true magic.

Is this all that I know of the ancient art? No, it is only the commencement of what I have to say about it, and this already suffices to explain and render intelligible the tales about sorcerers, their terrors, their fear of the devil, the numerous and visible bruises and contusions they received, and the unfortunate exit out of this life which they are represented to have sometimes made.

The practice of magic required a strong soul, a resolution which cannot be shaken; poltroonery is not adapted for these kinds of operations, danger must be faced unflinchingly; for even if the devil be only an empty word, it nevertheless represents a force, an agent, a power. Only through, and after, a struggle with that "great" unknown, can man arrive at anything. Thus also with ourselves, and at all moments, life struggles against death. Thus only by ruling over its enemy, can life prolong itself; all nature is subject to the same law. Here, moreover, is it necessary to break this obstacle; to subdue first of all the flesh and all carnal lust, so that the force which animates us may pass through the veils of flesh and blood which surround it, and extend its sphere of activity to a distance. It is in this new medium that the soul finds its enemy, but also the new affinities which furnish the power. All that is accomplished is done in this manner, and by these means; it assumes the character of the supernatural, nay, is the very supernatural itself.

Science has an instinctive notion of these mysterious operations, but only for and in the physical order of things; it only arrives at results by destroying the affinities of bodies, by tearing asunder their elements (vivisection); then, laying hold of this or that element, it alters and upsets for a few moments the laws which nature imposes. This no longer surprises any one, nay, even greater miracles are expected from science, and there is no doubt that science will surprise itself by and by. Has science not also fears? Does she run

no risks? On the contrary, all is danger for the men entrusted with the authority of directing its blind forces; for all these forces have a tendency constantly to return to their primitive state, and, to attain this end, they break copper and steel.—*The Harbinger of Light.*

## Letters to the Editor.

### THELEMOMETER—A WILL MEASURER.

To the student of Occultism it must be a well-established fact that the identity between Ferric Magnetism and Human Magnetism, which Reichenbach proved to the modern world by his researches half a century ago, is so closely connected that Human or rather Animal Magnetism may now be added to the list of the Physical Forces with which the modern scientist is familiar. These are so intimately related (correlated), and so far convertible into one another that Lord Lytton, whilst speaking of *Vril* in his *Coming Race*, goes a step further and looks upon all these forces as merely the manifestation of a single Force, which we may call **THE ONE LIFE**, the *Anima Mundi*, so protean in its changes and so manifold in its manifestations. Now, one of its manifestations is the *Will* or, if one wishes to be more accurate, *Will-power*, the development of which in the right direction for the good of humanity is the goal which we aspire to reach, and the placing of which *en rapport* with the universal mind is what a Yogee means and strives to do—(nay, I shall go a step further and say it is his *Dharma*.)

As regards magnetism, I believe it would perhaps be better to make a distinction between Animal and Ferric Magnetism; howsoever intimately connected they may be, I should like to call the former organic and the latter inorganic, terms not unfrequently and very aptly used in modern science—such as Organic and Inorganic Chemistry.

I have for a long time thought that an easy piece of apparatus capable of measuring accurately the will-power of a person is possible especially for beginners; and having shown my design to some of my friends, who have encouraged me in perfecting it, I venture to lay it before my fellow students of occultism.

The principle which I adopt, is that Will-power, being a polar Force, can and most easily affect visibly a substance in which the Odyde or Force is polarized—more than a substance in which the polarities neutralize each other. Hence in the first place I use a light and a sufficiently long magnetic needle suspended from the middle by a cotton-thread, or, better still, by a single thread of silk and allowed to oscillate till it comes to a state of rest, one end pointing to the north and the other to the south as in the case of a mariner's compass. The needle may, if the experimenter wishes it, rest on a sharp point at its centre. Such a magnetic needle, if purchased in the shops, would cost a trifle; but the intelligent experimenter can get a long steel-needle and magnetise it himself, either with a magnet, by making passes over it, or by placing it in a coil or helix through which a current of electricity is passing.

Having now such a needle before him, let the experimenter, at a place unaffected by currents of air, hold out the fingers of the right or left hand towards one of the poles of the needle and *will* either to attract or repel it. In the case of a beginner, for whom this experiment is intended, I have no doubt that his first attempts will be unsuccessful; but, if he performs the experiment, say for 15 minutes each day at a fixed time, I have no doubt he will find that his perseverance and patience will be crowned with success. But the first oscillations, indicating attraction or repulsion, are so minute, or the intense expectancy of the experimenter may be so great as to make him believe that the needle moves when it does not actually move. To help him in this difficulty and to enable him to avoid these undesirable contingencies, I propose a method by which the least movement of the needle can be detected. My plan is simply this. Stick a small piece of silvered glass on to the needle with a very small quantity of wax,\* and allow a small beam of light from a closed lantern near by to fall on the small mirror, and observe where the reflected beam falls on a distant object,

say the wall or ceiling of the room in which you may be experimenting. Now, by the well known laws of optics, the minutest deviation of the needle will be magnified on the wall or ceiling. The small mirror may be stuck on to the thread, if the needle is suspended from it; and the twist or torsion of the thread, however small, imparting to the small mirror a slight motion, the smallest deviation of the needle will be shown by the reflected beam. When the student has made a sufficient progress in registering his will-power, he can safely dispense with the mirror and lantern, and ascertain the angle of deviation made by the needle alone in motion by placing a card marked with degrees under the needle.

When he has attained proficiency so far, I believe he will be, after some efforts, able to influence a non-magnetic needle or even a wisp of straw or some such light substance. He can also vary his experiments by spreading on a table before him light pith balls, or feathers and the like and *will* them to move or be attracted, as in experiments illustrating the laws of static electricity.

A few months ago, when I was asking the opinion of an esteemed American brother with regard to the simple apparatus sketched above, he assured me that he knew of a person "Down West" who could wilfully, for sheer mischief, vitiate the readings of the magnetic compasses used by land surveyors, by simply influencing the needle by his will-power.

Now a few words regarding the name with which I propose to designate the apparatus, namely, Thelemometer. Whilst searching for a suitable epithet sometime ago, I hit upon this, which I subsequently have found exactly to answer our purpose. *Thelema* in Greek means *wish* or *will*. This word is philologically connected with the Sanskrit *Dharma*, meaning religion, or rather that which one has held firmly; also virtue, morals, law, justice and, strangely enough, religious abstraction, devotion and yog (vide M. Williams' Sanskrit Dictionary, p. 449). *Dharma* is also the name of Yama, the Hindu Minos as well as of a great many members of the Hindu Pantheon. In Buddhistic literature it is the name of a celebrated Arhat. This word "Thelema" and its Sanskrit confrère "Dharma" are derived from the root *Dhri* (dhar) implying a holding fast, retaining, curbing, resisting. From this root are derived a great many words in Sanskrit and the modern languages derived from Sanskrit—one of them being *dhruva*, which means *firm* as well as the *fixed* North polar star. The same root again, as Philology proves to us, appears in the Latin *firmus* (hence English *firm*) and even, as some would have it, in the English *drag* from the Anglo-Saxon, *drag-an*;—not to mention other vocables in the cognate Aryan languages. The second part of the word Thelemometer, namely, *meter*, is from *metron*, a measure—from the Indo-European root *mā* to measure. So prolific in their derivatives are the Sanskrit and the cognate languages that they need no further remarks from me in this place.

The reader will see why I call the above apparatus a *Thelemometer* or "Will measurer." Its Sanskrit equivalent philologically and literally would be *Dharma-māpaka-yantra*.

ERIOPOLES, F. T. S.

### WHEN TO EXPECT SPIRITUAL HELP.

EXTRACT FROM A PRIVATE LETTER.

(For publication in the "Theosophist.")

"\* \* \* For all men one rule holds good—live the purest and most unselfish life you possibly can—cultivate alike your mind and heart—detach your mind as far possible from worldly pleasures, worldly desires, worldly objects, and set your heart as undividedly as your strength permits on doing good to all living things. If you thus reach, or have in past lives by similar exertions, reached, a certain stage of spiritual awakening, you will find others more advanced from whom you will receive encouragement and some little help (though in the main each soul has to work out its own road); if you meet none such, then you know that you have not reached the stage at which such encouragement is desirable, and you have only to persevere in the right path, quite sure that in the inexorable sequence of cause and effect that dominates the universe, you will, if not in this, at least in the next life, reach the gateway that leads to the higher life. The way may seem long and weary—but never

\* The needle then will have to be balanced, say with a piece of wax as a counterpoise.

despair; it leads to the everlasting condition, and to these sooner or later according to your own exertions and deserts you will attain—as all men—not utterly destroyed on the way, and these are few (the time of trial comes later)—do likewise attain.

“Of what I have said before, let me try to give you an illustration. I am very fond of flowers—to those who have worked in certain lines, their beauty and fragrance have higher meanings. I receive a parcel of amaryllis bulbs, destined later to produce some of the loveliest and most gorgeous blooms known, but when received they look like a set of dry, brown scaled coarse onions, not worthy of a second look. Knowing, however, their innate capacities, I place them carefully in dry earth in pots and leave them to themselves. I do not water them, for the vital principle in them is still dormant, and were I to try water out of season, to endeavour to stimulate them into premature growth, they would rot—so I leave them to themselves—and weeks and weeks and sometimes months and months pass thus and no change, no progress, is discernible, though all the while in their inner tissues, action and reaction are preparing the way for higher development. But one day, in one of them, I discern a tiny green point, pushing its way between the brown scaly skins that cover the sides of the bulb, and then I know that the period of rest is over, and that of activity is commencing, and that I may now begin to water without danger, very sparingly at first, but, as the flower stem rises and the great buds begin to show out, with generous hands.

“So it is with the soul; its inner actions and reactions must have triumphed over its dormancy, and its spiritual aspirations must have pushed their way out of the dry earth of material associations into the clear air of spirituality before the watchers over the progress of their less advanced brethren, can dare to water them, however sparingly, with the water of life. \* \* \*”

P. G. N.

### HOMÆOPATHY.

PERMIT me to say a few words in reply to the remarks on Homœopathy in the May number of the *Theosophist*. The writer of “*Medical Magnetism*” says, “to the right observer, both [Homœopathy and Allopathy] are equally good and useful.” This statement is refuted by statistics, which show the immense superiority of Homœopathic treatment in all forms of disease. I would urge your correspondent to read carefully the *Organon of Hahnemann*, in which work he will find described, not only the rules of the system of Homœopathy, but also the essential difference between it and the system of Allopathy. The reason why the Allopaths sometimes cure is because they use Homœopathic remedies, either unwittingly or without acknowledging the source of their inspirations. But, taking Allopathy as a whole, it is my conviction, after a practical investigation of the two systems, that there would be less suffering and mortality, if there were not a single Allopathic doctor in existence. These two systems do not “accomplish the very same end,” and in my opinion there is no “truth common to both.” If there is, what is it? Magnetism cures Homœopathically; and if the south pole removes the morbid effects produced by the north pole, it is because the effects of these two are similar, and hence antidotal. My own theory of Homœopathic action is that the disease-forces and their antidotal drug-forces are identical in their essence, but opposite in polarity; hence when they meet in the living organism, they neutralize each other, and so leave the *vis medicatrix nature* to restore the organism without hindrance. This theory is confirmed by the antidotal powers of the north and south poles of the magnet, referred to by your correspondent; and I may here mention that I, as well as other true followers of Hahnemann, have used the magnet homœopathically, with curative results.

Homœopathy is the only true system of healing disease by medicines, and he, who fairly tests it, will be convinced of its superiority. But to obtain complete success, it must be practised strictly according to rules laid down by Hahnemann in his *Organon and Chronic Diseases*. There is much spurious Homœopathy practised at the present day, and I utterly repudiate all such treatment as mere empiricism. Homœopathy is based upon a law of nature, and is therefore infallible whenever we succeed in applying that law.

I understand that the law of *Similia* is taught in an ancient Sanskrit work; can any of your readers inform me whether the action of the infinitesimal dose is to be found in these writings also? It is taught in the Hermetic writings

LONDON.

E. W. BERRIDGE, M. D., F. T. S.

*Note.*—While we do not desire to endorse the opinions of the writer of “*Medical Magnetism*,” we do not consider it necessary to enter the battle-ground of “*Allopathy*” and “*Homœopathy*.” We prefer to leave it to the champions of either system, to fight for its supposed superiority in their medical journals. As far as our personal experience goes, we believe that if “*homœopathy*” appears to do more good than “*allopathy*,” it is amongst other things due to the fact that it does less harm; or as an old and malicious saying has it:—“while the average allopathic doctor may kill his patient, the homœopathic doctor will perhaps let him die.” We by no means desire to deprecate the value of any system of medicine; we believe more in the physician than in his medicines, and we consider everything right, if applied at the right time and in the right place. As far as statistics are concerned, they can only be relied on, if we know all the attending circumstances of the cases, not only in regard to the patient, but also in regard to the intellectual, scientific and moral qualifications of the attending physicians and attendants.—*Ed.*

### QUESTIONS BY “A TRUTH-SEEKER.”

I. In your reply to my first query, page 247, Vol. V, you use the phrase ‘*Universal spiritual principle*.’ What is meant by the word ‘*spiritual*’? Do you agree with Hudson Tuttle\* in saying that spirit is ‘*sublimated matter*’? Is what you call the universal spiritual principle one with the universal material principle which forms the *fons et origo* of the material cosmos?

II. May I infer from the latter portion of your answer to my first question that you agree with Mr. Bradlaugh, whom I quoted, in believing in the existence of one universal substance which forms the *noumenon* of which the word ‘*I*’ represents a special *phenomenon*?

III. In your answer to my second query you seem to have entirely left out of account what Prof. Clifford calls *mind-stuff* which, he says, exists in every entity from the lowest inorganic molecule to the highest developed human brain. May not this mind-stuff, which, according to the Professor, forms the basis of consciousness, be considered to be akin to the *one life* of the occultists?

IV. Am I right in inferring from what is said in the first article of the *Theosophist* for June that Theosophy, at least in its cosmology, is purely materialistic?

V. Has the seventh principle in man any form?

VI. What is your explanation of Mr. Slado’s manifestations so carefully recorded by Prof. Zöllner in his *Transcendental Physics*?

A. TRUTH-SEEKER.

*Notes.*—I. The word *spiritual* is inserted therein for the purpose of precluding the possibility of any association between the said principle and the ordinary conceptions derived from matter as it exists in the Manifested Solar System. Spirit is not “*sublimated matter*” in our opinion. Matter or manifested *prakriti*, however sublimated or refined, is but an emanation from Parabrahmam. The 7th principle of evolved matter, as it is now technically called in theosophical phraseology, has of course its *latent* existence (which, when closely examined, amounts merely to a permanent possibility of its evolution) in this principle eternally. If the term matter is however used to mean what is technically called *Mulaprakriti*, this principle may be described as material. But in our opinion this will be misleading. This principle is no doubt in one sense the remote *Upadana Karanam* of the Universe. Every object in the Universe is constructed out of the elements that emanated from it. But there is no entity in the Universe of which it is *immediately* the *Upadana Karanam*.

II. *Ahankaram* is as much a manifestation of the Universal noumenal substratum as everything else which has a beginning and which will have an end.

III. The “*mind-stuff*” you refer to is several degrees removed from the “*One Life*.” It is but a remote emanation, and it has its own development in the course of evolution. Of course it is not eternal. It is but the 5th principle of the evolved Solar System; and is closely connected with the sixth element recognised by Eastern occultists.

IV. The word "materialistic" is one of doubtful import. We have no objection to it if it faithfully represents the nature of our theory.

V. It is Arupa—formless.

VI. It is impossible to give a short reply to this question. The desired explanation will be found to some extent in the 1st volume of "Isis Unveiled."—Ed.

#### ANGLO-SANSKRIT SCHOOLS.

FOR the first time since the establishment of the Theosophical Society in India, the *Aryas* have begun to show signs of an awakening sensibility. The Society has helped to demonstrate the condition of the *Aryas* of the by-gone days, and has pointed out how the descendants of those *Aryas* are gradually, or rather rapidly, dwindling to the lowest point of degeneration. Hitherto we were so proud about the virtue of western education, science, and every thing western, that we condemned our most illustrious ancestors, treated them as an ignorant and uncivilized race, their language as almost useless, and their instructions as most ludicrous myths. One of the aims of the Society and of the Masters, to whom the Society owes its existence, is to regenerate *Aryavarta* and its people, with their arts, literature, science, &c., &c. This grand object can only be realized and accomplished with the revival of our so-long and so-much neglected Sanskrit literature. Men of education and position take interest in the revival of Sanskrit literature, several Anglo-Sanskrit schools have been established, in the different parts of the country, through the exertions of the members of the Branch Theosophical Societies. It is most sanguinely expected within a year or two that every Branch will have a school of its own. Lately the Ajoodhia Branch has started one here.

It is the opinion of many that the boys should be taught in these schools English, Persian, Urdu and Sanskrit as well. But the funds of almost all the schools are limited. None of the schools is in a position to impart English education up to the entrance standard. So there can be no higher classes in these schools. Small boys could only be admitted for their elementary education, and if they remain here for a period of two or three years, they can make themselves fit for the third or fourth class of Government High Schools. In the Government schools in N. W. P. and Oudh, Sanskrit is not taught; Persian or Urdu is the second language throughout the province. As soon as the boys leave the Anglo-Sanskrit school and join the Government school, their elementary Sanskrit education comes to an end; and they are sure to forget soon whatever they may have learnt in the former institution. Under such circumstances, I see no earthly use of establishing any such Anglo-Sanskrit school and teaching boys for a short time English, Persian, Urdu, and Sanskrit. In my humble opinion, such schools are simply waste of time, money and energy. To teach Persian and Urdu in such schools is quite unnecessary. The Sanskrit education is the *only thing* to be aimed at along with the English, and the boys should be taught up to the entrance standard if possible, so that after passing the entrance examination they may be able to continue their studies in any Government College up to the highest standard. If the promoters of the Sanskrit education find sufficient means to keep up a school, as described above, all good and well; otherwise they must wait and try to raise the necessary funds for the purpose.

But something must be done. One plan can be well adopted with small and limited funds. If the school fund does not exceed Rs. 25 or Rs. 30 a month, this sum can be utilized by engaging one competent Pundit, whose duty would be to teach Sanskrit regularly to all who care to learn. Regular public lectures by such Pundit would be very useful and instructive. Subjects of such lectures must be always selected from the Puranas, &c. By adopting this plan, a greater amount of good work would be done to the public, than by establishing such schools.

FYZABAD,

PARASH NATH CHUCKERABUTTY, F. T. S

#### QUESTIONS.

1. Is Re-birth in the male parent and then transferred to the mother? or in the mother after the physical body has attained a certain development in the womb?

2. Two persons have desired to do a wicked or virtuous deed, but one only has been able to accomplish the desire. What is the difference as regards their Karma and Re-birth?

3. Is there not a Review of all Karma good and bad, before the disembodied entity with a balance of good passes into the Devachanic existence? The painful review is probably the Narakam and the pleasurable the Swargam of the Hindus.

TICHOOR,  
16th July 1884. }

A. S.

#### ANSWERS.

(1.) Re-birth is neither in the male nor in the female. The re-incarnating entity, which has passed through *Devachan* or *Avitchi* as the case may be, is attracted to the physical body immediately after its birth, when the child begins to breathe,—according to its affinities. Of course the *Atma* (the seventh principle) never enters the body. It only *overshadows* the *individual*.

(2.) A person, who has committed an evil act or harbours evil desires, will reap the fruit on those planes on which an effect has been produced.

(3.) No. The "Ego" cannot review all his past experiences before it obtains the state of a Buddha. At the point of death, however, a man may see all of his past life as in a panoramic view.—Ed.

#### SPIRITUALISM.

I HAVE read with some curiosity the long paper of Mr. Morell Theobald, F. C. A., read before the London Spiritualist Alliance on the 10th of June last and published in the *Light* of the 14th. It consists of a description of some strange phenomena, but there are a few points which appear to me to be new, and which I fail to understand. Mr. Theobald writes, when speaking of his daughter who died in birth:—"She would now be twenty-seven, and to our *clairvoyante* appears a tall, lovely woman." And when speaking of Saadi of Shiraz, writes:—"Two in our household have since seen him as having black hair, with a dark flowing beard, penetrating eyes and a lovely face." How, in the one case, has the spirit of the writer's daughter grown up to womanhood, while, in the other, the spirit of poor Sheikh Saadi of the Gulistan and Bostan renown become younger than he would naturally have been at the age of 116 or 120 years, the age at which the paper speaks to his having died? Having black hair with a dark flowing beard,—has Sheikh Saadi been guilty of dyeing his hair in spirit-land as some of his co-religionists do in their earthly lives?

Mr. Theobald also speaks of a German spirit who has written for him. But in this case I fail to understand why this German spirit has been backward in his spelling English words, while Sheikh Saadi, who was not even acquainted with the English alphabet, has spelt his words correctly.

Will any of the spiritualist readers of the *Theosophist* explain the above?

ALLAHABAD,  
19th July 1884. }

#### Reviews.

##### "KOOT HOOMI UNVEILED."

Mr. Arthur Lillie's pamphlet is an interesting contribution to the literature of Occultism. Not because it discloses anything especially new, except a deplorable and quite unexpected want of information on the part of the writer, but because it brings before the public a number of questions, which it will be well to discuss, as a free discussion will necessarily assist the progress of the Theosophical movement, which, as Mr. Lillie acknowledges, is assuming gigantic proportions. Most of his objections however have been frequently discussed in the *Theosophist*, and therefore and, for want of space, we shall not go extensively into the details at present.\*

A glance at Mr. Lillie's pamphlet makes it at once apparent that the author has taken a very narrow view of the subject before him. There are people who in a beautiful oil painting can see nothing but a piece of canvass daubed with paint and who look upon "the cattle upon a thousand hills" only as the representatives of a certain number of pounds of butcher's meat. Objects change

\* Besides this, Mr. T. Subba Row is preparing a detailed answer as to the derivation of the Sanskrit name *Koot Hoomi*, see in the mean time the reply by the *London Lodge, Theo. Socy.*

As our perceptions and our opinions change. The Parsee may look upon fire as an all-penetrating life dispensing deity, and he whose house burns down may curse it as being a wicked demon. To the enlightened "esoteric" Buddhist God may be a universal principle, whose wisdom he may admire in every leaf, while to the superstitious "exoteric" Buddhist the same God may be a monster, whose wrath he seeks to appease by the turning of a "prayer machine."

Bulwer Lytton says: "Only in a peculiar state of mind can we perceive the truth;" and Bacon says: "Read not to contradict and confute, nor to believe and take for granted, nor to find talk and discourse, but to weigh and consider." This advice Mr. Lillie has evidently not followed. The spirit exhibited by his desperate and rather rambling attack shows that he has a pet theory to defend; that having gained some reputation as a writer on "Buddhism," he believes his domain invaded, and wishes to regain lost ground. Mr. Lillie beholds the shell and cannot see the kernel. He has all his life studied old superstitions, beliefs and customs and thereby lost sight of the ancient wisdom.

We can fully appreciate Mr. Lillie's irritation, and we sympathise with him to certain extent. At the entrance to the temple of ancient religion stands the "dweller of the threshold," a queer looking ghost, whose name is *authority*. But if we examine that ghost a little closer, we find him to be a stupid illusion, the product of an excited imagination. Neither "Esoteric Buddhism" nor any other writings were ever intended to be presented as conclusive and infallible like ready made patent medicines or pontifical bulls. Instead of dogmatising, the Mahatmas have endeavoured to inculcate that enquiry and research are necessary for the attainment of knowledge.

They have nowhere insisted that their teachings should be believed because they were given by Mahatmas; they have given instructions and hints, asking us to examine the facts, and let the results stand on their own merit.

They have, prompted by a desire to assist human progress, sown the seed of the theosophical movement, not only by assisting various writers in their researches, but also by forming a nucleus for the spread of occult knowledge by organizing the "Theosophical Society." That seed has, as Mr. Lillie acknowledges, commenced to grow. Whether its further growth will be impeded by the weeds of selfishness, whether the young plants will be trampled down by the oxen of dogmatism and swagger, or whether it will continue to grow and be victorious over all the surrounding superstitions and errors, remains to be seen.

But Mr. Lillie does not believe in the Mahatmas, and this is perhaps unfortunate for him. What means could they take to make Mr. Lillie believe? Does he want them to present themselves before a committee of investigation, and if so, where are their credentials? To speak of a Mahatma proving his identity as a person is a contradiction of terms, because to enter that state which constitutes a Mahatma, a merging into the Universal Mind is required; and "personality" ceases, for the time being, to exist. Those that are in daily intercourse with the Adepts do not need to see them to believe in their existence and need not care very much about knowing their names or address, because such students are not concerned with the physical bodies of the Adepts. As to the absurd "Kiddle incident," its true explanation was known to all of us here at the time when it occurred; and if the exact explanation was not permitted to be made at once, it was probably for a reason which Mr. Lillie may find out, if he attempts to use his own intuition.

But is it so very necessary that Mr. Lillie should be convinced, and are the Adepts so very anxious to convince him? Does truth rest upon authority or authority upon the truth? It would be absurd to reject a book simply because we are not personally acquainted with the author, and the beggar who would come to the back door to receive alms, and then cudgel in hand would demand to know by what authority they were given, would probably get the door slammed into his face.

Mr. Lillie evidently shows a want of proper discrimination. The objects of the movement as a whole are certainly laudable, and no sane person can have any serious objection to them. As such, the movement ought to be discussed. But Mr. Lillie cannot mentally rise above the sphere of narrow sectarianism, he descends to personalities, and the attacks, which he directs against the movement, concern only persons and things with which that movement is for the time being connected. Mr. Sinnett's book forms not the essential part, but only an incident of that movement. It was never intended to be the Theosophist, "word of God," and if anything in that book or in any other writing can be shown to be erroneous, the Theosophists as well as Mr. Sinnett will be glad to have it corrected.

To call Madame Blavatsky "a female brother," is simply absurd and shows a complete misconception of what the "Brothers" really are. She is not a "Brother" any more than a person who has matriculated at the Cambridge University is therefore a "wrangler." Neither is she a "Buddhist nun," as in that case she would not be travelling in Europe. But she is an initiate, who has had occasion to learn a great deal more of Occultism, than is known to the uninitiated, and the world owes her an immense amount of gratitude for her teachings and her self sacrifice. Although not more than a human being, Madame Blavatsky is not only possessed of extraordinary knowledge based

upon personal experience, but by her close connection with the Himalayan Brotherhood and the consequent acquisition of certain occult powers through initiation is able to enter into direct communication with it.

It is true that Madame Blavatsky warned the "Spiritualists" carefully to study the nature of the forces with which they were meddling, because they are dangerous; but that advice cannot apply to herself, because instead of being controlled by these forces, she knows how to control them herself. Mediumship implies the surrendering of one's Reason to the will of another, and it is therefore certainly advisable that that other one should be thoroughly known, because if he is stupid or dishonest, he may run away with it or do it great injury. It is well to warn children not to play with the fire, but it would be foolish to ask Mr. Lane-Fox not to dabble with electricity.

Mr. Lillie's criticisms further disclose the fact that he has read Mr. Sinnett's book in a very careless and superficial manner, and he imputes assertions to Mr. Sinnett and to Eliphas Levi, which these gentlemen never made. He makes Mr. Sinnett say: "The highest reward of the just man made perfect, is annihilation;" but the sentence reads:—"to merge his glorified individuality into that sum total of all consciousness, which esoteric metaphysics treat as absolute consciousness." If by "absolute consciousness" Mr. Lillie understands "annihilation," who is responsible for that defect of his judgment? Mr. Lillie makes Mr. Sinnett say "Avitchi or the Domain of Jvy." We wish Mr. Lillie much joy in Avitchi, if he should ever get there as a punishment for his profanations.

*The Dhyani Chohan will be by-and-by annihilated.*

Here again Mr. Lillie mistakes Nirvana for annihilation a serious blunder if committed by an Orientalist; however as he insists on that interpretation and refers to his own writings as an authority for it, we are forced to yield or cease to be polite. It is impracticable in this short review to follow all the glaring mistakes of Mr. Lillie, and we will add only one more sample to show the confusion in his ideas. Mr. Schlagintweit informs him that from Devachan return is impossible.

Now if Mr. Lillie will read page 85 of "Esoteric Buddhism," he will find the same doctrine enunciated, namely, that a return from Devachan for the purpose of communicating with men, is not possible. The spiritual monad that reincarnates, has passed out of its Devachanic condition, and Mr. Schlagintweit's remarks do not contradict that fact. It simply follows, from a perusal of Mr. Lillie's book, that he is fighting a man of straw of his own creation, and that it is his own fancy that has created the "Gospel of Nightmare."

"Christianity" is not identical with the Kabala, neither is "Esoteric Buddhism" identical with the popular "Buddhism" of either northern or southern India; but as all the symbolism of Christianity finds its true explanation in the Kabala, so the fundamental truths contained in a distorted form in what is known as *esoteric Buddhism* are contained in the ancient Wisdom-Religion, called the "Secret Doctrine," or as Mr. Sinnett has chosen to call it, "Esoteric Buddhism." If it had been intended to augment the pile of useless theological rubbish, by giving a compilation of the manners and costumes of certain eastern sects, a book might have been produced, which would perhaps have been interesting to a few antiquarians and quarrelsome theologians, but it would never have attracted the attention of the most enlightened and freethinking minds. The spirit of the Buddhist religion cannot be discerned by studying the manners of Tibetan "nuns" or by dismembering the prayer machine of a religious "crank;" to attempt it would be as reasonable as to search for the spirit of true Christianity in the beads of the rosary of the Roman Catholic monk.

Theosophy admits that one essential truth underlies all religions. As that truth can be only one, it must be the same in all religious systems and consequently the truth found in Buddhism must be the same as the truth found in the Kabala.

Whether we draw our information that the earth turns around her axis from an ancient Rishi, or from an English professor, that truth remains ever the same, and if the essential truths of Buddhism are identical with those hinted at in the Kabala, the former being expounded by an Adept and the latter by Eliphas Levi; it will not be unreasonable to expect that the assertions of the Adept and those of the "paradoxical Frenchman" may somewhat correspond with each other. The "Christianity" of Guiteau and Freeman, Torquemada and Robespierre, differs to a certain extent from the "Christianity" of St. Martin, or Jacob Boehme, still the ultimate principle or origin is the same, no matter how it may be misunderstood.

"Buddha" means "Enlightened" and the word "Buddhism" does not strictly refer to what is now popularly understood to have been the doctrine of Sakyamuni, who became a "Buddha" some 600 years before the Christian era. *Esoteric Buddhism* existed many thousands of years before that time, and we have cause to believe that it is as old as the existence of man on this globe.

Mr. Lillie complains of mystifications in occultism.

The word "occult" implies something concealed or secret, something that is not so plain and simple that a child can easily comprehend it, and we may therefore expect that occult teachings will contain mystifications. The fact that the "Brothers" should have any secrets, which they refuse to impart to the uninitiated,

must be very provoking to the temper of the superficial thinker; but the necessity for secrecy may result from various causes:—

1. From the insufficiency of language to convey ideas of things, for which that language has no words and the people who use that language no comprehension. It is well known that Sanscrit has many words for which there are no corresponding words in English, implying ideas for which many Europeans have no comprehension. As an illustration we may name the word "Nirvana," which in spite of everything that has been said to the contrary is still held by many to mean "extinction."

2. From the incapability of the investigator to comprehend the nature of the secrets, and to illustrate this fact, we need only refer to the innumerable wars, quarrels and persecutions, followed by bloodshed, torture and misery, that have been caused by a misunderstanding of theological doctrines or by a wrong definition of terms. Calvin burnt Servetus on a slow fire, because he did not agree with him on a definition of terms, and it is probable that neither one nor the other knew the right definition.

3. From dangers that may arise from obtaining knowledge which confers power, without having the necessary sense of justice to apply that power and not to misuse it. If the powers of the "Vril" were in the hands of certain bigots, the "Theosophical head-quarters" would probably have only a limited existence; if Dr. Wyld knew the powers of black magic, he might perhaps destroy Mr. Sannett for not having permitted him to see that picture, and Mr. Lillie in his residence in London may yet have occasion to wish that the Fenians had become saints before becoming acquainted with the powers of dynamite.

4. From the fact that *relative truth* refers to conditions and the conditions are changeable. If it is for instance said "Prayer is useful" and "Prayer is useless," both assertions are true according to the nature of that "prayer." If it is a strong desire to accomplish an act, which it is in our power to perform, it is useful because it strengthens the will; if it is a puerile begging for an absurdity, it is useless. If it is said that the cosmic ether is "Matter," it does not imply that it is the same form of "matter" as clay, etc.

To understand the teachings of occultism, it is necessary to enter into their spirit and not merely huddle at words. In conclusion it may be well to point out to Mr. Lillie, that if he will seriously apply himself to the study of *Esoteric Buddhism*, the objections raised in his pamphlet will disappear. He will then discover that the "Buddhism," to whose study he has given so much time and attention, is only the caricature of the true *Esoteric Doctrine*, and that far above the muddle of credal superstitions, scientific fallacies and personal prejudices, is a realm of truth, to explore which is the duty of the true searcher for knowledge.

F. HARTMANN F. T. S.

#### "THE GOVERNMENT AND THE BUDDHISTS IN CEYLON."

THE above is the title of a little pamphlet that has recently appeared in London. It contains a history of the assault perpetrated by the *Roman Catholics* at Columbo, Ceylon, upon an inoffensive procession of Buddhists, who were carrying fruits and flowers to their place of worship. It is written in very moderate language and contains all the official documents, which go to show, how a cowardly police stood by without interfering, how sectarian officials attempted to hush the matter up, how a Government officer was sent to see justice done, but being himself a Catholic, failed to do his duty, how the Buddhists appealed to the Government, and how after ten months of anxious waiting they obtained a promise of a *revision of the Police Regulations* which was benignantly held out to them in the indefinite future, how they applied for advice to Col. H. S. Olcott, and how he by presenting the matter before Lord Derby, the Secretary of State in London, not only obtained justice for the Buddhists, but the promise of other privileges, more than they dared to hope for.

The "Theosophist" of September 1883 contains a history of the assault, which was committed without the least provocation. At the ringing of the church-bells, the "Followers of Jesus" assembled, inspired by the spirit of Torquemada, excited by liquor and by "religious exhortation" to carry out the instructions of Him, who said: "Think not that I am come to send peace on earth; I came not to send peace, but a sword." (Math. x, 34.) The brown bodies of the ruffians were painted with the white sign of the Cross, they were armed with various weapons and behind them stood as protecting angels, superstition and ignorance, overshadowed by the satan of religious bigotry.

Justice in Ceylon seemed to be asleep and the murderers went free, unmolested, and even boasting of their crime; but it seems to be a peculiarity in Colonel Olcott's character, that whatever he attempts, he always carries to a successful termination. By his efforts he succeeded in re-establishing the rights of the people and their confidence into the Government.

The Buddhist case ought to serve as a warning to all. Dogmatic Christianity is the religion of intolerance. The word *Catholic*

does not signify to such Christians "universal love;" it means for them that they must and will have their religion universally introduced, either by fair means or foul. They believe that their religion is the only true one and that it is their duty to spread it irrespective of material consequences. They act therefore only according to their "honest belief" if they promulgate it by fire and sword, and the Christian Church never gave up and never can give up its persecutions, except from want of power to put its will into action. "If any man preach any other Gospel unto you than that ye have received, let him be accursed." (Gal. i., 9.) It will be well not only for the Buddhists but also for others to remember such "Bible" passages as the above. It will also be well for all to remember that the recent action of Col. Olcott, and which was performed by him as a matter of love, proves that the object of the *Theosophical Society*, to establish a Universal Brotherhood, is not mere idle talk. The "brotherhood," of which the "Christian" boasts, means in plain words: "If you will do and act and think as we Christians do, we will consent to call you brothers, but if you do not receive our words, it would be better for you if you had never been born." (see Math. x. 14.)—The Theosophical idea of universal brotherhood is not only theoretical but practical, and the true Theosophist is always ready to assist his brothers, to whatever race or religion they may belong.

F. H.

#### OUR NEXT VOLUME.

WITH this number closes the fifth volume of the *Theosophist*. The sixth Volume, beginning with the next number, promises to be of superior interest, because the new truths heretofore disclosed by the Adepts have prepared the ground for the dissemination of still higher ones. The formation of the "Society for Psychological Research" in London has awakened the minds of the scientists to the importance of the study of the mysterious side of nature, and largely contributed to make the study of occult science more popular. Their experiments have already to some extent confirmed the theories advanced in the "Theosophist" from time to time, and as science progresses it will make a step nearer towards the "unknowable." We shall bring a review of the proceedings of that society in our next number.

Complaints having been made about the inconvenient size of the "Theosophist" and its outward appearance, we have applied to the Founders to make the desired change and are expecting their answer.

#### NOTICE.

Mr. W. Q. JUDGE, Joint Recording Secretary and Treasurer of the Theosophical Society, in New York, having come permanently to India, will be henceforth the Treasurer of the Theosophical Society, while Mr. Damodar K. Mavalankar will be the Recording Secretary. All payments, for the Theosophical Society, should therefore be forwarded to the "Treasurer of the T. S.," without any individual name; and the Society correspondence to be addressed similarly to the "Recording Secretary, T. S.," Mr. Judge will also have charge of the *Secret Doctrine*, correspondence concerning which should be addressed to the "Manager *Secret Doctrine*," without any individual name. Mr. Damodar K. Mavalankar continues in charge of the *Theosophist*. All correspondence addressed individually, will be treated as private and be forwarded to the addressees, should they be temporarily absent from the Headquarters. The assistants in charge will open only such letters as may not be addressed to any person *individually*.

#### SPECIAL NOTICE.

Mr. Albert Collins, of 6 rue de la Sorbonne, Paris, France, is appointed agent for the Theosophical Society's publications. Copies of all works, issued by the Society or under its auspices, will always be available in stock, at his place of business, and will also be laid on the table of his "Reading Room" there.

## NOTICE.

THE delay in the issue of Part I of the *Secret Doctrine* was due to the MSS. not having reached this office in time, from London from Madame Blavatsky, who, besides being in bad health, has a good deal of Society business to do in connection with the European tour. The MSS. have, however, now come and been put into the printer's hand. The first number is expected to be out by the middle of this month. We trust the subscribers will excuse this unavoidable delay of nearly a month.

## SPECIAL NOTICES.

It is now evident that the THEOSOPHIST offers to advertisers unusual advantages in circulation. We have already subscribers in every part of India, in Ceylon, Burmah, China and on the Persian Gulf. Our paper also goes to Great Britain and Ireland, France, Spain, Holland, Germany, Norway, Hungary, Greece, Russia, Australasia, South Africa, the West Indies, and North and South America. The following very moderate rates have been adopted:—

## ADVERTISING RATES.

First insertion.....16 lines and under.....1 Rupee.

For each additional line.....1 Anna.

Space is charged for at the rate of 12 lines to the inch. Special arrangements can be made for large advertisements, and for longer and fixed periods. For further information and contracts for advertising, apply to

MANAGER, THEOSOPHIST, ADYAR, MADRAS.

MESSRS. GRAVES, COOKSON AND Co., MADRAS.

PROPRIETOR, INDUSTRIAL PRESS, 3, HUMMUM STREET, FORT, BOMBAY.

MESSRS. COOPER MADON & Co., MEADOW STREET, FORT, BOMBAY.

## TO SUBSCRIBERS.

The Subscription price at which the THEOSOPHIST is published barely covers cost—the design in establishing the journal having been rather to reach a very wide circle of readers than to make a profit. We cannot afford, therefore, to send specimen copies free, nor to supply libraries, societies, or individuals gratuitously. For the same reason we are obliged to adopt the plan, now universal in America, of requiring subscribers to pay in advance, and of stopping the paper at the end of the term paid for. Many years of practical experience have convinced Western publishers that this system of cash payment is the best and most satisfactory to both parties; and all respectable journals are now conducted on this plan.

The THEOSOPHIST will appear each month. The rates, for twelve numbers of not less than 48 columns Royal 4to. each of reading matter, or 576 columns in all, are as follows:—To Subscribers in any part of India, Ceylon, Straits Settlements, China, Japan, and Australia, Rs. 8; in Africa, Europe, and the United States, £ 1. Half-year (India, &c.) Rs. 5; Single copies Rupee 1. Remittances in postal stamps must be at the rate of annas 17 to the Rupee to cover discount. The above rates include postage. No name will be entered in the books or paper sent until the money is remitted; and invariably the paper will be discontinued at the expiration of the term subscribed for. Remittances should be made in Money-orders, Hundis, Bill, Cheques, (or Treasury bills if in registered letters), and made payable only to the PROPRIETORS OF THE THEOSOPHIST, ADYAR, P. O., (MADRAS) INDIA. Subscribers wishing to have receipts, in acknowledgment of their remittances, should send reply post-cards for the purpose.

The Supplement to the "Theosophist" or, as it is now called, the "JOURNAL OF THE THEOSOPHICAL SOCIETY," is given free of charge to our Members who are subscribers to the "Theosophist." Members who subscribe only for the Supplement are charged Rs. 2-0-0 per annum.

To Subscribers who are not Members of our Society, the charge for the Supplement only is Rs. 5; for the "Theosophist" with Supplement, Rs. 13 per annum.

Subscribers for the Second Volume (October 1880 to September 1881) pay Rs. 6 only in India; Rs. 7 in Ceylon; Rs. 8 in the Straits Settlements, China, Japan, and Australia; and £ 1 in Africa, Europe and the United States. Vol. I is now entirely out of print; but a second Edition is in press. As soon as it is ready for sale, the fact will be duly announced.

AGENTS: London, Eng., Messrs. Trübner and Company, 57 and 59 Ludgate Hill; Mr. George Redway, 12 York Street, Covent Garden; Bernard Quaritch, 15 Piccadilly, W.; Paris, France, Albert Collins, 6, Rue de la Sorbonne; New York, Fowler and Wells, 753, Broadway; Boston, Mass, Colby and Rich, 9, Montgomery Place; Chicago, Ill., J. C. Bundy, La Salle St.; Melbourne, Australia, W. H. Terry, Pub. *Harbinger of Light*; St. Thomas, West Indies, C. E. Taylor; Calcutta, India: Thacker Spink and Company, Booksellers; Babu Norendro Nath, Sen, *Indian Mirror* Office, 24, Mott's Lane, Dhurruntollah Street; Madras, Messrs. Kailasam Brothers, Popham's Broadway, L. Venkata Varadarajulu Naidu Garu, Royapetta High Road; Colombo, Ceylon: John Robert de Silva, Surveyor General's Office; Kandy, Don Timothy Karunaratne; Shanghai, China: Kelly and Walsh.

## SPECIAL NOTICE TO CORRESPONDENTS.

(I.) No anonymous documents will be accepted for insertion even though they may be signed "A Theosophist."

(II.) Any contributor not desiring his name to be made public, should give the necessary intimation to the Editor when forwarding his contribution.

(III.) Contributors are requested to forward their articles in the early part of the month, so as to allow the Editor plenty of time for correction and disposal in the pages of the THEOSOPHIST.

(IV.) All correspondence to be written on one side of the paper only, leaving clear spaces between lines and a wide margin.

Proper names and foreign words should be written with the greatest care.

The Manager calls particular Notice to the fact that all Money-orders must now be sent payable at ADYAR (not Madras), P. O. India.

Great inconvenience is caused by making them payable to Col. Olcott or Mme. Blavatsky, neither of whom has to do with financial matters, and both of whom are often for months absent from Head-quarters.

Adverting to articles and correspondence destined for the pages of the THEOSOPHIST, we would call the attention of intending contributors to the following instructions:—

The Editors disclaim responsibility for opinions expressed by contributors in their articles, with some of which they agree, with others not. Great latitude is allowed to correspondents, and they alone are accountable for what they write. The journal is offered as a vehicle for the wide dissemination of facts and opinions connected with the Asiatic religions, philosophies and sciences. All who have anything worth telling are made welcome and not interfered with. Rejected MSS. are not returned.

Printed at the Scottish Press, by GRAVES, COOKSON AND Co. and published by the THEOSOPHICAL SOCIETY AT ADYAR, (MADRAS), INDIA.

## LECTURE VIII.

*How to govern Influences through Power.*

We must not mistake mere *Polency* for *Power*. A bad man may be potent to do evil; but evil will never be a real power; and this is the reason why we dared to say: Satan does not exist. Hell is not a power, it is only a circle of bad influences, and the devil is the hysterical nightmare of impotence and envy.

The good alone is a power, and will always destroy the influence of evil, and for this reason Jesus advises us never to lose our forces by battling in vain against evil, but simply to do good, which is the antidote of evil. We need not punish the bad, they punish themselves sufficiently; we must simply destroy their influence through the power of good. "Ten just men," said he, "would have been sufficient to save the town of Sodoma." Let us then examine what a "just man" means. Does it mean a Fakir, or an Asectic? No. It means a man who completely exacts his duties as man, and who never relinquishes any of his rights. If he sacrifices himself often for others, he does so because he strives forward towards eternity, and wants to obtain great moral riches. He lends to humanity, so he may become the creditor of God; but knowing that sacrifice is higher than justice, he demands nobody's sacrifice. If he dares to be sublime, he does so because he has a right to be sublime, a right which belongs to those who are able to understand it, but which cannot be given.

The just man alone is a *man*; the others are abortions of humanity. The just man alone is free, and consequently he alone can exert power; the others absorb and give out influences; they misuse the force and are its victims. The just man alone embodies humanity in himself, because justice alone is eternal, injustice is the suicide of the soul. The just man alone fears no punishment and desires no reward. The price for good is in the good, and the punishment of evil is the evil itself.

A just man is not necessarily a hero, and a hero is not always a just man; but heroic deeds buy back false ones and render souls able to become just. Human animals, by heroic deeds, jump, so to say, towards human perfection and shorten in this way the distance, while a just man goes along with equal steps, and is sure to arrive and does not need gambols and jump.

A dog, which dies for grief upon the grave of its master, transforms perhaps in this way its animal soul, and may be born in a human body. Metempsychosis is a system which is generally more believed in, but in which is perhaps some mysterious hidden truth, especially when we look at it in an ascending order. If a just man can become an angel, why should a good animal, which is faithful even to voluntary self-sacrifice, not become a man? This is a secret of nature which we have not been permitted to penetrate.\*

For us justice does not depend on dreams or hopes of another life; she has all her laws and their applications in the present one.

To know whatever we *can* know, to will that which we *must*, to dare what we *will*, is very simple and has no mysticism about it. Poetry is not a duty but a pleasure. To be master of one's senses, to act with reason, to do our duty and to respect the rights of others, to desire only the good, to

turn away from baseness and turpitude, all this means in short to be an honest man. This does not mean to merit heaven; but to repulse and to vanquish all bad influences through the power of good, is to possess the secret of beneficence and happiness; it is to have no more envy and to have nothing more to desire on earth.

The idea of a God, whom we must appease and who forgives sins, is a great obstacle to justice, and we must be well convinced that justice is inexorable, and does not absolve those from debts, which owe her a debt. Man can forgive, because the offences which one may commit against him, depend on the estimate he puts on them: human law, possessing nothing absolute, can be shortened or stretched, but divine law is immutable, because it is based upon eternal order. Through divine law the profligate becomes besotted and brutalized, a devotee imbecile, a mystic a fool: by divine law an ignorant doctor is necessarily contemptible, a malicious and covetous priest scorned and a self-interested casuist despicable. By divine law man finds liberty through reason or is eternally thrown into the slavery of folly. Fanaticism, ambition, covetousness and impure love are the follies which, more than any other, enslave men. Nevertheless, religion, honor, intelligence and honest love, are living forces of the soul. Jesus says, speaking of religious law: "The law is made for man, and not man for the law." The same may be said about honours, riches and women. We do not come into possession of these pretty things until we do not allow ourselves under any circumstances to be possessed by them.

The Jesuit fathers accommodate and bend religion to all human habits; they are neither exacting nor rigid; they give away bishoprics, but they do not accept them; they take the vow of poverty, and individually they are poor; but they have immense amounts of money at their disposal. They have neither wives nor concubines, and this enables them to work and move the world through the occult influence of women. They set all human passions into play for their own profit, but they do not let those passions possess them. This is the reason why the Jesuits after being beaten, ridiculed, made infamous, dishonored, suppressed and driven away, always return again and are always more powerful than their enemies. It has been vainly attempted to oppose to them Free-Masonry and Illuminism. The majority of the Free-Masons and the Illuminates were independent, and as such were fond of enjoying life and understood neither absolute obedience to a hierarchy, nor personal abstinence; there were distinguished individuals amongst them, but they never had a powerful association. There is no power in isolation; it manifests itself only in groups and associations.

A well balanced mind attracts towards itself all things that seek equilibrium, and disposes of and directs the same. If the Jesuits were perfectly equilibrated, that is to say, if they had as much reason, as much true natural science, as they have theologic erudition, and if they had as much human dignity as sacerdotal ability, they would still be and remain the masters of the world. Unfortunately for them, but fortunately for those who do not like them, such is not the case. Nevertheless this notorious order continues to exert a great influence, if not an actual power to such an extent, that no other and even stronger society can dispossess her of the same. The order of St. Ignatius is the creation of a hallucinated genius. Let some veritable initiate come, even more wise and more honest than Weisshaupt, and let him attempt to regenerate old Free-Masonry, or to institute a new one, and the underground mines, which

\*But which is clearly explained now in the issue of the *Theosophist* for September last (See Article on "Mineral Monad.")

the sly foxes of Loyola continue to dig under all modern institutions, will be laid open.\*

As long as passionate and therefore fatal influences combat each other in the world, blind necessity alone will take the place of power. Therefore the passionate influence of the Jesuits will be of a destructive consequence to clerical catholicism. By exaggerating the authority of the Pope they have destroyed the same; by proclaiming his infallibility in the church they have made it doubtful and therefore "Zero" as far as the supernatural and miraculous is concerned. By announcing a dogma to-day, which was not a dogma yesterday, Rome has justified all heretics and opened the door to universal indulgency. This great religious event is appreciated in different ways, to some it is a catastrophe, to others a victory; but to disinterested and thinkers with cold blood, it is certainly a revolution. To us, who do not believe in fatalism, and who attribute to providence everything that appears to be the necessary result of universal laws, the convention, which instituted the dogma of the Pope's infallibility by a majority of votes, presents decidedly a transformation of the catholic doctrine, that is, an open door to universal conciliation; and if an intelligent Pope will make up his mind that there shall be in the world only one religion and one church, all he has to do is to proclaim the same, and for the believers, even the most fanatical ones, and those that have been the most opposed to progress, it will at once be as the infallible Pope orders. It remains only for us to know, whether the influence of Jesuits will ever permit that a man, who is strong enough through intelligence and will power to accomplish such a work, should be allowed to take the pontifical chair.

The power of a force manifests itself in proportion to the energy of resistance, in politics as well as in dynamics. A mathematician said to Napoleon I, we can only gain strength by resistance. The equilibrium becomes never established without the meeting of two contrary forces, and the wise cabalists have expressed that thought in an enigmatical and singular manner, in saying that the devils are the battle-houses of angels. The legend of St. Bernard tells us that one day the devil broke one of the wheels of the saint's carriage, and that holy man forced the bad spirit to change himself into a wheel, to replace that which was gone. Another and still more ancient legend, originating from the same idea, says that a bear having devoured the ass of some saint, was made to serve in his turn as a beast for the saddle of the pious and robust saint. This shows, as we have said

\* As an illustration to the above, and which may serve as a "prescription," how to get rid of Jesuits, we submit the following amusing anecdote:—

The Jesuits early became the ruling factor of the Church in Central America, and every attempt of the Masons to gain a foothold there was stontly and for a long time successfully resisted. The influx of foreigners into those States naturally carried Masoury with it, and as the members of that order grew in numbers, wealth and importance, they established lodges and began to interest themselves in political affairs. The strife between the two forces increased in bitterness until it culminated in Guatemala, the most important of the five States, in 1874, by a victory for the Masons, resulting in the expulsion of the Jesuits and the breaking up of the convents. This was done almost single-handed by President Barrios and the description of it is thus tersely told by one conversant with the facts:

"The two societies or orders had been striving for the mastery of affairs, and there was considerable social and business disturbance throughout the country. Barrios chafed a good deal and finally decided that he would use his powers as dictator and end the controversy, though when he arrived at this determination or what he intended to do no one knew, not even his chief aid, until the expulsion of the Jesuits was actually taking place. I may as well say here that Barrios disclaimed any intention of making war on the Roman Catholic religion, his enmity extending only to the Jesuits. One afternoon Barrios sent out in various directions to public and private persons with requisitions upon them for so many carriages, with the proper number of horses to draw them. No one could form any idea whatever of what he had in view. At the appointed hour, late in the evening, every vehicle called for was at the appointed rendezvous—no one had the temerity to refuse. He then informed his aids of his intentions and gave them their instructions. At the unseemly hour of 1 o'clock in the morning every residence of the Jesuits was visited by enough carriages to accommodate all the occupants, and they were notified that they would be given one hour and no more in which to pack up and start upon their journey across the frontier—never to return. Pleadings and protests were alike of no avail, and when the city awoke the next morning every Jesuit father who had been within its limits the evening before was miles away and rapidly increasing the distance."

before, that the devil gives himself up to the true magician while the ordinary sorcerer only delivers himself to the devil.\*

That which we call the devil, is only negative magnetism; Evil is defect, and the Prince of Hell is nothing but a fictitious personification of nothing; it is the galvanised ghost of the absurd, the fantastic shape of folly. All evil-disposed persons are fools, because fools are always evil disposed, and for this reason the saints are not sages. I use the word "saints" in the sense in which it is commonly taken and honored. There are two serpents around the staff of Hermes; one is white and the other one black, but the two are interlaced around the same staff, which is the sceptre of Trismegistus. Each of the two snakes, if separated from the other, is illusive and destructive; the one as well as the other. Whether we have our eyes closed with a white or with a black bandage makes no difference, each bandage renders us unable to see. The white serpent makes one seek death in life, the black serpent absorbs life in death. The white serpent is a fiction of eternal day, the black one is the falsehood of eternal night; the hermetic staff produces an equilibrium between nights and days and reveals thereby the secret of motion and life. Before the tribunal of Hermes, Cain and Abel are equally foolish; the prophet Enoch, who represents Hermes amongst the Hebrews, did not kill any body like Cain, neither did he allow himself to be killed by any body like Abel; but he cut out upon earth the pillars upon which rests eternal science, and he rose up to heaven by escaping death.†

Elias and Enoch symbolise the great Hierophants, who obtained eternal life even on this earth; that means that they obtained knowledge and perfect love of imperishable verities. Therefore the sacred legend says that they have not died like others, but they had necessarily to cast off their terrestrial envelopes, to rise up to superior heights, where it would be impossible to live, if burdened with a mortal body. This necessary casting off is allegorically alluded to by the cloak which Elias left behind as he rose up in the chariot of fire. Elishah touches the water of Jordan with that cloak when he invokes the God of Elias, and the holy river divides itself to receive the sacred garment. Therefore also, the Indians entomb their death in the Ganges.

If you refuse to admit allegories in the Bible, then you must consent with Voltaire to see in it only the most absurd and grossest kind of a book; but the least knowledge of Oriental genius and especially of that of the Hebrew genius is sufficient to make those allegories self-evident and to restitute to that venerable book its prestige and its full authority.

If the Bible for instance tells us that a spring of water came out of the jaw of an ass, and that the water which Elias poured upon his altar of stones took fire and consumed the holocaust and the stones, etc., we are absolutely forced to understand by "jaw of an ass" a hill or a rock, which was called by that name, and by the "water" which Elias used, a bituminous or mineral oil; and if those suppositions cannot be accepted, we must at least acknowledge that these stories have an allegorical meaning of some sort, unless we are endowed with a more puerile and stupid credulity than that of the Congo Negroes.

You say God can do whatever he pleases. God must do that which he can *will*. He cannot *will* the destruction of his own laws, he cannot *will* the disorder or ridiculous, else he would be below the standard of the most undeveloped human reason.

Such is the case with the sage who exercises a true power in the name of eternal order and supreme reason. Jesus answers scornfully to the Pharisees who ask him to cause (something) miraculous to appear on the sky; because miracles prove nothing but the imposture of him who desires them. The true miracles are those of reason and faith; the great wonder of a just man is to conquer eternity and to render himself immortal; but this is exactly the kind of miracle which the vulgar cannot accomplish, and which the Pharisees of all religious systems will never behold.

\* It is very much to be regretted that in the new "apostolic" edition of the Acta Sanctorum many of the most glaring absurdities have been left out, evidently from the mistaken idea that they were incompatible with modern thought; while in fact the most absurd ones contain the most beautiful hidden truths, which unfortunately the "apostolic" editor has not understood.—*Trans.*

† That means he succeeded while on earth to establish a union between his Atma (the 7th Principle) and his soul (the 5th).—*Trans.*

Ordinary souls fall like dry leaves and the wind of death takes them up in an eternal whirlpool. There they disappear and become extinct, and still not a single dead leaf is annihilated, and all that has lived once becomes transformed to live again. But what is this eternal whirlpool of inferior life, if not the perpetuity of death? To come out of that vortex, to escape from that gulf, is the dream of the sage; a dream which he will have realized in this life, as soon as he has arrived at the realm of profound peace. It is different with the ascetic who imposes upon himself sufferings and who will be well punished and well cheated. If no future life existed, the sage would have lost nothing, and have nothing to fear; for if he were certain that he should entirely and absolutely die, he would even then not change his way of living, because he has chosen the best part in this world. Ho can resign himself to incur all possibilities in this mortal life, which may happen to him in another. I know that by preaching this kind of wisdom very few proselytes will be made. Men want promises and threats, they must have exaggerations and something fantastical. It is much easier to imitate St. Labras than Socrates. St. Alexis, who ran away from his wife and his palaco on the very evening of his wedding, to become a beggar, would have probably proved himself to be a despicable kind of a husband. St. Paul said: Christianity has been victorious through folly, because the people could not come to it through wisdom. The impulsive apostle did not consider that the God of folly is necessarily the devil, and that the god of wisdom is supreme and eternal reason. What kind of a god did the maniacs of the cross make for us? The god of theological disputes, the god of religious wars, the god of the syllabus and of Veullot. The superstitious may well cry out:—They have put the devil in the place of God, and God in the place of the devil; that is, they curse truth as if it were falsehood, and extol falsehood as if it were truth. They regard nature, science and reason as cheats; they want us to kill imagination, make the spirit blind and deaden the flesh, annihilate thought to worship obedience and mystery, and nevertheless the greatest of the Evangelists, he whom they understand the least, he who is always a stumbling block for critics like Mr. Renan,—St. John says, speaking of reason or the eternal "word," that this is the true light, which illuminated man since he first entered the world. Solomon said that God made everything by weight, number and measure; that means that the laws of nature are exact and that no divine autocrat ever interferes to make a change. A prophet says that he who despises knowledge is unworthy to become a priest. Jesus said that if the blind leads the blind both will fall down the precipice. But what do they care? The school of Mr. Veullot has changed all that. You ask for reason? Take the infallibility of the Pope. You want science? Here are the Brothers of St. Ignorantius. Hold on, and do not inquire at the tribunals of justice, how these involuntary celibates, to whom we entrust our children, understand and often treat nature!

The religious dogma is philosophy put into enigmas, the mysteries are propositions, represented by drawings and in a paradoxical form. Religion is the Sphinx; she devours those who do not understand her and torments those who scorn her. This is something which the sage must know, and something about which he must keep silent. The prudence of centuries has created the dogma and the mysteries. Let us not lay sacrilegious hands upon the tombstones of our fathers.

Religion is the life of the heart, the intimate power of the soul. Woe be to him who thinks he can do without it; but threefold woe to him who makes himself the slave of priests!

The sage must have more religion than the priest, and must look upon priests not as his masters, but as the servants of the sanctuary. He ought by the power of reason restrain their influences, whenever they are fanatical and extravagant.

Let the Pope be the chief of the priest, and let him be infallible to them. We wish for nothing better. There will be less unreason in a single believer than in a thousand, and passive obedience is a palliative against the folly of the greatest number. Besides, it may perhaps happen that some day a reasonable man becomes Pope, and then the fools will owe obedience to reason.

But for the wise there is no infallibility outside of reason enlightened by science, which logically produces faith.

The influences of fools are only dangerous for fools; the wise avoid them or restrain them through power.

## INGERSOLL.

INGERSOLL we regard as the eloquent platform orator of popular protest against theological creeds, and the herald to the crowd of the great revolutionizing changes which science and rationalism are producing. His lectures, abounding in witticisms and homely but graphic illustrations and anecdotes, and rising ever and anon into genuine eloquence, into a lyrical enthusiasm which shows that his heart is in what he says, are especially adapted to stir the masses. He has a vivid, poetical mind, and some of his short addresses are among the most beautiful prose-poems in the English language. He has no faculty nor taste for abstract or abstruse subjects. He thinks in images and talks in word-pictures. He keeps always within the comprehension of the multitude, and by his eloquence imbues and magnetizes, as it were, with the idea of mental freedom, thousands who have neither the time nor the inclination to investigate for themselves. Even those who are not instructed by his lectures are entertained by his wonderful wit and eloquence, which one must be extremely pious and prejudiced not to enjoy. He has considerable acquaintance with modern thought, although his knowledge of scientific and philosophic subjects is fragmentary, and his views are not always well thought out. His spirit and manner of criticising theology are of the past, those of Voltaire and Paine.

In the heat and excitement of his declamation, he sometimes talks as though he had stormed the redoubts of intolerance, and given the world the liberty of thought it now enjoys, when, in fact, he simply presents in a manner peculiarly his own the views of thousands at a time when decay of the creeds he denounces, due to a multitude of causes, makes his denunciation acceptable to large crowds. No such fluent eloquent declaimer was ever other than a conductor of ideas. He is really a poet and an orator rather than a deep thinker or great reasoner.

As an oratorical idol of the multitude, he must be an indiscriminate assailant of what he opposes; for a caterer for the crowd cannot have a judicial mind and is not likely to have much sense of the historic perspective. The same was hardly less true even of Wendell Phillips, although different from Ingersoll in almost every respect. As a lawyer, an advocate, an iconoclast, Ingersoll is essentially *ex parte*.

The mass of Americans are not familiar with modern thought in any form: indeed, they are less familiar with modern thought and the undermining of Orthodoxy by modern science than are the masses of Europeans even of the common class. Orthodoxy has not been so progressive here as it has been across the water. Matthew Arnold said in his "Word about America," that the religion of the American people is less invaded by the *modern spirit* than is the religion of the middle class in England. British clergymen visiting their evangelical brethren here have been surprised to find "that orthodox Christian people in America are less troubled by attacks on the orthodox creed, than the like people in England, that they seem to feel sure of their ground, and to show no alarm." And it is true that a large number of our orthodox talk and act, as if the world instead of being in a state of transition from the Old to the New, were moving or rather standing still in the ruts and groves of old theology. And how many people still flock to hear exhorters like Moody and declaimers like Talmadge! When these facts are considered, one can see important work yet to be done by iconoclasts.

If Ingersoll had the ability to present the positive side of the best modern thought and to do constructive work in the liberal field, the quality of his services would be greatly improved. But with this ability he could not be the popular orator he now is, and would fail to reach the masses. He is now doing important work, even though there is much in his lectures more witty than wise. He has made no original contribution to liberal thought or criticism; but he has brought to the aid of the liberal movement in this country what it greatly needed,—sentiment, poetry, and eloquence,—and awakened more or less interest in free thought in the minds of large numbers who could never have been reached by hard logical reasoning. The majority of men have not accepted opinions because they were reasoned into them; and, when they abandon them, it is not because they have been reasoned out of them. People generally are moved through their emotions; and the man who is himself emotional, and at the same time a man of genius, a wit and orator like Ingersoll, will ever have a direct influence upon the masses, which the Darwins, the Huxleys, and the Spencers of the world would strive in vain to exert:—The "Index".

## LIFE IN MARS.

By R. A. PROCTOR.

ALL that we have learned about Mars leads to the conclusion that it is well fitted to be the abode of life. We can trace, indeed, the progress of such changes as we may conceive that the inhabitants of Venus or of Mercury must recognise in the case of our own earth. The progress of summer and winter in the northern and southern halves of the planet, the effects due to the progress of the Martial day, from sunrise to sunset—nay, even hourly changes, corresponding to those which take place

in our own skies, as clouds gather over our continents, or fall in rain, or are dissipated by solar heat: such signs as these that Mars is a world like ours can be recognised most clearly by all who care to study the planet with a telescope of adequate power.

As regards the atmosphere of Mars, by the way, the earliest telescopic observers fell into a somewhat strange mistake. For noticing that stars seemed to disappear from view at some considerable distance from the planet, they assigned to the Martial atmosphere a depth of many hundreds of miles—I care not to say how many. More careful observation, however, showed that the phenomenon upon which so much stress had been laid was merely optical. Sir J. South and other observers, carefully studying the planet with telescopes of modern construction, have been able to prove abundantly that the atmosphere of Mars has no such abnormal extension as Cassini and others of the earlier telescopists had imagined.

The early observations made on the polar snows of Mars were more trustworthy. Maraldi found that at each of two points nearly opposite to each other on the globe of the planet, a white spot could be recognised, whose light, indeed, was so brilliant as to far outshine that emitted by the remainder of the disc. The idea that these white spots correspond in any way to the polar snows on our own earth does not seem to have occurred to Maraldi. Yet he made observations which were well calculated to suggest the idea, for he noticed that one of the spots had at a certain time diminished greatly in size. Instead, however, of ascribing this change to the progress of the Martial seasons, he was led to the strange conclusion that the white spot was undergoing a progress of continuous decrease, and he even announced the date when, as he supposed, it would finally disappear.

No such disappearance took place, however. When Sir W. Herschel began his series of observations upon Mars, more than half-a-century later, the spots were still there. The energy of our great astronomer did not suffer these striking features to remain long unexamined. Searching, as was his wont, after terrestrial analogies—or, at least, analogies depending on known facts—he was quickly led to associate the white spots with our arctic regions. It would follow, of course, that in the summer months of either Martial hemisphere, the snow-cap would be reduced in size, while in the winter it would attain its greatest dimensions. Sir W. Herschel found this to be the case, and he was able to show that the changes, which Maraldi had interpreted as suggesting the eventual disappearance of one of the bright spots, were due to the progress of the Martial summer. Precisely as in our summer months, those who voyage across the Atlantic may sail in far higher latitudes than they could safely venture to traverse in winter, so in Mars the polar ice and snow is limited within a far narrower region in summer than in winter.

But, after all (it may be urged), to suppose that these two bright spots are formed in reality of ice and snow is rather venturesome. Might we not imagine that some other material than water is concerned in the observed changes? What reason have we for inferring that the same elements that we are familiar with exist out yonder in space?

The answer to these questions,—or, rather, the answers, for we have to do with a whole series of facts, dovetailing in the most satisfactory manner into each other,—will be found full of interest.

We all know that Mars shines with a ruddy light. He is, indeed, far the ruddiest star in the heavens: Aldobaran and Antares are pale beside him. Now, in the telescope the surface of Mars does not appear wholly red. We have seen that at two opposite points his orb exhibits white spots. But, besides these regions, there are others which are not red. Dark spaces are seen, sometimes strangely complicated in figure, which present a well-marked tinge of greenish blue. Here, then, we have a feature which we should certainly expect to find if the polar spots are really snow-caps; for the existence of water, in quantities sufficient to account for snow regions covering many thousand square miles of the surface of Mars, would undoubtedly lead us to infer the existence of oceans; and these oceans might be expected to resemble our own oceans in their general tint. According to this view, the dark greenish-blue markings on Mars would come to be regarded as the Martial seas.

If this be the case, then I may note in passing that the seas of Mars cover a much smaller proportion of his surface than those of our own earth, the extent of our seas being to that of our continents about the proportion of 11 to 4: in Mars the land and sea surfaces would seem to be nearly equal in extent. The seas in Mars are also very singularly shaped. They run into long inlets and straits; many are bottle or flask shaped—that is, we see a somewhat rounded inland sea connected with what must be called the main ocean by a narrow inlet; and further it would seem as though oceanic communication must be far more complete in Mars (notwithstanding the relative smallness of his ocean surface) than on our own earth. One could travel by sea between all parts of Mars, with very few exceptions, the long inlets and the flask-shaped seas breaking up his land surface much more

completely than the actual extent of water would lead us to infer. It may be supposed that on the other hand land communication is far more complete in the case of Mars than in that of our own earth. This is, indeed, the case, inasmuch that such Martialists as object to sea travelling (and we can scarcely suppose sea-sickness to be a phenomenon peculiar to our own earth) may very readily avoid it, and yet not be debarred from visiting any portion of their miniature World, save one or two extensive islands. Even these are separated by such narrow seas from the neighbouring continents, that we may regard it as fairly within the power of the Martial Brunels and Stephensons to bridge over the intervening straits, and so to enable the advocates of land-voyaging to visit those portions of their planet. This view is encouraged by the consideration that all engineering operations must be much more readily effected in Mars than on our own earth. The force of gravity is so small at the surface of Mars, that a mass which on the earth weighs a pound, would weigh on Mars about six and a quarter ounces, so that in every way the work of the engineer, and of his ally the spadesman, would be lightened. A being shaped as men are, but fourteen feet high, would be as active as a man six feet high, and many times more powerful. On such a scale, then, might the Martial navies be framed. But that is not all. The soil in which they would work would weigh very much less, mass for mass, than that in which our terrestrial spadesmen labour. So that, between the far greater powers of Martial beings, and the far greater lightness of the materials they would have to deal with in constructing roads, canals, bridges, or the like, we may very reasonably conclude that the progress of such labours would be very much more rapid, and their scale very much more important than in the case of our own earth.

But let us return to our oceans, remembering that at present we have not proved that the dark greenish-blue regions we have called oceans really consist of water.

It might seem hopeless to inquire whether this is the case. Unless the astronomer could visit Mars and sail upon the Martial seas, he could never learn—so at first view one might fairly judge—whether the dark markings he chooses to call oceans are really so or not.

But he possesses an instrument which can answer even such a question as this. The spectroscope, the ally of the telescope—of small use in astronomical work without the latter, but able to tell us much which the most powerful telescope could never reveal—has been called in to solve this special problem. It cannot, indeed, directly answer our question. It cannot so analyse the light from the greenish markings as to tell us the nature of the material which emits or reflects to us that peculiarly tinted light. But the astronomer and physicist is capable of reasoning as to certain effects which must necessarily follow if the Planet of War have oceans and polar snow-caps, and which could not possibly appear if the markings we call oceans were not really so, nor the white spots at the Martial poles really snow-caps. Extensive seas in one part of the planet, and extensive snow regions in another, would imply, in a manner there could be no mistaking, that the vapour of water is raised in large quantities from the Martial oceans to be transferred by Martial winds to polar regions, there to fall in snow-showers. It is this aqueous vapour in the Martial atmosphere that the spectroscope can inform us about. Our spectroscopists know quite well what the vapour of water is capable of showing in the rainbow-tinted streak which is called the spectrum. When white light is caused to shine through a sufficient quantity of the vapour of water, the rainbow tinted streak forming the spectrum of white light is seen to be crossed by certain dark lines, whose position and arrangement there is no mistaking. Now the light we get from Mars is reflected sunlight, but it is sunlight which has been subjected to more than reflection, since it has passed twice through the depths of the Martial atmosphere, first while passing to his surface, and secondly while leaving that surface, on its voyage towards ourselves. If that double passage have carried it through the vapour of water, the spectroscope will certainly tell us of the fact.

Let us see how this problem was dealt with by our most skillful spectroscopist, Dr. Huggins, justly called the Herschel of the spectroscope. The following account is an epitome of his own narrative:—"On February 14, 1868, he examined Mars with a spectroscope attached to his powerful eight-inch refractor. The rainbow-coloured streak was crossed, near the orange part, by groups of lines agreeing in position with those seen in the solar spectrum when the sun is low down, and so shines through the vapour-laden lower strata of our atmosphere. To determine whether these lines belonged to the light from Mars or were caused by our own atmosphere, Dr. Huggins turned his spectroscope towards the moon, which was at the time nearer to the horizon than Mars, so that the lines belonging to our own atmosphere would be stronger in the moon's spectrum than in that of the planet. But the groups of lines referred to were not visible in the lunar spectrum. It remained clear, therefore, that they belonged to the atmosphere of Mars, and not to our own."

This observation removes all reasonable doubt as to the real character as well of the dark greenish-blue markings as of the white polar caps. We see that Mars certainly possesses seas resembling our own, and as certainly that he has his arctic regions, waxing and waning, as our own do, with the progress of the seasons. But, in fact, Dr. Huggins's observation proves much more than this. The aqueous vapour raised from the Martial seas can find its way to the Martial poles only along a certain course—that is, by traversing a Martial atmosphere. Mars certainly has an atmosphere, therefore, though whether the constitution of that atmosphere exactly resembles that of our own air, is not so certainly known. On this point the spectroscope has given no positive information, yet it allows us to draw this negative inference—that, inasmuch as no new lines are seen in the spectrum of the planet, it would seem likely that no gases other than those existing in our own atmosphere are present in the atmosphere of Mars.—*Knowledge.*

### STUDY OF SANSKRIT.

THE reaction in favour of the study of Sanskrit is destined, we believe, to be very widespread and important. We are glad to learn from the *Hindoo Patriot* that the Lieutenant-Governor of the North-West Provinces has decided to re-open the Anglo-Sanskrit department of the Benares College, which has been closed since 1877. There has been some divergence of opinion, says our contemporary, concerning the principles upon which the course of studies is to be regulated. The "Orientalists," if we may be permitted to use the term, "would leave intact the traditional method of the Pundits, which aims only at a profound knowledge of the language and its philosophy, and would confine the study of English to such subjects only as tend to expand the reasoning powers. There are others who would import into the method of the Pundits, something of the critical and comparative system which distinguishes European linguists, and has given to the Sanskrit language the philological importance which it now possesses. The general view adopted by the local Government is that while the department is meant to promote the study of Sanskrit, it is intended not to replace Oriental by Western learning, but to co-ordinate, if possible, the two branches of study. It is proposed to attach to the Oriental department competent English teachers and a sufficient number of scholarships, and when necessary a properly qualified professor will be appointed".—*Indian Mirror.*

### THE LOGIC OF PAIN.

Not only does pain so defend the eye from the injurious effects of foreign bodies, it often serves to protect the delicate organ from overwork; and where pain is so produced, rest is given to the part, and recovery is instituted. Especially is this seen where the eyes are not an absolute pair, and long perusal of a page strains them. Proper spectacles making the eyes a pair give prompt and permanent relief. The grave diseases of the eye are those which are painless, where incipient diseases are aggravated by persisting action, all of which would be avoided if pain were a consequence of the malady. The advantages which ensue from pain are most markedly seen, and are most obvious, in the case of injuries. When a joint is sprained the pain caused by movement in it compels the rest which is essential to repair. If there were no pain produced by motion, the parts would almost certainly be exercised to the detriment and to the delay of the reparative processes. So too, in broken bones, the agony caused by motion is such that a fixed position is maintained for weeks, with the result that the part, being kept at absolute rest, is thus permitted to recover as speedily as may be. All who have thought over the matter must know well how irksome it is to maintain one position for any length of time: the keen sense of weariness and the inclination to change the posture become at once insupportable and irresistible. But if sharp pain be the consequence of movement, how steadily is the position maintained for days, and even weeks? Where there is a fractured bone, or an inflamed joint, the sense of weariness is restrained, and an irksome and otherwise intolerable attitude is willingly kept up and sustained. Pain is produced by motion, which further excites nutritive changes. If a bone be broken, the first result is pain; the secondary or reflex results are the formation of a large mass, or cell-growth around the broken ends of the bone, which acts as a species of splint and keeps the parts at rest as well as in apposition. Underneath this natural splint, and protected by pain, the truly reparative process goes on in the ends of the bone. By rest and the use of the artificial splints the surgeon reduces the necessity for this new growth, this natural splint, and so avoids the deformity which so commonly ensues when the natural splint is unaided by art. Hilton in his well-known work "On Rest and Pain," tells of a washerwoman who had a large mass on her collar-bone, which presented all the characters of a bony tumour. The fact was the clavicle was fractured;

but, as it happened, movement did not in this case elicit pain, and the woman toiled on at her occupation, and soon an enormous and unwontedly massive natural splint was required to permit of reunion taking place. The nutritive changes were here excessive, and instead of pain an unusual tissue-growth was set up.

When a joint is injured, pain is the great agent by which repair is rendered possible. Suppose, for the sake of example, we take a hip joint in a delicate person, which has been subjected to a jar, or a concussion from leaping, or other similar cause of jar. The surfaces of the joint become inflamed, exquisite pain is the consequence, especially on any movement, and so absolute rest is secured. If the case falls into the hands of a skilful surgeon, he produces still more complete rest for the parts by extending the limb, as by a weight attached to the ankle, and hung over a pulley at the foot of the bed, so releasing the inflamed surfaces from contact. By such means both pain is avoided and ready repair permitted. In less fortunate cases, tissue-changes are set up, a natural splint is formed by an infiltration into the neighbouring parts until they feel brawny and hard, so that motion is abolished or limited; while the inflammatory processes in the joint itself produce a cell-growth within it, which glues the parts together and recovery is attained, but with the loss of movement in the joint; and in bad cases, surgical interference with knife and saw is required to restore movement.

In like manner pain is most protective in certain internal diseases. Thus in inflammation of the large serous covering which invests the abdominal viscera and lines the walls of this space, pain, the result of movement, secures rest. This large lubricating surface in health permits of the contained viscera gliding gently upon each other, and on their boundary walls; but when it becomes inflamed, the friction of the dry surfaces produces intense pain, and quietude is thus enforced. Doubtless this pain is often such as to constitute a great danger to life; nevertheless, without it and its consequences more serious mischief would usually be produced. When there is an abscess in the liver, pain is induced by movement of this viscus, and so we find the muscles of the abdominal wall over the liver rigid and hard, thus keeping the organ at rest, in *silâ*. When a rib is broken, the fractured ends rub upon the pleura, and excite inflammation of it; and the pain thus set up causes the patient to call in a surgeon, who places the thorax in comparative quietude by a bandage and the friction being so minimised repair is permitted. Then in certain conditions of the stomach, pain is reduced by improper food; and so dyspepsia guides the sufferer to the choice of suitable food, which does not set up pain. Such are some of the best known instances of the utility of pain in local ailments or injuries. There are, however, more general conditions which evoke pain, and where that pain is the means of the condition being relieved, or remedied by medical art. Take neuralgia for instance. It may be the outcome of several conditions which have to be discriminated for its relief. In the young and in early adult life it is almost always the result of imperfect tissue-nutrition, however caused. Romberg wrote with equal poetical feeling and scientific truth, "Pain is the prayer of a nerve for healthy blood," and neuralgia is the common outcome of blood either poverty-stricken or poisoned by some deleterious ingredients as in material poisoning for instance. Without the pain so produced the condition would go on unrelieved, and ulterior organic changes would probably be brought about. But pain impels the sufferer to seek relief.

The pale, bloodless creature who is the prey of facial neuralgia, or that pain in the intercostal nerves which is felt below the heart (and commonly referred to that organ) is compelled thereby to desist from exhausting efforts, and to seek in rest and good food that relief which is so imperatively demanded by the pain. Here pain is the protector of the system generally, and its expressive though inarticulate tones attract attention to the requirements of the organism. If not attended to, the call becomes more urgent in its reiterated and sharper demands. With several persons known intimately to the writer, neuralgic pain is the first evidence of the system being overtaxed. In one gentleman there is very marked. Long and sustained over-exertion, mental and bodily, some years ago brought on a most severe and continued attack of sciatica, which necessitated a lengthened rest before recovery was completed. He now knows distinctly how far he may go with impunity. As long as his efforts do not overtask the system, he remains free from pain: as soon as they become excessive, little whiffs or puffs of neuralgic pain in the sciatic nerve warn him to desist; if these warnings are not attended to, the whiffs become gusts of agony, which compel attention, and secure for the system the needed rest. After repeated lessons, his education in this respect has become complete, and the first twinge of this well-known pain causes him to set aside his pallet and his easel, and seek leisure amidst fresh air and sylvan scenery. In this case the pain is directly conservative and conducive to health, and to length of days: it is indeed protective against physiological bankruptcy, or exhaustion. It is rather singular that in this gentleman's wife a similar phenomenon is found. She is dyspeptic, and as a consequence often reduces the food she takes to an amount below what is com-

patible with proper nutrition. In her case, a gusty current of facial neuralgia, like a long wail, is at once the indication for, and the direct cause of, more attention to her diet, and so, too, her health generally is improved. In like manner with many persons rheumatic or gouty neuralgia is the monitor which tells them to attend to their general condition. Especially is this the case with those persons of a neurosal diathesis, where all general conditions find their most pronounced manifestations and expressions in the nervous system. Here the advent of the irregular or even intermittent pain—for the pain of neuralgia is rarely, and only in the worst cases, persistent and uninterrupted—is as indicative of the state of the system as is the pain of an inflamed joint in other cases. In each instance the presence of the condition of the blood is indicated by pain, and relief is sought in measures which act upon the general condition. So too in lead poisoning; here colic or neuralgia attract attention, and point alike to the cause and its treatment. In the after consequences of malarial disease, neuralgia is the most prominent symptom, and indicates the resort to quinine—the specific of the malady—as much in its ulterior consequences as in its primary manifestations.

Headache often alone can secure that rest which the brain requires; and the headache of exhaustion is as marked as is that pain at the top of the head which tells us that the brain is insufficiently supplied with blood. The headache after a day of exertion, excitement or enjoyment, so commonly met with in ladies, secures a day of complete quiet, during which the system regains its tone.

In dyspepsia, too, the pain caused by food and still more by unsuitable food, either improper in quantity or in quality, is the direct incentive to the necessary attention to the matter, whereupon improvement follows. What betwixt the gustatory tastes, the appetite, and caprice or ignorance in the matter of eating, without the pain, the discomfort of dyspepsia, serious mischief in the stomach would be a common occurrence, instead of a comparatively rare one. Fortunately for the stomach and the system generally, each unsuitable meal is accompanied by more or less pain. The pain is less when the meal is suitable and appropriate in character and in bulk: it is more severe when the food is in too great quantity or unsuitable and indigestible in its nature. The suffering which follows improper food is the direct incentive to a rearrangement of the dietary, and to the choice of suitable food. Without this guardian pain no alteration of the dietary would be carried out; the capacity to digest on the part of the stomach would be further impaired and the system would suffer from inanition, and probably a state of low inflammatory action in the stomach would be induced, when all food would be rejected, and where absolute rest of the organ would be imperative. Absolute rest for the stomach is a serious and very troublesome affair for the patient; and though so grave a condition is not often reached, such cases are sufficiently frequent to point out the protective character of dyspeptic pain. In order to avoid the resultant pain, certain articles of diet are abandoned, and those which do not occasion pain are preferred; consequently the sufferer, unless utterly uneducable, is directed to a suitable dietary, and the body generally benefits thereby. Dyspepsia is a common trouble; it is spoken of by some as one of the greatest plagues to which suffering humanity is subject; and yet who can assert that without it worse evils would not happen? To many persons their hateful dyspepsia is a species of guardian angel; though it is very probable that they are not in the habit of regarding it in that light!

When a muscle is exhausted, its contractions are accompanied by pain. Consequently this pain secures the rest requisite for repair in muscles that are utterly exhausted; as is seen in the present common "tennis-elbow," the characteristic of muscular pain is that it is absent as long as perfect quietude is maintained; but as soon as the muscle is thrown into action pain is produced. Take the lumbar pain, for instance, so common in needlewomen, who lean over their work, and where the muscles of the back are on the stretch for hours together, with the weight of the head and shoulders upon them. As long as the sufferer keeps the recumbent posture on the back—by which means these muscles are thoroughly rested—perfect freedom from pain obtains; as soon as this position is abandoned and the muscles exercised, so soon does the pain return. This poignant cry for rest usually secures it, and so the enfeebled and exhausted parts are enabled to repair themselves. When a muscle is inflamed or has been injured by some violence to it, the acute pain caused by movement procures for it that rest so essential to its repair. So, too, with a gouty toe, the agony produced by movement secures the requisite rest for the inflamed joint. From which considerations it is clear that pain is not only not always an unmitigated evil, but has at times a distinct value of its own.

J. MILNER FOTHERGILL.

### CREMATION.

THE American press is at present extensively discussing the subject of cremation. This subject was first brought prominently before the public by the cremation of the

remains of Baron de Palm, by Col. H. S. Olcott.\* A writer in the American *Truthseeker* says:—

"The first advantage cremation possesses over burial, that I shall notice in this article, is that of avoiding disease, which is engendered, to a far greater extent than is known to most persons, by emanations from decomposing human bodies. This disease is spread by contamination of water-courses in and adjoining burial grounds, by the atmosphere, by reproduction from germs that have been buried—i. e., actually planted—but not killed. The grave is, therefore, in one sense, a disease factory. The epidemics, that follow wars, are undoubtedly the "crop" of the buried corpses and disease germs. The percentage of deaths is much larger in the neighbourhood of cemeteries than elsewhere; the air of cemeteries contains more than double the normal amount of carbonic acid, the proportion being that of nine in cemeteries to four elsewhere. Experiments at Stuttgart proved that poisonous emanations from a graveyard, when the number of burials averaged only ten per week, were carried by the wind and were perceptible several hundred yards away. Charles Darwin, as long ago as 1837, and Pasteur more recently, have presented formidable facts for the reflection of those who oppose the avoidance of plague generators in the cemeteries that surround, and, in too many cases, are embedded in our cities; the latter showed that earth worms bring to the surface millions of bacteria from decomposing bodies. Every instant of time, day and night, over sixty thousand human bodies are decomposing a few feet below the surface of the earth in and around New York. (Sir Henry Thompson) "No dead body is ever placed in the soil without polluting the earth, the air, and the water above and below it." Each decomposing human body generates annually about fifty cubic feet of carbonic acid gas, and other poisonous exhalations. The blood of persons dying of some diseases may be dried, kept for years, and pulverized, and yet the germs of the disease live with power to produce the disease.

An investigation of the causes of a recent epidemic of yellow fever in South America disclosed the interesting "fact that the soil of the cemeteries in which the victims of the outbreak were buried was positively alive" with "organisms exactly identical with those found in the vomitings and blood of those who had died in the hospitals of yellow fever." Earth was taken from one foot under ground over the remains of a person buried one year before; it was found to be thickly charged with these germs. There is no doubt that our cemeteries are being prepared to be plague spots to ourselves and generations who succeed us.

Washington Square was, prior to the year 1806, the Potter's Field of New York. At that day science had not discovered that the soil, saturated with the emanations of decomposing bodies, would continue for hundreds of years a source of disease. To this day it is said that a dense blue haze, several feet deep, rests every calm morning over Washington Square; certain it is that physicians who have lived for many years in its neighbourhood declare that it is impossible to raise children on the ground floors of houses in that vicinity; and yet children are turned, by hundreds every clear day, into this park for health and recreation.

An advantage, which is hardly less important than the avoidance of disease, is the avoidance of burial alive. The number of human beings who are buried alive is positively known to be larger than is popularly supposed. It is an ascertained and admitted fact that there are conditions of the body when life is apparently extinct when it really is not so; not only is this the fact, but it may not become extinct until an indefinite length of time elapses and the person becomes conscious. To those who have watched at death-beds and seen men die, as I have many times done, this seems not so hard to realize as it does to those who have only seen the human body in a state of health, with death apparently far off, or else after death. Unfortunately for society, it is of course but very seldom, comparatively, that it is known that any particular person is buried alive; we hear, however, almost weekly if not daily of cases of corpses which accident or some unforeseen necessity has caused to be disinterred, where life had undoubtedly not only not been extinct but when consciousness had ensued, as shown by the convulsed features, altered position of the limbs, flesh of the arms being eaten away, straining eyeballs and other indubitable proofs. I recollect of several such cases recently reported in the New York and Boston papers; also of one of a woman who had had a child partly born in the coffin.

So far as what is popularly known as "sentiment" is entitled to respect, cremation would be conducive to it in the opinions of all those who are not grossly ignorant of what occurs in the grave. Not one person out of one thousand could look at a human corpse in the various stages of decomposition without a feeling of extreme horror and disgust. Do not most people assiduously avoid thinking, even for a moment, of not the actual condition, but what they suppose is the condition of the body of any friend? If the truth were known to all as it is to some,

\* An old "erroneous statement" has recently been circulated again by the *Lahore Church Gazette* and other "religious" papers, that Baron de Palm left a valuable legacy to Col. Olcott. The truth is that Baron de Palm left nothing worth having, and that his cremation entailed a considerable expense to Col. Olcott.—Ed.

it would be readily admitted that nothing but extreme and unaccountable ignorance would keep alive the custom of burying our dead.

Mr. Andrew Carnegie in his book of travels called "Round the World," tells us of "the burning ghat"—as it is called—at Calcutta. It consists simply of a building twenty-five by one hundred feet, constructed directly upon the bank of the Ganges, the side next the river being left upon. The dead are borne there on stretchers, a little water from the sacred river is poured into their mouth; they are placed in a sitting posture, the wood is piled around them and they are burnt amid the weeping and the wailing of their relatives. This also is hardly the kind of cremation we should be satisfied with.

But as conducted at Gotha, for example, how different it is. The process there is thus described: "the body is borne into the chapel and placed in a catafalque which stands in front of the altar. The section of the chapel-floor, upon which the body rests, constitutes the floor of a lift or elevator. As the funeral service proceeds, the elevator invisibly and noiselessly descends, bearing the body to the basement directly in front of the incinerator, which by means of superheated air has been raised to a white heat within, at a temperature of 1,500° Fahrenheit. As the door of the incinerator is opened to receive the body, the rushing cold air cools it to a delicate rose tint; and the body resting on a metallic bed, covered with a cloth of asbestos, or of linen soaked in alum, passes over rollers into this bath of rosy light. Immediately it becomes incandescent, in which condition it remains until incineration is complete. There remain only a few handfuls of pure pearly ashes. These are dropped by means of a lever into the ash-chamber below and are drawn thence into an urn of terra cotta, marble, alabaster, or other suitable material and returned by means of the elevator to the catafalque. The service or ceremony being now over, the friends of the deceased find the ashes where they had last seen the body of the departed, and may bear them thence to the columbarium or mortuary chapel or set them in the border and plant violets, hearts-ease and forget-me-nots in them from year to year."

## SHORT NOTES ON PSYCHOLOGICAL STUDIES.

UNDER this head we intend issuing a series of articles containing useful hints and instructions upon various subjects of investigation, such as Psychometry, Crystal Reading, Mesmerism, Thought-reading, Palmistry, and others of a cognate character.

No. I.

PRELIMINARY CONSIDERATIONS.

By F. T. S.

In the first place, do not desire to obtain many books for the purpose of studying theories. Numerous books have been written: as the ancient Jewish writer said, "of the making of books there is no end;" but after all this use of ink, the pith of all the information conveyed may often be found within a few lines. There is a disposition, among the young Indian Theosophists, for acquiring books in numbers before any practical efforts are made. We know of several cases where, although the inquirers had in their possession a really valuable work upon mesmerism, they yet asked for other writings without having mastered the contents of those already in hand. This is a slight defect which is due perhaps to the extreme novelty of the subjects to the investigator in India; but some persons say that it is a national idiosyncrasy, running through all departments of Hindu thought and action.

Without deciding definitively which view is the correct one, we will merely recognize the existence of the defect, and endeavour to point out to our readers a path which, if carefully followed, will prevent failures and disappointments; and perhaps lead many into the fearless habit of investigation, which prevails in the West.

Disappointments in these matters often arise from too close an adherence either to a suggestion, or to a particular rule which some one person has been known to lay down for himself. Many persons have read articles giving general principles, applicable to these studies, but have immediately been seized with the desire to read more instead of putting those principles into practice.

Then some special mode advocated by this, that, or the other person has been followed, and the exact result which the formulator of the rule met with, not being reached by them, disappointment has supervened. Why? Because they did not think independently and try original experiments.

Our first piece of general advice then is, do not crave for many books, but endeavour to get all that can be got even out of mere hints, and put principles into practice.

In the second place we must impress upon the reader's mind the fact that the true investigator does not give up because of the apparent failure of his first attempt. Use your intellect to find other ways; try other ways, and try often.

And lastly, having found that you can succeed in one mode, do not dogmatize, saying that that is the only way, but remember that there are always many ways of bringing about one result.

Having said so much, we will take up the subject of

### PSYCHOMETRY.

"In nature's infinite book of mystery I have a little read."—*Shakespeare.*

The name Psychometry, has been given to a branch of occult science, which has been but little explored. The re-discovery of the psychometric power in man is due to Prof. Buchanan, of the United States, who in 1849 found that a certain Episcopalian Bishop had such acute sensibility that if by accident he should touch a brass plate, even in the night and not knowing what he touched, he immediately felt the influence through his system, and could recognise the offensive metallic taste.\* Dr. Buchanan is such a man that a slight hint leads him to close investigation; and upon learning the curious fact about the Bishop, he at once proceeded to further experiments which proved that many persons had the same power and could recognize other minerals, metals and medicines merely by touching them. In one case he records that an emetic held in the person's hand produced vomiting.† Subsequently Mr. Wm. Denton made numerous experiments and brought forward to our notice, in a more detailed manner, this new, undeveloped science.

It is not crystallo-mancy, from which it differs essentially. In crystal reading, the effect seems to be produced through the concentration of the eye and mind upon the surface and interior of the polished crystal, leading us to infer that the images seen exist wholly in the seer's brain. But in psychometry the pictures and ideas are due altogether to the odic emanations, or the occult reflections, from the surface and body of the object taken under examination.

Western Science does not recognize psychometry, because it denies that the powers of man can produce results which they claim for electricity or chemicals. Yet they allow that a lasting and reproducible impression can be made upon a smooth metal plate of an object laid upon, or held before it, and that this unseen impression, as well as washed-out images on certain plates, can be brought into visibility by electricity or chemicals. But to man is refused the power to take off the same impression or image simply by using his nervous system and brain.

A little consideration will show that our scientific men are in error.

It is well known that we explain sight by declaring that upon the minute disc of the retina is formed the picture of that which is before it. The picture then exists upon the retina in precisely the same manner as the undeveloped image on the photographic plate. But how is it that the image is transferred to the brain

\* Buchanan's *Journal of Man*, Vol. I. p. 51.

† *Ibid.*

p. 54.

through the optic nerve? No developer either electrical or chemical is used. Whether by vibration or not, is out of our province to enquire. We at once see that it *may be possible* to take off images from objects and impress them upon the brain if the way can be found. The ear is not necessary for hearing, as we often hear by means of the vibration passing into the seat of hearing through the bones of the head. And so the eyes are not indispensable for this kind of occult sight. Excite the internal organ of sight and the same result will follow to the consciousness, as if the external eye were the means of communication.

Theosophists and occultists from earliest times have held that every object in the world receives and keeps all impressions, not only of all objects that stand before it, but of all that happens before it; and that man through his nervous system can reproduce these images and impressions, no matter how far in time he may be removed from them. Take a rude illustration; if five men stand in front of one man ten feet away, each pair of eyes of the five sees the one man; proving that on each separate retina there exists a separate and complete image of the one object. In the same way each instant there is impressed upon every object in the visible world an image of whatever may come, or remain, before it. And the smallest fragment of the object will give as complete a picture as the whole.

Let the psychometer be seated in the posture most comfortable and then take the object to be examined. It may be a letter, a fragment of stone or plaster from an ancient temple, or tank, or modern house; a piece of fossil bone, or the wrapping of a mummy; a seal ring, or a coin; no matter what. Something should be known of its history or origin by those who submit it, but preferably not to the experimenter, because if he knows what it is or where from, imagination will play tricks. Then he should put it to his forehead (though some can see by holding in the hand), close his eyes and then describe what passes before his mental eye. If sensitive, he will soon begin to see pictures due to the emanations from the object.

The usual place on the forehead is just above the space between the eyebrows. Mr. Denton found sometimes that if moved up high nearer to the hair, the earlier history of the thing examined came into view. This is not, however, a fixed rule.

Notes should be taken until the experimenter ceases to see, or becomes tired, and then comparison made between them and what is actually known of the object.

Practice develops the faculty, and early failures should not discourage. As many persons as possible should be tried so as to find out who in the company is sensitive.

(To be continued.)

[We hope Branches will adopt the above suggestions and send copies of the notes of experiments made, to the *Theosophist* for examination. Questions, as well as criticism on these articles, are also requested.—Ed.]

## Psychic Experiences.

### DREAMS ABOUT MAHATMAS REALISED.

Mr age is 51 years; and this circumstance I mention to show that I have not the enthusiasm of youth, nor its inseparable flights of imagination. I note down the incidents in the order of their occurrence to me, and the reader is at liberty to draw what conclusion he pleases.

I am a Brahmin of the orthodox faith, and I have been brought up by my parents in the belief of the existence of one great Personal God, and of numerous other minor gods whose powers over nature and elements are extensive, and who have gradually worked up their ways by a knowledge of occult philosophy.

In the year 1860 or 1861, I had occasion to visit the town of Trivellum in North Arcot District and halted in the chuttrum near the Pagoda. I liked the place much; and something about the aspect of the place struck me that it must have been sanctified by the presence of a Mahatma in its neighbourhood. If time had allowed, I would have stayed there much longer, but my business required me to leave it the same evening.

In the year 1864 I was working in another district when one night in a dream I saw a Mahatma seated high in the air with a very brilliant star for his ring, and he pointed me out to his Chela standing near, and beyond this, nothing further occurred.

In the year 1873 my father died and in his last moments he told me that "he had in his mind one or two particular things to communicate, but which he was powerless to do at that moment, and, if the Mahatmas wished, they would communicate with me in the course of time."

About the year 1880, one night, I was carried in my dream to a rural village at the foot of a great chain of mountains; and there I saw a Mahatma dressed in a Buddhist's gown and hood, with bare feet. I at once prostrated myself at his feet, when he bade me rise, placed his two hands on my head, and directed me to persevere in the mode of life I have been following. A few months rolled away and nothing particular occurred.

In the year 1881, the newly established Theosophic Society attracted the attention of all people; and hearing that a Mahatma was favorably disposed to its successful working, I prayed that I may be favored with faith. I repeated this prayer every night; and it so happened that one night, in my dream, I was carried to the same chain of mountains, when I perceived the same Mahatma (who already appeared to me in the Buddhist's gown) standing on an isolated rock; and there was a deep chasm between him and me. Not being able to go nearer, I prostrated on the ground, when I was ordered to rise and was asked what I wanted. I repeated the prayer that I wanted to know more of faith, when, to my surprise, a large volume of brilliant fire burst forth from his breast with several forked tongues, and a few particles of fire flew in my direction and they were absorbed in my person. The Mahatma disappeared after this, and here ended my second dream.

As time rolled on, I became less and less selfish, am disposed to look upon the whole humanity, animals and men, as part of myself, and am more and more anxious to learn and become useful to the world at large within my limited means and knowledge, of which there is not much.

In the middle part of the year 1883, one night, I was carried in my dream to a great chain of mountains when some one led me into their recesses. There I found a great rock temple in the form of a hall of oblong size, and I perceived the same Mahatma, who had shown himself to me on the two previous occasions, seated on a low stool with a shrine opposite to him, and there were two rows of Mahatmas, one on each side, all dressed in Buddhist's gown except the Chief. I prostrated as usual and was ordered to rise. I was then told to go round the shrine, and some one led me round, and there I found two or three ladies in deep devotion. On the shrine I observed a very brilliant substance resembling phosphorus, in a dark place irregularly coiled like a serpent, and I expressed a wish to know what it was; and one of the ladies then opening her eyes told me that the shrine is earth, to which state all our physical bodies must be brought down sooner or later, and the brilliant substance is the spirit, or essence, or "Jyoti" which moves all universe. I came back to the Chief, and after prostrating before him once more, I left the place which was said to be "Harthayery", by one of the Mahatmas standing.\*

I have had no dreams since then, but I perceive a change coming over me as if my inward man is trying to fly upwards; and I have now a very sincere desire to proceed to the Tibetan mountains in search of the Mahatmas.

I was thinking over these dreams, and at last my mind became so heavy with these thoughts that I prayed to the

\*The correspondent probably means an altar and not a shrine. But the details he gives of the Jyoti (flame) seem to correspond to what is alleged to exist in a certain temple in Thibet. The flame symbolises what the Hindu philosophers know as paramjyoti, which is sometimes represented by the Buddhists as the "yellow Sun in the lotus."—(Ed.)

Mahatmas for relief. In my dream again about two months ago, I was told to go to Mr. T. Subba Row, the worthy President of the Madras Branch of the Theosophical Society, and to him I went after the voice repeated itself a second time. To him I explained my whole experience, and he kindly asked me to call at the Head-Quarters of the Theosophic Society in order to see if I could recognize the features of the Mahatma who appeared to me in my dream.

I went thither the same evening, and at about 4 p. m., the 'Shrine' doors were opened, and to my surprise I identified in the photo of the Illustrious Mahatma K. H. the exact features of the Mahatma of my dreams. With my hands joined in a state of supplication, and with the words "O Mighty God" on my lips, I went down on my knees, and in an hour afterwards I became a fellow of the Theosophic Society.

C. RAMAIAH.

MADRAS, 11th August, 1884.

## Psychic Phenomena.

### "COINCIDENCES."

A NUMBER of years ago my mother was residing in the north of Scotland, in a country district, and, while there, had a curious dream, immediately followed by what may fairly be called a "coincidence," allowing for the bull.

She dreamt she was calling at the house of her cousin, Captain F—, and on arriving found the front door open, and no one in attendance. She walked into the dining-room—to the right on entering—and to her horror found a coffin lying on the bare mahogany table. She particularly noticed that the lid was lying diagonally across the coffin, and on looking into it, her horror was still greater to find the dead body of her cousin, Captain F—, dressed in full Highland costume. She then awoke.

Now it happened that on that very night, and unknown to my mother, Captain F— was attending a county dinner at the town of B—, and had intended to remain at a hotel for the night, but on its becoming known that this was his intention, several gentlemen in his immediate neighbourhood at the table chaffed him unmercifully, alleging that an easy tumble into a bed close at hand was much more to his liking than a nine-miles' drive, and perhaps an uneasy tumble into the bed of some mountain stream. This proved sufficient to make F— drive home, and on his way, his horse went over the low parapet of an old-fashioned bridge, and precipitated his groom and himself into the ravine below. The groom was instantaneously killed, and F—, who was found a few hours afterwards, did not see the day out. Now, for the coincidence, as I have called it. My mother called the following day, and found the door open, with no one in sight, and on going into the dining-room found the coffin on the bare table with the lid as I have already described, and inside it, the corpse of her cousin, dressed in Highland costume. The last coincidence was the strangest of all, as, whatever eccentricities the Gaels may be capable of, it is not customary with them to lay out their dead in any other but the orthodox manner. Nor was my mother aware that it had been her cousin's wish that he should be so dressed after death.—T. W. R.—(*The Statesman*).

### ELECTRO-MAGNETIC GIRL.

Maggie Lee Price, the Wonderful Georgia Girl, gives an Exhibition of her Gifts at Frankfort, Kentucky.

A little girl, fourteen years of age and weighing ninety pounds, gave an exhibition at the Opera House, Frankfort, Ky., of such remarkable physical powers as would put Sullivan and Mace and all the great health-lifters to blush. Mattie Lee Price is the name of this prodigy of power; the place of her nativity Bartow county, Georgia. During the Christmas holidays, so says her manager, she first discovered her power by astonishing her playmates in the moving of chairs and tables merely by the touch of her hands. She is an ordinary looking child, and is devoid of cultivation, but is quick in reading character, which she has demonstrated by refusing to hold any converse with certain persons brought before her for introduction. The manager says her powers in this respect were tried, before she left home, and proved correct in every instance.

At the performance last night, Gov. Knott, Attorney-General Hardin, Auditor Hewitt, Col. John R. Proctor, Major Henry T. Stanton, Hon. Ira Julien, Col. H. M. McCarty, Col. C. E. Bowman, Gen. Daniel Lindsey, Dr. J. Q. A. Stewart, Dr. Sawyer, Dr. James, Dr. Hume and Capt. Sam. M. Gaines were among the many in the audience. The Attorney-General, who weighs 200 pounds and over and is perhaps one of the stoutest men in the State, took hold of a chair and the little girl touched it with her open palms and caused it to wriggle and move him all about the stage, Maj. Stanton, weighing 225 pounds,

then sat in the chair, the Attorney-General and Dr. Sawyer both pressed upon it with their whole weight and power, and the chair rose up to the girl's touch. This experiment was varied by other men, and the result was equally as satisfactory and astonishing. Dr. Sawyer and the Attorney-General took hold of a stick, and, despite their resistance, the girl's touch dragged them about the stage, much to the delight of the gallery, as attested by their loud applause. The doctors here examined the Attorney-General's pulse and found it had risen to 140, while the girl's was 104. She betrayed not the least evidence of muscular exercise or excitement attending such powerful feats. Maj. Stanton and Dr. Sawyer took hold of a chair, and, with all the power they could summon they could not place the chair on the floor as long as the girl's hand touched it.

Another, and, perhaps, the best test of her preternatural powers, was the touching, by open palm, the end of a stick standing upright, on the other end of which Drs. Sawyer, James and the Attorney General exerted their combined strength to press to the floor, but without avail.—*Courier-Journal*.

### A GHOST UPON THE BRIDGE.

A QUEER story is being circulated at Elmira, of the appearance of the ghost of Katie Brodchoff of New York, who was murdered some time ago by William Menken. A farmer living near Corr's Corners says that twice within a short time he has seen the figure of the girl sitting on the bridge under which the body was found. She was dressed as when discovered after the murder, with the exception of her headgear which is missing, and her hair was tossed about by the wind. She was uttering mournful cries and resting her head on her hand. When he approached, she turned her face towards him and pointing in the direction of the jail in which her murderer, who is to be hanged on June 20th, is confined, solemnly brought her hand down twice on her head, and then, pointing to the water beneath, disappeared. The same performance was gone through, on both occasions. It is also said that Menken has heard strange noises about his cell at night, and has frequently cried out in terror. When questioned as to the cause of his alarm, he refused to say anything, but pointed to the corner of his cell. His terror on these occasions is said to be appalling. These stories have created great excitement and many timid people refuse to go near the bridge where the murder occurred, or the prison, after dark.—R. P. J.

### THE CRAZE OF THE HOUR.

Dr. WILDE writes:—"In his conversation with you, Mr. Stuart Cumberland is understood to say that my experiments are claimed to explain both table-turning and table-tilting. It is of some importance to me that this idea should not remain, and for this reason. Previous to the publication of my analysis of the 'Involuntary Movements of the hand,' every writer on these phenomena had tried to find one theory to fit the whole series. I was the first to insist that half the mystery lay in the lack of scientific classification, and to show that the ancient experiment of table-turning was a wholly different thing from the tilting and levitation of tables. In the *Edinburgh Medical Journal* for 1882, I pointed out the fallacy of trying to explain the well-known body lifting experiment and that of turning a table by the theory of 'expectant attention' and 'unconscious cerebration.' In both these experiments a certain method of procedure is followed by a certain result, the one being necessary to the other. Both of these are freely reproducible, and in this differ from all spiritualistic levitations. I demonstrated at the time that the motor power in both these experiments was the involuntary muscles which expand the chest walls during the act of inspiration, and showed by a number of simple experiments, which have since been repeated by a number of independent observers, how it was that under certain circumstances this force could be conveyed beyond the body, and made to affect external objects. As a matter of fact, this force is largely made use of in rowing and lifting heavy weights. It is for this reason that the stroke of the oar is always simultaneous with the end of the act of inspiration, and that the porter draws a long breath before lifting a heavy box on to his shoulders."

"Allow me to add my mite to mystify the public," says a sceptic, who goes on to give the following experiment:—"A friend of mine accidentally discovered he has the power of thought-reading *bonâ fide*, no indications being needed at all. The operation is simple, and as follows:—Two people (he has rarely succeeded with one) having previously agreed on a person's name, a word, or one to four figures, grasp hands with my friend and think of the agreed name, word, or figures

for a moment or two, when, as he says, the agreed-on word comes singing into his mind as if some one was quietly repeating it to him. He has but seldom failed, and with sceptical people he has been equally successful. This, I conclude, is still more convincing of a 'power' existing capable of producing transmitted impressions on the brain without 'acute perception' on the part of the performer or betrayal on that of the subject."

"A friend lately observed to me," a lady believer writes, "that the first thing which had inclined him to believe there was some truth in spiritualism, was the feeble and inadequate explanation offered by Dr. Carpenter of its manifestations. So with regard to the article in your number of June 4. To any one who has seen anything of spiritualism (which your contributor evidently has not), Mr. S. Cumberland's explanations are so exceedingly weak and entirely insufficient, as to force upon them the conviction that, if nothing more satisfactory is forthcoming, the phenomena they have witnessed must be attributed to some source, the origin of which is as yet undiscovered. Mr. Cumberland, undertaking to show the writer, 'how it is done,' presumes the conditions to be such as they never are at a séance. For example, he says that mediums, 'the moment the lights are out, loosen their hands and move noiselessly to another part of the room'—an absurdity (unless two confederates are seated next him). I have never sat in any circle (and I have sat in dozens,) where such a thing could be for an instant possible; the medium's hands are always firmly held by two persons, who frequently also place their feet on his. Again, Mr. S. Cumberland places both his hands upon the writer's hands, who closing his eyes believes they are still on his; at the same time he feels ghostly touches, &c., or opening them finds one hand removed. Now I have experimented this evening with friends; and we cannot discover any position (save that of one hand lying directly above the other, which of course would never be allowed) in which a pair of hands can be laid on a second pair and one removed without instant detection; but let that pass. At no séance that ever was held was a medium allowed to place his hand on a sitter's; they are invariably clasped in the hands of one or more of his circle. Thirdly, Mr. Cumberland says most mediums are of the female sex; there are but two lady mediums of note in London, while there are at least a dozen men. I have frequently sat with both these ladies, and on every occasion have observed them to wear, the one high boots with about sixteen buttons, the other strong laced-up boots. Fourthly, 'celestial' infant voices and 'sepulchral' tones are exceedingly rare phenomena; still, if Mr. Cumberland can easily produce them with his 'joints,' he would find it difficult to carry on a long and rational conversation by such means, and that, too, in natural manly and womanly voices. Fifthly, provided the medium has hands or even we will say feet, free, the lazy tongues could easily produce the 'pulls' and 'touches,' but could they play tunes on a piano five yards off—particularly if that instrument happened to be shut and locked? could they lift a heavy brass feeder, a scuttle full of coal, and a ponderous arm-chair over the heads of the sitters, and place them noiselessly on the table in their midst? or could they play on a violin swiftly moving about close to the ceiling? By all means, Sir, let us have an explanation of these phenomena—we all desire it. Undermine spiritualism, knock it down, explode it, let in day-light on its mysteries, expose its trickery if you are able, but in the name of common-sense do not convert us all to Spiritualism against our will by offering us 'explanations' which to those knowing anything at all of the subject are simply absurdities":—*Pall Mall Gazette*.

## Occult Phenomena.

### OCCULT PHENOMENA AT PARIS.

[Extract from "Light" (London) of 12th July 1884.]

THE undersigned attest the following phenomenon. On the morning of the 11th June, instant, we were present in the reception room of the Theosophical Society at Paris, 46, Rue Notre Dame Des Champs, when a letter was delivered by the postman. The door of the room in which we were sitting was open so that we could see into the hall; and the servant who answered the bell was seen to take the letter from the postman and bring it to us at once, placing it in the hands of Madame Jelihovsky who threw it before her on

the table round which we were sitting. The letter was addressed to a lady, a relative of Madame Blavatsky's, who was then visiting her, and came from another relative in Russia. There were present in the room Madame de Morsier, Secretary-General of the "Society Theosophique d'Orient et d'Occident," M. Solovieff, son of the distinguished Russian historian, and attaché of the Imperial Court, himself well known as a writer, Colonel Olcott, Mr. W. Q. Judge, Mohini Babu, and several other persons. Madame Blavatsky was also sitting at the table. Madame Jelihovsky, upon her sister (Madame Blavatsky) remarking that she would like to know what was in the letter, asked her, on the spur of the moment to read its contents before the seal was broken, since she professed to be able so to do.

Thus challenged, Madame Blavatsky at once took up the closed letter, held it against her forehead, and read aloud what she professed to be its contents. These alleged contents she further wrote down on a blank page of an old letter that lay on the table. Then she said that she would give those present, since her sister still laughed at and challenged her power, even a clear proof that she was able to exercise her psychic power within the closed envelope. Remarking that her own name occurred in the course of the letter, she said she would underline this through the envelope in red crayon. In order to effect this she wrote her name on the old letter (in which the alleged copy of the contents of the sealed letter had been written), together with an interlaced double triangle or "Solomon's seal," below the signature which she had copied as well as the body of the letter. This was done in spite of her sister remarking that her correspondent hardly ever signed her name in full when writing to relatives, and that in this at least Madame Blavatsky would find herself mistaken. "Nevertheless," she replied, "I will cause these two red marks to appear in the corresponding places within the letter."

She next laid the closed letter beside the open one upon the table, and placed her hand upon both, so as to make (as she said) a bridge along which a current of psychic force might pass. Then, with her features settled into an expression of intense mental concentration, she kept her hand quietly thus for a few moments, after which, tossing the closed letter across the table to her sister, she said, "Tiens! c'est fait. The experiment is successfully finished." Here it may be well to add, to show that the letter could not have been tampered with in transit—unless by a Government official—that the stamps were fixed on the flap of the envelope where a seal is usually placed.

Upon the envelope being opened by the lady to whom it was addressed, it was found that Madame Blavatsky had actually written out its contents; that her name was there; that she had really underlined it in red, as she had promised; and that the double triangle was reproduced below the writer's signature which was in full, as Madame Blavatsky had described it.

Another fact of exceptional interest we noted. A slight defect in the formation of one of the two interlaced triangles as drawn by Madame Blavatsky had been faithfully reproduced within the closed letter.

This experiment was doubly valuable, as at once an illustration of clairvoyant perception, by which Madame Blavatsky correctly read the contents of a sealed letter, and of the phenomenon of precipitation, or the deposit of pigmentary matter in the form of figures and lines previously drawn by the operator in the presence of the observers.

PARIS, 21st June 1884.

I merely remark that the transference of an imperfectly formed triangle with exactitude within the closed letter is a fact that has a very important bearing on the obvious criticism that occurs at once of collusion between the writer of the letter and Madame Blavatsky and the lady to whom it was addressed. And further, that, however wonderful the narrative, it is by no means isolated, but can be paralleled by other accredited cases.

M. A. (OXON).

## Correspondence.

### A LECTURE AT BOMBAY.

MR. JUDGE, the latest Theosophical arrival from America, gave his first public lecture in Bombay this evening before a crowded audience in the hall of the Framjee Cowasjee Institute. The subject chosen was, "*Theosophy and the Destiny of India.*" Mr. Judge began by saying that, born of Christian parents, he very early saw that Christianity was inadequate to his moral aspirations and was unable to solve the many doubts and difficulties which perpetually rose before his mind. Led by an irresistible desire to find out the truth, he turned his thoughts to the religions of the East. And how were the labors of himself and his friends rewarded? The most superficial examination convinced them that their fables buried beneath the outward shell a code of morality far superior to any that the Bible has to offer, and that this inculcated a course of conduct based on *good thoughts, good words and good deeds.* It was to this desire to find elsewhere what the lecturer vainly sought in his own country, that the Theosophical Society owes its birth. The first public act of importance was the cremation, before the eyes, so to speak, of America and Europe, of the body of Baron de Palm. Since then, Theosophy and the Theosophical Society have become known in America. In Europe, too, the ridicule which greeted its infant days, is fast dying out, if it has not ceased altogether, and at this moment the Society is exercising a considerable influence on the intellectual and scientific thought of the West. Men of mark in England, if they do not all belong to the Society, are yet in very active sympathy with its objects. Theosophical thought has moreover affected the current literature of Europe, as witness that wonderful book, the "*Occult World*" by Mr. Sinnett, "*Esoteric Buddhism*," by the same author (both already within fourth and fifth editions and read with avidity by thousands) and "*Mr Isaacs*" by F. Marian Crawford, which last Mr. Judge described as an essentially theosophical novel, being an attempt to put some prominent theosophical truths in a popular form. Speaking of the Society's avowed objects, that which related to the so-called supernatural phenomena, the lecturer did not think it necessary or desirable to dwell upon at length. Not because he disbelieved in phenomena, but because it was impossible to convince every one of their genuineness by ocular demonstration. As regards the first object, universal brotherhood, he remarked that it was really the most important, and he hoped that the disarmament of the world, if still distant, was not, judging from the signs of the times, an impossible or improbable occurrence.

Going on to the second portion of his subject—the *Destiny of India*, the lecturer observed that India's destiny was not political, but purely and simply intellectual, moral and religious. Though one of a nation who had broken from England and declared her independence years ago, he had no hesitation in saying that, all things considered, the British Government was the very best form of Government that India could wish for. He thereupon earnestly exhorted his hearers to let politics alone, and to turn their thoughts to their real destiny, to the intellectual, moral and religious regeneration of India. The history of all conquered countries, of England herself after the Norman conquest, of Spain, of Mexico, when Spain over-ran her, showed that in every case the conquered have been too apt to give up their manners and customs, their habits of thought, their religion and their nationality, for those of the conquerors. India, alone, of all conquered countries, has resisted the shock of invasion, and remains to this day as thoroughly Indian in thought, in manners and in religion, after years of subjection to a foreign rule, as in the days when her own sons ruled the land. The lecturer called upon his hearers to rouse themselves, to study their own books, and to translate them for the benefit of the world. He believed that translation by western authors, although not without merit in some cases, were at best unreliable interpreters of Indian modes of thought, and that a genuine Indian, with a fair knowledge of the language in which his books are written, could do much towards enriching European minds with the treasures of Indian philosophy and religion. Mr. Judge concluded his eloquent lecture with the well known words of a gifted countryman of his, who, though dead, still speaketh:—

"Let us, then, be up and doing,  
With a heart for any fate;  
Still achieving, still pursuing,  
Learn to labor and to wait".

The lecture made a deep impression on its hearers, and it is my firm conviction that if such able discourses were repeated from time to time, and theosophy presented to outsiders in the attractive form which Mr. Judge knows so well how to give it, the first object of your Society—that of Universal Brotherhood under the common banner of Theosophy—will soon be much nearer accomplishment than it now appears.

BOMBAY, 18th July 1884.

H.

### LECTURE AT COIMBATORE.

[FROM OUR OWN CORRESPONDENT.]

The 17th July, 1884.

DR. F. HARTMANN delivered a very interesting and instructive lecture on Theosophy on the 15th instant at 6 P. M. at Coimbatore. The audience consisted of the leading gentlemen of the place and of almost all the English-knowing of the place. Babu R. D. Chuckerbutty, M. A., was voted to the chair. The lecturer began by stating that, according to the occult doctrine, we are now in an ascending cycle of intellectual development; how superstitions are dying; that, throwing away both the superstitions and the esoteric truths which they encrusted, the reasoning people had embraced rank materialism, and denied that mind exists independent of brain; that intellect is being developed at the expense of morality; that Theosophy has, therefore, opportunely enough stepped in to bring morals to prominence. He explained how Theosophy is not confined to the Theosophical Society, and instanced the work of the Psychic Research Society, and other like Associations as being Theosophic; and how modern literature is teeming with Theosophic doctrines. He dwelt at length on the progress of the Theosophical Society all over the world, and especially of its progress in India notwithstanding the temporary absence of its Founders in Europe. He pointed out the sphere and functions of Theosophy; the immense good it is doing, and how it has set itself to promote the cause of truth; the absurdity of dead letter interpretations of Hindu, Christian and other Theologians; and how sorely they need the aid of Theosophy. The superiority of the occult doctrine over the so-called "religions" was shown, as well as the futility of "Hatha Yog," and the necessity for spiritual and moral development. After explaining the "secret doctrine" in its various phases, the lecturer concluded by adducing his experiences as proof of the existence of *Mahatmas*, who are the inspirers of the Theosophical movement.—*Indian Mirror.*

## Official Reports.

### THE POONA THEOSOPHICAL SOCIETY.

Mr. Wm. Q. Judge (from America) arrived at Poona from Bombay on the evening of 20th July, when he was received at the station by several members of the Poona Branch. On the evening of the 23rd July, he gave a lecture at the Poona Town Hall on "*the West and what India can give it.*" There were over 300 persons present in the Hall, and the lecture was heard with great attention and created an extremely favourable impression, as Mr. Judge is an excellent speaker. He gave a brief description of life in America, particularly with reference to the education and prospects of young men in that country, and pointed out how the West had progressed in material civilization—a part of which India would do well to follow, but other portions of Western civilization would prove injurious to this country where the intellectual part of the brain seemed to be more developed than the part referring to material progress. He said that this country had an immense store of learning in religion, philosophy and certain sciences called psychical, and that if those stores were unearthed and properly brought to light, they would be the means of giving to humanity the principles of that one true religion which is the highest science and the highest philosophy. That the destiny of India was to teach the people of the West spirituality, and that the learned sons of India ought to work in that direction to rehabilitate themselves in the eyes of the whole world, which would then look up towards India with the respect which it has the means to command.

Rao Bahadur Mahadev Govind Rando, in thanking the lecturer for his eloquent, practical and instructive address, made a long speech, in the course of which he gave prominence to the energy of the Founders of the Theosophical Society, who, he said, had promoted the cause of the Society with marvellous rapidity and that that was the sort of energy which the sons of India ought to emulate. He said that he knew of no one amongst the Hindoos of the present generation in the city of Poona that were worthy to sit by the side of these Founders who had so unselfishly worked to promote a good cause.

Mr. Mahadev Moroshvar Kunto, who occupied the chair, spoke somewhat to the same effect, and said that the rising generation of scholars

were ignorant of the beauties of the old literature of India, and that an effort should be made to enlighten the young men about the excellencies of their religion.

In the course of his remarks he said that he had translated some part of Patanjali's Yog 'philosophy, and he wondered that Europeans from distant places had sent for it. He said that some copies were sent for from Corfu. Mr. Knute ought to know that there is a Theosophical Society at Corfu, and some of the members there, owing to the light thrown upon such subjects by our Society, went to the trouble of ordering out his book; otherwise very few would have thought of his book in that distant place.

There have been by this time several lectures in connection with Theosophy in this place and the young men are always glad to hear these subjects discussed in an intelligent manner. Slowly and imperceptibly they are being imbued with correct ideas about their literature; and that is a positive gain.

NAVROJI D. KHANDALAVALA,  
Pres't., Poona T. S.

#### MR. WILLIAM Q. JUDGE AT HYDERABAD.

Mr. Wm. Q. Judge, Joint Recording Secretary of the Parent Theosophical Society, arrived at Hyderabad on July 25th. He was received by the members of the Society and escorted by the President Mr. Dorabjee to the lodging arranged for his stay, where he received many visitors and discussed philosophical questions with them.

On the 27th, Mr. Judge he made some experiments in psychometry and gave some instructions to a few Theosophists who appeared capable of continuing the experiments and developing their powers. Among the experiments in psychometry were the following:—

A small copper Indian coin was given to a member of the Secunderabad Branch, who held it to his head, and soon described a street, with palm trees, looking like Southern Indian scenery. The shops were shut and only a dog could be seen for some time, when a man appeared. This scene persisted before him for 20 minutes, disappearing when the coin was moved along the forehead, but always reappearing when it touched the sensitive spot. No one knew where the coin was from, until the Collector of Hyderabad said it was a Southern Indian coin.

Another member took the seal of a gentleman present, and holding it to his forehead began to describe the house of the owner with tank surroundings, &c., which he had never before seen or heard described. Many other interesting trials were made, and a record is to be kept in Hyderabad and Secunderabad of all such experiments for future publication.

In the evening of the 29th, Mr. Judge was conducted to the spacious hall of Mr. Shapoorji, a well known Parsee gentleman here. The hall was filled with an audience representing all sects here. There were many well-informed European, Parsee, Mahomedan and other gentlemen present. Mr. Sabapathy Aiyah Garoo, a well-known member of the Madras Bar, was voted to the chair. He opened the meeting with a short and appropriate speech and introduced the American Brother to the audience.

Mr. Judge commenced his lecture by giving a short account of the conflict between Religion and Science; whence came man and whither he is to go? These momentous problems, he said, Western science is not yet able to solve satisfactorily. Spiritualistic phenomena, which then ushered themselves in the West, seemed at first to answer the purpose, but are now found to be not able to satisfy the spirit of enquiry which the modern science has kindled in the breast of man. He explained how the Theosophical Society came to be organized at New York under the prompting of the Mahatmas and why it was established in that country and why its Head Quarters were subsequently transferred to India. He thus enlightened the audience for an hour, and then brought his interesting discourse to a close, by observing that the ancient books and wisdom of Aryans were able to sufficiently answer the many and various questions which man meets with, in his endeavours to find out his goal, and to ascertain whether there is a futurity or not for him after death. The audience gave a calm and attentive hearing to his beautiful speech.

The Chairman then thanked the speaker for his able exposition, and added that as Theosophy was not sectarian, no man could have any objection to join the Society, whose object is one of enquiry.

After a vote of thanks to the Chairman and the speaker, the meeting was dissolved. Mr. Judge suggested and discussed plans for the future work of the Branch, and among those that were adopted are the following:—

1. Captain Raghunath and Messrs. Bheemajee Rowjee and Hanoo muntha Row to continue their studies and experiments in Mesmerism.
2. Two or three others to take up the subjects of Psychometry and Crystal reading.
3. The Brothers Moulve Mansab Ali and Abdul Razack to assist those Mahomedan Brothers who do not know English, by translating, into the Oordoo language, some of the useful and instructive articles found in the Theosophist.

Mr. Judge's affability, patience, and self-denial have made great impression on our minds, and our Branch President found very great pleasure in accompanying him wherever he went and seemed to enjoy his company much.

P. IYALOO NAIDU,  
Secretary.

HYDERABAD THEOSOPHICAL SOCIETY,  
2nd August 1884.

#### THE GOOTY THEOSOPHICAL SOCIETY.

Mr. William Q. Judge, our American brother, arrived here from Adoni on the evening of the 4th instant. That evening was spent in discussion upon the Eastern and Western social system and on hearing suggestions regarding work in the Branch.

On the morning of the 5th, according to invitation sent out, about 50 gentlemen of this place assembled in the bungalow of our President M. R. Ry. J. Sreenevasa Row, Pleader, he taking the chair at request, which was seconded by the Munsiff of this place. The Chairman welcomed Brother Judge to India in an address of which I give you the substance. He said that Theosophy affords the one common platform for all religionists; that it had been the one religion of the early Aryans and is now becoming that of the natural and scientific world; that it is through Theosophy that fraternal feeling is growing. In concluding, he hoped that the Mahatmas would bless our brother and, through him, the Society.

Mr. Judge then delivered a lecture extemporaneously, upon *Theosophy and the Destiny of India*. During the course of his speech, he explained some passages in the Hindu sacred books, that the West had laughed at; for instance the marriage of the five Pandaras to Droupadi, which is the combination of five vital centres in the body. The destiny of India, he said, was to furnish the world again with true philosophy and a true system of morals to be found in her ancient literature.

The Vice-President, Mr. P. Kesava Pillai, spoke at length in support of the lecturer, and then the Secretary concluded the remarks by defending Indian B. A's and B. L's; referred to Theosophical literature; and proposed a vote of thanks to the lecturer, which was carried with applause.

Before leaving, Mr. Judge gave us some instructions on Mesmerism; and suggested various experiments to be made in psychometry and crystal reading.

7th August 1884.

B. P. NARASIMMAIY, B. A.,  
Secretary.

#### MR. ST. GEORGE LANE-FOX AT VELLORE.

MR. LANE-FOX arrived at Vellore on the 11th July. He was received on the Railway platform by all the members of the Branch. On the following evening he delivered an able and impressive lecture on "*Theosophy viewed in the light of Modern Science*" to a large and appreciative audience. Mr. Winfred, President of the Chittore Branch, was voted to the chair. In winding up his address, Mr. Lane-Fox invited discussion on any points requiring explanation, &c. There was loud applause when the lecture closed. The Chairman closed the meeting with a short address summarizing what the lecturer said.

In the course of the next day, Mr. Lane-Fox held interviews with some learned gentlemen of the Town, who came to him. At the lecture on the following day there were nearly 300 persons present. Mr. Lane-Fox addressed the audience on "*The Theosophic View of Morality*." Some of the non-Theosophists present dilated upon what they thought the impracticability of universal Brotherhood in the present state of Hindu Society, ignoring all along the fact that what was aimed at was the formation of a "nucleus of universal Brotherhood." Initiation took place after the meeting closed.

#### FORMATION OF A BRANCH AT ARCOT.

On July 17th, Mr. Lane-Fox accompanied by Mr. Narainasawmy Mudaliar, the President of the Vellore Branch, arrived at Arcot, where they were received by Messrs. Thanakoti Mudaliar, Nummiah Chettiar, Tahsildar of Arcot, and others; and conducted to the "Hermit Park," which was prepared for the occasion. Mr. Lane-Fox addressed the audience present, in a few words. At the request of the gentlemen present, he consented to give a lecture in the evening on "*The Relation of Theosophy to Hinduism*." Accordingly at the appointed time he addressed a large audience on the subject announced. The topic being a very interesting one to Hindus, the lecture was listened to most attentively. The lecture, able and interesting as it was, closed amidst loud and deafening cheers. After this, one of those present, a non-Theosophist, read out a paper explaining in general terms the objects of the Theosophical Society and how it required our sympathy. Mr. Narainasawmy Mudaliar addressed the audience in Tamil and Mr. Nummiah Chettiar thanked the lecturer.

On the following day, a large number of applicants, consisting chiefly of important officials of Arcot and neighbourhood, were initiated; and a branch was formed.

MR. LANE-FOX AT ARNI.

Mr. Lane-Fox arrived at Arni on the 19th July. Immediately after his arrival, the additional District Munsiff and other officials of the place came to visit him. There was some discussion during the day. At the request of the townsmen, Mr. Lane-Fox consented to give a lecture on the "*Prospects of Theosophy*." There was such a large gathering

that even the Police were unable to keep peace outside the building. Mr. Veerasawmy Iyer, F. T. S., the local District Munsiff, was voted to the chair. Mr. Lane-Fox gave a very able and learned lecture. He closed his address amidst loud applause from all present. Mr. Winfred, President of the Chittore Branch, then explained briefly in Tamil the speech of the lecturer.

A venerable old gentleman, a retired District Munsiff and a Sanskrit scholar, then addressed the audience in Tamil, expressing sympathy with the Theosophical movement. The proceedings of the day were brought to a close after a short and impressive address from the Chairman.

A. RAJU,  
Corr. Secretary, Chittore T. S.

#### Mr. ST. GEORGE LANE-FOX AT ARCOT.

Mr. Lane-Fox, of the Parent Theosophical Society, arrived here on the morning of the 17th instant, accompanied by Mr. A. Narayanasawmy Moodaliar, the President of the Vellore Theosophical Society.

At the appointed time, the gentleman began the address. The Hall was crowded, both Mahomedans and Hindus attending. The subject treated of was "The Relation of Theosophy to Hinduism." At the close of the address, the Tahsildar of the place thanked the learned lecturer for his able address.

The next day Mr. Lane-Fox initiated the several gentlemen wishing to join the Society.

At a meeting of the newly initiated members held later in the day of that date, it was resolved that a branch of the Theosophical Society be formed here, and that the following gentlemen be appointed as office-bearers to carry out the business of the Society.

President, A. Thanacoty Moodaliar,  
Vice President, N. Nummiah Chettyar,

Secretary, S. Venkata Subbiar, B. A.,

The Bye laws of the Parent Theosophical Society were adopted for the present.

Arcot,  
21st July 1884. }

A. THANACOTY MOODALIAR,  
Pres. Arcot T. S.

Notes:—The Hindu (Madras) of 20th August contains a report of an interesting lecture at Trichinopoly, by Mr. Lane-Fox. We shall give it in our next issue.

#### MADRAS THEOSOPHICAL SOCIETY'S SANSKRIT SCHOOLS.

I HAVE the honor to submit my report of inspection, for the month of May, of Sanskrit schools organised under the auspices of the Theosophical Society, in Mylapur, Triplicane, Chintadripet and Peddoonaikpet.

2. The number of boys on the rolls of the Mylapur School is 24 and the average attendance is 18. Dowan Bahadur R. Raghunatha Row Garu has opened three Vedic classes, where three trained pundits teach the Rig, the Yajur and the Sama Vedas. The Rig Veda is read by 2 boys; the Yajur Veda by 3; the Sama Veda by 2; the first lessons in Sanskrit by 15; the second reader by 2; and the Sanskrit Text by 3. There are four teachers to give instruction in these subjects, and the establishment costs in all Rupees 21.

3. The Triplicane school has on its rolls 67 boys and there are two teachers for the school. I am of opinion that the school is doing well.

4. In Chintadripet the Sanskrit school is attached to a local Anglo-Vernacular School. There are no less than 109 boys on its rolls and the average attendance is 98.

5. The Sanskrit class is divided into seven divisions, all of which are taught by only one teacher. The two highest divisions are taught by him for one hour daily and the rest for half an hour. The boys of this institution are taught well, and it even sends a few of its students to Government examinations in Sanskrit. A poor monthly grant of Rs. 5 is made from the funds of our Association to meet the expenses connected with this large Sanskrit class. The staff has to be strengthened, and I am given to understand that the institution cannot bear the additional expense incidental to the necessary increase of strength. I therefore recommend that the grant for the school be raised to admit of the proprietors giving the present pundit an increase of pay of at least Rs. 5 a month and securing an assistant for the Sanskrit class.

6. There are 35 boys in Peddoonaikpet school, which has only one teacher. There is much improvement in the boys of the institution, and it speaks well of the teacher that some boys, who were asked by me on the day of inspection to recite verses from the text, delivered themselves in a very clear and

lucid manner. I would suggest to the Association the propriety of giving some encouragement to the teacher by an increase of pay and of appointing an assistant for the school.

7. In conclusion I beg to suggest that the Inspectors selected every month may be requested to draw their reports after inspecting and examining the schools every week of the month instead of once a month as they do now.

L. VENKATA VARADARAJULU NAYUDU,  
23rd July 1884. F. T. S.

#### MADRAS THEOSOPHICAL SOCIETY.

##### COMMITTEE FOR PSYCHICAL RESEARCH.

THE Madras Branch, having selected as its subject for investigation, in the current year, Dreams and other Psychical phenomena, has thought it desirable to issue circulars embodying a number of questions to its members and their friends for the purpose of collecting data relating to the personal experiences of a large number of individuals. We hope that our members will send careful and concise replies to our various queries; and, should they also be able to furnish us with the experiences of their friends, they are requested to do so without mixing them up with their own experiences; but to record them on a separate piece of paper, stating, if possible, the name, sex, age, and other particulars about the informants.

(1) Do you ever dream during sleep? If so, do you dream constantly or occasionally?

(2) Are your dreams of a rational nature and can you remember their purport or details?

(3) If so, how long does the recollection of your dreams remain impressed in your memory after waking?

(4) Are your dreams affected by the state of your health or by your food or drink?

(5) Do you keep up generally good health? If not, what is your ailment?

(6) Have you ever dreamed of an event which occurred afterwards? If so, how often? Give particulars.

(7) Have you ever experienced a dream in which some external influences or circumstances occurring at the time, such as a noise, a draught, change of temperature, smell, &c., have affected your dreams?

(8) Can you control the circumstances of your dreams by your will?

(9) In what direction and attitude is your body lying during sleep?

(10) Do you snore, groan, or breathe heavily during sleep?

(11) Do you ever talk, walk, or work in your sleep? If so, are you conscious of your actions on waking?

(12) Does any particular resting place affect the nature of your dreams? If so, how?

(13) Had you anything like double consciousness during sleep?

"Visions."

(14) Have you ever had a "vision"?

(15) If so, how often and under what circumstances?

(16) What was the state of your health at the time of your vision?

##### "Trance."

(17) Have you ever been in a trance?

(18) What produced it?

(19) Can you go into a trance at will?

(20) What was its effect upon you?

(21) Have you ever been under "mesmeric" influence? If so, state the circumstances and your experiences in that condition, if you can recollect them.

##### Thought transference or Mind reading.

(22) Do you ever think of a thing or of a word at the same moment as another person at the time conversing with you?

(23) If so, are you usually the first to give utterance to the thought?

(24) Are you ever impressed with the thought of a person who immediately afterwards makes his appearance?

(25) If so, does this occur often with the same person? and is he similarly impressed with your approach?

(26) Do you ever experience, in a waking state, the consciousness of any occurrence taking place some time before the actual occurrence of the said event, or occurring at a distance simultaneously?

(27) Have you ever seen a place or person, witnessed an occurrence, or heard, or carried on a conversation which you felt impressed, was either familiar to or experienced by you as aforesaid, while you know for certain that physically this familiarity was impossible?

##### Obsession (Possession by a devil)

(28) Have you any experience relating to obsession and the condition of mind experienced when a person is under the influence of Pisacham?

##### Anæsthetics and Narcotics.

(29) Have you ever been under the influence of anæsthetics or narcotics?

(30) If so, state how it was administered; and what were your experiences while under the influence?

## SUGGESTIONS.

For the purpose of conducting some practical experiments on thought transference, the first step to be taken is the selection of the "recipient" and "transmitter." The recipient is a sensitive person by whom the thoughts propelled from the transmitter are to be received and recorded. The transmitter is, therefore, as it were, the positive element influencing or mesmerising the recipient who is a negative, passive or sensitive subject. The selection of these two operators can only be made by trial. Having decided to make an experiment, the following is the course to be pursued:—The recipient is to be seated at a table and provided with a pencil and paper. The transmitter should, in the first instance, be in physical contact with the recipient, either by holding his unoccupied hand or by placing his (transmitter's) hand on the recipient's forehead. Then the transmitter pictures to himself some figure or diagram which for convenience may have been drawn on a slate or piece of paper; and holds it before his eyes. This picture should, of course, not be shown to the recipient, who allowing himself to be in a passive state must write down on the paper before him that which comes into his mind. If any success be obtained in this experiment, that is to say, if the recipient be able to reproduce more or less faithfully the picture in the mind of the transmitter, the experiment may be continued without contact, the two being separated by gradually increasing distances. If, in this manner, some success is obtained, it may be found possible to transmit words and figures in the same manner. At first it is not advisable to impose any test conditions; but after successful experiments have been made, more or less rigorous tests may be applied with advantage.

N. B.—In answering the above questions, please be careful not to draw too much upon your imagination, as otherwise our object will be defeated. Even when you have had no experiences coming under any particular question, please record the fact. As our object is to take an average from a given number of statements, an answer even of negative character will be of use.\*

## LONDON LODGE THEOSOPHICAL SOCIETY.

SYSTEMATIC work has been begun by the LONDON LODGE of THE THEOSOPHICAL SOCIETY. We have just received a copy of their *Transactions* printed in a very neat pamphlet. It is No. 1, June 1884, and consists of questions put to Babu Mohini M. Chatterji by members of the Lodge, with his replies thereto, and also of a paper read by him at one of their meetings, for which see the main text of *The Theosophist*.

The replies, unless fully explained, are liable to be misunderstood; yet we strongly recommend that all our Branches follow this excellent example, by collecting papers, and records of experiments, to be printed when of importance. In this convenient form they could be easily circulated among members of the Branches for mutual discussion and profit.

Our Hindu members should not allow the Western Theosophists to get too far ahead of them in such matters.

In the *Tribune* (Lahore) of 16th August, is given an account of an open meeting of the London Lodge of the Theosophical Society, held on the 21st of July, in Prince's Hall, Picadilly. Although a select number of people were invited, the Hall was quite full with the *elite* of London. The following were some of the most eminent persons present on the occasion:—Lady Elizabeth St. Aubyn, Herr Von Hegel Muller, Lady Calthrust, Mr. F. Myers, Mr. Gurney, Rev. Hawes, Baron de Gary, Dr. Grosvenor, Colonel Robertson, Oscar Wilde, Honorable Percy Wyndham, Sir A. and Lady Heyter, Hargreave Jennings, Lord Dorchester, Professor Graham, M. Kemesky, Mr. Crookes, Madame Novikoff, Right Honorable J. K. Cross, Earl Russel, Lady Blackheath, Major-General Honorable Fielding, Professor Seebohan, Honorable Kenneth Howard, Lord and Lady Castletown, Count Byland, Lady Duffer Hardy, Professor Minto, &c., &c.

Colonel Olcott, says the *Tribune* report, "rose amid loud cheers of the assembly and delivered a very impressive and eloquent lecture on 'Theosophy.'" An abstract of the speech is also given, which we regret we cannot give here for want of space. But the same report adds:—"The Colonel resuming his seat amid loud cheers and applauses of the whole audience, Mr. Mohini Mohun Chatterjee, F. T. S., M. A., B. L., read his paper on the wisdom of the ancient Aryans..... The intense interest excited in the audience at the strange sight of an Indian, preaching the superiority of Eastern wisdom over that of the whole world in the world's great metropolis, can be better imagined than described... English people knew very well that some of their very eminent men belong to this wonderful Society... That Theo-

sophy is thriving upon opposition and winning its way even to the hearts of the Europeans, is a sufficient proof of an enduring vitality which runs through its whole system... That the fashionable ladies of London could forego balls and theatres to see a strange man and a strange woman, and to hear discussions upon Theosophy, is a very hopeful sign of a bright future which is awaiting its fortunes... A spiritual warfare has begun, a voice of reproach and warning has been lifted against the vices and the vanities of the age..."

## GERMANY.

At the time of going to Press we received an interesting account of the formation of a new branch-Society at Elberfeld, the details of which we shall give in our next issue.

## THE SCOTTISH THEOSOPHICAL SOCIETY.

At a meeting of the members of the Theosophical Society held here this day (17th July, 1884) at Oddfellows Hall, Forrest Road, the President-Founder in the chair—it was unanimously resolved:—

That in view of the increasing interest in Theosophy, and for the purpose of strengthening the movement, a Branch of the Parent Society should be formed in the City of Edinburgh;

That the said Branch shall be known as "The Scottish (Branch) Theosophical Society;"

That the Bye-laws of the Parent Society be temporarily adopted.

An election was then held for officers to have charge temporarily of the Local Society's affairs. It having been decided that the choice of permanent officers should be postponed for a while, a President, two Vice-Presidents, a Recording Secretary and Treasurer, and a Corresponding Secretary were duly chosen, and the publication of the following names was duly authorised:—

*President, (pro-tem.)* R. M. CAMERON; *Recording Secretary and Treasurer,* HENRY J. SHIELDS; *Corresponding Secretary,* F. D. EWEN.

A Committee of six was appointed to draft bye-laws and to report at an adjourned meeting to be held on the 23rd instant.

Mr. Ewen, with the consent of the President-Founder, was invested by the Branch with special authority to initiate candidates in Glasgow and other places outside of Edinburgh.

Upon motion, it was unanimously resolved that the Corresponding Secretary convey to the London Lodge Theosophical Society the Fraternal greetings of this Branch, with the request for a reciprocal exchange of official courtesies.

The meeting then adjourned.

(By Order.)

E. D. EWEN,

*Corresponding Secy., F. T. S.*

EDINBURGH, 17th July 1884.

## THE "POONA GAYANA SAMAJ."

A society for the encouragement of the art and science of Nativo Music has evidently a laudable object, and we wish it success. As it counts amongst its patrons, vice-presidents, councillors and honorary members, many people of high standing, including the Prince of Wales, the Duke of Edinburgh, Lord Ripon, etc., to say nothing of a great number of Rajahs and Maharajahs, there can be no possible want of funds, which is so essential to success.

## Personal Items.

The success of our Theosophical Mission to Europe has been very largely helped by the philosophical conversation of our brother Babu Mohini M. Chatterji. He has interested all with whom he has been brought into contact. Several times he has by invitation visited the University of Cambridge to discuss Oriental Philosophy with the 'Dons,' while in London his company has been sought by a great number of the cleverest men of the day.

Our younger brother, Mr. B. J. Padshah, has also done excellent service in a similar way, having been brought into relations with some leading men.

\* Such of our readers, as have not received the Circular, are invited to act on the above suggestions.

# "THE SECRET DOCTRINE,"

A NEW VERSION OF "ISIS UNVEILED,"

WITH A NEW ARRANGEMENT OF THE MATTER, LARGE AND IMPORTANT ADDITIONS, AND COPIOUS NOTES AND COMMENTARIES,

BY

H. P. BLAVATSKY,

*Corresponding Secretary of the Theosophical Society.*

ASSISTED BY

T. SUBBA ROW GARU, B. A., B. L., F. T. S.,

*Councillor of the Theosophical Society and President of its Madras Branch.*

## PUBLISHER'S NOTICE.

NUMEROUS and urgent requests have come from all parts of India, to adopt some plan for bringing the matter contained in "Isis Unveiled," within the reach of those who could not afford to purchase so expensive a work at one time. On the other hand, many, finding the outlines of the doctrine given too hazy, clamoured for "more light," and necessarily misunderstanding the teaching, have erroneously supposed it to be contradictory to later revelations, which in not a few cases, have been entirely misconceived. The author, therefore, under the advice of friends, proposes to issue the work in a better and clearer form, in monthly parts. All, that is important in "Isis" for a thorough comprehension of the occult and other philosophical subjects treated of, will be retained, but with such a rearrangement of the text as to group together as closely as possible the materials relating to any given subject. Thus will be avoided needless repetitions, and the scattering of materials of a cognate character throughout the two volumes. Much additional information upon occult subjects, which it was not desirable to put before the public at the first appearance of the work, but for which the way has been prepared by the intervening eight years, and especially by the publication of "The Occult World" and "Esoteric Buddhism" and other Theosophical works, will now be given. Hints will also be found throwing light on many of the hitherto misunderstood teachings found in the said works. A complete Index and a Table of Contents will be compiled. It is intended that each Part shall comprise seventy-seven pages in Royal 8vo. (or twenty-five pages more than every 24th part of the original work,) to be printed on good paper and in clear type, and be completed in about two years. The rates of subscription to be as follow:—

	Indian.	Foreign countries.
		£ s.
If paid Monthly ... Rs.	1 4 0	0 3
„ „ Quarterly ... „	3 0 0	0 8
„ „ Half yearly .. „	6 0 0	0 16
„ „ Yearly ... „	10 0 0	1 7

Subscriptions payable invariably in advance, and no name entered on the list nor Part forwarded until the money is in hand. All applications to be made and sums remitted to the "Manager, Secret Doctrine, Adyar (Madras), India;" at which office money orders must be made payable and always in his favour. In making remittances it should be noted that no other amount should on any account be included in the drafts or money orders, except that intended for this work. Should nothing unforeseen happen, and should a sufficient number of subscribers be registered, the first Part will be issued on September 15th.

## REPORT OF THE EIGHTH ANNIVERSARY OF THE THEOSOPHICAL SOCIETY.

AT which were present Delegates from Branches in America, England, Ceylon and all parts of India from North to South and East to West.

Price four annas per copy; postage and packing charges:—India, one anna; Ceylon, three annas; all other Foreign countries, four annas.

Apply, with remittance, to the Manager of the THEOSOPHIST, Adyar, (Madras).

## OCCULT WORLD.

(Third Edition)

BY

A. P. SINNETT,

(Author of "Esoteric Buddhism.")

Cloth, Rs. 3-8-0.

APPLY TO THE MANAGER, "THEOSOPHIST" OFFICE.

MESSRS. NICHOLAS AND Co. have made a splendid photograph of a group comprising eighty-three Delegates attending the Eighth Anniversary celebration of the Theosophical Society, together with a view of the portico of the Adyar Head-quarters Building. Every portrait is excellent. Copies may be had at Rs. 2-8 (6s.) each, inclusive of packing and postage. Fellows of the Theosophical Society may also obtain cabinet size photos of Madame Blavatsky, Colonel Olcott and a group consisting of Madame Blavatsky, Messrs. Subba Row and Dharbagiri Nath at Rs. 1-12 (4s.) per copy, inclusive of packing and postage.

APPLY TO THE MANAGER OF THE *Theosophist*.

THE 108 UPANISHADS in original Sanskrit (in Telugu characters) with an abstract of the same by Siddhanta Subramania Sastrial, together with Mahavakia Ratnavali, Brahma Sutras, and a short abstract of the Philosophy expounded therein and Bhagavat Gita—edited by Siddhanta Subramania Sastrial. Price Rs. 8-6 per copy, including postage.

Apply to the Manager, Theosophist Office, Adyar, Madras.

S. Subramania Sastrial, Kanarese Pandit, Presidency College, Krishnama Naidu's Agraharam, Black Town, or to Mulukutla Venkatappiah, 170 Mint Street, Madras.

## PEOPLE FROM THE OTHER WORLD.

(CHEAP EDITION—PRICE RUPEES TWO.)

THE publisher gives notice that only fifty-two copies of this book, wherein Col. Olcott gives an account of his wonderful experiments in spiritualistic phenomena—now remain in stock. After those are exhausted, no more copies can be had, as the work will then be out of print.

TRANSLATION (in English) of *Isavasyopanishad* including its commentary by Srimat Sankarā Charya; price five annas, inclusive of postage. Apply to the Manager, Theosophist Office.
