# THE THEOSOPHIST

A MONTHLY JOURNAL DEVOTED TO ORIENTAL PHILOSOPHY, ART, LITERATURE AND OCCULTISM:  
EMBRACING MESMERISM, SPIRITUALISM, AND OTHER SECRET SCIENCES.

VOL. 5. No. 1.

MADRAS, OCTOBER, 1883.

No. 49.

सत्यात् नास्ति परो धर्मः ।

THERE IS NO RELIGION HIGHER THAN TRUTH.

[Family motto of the Maharajahs of Benares.]

## PROJECTION OF THE DOUBLE.

In one of the daily issues of the *N. Y. World*—an influential journal of the great American metropolis—for the year 1878, appeared a description of the events of an evening at the then Head-quarters of our Society, in the city of New York. The writer was one of the Editorial Staff, and among other wonders related was the following: Some lady or gentleman among the visitors had doubted the possibility of an Adept to leave his physical body in a torpid state in the Himalayas, and come in his astral body (*Mayavi-rupa*) across land and seas to the other side of the world. Three or four of the company sat so as to face the two large windows of the room which gave upon the Avenue—then brilliantly lighted with the gas of the shops and street-lamps. The doubting surmise was barely uttered when these persons simultaneously started in surprise and pointed towards the left-hand window. All looking there, saw deliberately and slowly passing on the outside, from left to right, first one, then another figure of Asiatic men, with *feh-tas* on their heads and clad in one of the long white garments of the East. Passing by the window and out of sight, they presently returned, and repassing the window, were seen no more. Two of the witnesses (Col. Olcott and the Editor of this journal) recognized them, from personal acquaintance, as a certain Mahatma and one of his pupils. The window was nearly twenty feet from the ground and, there being no verandah or other roof for a crow to walk upon—the figures had been moving through the air. Thus, upon the instant and most unexpectedly, the doubter had been silenced and the truth of Aryan Esoteric Science vindicated. Since we came to India a number of perfectly credible witnesses, Native and European, have been favoured with a sight of similar apparitions of the Blessed Ones, and usually under the most convincing circumstances. Only a few weeks ago at our Madras Head-quarters, one appeared suddenly in full light, in an upstairs room and approached within two feet of certain Hindu members of our society, retained the perfectly visible and solid form for about one minute, and then receding half a dozen paces—disappeared upon the spot. At Bombay, the astral *sarira* of Mahatma K. H. was seen repeatedly two years ago—by over twenty members in all—some of whom had been very sceptical as to such a possibility before, proclaiming it after the occurrence as “the most glorious, solemn of sights.” Three times, during one evening the “form,” perfectly recognizable, and seemingly solid to a hair of the moustache and beard—glided through the air from a cluster of bushes to the verandah, in brilliant moon-light...and then faded out. Again, the case of Mr. Ramaswamier, B. A., affords proof of the most cumulative kind ever recorded in the history of this branch of Esoteric Science:

he first saw a Mahatma's portrait; then saw him in the “double;” and finally met him in the flesh in a lonely pass in Sikkim, conversed with him for above two hours in his (Mr. R.'s) own vernacular—a foreign tongue to the Mahatma—had explained to him many facts relating to the Theosophical Society, and was charged with messages to Colonel Olcott about certain confidential matters which none but himself and this particular Mahatma knew about. The existence of the Mahatmas, their power to travel in the inner, or astral body at will, to preserve full command of all their intelligence, and to condense their “phantom” form into visibility or dissolve it into invisibility at their own pleasure, are now facts too well established to permit us to regard it as an open question.

Objectors to the above propositions are found only among the inexperienced, as objectors to every other new thing have been. There must be a particular moment in every case when doubt and disbelief vanish, to give place to knowledge and certainty. Few, comparatively, of any generation have ever or in the nature of things could ever see the splendid phenomenon of a Mahatma's astral apparition; for merely the magnetopsychic law of attraction and repulsion keeps Adepts and the reeking stew of social corruption far apart. Sometimes, under very favourable conditions they may approach an individual devoted to occult research, but this happens rarely; for even he, pure though he be, is wallowing in the world's corrupt *akasa* or magnetic aura and contaminated by it. To his inner self it is as stifling and deadly as the heavy vapour of carbonic oxide to his physical lungs. And, remember, it is by the inner, not the outer, self that we come into relations with Adepts and their advanced Chelas. One would not expect to hold improving conversation with a besotted inebriate, lying in a state of swine-like stupefaction after a debauch; yet it is quite as impracticable for the spiritualised Mahatma to exchange thoughts with a man of society, living daily in a state of *psychic intoxication* among the magnetic fumes of its carnality, materialism, and spiritual atrophy.

But other living persons than the Eastern Adepts can project their doubles so as to appear at a distance from their bodies. The literature of Western mysticism—not to mention the voluminous records of the Orient—contain many instances of the kind; notably the works of Glanvil, Ennemoser, Crowe, Owen, Howitt, Des Mousseaux and many other Roman Catholic writers, and a host beside. Sometimes the figures talk, but usually not; sometimes they wander while the subject's outer body sleeps, sometimes while awake; often the apparition is the forerunner of death, but occasionally it seems to have come from its distant body for the mere pleasure of seeing a friend, or because the desire to reach a familiar place outran the physical power of the body to hurry there soon enough. Miss C. Crowe tells (*Night Side of Nature*) of a German Professor whose case was of the latter kind. Returning to his house one day, he saw the double of himself pass there before him, knock at

the door, and enter when the servant maid opened it. He hastened his pace, knocked in his turn, and when the maid came and saw him, she started back in terror saying "Why, Sir, I have just let you in!" (or words to that effect.) Mounting the stairs to his library, he saw himself seated in his own arm-chair as was his custom. As he approached, the phantom melted away into air. Another example of a similar nature is the following, of which the circumstances are as satisfactorily established, as could be desired.\*

The story is told of one—Emilie Sagès, governess in a ladies' school, at Riga, in Livonia. Here the body and its double were observed simultaneously, in broad day, and by many persons. "One day all the school, forty-two in number, were in a room on the ground-floor, glass doors leading into the garden. They saw Emilie gathering flowers in the garden, when suddenly her figure appeared on a vacant sofa. Looking instantly into the garden, they still saw Emilie there; but they observed that she moved languidly and as if exhausted or drowsy. Two of the bolder approached the double, and offered to touch it; they felt a slight resistance, which they compared to that of muslin or crape. One of them passed through part of the figure; the apparition remained some moments longer, then disappeared, but gradually. This phenomenon occurred, in different ways, as long as Emilie remained at the school, for about a year and a-half in 1845 and 1846, with intermittent periods from one to several weeks. It was remarked that the more distinct and material the double appeared, the more uneasy, languid, and suffering was the real person; when, on the contrary, the double became feeble, the patient recovered strength. Emilie had no consciousness of her double, nor did she ever see it."

Much remains to be said upon this most important theme, but it is reserved for another occasion. M. d'Assier's work (see Foot-note) will be reviewed separately.

## TWO WORDS ABOUT CHELASHIP.

[AN OPEN LETTER TO THE PRESIDENT.]

My dear Brother and President.

"Hints on Esoteric Theosophy" No. 2 is worthy of the author of Hints No. 1 and of the Society under whose auspices it is published. The conditions of regular chelaship have been found so onerous by the Brahmans that very few are now recommended to go to the length of giving up the care of children and relatives except when death is very near. The *Masters* have given them enough of sacred, *i. e.*, occult literature, and enough of rites and fasts and practical directions by which the inner eye is opened. Attention to these with certain duties of hospitality and philanthropy are enjoined upon a Brahman. Not one in a thousand families at present observe what is enjoined. The Brahman you know, by hereditary abstinence from meat and drink, and by reason of his mother having to cultivate habits of celibacy if she became a widow, is a mystic by his *physical organisation*. If you know how days of the week, phases of the moon, stars, and holy days intervene between him and the nuptial bed, you will see that an old-school Brahman was practically trained to chastity.

Those were days when all had belief in esoteric theosophy and honored the Brahman's life and culture. Indeed Adepts moved amongst them, commanded kings, and through the Brahmans gave laws to the multitude. They have been to the Hindus in short what regular Chelas are now to the Theosophical Society. As there are nominal deriding Theosophists, so there have been always soulless Hindus. A Brahman was one, only by attention to the culture and duties already mentioned, and not by Aryan descent or political ascendancy. Second grade Brahmans or Kshatriyas were the rulers and soldiers of the nation, and the third grade or Vysias were landlords and traders subject to payments to support the superior grades. These three classes were the Dwija or the reborn or initiated, and members were degraded if they neglected the culture and duties enjoined. Neither abstinence from meat and drink and lust, nor attention to the culture and duties was imposed upon

the mass of the Hindus called the Sudras (*Suchid dravayate*, free from restraint). Of course any Sudra acquiring the physical organization and submitting to the restraints could be taken into the higher sections. And it is said that only a century ago the Maharajah of Travancore, and still more recently the late Maharajah of Tanjore, were so taken. Buddha, acknowledged in Sanscrit Sacred literature to be an Avatar of Vishnu higher even than the preceding eight Avatars, wanted to purify the community of nominal Brahmans and ambitious Sudras and instituted simpler forms and duties. Jesus contented himself with briefer hints at Esoteric Theosophy, because the people whom he addressed had first to regulate their external lives to the commandments. Hindu Ramanujachariar who founded the Vaishnava Sect insisted only on having belief in the immortality of the soul and in the existence of Adepts. The old-school, *i. e.*, the orthodox Hindus, have no jealousy or grudge towards the other religionists and schismatics, but wish them success and contentment in their adopted system of culture and duty. Unhappily these, instead of making self-progress by living the lives they have appreciated, indulge in bigoted hostility towards their brethren of the earlier and more elaborate systems. To become a Hindu or a Brahman is not a matter of mere willingness or profession, but a matter of qualification duly tested and formally approved by a Brahman council. I respect a *good* Christian, a *good* Mohametan, a *good* Buddhist, a *good* Parsee, and any good man who acts up to his views of truth, justice and divine wisdom, but repel those bad specimens who do not so act up and yet would drag and deceive others into their views.

The degeneration of the orthodox Hindus has been, owing to the unscrupulous hostilities and deceptions of the converts and schismatics, supported by the non-Hindu and often anti-Hindu races which have for over ten centuries governed the country. The proverbial cause of degeneration is the well-known phrase "Yathá Raja tathá prajah." In the name of humanity and neutrality, and even of *discoveries* in Hindu Sashtas and Vedas, Governments and Officers have interfered with the religious belief and practices and social rules and personal rights of the Hindus. Humanity and neutrality are the root virtues of Hinduism, and the Brahmans can know their Sashtas and Vedas as well as any other ordinary man. Brahmans blessed with direct intercourse with Adepts and their Divine Self, have from time to time corrected erroneous beliefs and practices. Those who wish for the regeneration of the Hindus will afford facilities for such intercourse to the *qualified* members and not impose upon the nation their own views—the result perhaps of their own degeneration. Chelas like Subba Row and others can, by proving their chelaship, win over or guide any orthodox Brahman Council of Pandits and Priests; but ordinary Pandits and Priests like—, and—, and again—will not even be listened to. You, as a regular Chela, have been allowed to plant a tree in the Temple of Tinnevely, but ordinary Mlechas will not be so allowed. As I have again and again said, if you or Mr. . . . or Mr. . . . study the exoteric and technical system of Hinduism so well as you have studied the Buddhistic system, you will be admitted to all the privileges of the Brahman caste.\* In my understanding, *caste* is not in origin and principle a baneful barrier, but classification by previous Karma and present aptitude, and I have sent a line to this effect to the *Theosophist*.

I offer you my Brahmanical respects as to a holy Brahman, and remain yours ever fraternally,

A. SANKARIAH, F. T. S.,  
President Founder, Hindu Sabbah.

TRICHOOR, Aug. 15th.

\* A condensed version is given by the Hon. R. D. Owen in his "Footfalls on the Boundary of another world," and all the particulars as to time, place, and witnesses will be found in the recent French work of M. d'Assier "Essai sur L'Humanité Posthume, etc." A translation is in *Light* for August 18, 1882 (q. v.).

\* Our brother is not aware, it seems, that the sacred Brahmanical thread has been twice given to Col. Olcott—as the highest mark of esteem, of course, and not as an actual admission into caste. The last time, the donor was one of the most celebrated Sanscrit pandits of India, and he made the compliment complete by (theoretically taking him into his own Gotra.—Ed.

(Continued from the last Number.)

REPLIES TO INQUIRIES SUGGESTED BY  
"ESOTERIC BUDDHISM."

## QUESTION VI.

## "HISTORICAL DIFFICULTY"—WHY?

It is asked whether there may not be 'some confusion' in the letter quoted on p. 62 of *Esoteric Buddhism* regarding "old Greeks and Romans said to have been Atlanteans." The answer is—none whatever. The word "Atlantean" was a generic name. The objection to have it applied to the old Greeks and Romans on the ground that they were Aryans, "their language being intermediate between Sanskrit and modern European dialects," is worthless. With equal reason, might a future 6th Race scholar, who had never heard of the (possible) submergence of a portion of European Turkey, object to Turks from the Bosphorus being referred to as a remnant of the Europeans. "The Turks, are surely Semites;" he might say 12,000 years hence, and—"their language is intermediate between Arabic and our modern 6th Race dialects."\*

The "historical difficulty" arises from a certain authoritative statement made by Orientalists on philological grounds. Prof. Max Müller has brilliantly demonstrated that Sanskrit was the "elder sister"—by no means the mother—of all the modern languages. As to that "mother," it is conjectured by himself and colleagues to be a "now extinct tongue, spoken probably by the nascent Aryan race." When asked what was this language, the Western voice answers, "Who can tell?" When, "during what geological periods did this nascent race flourish?" The same impressive voice replies:—"In prehistoric ages, the duration of which no one can now determine." Yet it must have been Sanskrit, however barbarous and unpolished, since "the ancestors of the Greeks, the Italians, Slavonians, Germans and Kelts" were living within "the same precincts" with that nascent race, and the testimony borne by language has enabled the philologist to trace the "language of the gods" in the speech of every Aryan nation. Meanwhile it is affirmed by these same Orientalists that classical Sanskrit has its origin at the very threshold of the Christian era; while Vedic Sanskrit is allowed an antiquity of hardly 3,000 years (if so much,) before that time.

Now, Atlantis, on the statement of the "Adepts," sank over 9,000 years before the Christian era.† How then can one maintain that the "old Greeks and Romans" were Atlanteans! How can that be, since both nations are

\* This is not to be construed to mean that 12,000 years hence there will be yet any man of the 6th Race, or that the 5th will be submerged. The figures are given simply for the sake of a better comparison with the present objection in the case of the Greeks and Atlantis.

† The position recently taken up by Mr. Gerald Massey in *Light* that the story of Atlantis is not a geological event but an ancient astronomical myth, is rather imprudent. Mr. Massey, notwithstanding his rare intuitional faculties and great learning, is one of those writers in whom the intensity of research bent into one direction has biased his otherwise clear understanding. Because Hercules is now a constellation it does not follow that there never was a hero of this name. Because the Noachian Universal Deluge is now proved a fiction based upon geological and geographical ignorance, it does not, therefore, appear that there were not many local deluges in prehistoric ages. The ancients connected every terrestrial event with the celestial bodies. They traced the history of their great deified heroes and memorialized it in stellar configurations as often as they personified pure myths, anthropomorphising objects in nature. One has to learn the difference between the two modes before attempting to classify them under one nomenclature. An earthquake has just engulfed over 30,000 people (87,903) in Sunda Straits. These were mostly Malays, savages with whom but few had relations, and the dire event will be soon forgotten. Had a portion of Great Britain been thus swept away instead, the whole world would have been in commotion; and yet, a few thousand years hence, even such an event would have passed out of man's memory; and a future Gerald Massey might be found speculating upon the astronomical character and signification of the Isles of Wight, Jersey, or Man, arguing, perhaps, that this latter Island had not contained a real living

Aryans, and the genesis of their languages is Sanskrit? Moreover, the Western scholars know that the Greek and Latin languages were formed within historical periods, the Greeks and Latins themselves having no existence as nations 11,000 B. C. Surely they who advance such a proposition do not realize how very *unscientific* is their statement!

Such are the criticisms passed, such—the "historical difficulty." The culprits arraigned are fully alive to their perilous situation; nevertheless, they maintain the statement. The only thing which may perhaps here be objected to is, that the names of the two nations are incorrectly used. It may be argued that to refer to the remote ancestors and their descendants equally as "Greeks and Romans," is an anachronism as marked as would be the calling of the ancient Keltic Gauls or the Insubres—Frenchmen. As a matter of fact this is true. But, besides the very plausible excuse that the names used were embodied in a private letter, written as usual in great haste, and which was hardly worthy of the honour of being quoted *verbatim* with all its imperfections, there may perhaps exist still weightier objections to calling the said people by any other name. One misnomer is as good as another; and, to refer to old Greeks and Romans in a private letter as the old Hellenes from *Hellas* or *Magna Græcia*, and the Latini as from *Latium*, would have been, besides looking pedantic, just as incorrect as the use of the appellation noted, though it may have sounded, perchance, more "historical." The truth is that, like the ancestors of nearly all the *Indo-Europeans* (or shall we say *Indo-Germanic Japetides*?), the Greek and Roman sub-races mentioned, have to be traced much farther back. Their origin must be carried far into the mists of that "prehistoric" period, that *mythical age* which inspires the modern historian with such a feeling of squeamishness that anything creeping out of its abyssal depths is sure to be instantly dismissed as a deceptive phantom, the *mythos* of an idle tale, or a *later fable unworthy of serious notice*. The Atlantean "old Greeks" could not be designated even as the *Autochtones*—a convenient term used to dispose of the origin of any people whose ancestry cannot be traced, and which, at any rate with the Hellenes, meant certainly more than simply "soil-born," or primitive aborigenes; and yet the so-called *fable* of Deukalion and Pyrrha is surely no more incredible or marvellous than that of Adam and Eve,—a fable that hardly an hundred years ago, no one would have dared or even thought to question. And in its esoteric significance the Greek tradition is possibly more truly historical than many a so-called *historical event* during the period of the Olympiades—though both Hesiod and Homer may have failed to record the former in their epics. Nor could the Romans be referred to as the Umbro-Sabbellians, nor even as the *Itali*. Peradventure, had the historians learnt something more than they have of the Italian "Autochtones"—the Iapygians, one might have given the "old Romans" the latter name. But then there would be again that other difficulty: history *knows* that the Latin invaders drove before them, and finally cooped up this mysterious and miserable race among the clefts of the Calabrian rocks, thus showing the absence of any race affinity between the two. Moreover, Western archaeologists keep to their own counsel, and will accept of no other but their own conjectures. And since they have failed to make anything out of the undecipherable inscriptions in an unknown tongue and mysterious characters on the Iapygian monuments—and so for years have pronounced them unguessable, he who would presume to meddle where the doctors muddle

race of men but "belonged to astronomical mythology" was a "Man" "submerged in celestial waters." If the legend of the lost Atlantis is only "like those of Airyana-Vaëjō and Jambu-dvīpa," it is terrestrial enough, and therefore, "the mythological origin of the Deluge legend" is so far an open question. We claim that it is not "indubitably demonstrated," however clever the theoretical demonstration.

would be likely to be reminded of the Arab proverb about proffered advice. Thus, it seems hardly possible to designate "the old Greeks and Romans" by their legitimate, true name so as to at once satisfy the "historians" and keep on the fair side of truth and fact. However, since in the *Replies* that precede Science had to be repeatedly shocked by most unscientific propositions, and that before this series is closed, many a difficulty, philological and archæological as well as historical, will have to be unavoidably created—it may be just as wise to uncover the occult batteries at once and have it over with.

Well then, the "Adepts" deny most emphatically to Western science any knowledge whatever of the growth and development of the Indo-Aryan race which, "at the very dawn of History," they have espied in its "patriarchal simplicity" on the banks of the Oxus. Before our proposition concerning "the old Greeks and Romans" can be repudiated or even controverted, Western Orientalists will have to know more than they do about the antiquity of that race and the Aryan language; and they will have to account for those numberless gaps in History which no hypotheses of theirs seem able to fill up. Notwithstanding their present profound ignorance with regard to the early ancestry of the Indo-European nations; and though no historian has yet ventured to assign even a remotely approximate date to the separation of the Aryan nations and the origins of the Sanskrit language—they hardly show the modesty that might, under these circumstances, be expected from them. Placing as they do that great separation of the races at the first "dawn of traditional history," with the Vedic age as "the background of the whole Indian world" [of which confessedly they know nothing] they will, nevertheless, calmly assign a modern date to any of the Rik-vedic oldest songs—on its "internal evidence;" and in doing this, they show as little hesitation as Mr. Fergusson when ascribing a post-Christian age to the most ancient rockcut temple in India, merely on its—"external form." As for their unseemly quarrels, mutual recriminations and personalities over questions of scholarship, the less said the better.

"The evidence of language is irrefragable," as the great Oxford Sanskritist says. To which he is answered—"provided it does not clash with historical facts and—ethnology." It may be—no doubt it is, as far as *his* knowledge goes, "the only evidence worth listening to with regard to ante-historical periods;" but when something of these alleged "pre-historical periods" comes to be known, and when what we think *we* know of certain supposed pre-historic nations is found diametrically opposed to *his* "evidence of language," the "Adepts" may be, perhaps, permitted to keep to their own views and opinions, even though they differ with those of the greatest living philologist. The study of language is but a part—though, we admit, a fundamental part—of true philology. To be complete, the latter has, as correctly argued by Böckh,—to be almost synonymous with history. We gladly concede the right to the Western philologist who has to work in the total absence of any historical data, to rely upon comparative grammar, and take the identification of roots lying at the foundation of words of those languages he is familiar with, or may know of, and put it forward as the results of his study, and the only available evidence. But we would like to see the same right conceded by him to the student of other races; even though these be *inferior* to the Indo-European races—in the opinion of the paramount West: for it is barely possible that proceeding on other lines, and having reduced his knowledge to a system which precludes hypothesis and simple affirmation, the Eastern student has preserved a perfectly authentic record (for him) of those periods which his opponent regards as *ante-historical*. The bare fact that, while Western men of science are referred to as "scholars" and scholiasts—*native* Sanskritists and archæologists are often spoken of as "Calcutta" and

"Indian *sciolists*"—affords no proof of their real inferiority, but rather of the wisdom of the Chinese proverb that "self-conceit is rarely companion to politeness."

The "Adept" therefore, has little, *if anything*, to do with *difficulties* presented by Western History. To his knowledge—based on documentary records from which, as said, hypothesis is excluded, and as regards which even psychology is called to play a very secondary part—the history of his and other nations extends immeasurably beyond that hardly discernible point that stands on the far-away horizon of the Western world as a land-mark of the commencement of *its* history. Records made throughout a series of ages based on astronomical chronology and zodiacal calculations cannot err. [This new "difficulty"—palæographical, this time—that may be possibly suggested by the mention of the Zodiac in India and Central Asia before the Christian era is disposed of in a subsequent article.]

Hence, the main question at issue is to decide which—the Orientalist or the "Oriental"—is most likely to err. The "English F. T. S." has choice of two sources of information, two groups of teachers. One group is composed of Western historians with their suite of learned Ethnologists, Philologists, Anthropologists, Archæologists and Orientalists in general. The other consists of unknown Asiatics belonging to a race which, notwithstanding Mr. Max Müller's assertion that the same "blood is running in the veins (of the English soldier) and in the veins of the dark Bengalese"—is generally regarded by many a cultured Western as "inferior." A handful of men—whose history, religion, language, origin and sciences, having been seized upon by the conqueror, are now disfigured and mutilated beyond recognition; and who having lived to see the Western scholar claim a monopoly beyond appeal or protest of deciding the correct meaning, chronological date, and historical value, of the monumental and palæographic relics of his motherland—can hardly hope to be listened to. It has little, if ever, entered the mind of the Western public that their scholars have, until very lately, worked in a narrow pathway obstructed with the ruins of an ecclesiastical, dogmatic Past; that they have been cramped on all sides by limitations of "revealed" events coming from God "with whom a thousand years are but as one day," and who have thus felt bound to cram milleniums into centuries and hundreds into units, giving at the utmost an age of 1,000 to what is 10,000 years old. All this to save the threatened authority of their religion and their own respectability and good name in cultured society. And even that, when free themselves from preconceptions, they have had to protect the honour of the Jewish divine chronology assailed by stubborn facts; and thus, have become (often unconsciously) the slaves of an artificial history made to fit into the narrow frame of a dogmatic religion. No proper thought has been given to this purely psychological but very significant trifle. Yet we all know how, rather than admit any relation between Sanskrit and the Gothic, Keltic, Greek, Latin and Old Persian, facts have been tampered with, old texts purloined from libraries, and philological discoveries vehemently denied. And we have also heard from our retreats, how Dugald Stewart and his colleagues, upon seeing that the discovery would also involve ethnological affinities, and damage the prestige of those sires of the world races,—Shem, Ham and Japhet—denied in the face of fact that "Sanskrit had ever been a living, spoken language," supporting the theory that "it was an invention of the Brahmins, who had constructed their Sanskrit on the model of the Greek and Latin." And again we know, holding the proof of the same, how the majority of Orientalists are prone to go out of their way to prevent any Indian antiquity, (whether MSS. or inscribed monument, whether art or science,) from being declared *pre-Christian*: As the origin and history of the Gentile world is made to move in the narrow circuit of a few centuries "B. C.;" within that fecund epoch when mother earth, recuperated

from her arduous labours of the stone-age, begat, it seems, without transition so many highly civilized nations and—false pretences, so the enchanted circle of Indian archæology lies between the (to them unknown) year of the *Samvat* era, and the 10th century of the Western chronology.

Having to dispose of an "historical difficulty" of such a serious character, the defendants charged with it can but repeat what they have already stated: all depends upon the past history and antiquity allowed to the Indo-Aryan nation. The first step to take is to ascertain how much History herself knows of that almost prehistoric period when the soil of Europe had not been trodden yet by the primitive Aryan tribes. From the latest Encyclopædia, down to Prof. Max Müller and other Orientalists, we gather what follows: they acknowledge that at some immensely remote period, before the Aryan nations got divided from the parent stock (with the germs of Indo-Germanic languages in them); and before they rushed asunder to scatter over Europe and Asia in search of new homes, there stood a "single barbaric (?) people as physical and political representative of the nascent Aryan race." This people spoke "a now extinct Aryan language," from which, by a series of modifications (surely requiring more thousands of years than our difficulty-makers are willing to concede?) there arose gradually—all the subsequent languages now spoken by the Caucasian races.

That is about all Western History knows of its—genesis. Like Ravana's brother, Kumbhakarna,—the Hindu Rip Van Winkle—it slept for a long series of ages a dreamless, heavy sleep. And when, at last it awoke to consciousness, it was but to find the "nascent Aryan race" grown into scores of nations, peoples and races, most of them effete and crippled with age, many irretrievably extinct, while the true origin of the younger ones it was utterly unable to account for. So much for the "youngest brother." As for "the eldest brother, the Hindu," who, Professor Max Müller tells us—"was the last to leave the central home of the Aryan family," and whose history, this eminent philologist has now kindly undertaken to impart to him,—he, the Hindu, claims that while his Indo-European relative was soundly sleeping under the protecting shadow of Noah's ark, he kept watch and did not miss seeing one event from his high Himalayan fastnesses; and that he has recorded the history thereof in a language which, though as incomprehensible as the Iapygian inscriptions to the Indo-European immigrant, is quite clear to the writers. For this crime he now stands condemned as a falsifier of the records of his forefathers. A place has been hitherto purposely left open for India "to be filled up when the pure metal of history should have been extracted from the ore of Brahmanic exaggeration and superstition." Unable, however, to meet this programme, the Orientalist has since persuaded himself that there was nothing in that "ore," but, dross. He did more. He applied himself to contrast Brahminic "superstition" and "exaggeration" with Mosaic revelation and its chronology. The Veda was confronted with *Genesis*. Its absurd claims to antiquity were forthwith dwarfed to their proper dimensions by the 4,004 years B. C., measure of the world's age; and the Brahmanic "superstition and fables" about the longevity of the Aryan *Rishis*, were belittled and exposed by the sober historical evidence furnished in "The genealogy and age of the Patriarchs from Adam to Noah"—whose respective days were 930 and 950 years; without mentioning Methuselah, who died at the premature age of nine hundred and sixty-nine.

In view of such experience, the Hindu has a certain right to decline the offers made to correct his annals by Western history and chronology. On the contrary, he would respectfully advise the Western scholar, before he denies point-blank any statement made by the Asiatics with reference to what is *prehistoric* ages to Europeans, to show that the latter have themselves anything like

trustworthy data as regards their own racial history. And that settled, he may have the leisure and capacity to help his ethnic neighbours to prune their genealogical trees. Our Rajputs among others, have perfectly trustworthy family records of an unbroken lineal descent through 2,000 years "B. C." and more, as proved by Colonel Tod; records which are accepted by the British Government in its official dealings with them. It is not enough to have studied stray fragments of Sanskrit literature—even though their number should amount to 10,000 texts, as boasted of—allowed to fall into their hands, to speak so confidently of the "Aryan first settlers in India," and assert that, "left to themselves, in a world of their own, *without a past and without a future* (!) before them, they had nothing but themselves to ponder upon,"—and therefore could know *absolutely nothing* of other nations. To comprehend correctly and make out the *inner* meaning of most of them, one has to read these texts with the help of the esoteric light, and after having mastered *the language of the Brahmanic Secret Code*—branded generally as "theological twaddle." Nor is it sufficient—if one would judge correctly of what the archaic Aryans did or did not know; whether or not they cultivated the social and political virtues; cared or not for history—to claim proficiency in both Vedic and classical Sanskrit, as well as in Prakrit and Arya Bháshyá. To comprehend the esoteric meaning of ancient Brahmanical literature, one has, as just remarked, to be in possession of the key to the Brahmanical Code. To master the conventional terms used in the Puranas, the Aranyakas and Upanishads is a science in itself, and one far more difficult than even the study of the 3,996 aphoristical rules of Pânini, or his algebraical symbols. Very true, most of the Brahmans themselves have now forgotten the correct interpretations of their sacred texts. Yet they know enough of the dual meaning in their scriptures to be justified in feeling amused at the strenuous efforts of the European Orientalist to protect the supremacy of his own national records and the dignity of his science by interpreting the Hindu hieratic text after a peremptory fashion quite unique. Disrespectful though it may seem, we call on the philologist to prove in some more convincing manner than usual, that he is better qualified than even the average Hindu Sanskrit pundit to judge of the antiquity of the "language of the gods;" that he has been really in a position to trace unerringly along the lines of countless generations, the course of the "now extinct Aryan tongue" in its many and various transformations in the West, and its primitive evolution into first the Vedic, and then the classical Sanskrit in the East, and that from the moment when the mother-stream began deviating into its new ethnographical beds, he has followed it up. Finally that, while he, the Orientalist, can, owing to speculative interpretations of what he thinks he has learnt from fragments of Sanskrit literature, judge of the nature of all that he knows nothing about, *i. e.*, to speculate upon the past history of a great nation he has lost sight of from its "nascent state," and caught up again but at the period of its last degeneration—the native student never knew, nor can ever know anything of that history. Until the Orientalist has proved all this, he can be accorded but small justification for assuming that air of authority and supreme contempt which is found in almost every work upon India and its Past. Having no knowledge himself whatever of those incalculable ages that lie between the Aryan Brahman in Central Asia, and the Brahman at the threshold of Buddhism, he has no right to maintain that the initiated Indo-Aryan can never know as much of them as the foreigner. Those periods being an utter blank to him, he is little qualified to declare that the Aryan having had no political history "of his own..." his only sphere was "religion and philosophy...in solitude and contemplation." A happy thought suggested, no doubt, by the active life, incessant wars, triumphs, and defeats portrayed in the oldest songs of the Rik-Veda. Nor can he, with the smallest show of

logic affirm that "India had no place in the political history of the world," or that "there are no synchronisms between the history of the Brahmans and that of other nations before the date of the origin of Buddhism in India," for—he knows no more of the prehistoric history of those "other nations" than of that of the Brahman. All his inferences, conjectures and systematic arrangements of hypothesis begin very little earlier than 200 "B. C.," if even so much, on anything like really historical grounds. He has to prove all this before he would command our attention. Otherwise, however "irrefragable the evidence of language," the presence of Sanskrit roots in all the European languages will be insufficient to prove, either that (a) before the Aryan invaders descended toward the *seven rivers* they had never left their northern regions; or (b) why the "eldest brother, the Hindu," should have been "the last to leave the central home of the Aryan family." To the philologist such a supposition may seem "quite natural." Yet the Brahman is no less justified in his ever-growing suspicion that there may be at the bottom some occult reason for such a programme. That in the interest of his theory the Orientalist was forced to make "the eldest brother" tarry so suspiciously long on the Oxus, or wherever "the youngest" may have placed him in his "nascent state" after the latter "saw his brothers all depart towards the setting sun." We find reasons to believe that the chief motive for alleging such a procrastination is the necessity to bring the race closer to the Christian era. To show the "Brother" inactive and unconcerned, "with nothing but himself to ponder on," lest his antiquity and "fables of empty idolatry" and, perhaps, his traditions of other people's doings, should interfere with the chronology by which it is determined to try him. The suspicion is strengthened when one finds in the book from which we have been so largely quoting—a work of a purely scientific and philological character—such frequent remarks and even prophecies as:—"History seems to teach that the whole human race required a gradual education before, in the fullness of time, it could be admitted to the truths of Christianity." Or, again,—“The ancient religions of the world were but the milk of nature, which was in due time to be succeeded by the bread of life;” and such broad sentiments expressed as that “there is some truth in Buddhism, as there is in every one of the false religions of the world, but...”\*

The atmosphere of Cambridge and Oxford seems decidedly unpropitious to the recognition of either Indian antiquity, or the merit of the philosophies sprung from its soil!†

#### LEAFLETS FROM ESOTERIC HISTORY.

The foregoing—a long, yet necessary digression—will show that the Asiatic scholar is justified in generally withholding what he may know. That it is not merely on historical facts that hangs the "historical difficulty" at

\* Max Müller's *History of Ancient Sanskrit Literature*.

† And how one-sided and biased most of the Western Orientalists are may be seen by reading carefully *The History of Indian Literature*, by Albrecht Weber—a Sanskrit scholiast classed with the highest authorities. The incessant harping upon the one special string of Christianity, and the ill-concealed efforts to pass it off as the key-note of all other religions, is painfully pre-eminent in his work. Christian influences are shown to have affected not only the growth of Buddhism, and Krishna-worship, but even that of the Siva-cult and its legends; it is openly stated that "it is not at all a far-fetched hypothesis that they have reference to scattered Christian missionaries!" The eminent Orientalist evidently forgets that notwithstanding his efforts, none of the Vedic, Sutra or Buddhist periods can be possibly crammed into this Christian period—their universal tank of all ancient creeds, and of which some Orientalists would fain make a poor-house for all decayed archaic religions and philosophy. Even Tibet, in his opinion, has not escaped "Western influence." Let us hope to the contrary. It can be proved that Buddhist missionaries were as numerous in Palestine, Alexandria, Persia, and even Greece, two centuries before the Christian era, as the *Padris* are now in Asia. That the Gnostic doctrines (as he is obliged to confess) are permeated with Buddhism. Basilides, Valentinian, Bardesanes, and especially Manes were simply heretical Buddhists, "the formula of abjuration of these doctrines in the case of the latter, specifying expressly Buddha (*Bodda*) by name."

issue; but rather on its degree of interference with time-honored, long established conjectures, often raised to the eminence of an unapproachable historical axiom. That no statement coming from our quarters can ever hope to be given consideration so long as it has to be supported on the ruins of reigning hobbies, whether of an alleged historical or religious character. Yet pleasant it is; after the brainless assaults to which occult sciences have hitherto been subjected, assaults in which abuse has been substituted for argument, and flat denial for calm inquiry, to find that there remain in the West some men who will come into the field like philosophers, and soberly and fairly discuss the claims of our hoary doctrines to the respect due to a truth and the dignity demanded for a science. Those alone whose sole desire is to ascertain the truth, not to maintain foregone conclusions, have a right to expect undisguised facts. Reverting to our subject, so far as allowable, we will now, for the sake of that minority, give them.

The records of the Occultists make no difference between the "Atlantean" ancestors of the old Greeks and Romans. Partially corroborated and in turn contradicted by licensed, or recognised History, their records teach that of the ancient Latini of classic legend called Itali; of that people, in short which, crossing the Appennines (as their Indo-Aryan brothers—let this be known—had crossed before them the Hindoo-Koosh) entered from the north the peninsula—there survived at a period long before the days of Romulus but the name and—a nascent language. Profane History informs us that the Latins of the "mythical era," got so Hellenised amidst the rich colonies of *Magna-Græcia* that there retained nothing in them of their primitive Latin nationality. It is the Latins proper, it says, those pre-Roman Italians who, by settling in Latium had from the first kept themselves free from the Greek influence, who were the ancestors of the Romans. Contradicting exoteric History, the occult Records affirm that if, owing to circumstances too long and complicated to be related here, the settlers of Latium preserved their primitive nationality a little longer than their brothers who had first entered the peninsula with them after leaving the East (which was not their original home), they lost it very soon, for other reasons. Free from the Samnites during the first period, they did not remain free from other invaders. While the Western historian puts together the mutilated, incomplete records of various nations and people, and makes them into a clever mosaic according to the best and most probable plan and rejects entirely traditional fables, the occultist pays not the slightest attention to the vain self-glorification of alleged conquerors or their lithic inscriptions. Nor does he follow the stray bits of so called historical information, oft concocted by interested parties and found scattered hither and thither, in the fragments of classical writers, whose original texts themselves have often been tampered with. The Occultist follows the ethnological affinities and their divergences in the various nationalities, races and sub-races, in a more easy way; and he is guided in this as surely as the student who examines a geographical map. As the latter can easily trace by their differently coloured outlines the boundaries of the many countries and their possessions; their geographical superficies and their separations by seas, rivers and mountains; so the Occultist can by following the (to him) well distinguishable and defined *auric shades and gradations of colour in the inner-man* unerringly pronounce to which of the several distinct human families, as also, to what particular respective group, and even small sub-group of the latter belongs such or another people, tribe, or man. This will appear hazy and incomprehensible to the many who know nothing of ethnic varieties of nerve-aura and disbelieve in any "inner-man" theory, scientific but to the few. The whole question hangs upon the reality or unreality of the existence of this inner-man whom clairvoyance has discovered, and whose odyle or nerve emanations von Reichenbach proves. If one admits such a presence and realizes in-

tionally that, being closer related to the one invisible Reality, the *inner* type must be still more pronounced than the outer physical type, then it will be a matter of little, if any difficulty, to conceive our meaning. For, indeed, if even the respective physical idiosyncracies and special characteristics of any given person make his nationality usually distinguishable by the physical eye of the ordinary observer—let alone the experienced ethnologist: the Englishman being commonly recognizable at a glance from the Frenchman, the German from the Italian, not to speak of the typical differences between human root-families\* in their anthropological division—there seems little difficulty in conceiving that the same, though far more pronounced difference of type and characteristics should exist between the *inner* races that inhabit these “fleshy tabernacles.” Besides this easily discernible psychological and *astral* differentiation, there are the documentary records in their unbroken series of chronological tables, and the history of the gradual branching off of races and sub-races from the three *geological*, primeval Races, the work of the Initiates of all the archaic and ancient temples up to date, collected in our “Book of Numbers,” and other volumes.

Hence, and on this double testimony (which the Westerns are quite welcome to reject if so pleased), it is affirmed that, owing to the great amalgamation of various sub-races, such as the Iapygian, Etruscan, Pelasgic, and later—the strong admixture of the Hellenic and Keltic-Gaulic, element in the veins of the primitive Itali of Latium—there remained in the tribes gathered by Romulus on the banks of the Tiber about as much Latinism as there is now in the Romanic people of Wallachia. Of course if the historical foundation of the fable of the twins of the Vestal Silvia is entirely rejected, together with that of the foundation of *Alba Longa* by the son of *Æneas*, then it stands to reason that the whole of the statements made must be likewise a modern invention built upon the utterly worthless fables of the “legendary mythical age.” For those who now give these statements, however, there is more of actual truth in such fables than there is in the alleged *historical* Regal period of the earliest Romans. It is to be deplored that the present statement should clash with the authoritative conclusions of Mommsen and others. Yet, stating but that which to the “Adepts” is *fact*, it must be understood at once that all (but the fanciful chronological date for the foundation of Rome—April 753 “B. C.”) that is given in old traditions in relation to the *Pomerium*, and the triple alliance of the Ramnians, Luceres and Titians, of the so-called Romuleian legend, is indeed far nearer truth than what external History accepts as *facts* during the Punic and Macedonian wars up to, through, and down the Roman Empire to its Fall. The founders of Rome were decidedly a *mongrel* people, made up of various scraps and remnants of the many primitive tribes—only a few really Latin families, the descendants of the distinct sub-race that came along with the Umbro-Sabellians from the East remaining. And, while the latter preserved their distinct colour down to the Middle Ages through the Sabine element, left unmixed in its mountainous regions—the blood of the true Roman was *Hellenic blood* from its beginning. The famous Latin leaguo is no fable but history. The succession of kings descended from the Trojan *Æneas* is a fact; and, the idea that Romulus is to be regarded as simply the symbolical representative of a people,

\* Properly speaking, these ought to be called “Geological Races,” so as to be easily distinguished from their subsequent evolutions—the *root-races*. The Occult Doctrine has naught to do with the Biblical division of Shem, Ham and Japhet, and admires, without accepting it, the latest Huxleyan, physiological division of the human races into their quintuple group of Australioids, Negroids, Mongoloids, Xanthochroics, and the 5th variety of Melanochroics. Yet it says that the *triple* division of the blundering Jews is closer to the truth. It knows but of three entirely distinct primeval races whose evolution, formation and development went *pari passu* and on parallel lines with the evolution, formation, and development of three geological strata; namely, the BLACK, the RED-YELLOW, and the BROWN-WHITE RACES.

as *Æolus*, *Dorius*, and *Ion* were once, instead of a living man, is as unwarranted as it is arbitrary. It could only have been entertained by a class of historiographers bent upon condoning their sin in supporting the *dogma* that Shem, Ham, and Japhet were the historical, once living ancestors of mankind,—by making a burnt offering of every really historical but *non-Jewish* tradition, legend, or record which might presume to a place on the same level with these three privileged archaic mariners, instead of humbly grovelling at their feet as “absurd myths” and old wives’ tales and superstitions.

It will thus appear that the objectionable statements on pp. 56 and 62 of *Esoteric Buddhism*, which are alleged to create a “historical difficulty,” were not made by Mr. Sinnett’s correspondent to bolster a Western theory, but in loyalty to historical *facts*. Whether they can or cannot be accepted in those particular localities, where criticism seems based upon mere conjecture (though honoured with the name of scientific hypothesis), is something which concerns the present writers as little as any casual traveller’s unfavorable comments upon the time-scarred visage of the Sphinx can affect the designer of that sublime symbol. The sentences, “the Greeks and Romans were small sub-races of our own Caucasian stock” (p. 56), and they were “the remnants of the Atlanteans (the modern belong to the fifth race)” (p. 62), show the real meaning on their face. By the old Greeks “remnants of the Atlanteans” the *eponymous* ancestors (as they are called by Europeans) of the *Æolians*, *Dorians* and *Ionians*, are meant. By the connection together of the old Greeks and Romans without distinction, was meant that the primitive Latins were swallowed by *Magna Græcia*. And by “the modern” belonging “to the fifth race”—both these small branchlets from whose veins had been strained out the last drop of the Atlantean blood—it was implied that the *Mongoloid* 4th race blood had already been eliminated. Occultists make a distinction between the races intermediate between any two Root-races: the Westerns do not. The “old Romans” were Hellenes in a new ethnological disguise; the still older Greeks—the real blood ancestors of the future Romans. As in a direct relation to this, attention is drawn to the following fact—one of the many in its close historical bearing upon the “mythical” age to which Atlantis belongs. It is a fable and may be charged to the account of historical difficulties. It is well calculated, however, to throw all the old ethnological and genealogical divisions into confusion.

Asking the reader to bear in mind that Atlantis, like modern Europe, comprised many nations and many dialects (issues from the three primeval root-languages of the 1st, 2nd and 3rd Races), we may return to Poseidonis—its last surviving link 12,000 ago. As the chief element in the languages of the 5th race is the Aryan-Sanscrit of the “Brown-white” *geological* stock or race, so the predominating element in Atlantis was a language which has now survived but in the dialects of some American Red-Indian tribes, and in the Chinese speech of the inland Chinamen, the mountainous tribes of Kivang-ze—a language which was an admixture of the agglutinate and the monosyllabic as it would be called by modern philologists. It was, in short, the language of the “Red-yellow” second or middle *geological* stock [we maintain the term “geological”]. A strong percentage of the *Mongoloid* or 4th Root-race was, of course, to be found in the Aryans of the 5th. But this did not prevent in the least the presence at the same time of unalloyed, pure Aryan races in it. A number of small islands scattered around Poseidonis had been vacated, in consequence of earthquakes long before the final catastrophe, which has alone remained in the memory of men—thanks to some written records. Tradition says that one of the small tribes (*the Æolians*) who had become islanders after emigrating from far Northern countries had to leave their home again for fear of a deluge. If, in spite of the Orientalists and the conjecture of M. F. Lenormand,—who invented a name for a people whose shadowy outline

he dimly perceived in the far away Past as preceding the Babylonians—we say that this Aryan race that came from Central Asia, the cradle of the 5th race Humanity, belonged to the “Akkadian” tribes, there will be a new historico-ethnological difficulty created. Yet, it is maintained, that these “Akkads” were no more a “Turanian” race than any of the modern British people are the mythical ten tribes of Israel, so conspicuously present in the Bible and—absent from history. With such remarkable *pacta conventa* between modern exact (?) and ancient occult sciences, we may proceed with the *fable*. Belonging virtually through their original connection with the Aryan, Central Asian stock, to the 5th race, the old Æolians yet were Atlanteans, not only in virtue of their long residence in the now submerged continent, covering some thousands of years, but by the free intermingling of blood, by intermarriage with them. Perhaps in this connection, Mr. Huxley’s disposition to account for his *Melanochroi* (the Greeks being included under this classification or type)—as themselves “the result of crossing between the Xanthochroi and the Australioids”—among whom he places the Southern India lower classes and the Egyptians to a degree—is not far off from fact. Anyhow the Æolians of Atlantis were Aryans on the whole, as much as the Basques—Dr. Pritchard’s *Allophylans*—are now southern Europeans, although originally belonging to the Dravidian S. I. stock [their progenitors having never been the aborigenes of Europe prior to the first Aryan immigration, as supposed]. Frightened by the frequent earthquakes and the visible approach of the cataclysm, this tribe is said to have filled a flotilla of *arks*, to have sailed from beyond the pillars of Hercules, and to have landed, sailing along the coasts after several years of travel, on the shores of the Ægean Sea in the land of Pyrrha (now Thessaly) to which they gave the name of Æolia. Thence they proceeded on business with the gods to Mount Olympus. It may be stated here at the risk of creating a “geographical difficulty,” that in that mythical age Greece, Crete, Sicily, Sardinia, and many other islands of the Mediterranean were simply the far away possessions, or colonies of Atlantis. Hence, the “fable” proceeds to state that all along the coasts of Spain, France, and Italy the Æolians often halted, and the memory of their “magical feats” still survives among the descendants of the old Massilians, of the tribes of the later Carthago-Nova, and the seaports of Etruria and Syracuse. And here again it would not be a bad idea, perchance, even at this late hour, for the archaeologists to trace with the permission of the anthropological societies the origin of the various autochtones through their folklore and fables, as they may prove both more suggestive and reliable than their “undecipherable” monuments. History catches a misty glimpse of these particular autochtones thousands of years only after they had been settled in old Greece; namely, at the moment when the Epireans cross the Pindus bent on expelling the black magicians from their home to Bœotia. But, history never listened to the popular legends which speak of the “accursed sorcerers” who departed but after leaving as an inheritance behind them more than one secret of their infernal arts the fame of which crossing the ages has now passed into history—or, classical Greek and Roman *fable*, if so preferred. To this day, a popular tradition narrates how the ancient forefathers of the Thessalonians, so renowned for their magicians, had come from behind the Pillars, asking for help and refuge from the great Zeus, and imploring the father of the gods to save them from the Deluge. But the “Father” expelled them from the Olympus allowing their tribe to settle only at the foot of the mountain, in the valleys and by the shores of the Ægean Sea.

Such is the oldest fable of the ancient Thessalonians. And now, what was the language spoken by the Atlantean Æolians? History cannot answer us. Nevertheless, the reader has to be only reminded of some of the accepted and a

few as yet unknown facts, to cause the light to enter any intuitional brain. It is now proved that man in the antiquity was universally conceived as *born of the earth*. Such is now the profane explanation of the term autochtones. In nearly every vulgarized, popular fable, from the Sanskrit *Arya* “born of the earth,” or Lord of the Soil in one sense; the Erechtheus of the archaic Greeks, worshipped in the earliest days of the Akropolis and shown by Homer as “he whom the earth bore” (IL. II. 543); down to Adam fashioned of “red earth,” the genetical story has a deep occult meaning, and an indirect connection with the origin of man and of the subsequent races. Thus, the *fables* of Hellen, the son of Pyrrha the red—the oldest name of Thessaly; and of Mannus, the reputed ancestor of the Germans, himself the son of *Tuisco*, “the red son of the earth,” have not only a direct bearing upon our Atlantic fable, but they explain moreover the division of mankind into *geological* groups as made by the Occultists. It is only this, their division, that is able to explain to Western teachers the apparently strange, if not absurd, coincidence of the *Semitic* Adam—a divinely revealed personage—being connected with *red earth*, in company with the Aryan Pyrrha, *Tuisco*, etc.—the mythical heroes of “foolish” fables. Nor will that division made by the Eastern Occultists—who call the 5th race people—“the Brown-white,” and the 4th race, the “Red-yellow,” Root-races—connecting them with geological strata—appear at all fantastic to those who understand verse III. 34—9 of the Veda and its occult meaning, and another verse in which the *Dasyus* are called “Yellow.” *Hatvi Dasyin prā āryam vāraam āvat*—is said of Indra who, by killing the *Dasyus*, protected the colour of the *Aryans*; and again Indra “unveiled the light for the *Aryas* and the *Dasya* was left on the left hand” (IL. II, 18.). Let the student of Occultism bear in mind that the Greek Noah, Deukalion, the husband of Pyrrha, was the reputed son of Prometheus who robbed Heaven of its *fire* (i. e., of secret Wisdom “of the right hand” or occult knowledge); that Prometheus is the brother of Atlas; that he is also the son of Asia and of the Titan Iapetus—the antitype from which the Jews borrowed their Japhet for the exigencies of their own popular legend to mask its kabalistic, Chaldean, meaning; and that he is also the antitype of Deukalion. Prometheus is the creator of man out of earth and water,\* who after stealing *fire* from Olympus—a mountain in Greece—is chained on a mount in the far off Caucasus. From Olympus to Mount Kazbek there is a considerable distance. The occultists say that while the 4th race was generated and developed on the Atlantean continent—our Antipodes in a certain sense—the 5th was generated and developed in Asia. [The ancient Greek geographer Strabo, for one,—calls by the name of Ariana, the land of the *Aryas*, the whole country between the Indian ocean in the south, the Hindu Kush and Parapamisis in the north, the Indus on the east, and the Caspian gates, Karamania and the mouth of the Persian gulf, on the west.] The *fable* of Prometheus relates to the extinction of the civilized portions of the 4th race, whom Zeus, in order to create a *new race*, would destroy entirely, and Prometheus (who had the sacred fire of knowledge) saved partially “for future seed.” But the origin of the fable antecedes the destruction of Poseidonis by more than seventy thousand years—however incredible it may seem. The seven great continents of the world, spoken of in the *Vishnu Purana* (B. II, Cap. 2.) include Atlantis, though, of course, under another name. *Ila* and *Ira* are synonymous Sanskrit terms (see *Amarakosha*), and both mean earth or *native soil*; and *Ilavrita* is a portion of *Ila* the central point of India (*Jambudvipa*), the latter being itself the centre of the seven great continents before the submersion of the great continent of Atlantis, of which Poseidonis was but an insignificant remnant. And now, while

\* Behold Moses saying that it requires earth and water to make a living man.

every Brahmin will understand the meaning, we may help the Europeans with a few more explanations.

If, in that generally tabooed work, *Isis Unveiled*, the "English F. T. S." turns to page 589, Vol. I. he may find therein narrated another old Eastern legend. An island... (where now the Gobi desert lies) was inhabited by the last remnants of the race that preceded ours: a handful of "Adepts"—the "sons of God," now referred to as the *Brahman Pitris*; called by another, yet synonymous name in the Chaldean Kabala. *Isis Unveiled* may appear very puzzling and contradictory to those who know nothing of Occult Sciences. To the Occultist it is correct, and, while perhaps, left purposely sinning (for it was the first cautious attempt to let into the West a faint streak of Eastern esoteric light), it reveals more facts than were ever given before its appearance. Let any one read these pages and he may comprehend. The "six such races" in *Manu* refer to the sub-races of the fourth race, (p. 590). In addition to this the reader must turn to the July number of the *Theosophist*, and acquainting himself with the article "The Septenary Principles in Esotericism," study the list of the "Manus" of our fourth Round (p. 254). And between this and *Isis* light may, perchance, be focussed. On pages 590—6, he will find that Atlantis is mentioned in the "Secret Books of the East" (as yet virgin of Western spoliating hand) under another name in the sacred *hieratic* or sacerdotal language. And then it will be shown to him that Atlantis was not merely the name of one island but that of a whole continent, of whose isles and islets many have to this day survived. The remotest ancestors of some of the inhabitants of the now miserable fisherman's hovel "Aelo" (once *Atlan*), near the gulf of Uraha, were allied at one time as closely with the old Greeks and Romans as they were with the "true inland Chinaman," mentioned on page 57 of *Esoteric Buddhism*. Until the appearance of a map published at Basle in 1522, wherein the name of America appears for the first time, the latter was believed to be part of *India*; and strange to him who does not follow the mysterious working of the human mind and its unconscious approximations to hidden truths—even the aborigines of the new continent, the Red-skinned tribes, the "Mongoloids" of Mr Huxley, were named Indians. Names now attributed to chance: elastic word that! Strange coincidence, indeed, to him, who does not know—science refusing yet to sanction the wild hypothesis—that there was a time when the Indian peninsula was at one end of the line, and South America at the other, connected by a belt of islands and continents. The *India* of the prehistoric ages was not only within the region at the sources of the Oxus and Jaxartes, but there was even in the days of history and within its memory, an upper, a lower, and a western *India*: and still earlier, it was doubly connected with the two Americas. The lands of the ancestors of those whom Ammianus Marcellinus calls the "Brahmans of Upper *India*" stretched from Kashmir far into the (now) deserts of Schamo. A pedestrian from the north might then have reached—hardly wetting his feet—the Alaskan Peninsula, through Manchouria, across the future gulf of Tartary, the Kurile and Aleutian Islands; while another traveller furnished with a canoe and starting from the south, could have walked over from Siam, crossed the Polynesian Islands and trudged into any part of the continent of South America. On pages 592,3 of *Isis*, Vol. I, the Thevetatas—the evil, mischievous gods that have survived in the Etruscan Pantheon—are mentioned, along with the "sons of god" or *Brahma Pitris*. The *Involute*, the hidden or shrouded gods, the *Consentes*, *Complices*, and *Novensiles*, are all disguised relics of the Atlanteans; while the Etruscan arts of soothsaying their *Disciplina* revealed by Tages comes direct, and in undisguised form from the Atlantean King Thevetat, the "invisible" Dragon, whose name survives to this day among the Siamese and Burmese, as also, in the Jataka allegorical stories of the Buddhists as the opposing power

under the name of *Devadat*. And Tages was the son of Thevetat, before he became the grandson of the Etruscan Jupiter-Tinia. Have the Western Orientalists tried to find out the connection between all these Dragons and Serpents; between the "powers of Evil" in the cycles of epic legends, the Persian and the Indian, the Greek and the Jewish; between the contests of Indra and the giant; the Aryan Nagas and the Iranian Aji Dahaka; the Guatemalian Dragon and the Serpent of *Genesis*—etc. etc. etc.? Professor Max Müller discredits the connection. So be it. But—the fourth race of men, "men" whose sight was unlimited and who knew all things at once, the hidden as the unrevealed, is mentioned in the *Popol-Vuh*, the sacred books of the Guatemalians; and the Babylonian Xisuthrus, the far later Jewish Noah, the Hindu Vaivaswata, and the Greek Deukalion, are all identical with the great Father of the Thlinkithians, of *Popol-Vuh* who, like the rest of these allegorical (not mythical) Patriarchs, escaped in his turn and in his days, in a large boat, at the time of the last great Deluge—the submersion of Atlantis.

To have been an Indo-Aryan, Vaivaswata had not, of necessity, to meet with his Saviour (Vishnu, under the form of a fish) within the precincts of the present India, or even anywhere on the Asian continent; nor is it necessary to concede that he was the seventh great *Manu* himself (see catalogue of the *Manus*, *Theos*: for July), but simply that the Hindu Noah belonged to the clan of Vaivaswata and typifies the fifth race. Now the last of the Atlantean islands perished some 11,000 years ago; and the fifth race headed by the Aryans began its evolution, to the certain knowledge of the "adepts" nearer one million than 900,000 years ago. But the historian and the anthropologist with their utmost stretch of liberality are unable to give more than from twenty to one hundred thousand years for all our human evolution. Hence we put it to them as a fair question: at what point during their own conjectural lakh of years do they fix the root-germ of the ancestral line of the "old Greeks and Romans?" Who were they? What is known, or even "conjectured" about their territorial habitat after the division of the Aryan nations? And where were the ancestors of the Semitic and Turanian races? It is not enough for purposes of refutation of other peoples' statements to say that the latter lived separate from the former, and then come to a full stop—a fresh hiatus in the ethnological history of mankind. Since Asia is sometimes called the Cradle of Humanity, and it is an ascertained fact that Central Asia was likewise the cradle of the Semitic and Turanian races (for thus it is taught in *Genesis*), and we find the Turans agreeably to the theory evolved by the Assyriologists preceding the Babylonian Semitists, where, at what spot of the globe, did these Semito-Turanian nations break away from the Parent stock, and what has become of the latter? It cannot be the small Jewish tribe of Patriarchs; and unless it can be shown that the garden of Eden was also on the Oxus or the Euphrates, fenced off from the soil inhabited by the children of Cain, philologists who undertake to fill in the gaps in Universal History with their made-up conjectures, may be regarded as ignorant of this detail as those they would enlighten.

Logically if the ancestors of these various groups had been at that remote period massed together, then the self-same roots of a parent common stock would have been equally traceable in their perfected languages as they are in those of the Indo-Europeans. And so, since whichever way one turns, he is met with the same troubled sea of speculation, margined by the treacherous quicksands of hypothesis, and every horizon bounded by inferential landmarks inscribed with imaginary dates, again the "Adepts" ask why should any one be awed into accepting as his final criterion that which passes for science of high authority in Europe? For all this is known to the Asiatic scholar—in every case save the purely mathematical, and physical sciences—as little

better than a secret league for mutual support, and, perhaps, admiration. He bows with profound respect before the Royal Societies of Physicists, Chemists, and to a degree—even of Naturalists. He refuses to pay the slightest attention to the merely speculative and conjectural so-called “sciences” of the modern Physiologist, Ethnologist, Philologist, &c., and the mob of self-styling (Edips, to whom it is not given to unriddle the Sphinx of nature, and who, therefore, throttle her.

With an eye to the above, as also with a certain prevision of the future, the defendants in the cases under examination believe that the “historical difficulty” with reference to the non-historical statement, necessitated more than a simple reaffirmation of the fact. They knew that with no better claims to a hearing than may be accorded by the confidence of a few, and in view of the decided antagonism of the many, it would never do for them to say “we maintain” while Western professors maintain to the contrary. For a body of, so to say, unlicensed preachers and students of unauthorized and unrecognized sciences to offer to fight an august body of universally recognized oracles, would be an unprecedented piece of impertinence. Hence their respective claims had to be examined on however small a scale to begin with (in this as in all other cases) on other than psychological grounds. The “Adepts” in Occult Arts had better keep silence when confronted with the “A. C. S’s”—Adepts in Conjectural Sciences, unless they could show, partially at least, how weak is the authority of the latter and on what foundations of shifting sands their scientific *dicta* are often built. They may thus make it a thinkable conjecture that the former may be right after all. Absolute silence, moreover, as at present advised, would have been fatal. Besides risking to be construed into inability to answer, it might have given rise to new complaints among the faithful few, and lead to fresh charges of *selfishness* against the writers. Therefore, have the “Adepts” agreed to satisfy the English members of the London Lodge, as far as permissible, by smoothing in part at least, a few of the most glaring difficulties and showing a high way to avoid them in future by studying the *non-historical* but actual, instead of the historical but mythical portions of Universal History. And this they have achieved, they believe (at any rate with a few of their querists), by simply showing, or rather reminding them, that since no historical fact can stand as such against the “assumption” of the “Adepts”—historians being confessedly ignorant of pre-Roman and Greek origins beyond the ghostly shadows of the Etruscans and Pelasgians—no real *historical* difficulty can be possibly involved in their statement. From objectors outside the Society, the writers neither demand nor do they expect mercy. The *Adept* has no favours to ask at the hands of conjectural sciences, nor does he exact from any member of the “London Lodge” blind faith: it being his cardinal maxim that faith should only follow enquiry. The “Adept” is more than content to be allowed to remain silent, keeping what he may know to himself, unless worthy seekers wish to share it. He has so done for ages, and can do so for a little longer. Moreover, he would rather not “arrest attention” or “command respect” at present. Thus he leaves his audience to first verify his statements in every case by the brilliant though rather wavering light of modern science: after which his facts may be either accepted or rejected, at the option of the willing student. In short, the “Adept”—if one indeed—has to remain utterly unconcerned with, and unmoved by, the issue. He imparts that which it is lawful for him to give out, and deals but with *facts*.

The philological and archæological “difficulties” next demand attention.

(To be continued.)

NOTE.—The continuation of Mr. Subba Row's replies to the 7th and 8th questions will appear in the next issue of the *Theosophist*. As he finds it necessary to examine carefully the new inscriptions on the strength of which Major General Cunningham and the Orientalists who followed

him have thought it fit to reject the date assigned by Buddhists and Hindus to Buddha's death, and as the reply to question VI, has become very lengthy, we have thought it proper to publish the answers to the two succeeding questions in the November issue of our journal.—Ed.

### THE MISSING LINK—AT LAST.

UNDER the heading of an “Extraordinary Tale” (Tail?) the papers give out the following, and thus have to be held responsible for its authenticity. “An interesting discovery has, it is announced, been made in Paraguay of a tribe of Indians with tails. An Argentine domiciled in the Argentine Missions has a yerba establishment in the Paraguayan Missions, in a district called Tacura-Tuyu. While collecting the yerba in the yerba woods the other day, his mules were attacked by some Guayacuyos Indians, who fled after killing several mules. The muleteers pursued, firing on the Indians, one of whom, a boy about eight years old, was captured. This boy was brought to Posedas, where Don Francesco Golcochoa, the Argentine referred to, lives, and excited much curiosity, owing to his having a tail six to eight inches long. The boy, who has been photographed by some Germans, is, it is stated, very ugly; but his body is not covered with hair. A brother of the boy, at present in the possession of Colonel Rudeciudo Roca, has also a tail; and all the tribe are said to be similarly adorned.”

### CALIFORNIA ON THEOSOPHY.

#### THEOSOPHY AND OCCULTISM IN INDIA.

SOME ACCOUNT OF A NEW AND REMARKABLE MOVEMENT.

By GEORGE FREDERIC PARSONS, F. T. S.\*

*Ex Oriente Iuxa.*

It is idle to speculate upon the antiquity of *Yoga Vidya*, but at least we know that traces of this occult knowledge are to be found in the Rig-Veda; that during this supremacy of Brahmanism it was cultivated with ardor; that throughout the Buddhistic period it continued to flourish; and that the revival of Hinduism did not affect or disturb it appreciably. It can show an unbroken line of descent, stretching away into the regions of pure mythology, and throughout this enormous period it has claimed a mastery over natural laws and natural forces which puts to shame all the discoveries of Western science, and which at the same time is alleged to solve the central problems of human existence; namely, the whence and the whither of Man..... The practice of writing all scientific works in symbolic language, which the Mystics followed in their time, so perplexed the first Sanskrit scholars that they thought the Vedantic writings and commentaries to be little better than masses of gibberish. At last, however, it has begun to dawn upon them that there may be “that within which passeth show,” and Professor Max Müller has with characteristic candor admitted this already. It is extremely difficult for the Western mind to put itself into a receptive attitude in regard to Oriental science, because the two systems are so radically different, and the civilizations so incompatible. With us Science is respected chiefly for its bearing upon what we call material progress. But it has no connection whatever with ethics, and it has deliberately cut itself off from the study of true psychology. But in the Orient it is not even admitted that Western civilization is the best. On the contrary, it is asked: “Does your Science make men happier?” And what can be the answer to such a question? Philosophers certainly strive to persuade themselves that in some large general average the balance will be found on the side of real progress in happiness, but meantime it is one of the perplexities of the thinker that human misery seems to keep step with human material progress. As Stephen Montague says: “You accumulate machinery; you increase the total of wealth; but what becomes of the labor you displace? One generation is sacrificed to the next. You diffuse knowledge—and the world seems to grow brighter; but Discontent and Poverty replace Ignorance, happy with its creed. Every improvement, every advancement in civilization, injures some to benefit others, and either cherishes the want of to-day, or prepares the revolution of to-morrow.”

Now the Indian Scientist does not recognize the superiority of this form of civilization. On the contrary, he maintains that it involves a distinct degradation of the race, despite its brilliant external manifestations. And this assertion is the inevitable result of the Asiatic theory of the universe. For if this life is but a single link in the long chain of existences which every spirit must pass through; and if Past, Present and Future are determined, as regards the destiny and future of man, by his own

merit and demerit alone; and if the upward course of the spirit can only be assured by an intelligent and persistent discipline; it follows that the entirely material and earth-absorbed life which Western civilization entails and compels is not in the line of real progress, but that this civilization is, notwithstanding its apparently marvellous advancements, a mistake of the most disastrous character. No doubt it is very difficult for the average Western intelligence to apprehend the Oriental view, and yet some effort to do this must be made by all who desire to understand the situation we are describing. A great help to comprehension is the clearing of our minds from cant. Let it be realized, as a preliminary to candid inquiry, that the Western world has no monopoly of knowledge; that in fact it has, with all its cleverness and all its profundity, thus far failed to discover any theory of the universe which is satisfactory to its best minds; and that it is quite possible for a people of high intellectual capacity, who have devoted their strongest minds to research and reflection for many ages, to have excogitated, or even to have discovered by experimental research, a loftier, a nobler, a more consistent, congruous, and altogether deeper explanation of the Cosmos and of Man's place in it, than has hitherto been known beyond the Orient.

Religion in India, as everywhere else, has been subject to mutation and decay. No creed has ever yet escaped the injury which arises from encrusting superstition, and officious, unintelligent interpretation. The religion of Gautama Buddha is no exception to the rule. There can be no question that Buddhism has exercised a most powerful influence for good upon the people of India, not only during its hold upon the country, which lasted a thousand years, but since the rise of Hinduism also. For apart from that mystic doctrine of Nirvana, which has so perplexed Western scholars, and not apart from that doctrine so far as the initiates are concerned, Buddhism is a religion of Love and Peace and Purity. And what is most remarkable about the religion is that its votaries have followed their Founder's doctrine in the main faithfully. Toleration is the essence of Buddhism. It has been violently persecuted at various times, and has never sought revenge. As Johnson observes: "It has been faithful to its principle that truth is not to be impressed by violence; that opinion must be free. Its rejection of bloodshed has been absolute. Beside the history of its peaceful progress, the records of Islam and Christianity are black with tyranny and hate." Western commentators, for the most part missionaries, have been repeatedly compelled to bear testimony to the nobility of the creed of Buddha. Thus Bishop Bigandet, a Roman Catholic prelate who has written a "Life of Buddha," frankly declares that there is not a single moral precept to be found in Christianity which has not its counterpart in the religion of Sakya Muni. The life of the founder, and even some of the principal tenets of his faith, have been made familiar to the English and American public through Mr. Edwin Arnold's beautiful poem, "The Light of Asia." It may in fact be said that the lofty moral tone of pure Buddhism is incontestable, and that it yields to no religion in this respect. The stumbling-block in the way of its acceptance by the Western mind has always been the doctrine of Nirvana, which has been regarded as implying annihilation.....

Western opinion on such a question is, however, not trustworthy. ... It is evident from the language of the *Milinda Prasna*, however, that early Buddhism did not regard Nirvana as identical with Annihilation. It involved no doubt the absolute extinction of all earthly desires and properties and tendencies; but whoever takes the trouble to think out the problem of a future life, will find that no tenable theory of complete happiness can be framed which does not necessitate the exclusion of every mundane and physical emotion and desire. Nirvana in fact is the logical ultimatum of a scheme of reasoning carried far beyond the common limits of such speculation, and perhaps the best possible answer to the assertion of its Nihilistic meaning consists in the fact that it is a consummation which has been sought with the most persistent effort by the most powerful minds of Asia, for ages.

It has been necessary thus to dwell upon Buddhism, because it is closely connected with that system of occult science which is so interwoven with Asiatic faiths. And that it includes a complete harmony with much that the Brahmans taught before the time of Gautama. But the reader may ask: How has any connection arisen between Europeans and Asiatics in regard to an Oriental religion? How can men educated to Western science and philosophy have come to seek in the mystic abstractions of a visionary race the clues to secrets of Nature which the intellect of Europe has in vain striven to pierce? What encouragement can have been given to such an experiment, and to what can so strange and apparently impractical an enterprise tend? These questions shall all be answered; but not in this paper. For the present it must suffice to say that the dark veil which has so long concealed the East from the West was a short time ago partially removed. That the small but earnest band of Western thinkers who refused to accept the paralyzing limitations of Agnosticism, who recoiled from Nihilism, and who could not be convinced of the truth of Spiritualism, were given reason to believe that in those far regions the Sacred Fire was still kept burning; that an Occult Brotherhood existed in India or the

neighboring territories; that this mysterious Fraternity had mastered the great arcana; that it held the keys of a system of Natural Science surpassing in extent, grandeur and value anything the West possesses; and that it alone had the power to solve those burning questions with which the age is occupied, and to save society at once from the degradation of a Materialism which transforms the universe into a ghastly mockery, and the sensuous fantasies of a superstition which is only fitted to rivet anew the broken shackles of false and exploded faiths.

OF THE SERPENT PYTHON AND THE  
PYTHONESSES THROUGHOUT THE AGES.  
RESEARCHES OF PRACTICAL SCIENCE TO FORM PYTHIAS.

BY DR. FORTIN, F. T. S. PRES: S. S. O. F.

(Société Scientifique des Occultistes de France.)

The scientific progress and evolution of ancient Egypt were arrested by such celesto-planetary disturbances and her incessant wars against invaders.

But her great and immortal soul conjured up by Greece proved sufficient to instruct her future priests and inspire her seers.

The classification of objects destined to play a part in occult phenomena teaches us that there once existed in Greece a veritable science under the rules of which were governed her numerous temples. Two varieties of subjects demand our special attention: they are the Pythoness and the Sibyl.

The first named is derived from a species of serpent, whose strange physiological peculiarities produced on certain abnormal human organisms, and in them stirred up into activity other functions and faculties stranger still.

The name of *Python*, and its derivatives, is found applied from the highest antiquity to deities and localities, as well as to names of things and beings. There was in the year 1263, B. C., a festival instituted by the Grand Council of the AMPHICTYONS at Delphos, in honor of the victory gained by Apollo over a python. But Delphos having been called before this event PYTHOS, this change of name can only be attributed to servility towards the daughter of Delphius. Poetry has played a great part in the history of the ancient Greeks; and we have a convincing proof of this in the abovementioned great national event of the death of the famous Ophidian. Everything tends to show in this direction that that species of serpent had already become very rare, and that it must have possessed occult and precious properties indeed, that a whole people should institute, to perpetuate its remembrance, a series of yearly national festivities. As to the successful conqueror, it is but natural that he should have been raised to the rank of a demi-god who, in good time, became quite legendary. The national *Pythoness* sat enthroned in her *Pythium* (Temple) governed by her *Pythomantes* (Priests of Python). Her tripod was composed of seven magical metals corresponding to the seven Planets\*—Saturn to lead—Jupiter to tin—Mars to iron—Sun to gold—Venus to brass—Mercury to mercury—Moon to silver. This tripod thus composed was covered moreover with a python's skin. Spring was the season chosen as the most favorable to the development of the Pythoness. Having bathed in the fountain of Castalia and fasted for three days, while chewing laurel-rose leaves, the Pythonessa, bare-footed, ascended her tripod. The latter was placed over an opening in the soil, whence ascended a vapour produced by the assemblage of numerous serpents which excited thereby to fury foamed, hissed and bit each other. This noise and the exhalations excited the Seeress who added her cries and Pythian fury to this scene of horror. Such was the Grecian Pythonessa.

Rome had them too; but the Cæsars fearing criticism, persecuted not only the Pythias but every occult prac-

\* Here should follow the comparative tables between the metals and the planets. Having no type for it, we regret being unable to reproduce the magical signs.—Ed.

tice—then was the time when it was sufficient to wear the cloak of the Greek philosopher, to be condemned to death.

The Cæsars claimed the right alone to consult the occult powers. One instance will be sufficient to explain the dangers to which the representatives of this oldest science, hallowed by antiquity, and whose course even then, already, was running by no means smooth—were exposed. Nero, during his voyage to Greece, visited the Temple of Delphos, partly to satisfy a time-honored custom, and partly through curiosity, when the Pythoness amidst her fits of fury exclaimed—“Avant matricide,” “thy presence outrages the god whom thou wouldst interrogate!... No. 73 will mark the hour of thy punishment.” Nero understood but one thing in this, he would die at the age of 73; but the reproach of his crime flung into his face threw him into a frenzy, during which time his ferocity knew no bounds. He was well aware that the Pythoness, once on her tripod, was absolutely forced to render the oracle, and that the priests were helpless in their translation of it: he knew it and still ordered the hands and feet of the priests to be cut off, and the Pythoness of the temple to be buried alive among their mutilated corpses. The No. 73 indicated the age of Nero's successor—Galba. This scene from Roman history shows that the occult sciences formed part and parcel of their political organisation.

In 1766, D'Harcerville published a drawing from an Etruscan vase of the highest antiquity, belonging to the Hamilton collection. This drawing represents two distinct scenes:—first, two enormous serpents coiled around a tree, of form and nature unknown to us—three egg-shaped fruits, hang from it. Is this the tree of the fruits of science? A man of the Mercurian type—and a woman seeming to belong to a lower condition, complete the scene; their expression and attitude show that they are consulting the two monsters. The head of the serpent consulted by the woman, by its size, expression, and form, exhibits a now unknown variety, quite distinct from that of all other serpents. The top head is rounded, the eyes big and prominent—placed under two very salient eyebrows, the jaws opened, of which the lower one is strongly receding, making the head look half human, half canine. The other drawing represents a powerfully built man—it is the true *terrian*\* in all the powerful development of his physical forces, with one knee bent under him to the ground, he seems to stagger under the weight of a sphere supported on his robust shoulders covered with a lion's skin whose head covers his own like a hood. On the sphere are drawn the crescent moon in her first quarter, and two stars whose central point is represented by a circle—a woman draped in a rich tunic, and whose eye by its size and form, shows her to be an inspired seeress,... fixes the stars drawn on the sphere before her.

The above description of the drawings shows the reader that in both cases practical Occultism is meant. On one hand are the magical operations of Ophiomancy, which can give the operators nothing higher than the fruits of the science of the *terrians* (Earth bound,—living men included), of elementals and—perhaps—elementaries. On the other hand the scene shows with certainty that we are in the presence of a phenomenon of the highest seership. The inspired clairvoyant evokes the astral influences to study astronomy and astrology,—its vivifying spirit.

She is the “Seeress”—the ‘Sibyl.’ Thus are explained the two varieties of subjects (mediums), the destructive characteristics of which give us on the one hand the irresponsible Pythia (Medium), on the other, the high Seeress the Sibyl† and the Prophetess. In Japan the image of the creation is accompanied by those of a serpent coiling

around a tree and of personages who seem to consult the reptile.

Thus the scene of the garden of Eden, as given in the Bible, is simply the disfigured narration of a once quasi universal scene of magic enacted in all the temples of old. Everywhere a serpent—(the universal symbol of Life and Oracular wisdom) coiling around a tree (symbol of science of good and evil), a woman interrogating the serpent, and a man who remains passive, owing to the danger of such evocations. Then, the operators having stirred up against themselves too many of the powers of the invisible nether worlds, they were forced to quit Eden—henceforth a haunted locality.

In Mexico at Xaltucan, there was living for centuries, the legend tells us, an enormous serpent with a woman's head. The Goddess Cihua—Cohualt, a woman-snake, was made a mother while remaining immaculate of a strange creature *Acraoopo*. A goddess was also honored at Xaltucan. But degeneration, the final law which no nation escapes, having culminated in people forgetting the spirit of magic, the phenomena fell lower and lower. In those days of the many daily prodigies, only one took place regularly every night; dreadful howlings and moanings were heard, and a voice crying, “O Xaltucanes, what is to become of you?” Karnac in Bretagne (France) is scattered all over with Druidical stones. *Carn-ac* means in old Persian “the serpent's heap,” while the meaning of “Maen-ac” (a locality near Carnac) is the “serpent's stones.” In Egypt—Thebes—the same name of Karnac is again found.

In modern days, and notwithstanding the changes produced on men and things by the succession (and progress?) of the ages, are there not any individualities left in existence for the production of phenomena of the occult order? Facts answer everywhere—YES; and how can it be otherwise, since it is a law of universal usefulness? To rediscover real subjects by their characters, and the real science by its practice, to classify and protect both amidst social exigencies, necessitates an order of research and investigation quite indispensable, if one would utilize modern seership. The absence of all method, the indifference of scientific bodies, have hitherto abandoned the manifestation of occult phenomena to that ignorance which finds in the interpretation of facts, no better than a doctrinaire spirit unable to stand the slightest scientific examination. Professional somnambulism is represented by perturbed subjects, most of whom belong to the species (or varieties) called pythias; a fact that explains the intermittency that governs fatally their lucidity and the deceptions of the magnetisers. In “Isis Unveiled” at the end of Vol. I is found the description of a magical seance\* which will give a perception of what can be yet achieved with a “subject” trained according to law and method either as a Pythoness or as a Sibyl. We will continue this study in a future number of the *Theosophist*.

#### LIFE OF GIORDANO BRUNO.

[It is suggestive that in these Numbers which close the 4th and begin the 5th year of our Magazine, several scientific and philosophical articles should be brought together,—through no predetermination, but owing simply to chance—showing how sooner or later, universal truths will break through the clouds of ignorance and vindicate themselves in this world of routine and prejudice. Mr. Gilbert Elliot's fine article is one instance,—the one that follows—another.

We owe this chapter from the “Life of Bruno” to the kindness of Mr. N. Trübner, who, as appears, is the translator of it. We regret—space forbidding—to be unable to reproduce it not only more fully, but to give in each instance chapter and verse from the Aryan philosophies of which Giordano Bruno could know nothing, and in which

An inhabitant of the planet, Earth; a technical expression of the Western Kabbalists and Occultists.—Ed.

† The Sibyl will be the subject of a special and separate study.

the reader would find a complete identity of thought and conclusion. But we shall not refrain from the temptation of republishing, at least those parts which show the extraordinary similarity of thought regarding the most puzzling mysteries of nature and man, between most of the great minds that lived during our period of history—beginning with Pythagoras and ending with the German metaphysician Schopenhauer. In the speculations that follow, the martyred philosopher, Giordano Bruno, seems to have come to the same conclusions as Lessing, Germany's great author, and both to have taken them bodily from our Occult Doctrines. As every new discovery in the world of science vindicates one or another of the esoteric tenets, so every time that a hitherto unknown page of the history of a great thinker is published, it brings out to light some philosophical thought that has its very source in the teachings of Occult Science. Content with drawing the readers' attention to the fact, we will say no more and leave our occultists to judge whether the notion is too exaggerated.—*Ed.*]

The primeval enigma of the continuance of our individual soul occupies Bruno's mind a good deal, but, as must be expected, in a manner widely diverging from the Christian's answer to the question. Bruno does not believe in personal immortality in the sense of the continuance of our *present* self-consciousness, but is on the other hand deeply convinced of the indestructibility of the Central Monad, constituting our innermost being. "We are therefore, *what we are*, solely by the one substance of the soul, round which, like round a centre, the atoms develop and cluster. Hence the building spirit expands through birth and growth to that body, by which we exist, and is poured forth by the heart, into which it may finally retire, wrapping itself up—like into the warp of the web—in order to recede and go out again by the same way on which it had come and had entered life. For *birth* is the expansion of the centre, *life* the consistence (stability) of the sphere, *death* the contraction into the centre."\*

"But a most potent argument for our immortality may be derived from the point of view, that the *one* substance which builds up, clusters (agglomerates) and develops, regulates, vivifies, moves, interweaves, and like a marvellous artist presides over such considerable work, cannot assuredly be of a meaner quality than the bodies which are by it agglomerated, developed, regulated, moved, and into whose service *that* is taken, the substance of which is, in truth, eternal."†

The belief in the indestructibility of the substance leads us compulsorily to the doctrine of the transmigration of the souls. If, according to Bruno, the All is nothing but the development-process of the innumerable individual souls, flowing off in the infinity of space and time, the innermost kernel of which is indeed again but the one and indivisible substance, or rather the one self-conscious world-subject, and if this development-process, passing through numberless degrees, has the divine perfection of the individual souls for its last and highest aim, then it follows with logical necessity that this gradation of development will have to take for its point of egress the imaginably lowest grade of primordial predisposition. If moreover the human soul represents a development-stage, compared with which we already see lower-placed organisms developing themselves under our eyes, then again the conclusion is irresistible—viz., that the human soul, in order to occupy the degree of *human* existence at all, must have passed through an infinitely long series of predevelopment-stages, the reality of which loses nothing whatever of its certainty on account of our not being conscious of it. The post-existence postulates the pre-existence of the soul. The self-perfecting process of the innumerable individual beings is an absurd hypothesis without the presupposition of numberless development-stages, which the soul *has* to pass through, but which in the infinitely short space of its terrestrial existence it *cannot* possibly pass through. How small is the limit of duration assigned to the living organisms of our planet-earth, as compared with the term of expiration allowed to the life-process of the planet itself! But how infinitesimally small is then first the life-period of the planet-earth, as compared with the infinity of the universal world-process, moving in numberless *Æons*! This reflection leads to the following further conclusion: As the self-perfecting process of the human soul, which can spin itself off only in the infinity of space and of time, can neither have had its beginning on the planet-earth, nor, on it, will be able to find its end, the All alone, as the complex of all development-stages, can form an arena worthy of the self-perfecting process of the soul.

True this notion is only hinted at in Bruno, but the hint suffices to furnish the proof, that Bruno indeed had, in his mind, figured to himself the infinite All and not merely the planet earth

as the space in which the transmigration of the souls is to take place. "The dwelling—places of the Blessed are the stars. The dwelling-place of the gods is the ether or heaven: for I call the stars, with good reason, gods. But the dwelling-place of God is the All, extending everywhere, the entire immeasurable heaven the empty space, the plenitude of which He is, the father of the light, which comprehends the darkness, the Ineffable."\* In calling the stars the dwelling-places of the Blessed, Bruno is evidently influenced by the primitive notion of an adjustment between virtue and reward, vice and punishment, accomplishing itself, although not observable here below, in the infinity. "In proportion as the soul has conducted itself in a body, it determines itself to transition into another body, says Pythagoras, say the Sadducees, says Origines, and many others of the Platonists. Thus that change of dwellings is not by any means as accidental as that of the particles out of which the corporeal substance is composed. Therefore some make their development-progress through human bodies, others pass into the bodies of demigods, whilst others again are thrown back into viler bodies. Such at least is the view of those who consider the All to be engaged in an eternal revolution, with the exception of one,† who does not share this view."‡ This question is more minutely discussed by Bruno in his "Spaccio de la Bestia Trionfante."

"This principle is the Divinity, the Hero, the Demon, the Individual God, the Intelligence [Spirit] in which, from which through which are formed and forming the different organisations [temperaments] and bodies, which have to pass through different kinds of existence, names and destinies. This principle, which is the one which as to rational acts and desires, moves and governs the body, is superior to the latter and cannot be annoyed and constrained by it. But this superior principle is itself subject to the High Justice, which presides over all things, and which may cause that in consequence of its wild passions the spirit may be relegated back into its own or into another body for punishment and degradation, and must not expect to be entrusted with the government and administration of a better dwelling, if it has conducted itself badly in the conduct of a previous one. If, for instance, I have here below led a brutish life [literally: an equine or swinish life], the justice of the fate will—as many of the most distinguished philosophers have taught and what I myself consider deserving the greatest consideration, if not credence—assign to the body a prison appropriate to such an offence and crime, and organs and instruments fit for such a workman or artificer. And in this wise, and passing onwards constantly in accordance with the law of eternal change, it will be conducted into better or worse conditions of life and fortune, in keeping with the better or worse management of its previous condition and fortune."¶

"If therefore a soul which happens to be furnished with the instruments of an equine (to be imprisoned at present in a horse's body) knew that there were waiting for it,—in regular gradation or in an undefined order,—the instruments of the human frame and of the bodies of all other [still higher] organisms, and that the death [or decay] of the instruments at present assigned to it had nothing at all to do with the future life [passing, as it will have to do, through innumerable kinds of post-existence], it would not grieve. Indeed, a wise soul does not fear death, nay sometimes longs for it, even seeks it. All substance has in store therefore *eternity*, as far as duration [time] is concerned; *immensity*, as far as space is concerned; and *omniformity* [viz., the totality of the forms of existence], as far as existence is concerned."||

These are the outlines of a belief deliberately shared by Bruno with the priest-philosophers of the ancient East and West, with the Brahmans and Magi, the Chaldees and Egyptians, the Pythagoreans and Druids; of a belief moreover which even now determines and rules the life of three-fourths of mankind—viz., the Brahmanic and Buddhistic world; and the day will come when it will seize also with an elementary force the European members of Indo-Germanic humanity—of course in a form, first to be purified by the Darwin of the psychology of the future. Bruno's Christian and Jewish successors in *Deo et Natura* have certainly taken good care not to notice this view, according to which every soul has the mission and capability of bringing itself to perfection through infinite stages of development; nor have they dared openly to confess the same. Only Leibnitz, generally so very diplomatic as a metaphysician, and whose first aim always is not to give umbrage on high, commits himself once, but only once, and then only partially, to metempsychosis; this to be sure only in a letter, which remained unknown during his lifetime. In a letter written from Hanover on the 30th of April, 1709, to the Father Des Bosses he says: "I verily believe that the idea of God creating new Monads, is defensible; but perhaps the contrary is more probable still, nay even the pre-existence of Monads."§

Leibnitz never dreamed of making this his paradox known. And thus Bruno's doctrine died out, until Lessing revived it in 1780, a year before his death, in his "Education of the Human Race," in the following profound words:—

"But why should not every individual man have existed more than once upon this world? Is this hypothesis so laughable merely because it is the oldest? Because the human understanding, before the sophistries of the Schools had dissipated and debilitated it, lighted upon it at once? Why may not even I have already performed those steps of my perfecting which bring to man only temporal punishments and rewards? And why not another time all those steps, in the performance of which the prospects of eternal rewards so powerfully assist us? Why should I not come back as often as I am capable of acquiring fresh knowledge, fresh expertness? Do I bring away so much at once, that there is nothing to repay the trouble of coming back? Is this a reason against it? Or because I forget that I have been here already? Happy is it for me that I do forget. The recollection of my former condition would permit me to make only a bad use of the present. And that which even I must forget now, is that necessarily forgotten for ever? Or is it a reason against the hypothesis that so much time would have been lost to me? Lost? And how much then should I miss? Is not a whole eternity mine?"

Compare herewith what Lessing says at the end of his treatise: "That there may be more than five senses for man" which may perhaps be owing to the influence of Bruno:—(Ed. Lachmann-Maltzahn, vol. xi, part i. pp. 64 to 67).

1. The soul is a simple being, capable of infinite ideas.
2. As it is a finite being, it is not capable of forming these infinite ideas all at once, but attains them little by little in an infinite course of time.
3. If it attains its ideas little by little, there must be an order in which, and a measure by which, it attains them.
4. This order and this measure are the *senses*.
5. Of such senses it has at present five. But nothing will induce us to believe that it has commenced forthwith to form ideas with these five senses.
6. If Nature nowhere takes a leap, the soul must no doubt have passed through all the lower stages before it has reached the one in which it is at present. It will first have had each of these five senses singly, then all ten binions, next all ten ternions, and lastly all five quaternions of them, before all the five together have fallen to its share.
7. This is the way which it has already made, and there can have been only very few of its stations on it, if it be true that the way which it has still to make is so monotonous in the soul's present state. In other words, if it be true, that besides these five senses no other senses are possible, that in all eternity it keeps only these five senses, and that the richness of its ideas augment only through the perfecting of them.
8. That which puts boundaries, is called matter.
9. The senses determine the boundaries of the ideas of the soul [*vide* 4]; the senses are therefore matter.
10. When the soul began to form ideas, it had one sense, therefore was combined with matter.
11. But not, forthwith, with an organic body. For an *organic body* is the combination of several senses.
12. Every atom of matter may serve as a sense to the soul. In other words, the whole material world is animated in its minutest particles.
13. Atoms which serve to the soul as one and the same sense make homogeneous, primordial substances.
14. If one could know how many homogeneous masses the material world contained, one could also know how many senses were possible.
15. But why and wherefore? Suffice it that we know positively that more than five such homogeneous masses exist, with which our present five senses correspond.
16. For, just as the sense of sight corresponds with the homogeneous mass [the light] through which the bodies become visible, particular senses can, and no doubt do, correspond, for instance, with electric matter or with magnetic matter, by which we immediately recognize whether the bodies are in the state of electricity or in the state of magnetism; a circumstance which, as matters stand at present, we can only learn by experiments. All that we now know of electricity and magnetism, or can know in this human condition, is not more than what Saunderson knew of optics; but we shall hardly, ourselves, have the sense of electricity, or the sense of magnetism; thus it will fare with us, as it would have fared with Saunderson, if he had all at once got the sense of sight. An entirely new world will at once arise for us, a world full of the most glorious phenomena of which we can at present form as little a conception as he could form for himself of light and colours.
17. And just as we now feel sure of the magnetic and electric force, or of the homogeneous primordial substance (masses) in which these forces are active,—although once upon a time one knew little or nothing of them,—we can similarly be assured of a hundred, a thousand other forces in their masses, although we know as yet nothing of them, nor what particular sense corresponds with them all.

18. Nothing can be said of the number of these senses, still unknown to us. It cannot be infinite, but must be *determined*, although *undeterminable* by ourselves.

19. For if it were infinite, the soul would, in all eternity, never have got into possession of even two senses, simultaneously.

20. Nothing need therefore be said of the phenomena, under which the soul appears possessed of every single sense.

21. If we had only four senses and were deficient of the sense of sight, we should as little be able to form a conception of the same as of a sixth sense. And the possibility of a sixth and of several senses need therefore be as little doubted, as little as in the former state we should have had cause to doubt the possibility of the fifth. The sense of sight serves to make the matter of light perceptible to us, and all the same conditions towards other bodies. How much more may there not still be of like matter distributed throughout creation generally!

The following is written on the last page of this MS. fragment:—

"This, my system, is unquestionably the oldest of all philosophical systems, for it is essentially nothing more than a system of the soul's pre-existence and metempsychosis, which not only Pythagoras and Plato, but even before them Egyptians and Chaldees and Persians, in fine all sages of the East, have held.

"And this alone must create for it a favourable prejudice. The first and oldest opinion in speculative matter is always the most probable one, because the sound common-sense of man hits upon it directly.

"This oldest, and in my belief only probable, system, is merely hampered by two things. First—

[Here the manuscript breaks off abruptly.]  
(Sime's "Lessing," vol. ii. pp. 322 to 324.)

NOTE OF THE TRANSLATOR.—It would be interesting to trace Giordano Bruno's influence on English contemporary thought. He lived several years in England, moved in the best society, enjoyed the friendship of Sir Phillip Sidney and other men of mark, and, according to his own statement, defended certain theses before an audience of learned men at the University of Oxford. As shown above, he revived in the "Spaccio de la Bestia Trionfante" (printed in 1584, during his stay in England), the ancient idea of the migration of the soul, which, though lingering still in popular tradition, had been dormant during the Middle Ages. That the same idea occupied the mind of at least some of Bruno's English contemporaries will be shown by the following quotations. In Christopher Marlowe's "Tragedy of Doctor Faustus" (Act V, scene 2, verse 184 and f.), we find, for instance, the following lines:

"Ah, Pythagoras' metempsychosis, were that true  
This soul should fly from me, and I be changed  
Unto some brutish beast."

From Webster's tragedy of "Appius and Virginia" (Dyce, p. 172 b), we quote:

"Oh thy opinion, old Pythagoras!  
Whither, O whither should thy black soul fly?  
Into what ravenous bird or beast most vile?  
Only into a weeping crocodile?"

And in Shakespeare's "Antony and Cleopatra" (Act ii, scene 7) we find:

"Lepidus. What manner o' thing is your crocodile?"

"Anthony. It is shaped, sir, like itself, and it is as broad as it hath breadth; it is just so high as it is, and moves with its own organs; it lives by that which nourisheth it; and the elements once out of it, it transmigrates."

Again, Notter, a German critic of some mark, thinks he has discovered in the Saxon Anti-Pope Bruno of Marlowe's tragedy of "Doctor Faustus," an allusion to Giordano Bruno. Marlowe, of course, who died in 1583, could not have known of, or alluded to, Giordano Bruno's tragic death, which took place at Rome early in the year 1600. But both scenes in which Bruno appears have been shown to be later interpolations; and we find in Henslowe's "Diary," not much more than a twelvemonth after Bruno's untimely death, an entry that "Wm. Birde and Samwell Rowley" were paid for "*aditiones in Doctor Fostes*." These additions, most probably, are the two scenes in which Bruno appears. Bruno's death no doubt created a profound sensation in this country, whose church was in those days engaged in continuous warfare with the Pope of Rome, and the Protestant party may sometimes have alluded to it as a heavy reproach of its adversary's injustice and religious fanaticism. That probably caused Birde and Rowley to introduce a reference to it, in the play they were remodelling, as one of the great events of the day. The two first quartos (1604 and 1609) are most likely nearly accurate reprints of Marlowe's original play. For the "Lord Admiral's Servants" would not give up the stage copy-right of the additions they had paid for as long as they were fresh on the stage. They therefore first appear in the quarto of 1616.

What precedes disposes also of Prof. Ward's objection in his edition of the play (Oxford, 1878), p. 111:

"It is hardly possible that there can be any allusion, as Notter suggests, to Giordano Bruno, who was burnt for heresy at Rome in

1600 (Faustus, in the edition of 1616, proposes that Bruno shall suffer the same fate for the same reason)."

In conclusion, it does not by any means follow that the above passages were inspired by Giordano Bruno; still they are curious coincidences, well worth the attention of all students of Bruno.

*Additional Note of the Translator.*—Mr. Benno Tschischwitz in his *Shakspeare-Forschungen*, I., Shakspeare's Hamlet, vorzugsweise nach historischen Gesichts punctenerläutert, Halle, 1868," has endeavoured to show that Shakspeare in writing his Hamlet was to a certain extent under the influence of Bruno's philosophy. He quotes parallel passages from Hamlet and from Bruno's works (in particular from "Spaccio de la bestia trionfante" and "Il Candelajo"), which certainly exhibit a striking likeness, and he even goes so far, as to assert (page 118) that Hamlet, when he enters reading (Act II, scene 2), is studying Bruno's "Spaccio de la bestia trionfante."—Klein, in his "Seschkichte des Drama," Leipzig 1865—76, (Vol. IV, page 476) remarks: "Perhaps Shakspeare's Hamlet heard Giordano Bruno's lecture on philosophy at Wittenberg." And even if this be going too far; it is evident that three Englishmen—Fynes Morison of Lincolnshire, Anton Everstild of Sussex, and Martin Turner of York—were entered as students into the University-Register at Wittenberg on the 12th of June 1592, shortly after Bruno had left (1588). Morison became the author of several important works, and his "Itinerary" was most probably known to Shakspeare: even if he was not personally acquainted with the poet.

### THE LAMP OF LIFE.

BY ERIOPŌLES, F. T. S.

LUCRETIVS, the great philosopher poet of ancient Rome, in one of those lofty flights of genius which distinguish his famous work, *De rerum naturâ*, a poem, by the way, which is the most erudite and interesting exponent of the Materialistic philosophy of his master Epicurus, Democritus and other Free-thinkers of ancient Greece—compares the Life of man to a lamp in the following verse when he speaks of the perpetuation of life-phenomena from generation to generation:—

*Et quasi cursores VITAE LAMPADA tradunt.\**

Life-phenomena being perhaps the grandest and most mysterious, have not thus failed to engage the attention of humanity from the remotest ages, and the student of philosophy and literature in their various phases of development cannot be ignorant of this beautiful comparison of human life with the burning flame of a lamp. Numerous instances may therefore be cited from the literatures of all ages and countries where the philosopher and the moralist for the purposes of illustration, and the poet with his eyes "in a fine frenzy rolling," have used this lucid simile. But is it simply a simile, a mere rhetorical flourish adopted for the purposes of illustration and instruction? The following incidents in the life-history of a particular family whom I know—and there are hundreds who will vouch for its truth at the place I write this from—will clearly show to even the most cursory reader of this journal that there is or there must be something more profound and mystical in this simile of the Lamp of Life. For obvious reasons it would not be advisable to give in full the names of the parties mentioned below. At the same time let me assure the reader that the incidents are well authenticated, and there is not the slightest doubt in my mind as to the veracity of all the actual witnesses whose evidence I have taken great care to sift, and collate, and have at length found unimpeachable.

Some fifty years ago there came to this city in Guzerat (which I shall call B—) a great Yogi named Chitânandswamy, who was known for his extreme purity of life, his piety and great occult powers wherever he used to make his temporary residence *more suo*. Of the innumerable devotees who gathered round the extraordinary man, there were two, a high-caste Brahmin and his wife, who distinguished themselves above all others for their greater devotion to him and faith in his mysterious powers. I shall designate them as N— and Mrs. N.— They two were in well-to-do circumstances, and were known for their hospitality, piety and good nature, but were unfortunate in one particular—their children used to die in infancy. Mrs. N— therefore, to remove this misfortune, asked the Swamy to help her out of her difficulties. Thereupon the Swamy, who, I have been informed by people

\*And as the racers do, handing over to one another the lamps of life." (*vitai*, old form for *vita*.)

This refers to, as the commentators say, a race called by the Greeks *εἰς τὴν λάμπαν*—a game which may have had both a deep occult meaning and origin as it seems to me,

who had known him personally, was not one of those hard-hearted and disgustingly rude Yogis one very often meets with in the streets in India, in the fulness of his heart, ever ready to help deserving devotees, promised his blessings and said that two children, one a daughter and another a son, would be born at an interval of ten years; but he asked the lady to keep always an oil-lamp burning in a recess in the wall of her room from the day he promised them the children, and further ordered her to keep a *Ghi* (clarified butter) lamp in the same manner after the birth of the son. Within a year after the Swamy's promise a daughter, whom I shall call H—, was born, *i. e.*, in Samvat 1883, the injunctions as regards the oil-lamp being strictly followed, for, as the Swamy had directed, her life was to depend upon the flame of the oil-lamp. The Swamy who returned to B— in the course of his peregrinations nine years after reminded the pair of his promise, and again insisted that a *Ghi*-lamp be prepared for the birth of the son who was to be born the next year 1893. This was the last time the Swamy visited this place, and some years later he died at Jamnagar in Kathiawar, where I hear a temple has been erected on the spot where he was as a Sanyasi buried by his devoted followers. In due time the son was born and the pair were happy. His name was G—, and I knew him very well, for he was a friend of mine. N— and his wife, after their children were married and settled in life, died a peaceful death some years afterwards. H— was married to one who is now an old man and is one of those intelligent administrators of a Native State, for which Guzerat is so celebrated; she had four or five children, of whom two sons and one daughter are alive. The two lamps were kept with religious care by Mrs. G—perpetually burning in her room after the death of the old pair. The lamps were simple *battis*, such as are used in this country—a plain small dish of copper, rather deep with a simple wick of cotton, a small portion of this wick lying over the edge for feeding the flame with the oil or *Ghi* by its capillarity. They were thus of an extremely simple construction, not like the mystic lamp found in the supposed tomb of Tulliola, Cicero's daughter or others mentioned in history and romance (Vide *Isis Unveiled*, Vol. I, pp. 224—228, and *Addison's Spectator*, No. 379.)

Now in Samvat 1920 H— died at G—, a place 12 miles from this place, B—, *i. e.*, far from the place where her oil-lamp of life was kept. The flame at B— was flickering for some time during her last illness, as was observed by many at that time, notwithstanding all the scrupulous care and precaution which her brother, his wife and other relations and friends took to feed the flame with new wicks and new oil. The flame at length was extinguished as if suddenly by a gust of wind—it is to be remembered that the niche in the wall was scrupulously guarded against any such untoward accidents by its position in the interior of the room. At that very moment she was a corpse at G— as was found from the news of her death that reached this place B— two hours and a half after.

The very same phenomenon occurred at the time of her brother, my friend, G—'s death, who died at B— in a room in his house not far from the room in which his lamp of life was kept, the cares and anxieties of his wife, who is still alive, to feed the lamp notwithstanding. He died at the age of 42 years (mark the number, which is six times the mystic number seven) and has also left one daughter and one son. It is also a strange fact that the son who is a friend of mine has (at least for the present) one son and one daughter.

The evidence as regards the accuracy of the statements made above is to me overwhelming, as there are in this town hundreds who are ready to certify to these statements as facts.

There are also other incidents connected with these life-histories which are worthy of note and which I give below, in the hope that they will give a certain clue to the kind of occult powers which the Swamy wielded.

Some years after the birth of G— and his sister, an aunt of G.'s, *i. e.*, his father's brother's wife, who had been childless, imitated the example of G—'s mother by placing a *ghi*-lamp in a niche in her room, thereby putting the Yogi's power to a test, unconscious of the danger she incurred therefrom. I trust that the brethren of our Society are now alive to the fact of the great danger one incurs when one dares to sit in judgment on the powers of a high Yogi, and arrogates to one's self the rôle of an experimentalist on him

as a *corpus vile*. Well, a few days after this tentative experiment, one night the wood-work of her niche caught fire. This time the "double-edged sword" of occultism flashed strangely and ominously, and a general conflagration ensuing, her house was burnt down. She herself subsequently and all her friends and relations attributed this her misfortune to her meddling with occult powers she had no business to, without the guidance or protection of one who knew how to manipulate them.

In connection with such an incident I must not omit to mention two partly similar incidents that happened even in G—'s house itself on different occasions. G—'s mother one night saw in a dream that the wood-work of the niche in which her two lamps were kept was burning and a general conflagration was imminent; the Swamy, she used to swear afterwards, appeared at that time to her in that dream and ordered her immediately to get up and go to the niche, *not* to attempt extinguishing the fire with water but to sing to it a certain song—a certain *Chandipāth-garbi*—that she knew in Guzerāti.\* She did as she was ordered and the fire was put out in a most mysterious manner. Exactly a similar incident happened to G—'s wife years afterwards under similar circumstances, and a great personal misfortune was thus averted in the same mysterious manner. She is still alive and swears to the truth of her statements. It is in fact impossible to conceive how these two ladies could dare to concoct such stories, for, devoted and grateful as they were to that great Swamy, they would never have attempted out of reverence and awe, nay, out of sheer fright, to tell falsehoods with reference to the great powers of their venerable *guru*—a consideration and a concession we, as students of Occultism, have every right to demand and to expect from our sceptics and scoffers who doubt the truth of, or who laugh at, our assertions regarding the powers of our Illustrious Masters.

I hear that the two lamps are still kept burning by G—'s wife and son with religious care.

I have during my inquiries regarding the powers of the Yogi come across a statement which I will here note down, but the truth of which I cannot vouch for as the evidence before me is meagre. The Swami is said to have been present in Surat when the great fire of A. D. 1837 took place, which destroyed nearly the whole of that far-famed city. When the fire was approaching the house in which he was living at the time, consuming everything before it with its "relentless tongues," his disciples asked him to leave it and betake himself to a safer spot. He "nothing daunted" stood motionless with a *lota* (brass-jug) of water, muttered some *mantras* and then went round the house once, sprinkling the water. To the utter amazement of his *Chelas* the house was quite safe, although the fire attacked all the houses in the immediate vicinity.

As far as these incidents are concerned which I have narrated in this note, we can clearly see the nature of the occult powers that the Yogi could so successfully wield—he had an extraordinary power over the spirits or elementals of fire; he could not only control their, so to speak, vagabond propensities, but could manipulate them for his own purposes. To the students of Medieval lore these fiery elementals are known as Salamanders,† and according to the notions prevalent in those ages they not only lived in fires but manifested themselves in the Will-o'-the-wisps, in volcanoes, in St. Elmo's fires on the masts of ships, in meteors and in counterfeit suns and moons (Vide Burton's *Anatomic of Melancholic*,‡ p. 122.)

This, then, is a suggestive and instructive instance of an advanced Yogi not only curbing the elementals and the elementaries, but putting them to use as so many instruments for the benefit of mankind and even establishing a mysterious connection or alliance between them and the souls of men, thereby rendering the "Lamp of Life" in the cases cited above not merely a myth, a poetical or fanciful conceit, but a palpable reality undreamt of in our modern so-called philosophies.

\* I am told that this song is an invocation to a goddess whose aid is sought by those who wish that a coming danger be averted.

† Various etymologies are given of this word; but the more plausible one is from the Greek "*Salambē*," aperture, chimney and *anēr*, man—the chimney-man, i. e., the semi-intelligent spirit of the chimney-fire.

‡ A curious old book published by an erudite scholar in the beginning of the seventeenth century to whom, as students of the history of English Literature know, Milton owed much of his inspiration, when he composed his *L'Allegro* and *Il Penseroso*.

## THE ADEPTS IN AMERICA IN 1776.

(BY AN EX-ASIATIC.)

THE following suggestions and statements are made entirely upon the personal responsibility of the writer, and without the knowledge or consent—as far as he knows—of the adepts who are in general terms therein referred to.

The reflecting mind is filled with astonishment upon reviewing the history of the rise of the United States of N. America, when it perceives that dogmatic theology has no foundation in any part of the Declaration of Independence or Constitution for the structure which it fair would raise and has so often since tried to erect within and upon the government. We are astonished because those documents were formulated and that government established at a time when dogmatism of one kind or another had supreme sway. Although the Puritans and others had come to America for religious freedom, they were still very dogmatic and tenacious of their own peculiar theories and creed; so that if we found in this fundamental law much about religion and religious establishments, we would not be surprised. But in vain do we look for it, in vain did the supporters of the iron church attempt to lay the needed corner stone, and to-day America rejoices at it, and has thereby found it possible to grow with the marvellous growth that has been the wonder of Europe.

The nullification of those efforts made by bigotry in 1776 was due to the adepts who now look over and give the countenance of their great name to the Theosophical Society.

They oversaw the drafting of the Declaration and the drawing of the Constitution, and that is why no foothold is to be found for these blatant Christians who desire to inject God into the constitution.

In the declaration, from which freedom sprang, "*nature and nature's god*" are referred to. In the 2nd and 3rd paragraphs the *natural rights of man* are specified, such as *life, liberty and the pursuit of happiness*. The king is spoken of as being unworthy to be "the head of a civilized nation," nothing being said as to whether he was the head, or worthy to be, of a *Christian* one.

In appealing to their British brethren, the declaration says the appeal is "made to their *native* justice and magnanimity." All reference to religion and Christianity or God's commands are left out. This was for the very good reason that for 1700 years religion had battled against progress, against justice, against magnanimity, against the rights of man. And in the concluding sentence the signers mutually pledge each other to its support ignoring all appeals to God.

In the constitution of 1787 the preamble declares that the instrument was made for union, for justice, for tranquillity and defence, the general good and liberty. Art. VI says no religious test as a qualification for office shall ever be required, and the 1st Amendment prohibits an establishment of religion or restraint of its free exercise.

The great Theosophical Adepts in looking around the world for a mind through which they could produce in America the reaction which was then needed, found in England, Thomas Paine. In 1774 they influenced him, through the help of that worthy Brother Benjamin Franklin, to come to America. He came here and was the main instigator of the separation of the Colonies from the British Crown. At the suggestion of Washington; Franklin, Jefferson and other Freemasons, whose minds through the teachings of the symbolic degrees of masonry were fitted to reason correctly, and to reject theological conservation, he wrote "*Common Sense*," which was the torch to the pile whose blaze burned away the bonds between England and America. For "*Common Sense*" he was often publicly thanked. George Washington wrote September 10th, 1783, to Paine: "I shall be exceedingly happy to see you. Your presence may remind Congress of your past services to this country, and if it

is in my power to impress them, command my best exertion with freedom, as they will be rendered cheerfully by one who entertains a lively sense of the importance of your works." And again in June 1784, in a letter to Madison, Washington says: "Can nothing be done in our assembly for poor Paine? Must the merits and services of 'Common Sense' continue to glide down the stream of time unrewarded by this country? His writings certainly have had a powerful effect upon the public mind. Ought they not then to meet an adequate return?"\*

In "the Age of Reason" which he wrote in Paris several years after, Paine says: "I saw, or at least I thought I saw, a vast scene opening itself to the world in the affairs of America; and it appeared to me that unless the Americans changed the plan they were then pursuing and declared themselves independent, they would not only involve themselves in a multiplicity of new difficulties, but shut out the prospect that was then offering itself to mankind through their means." Further on he says: "There are two distinct classes of thoughts; those produced by reflection, and those that bolt into the mind of their own accord. I have always made it a rule to treat these voluntary visitors with civility, and it is from them I have acquired all the knowledge that I have."

These "voluntary visitors" were injected into his brain by the Adepts, Theosophists. Seeing that a new order of ages was about to commence and that there was a new chance for freedom and the brotherhood of man, they laid before the eye of Thomas Paine—who they knew could be trusted to stand almost alone with the lamp of truth in his hand amidst others who in "times that tried men's souls" quaked with fear,—a "vast scene opening itself to Mankind in the affairs of America." The result was the Declaration, the Constitution for America. And as if to give point to these words and to his declaration that he saw this vast scene opening itself, this new order of ages, the design of the reverse side of the U. S. great seal is a pyramid whose capstone is removed with the blazing eye in a triangle over it dazzling the sight, above it are the words "the heavens approve," while underneath appear the startling sentence "a new order of ages."

That he had in his mind's eye a new order of ages we cannot doubt upon reading in his "Rights of Man," Part 2, Chap. 2, "no beginning could be made in Asia, Africa or Europe, to reform the political condition of man. She (America) made a stand not for herself alone, but for the world, and looked beyond the advantage she could receive." In Chap. 4, "The case and circumstances of America present themselves as in the beginning of a world \* \* \* there is a waning of reason rising upon men in the subject of Government that has not appeared before."

The design 'of the seal' was not an accident, but was actually intended to symbolize the building and firm founding of a new order of ages. It was putting into form the idea which by means of a "voluntary visitor" was presented to the mind of Thomas Paine, of a vast scene opening itself, the beginning in America of "a new order of ages." That side of the seal has never been cut or used, and at this day the side in use has not the sanction of law. In the spring of 1841, when Daniel Webster was Secretary of State, a new seal was cut, and instead of the eagle holding in his sinister claw 13 arrows as intended, he holds only six. Not only was this change unauthorized, but the cause for it is unknown. (†) When the other side is cut and used, will not the new order of ages have actually been established?

More than is claimed for the Theosophical Adepts than the changing of baser metal into gold, or the possession of such a merely material thing as the elixir of life. They watch the progress of man and help him on in his halting flight up the steep plane of progress. They hovered over

Washington, Jefferson, and all the other brave freemasons who dared to found a free Government in the West, which could be pure from the dross of dogmatism, they cleared their minds, inspired their pens and left upon the great seal of this mighty nation the memorial of their presence.

#### A VOICE FROM THE CASHMERE VALLEY.

POOR, poor India! few of thy lethargic sons know aught of thy miserable state. Fewer still would do their duty to thee. But who cannot if they only will? Shame in a man to be born amidst such drones, and triply so when they do not follow the lead of thy Great Representatives. Sad fate! Enough to bleed any heart. Roll on stern cycles. Fate, spin thy web, turn thy never-ceasing wheel just to prove the Wisdom and far-seeing greatness of the undying Rishis! Nought on Earth, carthy, can be eternal. The days of thy glory, dear India, were long, long over. Decay and death had fast begun to strangle thee. But, they shall not, dare not grapple thee—not at least until the last drop of blood in the veins of all her few lingering patriots is gone. ....

The storm of Reformation is beginning to blow off the chaff of the present generation and consign it to the hands of justice and her balance. In the future must be found solid grains. Whether a part of India voluntarily comes forth now to aid in this Reformation or not—before the next 21 years shall pass away, all intelligent men in India from the Himalayas to Cape Comorin are sure to be enveloped sooner or later in the atmosphere of Theosophy. The day shall come when all ye unworthy and bumptious creatures will be arraigned and made to stand at the great Tribunal to answer for your present indifference—your degraded state to which you have reduced yourselves, and then it will be too late even to repent. The sins of your selfishness shall not be visited upon your sons. Remember my last appeal—"Now or Never."

With remorse, shame and indignation I turn from thee, poor hapless country (though once thy Name was a magic spell) never even to cast a pitying glance behind, upon thee. I turn to more welcome climes—more intelligent tribes and races—quarters where there is still a remnant drop of the blood of ancient Rishis. But vain, ah, vain indeed are words! Vain, the tears of a true patriot.

#### ORIENTAL MESMERISM.

(By RAMAMRIT SAGARA BAWA.)

It may be interesting to your readers to estimate approximately the advantages of one's being able to exercise a mesmeric influence upon the senses of all present. This is vulgarly called "Joga Maya." If our positive scientists object to the possibility of such occurrences, we can only allow Ashburner Esdaile and other mesmerists to plead for us.

I know of a Brahman ascetic who has somehow tasted of some crumbs of Raja Joga, adequate to command the veneration of the public. Wherever there is real merit, there will be arrayed against it base calumny and jealousy. But our hero is of too strong a metal to yield to them.

With increasing fame, storms of danger were gathering thick around him. At last his enemies bribed two "dancing girls" (professional prostitutes), and induced them to beg of him permission to serve him for one night. He granted their request, though with some hesitation. They sang and played upon the music for a while. They then ventured to shampoo him. He consented but not before dismissing all his attendants and admirers, and having his room locked up outside. Inside he lay on a couch with the two ladies sitting on the ground at his feet. No sooner did they touch his body, then lo! they saw a monstrous cobra on the couch hissing against them. In vain they sought for the pious man. Where was he? They were chased from one corner of the room to another. They cried aloud, "save us from this inexorable vengeful beast." Those who were outside had no idea of what happened, and threw open the door, when the reptile had changed into the Sannyasi. This happened about five years ago.

A similar event occurred in a different part of the country. An Orthodox Brahman had given up the caste and his only

son. He was in a well-to-do position. Thenceforth he had to beg for alms at the doors of Mahomedans and low caste men; for the higher classes of Hindus regarded him as a "bhrashtha" (renegade). As he was a good musician, he was, like Goldsmith's poet-errant, obliged to live upon his flute. He became the favorite guest of a Nawab's harem in the neighbourhood. For a man to enter under any pretext the haram of a Mussulman family is to court the tortures of a lingering death on the spot. One day the Nawab happened to take the inmates of the harem and the man with the flute by surprise. The horror and dismay of the poor ladies is indescribable. They fell prostrate at the chieftain's feet, and frankly confessing that they were themselves the cause of this intrusion, and that the musician was innocent, they offered to die in prison, if only the ascetic's life could be spared. Up went the Nawab's sword. Away ran the terrified ladies to conceal their shame and remorse. Alone, unmoved, sat still the venerable man. As if mocking the steel and to shield himself from the Nawab's wrath, he only threw his cloth over his head and shrouded himself in it. With the tip of the sword, the Chief threw off the cloth—why, but to find there instead of the man, a huge "Adishesha" (Vishnu's Vahan, the snake Ananda) sitting in pomp on his coils. Then, for once, ignorance, wealth and power, paid at wisdom's shrine the homage due.

### WAS WRITING KNOWN BEFORE PANINI?

BY A CHELA.

I AM entrusted with the task of putting together some facts which would support the view that the art of writing was known in India before the time of our grammarian—the Siva-taught Pānini. Professor Max. Müller puts forward and maintains the contrary opinion ever since 1856, and has the approbation of other illustrious Western scholars. Stated briefly, their position is that the entire absence of any mention of "writing, reading, paper, or pen," in the Vedas, or during the whole of the Brahmana period, and the almost if not quite as complete silence as to them throughout the Sutra period, "lead us to suppose that even then [the Sutra period], though the art of writing began to be known, the whole literature of India was preserved by oral tradition only. [Hist. Sans. Lit., p. 501]." To support this theory, he expands the mnemonic faculty of our respectable ancestors to such a phenomenal degree, that like the bull's hide of Queen Dido, it is made to embrace the whole ground needed for the proposed City of Refuge, to which discomfited savants may flee when hard pressed. Considering that Professor Weber—a gentleman who, we observe, likes to distil the essence of Aryan woe down into an attar of no greater volume than the capacity of the Biblical period—admits that Europe now possesses 10,000 of our Sanskrit texts: and considering that we have, or have had, many other tens of thousands which the parsimony of Karma has hitherto withheld from the Museums and Libraries of Europe, what a memory must have been theirs!

Under correction, I venture to assume that Pānini was the greatest known grammarian in India, ranked among the Rishis and than whom there is no higher in history, whether ancient or modern: further, that contemporary scholars agree that the Sanskrit is the most perfect of languages. Therefore, when Prof. Müller affirms that "there is not a single word in Pānini's terminology which presupposes the existence of writing [Op. cit. 507], we become a little shaken in our loyal deference to Western opinion. For it is very hard to conceive how one so pre-eminently great as Pānini should have been incapable of indenting characters to preserve his grammatical system—supposing that none had previously existed—if his genius was equal to the invention of classical Sanskrit. The mention of the word *Grantha*, the equivalent for a written or bound book in the later literature of India—though applied by Pānini (in I. 3, 75) to the Veda; (in IV. 3, 87) to any work; (in IV. 3, 116) to the work of any individual author, and (in VI. 3, 79) to any work that is studied, do not stagger Prof. Müller at all: *Grantha* he takes to mean simply a composition, and this may be handed down to posterity by oral communication. Hence, we must believe that Pānini was illiterate; but yet composed the most elaborate and scientific system of grammar ever known; recorded its 3,996 Rules only upon the molecular quicksands of his "cerebral cineritious matter," and handed them over to his disciples by atmospheric vibration, *i. e.* oral teaching! Of course, nothing could be clearer; it commends itself to the

simplest intellect as a thing most probable. And in the presence of such a perfect hypothesis, it seems a pity that its author should [Op. cit. 523] confess that "it is possible" that he "may have overlooked some words in the Brāhmanas and Sūtras, which would prove the existence of written books previous to Pānini." That looks like the military strategy of our old warriors, who delivered their attack boldly but nevertheless tried to keep their rear open for retreat if compelled. The precaution was necessary: written books *did* exist many centuries before the age in which this radiant sun of Aryan thought rose to shine upon his age. They existed, but the Orientalist may search in vain for the proof amid the *exoteric* words in our earlier literature. As the Egyptian hierophants had their private code of hieratic symbols, and even the founder of Christianity spoke to the vulgar in parables whose mystical meaning was known only to the chosen few, so the Brahmins had from the first (and still have) a mystical terminology couched behind ordinary expressions, arranged in certain sequences and mutual relations, which none but the initiate would observe. That few living Brahmins possess this key but proves that, as in other archaic religious and philosophical systems, the soul of Hinduism has fled (to its primal imparters—the initiates,) and only the decrepit body remains with a spiritually degenerate posterity.\* I fully perceive the difficulty of satisfying European philologists of a fact which, upon my own statement, they are debarred from verifying. We know that from the present mental condition of our Brahmins. But I hope to be able to group together a few admitted circumstances which will aid, at least to show the Western theory untenable, if not to make a base upon which to stand our claim for the antiquity of writing. Three good reasons may be postulated for the correctness of the claim—though they will be regarded as circumstantial evidence by our opponents.

I.—It can be shown that Phœnicia was acquainted with writing from the date of the acquaintance of Western history with her first settlements: and this may be dated, according to European figures—2760 B. C., the age of the Tyrian settlement.

II.—Our opponents confess to knowing nothing whence the Phœnicians themselves got their alphabet.

III.—It can be proved that before the final division and classification of the languages, there existed two languages in every nation: (a) the profane or popular language of the masses; (b) the sacerdotal or secret language of the Initiates of the temples and mysteries—the latter being one and universal. Or, in other words, every great people had, like the Egyptians, its Demotic and its Hieratic writing and language, which had resulted first in a pictorial writing or the hieroglyphics, and later on in a phonetic alphabet. Now it requires a stretch of prejudice, indeed, to assert upon no evidence whatever that the Brahman Aryans—mystics and metaphysicians above everything—were the only ones who had never had any knowledge of either the sacerdotal language or the characters in which it was reproduced. To contradict this gratuitous assumption, we can furnish a whole array of proofs. It can be demonstrated that the Aryans borrowed no more their writing from the Hellenes or from the Phœnicians, than they were indebted to the influence of the former for all their arts and sciences. [Even if we accept Mr. Cunningham's "Indo-Grecian Period," for it lasted only from 250 to 57 B. C., as he states it.] The direct progenitor of the Vedic Sanskrit was the sacerdotal language (which has its distinct name but cannot be given). The *Vāch*—its *alter ego* or the "mystic self," the sacerdotal speech of the initiated Brahmin, became in time the mystery language of the inner temple, studied by the Initiates of Egypt and Chaldea; of the Phœnicians and the Etruscans; of the Pelasgi and Palanquans; in short, of the whole globe. The appellation DEVANAGARI is the synonym of, and identical with, the Hermetic and Hieratic NETER-KHARI (divine speech) of the Egyptians.

As the discussion divides naturally into two parts as to treatment—though a general synthesis must be the final result—we will proceed to examine the first part, namely, the charge that the Sanskrit alphabet is derived from the Phœnicians. When a Western philologist asserts that writing did not exist before a certain period, we assume that he has some approximate certitude as to its real invention. But so

\* Not only are the *Upanishads* a secret doctrine, but in dozens of other works as, for instance, in the *Aitariya Aranyaka*, it is plainly expressed that they contain *secret doctrines*, that are not to be imparted to any one but a *Dwijā Brahman*.

far is this from true, it is conceded that no one knows whence the Phœnicians learned the characters, now alleged (by Gesenius first) to be the source from which modern alphabets were directly derived. DeRouge's investigations make it extremely probable that "they were borrowed, or rather adapted from certain archaic hieroglyphics of Egypt:" a theory which the *Prisse Papyrus*, "the oldest in existence," strongly supports by its "striking similarities with the Phœnician characters." But the same authority traces it back one step farther. He says that the ascription (by the myth-makers) of the art of writing to Thoth, or to Kadmus, "only denotes their belief in its being brought from the East (Kedem), or being perhaps primeval." There is not even a certainty whether, primevally or archaically, "there were several original alphabetical systems, or whether one is to be assumed as having given rise to the various modes of writing in use." So, if conjecture has the field, it is no great disloyalty to declare one's rebellion against the eminent Western gentlemen who are learnedly guessing at the origin of things. Some affirm that the Phœnicians derived their so-called Kadmean or Phœnician writing-characters from the Pelasgians held also to have been the inventors or at least the improvers of the so-called Kadmean characters. But at the same time, this is *not proven*, they confess, and they only know that the latter were in possession of the art of writing "before the dawn of history." Let us see what is known of both Phœnicians and Pelasgians.

If we enquire who were the Phœnicians, we learn as follows:—From having been regarded as Hamites on Bible testimony, they suddenly became Semites—on geographical and philological evidence (?) Their origin begins, it is said, on the shores of the Erythrian sea; and that sea extended from the Eastern shores of Egypt to the Western shores of India. The Phœnicians were the most maritime nation in the world. That *they* knew perfectly the art of writing no one would deny. The historical period of Sidon begins 1500 B. C. And, it is well ascertained that in 1250 Sanchoniaton had already compiled from annals and State documents, which filled the archives of every Phœnician city, the full records of their religion. He wrote in the Phœnician language, and was mistranslated later on into Greek, by Philo. of Byblus, and annihilated bodily—as to his works—except one small fragment in Eusebius, the literary Siva, the *Destroyer* of all *heathen* documents that fell in his way. To see the direct bearing of the alleged superior knowledge of the Phœnicians upon the alleged ignorance of the Aryan Brahmins, one has but to turn to European Universal History; meagre though its details and possible knowledge, yet I suppose no one would contradict the historical facts given. Some fragments of Dius, the Phœnician, who wrote the history of Tyre, are preserved in Josephus; and Tyre's activity begins 1100 B.C. in the earlier part of the third period of Phœnician history, so called. And in that period, as we are told, they had already reached the height of their power: their ships covered all seas, their commerce embraced the whole earth, and their colonies flourished far and near. Even on Biblical testimony they are known to have come to the *Indies* by the *Red Sea*, while trading on Solomon's account about a millenium before the Western era. These data, no man of science can deny. Leaving entirely aside the thousand and one documentary proofs that could be given on the evidence of *our* most ancient texts on Occult Sciences, of inscribed tablets, &c., those historical events that are accepted by the Western world are only here given. Turning to the Mahabharat, the date of which—on the sole authority of the fancy lore drawn from the inner consciousness of German scholars, who perceive in the great epic poem proofs of its modern fabrication in the words "Yavana" and others—has been changed from 3300 years to the first centuries after Christ (!)—we find: (1) ample evidence that the ancient Hindus had navigated (before the establishment of the caste system) the open seas to the regions of the Arctic Ocean and held communication with Europe; and (2) that the Pandus had acquired universal dominion and *taught the sacrificial mysteries to other races* (see Mahabharat, Book 14). With such proofs of international communication, and more than proved relations between the Indian Aryans and the Phœnicians, Egyptians and other literate people, it is rather startling to be told that our forefathers of the Brahmanic period *knew nothing* of writing.

Admitting for the argument only that the Phœnicians were the sole custodians of the glorious art of writing; and

that as merchants they traded with India; what commodity, I ask, could they have offered to a people led by the Brahmans so precious and marketable as this art of arts, by whose help the priceless lore of the Rishis might be preserved against the accidents of imperfect oral transmission? And even if the Aryans learned from Phœnicia how to write—to every educated Hindu an absurdity—they must have possessed the art 2,000 or at least 1,000 years earlier than the period supposed by Western critics. Negative proof, perhaps? Granted: yet no more so than their own, and most suggestive.

And now we may turn to the Pelasgians. Notwithstanding Niebuhr's rebuke who, speaking of the historian in general, shows him as *hating* "the spurious philology, out of which the pretences to knowledge on the subject of such extinct people arise," the origin of the Pelasgians is speculated upon to have been either that of (a) swarthy Asiatics (*Pell-asici*) or from some mariners—from the Greek *Pelagos*, the sea; or again to be sought for in the Biblical *Peleg*! The only divinity of their Pantheon known well to Western History is Orpheus, also the "swarthy," the "dark-skinned;" represented for the Pelasgians by *Xoanon*, their "Divine Image." Now if the Pelasgians were Asiatics, they must have been either Turanians or Semites, or—Aryans. That they could not be the former, and *must* have been the last-named, is shown on Herodotus' testimony, who declared them the forefathers of the Greeks—though they spoke, as he says, "a most barbarous language." Further, *unerring* philology shows that the vast number of roots common both to Greek and Latin, are easily explained by the assumption of a common Pelasgic linguistic and ethnical stock in both nationalities. But then how about the Sanskrit roots traced in the Greek and Latin languages? The same roots must have been present in the Pelasgian tongues? We who place the origin of the Pelasgi far beyond the Biblical ditch of historic chronology, have reasons to believe that the "barbarous language mentioned by Herodotus was simply "the primitive and now extinct Aryan tongue" that preceded the Vedic Sanskrit. Who could they be, these Pelasgians? They are described generally on the meagre data in hand as a highly intellectual, receptive, active and simple people, chiefly occupied with agriculture; warlike when necessary, though preferring peace. We are told that they built canals, subterranean water-works, dams, and walls of astounding strength and most excellent construction. And their religion and worship originally consisted in a mystic service of those natural powers—the sun, wind, water, and air (our *Soorya*, *Maruts*, *Varuna* and *Vayu*), whose influence is visible in the growth of the fruits of the earth, moreover, *some of their tribes were ruled by priests, while others stood under the patriarchal rule of the head of the clan or family*. All this reminds one of the nomads, the Brahmanic Aryas of old under the sway of their Rishis, to whom were subject every distinct family or clan. While the Pelasgians were acquainted with the art of writing, and had thus "a vast element of culture in their possession before the dawn of history," we are told (by the same philologists) that *our* ancestors knew of no writing until the dawn of Christianity!

Thus the Pelasgic language, that "most barbarous language" spoken by this mysterious people, what was it but Aryan: or rather, which of the Aryan languages could it have been? Certainly it must have been a language with the same and even stronger Sanskrit roots in it than the Greek. Let us bear in mind that the *Æolic* was neither the language of *Æschyles*, nor the Attic, nor even the old speech of Homer. As the Oscan of the "barbarous" Sabines was not quite the Italian of Dante nor even the Latin of Virgil. Or has the Indo-Aryan to come to the sad conclusion that the average Western Orientalist will rather incur the blame of ignorance when detected than admit the antiquity of the Vedic Sanskrit, and the immense period that must have elapsed between this comparatively rough and unpolished tongue—when compared with the classical Sanskrit—and the palmy days of the "extinct Aryan tongue?" The *Latium Antiquum* of Pliny, and the *Æolic* of the Autochtones of Greece present the greatest kinship, we are told. They had a common ancestor; the Pelasgian. What then, the parent tongue of the latter unless it was the language "spoken at one time by all the nations of Europe—before their separation?" In the absence of all proofs to the contrary, it might have been expected that the Rik-Brahmanas, the *Māhabharata* and every *Nirukti* should not be treated as flippantly as they now are. It is admitted that however inferior to the

classical Sanskrit of Pānini—the language of the oldest portions of Rig-Veda, notwithstanding the antiquity of its grammatical forms, is the same as that of the latest texts. Every one sees—cannot fail to see and to know—that for a language so old and so perfect as the Sanskrit to have survived alone, among all languages, it must have had its cycles of perfection and its cycles of degeneration. And, if one had any intuition, he might have seen that what they call a “dead language” being an anomaly, a useless thing in nature, it would not have survived, even as a “dead” tongue, had it not its special purpose in the Reign of immutable Cyclic Laws; and that Sanskrit which came to be nearly lost to the world is now slowly spreading in Europe, and will one day have the extension it had thousand upon thousand of years back—that of a *universal language*. The same as to the Greek and the Latin: there will be a time when the Greek of Æschylus (and more perfect still in its future form) will be spoken by all in Southern Europe while Sanskrit will be resting in its periodical *pralaya*; and the Attic will be followed later by the Latin of Virgil. Something ought to have whispered to us that there was also a time—before the original Aryan settlers marred the purity of the sacred Sanskrita Bhashya among Dravidian and other aborigines admitted within the fold of Brahmanical initiation—when Sanskrit was spoken in all its unalloyed subsequent purity and therefore must have had more than once its rises and its falls. The reason for it is simply this: classical Sanskrit was only *restored*, if in some things perfected by Pānini. Neither Pānini, Katyayana or Patanjali created it; it has existed throughout cycles and will pass through other cycles still.

Professor Max Müller is willing to admit that a tribe of Semitic nomads, fourteen centuries before the year 1 of the Westerns—knew well the art of writing, and had their *historically and scientifically proven* “book of the covenant and the tables ‘with the writing of God upon them.’” Yet the same authority tells us that the Aryans could neither read nor write until the very close of the Brahmanic period. “No trace of writing can be discovered (by the philologists) in the Brahmanical literature before the days of Pānini.” Very well, and now what was the period during which this Siva-taught sage is allowed to have flourished? One Orientalist (Böhtlingk) refers us to 350 B. C., while less lenient ones like Professor Weber, land the grammarian right in the middle of the second century of the Christian era! Only after fixing Pānini’s period with such a remarkable agreement of chronology (other calculations ranging variously between 400 B. C. and 460 A. D.), the Orientalists place themselves inextricably between the horns of a dilemma. For whether Pānini flourished 350 B. C. or 180 A. D., he could not have been illiterate; for, *firstly*, in the *Lalita Vistara*, a canonical book recognized by the Sanskritists, attributed by Max Müller to the *third* Buddhist council (and translated into Tibetan) our Lord Buddha is shown as studying, besides Devanagari, 63 other alphabets specified in it as being used in various parts of India; and *secondly*, though Megasthenes and Nearchus do say that in their time the laws of Manu were not (popularly) reduced to writing,—(*Strabo* XV, 66 and 73) yet Nearchus describes the Indian art of making paper from cotton. He adds that the Indians wrote letters on cotton twisted together (*Strabo* XV, 53 and 67). This would be late in the Sutra period, no doubt, according to Professor Müller’s reasoning. Can the learned gentleman cite any record within that comparatively recent period showing the name of the inventor of that cotton-paper and the date of his discovery? Surely so important a fact as *that*, a novelty so transcendently memorable, should not have passed without remark. One would seem compelled, in the absence of any such chronicle, to accept the alternative theory—known to us Aryan students as fact—that writing and writing-materials were, as above remarked, known to the Brahmans in an antiquity inconceivably remote—many centuries before the epoch made illustrious by Pānini.

Attention has been asked above to the interesting fact that the God Orpheus, of “Thracia,” (?) is called the “dark-skinned”. Has it escaped notice that *he is* “supposed to be the Vedic Ribhu or Arbhu, an epithet both of Indra and the Sun.”\* And if he was “the inventor of letters,” and is “placed anterior to both Homer and Hesiod,” then what? That Indra taught writing to the Thracian Pelasgians under

the guise of Orpheus,\* but left his own spokesmen and vehicles, the Brahmans, illiterate until “the dawn of Christianity”? Or that the gentlemen of the West are better at intuitional chronology than conspicuous for impartial research? Orpheus was—in Greece—the son of Apollo or Helios—the sun-god, according to corrected mythology, and from him received the phorminx or lyre of *seven*, strings, *i. e.*,—according to occult phraseology—the seven-fold mystery of the Initiation. Now Indra is the ruler of the bright firmament, the disperser of clouds, “the restorer of the sun to the sky.” He is identified with Arjuna in the *Samhita* and *Sattapatha Bramana* (although Prof. Weber denies the existence of any such person as Arjuna, yet there was indeed one), and Arjuna was the Chief of the Pandavas; † and though Pandu the *white* passes for his father, he is yet considered the son of Indra. As throughout India all ancient cyclopean structures are even now attributed to the Pandavas, so all similar structures at the West were anciently ascribed to the Pelasgians. Moreover, as shown well by Pococke—laughed at because too intintional and *too* fair though, perchance less, philologically learned—the Pandavas were in Greece, where many traces of them can be shown. In the Mahabhārata, Arjuna is taught the occult philosophy by Krishna (personification of the Universal Divine Principle); and the less mythological view of Orpheus presents him to us as “a divine bard or priest in the service of Zagreus. . . founder of the Mysteries” . . . the inventor “of everything, in fact, that was supposed to have contributed to the civilisation and initiation into a more humane worship of the deity \* \* \*.” Are not these striking parallels; and is it not significant that in the cases of both Arjuna and Orpheus the sublimer aspects of religion should have been imparted along with the occult methods of attaining it by masters of the mysteries? Real Devanagari—non-phonetic characters—meant formerly the outward signals, so to say, *the signs used in the intercommunication between gods and initiated mortals*. Hence their great sacredness and the silence maintained throughout the Vedic and the Brahmanical periods about any object concerned with, or referring to, reading and writing. It was *the* language of the Gods. If our Western Critics can only understand what the Ancient Hindu writers meant by *Bhūtalipi*, so often mentioned in their mystical writings, they will be in a position to ascertain the source from which the Hindoos first derived their knowledge of writing.

A secret language, common to all schools of occult science once prevailed throughout the world. Hence—Orpheus learnt “letters” in the course of his initiation. He is identified with Indra; according to Herodotus he brought the art of writing from India; his swartlier complexion than that of the Thracians points to his Indo-Aryan nationality—supposing him to have been “a bard and priest” and not a god; the Pelasgians are said to have been born in Thracia; they are believed (at the West) to have first possessed the art of writing, and taught the Phœnicians; from the latter all modern alphabets derive. I submit, then, with all these coincidences and sequences, whether the balance of proof is on the side of the theory that the Aryans transmitted the art of writing to the people of the West; or on the opposite, and wholly unsupported, one that they, with their caste of scholarly Brahmans, their noble secret sacerdotal and “barbarous” popular vernacular—in the high antiquity, their redundant, high-class literature, their acquaintance with the most wonderful and recondite potentialities of the human spirit—were illiterate until generations upon generations before the era of Pānini the grammarian and last of Rishis. When the famous theorists of the Western colleges can show us a river running from its mouth back to its spring sources in the mountain nullahs, then

\* According to Herodotus the Mysteries were actually brought from India by Orpheus.

† Another proof of the fact that the Pandavas were, though Aryans not Brahmans, and belonged to an Indian tribe that preceded the Brahmans and, were later on *Brahmanized*, and then outcasted and called *Mee-shas*, *Yavanas* (*i. e.*, foreign to the Brahmans) is afforded in the following: Pandu has two wives: and “it is not Kunti his lawful wife, but Madri his most beloved wife,” who is burnt with the old king when dead, as well remarked by Prof. Max Müller, who seems astonished at it without comprehending the true reason why this is. As stated by Herodotus (V. 5), it was a custom amongst the Thracians to allow the most beloved of a man’s wives to be sacrificed upon his tomb; “and” Herodotus (IV. 17) “asserts a similar fact of the Scythians and Pausanias (IV. 2) of the Greek.” (Hist. Sans. Lit. p. 48). The Pandavas and the Kuravas are called esoterically *cousins* in the Epic poem, because they were two distinct yet Aryan tribes and represent two nations—not simply two families.

may we be asked to believe their theory of Aryan illiteracy. The history of human intellectual development shows that humanity always passes through the stage of ideography or pictography before attaining that of cursive writing. It therefore remains with the Western critics who oppose the antiquity of Aryan Scriptures to show us the pictographic proofs which support their position. As these are notoriously absent, it appears they would have us believe that our ancestors passed immediately from illiteracy to the Devanagari characters of Panini's time.

Let the Orientalists bear in mind the conclusions drawn from a careful study of the Mahābhārata by Muir in his Sanskrit Texts (Vol. I. pp. 390, 480 and 482). It may be conclusively proven on the authority of the Mahābhārata that the *Yavanas* (of whom India as alleged knew nothing before the days of Alexander!) belong to those tribes of Kshatriyas who in consequence of their non-communication with, and in some cases rejection by the Brahmins, had become from *twice-born*—“*Vrishalas*,” *i. e.* made *outcastes* (*Mahabharatu Anusasanaparvam v. v. 2103 F.*) “*Sakah yavana-Kambojas tastah kshatriya jalayah Vrishalatvam parigatah brahmananam adarsana (Dravidas cha Kalindus cha Pulindas chapy usinarah) kalisarpa Mahishakas tas tah kshatriya-jatayah ityadi.*” The same reference may be found in verses 2158-9. The Mahābhārata shows the *Yavanas* descended from Turvasu—once upon a time Kshatriyas, subsequently degraded into *Vrishalas*. Harivansa shows when and how the *Yavanas* were excommunicated. It may be inferred from the account therein contained of the expedition against Ayodhya by the *Yavanas* and the subsequent proceedings of Sagara that the *Yavanas* were, previous to the death of the said expedition, Kshatriyas subject to the Government of the powerful monarchs who reigned at Ayodhya. But on account of their having rebelled against their sovereign and attacked his Capital, they were excommunicated by Sagara who successfully drove them out of Ayodhya, at the suggestion of Vasishtha who was the Chief minister and Guru of Sagara's father. The only trouble in connecting the Pelasgians with, and tracing their origin to the Kshatriyas of Rajputana, is created by the Orientalist who constructs a fanciful chronology, based on no proof, and showing only unfamiliarity with the world's real history, and with Indian History within historical periods.

The value of that chronology—which places virtually the “primitive Indo-Germanic-period” before the ancient Vedic period (!)—may, in closing this article be illustrated with a final example. Rough as may be the calculations offered, it is impossible to go deeper into any subject of this class within the prescribed and narrow limits of a magazine article, and without recourse to data not generally accessible. In the words of Prof. Max Müller:—“The Code of Manu is almost the only work in Sanskrit literature which, as yet, has not been assailed by those who doubt the antiquity of everything Indian. No historian has disputed its claim to that early date which had from the first been assigned to it by Sir William Jones.” (p. 61, *Hist. Sans. Lit.*) And now, pray, what is this extremely “early date.?” “From 880 to 1280 B. C.”—we are told. We will then, for the present purpose, accept this authoritative conclusion. Several facts, easily verifiable, have to be first of all noticed: (1st) Manu in his many enumerations of Indian races, kingdoms and places, *never once mentions Bengal*: the Aryan Brahmins had not yet reached in the days when his *Oode* was compiled the banks of the Ganges nor the plains of Bengal. It was Arjuna who went first to *Banga* (Bengal) with his sacrificial horse. [*Yavanas* are mentioned in *Rajdharna Anasasanika Parva* as part of the tribes peopling it.] (2) In the *Ayun* a list of the Hindu kings of Bengal is given. Though the date of the first king who reigned over *Banga* cannot be ascertained, owing to the great gaps between the various dynasties; it is yet known that Bengal ceased to be an independent Hindu kingdom from 1230 after Christ. Now if, disregarding these gaps, which are wide and many, we make up the sum of only those chronological periods of the reign of the several dynasties that are preserved by history, we find the following:—

24.	Kshatriya families of Kings reigned for a period of	2,418	years.
9.	Kaista Kings	250	”
11.	Of the Adisur families	714	”
10.	Of the Bhopal family	689	”
10.	Of the Pala dynasty (from 855 to 1040, A. D.)	185	”
10.	The Vaidya Rajaha	137	”

Years, 4393

If we deduct from this sum 1230, we have 3163 years B.C. of successive reigns. If it can be shown on the unimpeachable evidence of the Sanskrit texts that some of these reigns happened *simultaneously*, and the line cannot therefore be shown as successive (as was already tried) well and good. Against an arbitrary chronology set up with a predetermined purpose and theory in view, there will remain but little to be said. But if this attempt at reconciliation of figures is shown simply as in every other case claimed upon “critical, internal evidence,” then, in the presence of these 3,163 years of an unbroken Hindu line of powerful and mighty kings the Orientalists will have to show, a very good reason why the authors of the Code of Manu seem entirely ignorant even of the existence of Bengal—if its date has to be accepted as not earlier than 1280 B. C. ! A scientific rule, which is good enough to apply to the case of Panini, ought to be valid in other chronological speculations. Or, perhaps, this is one of those poor rules which will *not* “work both ways?”

#### A HINDU LOYALIST OF PONDICHERRY.

The following is translated from a French Colonial monthly. The event was mentioned by several European officials of the little French colony; and as usual never seemed to have reached the right ears.

“There lives, at Pondicherry, a Hindu, known by the name of Sundira Poullé, who exists with his numerous family upon a modest annual pension of 3,000 francs, (or something like Rupees 100 per month). His grandfather has spent 12,000,000 of francs (48 *lacks* of Rupees) for France; and Sundira Poullé waits, in great want, that France should kindly remember that one of the richest families of India ruined itself for the honour of her banner.

“*This is history.*”

“In 1793 the English were besieging Pondicherry from Godaloor and the sea. This unfortunate city so famous for its tried loyalty to France, kept defending herself with the energy of despair. She had no help to expect from her mother-land, for France was herself struggling against foreign coalition.

“One day the defenders of Pondicherry found themselves unable to repel the English attack. They had powder but had no projectiles left. Every bit of iron available in the town had been sent to the red-coats: iron railings around public monuments, the spires and crosses of the churches, all had been melted for canon balls.

“A counsel of war had assembled. The Governor and the old soldiers assembled were weeping in powerless rage at the thought of surrendering. There were present at the counsel old chums of Lally Tollandal, of Duplex, and of Mahe de la Bourdanna. It was a hard thing for these brave warriors to abandon old Pondy, the city of Palaces, as it is called on the coast of Coromandel.

“Suddenly a Hindu sends word to ask admission. He has something to say to the members of council. He is introduced. It is the headman of the caste of the Vellala of Pondicherry, the richest man of all the French territory. It was Sundira Poullé's grandsire.

—“Gentlemen,” he simply says,—“learning that you were short of ammunitions, and that a surrender had thereby become imminent, I ordered 50 boxes full of coined money in rupees to be transported to the fortifications. Don't you think it may make excellent grape shot?”

“At these words the whole Council room burst into thundering applause. It was decreed that the headman of the Vellalas had well deserved the thanks of the nation. Every one returns to his post at the fortifications, and the defence is pursued with renewed enthusiasm. For twenty consecutive days the English were pelted with gold and silver bullets.

“The convention, moved by such an act of patriotic devotion, ordered as a national reward that the sums thus used for the French canon should be restituted to the Hindu who had offered them. The Minister of the

Finances, Roland, liquidated by transaction the sum to be returned at 10 millions of francs. But the payment was never ordered. The great chief of the Vellalas, too proud to claim the debt due to him, died in comparative poverty, and his grandson Sundira Poullé, is now living in a condition neighbouring destitution, and in a town in which his family fell off from the highest ranks only for having too well loved and too well served France.

"It is true that Sundira Poullé's grandsire has received for himself and his heirs to the end of times the remarkable privilege of carrying the cane with a golden knob on it.

"It is sad to confess; but the English would have made the reward equal to such great devotion.

"It is not that we are less generous than our neighbours. But, for the last sixty years we have no politics either exterior or colonial, we have not even a Government; we are an administrative system—and all know that in good administration, all the science consists in forcing the payment of the contributions and in raising the salary of the functionaries—those of ten to fifteen, those of fifteen to twenty; as to acts of devotion and heroism, they are figured by sum of francs fifty of gratification."

(*Bulletin de la Société Française pour la protection des Indigènes des colonies, No. 1 Mars 1882,—Paris.*)

EDITOR'S NOTE.—We are happy and proud to say that the Theosophical Society now counts Mr. Sundira Poullé, the grandson of the generous patriot as one of its members. He is the President of the "SOCIÉTÉ THEOSOPHIQUE DE PONDICHERY."

#### SOME SCIENTIFIC QUESTIONS ANSWERED.

[A letter was recently received by the Editor from one of our most eminent Australasian Fellows, asking some questions in science of such importance that the replies are, with permission, copied for the edification of our readers. The writer is a Chela who has a certain familiarity with the terminology of Western science. If we mistake not, this is the first time that the rationale of the control exercised by an Adept Occultist over the relations of atoms, and of the phenomena of the "passage of matter through matter," has been so succinctly and yet clearly explained.—*Ed.*]

#### REPLIES TO PROF. ———'S QUESTIONS.

(1) The phenomenon of "osmosing" (extracting. *Ed.*) your note from the sealed envelope in which it was sewn with thread, and substituting for it his own reply, without breaking either seal or thread, is to be considered first. It is one of those complete proofs of the superior familiarity with and control over atomic relations among our Eastern Adepts as compared with modern Western men of science, to which custom has made me familiar. It was the same power as that employed in the formation of the letter in the air of your room at ———; in the case of many other air-borne letters; of showers of roses; of the gold ring which leaped from the heart of a moss-rose while held in ———'s hand; of a sapphire ring doubled for a lady of high position here, a short time ago, and of other examples. The solution is found in the fact that the "attraction of cohesion" is a manifestation of the Universal Divine Force, and can be interrupted and again set up as regards any given group of atoms in the relation of substance by the same Divine power as that localised in the human monad. Atma, the eternal spiritual principle in man, has the same quality of power over brute force as has the Universal Principle of which it is a part. Adeptship is but the crown of spiritual self-evolution, and the powers of spirit develop themselves successively in the ratio of the aspirant's progress upward, morally and spiritually. This you see is to place our modern Evolution Theory upon a truly noble basis, and to give it the character of a lofty spiritual, instead of a debasing materialistic, philosophy. I have always felt sure of the warm approval of the most intuitional of your Western men of science when they should come to take this view of our Aryan Arhat Science.

You should not find much difficulty in drawing the line between the "Spook" and the "Adept." The latter is a living man often fit to stand as the grandest ideal

of human perfectibility; the former is but undissolved congeries of atoms recently associated in a living person as his lower—or better, his coarser, and more materialistic—corporeal envelopes; which during life were confined in the outermost shell, the body, and after death released to linger for a while in the astral (Etheric or *Akasic*) strata nearest the earth's surface. The law of magneto-vital affinities explains the attraction of these "shells" to places and persons; and if you can postulate to yourself a scale of *psychic specific gravity*, you may realise how the greater density of a "soul" weighted with the matter of base (or even unspiritual, yet not animal) feelings would tend to impede its rising to the clear realm of spiritual existence. Though I am conscious of the imperfection of my scientific exigesis, I feel that your superior capacity for apprehending natural laws, when a hint has been given, will fill all lacunæ.

Note that no Adept even can disintegrate and reform any organism above the stage of vegetable: the Universal *Manas* has in the animal begun and in man completed its differentiation into individual entities: in the vegetable it is still an undifferentiated universal spirit, informing the whole mass of atoms which have progressed beyond the inert mineral stage, and are preparing to differentiate. There is movement even in the mineral, but it is rather the imperceptible quiver of that Life of life, than its active manifestation in the production of form—a ramification which attains its maximum not, as you may suppose, in the stage of physical man, but in the higher one of the Dhyan Chohans, or Planetary Spirits, *i. e.*, once human beings who have run through the scale of evolution, but are not yet re-united, or coalesced with Parabrahma, the Universal Principle.

Before closing, a word more about the "passage of matter through matter." Matter may be defined as condensed Akasa (Ether); and in atomizing, differentiates, as the watery particles differentiate from superheated steam when condensed. Restore the differentiated matter to the state *ante* of undifferentiated matter, and there is no difficulty in seeing how it can pass through the interstices of a substance in the differentiated state, as we easily conceive of the travel of electricity and other forces through their conductors. The profound art is to be able to interrupt at will and again restore the atomic relations in a given substance: to pull the atoms so far apart as to make them invisible, and yet hold them in polaric suspense, or within the attractive radius, so as to make them rush back into their former cohesive affinities, and re-compose the substance. And since we have had a thousand proofs that this knowledge and power is possessed by our Adept Occultists, who can blame us for regarding as we do those Adepts as the proper masters in science of the cleverest of our modern authorities? And then, as I above remarked, the outcome of this Philosophy of the Aryan Sages is to enable humanity to refresh the moral and awaken the spiritual nature of man, and to erect standards of happiness higher and better than those by which we now govern ourselves.

The Manager has received from America a number of copies of a new edition of Col. Olcott's *People from the Other World*, which can be had, postage free, for Rs. 2. This is one of the most interesting and remarkable books ever published, and upon its original appearance caused so great an excitement that, as the *N. Y. Herald* observed, it divided public attention with the election for President. It is an account of the Author's three months' observations and scientific tests of about 500 *bhutas* ("materialised spirits," so called) at a country village in Vermont State. A large number of pictures of the *bhutas* give additional value to the work. Purchasers should bear in mind that at the time of writing Col. Olcott was ignorant of Aryan Philosophy.

## Letters to the Editor.

### CAN FEMALES BECOME ADEPTS?

Will you kindly let me know whether females can attain to adeptship, and whether female adepts exist at all?

"AN INQUIRER."

*Note.*—It is difficult to see any good reason why females should not become Adepts. None of us, Chelas, are aware of any physical or other defect which might entirely incapacitate them from undertaking the dreary ordeal. It may be more difficult, more dangerous for them than it is for men, still not impossible. The Hindu sacred books and traditions mention such cases, and since the laws of Nature are immutable, what was possible some thousand years ago must be possible now. If our correspondent had referred to the Editorial Notes, page 148, Vol. III, (Article, *Re-Incarnations in Thibet*), he would have found the existence of a female Adept hinted at—the pious Chinese Princess who, after living for ten years a married life, renounced it with her husband's consent and became a *Gelung-ma*, or Ani, i. e., a nun. She is believed to be still re-incarnating herself "in a succession of female Lamas." The late Tde-shoo Lama's sister is said to be one of such re-incarnations. From this lady-Adept, the Superior of the Nunnery on the Palte-Lake—a Tibetan pedlar of Darjeeling acknowledged to some Bengal Theosophists, who visited that place last year, to have received a talisman. That pedlar is now supposed to be dead; but those Theosophists who heard repeatedly his statement can testify to the fact. In Nepal, we all know, there is a high female Adept. And in Southern India, flourished at a recent date, another great female Initiate named Ouvaiyar. Her mysterious work in Tamil on Occultism is still extant. It is styled *Kural*, and is said to be very enigmatically written, and consequently inexplicable. In Benares too lives a certain lady, unsuspected and unknown, but to the very few to whom reference has been made in the *Theosophist* in the article "Swami Dayanand's Views about *Yoga*" (page 47, Vol. II). Further information about these few already mentioned or any other female Adepts we may know of, we do not feel at liberty to give. If our numerous correspondents would carefully go over the back Numbers of this journal, they would find many of their questions already anticipated and answered; and thus, they would save us an unnecessary travelling over the same line.

D. K. M.

### SOME QUESTIONS ON ARCHÆOLOGY.

I AM extremely thankful for the kind advice you have given me in cultivating psychometry, according to the directions given in Professor Denton's "Soul of Things," of which I shall try to avail myself in my next archæological tour. In the meantime, will you be kind enough to remove some of my doubts which have arisen from a perusal of books and reports on antiquarian subjects?

(1.) The age of Buddha:—In what year was he born? What was the era then in vogue? And when did he die? Some say that he was born (?) in 477 B. C.; and others hold, in 543 B. C.; while, on a perusal of Babu Rajendro Lal Mitter's "Buddha Gya," we find that the Chinese, Ceylonese and Burmese authorities ascribe different and earlier ages to the event. We, Theosophists, should have definite grounds with regard to this and other important ages. Why should we believe them when we have higher authorities?

(2.) The locality and Buddha's life. Where was Kapilavastu? Was it in the Basti district among the ruins and mounds of Bhovilla Tala about 15 miles north-west of Ayo-dhya? These mounds have been identified with the remains of the buildings of Buddha's parents by General Cunningham's Assistant. But this identification looks so hazy and far-fetched, that naturally some doubts arise in our mind. If Bhovilla Tala is not the remains of Kapilavastu, is there no clue to find the true one?

Where did Buddha die? Did his final *Nirvana* take place at Kusia or Kasiapore—near Sultanpore in Oudh? Was Siabad situated at the place, now known as Lahetellahet on the Rapti in Northern Oudh?

(3.) Are the readings and findings of General Cunningham, the Archæologist to the Government of India, generally correct?

(4.) Are there no other foreign travels besides those of Fa-Hian and Hiouen Thsang to help us in the tracing and discovery of old sites now lost and forgotten?

(5.) Are there no ancient Aryan buildings in existence, anterior to the age of Asoka, as the antiquarians assert?

It will be a high favor to me, if answers or clues be given me that I may conduct my researches on new lines.

P. C. MUKERJI, F. T. S.

NAINI-TAL, July 1883.

*Ed. Note.*—Our correspondent may receive sufficient information upon this subject by turning to the *Replies* to the *Queries* 7 and 8 of "An English F. T. S."—in the last, the current, and next number.

### PINDAMS AT GYA.

REFERRING to N. D. K.'s query and your reply in the *Theosophist* for June 1883, on the efficacy of funeral ceremonies, may I be permitted to ask for the explanation on the following.

It is generally believed that after death the souls of some men, owing either to their own misdeeds or the influence of evil stars, cling to this earth and wander on it, assuming at times various shapes and remaining in a state of continued unrest; and that the only way by which they can be delivered from this unhappy condition, is through the offering by some one related to them of what is commonly called *Pindam* laid at the feet of *Godadhara*, the presiding Deity of Gya. People, whose veracity can hardly be doubted, say that the ghosts very often narrate through the persons obsessed by them the tale of their sufferings, and express the desire that their friends and relatives should offer the *Pindam* with a view to their speedy deliverance.

If there is any truth in these stories, what is there in the shrine at Gya that emancipates the ghosts when their previous *karmas* require that they should still hover over the earth; why should the *reliquiæ* of the departed which, under ordinary circumstances, naturally longs to prolong its artificial existence covet its final dissolution? Is it the strong *will* of the person that offers the *Pindam*, or is there about the place itself any latent magnetic power that destroys the *reliquiæ*? It is often related that pilgrims on their way to the sacred place see the shadows of their departed relatives imploring them to offer *Pindams* for their benefit. It is also affirmed that in order to convince their relatives that their offering of *Pindam* had produced the desired effect, the ghosts sometimes promise to break the branches off some trees or a piece of cornice from some old buildings which they had haunted and in which they had resided in token of their deliverance; and that they had actually fulfilled their promise as soon as the *Pindam* was placed at the feet of *Godadhara*, the time of both the events being in due time found to correspond exactly together. It is further believed by many, that if by some accident the shrine at Gya were suffered to remain without any offerings being made to it, even for one single day, the presiding *Asura* of the place would rise from his resting place and shake the very world to its foundation.

For any reasoning person who does not blindly follow the *Shastras* it is a puzzle which he finds difficult to solve, while at the same time he can hardly help believing the stories when related by persons whose truthfulness is beyond question.

If the offerings help really in any way to destroy the Hindu *Bhuts*, can they also produce the same result upon ghosts which, while they lived on earth had neither any regard for the Hindu religion, nor had they ever heard of Gya and its *Pindam*?

A short explanation from you would be of an immense value to your Hindu readers as throwing light on one of the most mysterious ceremonies daily performed by hundreds of Hindus coming to Gya from the different parts of India and at a great cost of money and convenience.

A. HINDU,

SIMLA, }  
June 24th, 1883. }

*Editor's Note.*—The answer would be more satisfactory, we think, were it to come from some initiated Brahmin or Yogi. If we believe in *bhoots* or "shells" who have to wait in the earth's atmosphere for the slow dissolution of their *reliquiæ*, we cannot say the same of *Godadhara*. We believe the latter—as we believe all the other minor Hindu gods and goddesses—no more than the generic name assumed by a host of elementaries who play their tricks upon Eastern credulity as some spooks play theirs upon Western imagination. But this is our personal belief, for which we claim no degree of infallibility. While disbelieving

the omnipotence of Godadhara and her threats there seems no reason why we should doubt, at the same time the word of honest and truthful pilgrims when they tell us that they saw "the shadows of their departed relatives." The air is thronged with shells—the pale reflections of men and women who lived and whose *reliquiæ* are magnetically drawn to those whom they had loved on earth.

As to the efficacy of *Pindam* or *Shraddha* we deny it most emphatically. The custom of such *post-mortem* offerings having been in existence for long centuries and forming part and parcel of the Hindu religion, they produce effects, only owing to the strong belief in them of the offerers, or the *pujarees*. It is the latter who cause unconsciously the production of such phenomena. Let there only be a strong medium in the midst of pilgrims (something that happens invariably in a country so full of sensitives as India is), and the intensity and sameness of their thoughts bent constantly and simultaneously upon the object of their pilgrimago, will affect the throng of the elementaries around them. They will repeat that which they find in their friends' brains and clamour for *Pindam*. After which, following the same idea which develops in the pilgrim's thought, *i. e.*, that the offering will bring on deliverance—they, "the ghosts," will promise a sign of it, and perform the promise mechanically and unconsciously as a parrot would repeat a word, or any trained animal perform an act, led on by the superior intelligence of the master mind, that had trained it to this.

What is it that puts an end to the unrestfulness of the "Ghost?" Nothing particular, most probably: neither the magnetism of the place devoted to the *Pindam*, nor the strong will of the person who offers it; but simply the absence of any idea connected with the reappearance of the "ghost;" the firm assurance, the implicit confidence of the medium that the "ghost" having been comforted by the offering of the *Pindam* can no longer return, or feel unrestful. That's all. It is the medium's brain, his own creative power of imagination that calls forth out of the normal subjectivity into *abnormal objectivity* the ghosts that appear, except in the cases of the apparitions of *real spirits* at the moments immediately following their death. No living being, no god or goddess has the power of impeding the immutable law of nature called *karma*, especially after the death of the person that evolved it.

We would be pleased to see an infuriated *asura* shaking in its wrath "the world to its foundation." Many a day, during the invasions of and attacks upon cities by the armies of an enemy, have the shrines remained without any offering as they have often been destroyed, and yet the world moveth not. It is the prosiding and hungry, when not simply *greedy*, geniuses of the shrines, the Brahmins, who need the *Pindam*, we should say, more than the Godadharas and the *omnia gatherum* of such. The masses claimed for the quieting of the souls of Christian ghosts paid in hard cash instead of being rewarded mostly in nature are of the same kind and efficacy. And if we are asked to give our honest opinion upon both the modes adopted by the priests of every religion to make the living spend their money in useless ceremonies upon their dead, we say, that both means are in our sight no better than a legal and authorized extortion, the tribute paid by credulity to cunning. Change the name and the story is told of civilized Christians as it is of half-civilized Hindus. But—*Mundus vult decipi*—and who can prevent a willing man from hanging himself!

### THE EFFICACY OF FUNERAL CEREMONIES.

In the editorial note on page 221 of the June No. of the *Theosophist*, the following remarks occur. "But rites and ceremonies as proscribed by our respective Churches and Theologians are an after-thought of the priest, an outgrowth of the theological and clerical ambition, seeking to impress upon the laity a superstition, a well-paying awe and dread of a punishment of which the priest himself knows nothing beyond mere speculative and often very illogical hypotheses." Further on it is said that "Nowhere will one find in the oldest books the injunction of the ceremonies in use." Perhaps not in the oldest books on Zoroastrianism, but certainly these funeral rites are mentioned and mentioned prominently as one of the five duties of a Grihastha in every book, in the very oldest works on Hinduism, not excepting the Vedas. Of course the ruinous expenditure on funeral ceremonies lamented by the learned correspondent (as the ruinous expenditure on occasions of marriage, &c. among the Hindus) is due to the vicious motive of appearing respectable in the eyes of their neighbours, and perhaps also to the folly of complying with the extortions of sham-priests, and therefore cannot be too strongly deprecated. Manu says "As many balls of rice as a Brahman unlearned in the Vedas eats in a funeral ceremony, so many red-hotballs do the Pitris swallow in the next world." But if it is a pious and learned Brahman who, in the funeral ceremonies, places himself *en rapport* with the spirits of the departed, the said spirits are said to live long and happily in the Deva Loka. Nowhere is it said that the Pitris by funeral ceremonies attain Brahma Loka (that is, Moksha or Nirvana). Hence it seems probable that Adepts or true-priests can prolong the life of the principles residing in Devachan and perhaps make such life happier.

As to the objections that "the correct comprehension of the law of Karma is entirely opposed to the idea, and that the next of kin cannot interfere with the Karma of the departed one," I respectfully submit the following explanations: 1st. That it is not necessary that the nearest of kin should perform

the ceremonies, but as a rule he performs, as he will take the greatest interest in the welfare of the departed: a pupil and even a stranger might perform them with efficacy. 2nd. That the karma of the departed might be such that a true priest or Adept is willing to be present at the funeral ceremonies and thus lengthen the life of the departed in Deva Loka. In fact, I could find no greater opposition to the law of Karma than when an Adept takes care of the moral and spiritual welfare of a Chela in this life.

The examples of Buddha, Zoroaster and Moses, are, in my humble opinion, irrelevant, as they were persons who had conquered their lower principles during life and so require no funeral ceremonies. As a remarkable coincidence, no funeral ceremonies proper are performed on the death of a Sannyasi, and no pollution is observed even by his nearest relations, as a true Sannyasi will, at the moment of death, be contemplating the Divine Spirit and not letting his lower nature to be thinking about his nearest relations.

The performer of funeral ceremonies, should not wear any caste-marks. No mutilations or sheddings of blood are allowed, not even the cleaning of teeth by very hard rubbing. The priest who officiates should fast until the next morning and purify himself.

Practically now-a-days, the performance of funeral ceremonies does more harm than good, as true priests are very rare and sham-priests abound. But in principle, I submit that the performance of funeral ceremonies with the aid of a pious and learned priest does good to the departed. I therefore invite the opinions of learned Brother Hindus and Parsees on the subject.

T. SATHASIVA IYER, B. A., B. L.,  
F. T. S.

[To this we answer by printing the following letter just received.—*Ed.*]

Now that the question of funeral ceremonies has become so important, may I venture to place before the readers of the *Theosophist* the views of Agastya Rishi (the chief of South Indian Yogis) embodied in a Tamil work called "Agastya Pooja Vidhi." It purports to be an *Upadesa* to Pulastya, one of the *Sapta Rishis*. It consists of seven stanzas of eight lines each, where he unequivocally denounces the *pindam*, *tarpanam*, and *amavasi* ceremonies, asserting that all these terms signify *Yogam*; and gives the esoteric meaning of *Amavasi*. He splits the word into the well-known mystic syllables of akara—makara—vakara—sikaram. He adds that "Initiates alone can interpret the Vedas, and they know what *tarpana*, &c., really are; no wise man shall therefore do as the priest-ridden mob does."

The *Vidhi* opens with the following stanza:—

“உண்டான மாதாவும் பிதாவும் அண்டா  
லுத்தமனே தேவணங்க ளெங்கேசெய்தோம்  
பண்டான சரிதையோடு கிரியைக்கெல்லாம்  
பரிசுகெட்ட நிலைவாலே நீரிதைத்துக்  
கொண்டாடித் தற்பணங்கள் செய்வோமென்று  
குருடரப்பா வெள்ளோடு தண்ணீர்வார்ப்பார்  
தெண்டனிடுவார் கோவிற்றேறும்சென்று  
தேரமற் றெளிவில்லாதலைவாரப்பர்.”

TRANSLATION.

("O *Uttama*! If the father and mother, who were but born, die, why should we perform ceremonies? It is the blind who, relying on their feeble memory so-called and boasting of the *tarpanas* they perform, pour water and gingely seed with all the time-honored *shraddha* and wander from temple to temple, but withal become not a whit wiser for it.")

S. M. CHINESINGH, F. T. S.

### AN AMERICAN BROCKEN SPECTRE.

I FIND the following in *The Times of India* of the 25th ultimo, p. 17. Can you please explain it? "The strange apparition of the Brocken, so frequently seen in the Hartly mountains, seems to have paid a visit to the United States. At least Mr. R. A. Marr, of the Coast and Geodetic Survey, reports that he has witnessed this atmospheric phenomenon in the Tonjabe Range, in Nevada. In describing its appearance he says:—'Suddenly as I stood looking over the vast expanse beneath me, I saw myself confronted by a monster figure of a man standing in the mid-air before me, upon the top of a clearly defined mountain peak, which had beat the thin air of the valley below for a resting place. The figure was only a short distance from me. Around it were two circles of rainbow light and colour, the outer one faintly defined as compared with the inner one, which was bright and clear and distinctly iridescent. Around the head of the figure was a beautiful halo of light, and from the figure itself shot rays of colour normal to the body. The sight startled me more than I could now tell. I threw up my hands in asto-

nishment, and perhaps some little fear, and at this moment the spectre seemed to move towards me. In a few minutes I got over my fright, and then after the figure had faded away, I recognised the fact that I had enjoyed one of the most wonderful phenomena of nature. Since then we have seen it once or twice from Jeff. Davis Peak, but it never created such an impression upon me as it did that evening when I was doing service as a heliotrope on the top of Arc Dome."

P. T. SRINIVASINGAR, B. A., F. T. S.

What is there to explain in this? A most interesting, yet very natural phenomenon explained on the same principle as that of Broken.—*Ed.*

#### SPECIMENS TO EXCHANGE.

I HAVE found the fossil head of the extinct marsupial Lion *Thylacaleo Carnifex*, a unique and very interesting specimen; I am anxious to exchange the "casts" with any class of museum specimens for my free museum open every day in the year. I have also a large number of other Fossil Bones, Fern Impressions, Shells, &c. to exchange for Birds, Shells, Fossils, Insects, &c.; also Phanerogamia specimens. If one of our brothers would kindly undertake to receive specimens and my exchanges and to keep them in his charge until they would be sent off in lots to their respective addresses, that would facilitate the work, and save expense.

Range Nursery, C. H. HARTMANN, F. T. S.  
TOOWOOMBA, QUEENSLAND,  
Australia.

#### ARNE SAKNUSSEMM.

HAVING just received the *Theosophist* for June, I find on page 234 a letter from one signing himself "A Junior Student," and headed—"An explanation wanted." I now beg you will allow me a few remarks upon the subject, which may, perhaps, prove of a certain importance. Seven or eight years ago, in one of Jules Verne's works (I forget the title), I read the following: A *savant* finds in an old book verses in Runic characters that his nephew alone can decipher. These verses contain the proof that an old alchemist Arne Saknussem, burnt alive by the Holy Inquisition, had performed a voyage into the interior of the earth *via* the crater of a volcano in Greenland, &c. &c.; a voyage undertaken later on by the uncle and nephew. This old alchemist, among other extraordinary feats, was the inventor of the double "M." written in Runic characters in a peculiar way. It will be easy to verify the statements, and in case they are found correct, to put down "A Junior Student" as he deserves—for his impertinence.

PEKALONGON, F. de TENNEGELL, F. T. S.  
I. of Java, 7th July.

*Editor's Note.*—We thank our Java brother for the information. We have read this work of Jules Verne along with all his other works of scientific fiction as they have appeared; but since one reads certainly not a romance for the sake of its action, descriptions, and analysis of human nature, the names of the fictitious personages used as crystallizing points, or "motor-centres," by the author are soon forgotten. We did our best to give "Junior Student" facts we presumed he actually wanted; and we hope our Editorial "Note" edified him. But if the party in question got his alchemist out of Jules Verne's romance, and put his query in a spirit of quizzing, it would only show that he is yet a very junior student, indeed, who has, moreover, a very puerile notion of a joke; and when he blooms into a "Senior," or a graduate, he will discover what a simpleton he made of himself. The proverb tells us to "Answer a fool according to his folly;" but in this instance our sober answer profited others perchance, if not him. But, perhaps, we do the lad injustice. He may have sent his questions in good faith.

#### THE ADI BRAHMA SAMAJ.

I AM glad that Babu Raj Narain Bose has come to the front. *Theosophy* being the Science at the bottom of all Theologies, his advice to keep them apart becomes unmeaning. Bigoted adherence to one's beliefs is bad as precluding the acceptance of possibly truer beliefs than one holds. But any one can speak out and publish his opinions as *his having them open to correction*; and so far it may be a duty of the brotherhood of man. But bigoted proselytism is a Disease or else—a Deceit. The Hindus believe in an Impersonal Infinite, but work to reach it through the Personal Finite, beginning with finite objects in nature and passing through images inspired by Gurus and Hierophants to self-illumination. Brahmanism classes men according to their inherited aptitudes into *Varnam*, and each man according to his culture and progress into *Asramam*. The *Varnam* classi-

fication is applied also to the formation and quality of the precious stones and of horses, serpents, &c. &c. The Bhuddhists, while granting that a man's birth is according to his previous Karma, have neglected the classification of *Varnam*, and Brahmanism is therefore and so far only opposed to Bhuddhism. To start a Census of Birth-characteristics for the first time in a populous and sceptical community, is no doubt impracticable now; but the Mahatmas classified the Hindus and have given infallible rules for judging not only men but animals and minerals as every trader and snake-charmer knows.

A. SANKARIAH.

#### A FEW WORDS.

FROM A VETERAN PHILOSOPHER.

I WAS truly inclined to copy out a very short Chapter in Professor Flint's book "Anti-Theistic Theories" on 'Hindu Materialism,' quoting books and authorities to show that we are not so ignorant of Hindu Philosophy as the learned Editor imagines,\* but we have also in this most learned work from the Professor of Divinity in the University of Edinburgh Chapters on 'Chinese Materialism,' Early Greek, Epicurean, of the Seventeenth and Eighteenth Centuries, of the first half of the *Nineteenth Century*, Recent Materialism, &c. &c. No doubt Professor Tyndall's Materialism is no novelty except in his bold utterance of its immortal principle as President of the British Association for the Advancement of Science in the meeting of Belfast; but in my letters to Miss Martineau I had insisted on the same 20 years before, taking my stand on Bacon's principles and his 'Novum Organum.' I am sorry to have misapprehended so much concerning 'Theosophism,' the word I find in many mouths, but the meaning in no one's thoughts. As to what is the definite aim and the matters sought for, or as to the investigation going on, or means and method implied, I read as fact that the President has seen a vast number of spirits or ghosts or apparitions or doubles or what not, and that he is practising the healing art by means of mesmerism with remarkable success, but beyond which what the subtle means now sought to acquire occult meanings and practical science is, I cannot see, but, on all, which remain, after all the say, in quite occult darkness. With all apologies for my obtuseness,

Ever, Sir Editor,

Your humble servant,

HENRY G. ATKINSON.

#### THE "SAVING OF ANOTHER HINDU SOUL."

I KNOW your time is precious, and any useless encroachment upon it is nothing short of positive sin. I know this, may realise it, but I am just imploring your attention to a matter of no small importance, no insignificant spiritual merit—the saving of a *soul*.

It is a shame now in this condition of my spiritual knowledge to claim descent from the *Rishis* of hoary antiquity. I am a Brahmin, a Nagar. It is no little joy to know that the source of a knowledge long neglected, forgotten, discredited, whose place has been usurped by self-sufficient materialism and cunning scepticism assisted—shocking to admit—by her (knowledge's) very children and descendants—the source I say of such spiritual knowledge is within reach of every seeker of truth. A short history of my *religion* (as I would call the philosophical development of my intelligence) will form a fit prelude to what follows. In my infancy I was well content to worship the household gods with fond expectations of the day in my existence, when they will favour me with their presence and bestow their boons on me with a free hand. Gradually the routine of worship began to yield under its own weight. Everything of the gods vanished, but the piece of metal or stone before my physical eyes. At about 18 I identified religion with a moral code of laws, waving all belief in anything beyond morality and matter. At this stage commenced what we call my "Col-

\* They may know, no doubt, something of Hindoo philosophy, if the perusal of a few *literal* translations of Hindu metaphysical works can be considered as knowledge of Hindu philosophy. But we venture to affirm that Europeans know absolutely nothing of the real nature of Hindu religious philosophy in its relation to mysteries and practical Raj Yog. Our respected correspondent is a Materialist and a Freethinker, while we are Occultists and Metaphysicians. We can hardly understand each other.—T. SUBBA Row, Joint Editor.

lege life." New scenes of life and thought opened up to my bewildered imagination in Bombay. I had become a collegian! My friends expected me to be a novel creature. Those of them who have had no advantage of English education already saw one in me. I must look upon the Shastras as tales of superstition, not worth even the curiosity of a passing consideration, got up for the guidance of the ignorant and the credulous who do not realize the importance of social morality or Hygiene for its own sake. I am surely above all such dross, with my knowledge of Mill, Spencer, Darwin and a hoard of others; and must soar higher in science and method. I must imitate English manners, English dress, English modes of life and thought, and goodness only knows what not English. I am happy I can reflect upon the past without a single pang of remorse for what I should have done under the influence of Collegiate infatuation. I took my degree. Launched upon the world with a head full of admiration and veneration for Western subjective speculations, I made up my mind to first go through every English work on History or Philosophy I could lay my hands on. In accomplishing this labour of love, I made no inconsiderable sacrifice, gave up my course of Law-studies for L. L. B., the goal of every Indian graduate's ambition. My mind soon grew disappointed with the speculations of the West not unoften diametrically opposed to the teachings of my Shastras. Failing to solve as Prof. Tyndall acknowledges "the ultimate mystery," I turned to the study of my Shastras. Thanks to my Sanskrit knowledge, I was able in a brief space of time to master the principles of the six principal schools of Sanskrit Philosophy (the two Nyayas, the two Sankhyas, the two Mimamsas.) The teachings of Shankara Charya went home to my mind, and I adopted the Vedanta as my future religion. I was then able to understand to some extent the teachings of Plato and especially the Alexandrian Neoplatonists. Berkley also among modern philosophers began to appear in better light than hitherto, for I had still had no belief in any occult phenomena, though I had long since heard of your Society and your work, when some accident introduced me into the secret of mesmerism. I practised it myself with application, but in a Western spirit. The results, convincing and surprising as they were, soon came to a stand-still and had to be reported to Col. Olcott for advice. (These are published on page 280 of the "Theosophist" for August last). These "rash and ill-considered experiments," as the Col. chooses to call them, though ending in partial failure (since which time I have given up the investigation) for want of competent guidance, have not, I am glad to say, resulted in any of the consequences which he expressed his unwillingness "to forecast." My experience, however, convinced me of the existence of *spirit*; and of the *akas* of the Brahma Sutras and the Upanishads which appeared to be a potent, impressible reality deified by Dr. Bovvy Dodds in his essays. The *Maya*, *Avidya*, and the *Brahma* of the creed I had been cherishing with fondness, became, though apparently contradictory, at once intelligible; and the *Shhula*, *Sukshma* and *Karana Deha* of men together with the five *Koshas* assumed for the first time some philosophical meaning. During these six months I learnt more than I had learnt in years past. I took a review of *Yoga*, *Sankhya* and *Vedanta*, and became thoroughly reconciled to the teachings of the first and the last chiefly by the help of several articles in the Nos. of the "Theosophist," the whole of which I now made a subject of constant study. As far as I have been able to understand Patanjali and Shankara, both teach the same theory of *Moksha*, the former laying much stress on *Hatha Yoga* as a means to it, and the latter on *Raja Yoga*. The explanations of *Nirvana* contained in your "Isis Unveiled" enabled me to reconcile Buddhism with its antagonist Brahmanism; the essential difference between the two consisting merely in non-belief or belief in Vedic rites and ceremonies. The spark for this true knowledge thus kindled in me blew into a blaze on reading Bulwer Lytton's "Zanoni" and Mr. Sinnett's "Occult World."

The history of my religion is told. I have come to sympathise fully with the Theosophical movement and its work. If the assurance of a spectator beyond the pale of your Society can ensure the consciousness of pious merit, you are accumulating by saving innumerable children of this once illustrious land from wrecking the ship of their spiritual welfare upon the stubborn rocks of Materialism and Hypocrisy, here I stand to throw that assurance in the teeth of incredulity and ignorance.

M. N. DIVEDI,

## AN APPEAL FOR THE REDEMPTION OF THE POOR PARIASHS.

[A NOBLE movement, one of a most redeeming and high character, is set on foot by several native gentlemen of Southern India, namely, a Society for the Regeneration of the Pariah classes. Hitherto, these hapless outcasts, or rather creatures of no-caste, rejected by all their fellow-men, thought that their only way to social and political rather than religious salvation, was by lending a willing ear to the liberal promises made to them by the Missionaries; and thus—they fell an easy prey to these universal way-layers. Had the Padres while baptizing (which does not always mean converting) them, done anything in the way of moral regeneration for this unfortunate class, we would be the first to applaud their efforts. As it is, every European having the misfortune to deal with native converts (of any caste, not only the Pariahs) whether as servants or anything else, will bear out our testimony when saying that Missionary proselytism has done a thousand times more harm to those natives who have succumbed to it than any kind of idolatry or fetichism. Useless to go over a too well beaten ground and repeat that which has been said and better said even by a few honest Christian missionaries themselves. Therefore we applaud most sincerely to the noble undertaking. Once that the Pariahs, among whom there are as many intelligent young men as among any other class, are made to enjoy the benefits of an education that will enable them to think for themselves, the abuses of proselytism must cease. We feel happy to give such a specimen of the growth of philanthropy in the right direction in India as this "APPEAL to the Native Princes, Zemindars, Merchants, Graduates of the University of Madras, and all other educated gentlemen of Southern India."—Ed.]

### GENTLEMEN,

At a meeting of some educated and benevolent Hindoos of Bangalore, held at the residence of Rai Bahadur A. R. SARAPATHY MOODELIAR, Civil and Military Station, on the 10th September 1882, it was unanimously resolved after a long discussion that the formation of a Native Philanthropic Association for the Regeneration of outcasts, commonly called Pariahs, is one of the most urgent wants of Southern India, and that it should therefore be formed as early as practicable after ascertaining the views of the public.

Before we proceed to explain the aims and objects of the Association, we have great pleasure in placing before you a brief *résumé* of the sentiments and ideas expressed at the meeting with a sanguine hope that we shall enlist your sympathy and secure your hearty co-operation, without which it is almost impossible to surmount the difficulties connected with such a gigantic undertaking.

We have to recognise the sad fact that the low position of our country in the scale of civilization is partly owing to the ignorance in which the masses are at present steeped, and partly to the division of the Hindoos into castes and sub-castes of exclusive nature with a tendency to limit our sympathies and sphere of usefulness. The caste system and its concomitant religious intolerance, when in their full vigour, not only made the higher orders totally neglect the welfare and advancement of the lower classes, but assigned to them a degrading social position—a state of things not at all conducive to the continuance of friendly feelings between both. But while it is a source of gratification that the progress of higher education during the last 30 or 40 years has to some extent mitigated the evils of the spirit of cold indifference and jealousy above alluded to, we cannot mince matters and ignore the absolute truth that a great deal more remains undone. We can no longer afford to be unconcerned about the sad and distressed condition of the lower orders amongst us, such as the Tamil speaking Pariahs, who as a body are ignorant, ill-fed, and given up to the pernicious vice of drinking which consumes the major portion of what little they care. An ancient religion is fast losing its hold on them: several of them have shewn a readiness to embrace faiths foreign to them without enquiry.

Their adopted religion (Christianity) has in no way helped them in shaking off their vices, such as drinking, &c. Their children are despised in schools which are opened for boys. In spite of the deterioration they have been undergoing of late, as a class they are strong, intelligent and industrious. Above all they are noted as the truly grateful race as Yas-Bedurs of this Province, a virtue, which is rarely found in the other lower orders. As household servants of Europeans, they have acquired a reputation by displaying special powers of adaptability, shewing that they possess latent powers for higher things, which, if only developed under the fostering care of the intelligent and humane public, can be directed into several useful channels. Such a consummation will not only promote their own happiness, but also that of the country indirectly. They have no abhorrence for industrial professions. If they only rise to position they would have no scruples of religious nature to reap the

benefits of travel in civilized countries. They have a language and a history which, if they comprehend, would make them proud. We have only to refer to the antiquity of the Tamil language which has an original literature of its own. Amongst the ancestors of the present Tamil-speaking Pariahs, there were several distinguished Grammarians, Poets, and Religious Preachers, who could be spoken of in the same breath as that of their world-known Aryan brethren. It would put the present degraded Pariahs to shame if they would only think of the prominent position assigned to the representation of one of their ancestors in the celebrated Temple of Sreerangam in recognition of his tried religious zeal. The great sage *Ramanujachariar* devised and carried out measures to raise the condition of even the lowest amongst us. In recognition of the help the Pariahs rendered him on an occasion when their services were needed, he allowed them the privilege of worshipping God in the celebrated temple of Melkote on special occasions. Similar instances of privilege are to this day observed in the famous Temple of Teroovauloor in Tanjore. Is it then just, proper, or expedient to look down upon Pariahs who have a noble and elevating history, or allow them to pine away in their miserable condition? When we enjoy liberty of speech and action under the benign rule of the British, and when we find in Europe and other civilized countries the rich and the learned consider it an unswerving principle of action to raise the status of the masses by all possible means—Is it not time to do something for the amelioration of the lower classes of Southern India?

Now to the objects and aims of the Association. They are:—

- (a.) To establish Charity Schools in all the large towns of Southern India for the education of the lower orders.
- (b.) To employ learned men to go about the country preaching religion and morality amongst them and to train up their own preachers.
- (c.) To give scholarships to promising and intelligent lads to enable them to prosecute their studies in English Schools.

(Signed) A. NARASINMA IYENGAR, Assistant Commissioner in Waiting on H. H. the Maha Rajah of Mysore;

A. SREENIVASA CHARIAR, Advocate, and Vice-President, Bangalore Town Municipality;

Hon: Secretaries to the Native Philanthropic Association for the Regeneration of Pariahs of Southern India, on behalf of the Provisional Committee.

BANGALORE, 12th May 1883.

### THE THREE ASPECTS OF BRAHMA.

BY KRISHNASHANKAR LAL SHANKAR.

ALLOW me to inform you that it was with the greatest pleasure that I read Mr. T. Subba Row's very able exposition of the nature of the First Principle in the great universe (ब्रह्मांड) in his article headed "Prakriti and Purusha" in the July *Theosophist*, written in answer to the rather vague and confused questions raised by the venerable Swami of Almora, for whom, however, notwithstanding the great distance between him and me, and notwithstanding the fact of my having never seen him, I entertain the same high respect as I do for all real Yogis, with one at least of whom—a genuine *Advaiti*—I have the good fortune to be personally acquainted.

Let me assure Mr. Subba Row that his exposition is not only so clear and able as every thing that has proceeded from his pen has always been, but that it is exactly in accordance with what the real *Advaiti yogis* on this side of the country conceive of the *Swarupa* of the First Principle or *Parabrahma*. The three great schools of *Advaitis*, *Dwaitis* and *Vashishtadwaitis*, when shorn of the phraseological technicalities and war of words, would seem to amount to nothing more than so many different opinions as to the way in which this aspect of the *parabrahma* should be described, because I think that all the three in that case would have to agree that the *Parabrahma*, or by whatever other name they might prefer to call the First Principle, is, in its nature, dual, or rather triple, if space (महाकाश) which must also be admitted to be co-existent, eternal, and interwoven with *Mula-prakriti* and *Chaitanya*, is taken into consideration. They should all agree, I imagine, as to the substance (I beg pardon for having to use this word for lack of a better one), although they might disagree as to its name, in view of the different ingredients of which it was composed. Take, for instance, the mixture of milk,

water and sugar. One might choose to call it milk; another, water; a third, neither of the two; a fourth, the mixture of milk and water; and a fifth, some other name; and yet, all along, all these might agree that the substance in dispute was milk and water and sugar without any one of which it could not be what it was. The dispute as to the name, or the mode of description for the matter of that, is *Mithyavad* (मिथ्यावाद). The substance is the thing. The same is the case almost, in my humble opinion, with the different schools as to the *Swarupa* of the First Principle, and I hope, that in this spirit, the venerable hermit of Almora would see his way to agree with the major premises and the final deduction of Mr. Subba Row, although he might disagree—from his stand-point—with the manner of Mr. Subba Row's proceeding with his argument. The idea of the dual nature of the First Principle is so well known on this side—to those "who know, you know"—that even an uninitiated nobody like myself expressed it in the following stanza (in Guzarati) which was composed some months ago almost impromptu, when I was asked to say something about the reason why the features of the newborn child of one of my friends—whose surname was Kaka—were so much like his father's, and yet also so much like his mother's.

TRANSLATION.

Either call it *Purusha-Prakriti*, or call it *Karan-Karya* ;

Or call it *Shiva-Shakti*, or call it *Satya-Asatya* ;

Or call it *Jada-Chaitanya*, or call it *Ishwar-Maya* ;

Call it *Brahma-Avidya*, or call it *Atma-Kaya* ;

The Universe is the impression (or shadow or emanation) of this corporate indivisible (*Ardhanarishwari*) half male, half female principle or entity ;

In like manner, the boy born of *Kaki* is the impression (or bears the stamp) of the combination (both physical and mental) of *Kaka* and *Kaki*.

BROACH, }  
21st July 1883. }

### "IMPRESSIONS FROM THE INFINITE."

FOR some time past, M. C. W. Rohner, M.D., of Benalla, was busy translating from the Spanish of Balme's trance-utterances of the name that heads this note. Whether the "Impressions from the Infinite" is a name given to the series by the Spanish recorder (or compiler,) or by the able Australian translator, we are unable to tell. However it may be, the work is finished, and after the word FINIS, Dr. Rohner has the following:—

*Epilogue by the Translator.*

Readers of the *Theosophist*, and of the *Theosophical* writings generally, will have perceived that the "Impressions from the Infinite," as published in the *Harbinger of Light* for the last eight or ten months, bear a certain resemblance to some of the more advanced teachings of Eastern Occultism, which circumstance appears to me to illustrate the fact, still doubted in certain quarters, that the "Brothers" exert a silent and world-wide influence on receptive minds, and that the spiritual press in both hemispheres is gradually getting impregnated with theosophical doctrines and the spirit of Occult science.

Of Balmes, the inspired writer of the "Impressions," I know personally nothing more than he, or she, is a Mexican medium of great refinement and spiritual comprehension.

BENALLA, April 1883.

[The conjecture is more than possible as far as the general tenor of mediumistic utterances and so called "Spirit" teachings is concerned. But, although we have not had the time to read as carefully as it may deserve the able translation given by M. Rohner, yet from what one is being able to gather from the concluding portion of it, there seems to be a wide difference between one of the essential or, so to say, cardinal tenets of Eastern Occultism and the said "Impressions." Too much is assumed hypothetically with regard to God—as a "Creator" and a Being distinct from the universe—an extra-cosmic deity, in fine; and too little attention is bestowed upon the only concrete symbol of the latter—inner man. While the personal deity has and ever will elude scientific proof of its existence, man, its hitherto solitary synthesis as manifested on this earth is allowing himself, in the case under notice, to be mastered and guided by invisible powers perchance as blind as himself—instead of seeking to obtain mastery over them, and thus solve the mysteries of the Infinite and the Invisible REALITIES. Preconceived Impressions, accepted on blind faith, and along the old theological grooves, can never yield us the whole truth; at best they will be hazy and distorted images of the Infinite as reflected in the astral and deceptive light of the *Kama loka*. Yet the style of the "Impressions" is beautiful—perchance owing more to the translation than the original.—Ed.]

#### METHOD OF TRANSLITERATION.

A Fellow of our Society, a good Philologist, Mr. J. N. Unwala, who was a short time ago at the Head-quarters, on a visit to us, and who is personally acquainted with the difficulties we very often experience in deciphering the contributions we receive from our numerous correspondents, suggests, among other things, that the contributors would do well, were they to adopt a uniform system of transliteration in transcribing words and phrases belonging to Sanskrit and other Oriental languages. This uniformity, we doubt not, will not only greatly lighten the already increasing work of the editorial staff and the printers, whose difficulties and responsibilities contributors are apt to neglect, but will, as our Brother assures us, render the words and expressions much more intelligible to the reader in his efforts to decipher them. We fully endorse his remarks and request that our kind contributors will adhere as much as possible to the system he proposes, which he tells us is based upon what is known among Orientalists as the "Jonesian\* system of transliteration." Our readers can have an idea of our difficulties in this particular when we tell them that not unfrequently we receive contributions even full of long Sanskrit quotations written not in Devanâgari characters (which we can manage), but in the *lekhana lipi* or current writing characters of that part of the country to which the writers belong. They thus attribute to us the linguistic powers of such a Polyglott as Cardinal Mezzofanti—an honor which we cannot lay any claim to, at least, in this life. Our brother adds that the systems mentioned are virtually the same as those adopted by the Editor and contributors of the "Indian Antiquary," by Max Muller, Weber, Bühler and others; and contain the method of transliteration for Sanskrit and its derivatives and for the Dravidian languages, including the Singalese.

\* From Sir William Jones, the great Orientalist and Sanskrit Scholar, at one time a Judge at Calcutta, as most of our readers must know.

#### A PLEA FOR A PERSONAL GOD.

By P \* \* \* T \* \* \* S \* \* \*, B.A.

CAN the Editor please enlighten me as to the following:—

1. It is said that the solar system is the evolution of *Mulaprakriti* according to the latent design, inherent in *Chidakasam*. Now two things (if they may be so called) are evolved—man and the external cosmos.

(a.) The duty of man is to choose between good and evil—to seek the means of making an involution into the state of Nirvana or to seek the means of his total destruction. What is this *destruction*? Matter is eternal.\*

(b.) What is now man—was in an imperfectly developed state some ages back or in the previous "rounds," not so fully responsible for his acts as he is now. Let us go back to the most imperfectly developed state of what is now man. Whence did this state come? If there is only one Life, and if the progress of humanity is to make a series of evolutions or rather involution from this most imperfectly developed state through the state of the present man to the Nirvana state, there must have been a contrary series from the Nirvana state through the state of the present man to have arrived at the most imperfectly developed state. Is it so?†

(c.) Are there any such "rounds" in the life of external cosmos?‡

2. Mr. T. Subba Row concurs with J. S. Mill's conclusion that matter has no noumenal existence but is a permanent possibility of sensation.§ Do the Theosophists

\* Matter is certainly eternal; and no one has ever said that man was destroyed or annihilated in his atoms, but only in his personality.—Ed.

† Before our correspondent's query can be answered, he ought to obtain a sufficient mastery over his ideas to make himself intelligible. We are afraid that his "evolutions" and "involutions" are rather involved in darkness and obscurity. We beg his pardon; but there hardly seems to be any sense in his question. When was it ever stated that there was only *one* life for man? Our correspondent has evidently mixed up personal human life with the ONE LIFE or Parabrahm? Perhaps he will kindly let us know the short meaning of this very long sentence?—Ed.

‡ We are not aware of having ever discussed about the "rounds" of any but the "external cosmos" and its many habitats of the septenary chain. What can the writer mean?—Ed.

§ The present reference to Mr. Subba Row's "Personal and Impersonal God," and to his remarks upon J. S. Mill has not the slightest bearing upon what is said in that article. We offer a premium to him who will find any connection between the two.—Ed.

hold that there is no substratum\* underlying all external phenomena?

3. A "chapter of accidents" is, it seems, allowed by the *Theosophist* in the course of life, and this idea is pushed to such an extent as to say that nature will not be *cheated out* of its course by accidents, although accidents may intervene and prevent the immediate rewarding of good or punishing of evil by nature. This statement is extraordinary. Whence these accidents †?

4. Some western philosophers of now-a-days, recognizing the fact that there are fixed laws governing the universe as pointed out by materialists, do still hold that a personal God is the author of those laws. Granting the validity of Mr. Subba Row's argument that a conscious Iswar's ego must itself be the effect of a previous cause, we meet with a difficulty presenting itself to our mind, when preparing to receive the doctrine of an unconscious God as truth. There are many events happening in the course of life, referred ordinarily to "chance" as their cause. Now, believers in a personal God account for what is called "chance" as the conscious exercise of the will of God for the good of his creatures—arrangements done by him for their happiness. I shall illustrate what I mean by a *fact*. G— was one day sleeping in his room. It is his custom always to sleep with a lantern and a staff by. At about midnight he awoke (but nothing had roused him) mechanically, felt for the lantern, lighted it, leaped out of his bed staff in hand, and looked up. All this without any motive whatever—quite unconsciously; and when he looked up, he perceived a snake right above the place where his head had lain. The snake then dropped down on the floor and he soon despatched it. This extraordinary phenomenon, ‡ as well as similar ones, which have come under my notice (but a few days back, my infant nephew was found one day with a snake wound round his waist) can be easily explained away on the theory of a personal God watching over men (and as G— believes, appointing angels to watch over them). How would the *Theosophists* explain these? ¶ True it is there are fixed laws of nature reigning in this universe, but these gaps called accidents, must be filled before the theory of an impersonal God can become tenable.

5. What is the *moral standard* of the *Theosophists*? Is it utility? What *sanction* of morality do they acknowledge? These can be easily found out on the theory of a personal God.

\* The Theosophists are many and of various and many creeds. Each of them believes in whatever he likes, and there is no one to interfere with his private beliefs. The Theosophical Society is no school of sectarianism and holds to no special dogmas. But if, by "Theosophists," our correspondent means the Founders, then all they can tell him is, that "the substratum underlying all external matter," they believe in, would rather clash with that on what the querist seems to hang his faith—if the two were compared.—*Ed.*

† From previous causes, we should say, as every other result is supposed to be.—*Ed.*

‡ Nothing "extraordinary" in this at all, considering we live in India, a country full of snakes, and that people awake unconsciously very often at the slightest noise. To call the occurrence an "extraordinary phenomenon" and see in it the "protecting hand of God," is positively childish. It would be far more extraordinary, if, granting for the sake of argument, the existence of a personal God, we should be attributing to him no better occupation than that of a body-guard for every man, woman and child, threatened with danger, when he might by a simple exercise of his will, either have kept the snake away without disturbing the poor man's rest, or what would have been still better, not to have created snakes at all. If St. Patrick, a mortal man, had the power to banish all the snakes from Ireland, surely this is not too much to expect of a personal protecting God that a similar act should be performed for India.—*Ed.*

¶ Simply that the snake was not inclined to bite. Why does not our correspondent refer to cases where poor innocent children were bitten and *died*? What had they done not to have been equally protected? Is he prepared to maintain that the thousands that are yearly bitten and killed by snakes in India have offended the deity like Laocoon, whose innocent children shared his fate? Simple assumptions will never do in a theosophical argument. We are not in the least inclined to interfere with our correspondent's belief, and welcome and invite him to believe in anything he pleases. Only if he would remain undisturbed in his faith we would advise him not to meddle with the theosophical literature. That he has not grown up to its intellectual standard—is quite evident, "B. A." though he may be, and thus sign himself.—*Ed.*

You will oblige me very much if you can publish this and remove my difficulties.

NEGAPATAM,  
July 14th, 1883. }

EDITOR'S NOTE.—To the rather impertinent (No. 5) question of our Negapatam inquisitive correspondent, we answer: The "moral standard of the *Theosophists*" is—TRUTH—and this covers all. Whether those who believe in a personal, or anthropomorphic deity, or those who call themselves Agnostics, or Atheists, or Buddhists or even Materialists, once that they have joined the Theosophical Society, they are bound to present to the world a far higher "standard of morality" than that which is developed merely through fear of hell or any other future punishment. The love of virtue for its own sake does not seem to enter in, or agitate the centres of our correspondent's reflective faculties. If he would know more of theosophy and its ethics, we would refer him to the *Rules of the Theosophical Society, its Objects and Principles*.

## Requies.

KAVYA DOSHA VIVECHANA.\*

WE HAVE to thank Mr. Simeon Benjamin, the author, for a copy of his *Kavya Dosha Vivechana*. This is an essay read by him before a meeting of the *Arya Samaj*, and subsequently republished by him at the request of its leaders. The work before us purports to point out the faults in Marathi poems taught in Government Vernacular and Anglo-Vernacular schools. The subject being of some importance, we shall, with the author's permission, examine minutely his analysis of the poems. His main contention is that some of these verses being unfit to be taught to children, should be eliminated from the Government school text-books. It is therefore necessary to examine carefully his reason in support of the contention. The first verse he takes objection to, is in the *Md. alhi* primer, which reads:—

मुके आंधळे पांगळ आणि थोटे ॥

अशदुर्वळांला करा साह्य मोठे ॥

जरीयांसहांसारु होतील तोटे ॥

तुम्हांलाचहोतां तसें जाल कोठे ॥

This he translates as meaning that if we were to laugh at the dumb, the blind and the cripple, we would ourselves become like them, &c., &c. Thereupon he argues the falsity of this teaching and shows how it frustrates the chief aim of bringing children to a correct mode of action and thought. When the children, he tells us, do actually laugh at such unfortunate creatures and find no such threatened retaliation, then they naturally lose all faith in, and regard for, such a teaching; and the principal object of giving them sound instruction is foiled. There would be a good deal of truth in this reasoning, were the verses to really mean what the above translation indicates. With every deference, however, to the profound learning and scholarship which the author seems to possess, we submit that the verse yields quite a different meaning, or, at least, another meaning might more appropriately be attached to the verse than the one given by the erudite author. May we not translate the poem in question to mean that we should assist the invalids therein mentioned, not because such an act would recoil on us by making us like them, but because we would in the end be the sufferers: and for the second consideration that, should such a misery befall us, we may find no sympathisers. Or may it not also mean that in case we should be the sufferers in that way, there would be no one to look up to, we having estranged the sympathies of good people by laughing and scoffing at the poor unfortunates when we were in good circumstances. This is not, of course, the literal translation: but neither is that of Mr. Benjamin. In our humble opinion, however, this interpretation is more warranted by the words of the poem than the other. Our first rendering would teach the doctrine of *Karma*, a scientific and axiomatic truth. The latter construction would be a check upon untrained minds from doing

\*An exposition of faults in the Marathi poems taught in Government Schools. By Simeon Benjamin. Price seven annas. Can be had from the Author; House No. 26, Payadhooni, Bombay.

anything wrong. Where then lies the harm? The next verse to which objection is taken, is:—

विद्या नसे ज्या पुरुषास काहीं ॥ विचार निती तिळमात्र नाहीं ॥  
अशा नरा काय अहो हणार्हे ॥ पशूमध्ये सस तया गणार्हे ॥

This is interpreted in two different ways by the author. The first meaning, however, he sets aside. As to the second, he says, it is not fit to be taught to children, its meaning being:—"One who has no *Vidya* (knowledge) and is neither considerate nor moral (in the broadest sense of the term), should not be styled as *Aho* (you) but as *Aray* (thou) and reckoned among beasts." We think, however, that the word *Aho* is not correctly rendered. It does not refer to the man "without learning," &c., &c., since there is no such word as *Aray* (अरे) in the verse to point the distinction as shown by the translator, and that it rather refers to the reader, or the person to whom the lines are made to refer. What the poet says is:—"Oh! You (addressing his readers)! What shall we call a man without learning, morals and consideration! Surely he ought to be classed with the brutes." The exception taken by the critic thus falls to the ground, for there is no direct insult implied in the above application. The student is not advised to *insult* the man by calling him "thou," but to avoid him rather, as one below the rank of average humanity. And we leave it to our readers to decide whether the advice to avoid a man without learning, *morals and consideration* (mark the italicized portion) is justifiable or not. The third verse, found fault with, is from the third book:—

नाम रूप हें तूजला नसे ॥ स वंतुला मुखें वर्णवें कसे ॥  
आदि अंत ना मध्यही तुला ॥ तूच दाविशी मार्ग आपुला ॥

In this poem, in talking of what is loosely termed God, the poet says:—"Thou who hast no beginning, no end, & in no middle." Our author is shocked at such a conception. The word *middle* has upset his ideas! We would however humbly enquire if an infinite something (and it *must be infinite* if it has no beginning and no end), according to Geometry, is divisible? If it is *indivisible*, it can have no middle. We beg to suggest to our learned author that if the Marathi poems under review are not meant to be taught only in sectarian, and purely theistic schools but are used in colleges where there may be as many Vedantins as Hindus of other denominations, and the term being perfectly applicable to Parabrahm, it has nothing either disrespectful or offensive in it; hence that it is quite fit to be taught to children. We might go on in this wise, and take exception to nearly every objection of the critic of the pamphlet before us; but we regret having neither the space nor time for it. The instances, however, here given are, we believe, sufficient to prove to the impartial reader that the fault lies more with the intolerance of the teacher, than the poems under his review. Mr. Benjamin tells us that these difficulties were not only experienced by himself, while a teacher in a Government School, but that they are complained of still, by many of his colleagues. If that be really the case, we are at one with him in advocating the elimination of all such verses from Government text-books, rather than see a false interpretation placed upon them. If no one can be found to enter into the true spirit of the poet's meaning and expound the real significance of his ethical stanzas for the instruction of the students, it is far better for all parties to be without them than to have erroneous ideas inculcated, and impressed upon young minds incapable of forming an independent judgment. The work before us has at the same time its objectionable feature in other poems left unmentioned by the critic. Some of them are positively indecent; such, for instance, as the description of Damayanti, a conversation between Rama and Sita when meeting alone in a forest, and going over their past days of bliss. Such descriptions of marital relations are not precisely the scenes to be impressed upon plastic and undeveloped minds. No language is too strong to condemn the disgraceful carelessness of the tutors who have permitted for years such reading to be left in the hands of their pupils without a protest. In this instance the Marathi-reading community is certainly under a grateful obligation to Mr. Benjamin for initiating this movement and laying a just complaint before the educational authorities. We also concur in his opinion that the poems relating to the struggle between Bheema and

Duryodhana ought to be expunged from the school-texts, although my reasons are quite different from those advanced by the critic. Taking exception but to the dead-letter sense, he only deprecates an exhibition of cruel and brutal feelings between two cousins. Unfortunately, however, our *Puranas* are generally abused by "learned" critics without a proper understanding of the *inner* sense and the morality to be conveyed. If our readers will turn to the back pages of this Magazine, they will find the real meaning of the allegory of the war between the *Pandavas* and the *Kauravas*. If the former represent the higher (or spiritual) part of man and the latter the earthly (sensual), and if *Krishna* (the only manifested deity, the *Logos* in each man's heart) is spoken of as being the adviser of the former in conquering and killing the latter, where then, we ask, is the "disgusting brutality" fathered upon that most sublime of poems, the *Bhagavat Gita*? We are not, however, at present concerned with metaphysics or philosophy. And, as we are agreed that the poems complained of should not be taught to children promiscuously, since on the one hand the teachers themselves are as yet unable to realize the profound significance and the philosophical spirit of some of them, and that, on the other, there are some really indecent stanzas among them, we conclude our somewhat lengthy review of Mr. Benjamin's criticism with a hope that the proper authorities will lend an ear to his just complaint. We beg at the same time our learned author's pardon for dwelling at length upon the points of disagreement between him and ourselves, since the necessities of the case demanded the present action. On the whole, the book supplies a deficiency which was long being felt; and every credit is due to Mr. Benjamin for interesting himself in the welfare of a people who are not of his race. We would recommend it to every person who has a real and an earnest desire to improve the educational standard of Marathi children. As a Maratha we sincerely thank the erudite author for his advocacy in behalf of our children,

D. K. M.

#### THE LAWN-TENNIS SCHOOL OF CRITICS.

Those intellectual prodigies of the Lawn-Tennis clubs—Anakin among critics—who swallow the story of Balaam's speaking "she-ass" but cannot believe in the Reincarnation of her "soul" agreeably to Pythagoras nor even to Allan Kardec's doctrine, may be made less incredulous by reading further on the choice bits in the "Ooty Chronicle" of the *Madras Times* of September 7th. One might suspect from its delicate wit that Sydney Smith is reborn and lurks somewhere among the Eucalyptic Sholas of the "Blue Hills." Of course, the numerous *lapsus lingua et calami* of the chronicler and his airy conceits must be caused by a too long sojourn on the mountain tops. On some ill-balanced natures a rarefied atmosphere, while expanding their lungs, has the effect of contracting their brains. To such meteorological phenomenon, have we probably to attribute the correspondent's assertion that Colonel Olcott "bitterly" complained of the gymkhana sports which made him change the date of his lecture; as also the charming remarks with regard to a made-up story of "broken china", "General Blank", "spirits from the vasty deep", and possible "Kleptomaniacs" in the Theosophical Society. "We do not know—" queries this newspaper prodigy—"what fees are charged...for such surprising skill in the art of repairing China ware." None at all, we hasten to assure him. Whether a soup-tureen or an entire dinner service makes no difference, and we would not charge even the miserable price in pice and annas paid for every line of such witty gossip as his. Moreover the "Ooty Chronicler" may be glad to hear, that besides China ware, the Theosophical Society undertakes sometimes to mend cracked and damaged brains, by injecting them thoroughly with a saturated solution of common sense, cleansing them of dusty and stale notions of bigotry and prejudice and by thoroughly ventilating the musty premises. Nor need he feel alarmed or take the trouble of suggesting new amendments in our Rules, namely, "a regulation excluding pick-pockets from membership." The genial wit of the Nilgiris should know that our Society does not recruit its members in the favourite resorts of the Salvationists—"the dens and ditches of the outscum of the great cities." And, since it refuses admission to waifs rescued from the "Citadels of Apollyon," and does not employ Theosophical nautches in the persons of "tambourine lasses"—even though promoted to be "golden harp lasses"—there is no cause to fear that a *pickpocket* whether "converted" or unregenerate, will be taught how to improve the resources of his art by acquiring proficiency in Occult Sciences.

However meagre the production of the "Ooty" chronicler, still, as it is an original one, and as good as could have been expected from that source, and that it exhibits no great malice we reproduce it with pleasure—to show the "inferior race" what

passes with the "superior" one as witty criticism upon Aryan philosophy and science. An original production is always more respectable than borrowed blackguardism, such as an article just copied into the *Bombay Gazette* from a sensational third class New York daily. In the latter the Editor of the *Theosophist* is described as "ONE OF THE MOST IGNORANT AND BLASPHEMOUS CHARLATANS OF THE AGE—viz., Mme. Blavatsky" and the Theosophical Society as the biggest fraud of its kind ever gotten up." As one of Punch's "self-made" millionaires is made to say when his father's absence from his evening party was remarked, "We must draw the line somewhere,"—we have an impression that this would be as good a place to draw our line as we shall ever have. At first it was hard to realize that such a blackguardly and uncalled for attack should find its way in a respectable journal. But since we learned that the Editor of the *Bombay Gazette* whom we have always known and regarded as a thorough gentleman was at Simla, we wondered no more. Not every *sub* and acting Editor is a gentleman; and we know of more than one in India quite ready to treat his subscribers to such *witticisms* (whether original or borrowed) in the style of those direct from Hungerford fish market.

Another philosopher of the "Lawn Tennis" calibre furnishes a paragraph to the *Poona Observer* of the 11th September about the recovery of some stolen property by a native shopkeeper through a simple form of ceremonial magic. He "suggests that the Government of India might do worse than engage Colonel Olcott to instruct the Police in his particular 'ism' or 'doxy.' The force would then be the terror of thieves. It would—undoubtedly, and of persons like himself also: for Colonel Olcott's method when well studied detects a ninny at sight. But take this para full of such happy *repartees*—out of its harmonious journalistic frame and put it into another and one sees at once the mighty mentality and cultured taste required to cut and set so rare a literary gem. This is the Article:—

#### OOZY CHRONICLE.

Wednesday, September 5, 1883.

COLONEL OLCOTT duly delivered his lectures on Wednesday and Friday last at the hours notified, to a large and distinguished audience in the Breeks' Memorial School. Much disappointment was felt at the entertainment, as people were credulous enough to imagine that the Colonel would illustrate and emphasise his discourse with some supernatural feats, instead of confining himself to vague assertions of the occult power of Theosophists and their ability to see, hear, and do things denied to ordinary mortals. People would require to be endowed with a very large amount of credulity—indeed to accept without reserve the assurances of the lecturer on this head. Looking through a stone wall and discovering what was going on in the next room was a mere *bagatelle* to the gallant Colonel; so he assured his audience. He knew intimately, he declared, the exact contents of the wardrobes and dressing cases of all present, at which we observed some elaborately got-up ladies of a certain age shudder violently. He could tell at that moment what was going on at Timbuctoo or even Hades, the Colonel continued, and any one present who didn't believe that he had the power of knowing every thing that occurred on the earth, or under it either, was an unmitigated fool. This last dictum had its due effect on the audience, for, as no one likes to be taken for a fool, every one present, ourselves included, tried to look as if they believed implicitly every word the lecturer uttered. The Colonel repelled the insinuation which he alleged had been made against him to the effect that he was hostile to the Christian religion, and magnanimously observed that he thought Christians had as good a chance of being saved as he himself, whereupon we noticed a clerical-looking gentleman in the audience give expression to his horror by an ejaculation. The lecturer bitterly commented on the fact that, owing to the Gymkhana sports being announced for Saturday, he had changed the date of his lecture from that day to Friday, and treated with silent contempt a query from an irresponsible individual who had the temerity to enquire how it was that, with his marvellous occult powers, the Colonel did not postpone the sports *willy-nilly* to a day that would better suit his convenience. Having expressed his conviction that the inane idiots who could fix or even think of Gymkhana sports on the same day as his lecture was to come off, were unspeakably beneath contempt, the lecture concluded his discourse by passing round a book in which hieroglyphics and marvellous figures with horns and tails were depicted, and darkly hinted that he knew more about these than he would care to tell.

A CORRESPONDENT writes to know if we are to attribute the fact of our library being deluged with Theosophical works to the circumstance that all the members of the library committee appear beaten with the Theosophical mania? *Apropos* of this, here is the latest local canard regarding the powers of the Theosophists. A lady had the misfortune to break a rare ornamented plate of *Sevres* China, which was prized the more owing to its being an heirloom. While she was picking up the pieces and bemoaning her loss, General Blank entered and bade her be of good cheer, for, said he, I will lay the matter before the Theosophists, and they will make your much-prized plate whole again. Paying no attention to this assurance, the lady locked

up the broken pieces in her cabinet which adjoined her bed. During the night mysterious noises issued from the cabinet, and the pieces of severed *Sevres* appeared to be holding high revel, judging from the jingling, clashing sound which was heard issuing from the receptacle in which they had been locked. Filled with curiosity, the lady opened the case on the following morning, and lo! there was his *Sevres* plate without a crack or flaw, and as sound as if it had never been broken! Whether General Blank and Co. had introduced themselves through the key-hole of the cabinet or not, or had summoned a familiar spirit from the "vasty deep" to their assistance, does not appear; but the fact remains that the job was well done, and a new branch of industry has been started by the Theosophists in which the usual appliances of trade are not needed. People with broken China need not trouble to send their damaged ware up here. They have only to acquaint the Theosophists of the breakage, and an invisible emissary will be at once despatched to put things to rights. We do not know what fees are charged, or if it is necessary to be a believer in order to benefit by the services of the obliging spirits who manifest such surprising skill in the art of repairing China ware but we understand that carnivorous bipeds who eat meat are an abomination in the sight of Theosophists, and only vegetarians are looked on with favour. Under these circumstances, it is not surprising that the prices of vegetables have risen in the market since the arrival of Colonel Olcott and Company. From the above episode the serious reflection arises that, as it appears such a trifling matter for a Theosophist to induct himself through a key-hole, or send his familiar spirit to achieve the feat, are we not entirely at the mercy of any member of the creed who may develop annexing proclivities? We therefore beg to suggest that the Society amend its rules in the interests of the general community, and pass a regulation excluding pick-pockets from membership.

On its present broad and liberal basis, we believe that any one can join Theosophist organisation, provided he can muster up a guinea as entrance fee, and it is positively appalling to contemplate the loss the general public would suffer if a kleptomaniac were inadvertently admitted into the guild....."

#### A REMARKABLE DISCOVERY.

A NEW ISLAND APPEARS IN THE ATLANTIC—CURIOUS REMAINS. Yesterday the British steamship *Jesmond*, Captain Robson, arrived at this port from Messina with a cargo of fruit. He says that when about two hundred miles to the westward of Madeari his attention was called to the irregular appearance of the sea. The water had a dark, muddy look, and was covered with dead fish as far as the eye could reach. They were of several species, among them being noticed mullet, cod and bass. Soon after entering this field of dead fish he observed a faint smoke on the horizon nearly ahead, on the course of the vessel. Early next morning the Captain was awakened by the second officer, and informed that land had been sighted in the course of the steamer. He was greatly surprised at this information, knowing that there was no land in this part of the Atlantic. Upon going on deck, however, he found that the report was correct. The dim outlines of an island, broken by mountain peaks, were visible even without use of the glass. Above it hung a cloud of smoke. The water was more turbid than on the previous day, and the shoal of dead fish thicker. Captain Robson deemed it advisable to take soundings, not expecting, however, to get bottom, as the charts show a depth of from 2,000 to 3,000 fathoms in that portion of the Atlantic. For some time the sounding was without result, but suddenly the line brought bottom at fifty fathoms. When about four leagues distant from the island the *Jesmond* came to an anchor in seven fathoms of water. The island was located 28 degrees 40 minutes west, 25 degrees north. Captain Robson determined to make an observation of the strange, and the yawl was lowered, and the captain and one of his officers were rowed to the island. A landing was effected on the low coast of the western border, where a convenient harbor was found for the yawl. The captain and several of the crew, with some difficulty, ascended the declivity.

The promontory seemed several miles in length, and joined an extensive tableau, which sloped gently back to a chain of mountains at great distance off, from which rose light columns of smoke. The surface of the ground was covered with pumice stone and volcanic debris, and entirely devoid of vegetation. It was a desolate scene, where not a single living thing was to be perceived. The captain and his companions started on a tour inland, but soon found their progress impeded by yawning chasms. It was therefore determined to return to the beach and inspect the island from that side. While examining the base of the cliff where the rock was fractured and twisted, as if by some tremendous convulsion, and disclosed a bed of breccia, a surprising discovery was made

by one of the sailors. On thrusting a prong of a boat-hook into the loosened mass of gravel, he disclosed a stone arrow-head. Excited by this incident, the search was continued, and other articles of stone were discovered. A large excavation was made, and it was ascertained that the opening led between the crumbling remains of what must have been massive walls. A number of articles were exhumed, such as bronze swords, rings, hammers, carvings of heads and figures of birds and animals, and two vases or jars with fragments of bone, and one cranium almost entire. The most singular thing brought to view was what appeared to be a mummy, contained in a stone case. It was incrustated with volcanic deposits so as to be scarcely distinguished from the rock itself. Much difficulty was experienced in dislodging the sarcophagus, which was finally taken out whole and, with the fossils, transported to the steamer.

Captain Robson would have continued this investigation, but as the aspect of the weather became less favorable, and he could not afford to spend more time at the island, he sailed for this port. He considers that the new island was raised from the sea by volcanic action, and that the fish were killed by the poisonous gases from the volcano. The captain thinks that the new land is a section of the immense ridge known to exist in the Atlantic, and of which the Azores and the Canaries are a part. He took pleasure in exhibiting the fossils and curious articles of which he was the fortunate finder. The carved heads are in the Egyptian style of sculpturing, being distinguished by the veil or hood which characterizes Egyptian figures. The urns and vases are spherical, with large mouths, and upon them may be discerned inscriptions in hieroglyphics. The edges of the axes and arrow or spear-heads are blunted and jagged. The sword is a straight weapon of bronze, with a cross hilt.

"This is the mummy," remarked the captain, pointing to what the reporter had taken to be a long block of stone. Scrutinizing closely the lidless case, the outlines of a human figure could be traced through the coating of scorie and pumice. It will require careful handling to remove the coating. Captain Robson proposes to present the relics to the British Museum at London, upon his return to Liverpool.—*N. O. Picayune.*

Important, certainly—if true (?),—*Ed*

#### A PICTURE IN THE HEART OF AN OAK.

A correspondent of the *Waterbury (Conn.) American*, writing from Water Town, says that Mr. Benjamin Markin, of that town, in splitting a log of black oak, observed a picture on the smooth grain in the heart of the tree. It is a landscape, or rather a clump of trees, with trunk and branches and twigs as clearly defined as though drawn with ink or photographed by the sun's rays. The trees form a picture about four inches square, showing like the open leaf of a book, and the same on the opposite page. Mr. Marvin says it is a pretty good portrait of the clump of trees which he felled, the picture appearing in the heart of the largest one.—*The Scientific American.*

#### TO SUBSCRIBERS.

The Subscription price at which the THEOSOPHIST is published barely covers cost—the design in establishing the journal having been rather to reach a very wide circle of readers, than to make a profit. We cannot afford, therefore, to send specimen copies free, nor to supply libraries, societies, or individuals gratuitously. For the same reason we are obliged to adopt the plan, now universal in America, of requiring subscribers to pay in advance, and of stopping the paper at the end of the term paid for. Many years of practical experience have convinced Western publishers that this system of cash payment is the best and most satisfactory to both parties; and all respectable journals are now conducted on this plan.

The THEOSOPHIST will appear each month. The rates, for twelve numbers of not less than 48 columns Royal 4to each of reading matter, or 576 columns in all, are as follows:—To Subscribers in any part of India, Ceylon, Straits Settlements, China, Japan, and Australia, Rs. 8; in Africa, Europe, and the United States, £1. Half-year (India, &c.,) Rs. 5; Single copies Rupee 1. Remittances in postal stamps must be at the rate of annas 17 to the Rupee to cover discount. The above rates include postage. No name will be entered in the books or paper sent until the money is remitted; and invariably the paper will be discontinued at the expiration of the term subscribed for. Remittances should be made in Money-orders, Hundis, Bill, Cheques, (or Treasury bills if in registered letters), and made payable only to the PROPRIETORS OF THE THEOSOPHIST, ADYAR P. O., (MADRAS,) India.

Subscribers wishing a printed receipt for their remittances must send stamps for return postage.

ONLY THREE NUMBERS OF VOL. I BEING AVAILABLE, THE CHARGE FOR them will be Rs. 1-8. Subscribers for the Second Volume (Oct. 1880 to September 1881) pay Rs. 6 only in India; Rs. 7 in Ceylon; Rs. 8 in the Straits Settlements, China, Japan, and Australia; and £1 in Africa, Europe and the United States.

AGENTS: London, Eng., Messrs. Tribner and Company, 57 and 59, Ludgate Hill; Bernard Quaritch, 15 Piccadilly, W.; Paris; France, P. G. Leymarie, 5, Rue Neuve des Petits Champs; New York, Fowler and Wells, 753, Broadway; Boston, Mass, Colby and Rich, 9, Montgomery Place; Chicago, Ill. J. C. Bandy, La Salle St. American subscribers may also order their papers through W. Q. Judge, Esq., Box 8, P. O. Brooklyn, New York; Melbourne, Australia W.H. Terry, Pnb. *Harbinger of Light*; St. Thomas; West Indies, C.E. Taylor; Calcutta, India: Thacker Spink and Company, Booksellers, Babu Norendro Nath Sen, *Indian Mirror* Office, 24 Mott's Lane, Dhnruntollah Street; Madras, Messrs. Johnson and Co., 26 Popham's Broadway, Venkata Varadarajulu Naidu, Rayapetta, High Road; Bangalore, W. A. Leonard, *Bangalore Spectator* Office, 10, South Parade; Colombo, Ceylon: Greg. Ederewere, Galle, John Robert de Silva, Surveyor General's Office; Kandy, Don Timothy Karunaratne; Shanghai, China: Kelly and Walsh.

The Manager calls particular Notice to the fact that all Money-orders must now be sent payable at ADYAR P. O. (not Madras), India.

Great inconvenience is caused by making them payable to Col. Olcott or Mme. Blavatsky, neither of whom have to do with financial matters, and both of whom are often for months absent from Head-quarters.

Printed at the *Scottish Press* by GRAVES, COOKSON AND Co., and published by the THEOSOPHICAL SOCIETY at ADYAR, (MADRAS) INDIA.

No. 49.

## PAYING THE WAY.

THE late Artemus Ward, a famous American humorist, wishing to prove his effusive patriotism during the late Civil War, said that he was ready to send all his wife's relatives to the army! Some of the liberal advisers and critics of the Theosophical Society seem moved by a like liberal sentiment. Ever since the Society had its current expenses to pay and fixed an entrance fee of Rs. 10 to defray them, these sensitive natures have felt too, too keenly, the false position in which this step was placing it! They were willing—quite too much so—that the unlucky Founders should pay its charges, to the sacrifice of their last garment, if they could not do it by Magic; but an entrance fee—fie! Though every other Society in the world does the same—unless endowed with an interest bearing Permanent Fund, or receiving voluntary subscriptions to the extent of its needs—that does not alter the case. Nor does it, if the objector himself is proved to be paying without marmur his Re. 75 per annum in the Bombay, or his "entrance donation" of Rs. 10 and "annual subscription" of Rs. 40 in the Madras, Branch of the Royal Asiatic Society; or his Rs. 28 per annum in the Madras Agricultural and Horticultural Society; or his life membership fee of ten guineas in either of the Bible, Tract, Religious Knowledge, Missions, S. P. G., or Temperance societies; or his entrance and large annual fees in a lodge of free masons; or in any other body for the carrying on of organised work of a philanthropic character the world over. They are, of course, expected to pay their reckonings out of their annual income, but with the Ishmaels of Theosophy it is quite a different affair. If they chose to dig their Society out of the Aryan *tanulus* for the good of humanity, certainly they ought to pay for the privilege. They pretend to be philanthropists; let them purchase the luxury, and not for a moment think of their poor relations, their personal wants, or the books, instruments, furniture, or clothing that the money might buy; for philanthropists have no occasion for such luxuries: their reward is in the satisfaction of conscience, the doing of duty! How serene the brows of some of our own Theosophists in times past, when they have told their humble servants, the Founders, that really it would be better not to charge any Entrance Fee! More than once (and our latest experience dates but from a fortnight back) this has been said by persons who were far richer than the culprits addressed, yet had never offered to give one rupee towards the Society's expenses. They were very liberal with advice but very parsimonious with their cash. If it had been a question of paying salaries to the Founders, or even to subordinate officers, it might have been different. But, since there has never been a rupee paid to any one of the secretaries, most of whom have sacrificed and renounced for ever all worldly goods and yet have to be fed and clothed, nor to any one connected with the management, from the beginning, for his or her services, nor any expectation of its ever being done—it has seemed that the remark, *under the circumstances of the advisers' pecuniary relation to the Society*, was a superfluous donation! If a computation were made of the aggregate wealth of our members, the sum total of their incomes alone would mount into the millions of pounds sterling. An infinitesimal percentage upon that by way of a voluntary tax would, in a single year, create an endowment whose interest would make the Society independent of all Entrance-fees, and they might be dispensed with. That tax, voluntary or involuntary, the Founders will never call for; if it is to be done at all, it must be by others. For so long as they have a rupee of income, if the Society, the child of their souls, needs it for its current expenses it shall have it and thrice welcome. Probably a day may come when such sacrifices will no longer be demanded. Its income *may* be approaching the point of self-support; but at present, it is not so. A movement was inaugurated by some of the brethren of Madras

to pay for the Adyar Head-quarters, make the needed repairs, erect some *ashrams* to accommodate caste visitors, pay for furniture, etc. etc. The Founders headed the list with a cash donation of Rs. 500, highly approving of the project—although they expect to have to advance above Rs. 5,000 this year besides. Well, out of Rs. 8,500 (all necessary repairs excluded) hitherto, only Rs. 3,200 are paid. The sacred fire of devotion and enthusiasm that burned so brightly at the beginning has flickered away, and the probable consequences are that we will have to pay the rest ourselves. When the Society is placed in a home of its own—like every other respectable body, of whatsoever kind—and repaying is stopped, there will be one drain the less upon our private resources. If the day of relief were a little nearer, we should not have said one word upon the subject. And, but for the gratuitous remarks heretofore made by colleagues inside the Society who ought to have had the delicacy to withhold them unless they knew of some other means of paying the honest expenses, we should not have noticed certain malicious slurs in Anglo-Indian journals about the poor little initiation fee which, in contrast with the like charges in other organisations, especially with their often heavy annual dues, to which there is no parallel in our Society—is small enough in all conscience. Nor are we ever likely to claim merit for the practice, from the first followed by us, of paying out of our own pockets the fees of Pandits and other poor scholars, who have loved our cause, but been unable to give that practical proof of their interest in its work.

## THE GOVERNMENT AND THEOSOPHY.

From

COLONEL HENRY S. OLCOTT,  
*President of the Theosophical Society,*

To

THE HONORABLE E. F. WEBSTER,  
*Chief Secretary to the Government of Madras.*

SIR,—I have the honor to address you on behalf of the Theosophical Society, of which I am President, and the objects of whose organization are as follow:—

I. (a) To promote the feeling of mutual tolerance and kindness between people of different races and religions;

(b) To encourage the study of the philosophies, religions and sciences of the ancients, particularly of the Aryans;

(c) To aid scientific research into the higher nature and powers of man.

II. These are our only corporate aspirations and, since the year 1875—when the Society was founded at New York—they have been openly declared and publicly defended. With them we have exclusively occupied ourselves, and have most strenuously refused to meddle with Politics or to advocate any creed to the exclusion of others.

III. The principal seat of the Society's operations was transferred from New York to India in February 1879 for the greater convenience of our purely Oriental researches; and in December 1882, was moved from Bombay to Madras for a like reason.

IV. The Society was, in the first instance, an open body; but it was found in practice that the successful prosecution of psychical experiments, in the progress of which the most private thoughts and aspirations of our common nature had to be expressed, demanded a more confidential relation between members. The principle of secrecy, identical with that of Free Masonry and Odd Fellowship, and with the same laudable motive, was therefore adopted as early as the second year of the Society's existence.

V. Our work being thus cut off from public view, many ladies and gentlemen of good position socially, joined us, both in America and Europe—where branches after awhile sprang up. But coincidentally with our coming to India this private relation between ourselves, and the great favour which our endeavours to revive Aryan learning excited among Hindus, caused a suspicion—to the last degree unjust and unfounded—that we might have under the mask of philosophical study some political design. Accordingly, the Government of India, at the instance of Her Majesty's Home Government, caused us to be watched both at Bombay, our residence, and while travelling over India.

There being nothing whatever to discover of the nature apprehended, the expense and trouble lavished upon us, only ended in proving our blamelessness of motive and conduct. For sufficient proof of which I would respectfully invite attention to the enclosed letter [No. 1025 E. G., dated Simla, the 2nd October 1880] from the Secretary to Government in the Foreign Department to myself— which I transmit in the original, with request for its return. It is therein remarked that "the Government of India has no desire to subject you (ourselves) to any inconvenience during your (our) stay in the country," and "so long as the Members of the Society confine themselves to the prosecution of philosophical and scientific studies, wholly unconnected with politics \* \* \* they need apprehend no annoyance, &c. &c."

VI. The above decision is in strict accordance with the oft-declared policy of Her Most Gracious Majesty's Asiatic relations with subjugated peoples, to maintain strict neutrality in all matters involving religious enquiry or belief. And, having ever faithfully observed the laws and respected the established regulations of Government, in India as everywhere else throughout the world where our Society has Branches—we are entitled to protection and demand it as our right.

VII. Entire freedom from annoyance and molestation we have not enjoyed in the Madras Presidency. In various quarters a certain pressure, none the less menacing because unofficial, has been put upon Hindu subordinates to prevent their taking active interest in our work. Though the vindication of the wisdom, virtues and spiritual achievements of their ancestors was involved, they have been made to feel that they could no be Theosophists without losing the good will of their superiors, possibly their chances of promotion. Timid by nature, the subordinates have in many—though, to the honour of true manhood, be it said not all—instances, sacrificed their feelings to this petty tyranny. But despite all opposition, whether of sectarian bigotry or other kinds, the Society has so rapidly increased that it has already founded twenty Branches within the Madras Presidency. An impartial inquiry among our members will show that the influence upon the natives is excellent: improving their moral tone, making them more religious, more self-reliant, and more tractable as subjects. Should the Government of Madras care to test the truth of this assertion, I shall most gladly furnish every needed facility.

VIII. In view of the above facts, what I respectfully ask is that the Government will make it understood that, so long as the Theosophical Society shall keep to its declared field of activity, an absolute neutrality shall be observed towards it by officials throughout the Presidency. And especially forbid that the fact of membership or non-membership shall even be considered in determining the claims of any employé, English or Native, to official favour.

I have the honour to be,

Sir,

Your most obedient Servant,

H. S. OLCOTT,

President Theosophical Society.

#### PUBLIC DEPARTMENT.

##### PROCEEDINGS OF THE MADRAS GOVERNMENT.

READ the following letter from Colonel H. S. OLCOTT, President, Theosophical Society, dated 7th September, 1883; (1) stating the objects of the Society: (2) transmitting a letter addressed to him by the Government of India, Foreign Department, of 2nd October 1880, promising the members of the Society freedom from all annoyance so long as they confine themselves to the prosecution of philosophical and scientific studies, wholly unconnected with politics: (3) complaining that in various quarters of the Madras Presidency some native subordinates have been made to feel that they cannot join the Society without losing the good-will of their official superiors.

#### ORDER.

13th September 1883, No. 1798.

Colonel Olcott may be assured that this Government will strictly follow the lines that have been laid down by the Government of India in their letter to his address. In regard to the complaint he has preferred, they observe that it is of a general nature only, no specific instances being mentioned, and His Excellency the Governor in Council need only say that he would highly disapprove any interference with the religious or philosophical ideas of any section of the population.

[True Extract.]

(Signed) FORSTER WEBSTER,

Ag. Chief Secretary.

To COLONEL H. S. OLCOTT,  
President, Theosophical Society.

#### THE TWO FOUNDERS AT COIMBATORE.

COLONEL OLCOTT, who was invited to visit this town on his way from Ooty to Pondichery, arrived at the Coimbatore Railway Station on the 10th Instant at 2.30 P. M., with the mail train from Mettappoliam.

It was a peculiar blessing to Coimbatore that the author of that admirable work "Isis Unveiled" accompanied him to spend a few days with us.

It being Sunday, all the leading gentlemen of the town were on the Railway platform to do honor to their adopted brother and sister,

The distinguished Theosophists drove to the bungalow prepared for their reception, followed by a long array of carriages.

An English address was read there, and Tamil poems composed for the occasion were recited. Beautiful and magnificent garlands made of the ruby-like seeds of pomegranates, the like of which they had not seen before, as it appeared from their admiration of them, were then thrown round their necks. The day's proceedings were then brought to a close by an eloquent and touching though short speech from Colonel Olcott, thanking the native community for the kindness and brotherly love shown to him and to his colleague.

It was a lovely scene to behold Madame Blavatsky, though all the while suffering from fever of a very violent nature discussing from about 3.30 P. M. to 10 P. M., Theosophical questions with Yogis that came from Palghat only to pay their respects to her and to get their doubts cleared, and with Sanscrit Pundits. When some friends who were very anxious about her health requested her to go into her apartment and take rest, she replied in a true Oriental fashion, "I must be master over my body and not my body over me."

On the evening of the 17th Colonel Olcott delivered a lecture on Theosophy to a very large and appreciative audience. The learned lecturer dwelt at length on the importance of a knowledge of mesmerism to the right understanding of the religions of the past. He exhorted the Hindus to dive deep into the religious truths enunciated by their glorious forefathers, and to make the torch of Indian Philosophy shine, by united efforts, as bright in this ancient land of India, as in days of yore, and not to be hankering after Western positivistic philosophers. College youths idolize them simply because no Hindu, now-a-days, is found to unravel satisfactorily the grand truths of life and death lying hidden in the apparently silly and absurd allegories in which it was the custom of all Orientals to clothe these truths, (it being impossible to popularise occult truths forcibly otherwise).

The next morning he delivered another lecture to the Tamil speaking population, which was very happily translated by M. K. Ry. Vengu Ayer Avergal, a pleader of Calicut. After the lecture was over, he returned to his bungalow, where the sick were awaiting his arrival to be cured by touch.

The President Founder felt that he would not be able to treat successfully, as he was very much exhausted from his hard work on the Southern Circuit. He therefore wanted to instruct one or two local doctors in the art of healing by touch. He selected some cases and showed to two dressers of this place how to proceed with particular diseases.

Notwithstanding his exhaustion at the time, some were immediately cured and others, who were suffering from chronic diseases that could only be cured by repeated sittings, obtained such temporary relief as to show that they might be cured by mesmerism.

Some ignorant people who were under the absurd impression that the Colonel was some deity or one gifted with divine powers, and who therefore thought that their disease would vanish in a trice at a single glance of Col. Olcott, were sadly disappointed. They ran mad, and of course are circulating false reports about the Theosophists. But time will correct their mistakes.

On the 19th by the mail train Col. Olcott and Madame Blavatsky started for Pondichery, wherefrom they had received an invitation.

T. M. SUNDARAM PILLAY B. A.,

COIMBATORE, 25th September 1883.

#### THE FOUNDERS AT PONDICHÉRY.

On the 20th September, after travelling day and night without stopping, the Founders reached the charming French station of Pondichéry. Mr. Chanemonga Velayouda Modeliar, a Member of the Provincial Council (Conseiller General), and some other gentlemen of respectability, met them at Villipooram, some 23 miles up the railway, and escorted them to their place of destination. At the Pondichéry platform a great crowd had assembled to greet the guests. No sooner had the train stopped than the visitors were greeted with the National British anthem. The fine Military band of the Governor played them first to their carriage, and then through the street to the house, when the Hymn of "God Save the Queen," was followed by the War-like "Marseillaise" of the French Republic. A regular procession was organised of the carriages of the native gentry, and moved slowly through the town to a spacious mansion by the sea-shore which had been fitted up for their occupancy. The Councillor General here placed garlands about their necks, and read an address in French, to which Col. Olcott, for himself and his colleague, replied in the same language. The usual presentations were then made, and the house was full of visitors until a late hour of the evening. On the following day the President-Founder paid ceremonial visits to H. E. the Governor, His Honor the Mayor; and other principal officials; being received by each and all with the suavity which is so natural to educated French gentlemen. At 5 P. M. he lectured on "Theosophy as a support to true Religion." The Honorable M. Guerre, the Mayor, had kindly agreed to serve as Interpreter for the occasion, but finally felt obliged to decline as he doubted his capacity to render so high and thoughtful a discourse, as this seemed likely to be, from English into French. Another French gentleman then undertook the duty, but broke down after a few attempts. Then two native gentlemen tried in turn to interpret into Tamil, but both failed. Finally, as a

last desperate resource, and at the urgent request of his audience, Col. Olcott continued his lecture in French, speaking for an hour and going over the whole scientific and religious ground. This was certainly a remarkable instance of available memory, for although very familiar with the language as printed or written, he had never before attempted such a bold experiment as to lecture in a foreign tongue, without the smallest previous preparation and even extempore. The President reports the curious fact that the very moment after he had decided to go on in French, and had thought how the interests of the Society were involved, he felt the "psychic current" of his Guru and thenceforward was not in the smallest degree embarrassed, but went on as though he had spoken French all his life.

On the 22nd ultimo he mesmerically treated some patients, and in the evening a new Branch entitled "La Societie Theosophique de Pondichéry" was organised. M. Tandar Sandirapouille was chosen President, M. Morougappa Modeliar Secretary.

On Sunday the Founders left the pleasant town, and the same evening arrived at Madras. A translation of the welcome address of the Councillor General is as follows:—

"MADAM AND SIR,—Welcome in this, our dear city. You stand now in the presence of an intelligent people who realize thoroughly well all the grandeur of the sublime mission entrusted to you by Providence—a mission in the ancient days of our forefathers, which was that of our venerated saints—the Maharishis. Indeed, as many of us already know, Theosophy is a science that can alone enlighten man with regard to the true condition of his existence here, and hereafter, and give him an exact idea of human nature and its superiority over that of all other living creatures, by placing it in direct communication with the one over-soul—Divine spirit.

This holy mission you have now come to accomplish, in the fulness of your generous philanthropy, in a part of India where you could count even before your arrival numerous adherents. Inspired with a sense of the benefits produced by your Society in other parts of the mother country, and the great services rendered by you to the cause of humanity, they all ardently desire to place themselves under the civilizing banner of the Theosophical Society.

Feel assured, Madam and Sir, that our faithful and filial attachment is pledged to you henceforward for ever; and that henceforth we will strive to the best of our ability to justify the confidence you have placed in us by trying to deserve well of the Society.

Meanwhile, we beg you to accept once more the assurance of our respectful devotion and gratitude."

#### THE BRITISH THEOSOPHICAL SOCIETY.

[We regret that the following account of our London Branch, which appeared in *Light* of July 28, was till now crowded off, for want of space, although, as our readers are aware, we have been giving more pages than promised.—*Manager Theos.*]

#### NOTES BY THE WAY.

Contributed by "M. A. (Ozon)."

On Thursday, the 17th, the London Theosophists held a conversation at Prince's Hall, Piccadilly. Invitations were issued to meet Mr. Sinnett. Some 270 assembled, and among them were many faces well known in society, and not a few men of letters and science whose judgment and opinion the world is accustomed to treat with deference. The company would be described in the language of the ordinary reporter as at once fashionable and influential. During the evening the President of the London Lodge delivered an introductory address which dealt generally with the pretensions of Theosophy, and its attitude towards the religions of the day. It was forcibly pointed out that as a religion Theosophy found nothing in the theologics of the hour that barred its acceptance. The speaker, a Catholic Christian, was in intimate accord with the author of *Esoteric Buddhism*, though they had drawn their inspiration from two such apparently divergent sources.

But the feature of the evening was an address from Mr. Sinnett, in the course of which he stated with his usual force and clearness the position of the Theosophical Society. Before attempting an outline of what he put forward, I may remark that the publication of his book, and, in no less degree, the large gathering that he addressed, as well as the speech which he then delivered, mark a new departure in the history of Theosophy in London. So long as the Society was one of students, attracted by a common taste, and perhaps bound together by a common hope that some light would eventually dawn on the faithful from the source of light and truth—the East, the world had little or nothing to do with the Theosophists. Even Spiritualists had no necessary concern with them except in so far as it was necessary to vindicate their own belief from assault, or desirable to comprehend a philosophy which so nearly touched their own interests. But now that the veil of secrecy has been to a considerable extent cast aside the world and the Spiritualists are bound to consider the claims made on behalf of Theosophy.

What may be the answer of the various types of mind to which Mr. Sinnett addressed himself on Thursday last, I did not know. Possibly I should not be far wrong if I were to say that many would go away bewildered with a feeling that there are antecedent points of difficulty to be settled, before examining the superstructure so skilfully raised on a basis that has not yet been submitted to a sufficient examination. And it requires a more exhaustive study of the scheme of thought expounded in Mr. Sinnett's volume, and stated more popularly in his recent addresses at the Prince's Hall, and at various fashionable assemblies in London drawing-rooms, before I, for one, should like to commit myself to a statement of what unquestionably appears on the surface to be the irreconcilability of Theosophical and Spiritualistic belief. I do not know whether the doctrines that antagonise each other are, in the language of theology, cardinal and to be held *de fide*,

I hope not: for if it be so then the knowledge of the Spiritualist is at variance with the truth as propounded by the Theosophist. No doubt it is on the great questions of spirit communion that the battle will rage most fiercely. It is that which seems to me to be so utterly beyond accommodation. But this is a question far too wide and imperial in its import to be discussed with imperfect knowledge and with the insufficient space at my disposal. It is one to which it will be incumbent on me to recur. Meantime I return to Mr. Sinnett's address, of which I present a brief epitome.

He commenced with some words in explanation of the attitude in which the Theosophical Society stood towards the work in which it is engaged, and the adepts in India with which it is connected. To make these relations intelligible he entered, in the first instance, into an account of the objects with which occult devotees in the East pursued adeptship, and the nature of their achievement if they attained it. The purpose they sought arose out of their comprehension, in the first place, of that great scheme of human evolution set forth recently in Mr. Sinnett's book on "Esoteric Buddhism." For all mankind at this present stage of the evolutionary process, or for the vast majority, the exceptions so far hardly requiring to be taken into account in a broad, general sketch of the position, there was a certain sort of spiritual future awaiting each Ego at death. And this spiritual future might easily be one of great and elevated enjoyment. But the pursuer of adeptship aimed at something more than elevated enjoyment in the spiritual state; he aimed at great developments of knowledge concerning Nature, and at perpetuity of existence, even beyond that very remote period in future evolution up to which the majority of mankind might gradually drift.

Nature would not grant perpetuity of existence which itself was only compatible with very advanced and enlarged knowledge, to any Ego, however good and virtuous, as a reward for mere goodness. The natural reward of goodness was happiness in the spiritual state,—a happiness, the duration of which might enormously transcend the brief periods of objective existence in which it might have been earned, but which in the progress of ages would come to an end by the exhaustion of the causes which had produced it. The only way to get on in the evolutionary process beyond the stage to which goodness could carry the Ego was to develop supreme spiritual wisdom or knowledge, and that was the object at which the efforts of Adepts were directed. Now, above all things, the Adepts in pursuing this object were eager to unite their own progress with that of the human race generally to the utmost extent of their power to accomplish this. Far from being selfish in their struggle for development, they were in such a position as to know that a policy of selfishness would be fatal to their own advancement, and learned to seek this in the total abandonment of their own personal welfare as compared with the effort to benefit others. They were constantly engaged in intervention, by one means or another, in the affairs of the world, even though the conditions of their existence forbade them from intermingling with the world. Their action was carried on by means of those higher senses and faculties with which their occult training invested them. In reference to these powers, it was desirable that people who paid attention to the subject should understand that the adept did not seek occult knowledge for the sake of the powers it incidentally invested him with any more than a patriotic soldier would seek a military career for the sake of wearing a red coat. The powers of adeptship were a very embarrassing fact connected with that state of knowledge, for these powers were the explanation of the apparently timid and seemingly unreasonable policy of silence and reservation in regard to their knowledge which the Adepts persisted in following. To teach people in general the mere philosophy of Occultism, if that were done freely and carelessly, would be to put them within the reach of secrets the possession of which would enable them, if willing to do evil to others, to work the most disastrous confusion all through human society and commit almost any crimes undetected.

On the other hand, it was conceived by the Adepts that the time had now come when it was necessary to fling into the current of human thought some knowledge of true spiritual science, that mankind might be armed, in advance with a higher religion to take the place of superstitious creeds and dogmas by the time these should crumble away. It was out of this conviction, on their part, that the Theosophical Society had arisen. That Society, and the teachings conveyed to the world through its intermediation, constituted an offer of enlightenment to the civilised world in regard to true spiritual science, the importance of which could not be overrated. It remained to be seen how far the advanced thinkers of London would respond to that offer, how far they would realise the coherence, beauty, and truth of the teachings so far put forward, and unite in asserting an intelligent demand for more. That demand, to be successful, would now have to be made by a Theosophical Society which should take a somewhat new departure. Hitherto that society had been rather a body of secluded thinkers and students, as far as the British branch was concerned at all events, than a body of persons seeking to make converts. Now the time had come when the Society had done all it could do along its old lines of effort. In order that its beneficent work might be carried on in the future on the larger scale now contemplated and to the grander results now hoped for, it was necessary that it should take up a position of dignity and influence, that it should be reinforced by qualified representatives of the culture and intellectual effort of the time, and that its hands should be strengthened for the task now lying before it. These considerations had suggested the demonstration of that evening, which was the first effort of any kind which the London Society had made to make itself known beyond the narrow limits of its original organisation. Comparatively small and insignificant to appearance as the Society might be at present, the facts of the whole position were such as to lead those who had studied them most closely to the conclusion that this little Society was in possession of the first gleams of the spiritual science which must ultimately become the religion of all the world.

In the course of his speech, and in further explanation of the point of view from which the Adopts themselves regarded the efforts embodied in the Theosophical Society, Mr. Sinnett read the following passages from a letter written by one of the greatest among them. The letter had been specially aimed at repressing the craving for scientific explanations of abnormal phenomena which had been freely expressed in the beginning by Europeans in India connected with the Society.

"It is not the individual and determined purpose of obtaining for oneself Nirvana (the culmination of all knowledge and absolute wisdom), which is, after all, only an exalted and glorious selfishness, but the self-sacrificing pursuit of the best means to lead, on the right path, our neighbour,—to cause as many of our fellow creatures as we possibly can to benefit by it,—which constitutes the true Theosophist.

"The intellectual portions of mankind seem to be fast dividing into two classes, the one unconsciously preparing for itself long periods of temporary annihilation or states of non-consciousness, owing to the deliberate surrender of their intellect, and its imprisonment in the narrow grooves of bigotry and superstition—a process which cannot fail to lead to the utter deformation of the intellectual principle; the other unrestrainedly indulging its animal propensities with the deliberate intention of submitting to annihilation pure and simple, or, in cases of failure, to millenniums of degradation after physical dissolution. Those intellectual classes, reacting upon the ignorant masses which they attract, and which look up to them as noble and fit examples to follow, degrade and morally ruin those they ought to protect and guide.

"In view of the ever-increasing triumph, and at the same time the misuse of free thought, it is time that Theosophy should enter the arena. Once delivered from the dead weight of dogmatic interpretations and anthropomorphic conceptions, the fundamental doctrines of all religions will be found identical in their esoteric meaning. Osiris, Krishna, Buddha, Christ, will be shown as different means for one and the same highway to final bliss, Nirvana. Mystical Christianity, that is to say, that Christianity which teaches self-redemption through one's own seventh principle—the liberated Para-atma or Angooides, called by the one, Christ, by the other Buddha, and equivalent to regeneration or re-birth in spirit—will be just the same truth as the Nirvana of Buddhism. All of us have to get rid of our own Ego, the illusory, apparent self, to recognise our true self in a transcendental Divine life. But if we would not be selfish, we must strive to make other people see that truth, to recognise the reality of that transcendental self . . . Shall we devote ourselves to teaching a few Europeans, many of them loaded with the gifts of blind fortune, the rationale of the spiritual telephone and astral body formation, and leave the teeming millions of the ignorant, the poor, and the despised to take care of themselves and their hereafter the best they know how? Never. Perish rather the Theosophical Society with both its hapless founders, than that we, the devoted followers of that spirit incarnate of absolute self-sacrifice, of philanthropy, divine kindness, as of all the highest virtues attainable on this earth of sorrow, the man of men, Gautama Buddha, should ever allow the Theosophical Society to represent the embodiment of selfishness, the refuge of the few, with no thought in them for the many."

The address of the President of the Theosophical Society, Mrs. A. Kingsford, M. D., was as follows:—

"No doubt, our guests will expect me to explain what is meant by the word 'Theosophy,' and what are the aims and objects of the Society over which I preside. I will attempt, in as few words as possible, to give a reply to both these questions.

"Theosophy is the science of the Divine. In this age the word Science is readily understood; not so the word Divine. We Theosophists understand by the word Divine, the hidden, interior and primal quality of existence; the noumenal as opposed to the phenomenal. Our relations to the Divine we hold to be relations not to the exterior, but to the within, not to that which is afar off, but to that which is at the heart of all being, the very core and vital point of our own true self. To know ourselves, is, we hold, to know the Divine. And, renouncing utterly the vulgar exoteric, anthropomorphic conception of Deity, we renounce also the exoteric acceptance of all myths and legends associated therewith, replacing the shadow by the substance the symbol by the significance, the great historical by the true ideal. We hold that the science of the Divine is necessarily a science of such subtle meanings and transcendent verities that common language too poorly conveys them, and they have thus, by universal consent throughout the world, found their only possible expression by the medium of types and metaphors. For metaphor is the language of the poet, or seer, and to him alone is it given to know and to understand the Divine. In the picture-world in which he lives and moves all interior and primal verities are formulated in visions rather than in words. But the multitude for whom he records his visions takes the metaphor for the reality, and exalts the eidolon in the place of the God.

"The object of the Theosophical Society is therefore to remove this misapprehension; to unveil Isis; to restore the Mysteries. Some of us have doubted whether such act of unveiling and of restoration is altogether prudent, arguing that the quality of mind needed for the comprehension of pure truth is rare, and that to most supernaturism and even superstition are necessities. The answer to such objection is that the present system of theological teaching has long been and still is an impassable barrier in the way of right thought and action, and of scientific progress; a fruitful spring of oppression, fraud and fanaticism, and a direct incentive to materialistic, agnostic, and pessimistic doctrines. In the interest of science, of philosophy, and of charity therefore, the Theosophical Society has resolved to invite all earnest thinkers, students, and lovers of their kind to examine the system and method it presents, and to satisfy themselves that the fullest claims of science are compatible with, and its latest revelations necessary to, the true comprehension of esoteric religion,

"I have used the word religion. It is a word which has unhappily become divorced from its true meaning, and associated with much that is inherently repugnant thereto. One of the efforts of this Society will be to restore to sacred things sacred meanings. Religion is the science of interpretation, the science of binding together earth and Heaven, the science of correspondences, of Sacraments, or as they were called in all old times, the Mysteries. And the religious man is he who is bound together, in whom heart and head have equal sway, in whom Intellect and Conscience work together and in harmony, who is at unity with himself and at one with the whole world of Being. In this sense we are a religious society, for one of our avowed aims is the promotion of universal brotherhood. We proffer an Erionicon to all churches, claiming that, once the veil of symbolism is lifted from the divine face of Truth, all churches are akin, and the basic doctrine of all is identical. The guest of the evening, who stands beside me, is a Buddhist. I, the President of the English Lodge, am a Catholic Christian. Yet we are one at heart, for he has been taught by his Oriental guru the same esoteric doctrines which I have found under the adopted pagan symbols of the Roman Church, and which esoteric Christianity you will find embodied in 'The Perfect Way.' Greek, Hermetic, Buddhist, Vedantist, Christian—all these Lodges of the Mysteries are fundamentally one and identical in doctrine. And that doctrine is the interpretation of Nature's hieroglyphs, written for us in sky and sea and land, pictured for us in the glorious pageantry of night and day, of sunset and dawn, and woven into the many coloured warp and woof of flower, and seed and rock, of vegetable and animal coils, of crystal and dewdrops, and of all the mighty phenomena of planetary cycles, solar systems, and starry revolutions.

"We hold that no single ecclesiastical creed is comprehensible by itself alone, uninterpreted by its predecessors and its contemporaries. Students, for example, of Christian theology, will only learn to understand and to appreciate the true value and significance of the symbols familiar to them by the study of Eastern philosophy and pagan idealism. For Christianity is the heir of these, and she draws her best blood from their veins. And forasmuch as all her great ancestors hid beneath their exoteric formulas and rites—themselves mere husks and shells to amuse the simple-minded—the esoteric or concealed verities reserved for the initiate, so also she reserves for earnest seekers and deep thinkers the true interior Mysteries which are one and eternal in all creeds and churches from the foundation of the world. This true, interior, transcendental meaning is the Real Presence veiled in the elements of the Divine Sacrament: the mystical substance and the truth figured beneath the bread and the wine of the ancient Bacchic orgies, and now of our own Catholic Church. To the unwise, the unthinking, the superstitious, the gross elements are the objects of the rite; to the initiate, the seer, the son of Hermes, they are but the outward and visible signs of that which is ever and of necessity, inward, spiritual, and occult.

"But, not only is it necessary to the Theosophist to study the myths and symbology of former times and contemporary cults; it is also necessary that he should be a student of nature. The science of the Mysteries can be understood only by one who is acquainted, in some measure at least, with the physical sciences; because Theosophy represents the climax and essential motive-meaning of all these, and must be learned in and by and through them. For unless the physical sciences be understood, it will be impossible to comprehend the doctrine of Vehicles, which is the basic doctrine of occult science. 'If you understand not earthly things,' said the hierarch of the Christian Mysteries, 'how shall you understand heavenly things?' Theosophy is the royal science. To the unlearned no truth can be demonstrated, for they have no faculty whereby to cognise truth, or to test the soundness of theorems. Ours may be indeed the religion of the poor, but it cannot be that of the ignorant. For we disclaim alike authority and dogma; we appeal to the reason of humanity, and to educated and cultivated thought. Our system of doctrine does not rest upon a remote past, it is built upon no series of historical events assailable by modern criticism, it deals not with extraneous personalities or with arbitrary statements of dates, facts, and evidence; but it relates, instead, to the living to-day, and to the ever-present testimony of nature, of science, of thought, and of intuition. That which is exoteric and extraneous is the evanescent type, the historical ideal, the symbol, the form; and these are all in all to the unlearned. But that which is esoteric and interior is the permanent verity, the essential meaning, the thing signified; and to apprehend this, the mind must be reasonable and philosophic, and its method must be scientific and eclectic.

"In the Mahā-Parinibbāna-Sutta, one of the Buddhist Theosophical books, is a passage recording certain words of Gautama Buddha which express to some extent the idea I wish to bring before you. It is this:—

"And whosoever, either now or after I am dead, shall be a lamp unto himself, and a refuge unto himself, betaking himself to no external refuge, but holding fast to the truth as his lamp and to the truth as his refuge, looking not to anyone besides himself as a refuge, even he among my disciples shall reach the very topmost height. But he must be anxious to learn."

"It may, at the outset, appear strange that there should of late have set in among us of the West so strong a current of Buddhism, and many, doubtless, wonder how it comes about that the literary and thinking world of this country has recently begun by common consent to write and talk and hear so much of the sacred books of the East, and of its religious teachers. The Theosophical Society itself has its origin in India, and the motto adopted by its Fellows declares that light is from the East—Ex Oriente Lux.

"In all this is the finger of Law, inevitably and orderly fulfilling the planetary cycle of human evolution, with the self-same precision and certitude which regulates the rotation of the globe in the inverse direction, or the apparent course of the solar light.

"Human evolution has always followed the course of the sun, from the east to the west, in opposition to the direction of the planet's

motion around its axis. If at times this evolution has appeared to return upon its steps, it has been only the better to gather power for some new effort. It has never deviated from its course in the main, save to the right or left, south or north, in its orderly march westward. And slowly, but surely, this great wave of human progress has covered the earth in the wake of the light, rising eastward with the dawn, and culminating mid-heaven with the Catholic Church. In India first, at the beginning of the cycle, rose the earliest glory of the coming day; thence it broke on Syria and on Egypt, where it gave birth to the Kabbalistic Hermetic gnosia. Passing thence to Grecian shores, the mysteries of the gods arose among the myrtle and olive groves of Thebes and Athens; and these mysteries, imported into Rome in their turn, became merged in the symbols and doctrines of the Christian Church. And as the cyclic day of human development draws on towards its close in the western hemisphere, the light fades from the Orient, and twilight gradually obscures that eastern half of the globe which was erst the spring of dawn and sunshine. What then? When the round of the terrestrial globe is thus accomplished, when the tidal wave of evolution has swept the whole expanse from India to America, it arrives once more at its point of departure. Scarce has day dipt beneath the horizon of the occident, then lo, again the east begins to glow anew with the faint dawn of another cycle, and the old race, whose round has now been accomplished, is about to be succeeded by a race more perfect, more developed, wise and reasonable.

"There are indications that our epoch has seen the termination of such a planetary cycle as that described, and that a new dawn, the dawn of a better and a clearer day, is about once more to rise in the sacred East. Already those who stand on the hills have caught the first gray rays reflected from the breaking sky. Who can say what splendours will burst from among the mists of the valley westward, when once the sun shall rise again?"

"Some of us have dreamed that our English Branch of the Theosophical Society is destined to become the ford across the stream which so long has separated the East from the West, religion from science, heart from mind, and love from learning. We have dreamed that this little Lodge of the Mysteries set here in the core of matter-of-fact agnostic London, may become an oasis in the wilderness for thirsty souls,—a ladder between earth and Heaven, on which, as once long since in earlier and purer days, the Gods again may 'Come and go twixt mortal men and high Olympus.'

"Such a dream as this has been mine; may Pallas Athena grant me, the humblest of her votaries, length of days enough to see it, in some measure at least, fulfilled!"

Mr. Sinnett then addressed the meeting, speaking for upwards of an hour and a-half. It was nearly midnight before the meeting closed.

#### G. W., M. D.'s ASSERTIONS.

In the course of his numerous and certainly more vituperative than "satirical" (as he calls them) denunciations of our Mahatmas and their doctrines—"G. W., M. D." has lately indulged rather too often in personal slings at Mme. Blavatsky and her supposed Atheism. "G. W. M. D."—who is Dr. G. Wyld, ex-member of the London Theosophical Society—cannot get reconciled to the idea that there should be any one allowed to think otherwise than he does himself. Now there is not a particle of evidence to show that because the editor of the *Theosophist* does not believe in a personal extra-cosmic God—a being that every man creates in his own image—and shows openly contempt for bigotry, therefore she is necessarily an Atheist. Nevertheless Dr. Wyld misses no opportunity to impress upon the public mind the grand truth of which he is the happy discoverer:—namely, that one who, discarding all anthropomorphic conceptions, believes in an Infinite, Universal, Eternal, withal impersonal PRINCIPLE which underlies the visible and invisible Universe—is an Atheist and a Materialist. Mme. Blavatsky is denounced as having published in the *Theosophist* these words—"there is no God, personal or impersonal." Therefore—"No one using such language could logically be a Theosophist." If we pass over that little difficulty, that Mme. Blavatsky has never used such words over her own signature, since the said individual does believe and very firmly—in an impersonal divine Principle for ever unknowable except in its identification with, and manifestation within, its highest tabernacle on this earth—namely man,—we may comprehend better how Dr. Wyld is led to confound true Theosophy with membership in the Society of this name. And we say that no man using the language *he does, i. e.*, one who regards every other form of religious belief than his own as the most stupid form of ignorance and superstition, "can be logically a theosophist." At best he will be a member of the Theosophical Society, never a true Theosophist. Thus we are led to suspect that Dr. Wyld, who calls himself an "Esoteric Christian," is, begging his pardon, no better than an exoteric bigot. His bigotry presenting, moreover, the worst features, those of self conceit, and of that bumpingtonian presumption which allows no one the privilege of thinking in any other way but the one delineated by one's opponent. In the words of "M. A. (Oxon)" who quotes "a powerful writer," he is "a grotesque exponent of Esoteric Christianity." One rather of the Salvationist than Theosophical kind. So much so, indeed, that in his desire to fling an additional insult in the teeth of those whom in his narrow-mindedness he will never be capable of understanding, he misses the mark and hits—his own God.

"In that criticism," he writes, meaning his indelicate and vulgar review of *Esoteric Buddhism* "from a European standpoint," "I did not utter one word in disparagement of Mr. Sinnett, my satiro (?) referring to the teachings of an invisible, and to all of us, including Mr. Sinnett, unknowable Asiatic"..... the author "of a series of complex subtleties and unsubstantial pogaontries—a production of the small Oriental brain." The italics are ours. The "small Oriental brain" is very, very good. And who was, in Dr. Wyld's learned opinion, his own ideal—Jesus Christ if not "an—Oriental"? Shall we then call Christian revelation also, "a production of the small Oriental brain"? Indeed after so many intellectual showers,—the production of his own large

Caledonian brain,—we would hardly wonder in learning that Dr. Wyld's Christian Esotericism had led him to fancy that Christ was a Scotchman!

#### THE BUDDHISTS AND GOVERNMENT.

The statement is circulating through the Indian Press, that "considerable indignation is felt in Ceylon at the attempts which the Buddhists are making to pose before the world as the favorites of Government." This false and malicious rumour is based upon the fact that in one of the temples the simple-minded priests, anxious to show their loyalty, have emblazoned the Royal Arms upon the wall! The simple fact that the fiction was started by that truculent sheet—the *Ceylon Observer*—is quite sufficient to satisfy any one who knows anything of Ceylon affairs not only of its groundlessness, and also its malicious intent. The Editor never loses an opportunity to inflict pain and harm upon the peaceable Buddhists of that island. He is a sectarian Protestant with a nature as bitter as gall, and is seldom without a libel suit to defend. The poor Singhalese Buddhists are so far from even dreaming that they could "pose before the world as the favorites of Government," that they are now appealing to the Home Authorities for simple justice—denied them after the murder and maiming of their people by the Roman Catholic mob in the late riots. We are sorry to see our respectable contemporary, the *Christian College Magazine*, misled by so transparent a humbug as the *Observer's* paragraph in question. Whenever the Editor may wish trustworthy data about Ceylon Buddhism or Buddhists, he should apply to some other quarter.

## Official Reports.

### CIRCULAR FROM THE HIMALAYAN ESOTERIC T. S.

#### OBJECTS AND CONSTITUTION OF THE THEOSOPHICAL SOCIETY.

1. Theosophy teaches an unselfish love for all creatures and particularly fellowmen, and the entire devotion of the mind to its highest conceptions of wisdom, goodness and love. Hence Theosophy aims at:—

- The formation of a Universal Brotherhood;
- The union of the individual Monad with the Infinite and the Absolute;
- The subjugation of the passions;
- The study of the hidden mysteries of nature, and the development of the psychical powers latent in man.

2. These objects are not new: they have been recognized ever since the dawn of the human race, and they are coeval with religion which is the lien uniting the spirit of man with the Universal Spirit.

3. The Theosophical Society does not give preference to any form of religion. It admits on a common platform, and without distinction, members of all religious creeds, of all races and castes, and of both sexes.

4. It is under the special care of one General Council, and of the President, its founder.

5. As the Society extended through widely separated countries and cities, it became necessary, for administrative purposes, to divide it into local branches; but no branch has the right to operate outside its chartered limits, except when so requested by the Parent Society.

6. Within such limits, the different branches select one or more of the abovementioned objects for their special study.

7. Simla possesses two branch Societies, one of which is the "Electric Branch" and the other the "Himalayan Esoteric Branch."

#### GENERAL RULES APPERTAINING TO THE HIMALAYAN ESOTERIC BRANCH.

1. The Himalayan Esoteric Branch is formed with the special object of promoting the study of Oriental philosophy and sciences, as a means to the investigation of the occult laws of nature and to the development of the psychical powers latent in man.

2. Persons of every race and creed, and of either sex, are eligible as members.

3. The necessary conditions for admission are:—

- That the candidate is already a Fellow of the Theosophical Society;
- That he is imbued with an earnest desire to be in active sympathy with the object of this branch; and
- That he bears a good moral character.

4. Applications for admission should be made in form A, and must be supported by at least two fellows.

5. In view to the specific object of this Branch no one will be admitted who:—

- Is actuated by motives of idle curiosity;
- Has not received a fair amount of education and is not fairly intelligent;
- Is lacking in mental energy; or—
- Is known to be wanting in stability of character and mental reserve.

6. As the prime object of the Society is Universal Brotherhood which can only be secured by *absolute* purity of life, the members pledge themselves, as far as is compatible with their respective states or conditions in life:—

- To lead pure, chaste and moral lives;

- b. To abstain from the habitual use of intoxicant liquors and narcotics; and—  
 c. To be abstemious in the use of animal food.
7. Membership will terminate:—  
 a. On cessation of active sympathy with the object of this Branch;  
 b. On the desire to sever connection being signified by writing; and—  
 c. By conviction of any crime involving moral turpitude or by any scandalous irregularity of life.

#### SPECIAL RULES FOR THE INTERNAL ECONOMY OF THE BRANCH.

1. The Himalayan Esoteric Branch consists of a President, Vice-President, with two Councillors, a Secretary and Members.
2. The President, Vice-President, Councillors and Secretary are elected annually by votes from among the members.
3. The President:—  
 (a) will preside at meetings;  
 (b) will receive applications, and will institute enquiries personally or by deputation, into the qualifications of candidates for admission;  
 (c) will correspond with Head-Quarters;  
 (d) will be responsible for the proper working of the Society.
4. In the absence of the President, the Vice-President replaces him.
5. The Councillors will consult with and advise the President or Vice-President in matters relating to the internal working of the Branch.
6. The duties of the Secretary are to keep a record of the Proceedings of the Meetings; to keep a list of members; to carry on correspondence other than with Head-Quarters; to convene extraordinary meetings, and to keep accounts.
7. Meetings will be held once every fortnight; and one-third of the total number of members, but not less than three members, will form a quorum.
8. Extraordinary meetings may be convened by a requisition made on the Secretary by the President, or by at least three members, with the knowledge and consent of the President.
9. The subject for consideration at each meeting will be one of the branches of occult science to be named by the President at the meeting previous.
10. On the opening of a meeting, the Secretary will present the Proceedings of the previous meeting, and will mention any fact connected with the working of the branch which may need attention. The President will then introduce the special subject for consideration.
11. A library will be established containing books appertaining to the subject of the Theosophical Society, and it will, for the present, be in charge of the Secretary.
12. A monthly subscription of Re. 1 will be payable by each member to defray expenses connected with the working of the Branch, and with the Library.

N. B.—The above is subject to the approval of the Parent Society.

W. D. TILDEN,

Pres. Him. Esoteric. T. S.

Approved as corrected:—

H. S. OLCOTT.

7-9-83.

P. T. S.

#### THE BHIRIGU KSHETRA THEOSOPHICAL SOCIETY.

(Jubbulpore).

A meeting of Native gentlemen anxious to join the Theosophical Society was held at Jubbulpore on the 11th of August with a view to form a branch of the Parent Society. Babu Nivaran Chandra Mukerji was proposed Chairman on the occasion. The candidates, whose applications for admission were already approved of by the President Founder, proposed and carried the following resolutions:—

I. That a branch of the Theosophical Society be formed at Jubbulpore by the name of the "Bhirigu Kshetra Theosophical Society, Jubbulpore.

II. That the object of the Society would be similar to those professed and carried out by the Parent Society.

III. That the following gentlemen be appointed office-bearers to carry out the business of the Society.

Babu Kalicharan Bose, President, M. R. Ry. B. Ghantaya Naidu Garu, Vice-President, Mr. N. B. Nakhre, Secretary and Treasurer, Mr. G. M. Page, Librarian.

IV. That Bye-laws for the proper management of the Society be drawn out and adopted at an early date.

V. That a copy of the proceedings of the meeting be sent to the President Founder for his information and publication in the *Theosophist*.

The meeting dissolved with a vote of thanks to the Chairman.

N. B. NAKHRE,  
Secretary.

Approved.

H. S. OLCOTT, P. T. S.

This Branch has proposed to give monthly prizes to such of the boys of the Local city-aided school as may be reported by the Head Master of that school to be truth speaking and of good character. Prizes will be given in form of books on morals and religion in Hindi and English.

#### BYE-LAWS OF THE BHIRIGU KSHETRA THEOSOPHICAL SOCIETY (JUBBULPORE.)

I. The branch of the Theosophical Society formed at Jubbulpore will be called "The Bhirigu Kshetra Theosophical Society, Jubbulpore."

II. The objects of this Society will be:—

a. To promote by all legitimate means the cause of the Theosophical Society by cultivating brotherly feelings among the various Theosophical Societies and mankind at large.

b. To adopt means to disseminate the principles of the Society among all classes of people by discourses and translations of the Theosophical tracts in Vernacular.

III. The Officers of the Society shall be a President, a Vice-President, and a Secretary and Treasurer.

IV. The Officers of the Society shall be elected annually from among the members.

V. The Society is open to all persons of good character without any distinction of race or creed.

VI. The candidates must, before being permitted, pledge themselves to endeavour to the best of their power to live a life of temperance, morality and brotherly love.

VII. Any member who may be found to lead a life inconsistent with the rules, objects and dignity of the Society, will be at first warned and if he still persists in his course his case shall be reported to the Parent Society, whose decision will be final.

VIII. Five members, including the President and Secretary, to form a quorum.

IX. The ordinary meetings of the Society shall be held on every Sunday at such convenient hour as the Society from time to time may direct.

X. The Secretary is empowered to summon a special meeting whenever in the opinion of the President the necessity for it may arise.

XI. It will be optional on the part of the members to pay a subscription of any amount from four annas upwards per mensem.

XII. Subscription shall be taken one month in advance.

XIII. Should any member be too poor to pay the subscription, the Society may at discretion either reduce it or exempt him altogether from the payment on the recommendation of a brother Theosophist.

XIV. The collection of subscription shall be appropriated for the purpose of establishing a Theosophical Library and for payment of printing and contingent charges.

XV. These bye-laws may be revised whenever any necessity for so doing will arise.

N. B. NAKHRE,  
Secretary.

Approved issue Charter,  
H. S. OLCOTT, P. T. S.  
Camp., Octy. 29-8-83.

#### THE MADRAS THEOSOPHICAL SOCIETY.

On the 7th of September 1883, a Theosophical Sanscrit School was opened at Mylapore with great eclat. A large number of the Hindu gentry of the place were present to witness the interesting ceremony. Among them were seen Messrs. B. Bashyam Iyengar, Avergal B. A., B. L., and P. Chensaul Row Garu, R. Ragoonath Row Garu, Dewan Bahadur, P. Sreenevasa Row Garu, R. Ramachandra Row Garu, T. Subba Row Garu, B. A., B. L., and others. The School, which opened with 15 students, has been daily increasing in strength, and on the 23rd September, we noticed 51 boys receiving instruction.

At a general meeting of the Society held on the 19th September, the Sanscrit School, which was established at Peddu Naik's, pett on the 6th September by M. R. Ry. Parthasarathy Chetty Garu, F.T. S., was recognised as the Theosophical Sanscrit School. 16 boys are now reading in that school, and the number is likely to double itself before the close of October.

On the 21st September, a Theosophical Sanscrit School was opened at Triplicane. There were only 9 students to commence with, but within these few days the strength of the school has trebled and 27 students (among whom is a Brahmin girl) do now attend the school regularly in the mornings to receive instruction.

The first Anniversary of the Branch was celebrated at Patchappa's Hall on Tuesday, the 25th September, at 6 P.M. The Hall was crowded to suffocation, notwithstanding the fact that invitations to be present for the ceremony were confined to Theosophists, and to a few select Hindu gentlemen who were known to be sympathisers in the progress and success of the Theosophical movement. Besides the Theosophists, there were present Messrs. Sundran Sastree Avergal, Kaliyana Sundrum Chetty Garu, Ramiah Garu and others. Madame H. P. Blavatsky,

Madame E. Coulomb, Col. H. S. Olcott, also honoured the occasion with their presence. On Dewan Bahadur R. Ragoonath Rao Garu taking the Chair as President of the Branch, the Secretary, Mr. T. Subba Rao Garu, read his report on the working of the Society for the past year. The report dwelt in the main on the following points:—

- (1) The establishment, under the control and management of the Branch of Theosophical Sanskrit schools in the suburban centres of Madras, mentioned above.
- (2) The publication of the collection of Col. Olcott's Lectures and the Tamil translation of the 1st Upanishad by Mr. Theyagarajier, the Assistant Secretary of the Branch.
- (3) The mesmeric cures being effected at the premises of the Society by Messrs. Theyagarajier, F.T.S., and Rajum Iyengar, F.T.S., pupils of the President-Founder.

After the reading of the report, the Secretary explained in a short speech the necessity for, and the value of, the revival of Sanscrit learning in India to bring about a proper appreciation of ancient Aryan philosophy and sciences. The President then delivered an eloquent and impressive address on the aims and objects of the Theosophical Society, whose unceasing labors, he said, has begun to bear fruit by the fact of its having brought together as now in one common platform in the research after truth as brothers, persons of all castes without distinction of race or creed. The proceedings terminated with a short and sweet speech, delivered in his usual attractive style, by Col. Olcott, on the superiority of the Aryan philosophy and science over the modern materialistic school of thought, and on the necessity that exists everywhere in India, for Hindu parents to give their children a sound education in Sanscrit, without a thorough knowledge of which, he said, no one could hope to get at the true meaning of the philosophical writings of our great Rishis and Mahatmas. The address provoked frequent outbursts of applause, and the meeting closed with the usual distribution of garlands, *attar*, and *pán*.

T. SUBBA ROW,  
Secretary.

#### THE NELLORE THEOSOPHICAL SOCIETY.

We are glad to hear that the Sanscrit classes already started by our Brothers of Nellore in that town are going on well. In spite of all difficulties, the Branch is silently contributing its mite to the revival of Sanscrit. It pays a monthly contribution of Rupees five to a purely Sanscrit School at Venkatagiri. It consists of 4 classes, in the guidance and management of which our Fellows take a very active interest. They are making preparations to have a pure Sanscrit School at Nellore, where two good pandits on Rs. 20 and 10 respectively will teach Vedas and Shastras. Above all, it is contemplated that a Sanscrit primary class be attached to each Local Fund School in each of the Taluqs of the District. These classes are to be maintained by local subscriptions as well as by contributions from the Branch. Arrangements are already being made in 3 Taluqs. It is desirable that our Mofussil Branches at Tanjore, Trichinopoly, Madura, &c., should begin to work in the same line. We earnestly hope that our Brother Pattah Kodandarama Reddy Garu will soon start a regular Sanscrit School at Butchireddipolliem, where we are given to understand there are peculiar facilities for so doing.

#### NORTH KANARA THEOSOPHICAL SOCIETY (KARWAR.)

In forwarding, though with unusual delay, the accompanying copy of the Rules of our Branch Society, formed at this station in December last through the instrumentality of our kind, enthusiastic and worthy brother Theosophist Mr. Janaki Nath Ghosal, I consider it necessary to conclude this letter with an expression of the deep sense of gratitude of my brother Theosophists here for the active part taken by that energetic gentleman in the formation of the Branch, particularly at a station like Karwar, where only a few persons desirous of acquiring a knowledge, leading to the discovery of hidden mysteries of nature, are to be found.

RAMRAO MANGESHAYA BHATKAL, F. T. S.,  
Secretary.

#### (Rules and Bye-Laws.)

1. The Society shall be called and known by the name of "The North Kanara Branch of the Theosophical Society."
2. A Managing Committee, consisting of 5 members, shall be appointed for the discharge of the ordinary work connected with the Branch.
3. The Managing Committee shall meet once a month or oftener if necessary.
4. A general meeting of all the members shall be convened once every month for the purpose of formally sanctioning the work done by the Managing Committee during the period, as also for the general purposes of the Branch.

5. At the General Meetings of the Branch Society, seven members shall form a quorum.

6. The General Meeting to be held every third Sunday of every month. Should anything prevent the meeting taking place on that date in any month, some other day shall be fixed for this purpose by the Managing Committee with the consent of the majority of the rest of the members.

7. Due notice shall be given by the Secretary to all the members of the Branch of such altered date and place of the meeting, at least three days before the date fixed, and also not less than a week of the third Sunday of the month.

8. The Secretary shall be at liberty to convene weekly or fortnightly meetings at the request of any 3 or 4 members, for the purpose of discussing any useful topic of social, moral, intellectual or spiritual importance.

9. Any member unable to attend at meetings under para. 4, owing to sickness or otherwise, shall signify his inability to do so in writing to the Secretary.

10. All resolutions passed at the regular meetings shall be binding alike on all members present or absent at such meetings.

11. Such Resolutions or Amendments as are voted for by the majority present at the meetings shall be considered as resolutions duly adopted.

12. When votes are equal the Chairman shall have the casting vote.

13. None but Theosophists to be allowed at the meetings of the Society. But persons learned or proficient in ancient sciences or philosophy, such as 'Yoga,' though not Theosophists, may be allowed to attend, provided they are recommended by at least two members of the Society, and previous intimation given of the same to all the members through the Secretary.

14. Every year during the Divali holidays the annual meetings of the Branch Society shall be held, when the annual reports shall be submitted by the Managing Committee and the office-bearers for the next year elected, the accounts passed, and any alterations, additions, &c. to the Rules for the guidance of the Society be made. Also, if feasible, a sum may be spent in objects of charity in connection with the celebration of the anniversary.

15. Every member shall pay a monthly subscription of not less than four Annas towards the formation of a General Fund to meet the general expenses of the Society.

16. All payments on behalf of the Branch Society shall be made to the Treasurer to be appointed by the general meeting.

17. The Treasurer shall keep a regular account of money received and disbursed on behalf of the Society, and shall submit the same every month for the inspection of the Managing Committee.

18. The Treasurer shall not be at liberty to spend any amount without previously obtaining the permission in writing of the Managing Committee.

19. A Library, consisting of useful works bearing on Theosophy, ancient Aryan literature and science, and such other works, should be formed for the use of the members of the Society.

20. Such Library shall be in charge of a Librarian to be appointed by the Managing Committee, subject to the sanction of the general meeting.

21. Every member shall have a right to use the books of the Library, but no member shall keep the book or books issued to him for more than seven days, without subjecting himself to a fine of one Anna for every day in excess of the time prescribed.

22. The Library Fund should always be kept separate from any other or all other funds of the Society, and should always be expended for the purposes of the Library.

23. The books of the Library shall be considered to be the property of the Society.

24. Any person not being a member of the Society may be allowed the use of the books of the Library for not more than three days, provided the Librarian is perfectly satisfied that such person is an earnest seeker or enquirer after Truth. The Librarian, however, shall be held responsible and would make good the loss should any book or books so lent by him are lost.

25. The Librarian or any member shall be at liberty to propose the purchase of any books, but no books shall be bought without the express sanction of the Managing Committee.

26. Any proposal which any member may have to make regarding the work of the Society shall be communicated in writing by such member to the Secretary, who shall lay it before the General Meeting of the members, and it shall then be decided by a majority whether such proposal or suggestion should be adopted or rejected.

27. Should any of the office-bearers vacate his place during the year by reason of transfer from the District or Station or any other cause, the Members in General Meeting assembled shall have the right to elect another member for the vacant place.

28. Should any member by any improper or immoral conduct become an annoyance to the rest of the members or a disgrace to the Branch, and the efforts and personal influence of other members fail to bring him back to the right path, his conduct should be brought to the notice of the Council of the Parent Society, with a view to obtain instructions regarding the manner in which he should be dealt with in future.

29. It will be competent for the members assembled at a regular meeting, should the state of the funds of the Society allow it, to vote out of the same any sum or sums of money for any charitable purpose, be it for helping any individual or any local or foreign charity.

30. The Secretary of the Society shall keep a book for entering therein the proceedings of all the general meetings and the resolutions adopted at such meetings. This book will be open to inspection to any member at any time.

31. The Secretary of the Society shall be the ex-officio Secretary to the Managing Committee.

32. A book shall be kept for recording the proceedings of the Managing Committee meetings, and such of their proceedings shall find entries therein as are to be brought to the notice of the general body of the members, as also any other proceedings which the Managing Committee decide to record therein. This book will also be open to the inspection of all the members of the Society.

33. The members of the Managing Committee shall draw a set of rules for the conduct of their business and their guidance, which they shall get previously approved of by the general body of the members assembled at a regular meeting.

34. Should any person when joining the Society stipulate that his name should be kept a secret, the same shall be done and the Parent Society shall be requested to do the same.

35. The general meeting shall have power to add to or alter, modify or annul the above rules as may be found necessary.

G. V. BHANAP,  
President.

#### A DELEGATE FROM AMERICA COMING.

I wish to inform you, that I have received papers from the Theosophical Societies at New York, St. Louis Mo., and Rochester, N. Y., empowering me to act as their delegate at our anniversary, to be held in Madras next December.

I expect to leave San Francisco on October 24th, and go by way of Yaldhama.

F. HARTMANN, F. T. S.

#### THE ROCHESTER THEOSOPHICAL SOCIETY.

I beg to submit the following report in regard to the Branch of the Society at Rochester, N. Y. The city of Rochester is twelve hours' (express speed) railway travelling away from New York City. It is a large city, and celebrated among spiritualists as the place where the first rappings were heard many years ago.

At the special invitation of the Branch, I visited them on their anniversary. They have 36 members all very earnest Theosophists, and both as a society and individually, they are doing all in their power to spread a knowledge of true Theosophy.

They meet once in each week at the house of the Secretary and spend one hour of the meeting in contemplation; they then devote themselves to discussion and comparison of views.

They have spread a knowledge of theosophy among a large number of persons, and as occasion permits, use the press for disseminating their views. Every one of them firmly believes in the existence of the Great Souls who have retired from the world, that they may the more effectually help the world, and aspire to imitate them in their virtue. As a society and individually, they fully realize the need for a true Brotherhood of man, and are doing all they can to forward that object. Very soon they intend to get out a pamphlet upon the doctrines inculcated by Esoteric Buddhism, in which they firmly believe.

Some opposition has been encountered among Spiritualists, but that is inevitable. One incident deserves mention. In 1879 or 1880 before they organized, the President Mr. W. B. Shelley called on me in N. Y. with the Secretary Mr. J. H. Cables, and inquired about Theosophy. I handed him the 2nd No. of the *Theosophist* which he took home, and after reading it subscribed for the Magazine and asked that all back numbers be sent him. The Indian Office sent all the back numbers with one exception, and informed him that that number was out of print. Upon looking over those sent he found that the missing number was of the issue of which I have given him a copy, so that his whole set was complete. When one considers the intense earnestness of Mr. Shelley and Mr. Cables in this matter, this little coincidence is rather remarkable.

If any branch deserves especial recognition, the Rochester one does but they ask no such thing, satisfied as they are to work for the good of humanity and the spread of truth.

WILLIAM Q. JUDGE,  
Recording Secretary, N. Y.

#### OUR ARYAN FOREFATHER'S SOCIETY (TINNEVELLY.)

Proceedings of the Extraordinary Meeting held on Thursday the 23rd August 1883, corresponding to 8th Avani Audu 1059.

PRESENT.

M. R. Ry. S. Ramaswamy Iyer Avergal (Member Library Committee) presiding.

„ S. Sunderam Iyer Avergal, Member of do.  
„ A. Anantha Chariar, President of the Society.  
„ T. S. Kandaswami Pillay, Secretary of do.  
„ S. Periaswamy Pillay, Treasurer of do.  
„ C. Shanmoogasunderam Pillay, } Members.  
„ V. Veerangavilar, }

I. Resolved, that Rules regarding the management of the Library be drafted by the Members of the Society, and submitted to the Library Committee for approval.

II. Resolved that the Society Hall be henceforth changed from the Central School Hall to the new building No. I in the North Car Street.

III. Proposed, by M. R. Ry. S. Periaswamy Pillay and unanimously carried into effect, that the opening of the Library be intimated to Col. H. S. Olcott, who started a subscription list for the same at the close of his lecture in this town.

IV. Proposed by M. R. Ry. S. Periaswamy Pillay and carried unanimously, that a vote of thanks be given to Madame H. P. Blavatsky and Col. Olcott for their kind patronage and good wishes to our Society.

V. The Library was then formally declared open by the presiding gentleman and the meeting dispersed.

S. PERIASWAMY PILLAY,  
TINNEVELLY, } Recording Secretary and Treasurer.

#### THE SEVENTH ANNIVERSARY REPORT OF THE THEOSOPHICAL SOCIETY.

This week we have received a copy of the "Full Report" of the Seventh Anniversary of the Theosophical Society, published in a nice pamphlet of 88 pages. Its perusal shows how much progress the Society has made during the last seven years of its existence, and how very successful it has been in spreading the idea of Universal Brotherhood all over the world—particularly in India. The anniversary was celebrated in Bombay on the 7th of December 1882, and from the report before us it is evident that there are very few *Utsavas* (celebrations) of the like nature held now-a-days in *Bharata Varsha*. This celebration was a realization, one might say, of the grand and real object which our ancestors had in view in enjoining on us the *Tirtha Yatra* (pilgrimage.) The hearty gathering of the great enterprising men of far and distant parts of the country in order to give their attention to the spiritual, mental and moral welfare of mankind to create lovely dealings for mutual benefit, and thus to be firm in trying to look upon the world as *one whole* (i. e., *Sama bhava*)—to be resolute in exerting to achieve these objects this celebration (of the Theosophical Society) was a very good example, and in our opinion there were no better or more occult objects than these in the large gatherings and pompous celebrations at the different *Tirthas* (sacred places). In addition to the well-known Mr. Sinnett, Madame Blavatsky and Colonel Olcott, there were present on this dignified occasion delegates from Berhampur (in Bengal), *Prayāga* (Allahabad), Calcutta, Barielly (Rohaikhand), Baroda, Madras, Lahore, Bombay, Rewah, Tinnevely, Bhagalpore, Cawnpur, Nuddeah, Galle (in Ceylon), Saorashtn (Kathiawar) and Poona—and what one and all of them said (as regards the Theosophic movement) is published in the Report under review, *in extenso*. The next celebration of the Society's anniversary will be held in Madras, where delegates from Europe and America are also expected on the occasion. If, setting aside the useless accusations made against the *Tirthas*—where so many thousands and hundreds of thousands of people assemble *regularly* from far and different countries on such auspicious occasions—the reformers and regenerators of our country would but try to establish associations or hold meetings with the objects above explained, i. e., Universal Brotherhood—the degrading state of the country will be soon remedied and rooted out at once. We wish every success to such movements:—(MITRA VILASA, LAHORE, 20th August 1883.)

## AN OPEN LETTER

TO THE

RIGHT REVEREND, THE BISHOP OF MADRAS.

RIGHT REVEREND SIR,

As the Founders of the Theosophical Society are leaving Ootacamund tomorrow, the occasion requires that I should address a parting word to yourself and those who share—or seem to share—your views about the Theosophical Society. I cannot believe the subject uninteresting to you. Your Reverence did us the great honour to allow the Society to be discussed at the Madras Diocesan Clerical Conference on the 4th July 1882, and to circulate as "From the Bishop of Madras" a pamphlet against us by the Revd. Arthur Theophilus, printed at your own press at Vepery (my pen had almost written it *viper*y). You have moreover, unless we are misinformed, used, and suffered to be used in your presence and at your very table, language about us very unparliamentary; in fact, so strong and uncharitable as to come under the provisions of the Penal Code of Matt. v. 21, 22. This attitude of your Church and your reverend self towards Theosophy is the result of misunderstanding of both Theosophy and—under favour—Christianity as well. It is alike a pleasure and a duty to undeceive your Reverence. If nothing else comes of it, at least the excuse of ignorance will be removed; and if I can refresh the memories of some of your least Christian and most vituperative followers [Your Reverence deserves sympathy under the affliction!] as to the spirit of their professed faith and of Religion in the abstract, we may hope for a better show of "peace on earth and good-will among men."

These blusterers, who would dragoon good people into condemning out of hand the Society and its Founders, by swinging the *knout* of orthodox respectability, little suspect what they are doing. Their clamour makes indeed a day's Reign of Terror in their little *côterie*, but the Nicodemuses of your Anglo-Indian *grand monde* come to us by night or by stealth to whisper the tale of their social slavery and their religious scepticism into our sympathetic ears. A temporary despotism chokes free religious enquiry, as the iron rule of the Brummagem French Cæsar stifled the national aspirations; but the immutable law of equilibrium, the correspondential relation of action and reaction, is thus preparing for your Reverence's church in India an ecclesiastical Sedan even more decisive in character than was its military prototype. There is a dogged love of fair-play in the human, particularly the British, breast; and, though your Reverence has not yet learnt the fact, persons of respectable connection at Ootacamund have joined the Theosophical Society, solely because of its being so bitterly and unfairly traduced in the social circle of which you are at once the Athanasius and the Tertullian. Others have the will without the courage to follow the example; and if this sort of thing goes on, it may actually happen that the poor, maligned Theosophists will be cited to the Indian Christian community, irrespective of cutaneous discoloration, as patterns of the old-fashioned "Christian Virtues." "May happen" did I say? It has happened already, for I find this in the highly respectable organ of the Scottish Free Church Mission at Madras, *The Christian College Magazine*, Sept., No. 3, p. 183.

"In the recently published volume of lectures and addresses by Colonel Olcott, there are many things which claim most careful attention. We shall not be accused of undue partiality for Colonel Olcott's ways of thinking and speaking, but *we hope we are not blind to evident good*. There is an address to lady Theosophists in the volume, not from the Colonel's pen, which is both beautiful and striking. Those of us who are familiar with good Christian sermons will recognize not only the arguments adduced, but the very forms of expression in which they are set forth. But people who will not listen to sermons will listen to the Colonel and his friends. Let them read this:—

"The first great truth then that each must take to heart is that this life here is but one day's sail in the vast voyage that all must make, who escaping utter shipwreck and destruction would fain safely cross the stormy seas of material existence to that tranquil haven where all is peace—their birth-place and their home. The second and even more vital truth is that throughout this entire pilgrimage our fates are in our own hands. We shall perish miserably by the way: we shall win onwards, slower or fast, in storm or sunshine, just as during each fresh departure we act, speak or think."

"Is this stern moral doctrine [that which is attracting his disciples to the Colonel?] Would that it were, for it is a bitter tonic like this that the public conscience needs."

But your Reverence will doubtless retort that these are the words of a branch of Dissenters, and your trunk of Christ's

Church is not responsible. I may be hustled out of Court with that back number of the S. P. G. Magazine flung after me, which contains the reprint of an infamously indecent and insulting slander upon us, from an American paper; entitled "Theosophical Deadheads;" and told to take *that* as the opinion of Theosophy of the Establishment. I can meet even this. For see the following from the first number of "The Epiphany," the new Missionary Edition of *The Indian Churchman*, of Calcutta:—

"If we were appealing to an English audience in England, we should expect to be treated by most with contempt. In England most people profess to believe that Christianity *may* be true; few people care to face the question honestly. *And there are a large number who, owing to its commanding social position, admit its truth theoretically.* For this very reason such people would be the most bitterly contemptuous, if we were, in the course of some special Mission, to press upon them its truth, to urge them to come to Church, or to repent of their sins. The effort of will which *stifes their conscience cannot leave them calmly neutral.*"

The Secretary of State for India—if a rather retentive memory has not deceived me—held a like opinion of Anglo-Indian religious fervour, since he sent a despatch to H. E. the Viceroy and Governor-General, to warn the paramount class in India that if they did not make greater use of the paid chaplains and churches, the Home Government would entertain the idea of relieving the Indian tax-payers of the burden of their support. That the highly educated priests of the Oxford Mission have a more Christian kindness of feeling towards the Theosophists, and believe them to be at least sincere, however misguided, appears from the fact that the *Epiphany Prospectus*, that of the paper in question, bore the written request from the Editor that I would "condescend out of my great kindness" to write an article upon the relations of Theosophy to Christianity. For, as he declares:—

"Even Theosophy, which, according to its published *Rules*, must in its meetings respect the particular religious convictions of its members by silence (*Vide Rule VI*) condescends to attack—not indeed the *Human nature of Christ, nor any true Christians*, but—bad Christians, and Christian Theology—in its magazine and its unofficial publications."—

The italics are mine. What I wrote in response to this request, your Reverence will be enabled to read in the journal itself, but I will permit myself a very condensed summary in advance with addenda. Briefly then: Religion is one, but theologies are many. One may be truly religious and yet profess no one theology. Jesus taught this; in fact, his mission was for "the awakening of the nations" into true religious life, out of the dull slumber of mere sectarian Pharisaical formalism. Religious feeling appertains not to the outer, physical self, as theology does, but to the inner, psychical self—the "soul," or "spirit," as your Reverence prefers. Religious aspiration is impossible without an inner, or psychic, awakening; and without that, religious knowledge (as distinguished from theological knowledge, or religious *faith*) is as impossible as physical sight without eyes, hearing without ears. Theosophy is the means for this awakening; a Theosophist one who practises some one of several prescribed methods. A Theosophist must, *ex necessitate rerum*, be a religious man, though he never entered temple or church; a moral, temperate, honest, upright man. A society of Theosophists conscientiously and ably managed, confining itself wholly to its declared area of activity, and eschewing politics, trade, and other purely secular externalisms, was never, could never be, aught save a source of benefit to its day and generation.

A mystery has always attached to theosophical schools and associations for the valid reason that the religious feeling is such that one can only expose to congenial souls; it is caviare to the general public a delicate plant which is at once nipped by the frost of a selfish world's atmosphere. "Unto you," said the Founder of the Church from whom your Reverence claims apostolic succession—"it is given to know the mystery (theosophy?) of the kingdom of God: but unto them that are without, all these things are done in parables. That seeing they may see, and not perceive; and hearing they may hear, and not understand; lest at any time they should be converted and their sins should be forgiven them." I am so "poor a theologian that in this geographical Indian "Swarga of Ooty, away from my library, I cannot pay my respects to the Bible revisers if, happily, they have omitted the last sentence or an interpolation, for it is most untheosophical. However, the main position stands unshaken, and it is quite evident that esoteric methods are perfectly Christian as endorsed by Christ himself. Those who, like a certain local "medicine man," object to the feature of secrecy attached to

our Society's programme, I leave to settle with their Scripture and their consciences. The dilemma is awkward, yet real. If they do not wish to subject themselves to reproach upon the basis of the *Epiphany's* test, they should straightway cease from their slanderous gossip about the obscure, yet honest, Founders of the Theosophical Society. Your Reverence has said to such at the Communion a thousand times, in the course of your long ministry: "Amend your lives, and be in perfect charity with all men; so shall ye be meet partakers of those holy mysteries." We only ask that these wicked Christians, these lip-pretenders to religious feeling, shall heed this sage counsel and act accordingly. Your Reverence knows that in this same sacrament the communicant is told "if ye shall perceive your offences to be such as are not only against God, but also against your neighbours; then ye shall reconcile yourselves unto them; being ready to make restitution and satisfaction, according to the uttermost of your powers, for all injuries and wrongs done by you to any other." We are your neighbours; you have grievously wronged us by catching up false and malicious reports against our private characters and without sufficient enquiry giving them currency. You have circulated misleading pamphlets and wickedly false stories about us; have tried to make every timid Christian shun our company; to influence officials more bigoted than prudent to use pressure upon their native subordinates to keep them out of our Society; to bar us from high official favour, or rather the protection guaranteed to all under British laws. All this, and worse, the Christian party in India have done to their overmatched Theosophical brethren. Yet we survive. And survive we shall—do what our enemies may. That equal justice which Mofussil collectors and other white officials withheld, the non-theological Government of Madras, at the Council meeting of the 12th instant, has unanimously dispensed to us. We shall take care to continue to deserve the boon. And, as trustees of the honour of our Society and of the self-respect of its thousands of fellows, the world over, we shall arraign in a Court of justice whomsoever—be he priest or laic—shall falsely and maliciously impute to us offences degrading to our reputations and secondarily injurious to our Society. Your Reverence is implored to give your professional subordinates timely warning. We are people of action as well as words.

And for such act of Christian justice, I shall, as in duty bound, ever pray,

H. S. OLCOTT,

*President of the Theosophical Society.*

OOTACAMUND,

The 15th September, 1883.

#### THEOSOPHY AND CHRISTIANITY.

TO THE EDITOR OF THE INDIAN CHURCHMAN.

*Camp, Ootacamund, Sep. 17, 1883.*

SIR,—At your request, I do myself the pleasure of saying a few words "as to the relations of Theosophy to Christianity." I can, unfortunately, make them but few, since my moments are so occupied officially as to leave me scarcely any leisure for literary work. I do assure you that this is strictly true, and that from year's end to year's end I hardly know what it is to have a holiday hour; and that but for my personal regard for a Gentleman of your Mission, I would have felt compelled to decline an invitation, the motive beneath which I quite understand.

It is quite conceivable to me that ministers of certain of the more unspiritual dissenting sects of Christians should propound the query what relation there is between Christianity and Theosophy: 'religion' being to them at best an Ethical system of restraint during this life, and the crudest possible dream of a future to be enjoyed amid surroundings of barbaric splendour. But for minds of your class, and scholars of your accomplishments, I had thought no such exegesis was called for. Your idea of Religion is much higher, your concepts much more spiritual. As High Churchmen, you have carried your idealism to that degree that you feel the "Spirit of God," received from the imposed hands of your seniors, ever verifying your being and thrilling through the avenues of your corporeal life. And you suspect—perhaps even assert: I am not a Christian, and so have not been well informed myself—the Real Presence in the consecrated water and cup of sacrament. Why then, should you doubt, not merely a relation with your religion, but an union as close with it, and all other religions, as that of your soul with your body. *Theosophia*, is "divine" wisdom, I believe; and a Theosophist one engaged in its research. And what is divine wisdom but the essence of Religion; Religion as such. I maintain, not the Religious ideas of Catholics or Protestants, Brahmans or Buddhists, Parsis or Jains? Neither Christ nor any other religious teacher, whether claimed to be superhuman or human, came but to tell mankind to wear certain fashions of clothes, or eat certain kinds of food or observe some one or other set of external forms. That was not Religion to them, but the patches of its cloak; and a sorry thing it is for

the world that this cloak, like the 'poisoned shirt of Nessus, has been eating into the vitals of each of the good religions of archaic times! If you Oxford Graduates think you can restore that escaped spiritual life, and infuse into this age of iron and humbug a truly sincere love for religion by your methods, do so, by all means. Not only I, but every lover of his kind will rejoice over your every success. If you have come to India with the necessary proofs to convince our Brahmans, and Bhikkus, and Mobeds, and Sadhus, that you have the one and only true religion, and that theirs are false from circumference to core, then do so: our applause will follow you always. That I do not believe you capable of doing this; that I personally believe that in every religion over evolved by man there was, and is, and must be, *ex necessitate rei* a portion of the one truth; that I believe that no man, whatsoever his Religion, can ever or could ever have a religious aspiration, or a glimpse of religious light, without awakening within himself the natural, but usually latent, psychic faculties, and that I disapprove, upon principle, of every Missionary or non-missionary attempt to inveigle persons—especially children of unripe intelligence—from their ancestral faiths to some other form of sect without giving them all the evidence pro and con—all this does not concern you. You follow the call of conscience; so do I. You pursue your methods; I, mine. You believe one cannot "know God" or acquire divine wisdom except through the enlarged perceptions of the Inner Self; I, also. It is only when we leave these 'universals' and descend to 'particulars' that our paths diverge. Your feet tread the way towards Calvary, mine that towards Buddha-Gaya and thence towards the Himalayan retreats, where my Teachers—the successors of the old Aryan Initiates—still hold the torch of divine wisdom to light the way of the truth-seeker. But still we are brethren—you and we Theosophists—though you deny it ever so much, for all, whether Christian or "Heathen," white or dark, bond or free, are children of one Cause, partakers of one destiny. "Let there be no strife, I pray thee, between me and thee \* \* \*; for we be brethren." Missionaries who war with us can have it; for we then know that they belie the professions of their master, and have no religion of any kind within them. But we have no strife to make with any Missionary or other Christian, who will permit those he would convert to read and know all that can be said against both Christianity and his 'Heathen' faith, whatever it may be.

Respectfully yours,

H. S. OLCOTT,

*President Theosophical Society.*

P. S.—I doubt my ability to give any more time to this question in the *Epiphany*, and so must leave to other members of our Society to reply to any criticism that may be provoked by my present letter.

H. S. O.

#### THE INDIAN CHURCHMAN ON THE ABOVE.

We publish to-day with pleasure, or rather with gratitude, a letter from the President-Founder of the Theosophical Society. With pleasure, because it enables us to claim a friendly hearing from Theosophists, although we advocate views of Theosophy the reverse, in many ways, of those taught by their adepts. With gratitude, because we know from many sources the immense amount of work done by Col. Olcott, and can appreciate the self-denying kindness with which he has found time to write to us.

This letter will form—especially through its postscript—a medium of communication with Theosophists, which we earnestly desire.

It is to us an augury of good that one who differs so widely from us as Col. Olcott, one whose life work it is to destroy the Christian Theology, which it is ours to defend, should yet recognise us as kindred spirits. We are so accustomed to be denounced as the interested upholders of a system begun, continued, and ended in forgery, that we are grateful to be recognised as fellow-seekers after truth. We can only assure Col. Olcott, that we regard him personally with the deepest respect and regard as one who honestly rejects Christian Theology, believing it to be man made.

Let us reply to Col. Olcott as directly as he speaks to us.

You are kind enough, Sir, to attribute to us some such spiritual conception of religion as to enable us to see our relation to Theosophy. You wonder at our even asking the question. There is one sense in which the question is needless, as you say. The essence of all religion is not in its letter, but in its spirit. We perform certain physical acts, as you go through certain process of Yogi, simply as a means to attaining the development of certain latent powers of human nature, such as humility, love, communion with the personal All-Father holiness, immortality, and, if God will, even in this life, dominion over physical nature, though this last is a matter of comparative indifference to us; we aim primarily at moral and spiritual perfection, not at extraordinary powers.

You also admit that the development of our nature must be sought for no selfish ends, and that its first step is—as in your own case—the struggle with selfishness.

In so far then, as your Theosophy is a crusade against the lower self in man, it is identical with Christian Theosophy. That is, we grant you, the common element of truth, the seal of the brotherhood of all human creeds.

But you will not forget that we Christians appeal to history against your view of Christ and early Christianity. You say that Christian Theology has been an excrescence upon an earlier doctrine which taught a Theology like your own—namely, the development of the higher self in man by his own efforts. We appeal to history to prove that from its beginning Christianity has been the reverse of all this, a proclamation of the powerlessness of the human will, until vivified by the communicated love of a personal God. We admit frankly the extreme heights of miraculous power and moral grandeur attainable—as by Gautama Buddha—apart from Christianity; but we see no reason to believe that human nature can reach perfect humility and love apart from the Cross of Christ and the supernatural Grace of His Sacraments.

It is no theory which we preach, but an experience. Whatever the East may have felt or obtained, it has been the experience of the West that all efforts to become holy end either in selfish abstraction, or isolation or mysticism, or in failure, and that only by the faith of Christ can active love and sustained purity be maintained in our crowded cities, where work is needed for the Salvation of mankind. We of the West may be wrong. But you at least, Sir, are right when you attribute to us an idealism bold enough to assert the possession of spiritual force through material media. It is, indeed, true that, with all our personal failings, we claim to possess by imposition of hands the Spirit of God, which Jesus once conveyed by breathing upon His Apostles. We do indeed, assert, not merely suspect, the Real Presence of the Crucified One in the Sacrament, when without defining the mode of that presence, we believe that we are made partakers of His Body, and Blood, of the Glorified Human Nature of the God-Man. And, Sir, we know that then we are blessed, that then we receive the power which only God can give to our frail natures, the power to love and to suffer more and more, as we come closer to him. And so you truly imply that we too are Theosophists. We are so, and we differ from you only as to the mode in which the "Love of God" is to be attained. There are earnest Christians who would gladly join your Society, if they might urge the claims of Christianity as the true key to the development of our latent powers. But that would be forbidden by Rule VI. of your Society, excepting in meetings of our co-religionists only. And this is the chief reason which keeps us aloof from you in your inner circles, though we desire your friendship, as far as we can win it, in ordinary intercourse.

And so you will perceive that we sympathise with your sorrow for the way in which mankind have buried the Spirit beneath the forms of religion. But we are childish enough to believe that in the Incarnation we have the true meeting place of the Divine Spirit and Matter, and that the ceremonies which are the outcome of that Incarnation, are still in the hands of the Brotherhood of the Church of Christ, the truest channel of communication between man and God. And we regard this our faith, the result of centuries of development before Christ came, as of universal significance, not to be confined to the Jews from whom it came. That which has done so much for us, we believe can do as much for the "age of iron and lumber" in which we live. But we bring no proof that other faiths are rotten to the core, because we believe each human faith to contain Divine Truth, sullied by human error, which has not spared its assaults upon Christianity also.

To your noble appeal for fairness in controversy we must make one exception. As it is impossible for most men to prove thoroughly the intellectual basis of their irreligion, as you confess to having not fully examined Christianity, nor we Hinduism or Theosophy, or indeed Christianity itself, so something must be allowed to internal or esoteric or experimental proof.

We do not very carefully enquire into the evidence for the existence of Christ, because we find it as a rule admitted as telly by the most learned enemies as by the friends of Christian Theology. It is only when we find it strangely doubted that we glance more minutely at the evidence which has convinced friends and foes. As a rule the faith of the Christian, as of the Theosophist, rests upon experience, on the consciousness of the growing development of his true self. And so when any young heart has almost of its own accord recognized the truth of Christ, when we see it holding pure converse, like our own, with Him, and by Him redeemed from selfishness, daily glowing more brightly in new gentleness and love, and certain of His Presence, we hold it to be no part of ours to refuse to baptise, because the boy does not know as much as we do, nor we as much as Voltaire on one side and Canon Liddon on the other. Forgive us; the boy believes; and we believe that the boy is right. Our conscience calls us one way, yours another. And yet we hold it a sin to tear a child, *yet a minor*, from the home and family which abhor the very name of Christian, and disown the baptised.

But in dealing with men and opponents, we do indeed desire the fullest knowledge and light. We seek the truth, stronger than all religion. And if you can convince us that Christ was not the Way, the Truth, and the Life, we will forsake Him, and follow the truth. Or convince us that we have misunderstood His teaching, and we will cease to worship Him as God, and follow Him simply as the Buddha of the West. Only we ask of you to be explicit. One instance only. We do not ask you to suppress infidel works. You have in the August number of the *Theosophist* given your "Final Answer" to any such request. But when, as in the note to the letter of Vera, in the July number of the same magazine, on the "Status of Jesus," it is said that the Mahatmas hold Jesus to be a great and pure man who lived over a century before the year of our vulgar, so-called, Christian era, we ask you to be more explicit. The Mahatmas would not speak without reason, but they can hardly expect people of ordinary education to put aside ordinary historical evidence without further explanation. How can a man who reads in the heather. Historian, the Roman Tacitus, himself born before A.D. 61, notorious for his careful historical accuracy, the record, in connexion with political events of his own day, of the crucifixion of Christ, the founder of the Christians, by Pontius Pilate, in the reign of Tiberius, put this aside without explanation. We ask you to be more explicit. And we are sure of your sympathy when we ask you to divorce yourself openly from all more abuse of our sacred beliefs. Although the *Theosophist* is advertised in the January 1883 number of the *Anti-Christian*, we are sure that you for one would not approve of the phrase made use of in p. 14, which we force ourselves to quote, of the Holy Ghost "seducing the innocent confiding Mary." When the very Jews who crucified Jesus only cared to say that He was the son of Joseph, why should calm critics

of the nineteenth century cease to respect the purity of a legend even while denying its truths? Why should they stain the purity of their own pages, wantonly wound every Christian heart, attribute to the purest spirit an act only possible in the sphere of the grossest matter, and by attributing to the most Holy an act only possible to the most vile, almost, though perhaps without full intention, blaspheme the Holy Ghost.

Nor do we think that you would approve of the vision of the Trinity on page 3 of the same publication, where the writer beholds a tree on which was nailed one who stole a donkey. It is of comparatively little importance that the fact itself is otherwise, that both S. Mark and S. Mathew record the directions given by our Lord for obtaining the consent of those concerned for obtaining the loan of the animal, or that S. Luke records the actual consent obtained from the owners. Let us even imagine that, in accordance with Oriental custom, a beast of burden was, as we should say now-a-days, requisitioned for use on a public occasion, still we confidently assert that any right-minded man would condemn the frame of mind which could fix on such a minute detail for sarcasm amid all the lovely and sublime features of the life of Christ, and could carry that sarcasm up to the very throne of God in Heaven.

Last of all, Sir, we note with some degree of sadness the words in which you say that our road lies to Calvary and yours to Bodhi-Gaya, the holy land of the Buddhists, and thence to the heights of the Himalayas where dwell the sacred brothers. If indeed it be so, that our paths must diverge so widely, we can only say that when you shall have obtained those lofty mountain heights and shall look down upon us, on the little mound of Calvary, we do not think we shall envy you your height, but shall be content to remain where we are, prostrate at the foot of the Cross, believing that there we shall obtain the deepest and truest view of the possibilities and the ideal of human nature.

Alas! would that all Christians, and especially Christian clergy-men, were moved by the same spirit of kindness and fairness that so evidently moved the writer of the above. Indeed, would there be no need then for writing "an Open Letter to the Bishop of Madras" which please see in another column and compare the spirit complained of which necessitated its publication with the above remarks.—  
ED. THEOS.

#### COLONEL OLCOTT'S LECTURES.\*

(From the Madras Mail).

Long before the light of Colonel Olcott's countenance had dawned upon Ootacamund, and before the beauty and fashion of the cloudy capital had been set a fluttering by the marvels of Madame Blavatsky, it was evident to all that kept touch with the native mind that a remarkable movement was in progress in and around Madras. It is not too much to say that the name of Colonel Olcott (or All-caught as the Natives call him, or All-talk as some Europeans dub him) has for many months past been prominently before the Hindu community. Europeans generally are so completely ignorant of what is going on in the dusky world around them that they seldom realize the significance of purely native movements till they have become matter of history. They are aware in a dim sort of way that something exciting is to the front, but they pay little attention to it. Thus the Theosophical excitement was regarded as simply another illustration of the native fondness for tamshas, and Colonel Olcott's triumphal progresses as so much temporary effervescence. It was supposed that he was but another meteor-blaze across the Indian sky, dazzling and alarming the weak-minded, but destined to sink below the horizon when his day was done, leaving not a trace behind. It is too early in the day to pronounce this view a complete mistake, but at all events the Colonel is doing all in his power to prove that it is. He knows well that mere excitement of whatever kind is in its very nature evanescent, and that all popular movements which are to stand the test of time must be supplied with an organization, a body for the spirit to inhabit and use as its organ. Accordingly, we find him everywhere, not only lecturing, and exhibiting his powers and collecting crowds of admiring natives, but also establishing branches of his Society, each with its executive officers and other guarantees of permanency. It is perfectly possible that the Theosophical Society and its branches may be one of the many strange items which must, in future, be taken into account by those who have to deal with Hindu society. An Association with such enthusiasm, such wide-spread ramifications, and such an evident power of self-propagation, is well worth study, even if Ootacamund had never developed a local branch. A volume of lectures from the pen of the President-Founder will be eagerly welcomed by those who, like ourselves, have regarded with wonder the recent developments of the Society. We naturally expect that we shall obtain some insight into the secret of its power over the native mind, even if we are as far as before from becoming converts to Theosophy. We must, however, confess our disappointment. If we feel puzzled to account for the evident power of Colonel Olcott over the native mind before the reading of the lectures, we marvel still more after it. They are clever, but surely not the cleverest that the people of this country ever heard. They are in some places as obscure as Swedenborg or the Quran, but obscurity is not popular. They are plain-spoken to a degree. The pictures which they draw of native lying, disunion, selfishness, and general worthlessness, are such as would convulse Hindu Society with righteous rage, if they were drawn by an English journalist or a

\* A collection of Lectures on Theosophy and Archaic Religions, delivered in India and Ceylon, by Colonel H. S. Olcott, President of the Theosophical Society, published by A. Theyaga Rajier, F. T. S., Assistant Secretary, Madras Theosophical Society, Madras, 1883.

Christian missionary. But plain-speaking cannot be the reason of such overwhelming popularity. Neither is it the Colonel's wisdom, for many wise and beautiful passages are sandwiched between fatuous nonsense and outrageous abuse of opponents. There is a considerable show of learning in the book, but the author does not pretend to the erudition of the prophetess of the movement, whose "*Isis Unveiled*" he regards with amusing awe. His own pretensions in this line may be measured by his confident assertion that Iræneus is the author of the Fourth Gospel, which must be a matter of special revelation, for the only thing that the advanced critics say about this Gospel's author is that he was some person unknown. But the fact of the Theosophical Society remains. It is a power, and at present a growing power in Southern India. If the explanation is not in Colonel Olcott, it must be in something else. We are sure that he himself would be the first to disclaim the honour of being the cause of the movement, though we fancy he would claim to be something more than the mere occasion. One of the secrets of his personal influence is evidently a charming simplicity, a profound belief in himself and in his work, leading him in some of the anniversary speeches to use language reminding us of the Fly and the Wheel. We shall see immediately that the Colonel not only exaggerates his own personal importance to the movement, but that he overestimates the importance of the movement itself. But at present we are enquiring the secret of the power of Theosophy—what it is that makes people run after it.

Part of the answer at least is to be found in the undoubted fact that of late years there has been a decided revival of national Indian feeling. In spite of the disintegrating power of caste, which splits the Hindu peoples into so many fragments at constant feud with each other, the new generation has realized to some extent the truth that Indians ought to be one. The old apologetic tone which characterized the utterances of natives regarding everything Indian a short time ago, has given place to a tone of self-assertion, not quite so pleasant to the ruling class perhaps, but certainly very much more natural and healthy. It is impossible to conceive for example that ten years ago the Ilbert Bill would have been received with such a tempest of jubilation, or that the ill-considered invectives of some Calcutta orators would have provoked such a fury of open resentment. The old school Hindu considered it his duty to take meekly the rebukes of Europeans, and even to esteem them as precious oil. The new school has no such amiable weakness. European scholars have taught them, not certainly to know their own classics, for that is what few can boast of, but to believe in them. The only difficulty about them was that an enlightened native could not be supposed to believe what they teach. If once it should become possible to regard Hindu literature, science, and religion as ahead of the times, nothing more would be wanting to enable the Hindu to boast himself not only as the equal, but as the superior of the European. The hour brought forth the man, and the man was Colonel Olcott. Belonging to the same race and the same civilization as the masters of India, he professed himself not the teacher, but the disciple of the genuine Hindu, and Hindus are showing their appreciation of his conduct by flocking to the standard he has set up among them. Hitherto all the efforts of people who believe in the superiority of western over eastern science and civilization have been in vain to check the rising tide of Theosophy. While they could only deny, Colonel Olcott could affirm, and after all, people prefer to believe rather than to disbelieve. For many years the tendency of the greater part of the higher education given in this country has run in a materialistic direction. At least so Colonel Olcott says, and he may be presumed to know something about educated natives. Materialism ignores certain facts of human consciousness, and imagines a blank where there is really a crowd of most difficult phenomena to be noted and explained. The whole subject of the relations between mind or spirit and body is one of great difficulty, and the truth seems to be that science hitherto has been able to say very little about it. What orthodox science has failed to do, that heterodox science, as represented by Swedenborgians, spiritualists, and now by the Theosophists, professes to be able to do. Either finding or imagining themselves to find a point of contact between heterodox western science and the wisdom of the Oriental religious devotees, Colonel Olcott and Madame Blavatsky have come forward to mediate between them. Many educated Hindus, tenacious of their natural traditions and seeking for relief from the attacks of materialistic science, have hailed them as deliverers. The Associations of which we have spoken have sprung up all around us for the purpose of cultivating the mysterious powers of man, and rescuing from fast-approaching oblivion what they believe to be a valuable heritage.

Of the wonders which Colonel Olcott relates, we shall not say much, because we cannot believe in them, and we cannot but believe that the Colonel does. Spiritualism has been long enough before the world now to prevent people from simply rejecting its stories as lies. There must be something in it, for many of the phenomena are well attested. At the same time it should be remembered that there may be a great deal in spiritualism, and yet spiritualism may be a very bad thing. Colonel Olcott openly proclaims that the state of mediumship is a very perilous one morally, in other words that a large proportion of the mediums are rogues. The notoriously stupid character of many of the phenomena might justify the assertion that if the mediums are rogues, the spirits are fools. As far as we can make out, neither are desirable acquaintances, and there is considerable reason for the remark that has often been made that spiritualistic phenomena are a good argument for the existence of devils in an extremely active state. With regard to what the Colonel considers the greatest triumph of mind over matter in this present life—the power of projecting the double, we profess ourselves in the same state of mystification as the majority of Theosophists. We would point out one very instructive sentence however, which seems to throw some light upon the mysterious statements brought before us. Mediumship is said to be generally concomitant with a scrofulous or phthisical taint in the blood.

Truly this indicates that the whole class of phenomena are phenomena not of health, but of disease. May not the ascetic austerities which Theosophy and Hinduism, and some forms of Christianity, declare to be the only way to the higher life of ecstacy, be just what we should naturally expect them to be, a means of reducing the healthy human constitution to the state of disease necessary for the experience of these abnormal feelings?

The attitude of Theosophy towards historical Christianity seems to be one of thorough-going antagonism. In every lecture in the volume before us, this is as clear as the noon day. So blinding a thing is prejudice that Colonel Olcott, shutting his eyes to the plainest facts, declares that almost the only places where what the age needs survives, 'are among the Lamaists of Tibet, the Copts of Egypt, the Sufis and Dervishes of Arabia and other Mahomedan countries.' It seems a pity that these possessors of the light should not have let it shine a little more in their own immediate neighbourhood, for if ever there were dark places in the earth, it is just where these lights of the world live. Even Colonel Olcott cannot put back the hands on the great clock of time, and there would be more chance of his receiving a patient hearing regarding the things which he says he knows, if he did not so often contradict what every intelligent man knows to be the truth. Christianity has in the past been able to give a pretty good account of itself to its adversaries, and we do not attempt to defend it here. A report has reached us from Ootacamund that Colonel Olcott there disavowed all intention of opposing Christianity. But it is to be observed that during his recent tour he posed before thousands of natives as an enemy of Christianity, and the Theosophists advertise themselves as an agency for the sale of "Unanswerable anti-Christian publications."

#### ANOTHER LETTER FROM THE MAHRATTA LADY THEOSOPHIST NOW IN AMERICA.

[We take from the *Indian Mirror* the letter that follows. It comes from our poor little voluntary exile, now in the Antipodes, the willing martyr to her noble thirst for Reform and Science. We have rarely read anything more touching and genuine than this simple and unpretentious narrative of what she must have suffered on her long journey to America. The mental torture in consequence of her separation from home and all those she loved, and the physical suffering she was subjected to on her way she might have anticipated, and therefore had been prepared for such unpleasantness, though we see no mortal reason why the S. S. Co. should have any more the monopoly or right of *starving* its passengers, than that of drowning them, whether they be Hindu or European. But the unmerited insult of seeing herself made fun of, and especially the humiliation she received at the hands of one, calling herself a *lady* and probably a *Christian*, is too disgusting and revolting to make us appreciate the discretion of whether author or editor which caused either of them to suppress the name of the human female obelisk of European haughtiness that was cruel enough to insult such a helpless lonely young creature as poor Mrs. Joshi must have felt herself on the steamer. On the contrary, she ought to have been named as a salutary lesson to herself and a warning to all of us Europeans who may believe ourselves the only "chosen" ones, the elected of a "superior" race. Were it worth the trouble, a comparative genealogical tree might be profitably drawn, showing the respective lineage and the list of ancestors of the Brahminee Indian lady and of both those arrogant European females who used to "make fun" of her "in whispers," and the one who sent her off on deck. It is to be feared that while the forefathers of Ananda Bai would be found stretching back into the night of that pre-historic age when the Aryans first crossed the Himalayas in their migration from the North, the ancestors of many of the former would be soon traced to some paltry shop in one of the back lanes of Oxford street. It is revolting to read of such *snobbery* in women. The kisses "over and over again" in the presence of reporters and other witnesses could obliterate but little, and atone still less for the sufferings caused in the early part of the voyage. We sincerely hope that Mrs. Joshi will find truer and better friends in democratic America than she has found on the aristocratic British steamer, whose Company takes apparently people's money but to starve them whenever it can do so with probable impunity.—Ed.]

The following is MRS. ANANDA BAI JOSHI'S letter :—

ROSELLE, N. J., the 25th June 1883.

"I received your letters from Punna, Kalyan, and Sholapore. My joy, at seeing them, may be better imagined than described.

God has given me a strong, nay, hard heart, which stood, and I hope, will continue to stand, any trial or difficulty in the world. How many misfortunes must have befallen me in the space of 59 days, while travelling in remote foreign lands, I leave it to you to imagine. I will now give you the particulars of my voyage; but, I am afraid, I will not be able to describe the scene as they ought to be; yet I will try my best to do so.

When I first entered into the land of waters, I earnestly hoped that I would enjoy the sea without satiety, but I soon got weary of seeing what I saw once. I have had my repose disturbed a hundred times by the feeling of painful separation from home. Soon after I left Saugor, I felt sea-sick. Sometimes my companions pressed me to partake of meat, and when I refused to have it, they used to make fun of me in whispers. For about

a fortnight I had been a source of amusement to all. They did not take any interest in me. They thought no better of me than of a Native *ayah*! Once it so happened that I was seated on a sofa in the saloon when Mrs.—— came and told me to go and get on the deck, or any other seat I could find. I got up without saying a word, and went to the stewardess, for she called me in, when she saw me going upstairs. "It is very cold upstairs. You are not used to this climate. I am sure it will kill you. Do you like to go to the hospital in London, where, I am quite sure, you will not like to stop a minute?" said she to me. "Why don't you go and sit on the sofa. I am afraid you will suffer from cold. You must be very careful," she added. To this I made no reply. Next day being Sunday Mrs.——asked me to go to the service. I said "I would rather sit with the *ayahs* than with those who think less of me than even the *ayahs*. I am not ashamed to sit with *ayahs*, because I am sure they will not think less of me than themselves."

We left Calcutta on the 7th, as you know, and stopped in the midst of the river after a slow voyage of twenty four hours. We again commenced sailing. I have already told you that we did not stop at Madras. On the 12th April, I once heard that we were going to stop at Colombo, but I soon found that we were going further. We saw from a distance of about one-and-a-half-mile the rocks and mountains and hills of Ceylon. Now it was the close of the day. The sky was perfectly clear; the sea was quite serene; the sun had spread his beautiful garments over the lovely sea; the beautiful golden rays of the sun peeped into the dense cocoanut trees, which enhanced the beauty of Ceylon. Though I have not seen it myself, I venture to say that Ceylon must be a handsome place. So happily we passed Ceylon, and arrived at Aden on the 20th April at about 7 p. m. Some of the passengers (both ladies and gentlemen) went ashore and came back before 10 p. m. It was the first time that I saw Africans. The physiognomy of the Negro is so peculiar that it is impossible not to recognise it at the first glance. His thick, protruding lips, his low forehead, his projecting teeth which peep out between his lips, his woolly and half-frizzled hair (it is said that he applies chunum to his hair which gives it a peculiar brown color) his beard, his short flat nose, his retreating chin, and his round eyes, give him a peculiar look amongst all other human races. The bones of the skull and those of the body are thicker and harder than those of the other races. Several are bow-legged; almost all have but little calves, half bent knees, the body stooped forward and a tired gait. Such is the appearance of the Africans. On the same day we left Aden. On the 25th we arrived at Suez at about 5 p. m. I saw another new type of the human race. I mean the Egyptians. We did not go on shore, but I saw plenty of them on board the steamer with fruits, shells, necklets, bracelets, corals, large beads, photos, silk and golden clothes, pots, &c. The Egyptians are fair and well-made. The characteristics of the Arab race are a long face, a high forehead, a retreating, small mouth, even teeth, eyes not at all deepset in spite of the want of prominence of the brow, a graceful figure formed by the small volume of fatty matter and cellular tissue, and by the presence of powerful but not largely developed muscles, a keen wit and bright intelligence, and a deep and persevering mould of character. You see, therefore, that the Arab type is really an admirable one.

I am sorry I have forgotten to inform you of some thing about my food on board the ship. I remember you told me to write to you all about my sorrow or joy. As to joy, I had none; nor did I expect any, . . . . but as to my troubles I had plenty of them, plenty for one like me. You might have thought that I was in abundance. Yes, I was in abundance indeed, but not in what you would, perhaps, imagine. But let me thank God before I say anything for His kindness in giving me strength to put up with all that befel me. I suppose, you know, I am rather a receiver than a giver of troubles or inconveniences, and, according to my nature, I did bear, and will ever patiently bear, whatever may come to me. I had kept no connection with any lady (even with Mrs.——). I had chosen an excellent companion that helped me to pass time quietly and pleasantly—I mean a book, I never felt lonely while reading. I read seven books on board the steamer *City of Calcutta*. Now in regard to my food, you might have thought that I could get whatever I liked, I could get a good many dishes, though I would not. Indeed I was well nigh on the point of starvation. I was nearly starving for about seven weeks. What were dried fishes to me? What should I do with the soup they would serve me, and how could I sit among them, and see them swallow dish after dish? How could I stand the sight of long—long bones, &c., &c.? How could I eat things composed of old vegetables, stalks, and half rotten potatoes? It required a stronger stomach than mine to retain an appetite for such kinds of food. I tried to be stronger, and after admiring the two beautiful carpets on either side of the table (which soon disappeared) and the silken curtains hanging over the doors, I ventured to hope that honesty would prove one of those exhibits and that I would get my money's worth. But alas! I met nothing but disappointment. My only food was two or three potatoes (for I could eat no more.)

I scarcely had rice, for it was too coarse and hard to be eaten. There were only cakes that I liked most at first, but I grew weary of them, and to make my condition worse, my gum began to swell. It hurt me to eat, to speak, laugh, or, to do anything else. Day by day the pain became severer. It made my head ache. My stomach was still worse. This state of things lasted for nearly three weeks, when I thought I had better consult a doctor. A week elapsed before I found the doctor; for I could not catch his time. I saw him every day at table, but he went away before I left the table. So two days before our arrival in London, I consulted him. After hearing all particulars, he said that my wisdom-teeth were just growing, and it was these teeth which were troubling me. For three days I could not stand, nor sit, nor sleep. Thus you see I have got two wisdom-teeth since I left you. My companions did not know of my pain or of the coming of my new teeth till we were in London. . . . I leave it to you to imagine what must have been my condition on this occasion. Is it no wonder that my friends or companions should know nothing of my pain, or of the half starvation I was suffering from? I have nothing to say against any one. For they were all very kind to me after their own fashion. I had to suffer all sorts of inconveniences for the first four weeks or so. After that, they all became so fond of me that they were quite unwilling to part company with me. They seemed very much interested in me. So a few days before our arrival in New York. Mrs.—— said to me, "Mrs. Joshi, your husband has given you in my charge, and Mrs. Carpenter cannot claim you from me; but you are married, and if you are not willing, I cannot keep you." In New York when they bid me good-bye, they kissed me over and over again."

#### ADWAITA AND SIDDHA TANTRA.

(Being the substance of two lectures delivered by Mahadeva Sastriah,  
F. T. S. Pundit of the "Negapatam Theosophical Society.")

The *Vedas*, the *Puranas* and many other works appear in their exotericism full of self-contradictions and absurdities. But no sooner are they divested of their exoteric garb, and read in their esoteric interpretation, than they will be found to embody the grandest and the most splendid truths. At the same time the *Siddha Tantras*, written by *Saddhas*, reveal the truth without any disguise; and, it is these *Tantras* that establish the *Advaita* Philosophy.

Before proceeding further, we shall try to understand the fundamental point of difference between *Dwaitism*, *Visishtadwaitism* and *Advaitism*. *Dwaitism* says that *Paramatma* (God) and *Jivatma* (the Spirit) are essentially different, whether they stand in the relations of the creator and the created, or whether they are quite independent of each other. *Visishtadwaitism* says that they are different, yet one. They are different it is true, but one owing to the relations of *Sevya Sevaka* (master and servant). They stand to each other as a spark of fire emanating from a huge mass of fire, yet the spark keeping its individuality distinct. *Advaitism* inculcates the doctrine that they are one and the same thing, but owing to ignorance, we imagine that they are different. The excellence of the *Advaita* doctrine consists in this:—From their own stand-points, while the followers of other creeds strive after *Sarupyam* (getting the form of God), *Sampygam* (getting near God) and *Salokyam* (living in the world of God) the adherents of *Advaitism* try to attain *Siyujjyam* (becoming one with God, nay becoming God themselves and attain god-like power).

Moreover, the *Advaita* is not intolerant; for he allows that the *ninda-vhakti* (blind devotion) of the followers of the other creeds, creates only a *Karma* of good intention (in other words, that it secures for him a seat in the higher *lokas*, such as *Indra Loka*, *Brahma Loka*, *Vaikunta Loka*.) The genuine *Advaita* is he who not only knows that he is *Brahmam*, but becomes that *Brahmam* himself. Now let us see what is the *Advaita* idea of God. He says that God is *Sattiyam*, *Nirgunam*, *Advaitam*, *Nirvikaram*, *Niranjanam*, and *Amritam*.

1. *Sattiyam* is indestructibility. In all evolution and involution, not an atom of him is destroyed. *Illustration*.—A single seed evolves into a tree and the tree produces the seed, but still the seed has lost nothing during the process of transformation.

2. *Nirgunam* is having no quality. God is impersonal and possesses no attributes. *Illustration*.—The seed does not possess the attributes of the tree, such as size, &c.

3. *Advaitam* is oneness. This fact can be understood not by words or descriptions, but by *Abhedabavan* or *Aikyam*. It is said in the *Vedas* that *Kam* (*Sukam* or pleasure) is *Brahmam* and *Kham* (*Akasam*) is *Brahmam*. This does not mean that either of these by itself is God, but that God is *Akasam* in *Sukarubam* (the form of pleasure), or *Sukam* in *Akasarupam* (the form of *Akasam*.) *Illustration*.—If you take two half measures of salt and one measure of water, and mix them, the result is still one measure of salt water. But distil this and you will get one measure of water and one of salt.

4. *Nirvikaram* is having no change. *Paramatma* never changes. *Illustration*.—The seed in its seed state never changes.

5. *Niranjanam* is being devoid of defect. God is free the *Malas* such as *anavanalam* belonging to the *sthoola Sariram* which is made of *anus* or atoms, *Karamkamalam* belonging to the *Karana sariram* and *Mayika Malam* produced by *Maya*.

6. *Amritam* is the union of *Sakti* and *Siva*. In reality *Siva* and *Sakti* are not different things, but *Siva* is *Saktirupam* and *Sakti* is *Sivarupam*. *Illustration*.—Fire and water have *Mitrahavam* (friendliness), for water came out of fire and lays in it; and fire does not burn ashes which are entirely without water, but does burn wood which contains a little water.

Four things are necessary for a man to become a proper *Adwaitee*.

- (1.) Studying the *Advaita Sastras*.
- (2.) Mantras.
- (3.) Yoga.
- (4.) Siddha Tantras.

(1.) This will make you understand that man and God are not two different things, but one. Even if one cannot become a proper *Adwaita* in this birth, this study will facilitate his work in the next one.

(2.) *Mantras* must not be slighted simply because they are an arrangement of letters. The degree of one's faith in them determines their efficacy. But they are useless without.

(3.) *Yoga* is to unite with the one. (From *Yog, Yoke, &c.*) Krishna by his *Yogam* was able to appear at the same time in the same place in different forms to different persons. But all these are little better than useless without.

(4.) *The Siddha Tantras* which give the rules of thinking, acting, meditating, &c., &c., by following which one gets the *Siddhis*, such as *anima, &c.*, 8 kinds of *Siddhis*.

A few of the teachings of the *Siddha Tantras* will now be given though no ordinary man can understand all the *Siddha Tantras*.

This universe, which is seen by man, which gives rise to so much disputation and which is composed of 14 lokas, is the body of God who is *Chaitanya masvarupi*. The manifested universe is to God what physical body is to man. He who realises this and transfers the love which he has for his body to this, gets *Visvarupa Siddhi, i. e.*, the power of becoming *Iswara* or of making his microcosm one with the macrocosm. But this is seldom done. *Manu* says "I possess lands" while there is no connection between him and earth; if the earth is cut, he does not feel pain. He says "I am lean", while the *Atma* has no size. He says "I am friendly," and thus appropriates to himself the *dharma* of *Apatwa* (the principle of water). He says "I am happy", while happiness belongs to the *Buddhi Tatwa* (the principle of Intelligence). He says "I am living," while *pran* is *svasa* (breath) and this belongs to *Vaya*. He says "I am *Sunya* (nothing)" while *Sunyam* is the *dharma* of *Akasa*. Thus egoism fully sways the *Atma* and makes it lean towards the *Vishaya* of *sarisa, Indriya, Buddhi, and Prana*. If this be got rid of, if you act up to the rule "*Atmarat sarva Bhutam*" (Regard all life as you would your *Atma*), and if you feel as much love for the whole manifested universe as you do for your body, then you get *Visvadehatvam* (macrocosmic body). Then if you imagine you are the table, you will become the table. If you think that the table should walk, it will walk. Many persons have attained this root-sisthi, such as *Soka, Vamadeva, Krishna, &c.*

## Personal Items.

### PERSONAL ITEMS.

Colonel H. S. Olcott, President Founder of the Theosophical Society, left Ootacamund on the 16th of September to visit Coimbatore and Pondicherry, where two new Branch Societies have since been formed. Thus during the last three months he has established in the Madras Presidency ten new Branches, and visited five old ones. He returned to Head Quarters on the evening of the 23rd. One important result of his tour has been the obtaining of a Government Order while at Ootacamund, which promises to observe towards our Society the same neutrality which Her Majesty the Queen Empress has been graciously pleased to grant to all non-political bodies, whether religious, social or philosophical. Nothing can be more desirable than the assurance of His Excellency the Governor in Council that "he would highly disapprove any interference with the religious or philosophical ideas of any section of the population."

This is a sufficient guarantee to all our members, especially those in the Mofussil, that they need fear no further annoyance or official tyranny from any of their superiors to which some of them had unfortunately been subjected.

Colonel Olcott was present on the evening of the 25th at the celebration of the Branch Society's Anniversary, a full report of which will be found in another column. On the evening of the 27th he again left Madras on another long tour, already referred to in the previous issues of this Journal. It will probably take him no less than ten weeks, so that he will return to the Head-Quarters barely in time to prepare for our Society's Eighth Anniversary celebration. Last year the Framjee Cowasjee Hall at Bombay was decorated with 40 shields representing our branches only in India and Ceylon. But this year, through our indefatigable President's arduous labours, we expect the number will be more than double.

Madam H. P. Blavatsky, Corresponding Secretary to the Theosophical Society, accompanied Col. Olcott from Ootacamund to Madras. At the former place Col. Olcott's success already noticed was largely due to her previous work.

Babu Mohini Mohan Chatterjea, M. A., B. L., Secretary to the Bengal Theosophical Society at Calcutta, intends taking advantage of the Durza Poojah holidays to visit the Head-quarters. He is expected to arrive here about the middle of this month and to pass with us about two weeks.

Dr. Avinash Chander Banerjee, Secretary to the Prayag Psychic Theosophical Society at Allahabad, writes to us that Babu Syama Charan Mukerjee, F. T. S., will leave Allahabad early this month for the Head-quarters. He purposes to visit a few of our Branch Societies on the way, with the purpose of gathering information concerning their theosophical work and utilising the knowledge for the benefit of his Branch. We need only remark that if some of our best members were to use their holidays in this way the cause of our Society will be immensely promoted.

We are further informed that Babu Aprocash Chander Murkerjee may accompany Syam Babu.

Mrs. Sarah Parker, F. T. S., who has lectured for several years in the United States and who left Liverpool on the 23rd of August for India, by S. S. *Olan Makentosh*, is expected to arrive here very shortly. She intends to devote herself to the service of the cause of the Theosophical Society.

Mr. W. T. Brown, F. T. S., *Bachelor Legis*, of the "London Lodge Theosophical Society," comes out in the same steamer, with the intention, as we understand, of studying Eastern literature. Both are expected towards the 1st of October. It is a pleasure to see our ranks swollen with highly educated Europeans as well as Natives.

Pundit Shyamjee Krishnavarma, F. T. S., of Balliol College, Oxford, who represented India at the International Congress of Orientalists at Berlin in 1881, has been appointed by the Secretary of State of India to act in a similar capacity at the Congress, which assembles at Leyden next month. This young and gifted man has a promising career before him.

Babu Dakshina Mohan Roy, F. T. S., of the Bengal Theosophical Society, came down here from Calcutta a few days ago for change of climate, as he was suffering from pain in the chest. His esteemed father also accompanied him. The next day of their arrival here we exceedingly regret to say, they met with a serious carriage accident but happily without any graver results than the injuries to the ribs of Dakshina Babu and the fracturing of his father's arm. As soon as the news was communicated to the Head-quarters, both the Founders of the Society instantly went to the Lippert's Hotel, where the invalids are still lying. We earnestly hope and wish that our friends will soon recover and pass with us a few days at the Head-quarters.

W. D. Tilden, Esq., President of the Himalayan Esoteric Theosophical Society, Simla, gives the following interesting account:—

"A curious phenomenon has happened in Simla, at the residence of certain high native officials, whose applications have just been sent to Head-quarters through me. My friend has been visited on two successive mornings by forms answering the description of Mahatmas who appeared distinctly to him, and one of them laid his hand upon him. The only sentence one spoke was to the effect that some key was missing. My friend says he was wide awake, having arisen out of bed from a sound and refreshing sleep, and was overjoyed with the sight. Further, he says he felt himself invigorated with the fresh atmosphere they brought with them into the room, and they disappeared as suddenly as they came.

### OBITUARY.

With sorrow we have to record the death of our brother P. Teroomal Row, F. T. S., late Subordinate Judge of Tinnevely. He joined our Society last year when the Founders visited Madras. About three months ago he came down here for medical treatment, as he was suffering from cough and general debility. During the time he was in town he called twice or thrice at the Head-quarters of the Society, and although he looked sickly, no one could ever expect he would die so soon. The illness which had, however, poisoned his system, went on increasing after his return to Tinnevely. He thought at last of going down to Royapuram for change of air and intended to leave Tinnevely on the 21st. But unfortunately, he became, meanwhile, so dangerously ill that he could not get away. On the 22nd, in the afternoon, he breathed his last. He was the brother of M. R. Ry. P. Sreenevas Row Garu, F. T. S., Judge of the Madras Small Cause Court, to whom the Founders now beg to offer, on behalf of themselves and the Society, their sincerest feeling of sympathy in this sad family bereavement.

सत्यात् नास्ति परो धर्मः ।

THERE IS NO RELIGION HIGHER THAN TRUTH.

[Family motto of the Maharajahs of Benares.]

## MORALITY AND PANTHEISM.

QUESTIONS have been raised in several quarters as to the inefficiency of Pantheism, (which term is intended to include Esoteric Buddhism, Adwaitee Vedantism, and other similar religious systems,) to supply a sound basis of morality.

The philosophical assimilation of *meum* and *teum*, it is urged, must of necessity be followed by their practical confusion, resulting in the sanction of theft, robbery, &c. This line of argument points, however, most unmistakably to the co-existence of the objection with an all but utter ignorance of the systems objected to, in the critic, as we shall show by and bye. The ultimate sanction of morality, as is well-known, is derived from a desire for the attainment of happiness and escape from misery. But schools differ in their estimate of happiness. Exoteric religions base their morality, on the hope of reward and fear of punishment at the hands of an Omnipotent Ruler of the Universe by following the rules he has at his pleasure laid down for the obedience of his helpless subjects; in some cases, however, religions of later growth have made morality to depend on the sentiment of gratitude to that Ruler for benefits received. The worthlessness, not to speak of the mischievousness, of such systems of morality, is almost self-evident. As a type of morality founded on hope and fear, we shall take an instance from the Christian Bible. "He that giveth to the poor lendeth to the Lord." The duty of supporting the poor is here made to depend upon prudential motives of laying by for a time when the "giver to the poor" will be incapable of taking care of himself. But the *Mahabharata* says that, "He that desireth a return for his good deeds loseth all merit; he is like a merchant bartering his goods." The true springs of morality lose their elasticity under the pressure of such criminal selfishness, all pure and unselfish natures will fly away from it in disgust.

To avoid such consequences attempts have been made by some recent reformers of religion to establish morality upon the sentiment of gratitude to the Lord. But it requires no deep consideration to find that in their endeavours to shift the basis of morality, these reformers have rendered morality entirely baseless. A man has to do what is represented to be a thing 'dear unto the Lord' out of gratitude for the many blessings he has heaped upon him. But as a matter of fact he finds that the Lord has heaped upon him curses as well as blessings. A helpless orphan is expected to be grateful to him for having removed the props of his life, his parents, because he is told in consolation that such a

calamity is but *apparently* an evil, but in reality the All-Merciful has underneath it hidden the greatest possible good. With equal reason might a preacher of the Avenging Ahriman exhort men to believe that under the *apparent* blessings of the "Merciful" Father there lurks the serpent of evil. But this gospel has yet to be preached.

The modern Utilitarians, though the range of their vision is so narrow, have sterner logic in their teachings. That which tends to a man's happiness is good, and must be followed, and the contrary to be shunned as evil. So far so good. But the practical application of the doctrine is fraught with mischief. Cribbed, cabined and confined, by rank materialism, within the short space between birth and death, the Utilitarians' scheme of happiness is merely a deformed torso, which cannot certainly be considered as the fair goddess of our devotion.

The only scientific basis of morality is to be sought for in the soul-consoling doctrines of Lord Buddha or Sri Sankarácárya. The starting point of the "pantheistic" (we use the word for want of a better one) system of morality is a clear perception of the unity of the one energy operating in the manifested Cosmos, the grand ultimate result which it is incessantly striving to produce, and the affinity of the immortal human spirit and its latent powers with that energy, and its capacity to co-operate with the one life in achieving its mighty object.

Now knowledge or *jnánam* is divided into two classes by Adwaitee philosophers,—*Paroksha* and *Aparoksha*. The former kind of knowledge consists in intellectual assent to a stated proposition, the latter in the actual realization of it. The object which a Buddhist or Adwaitee Yogi sets before himself is the realization of the oneness of existence and the practice of Morality is the most powerful means to that end, as we proceed to show. The principal obstacle to the realization of this oneness is the inborn habit of man of always placing himself at the centre of the Universe. Whatever a man might act, think or feel, the irrepressible "I" is sure to be the central figure. This, as will appear, on the slightest consideration, is that which prevents every individual from filling his proper sphere in existence, where he only is exactly in place and no other individual is. The realization of this harmony is the practical or objective aspect of the GRAND PROBLEM. Practice of morality is the effort to find out this sphere; and morality indeed is the Ariadne's clue in the Cretan labyrinth in which man is placed. From the study of the sacred philosophy preached by Lord Buddha or Sri Sankara *paroksha* knowledge (or shall we say *belief*?) in the unity of existence is derived, but without the practice of morality that knowledge cannot be converted into the highest kind of knowledge or *aparoksha jnánam*, and thus lead to the attainment of *mukti*. It availeth naught to intellectually grasp the notion of your being everything and Brahma, if it is not

realized in practical acts of life. To confuse *meum* and *teum* in the vulgar sense is but to destroy the harmony of existence by a false assertion of "I," and is as foolish as the anxiety to nourish the legs at the expense of the arms. You cannot be one with ALL, unless all your acts, thoughts and feelings synchronise with the onward march of nature. What is meant by the *Brahmājñani* being beyond the reach of *Karma*, can be fully realized only by a man who has found out his exact position in harmony with the One Life in nature; that man sees how a *Brahmājñani* can act only in unison with nature and never in discord with it: to use the phraseology of our ancient writers on Occultism a *Brahmājñani* is a real "co-worker with nature." Not only European Sanskritists but also exoteric Yogis, fall into the grievous mistake of supposing that, in the opinion of our sacred writers, a human being can escape the operation of the law of *Karma* by adopting a condition of masterly inactivity, entirely losing sight of the fact that even a rigid abstinence from physical acts does not produce inactivity on the higher astral and spiritual planes. Sri Sankara has very conclusively proved, in his Commentaries on the *Bhagavat Gita*, such a supposition is nothing short of a delusion. The great teacher shows there that forcibly repressing the physical body from working does not free one from *vāsana* or *vritti*—the inherent inclination of the mind to work. There is a tendency, in every department of nature, of an act to repeat itself; so the *Karma* acquired in the last preceding birth is always trying to forge fresh links in the chain and thereby lead to continued material existence; and that this tendency can only be counteracted by unselfishly performing all the duties appertaining to the sphere in which a person is born—that alone can produce *chitta suddhi*, without which the capacity of perceiving spiritual truths can never be acquired.

A few words must here be said about the physical inactivity of the *Yogi* or the *Mahatma*. Inactivity of the physical body (*sthūla sarīra*) does not indicate a condition of inactivity either on the astral or the spiritual plane of action. The human spirit is in its highest state of activity in *samādhi*, and not, as is generally supposed, in a dormant quiescent condition. And, moreover, it will be easily seen by any one who examines the nature of occult dynamics, that a given amount of energy expended on the spiritual or astral plane is productive of far greater results than the same amount expended on the physical objective plane of existence. When an adept has placed himself *en rapport* with the universal mind he becomes a real power in nature. Even on the objective plane of existence the difference between brain and muscular energy, in their capacity of producing wide-spread and far-reaching results, can be very easily perceived. The amount of physical energy expended by the discoverer of the steam engine might not have been more than that expended by a hard-working day-labourer. But the practical results of the cooly's work can never be compared with the results achieved by the discovery of the steam engine. Similarly the ultimate effects of spiritual energy are infinitely greater than those of intellectual energy.

From the above considerations it is abundantly clear that the initiatory training of a true Vedantin Raj *Yogi* must be the nourishing of a sleepless and ardent desire of doing all in his power for the good of mankind on the ordinary physical plane, his activity being transferred, however, to the higher astral and spiritual planes as his development proceeds. In course of time as the Truth becomes realized, the situation is rendered quite clear to the *Yogi* and he is placed beyond the criticism of any ordinary man. The Mahanirvan Tantra says:—

*Charanti trigunatite ko vidhir ko nishedhava.*

"For one, walking beyond the three *gunas*—*Satva*, *Rajas* and *Tamas*—what duty or what restriction is there?"—in the consideration of men, walled in on all sides by the objective plane of existence. This does no

mean that a *Mahatma* can or will ever neglect the laws of morality, but that he, having unified his individual nature with Great Nature herself, is constitutionally incapable of violating any one of the laws of nature, and no man can constitute himself a judge of the conduct of the Great one without knowing the laws of all the planes of Nature's activity. As honest men are honest without the least consideration of the criminal law, so a *Mahatma* is moral without reference to the laws of morality.

These are, however, sublime topics: we shall before conclusion notice some other considerations which lead the "pantheist" to the same conclusions with respect to morality. Happiness has been defined by John Stuart Mill as the state of absence of opposition. Manu gives the definition in more forcible terms:—

*Sarvam paravasam dukkham*

*Sarva mātnavasam sukham*

*Idam jnayo samasena*

*Lakshanam sukhadukkhayo.*

"Every kind of subjugation to another is pain and subjugation to one's self is happiness: in brief, this is to be known as the characteristic marks of the two." Now it is universally admitted that the whole system of Nature is moving in a particular direction, and this direction, we are taught, is determined by the composition of two forces, namely, the one acting from that pole of existence ordinarily called "matter" towards the other pole called "spirit," and the other in the opposite direction. The very fact that Nature is moving shows that these two forces are not equal in magnitude. The plane on which the activity of the first force predominates is called in occult treatises the "ascending arc," and the corresponding plane of the activity of the other force is styled the "descending arc." A little reflection will show that the work of evolution begins on the descending arc and works its way upwards through the ascending arc. From this it follows that the force directed towards spirit is the one which must, though not without hard struggle, ultimately prevail. This is the great directing energy of Nature, and although disturbed by the operation of the antagonistic force, it is this that gives the law to her; the other is merely its negative aspect, for convenience regarded as a separate agent. If an individual attempts to move in a direction other than that in which Nature is moving, that individual is sure to be crushed, sooner or later, by the enormous pressure of the opposing force. We need not say that such a result would be the very reverse of pleasurable. The only way therefore, in which happiness might be attained, is by merging one's nature in great Mother Nature, and following the direction in which she herself is moving: this again, can only be accomplished by assimilating men's individual conduct with the triumphant force of Nature, the other force being always overcome with terrific catastrophes. The effort to assimilate the individual with the universal law is popularly known as the practice of morality. Obedience to this universal law, after ascertaining it, is true religion, which has been defined by Lord Buddha "as the realization of the True."

An example will serve to illumine the position. Can a practical student of pantheism, or, in other words, an occultist utter a falsehood? Now, it will be readily admitted that life manifests itself by the power of acquiring sensation, temporary dormancy of that power being suspended animation. If a man receives a particular series of sensations and pretends they are other than they really are, the result is that he exercises his will-power in opposition to a law of nature on which, as we have shown, life depends and thereby becomes suicide on a minor scale. Space prevent us to pursue the subject any further, but if all the ten deadly sins mentioned by Manu and Buddha are examined in the light sought to be focussed here, we dare say the result will be quite satisfactory.

(Continued from the last Number.)

REPLIES TO INQUIRIES SUGGESTED BY  
"ESOTERIC BUDDHISM."

QUESTION VII.

PHILOLOGICAL AND ARCHÆOLOGICAL "DIFFICULTIES."

Two questions are blended into one. Having shown the reasons why the Asiatic student is prompted to decline the guidance of Western History, it remains to explain his contumacious obstinacy in the same direction with regard to philology and archæology. While expressing the sincerest admiration for the clever modern methods of reading the past histories of nations now mostly extinct, and following the progress and evolution of their respective languages, now dead, the student of Eastern occultism and even the profane Hindu scholar acquainted with his national literature, can hardly be made to share the confidence felt by Western philologists in these conglomerative methods, when practically applied to his own country and Sanskrit literature. Three facts, at least, out of many are well calculated to undermine his faith in these Western methods:—

1. Of some dozens of eminent Orientalists, no two agree, even in their *verbatim* translation of Sanskrit texts. Nor is there more harmony shown in their interpretation of the possible meaning of *doubtful* passages.

2. Though Numismatics is a less conjectural branch of science, and when starting from well-established basic dates, so to say, an exact one (since it can hardly fail to yield correct chronological data, in our case, namely, Indian antiquities) archæologists have hitherto failed to obtain any such result. On their own confession they are hardly justified in accepting the *Samvat* and *Salivâhana* eras as their guiding lights, the real initial points of both being beyond the power of the European Orientalists to verify; yet all the same, the respective dates "of 57 B. C. and 78 A. D." are accepted implicitly, and fanciful ages thereupon ascribed to archæological remains.

3. The greatest authorities upon Indian archæology and architecture—General Cunningham and Mr. Fergusson—represent in their conclusions the two opposite poles. The province of archæology is to provide trustworthy canons of criticism and not, it should seem, to perplex or puzzle. The Western critic is invited to point to one single relic of the past in India, whether written record or inscribed or unscripted monument, the age of which is not disputed. No sooner has one archæologist determined a date—say the 1st century—than another tries to pull it forward to the 10th or perhaps the 14th century of the Christian era. While General Cunningham ascribes the construction of the present Buddha Gaya temple to the 1st century after Christ—the opinion of Mr. Fergusson is that its *external form* belongs to the 14th century; and so the unfortunate outsider is as wise as ever. Noticing this discrepancy in a *Report on the Archæological Survey of India* (p. 60, Vol. VIII.) the conscientious and capable Buddha-Gaya Chief Engineer, Mr. J. D. Beglar, observes that "notwithstanding his (Fergusson's) high authority, this opinion must be unhesitatingly set aside," and—forthwith assigns the building under notice to the 6th century. While the conjectures of one archæologist are termed by another "hopelessly wrong," the identifications of Buddhist relics by this other are in their turn denounced as "quite untenable." And so in the case of every relic of whatever age.

When the "recognized" authorities agree—among themselves at least,—then will it be time to show them collectively in the wrong. Until then, since their respective conjectures can lay no claim to the character of history, the "Adepts" have neither the leisure nor the disposition to leave weightier business to combat empty

speculations, in number as many as there are pretended authorities. Let the blind lead the blind, if they will not accept the light.\*

As in the "historical," so in this new "archæological difficulty," namely, the apparent anachronism as to the date of our Lord's birth, the point at issue is again concerned with the "old Greeks and Romans." Less ancient than our Atlantean friends, they seem more dangerous in as much as they have become the direct allies of philologists in our dispute over Buddhist annals. We are notified by Prof. Max Müller, by sympathy the most fair of Sanskritists as well as the most learned,—and with whom, for a wonder, most of his rivals are found siding in this particular question—that "everything in Indian chronology depends on the date of Chandragupta,"—the Greek Sandracottus. "Either of these dates (in the Chinese and Ceylonese chronology) is impossible, because it does not agree with the chronology of Greece." (Hist. of the Sans. Lit., p. 275). It is then, by the clear light of this new Alexandrian Pharos shed upon a few synchronisms casually furnished by the Greek and Roman classical writers, that the "extraordinary" statements of the "Adepts" have now to be cautiously examined. For Western Orientalists the historical existence of Buddhism begins with Asoka, though even with the help of Greek spectacles they are unable to see beyond Chandragupta. Therefore, "before that time Buddhist chronology is *traditional* and full of absurdities." Furthermore, nothing is said in the *Brahmanas* of the Bauddhas—*ergo*, there were none before "Sandracottus" nor have the Buddhists or Brahmans any right to a history of their own, save the one evolved by the Western mind. As though the Muse of History had turned her back while events were gliding by, the "historian" confesses his inability to close the immense *lacune* between the Indo-Aryan supposed immigration *en masse* across the Hindookush, and the reign of Asoka. Having nothing more solid, he uses contradictory inferences and speculations. But the Asiatic occultists, whose forefathers had her tablets in their keeping, and even some learned native Pundits—believe they can. The claim, however, is pronounced unworthy of attention. Of late the *Smriti* (traditional history) which, for those who know how to interpret its allegories, is full of unimpeachable *historical* records, an Ariadne's thread through the tortuous labyrinth of the Past—has come to be unanimously regarded as a tissue of exaggerations, monstrous fables, "clumsy forgeries of the first centuries A. D." It is now openly declared as worthless not only for exact chronological but even for general historical purposes. Thus by dint of arbitrary condemnations, based on absurd interpretations (too often the direct outcome of sectarian prejudice), the Orientalist has raised himself to the eminence of a philological mantic. His learned vagaries are fast superseding, even in the minds of many a Europeanised Hindu, the important historical facts that lie concealed under the exoteric phraseology of the *Puranas* and other *Smritic* literature. At the outset, therefore, the Eastern Initiate declares the evidence of those Orientalists who, abusing their unmerited authority, play drakes and ducks with his most sacred relics, ruled out of court; and before giving *his* facts he would suggest to the learned European Sanskritist and archæologist that, in the matter of chronology, the difference in the sum of their series of conjectural historical events, proves them to be mistaken from A. to Z. They know that one single wrong figure in an arithmetical progression will often throw the whole calculation into inextricable confusion: the multiplication yielding, generally, in such a case, instead of the correct sum something entirely unexpected. A fair proof of this may, perhaps, be found in something already alluded to, namely, the adoption of the dates of certain Hindu eras as the basis of their

\* However, it will be shown elsewhere that General Cunningham's latest conclusions about the date of Buddha's death are not at all supported by the inscriptions newly discovered.—T. Subba Row, *Act: Ed:*

chronological assumptions. In assigning a date to text or monument they have, of course, to be guided by one of the pre-Christian Indian eras, whether inferentially, or otherwise. And yet—in one case, at least—they complain repeatedly that they are utterly ignorant as to the correct starting point of the most important of these. The positive date of Vikramaditya, for instance, whose reign forms the starting point of the *Samvat* era, is in reality unknown to them. With some, Vikramaditya flourished “B. C.” 56; with others, 86; with others again, in the 6th century of the Christian era; while Mr. Fergusson will not allow the *Samvat* era any beginning before the “10th century A. D.” In short, and in the words of Dr. Weber, they “have absolutely no authentic evidence to show whether the era of Vikramaditya dates from the year of his birth, from some achievement, or from the year of his death, or whether, in fine, it may not have been simply introduced by him for astronomical reasons.”\* There were several Vikramadityas and Vikramas in Indian history, for it is not a name but an honorary title, as the Orientalists have now come to learn. How then can any chronological deduction from such a shifting premise be anything but untrustworthy, especially when, as in the instance of the *Samvat*, the basic date is made to travel along, at the personal fancy of Orientalists, between the 1st and the 10th century?

Thus it appears to be pretty well proved that in ascribing chronological dates to Indian antiquities, Anglo-Indian as well as European archaeologists are often guilty of the most ridiculous anachronisms. That, in fine, they have been hitherto furnishing History with an arithmetical mean, while ignorant in nearly every case, of its first term! Nevertheless, the Asiatic student is invited to verify and correct his dates by the flickering light of this chronological will-o'-the-wisp. Nay, nay. Surely “An English F. T. S.” would never expect us in matters demanding the minutest exactness, to trust to such Western beacons! And he will, perhaps, permit us to hold to our own views, since we know that our dates are neither conjectural nor liable to modifications. Where even such veteran archaeologists as General Cunningham do not seem above suspicion and are openly denounced by their colleagues, palæography seems to hardly deserve the name of exact science. This busy antiquarian has been repeatedly denounced by Prof. Weber and others for his indiscriminate acceptance of the *Samvat* era. Nor have the other Orientalists been more lenient: especially those who, perchance under the inspiration of early sympathies for biblical chronology, prefer in matters connected with Indian dates to give heed to their own emotional but unscientific intuitions. Some would have us believe that the *Samvat* era “is not demonstrable for times anteceding the Christian era at all.” Kern makes efforts to prove that the Indian astronomers began to employ this era “only after the year of grace 1000.” Prof. Weber referring sarcastically to General Cunningham, observes that “others, on the contrary, have no hesitation in at once referring wherever possible every *Samvat* or *Samvatsare*-dated inscription to the *Samvat* era.” Thus, e. g., Cunningham (in his *Arch. Survey of India*,—iii. 31, 39) directly assigns an inscription dated *Samvat* 5 to the year “B. C. 52;” &c., and winds up the statement with the following plaint. “For the present, therefore, unfortunately, where there is nothing else (but that unknown era) to guide us, it must generally remain an open question, which era we have to do with in a particular inscription, and what date consequently the inscription bears.”†

The confession is significant. It is pleasant to find such a ring of sincerity in a European Orientalist, though it does seem quite ominous for Indian archaeology. The initiated Brahmans know the positive dates of their eras and remain therefore unconcerned. What the “Adepts”

have once said, they maintain; and no new discoveries or modified conjectures of accepted authorities can exert any pressure upon their data. Even if Western archaeologists or numismatists took it into their heads to change the date of our Lord and Glorified Deliverer from the 7th century “B. C.” to the 7th century “A. D.,” we would but the more admire such a remarkable gift for knocking about dates and eras, as though they were so many lawn-tennis balls.

Meanwhile to all sincere and enquiring Theosophists, we will say plainly, it is useless for any one to speculate about the date of our Lord Sauggyas's birth, while rejecting *à priori* all the Brahmical, Ceylonese, Chinese, and Tibetan dates. The pretext that these do not agree with the chronology of a handful of Greeks who visited the country 300 years after the event in question, is too fallacious and bold. Greece was never concerned with Buddhism, and besides the fact that the classics furnish their few synchronistic dates simply upon the hearsay of their respective authors—a few Greeks, who themselves lived centuries before the writers quoted—their chronology is itself too defective, and their historical record, when it was a question of national triumphs, too bombastic and often too diametrically opposed to fact, to inspire with confidence any one less prejudiced than the average European Orientalist. To seek to establish the true dates in Indian history by connecting its events with the mythical “invasion,” while confessing that “one would look in vain in the literature of the Brahmans or Buddhists for any allusion to Alexander's conquest, and although it is impossible to identify any of the historical events related by Alexander's companions with the historical tradition of India,” amounts to something more than a mere exhibition of incompetence in this direction: were not Prof. Max Müller the party concerned—we might say that it appears almost like predetermined dishonesty.

These are harsh words to say, and calculated no doubt to shock many a European mind trained to look up to what is termed “scientific authority” with a feeling akin to that of the savage for his family fetich. They are well deserved nevertheless, as a few examples will show. To such intellects as Prof. Weber's—whom we take as the leader of the German Orientalists of the type of Christophiles—certainly the word “obtuseness” cannot be applied. Upon seeing how chronology is deliberately and maliciously perverted in favour of “Greek influence,” Christian interests and his own predetermined theories—another, and even a stronger term should be applied. What expression is too severe to signify one's feelings upon reading such an unwitting confession of disingenuous scholarship as Weber repeatedly makes (*Hist. Ind. Lit.*) when urging the necessity of admitting that a passage “has been touched up by later interpolation,” or forcing fanciful chronological places for texts admittedly very ancient—as “otherwise the dates would be brought down too far or too near!” And this is the key-note of his entire policy: *fit hypothesis, ruat cælum!* On the other hand Prof. Max Müller, enthusiastic Indophile, as he seems, crams centuries into his chronological thimble without the smallest apparent compunction.

These two Orientalists are instances, because they are accepted beacons of philology and Indian palæography. Our national monuments are dated and our ancestral history perverted to suit their opinions; and the most pernicious result ensues, that History is now recording for the misguidance of posterity the false annals and distorted facts which, upon their evidence, is to be accepted without appeal as the outcome of the fairest and ablest critical analysis. While Prof. Max Müller will hear of no other than a Greek criterion for Indian chronology, Prof. Weber (*op. cit.*) finds Greek influence—his universal solvent—in the development of India's religion, philosophy, literature, astronomy, medicine, architecture, etc.

\* *The History of Indian Literature*, Trüb; Series, 1882. p. 202.

† *Ibid.*, p. 203.

To support this fallacy the most tortuous sophistry, the most absurd etymological deductions are resorted to. If one fact more than another has been set at rest by comparative mythology, it is that their fundamental religious ideas, and most of their gods were derived by the Greeks from religions flourishing in the north-west of India, the cradle of the main Hellenic stock. This is now entirely disregarded: because a disturbing element in the harmony of the critical spheres. And though nothing is more reasonable than the inference that the Grecian astronomical terms were inherited equally from the Parent stock, Prof. Weber would have us believe that "it was Greek influence that just infused a real life into Indian astronomy" (p. 251). In fine, the hoary ancestors of the Hindus borrowed their astronomical terminology and learned the art of star gazing and *even their zodiac* from the Hellenic infant! This proof engenders another: the relative antiquity of the astronomical texts shall be henceforth determined upon the presence or absence in them of asterisms and zodiacal signs: the former being undisguisedly Greek in their names, the latter are "designated by their Sanskrit names which are translated from the Greek" (p. 255). Thus "Manu's law being unacquainted with the planets"—is considered as more ancient than Yajñavalkya's Code, which "inculcates their worship," and so on. But there is still another and a better test found out by the Sanskritists for determining with "infallible accuracy" the age of the texts, apart from asterisms and zodiacal signs: any casual mention in them of the name "Yavana,"—taken in every instance to designate the "Greeks." This, apart "from an *internal* chronology based on the character of the works themselves, and on the quotations, etc., therein contained, is the only one possible," we are told. As a result—the absurd statement that "the Indian astronomers regularly speak of the Yavanas as their teachers" (p. 252). *Ergo*—their teachers were Greeks. For with Weber and others "Yavana" and "Greek" are convertible terms.

But it so happens that *Yavanacharya* was the Indian title of a single Greek—Pythagoras; as Sankaracharya was the title of a single Hindu philosopher; and the ancient Aryan astronomical writers cited his opinions to criticize and compare them with the teachings of their own astronomical science, long before him perfected and derived from their ancestors. The honorific title of Acharya (master) was applied to him as to every other learned astronomer or mystic; and it certainly did not mean that Pythagoras or any other Greek "Master" was necessarily the master of the Brahmans. The word "Yavana" was a generic term employed ages before the "Greeks of Alexander" projected "their influence" upon Jambudvīpa—to designate people of a younger race, the word meaning *Yuvan* "young," or *younger*. They knew of Yavanas of the north, west, south and east; and the Greek strangers received this appellation as the Persians, Indo-Scythians and others had before them. An exact parallel is afforded in our present day. To the Tibetans every foreigner whatsoever is known as a *Peling*; the Chinese designate Europeans as "red-haired devils;" and the Mussalmans call every one outside of Islam a *Kaffir*. The Webers of the future following the example now set them, may perhaps, after 10,000 years, affirm upon the authority of scraps of Moslem literature then extant that the Bible was written, and the English, French, Russians and Germans who possessed and translated or "invented" it, lived, in Kaffiristan shortly before their era, under "Moslem influence." Because the *Yuga Purana* of the Gārgi Sanhita speaks of an expedition of the Yavanas "as far as Pātāliputra," therefore, either the Macedonians or the *Seleucidæ* had conquered all India! But our Western critic is ignorant, of course, of the fact that Ayodhya or *Saketa* of Rama was for two milleniums repelling invasions of various Mongolian and other Turanian tribes,

besides the Indo-Scythians—from beyond Nepal and the Himalayas. Prof. Weber seems finally himself frightened at the Yavana spectre he has raised, for he queries:—"Whether by the Yavanas it is really the Greeks who are meant.....or possibly merely their Indo-Scythian or other successors, to whom the name was afterwards transferred." This wholesome doubt ought to have modified his dogmatic tone in many other such cases.

But—drive out prejudice with a pitch-fork it will ever return. The eminent scholar though staggered by his own glimpse of the truth, returns to the charge with new vigour. We are startled by the fresh discovery that:—Asuramaya,\* the earliest astronomer, mentioned repeatedly in the Indian epics, "is identical with 'Ptolemaios' of the Greeks." The reason for it given is, that "this latter name, as we see, from the inscriptions of Piyadasi, became in Indian 'Turamaya,' out of which the name 'Asuramaya' might very easily grow; and since, by the later tradition, this 'Maya' is distinctly assigned to Romaka-pura in the West." Had the "Piyadasi inscription" been found on the site of ancient Babylonia, one might suspect the word "Turamaya" as derived from "Turanomaya," or rather *mania*. Since, however, the Piyadasi inscriptions belong distinctly to India and the title was borne but by two kings—Chandragupta and Dharmāsoka,—what has "'Ptolemaios' of the Greeks" to do with "Turamaya" or the latter with "Asuramaya:" except, indeed, to use it as a fresh pretext to drag the Indian astronomer under the stupefying "Greek influence" of the Upas Tree of Western Philology? Then we learn that, because "Pāṇini once mentions the Yavanas, *i.e.*... Greeks, and explains the formation of the word 'Yavanāni'—to which, according to the *Varttika*, the word *lipi*, 'writing,' must be supplied"—therefore, the word signifies 'the writing of the Yavanas,' of the *Greeks* and none other. Would the German philologists (who have so long and so fruitlessly attempted to explain this word) be very much surprised, if told that they are yet as far as possible from the truth? That—*Yavanāni* does not mean "Greek writing" at all but any foreign writing whatsoever? That the absence of the word 'writing' in the old texts, except in connection with the names of foreigners, does not in the least imply that none but Greek writing was known to them, or, that they had none of their own, being ignorant of the art of reading and writing until the days of Pāṇini.... (theory of Prof. Max Müller)? For Devanagari is as old as the Vedas, and held so sacred that the Brahmans, first under penalty of death, and later on—of eternal ostracism, were not even allowed to mention it to profane ears; much less to make known the existence of their secret temple-libraries. So that, by the word *Yavanāni*, "to which, according to the *Varttika*, the word *lipi*, 'writing' must be supplied," the writing of foreigners in general, whether Phœnician, Roman, or Greek, is always meant. As to the preposterous hypothesis of Prof. Max Müller that writing "was not used for literary purposes in India" before Pāṇini's time (again upon Greek authority) that matter has been disposed of by a Chela in the last number of this Journal.

Equally unknown are those certain other, and most important facts [fable though they seem]. *First*, that the Aryan "Great War," the Maha-Bharata, and the Trojan War of Homer—both mythical as to personal biographies and fabulous supernumeraries, yet perfectly historical in the main—belong to the same cycle of events. For, the occurrences of many centuries, [among them the separation of sundry peoples and races, erroneously traced to Central Asia alone] were in these immortal epics compressed within the scope of single Dramas made

\* Dr. Weber is not probably aware of the fact that this distinguished astronomer's name was Maya (मया) merely; the prefix "Asura" was often added to it by ancient Hindu writers to show that he was a Rakshasa. In the opinion of the Brahmans he was an "Atlantean," and one of the greatest astronomers and occultists of the lost Atlantis.—T. S. R., Acting Editor.

to occupy but a few years. *Secondly* that in this immense antiquity the forefathers of the Aryan Greeks and the Aryan Brahmans were as closely united and intermixed, as are now the Aryans and the so-called Dravidians. *Thirdly*, that, before the days of the *historical* Rama from whom in unbroken genealogical descent the Oodycpore sovereigns trace their lineage, Rajpootana was as full of direct post-Atlantean "Greeks," as the post-Trojan, subjacent Cumæa and other settlements of *pre-Magna Græcia* were of the fast hellenizing sires of the modern Rajpoot. One acquainted with the *real* meaning of the ancient epics cannot refrain from asking himself whether these intuitional Orientalists prefer being called deceivers or deceived, and in charity give them the benefit of the doubt.\* What can be thought of Prof. Weber's endeavour when "to determine more accurately the position of Ramayana (called by him the 'artificial epic') in literary history—" he ends with an assumption that "it rests upon an acquaintance with the Trojan cycle of legend...the conclusion there arrived at, is that the date of its composition is to be placed at the commencement of the Christian era,...in an epoch when the operation of the Greek influence upon India had already set in!" (p. 194.) The case is hopeless. If the "internal chronology—" and external fitness of things, we may add—presented in the triple Indian epic, did not open the eyes of the hypercritical professors to the many historical facts enshrined in their striking allegories; if the significant mention of "black Yavanas," and "white Yavanas" indicating totally different peoples could so completely escape their notice;† and the enumeration of a host of tribes, nations, races, clans, under their separate Sanskrit designations, in the Mahabharata had not stimulated them to try to trace their ethnic evolution and identify them with their now living European descendants,—there is little to hope from their scholarship except a mosaic of learned guesswork. The latter *scientific* mode of critical analysis may yet end some day in a consensus of opinion that Buddhism is due wholesale to the "Life of Barlaam and Josaphat," written by St. John of Damascus; or that our religion was plagiarized from that famous Roman Catholic legend of the 8th century in which our Lord Gautama is made to figure as a Christian Saint, better still, that the Vedas were written at Athens under the auspices of St. George, the tutelary successor of Theseus. For fear that anything might be lacking to prove the complete obsession of Jambudvîpa by the demon of "Greek influence," Dr. Weber vindictively casts a last insult into the face of India by remarking that *if* "European Western steeples owe their origin to an imitation of the Buddhist topes † ...on the other hand in the *most ancient Hindu*

\* Further on, Prof. Weber indulges in the following piece of chronological sleight of hand. In his arduous endeavour "to determine accurately" the place in history of "the Romantic Legend of Sakya Buddha" (translation by Beale), he thinks, "the special points of relation here found to Christian legends are very striking. The question which party was the borrower Beale properly leaves undetermined. Yet in all likelihood (!) we have here simply a similar case to that of the appropriation of Christian legend by the worshippers of Krishna" (p. 300). Now it is this that every Hindu and Buddhist has the right to brand as "dishonesty," whether conscious or unconscious. Legends originate earlier than history and die out upon being sifted. Neither of the fabulous events in connection with Buddha's birth, taken exoterically, necessitated a great genius to narrate them, nor was the intellectual capacity of the Hindus ever proved so inferior to that of the Jewish and Greek mob that they should borrow from them even fables inspired by religion. How their fables, evolved between the 2nd and 3rd centuries after Buddha's death, when the fever of proselytism and the adoration of his memory were at their height, could be borrowed and then appropriated from the Christian legends written during the first century of the Western era, can only be explained by a—German Orientalist. Mr. T. W. Rhys Davids (Jataka Book) shows the contrary to have been true. It may be remarked in this connection that, while the first "miracles" of both Krishna and Christ are said to have happened at a Mathura, the latter city exists to this day in India—the antiquity of its name being fully proved—while the Mathura, or Maturæa in Egypt, of the *Gospel of Infancy*, where Jesus is alleged to have produced his first miracle, was sought to be identified, centuries ago, by the stump of an old tree in the desert, and is represented by—an empty spot!

† See Twelfth Book of Mahabharata, Krishna's fight with Kâla-yavana;

‡ Of Hindu *Lingams*, rather—Ed.

*edifices* the presence of Greek influence is unmistakable (p. 274). Well may Dr. Rajendralâla Mitra "hold out particularly against the idea of *any* Greek influence whatever on the development of Indian architecture." If his ancestral literature must be attributed to "Greek influence," the temples, at least, might have been spared. One can understand how the Egyptian Hall in London reflects the influence of the ruined temples on the Nile: but it is a more difficult feat—even for a German professor—to prove the archaic structure of old Aryavarta a foreshadowing of the genius of the late lamented Sir Christopher Wren! The outcome of this palæographic spoliation is that there is not a tittle left for India to call her own. Even medicine is due to the same Hellenic influence. We are told—this once by Roth—that "only a comparison of the principles of Indian *with those of Greek* medicine can enable us to judge of the origin, age and value of the former..." and "à propos of Charaka's injunctions as to the duties of the physician to his patient," adds Dr. Weber—"he cites *some remarkably coincident expressions from the oath of the Asklepiads.*" It is then settled. India is *hellenized* from head to foot, and even had no physic until the Greek doctors came.

#### SAKYA MUNI'S PLACE IN HISTORY.

No Orientalist—save perhaps, the same wise, not to say deep, Prof. Weber—opposes more vehemently than Prof. Max Müller Hindu and Buddhist chronology. Evidently—if an Indophile he is not a Buddhophile, and General Cunningham—however independent otherwise in his archaeological researches—agrees with him more than would seem strictly prudent in view of *possible* future discoveries.\* We have then to refute in our turn this great Oxford professor's speculations.

To the evidence furnished by the Puranas and the Mahavansa—which he also finds hopelessly entangled and contradictory (though the perfect accuracy of that Siuhalese history is most warmly acknowledged by Sir Emerson Tennant, the historian) he opposes the Greek classics and their chronology. With him, it is always "Alexander's invasion" and "Conquest", and "the ambassador of Seleucus Nicator—Megasthenes"—while even the faintest record of such "conquest" is conspicuously absent from Brahmanic record; and, although in an inscription of Piyadasi are mentioned the names of Antiochus, Ptolemy, Magus, Antigonus, and even of the great Alexander himself, as *vassals* of the king Piyadasi, the Macedonian is yet called the "*Conqueror* of India." In other words, while any casual mention of Indian affairs by a Greek writer of no great note must be accepted unchallenged, no record of the Indians, literary or monumental, is entitled to the smallest consideration. Until rubbed against the touch-stone of Hellenic infallibility it must be set down in the words of Prof. Weber—as "of course mere empty boasting." Oh, rare Western sense of justice! †

Occult records show differently. They say—challenging proof to the contrary—that Alexander never penetrated into India farther than *Taxila*; which is not even quite the modern Attock. The murmuring of the Macedonian's troops began at the same place and not

\* Notwithstanding Prof. M. Müller's regrettable efforts to invalidate every Buddhist evidence, he seems to have ill-succeeded in proving his case, if we can judge from the openly expressed opinion of his own German *confères*. In the portion headed *Tradition as to Buddha's age* (p. p. 283-288) in his *Hist. of Ind. Lit.* Prof. Weber very aptly remarks, "Nothing like positive certainty, therefore, is for the present attainable. Nor have the subsequent discussions of this topic by Max Müller (1859) *Hist. A. S. L.* p. 264 ff.), by Westergaard (1860) *Ueber Buddha's Todesjahr*, and by Kern *Über die Jaartelling der Zuidel. Buddhisten*—so far yielded any definite results." Nor are they likely to.

† No *Philaryan* would pretend for a moment on the strength of the Piyadasi inscriptions that Alexander of Macedonia or either of the other sovereigns mentioned, was claimed as an actual "vassal" of Chandragupta. They did not even pay tribute, but only a kind of quit-rent annually for lands ceded in the north: as the grant-tablets could show. But the inscription, however misinterpreted, shows most clearly that Alexander was never the conqueror of India.

as given out, at Hyphasis. For having never gone to *Hydaspes* or *Jhelum* he could not have been at *Sutledge*. Nor did Alexander ever found satrapies or plant any Greek colonies in the Punjab. The only colonies he left behind him that the Brahmans ever knew of, amounted to a few dozens of disabled soldiers, scattered hither and thither on the frontiers; who, with their native raped wives settled around the deserts of *Karmania* and *Dran-garia*—the then natural boundaries of India. And, unless History regards as colonists the many thousands of dead men and those who settled for ever under the hot sands of *Gedrosia*, there were no other, save in the fertile imagination of the Greek historians. The boasted "invasion of India" was confined to the regions between *Karmania* and *Attock*—East and West, and *Beloochistan* and the *Hindukush*—South and North: countries which were all India for the Greek of those days. His building a fleet at *Hydaspes* is a fiction; and his "victorious march through the fighting armies of India"—another. However, it is not with the "world conqueror" that we have now to deal, but rather with the supposed accuracy and even casual veracity of his captains and countrymen, whose hazy reminiscences on the testimony of the classical writers have now been raised to unimpeachable evidence in every thing that may affect the chronology of early Buddhism and India.

Foremost among the evidence of classical writers, that of *Flavius Arrianus*, is brought forward against the Buddhist and Chinese chronologies. No one should impeach the personal testimony of this conscientious author had he been himself an eye-witness instead of *Megasthenes*. But when a man comes to know that he wrote his accounts upon the now lost works of *Aristobolus* and *Ptolemy*; and that the latter described their data from texts prepared by authors who had never set their eyes upon one line written by either *Megasthenes* or *Nearchus* himself; and that knowing so much one is informed by western historians that among the works of *Arrian*, Book VII of the *Anabasis of Alexander*, is "the chief authority on the subject of the Indian invasion—a book unfortunately with a gap in its 12th chapter,"—one may well conceive upon what a broken reed Western authority leans for its Indian chronology. *Arrian* lived over 600 years after *Buddha's* death; *Strabo*—500 (55 "B. C."); *Diodorus Siculus*—quite a trustworthy compiler!—about the 1st century; *Plutarch* over 700 *Anno Buddhæ* and *Quintus Curtius* over 1000 years! And when, to crown this army of witnesses against the Buddhist annals, the reader is informed by our Olympian critics that the works of the last named author—than whom no more blundering, (geographically, chronologically and historically) writer ever lived—form along with the Greek History of *Arrian* the most valuable source of information respecting the military career of *Alexander the Great*,—then the only wonder is that the great conqueror was not made by his biographers to have—*Leonidas*-like—defended the *Thermopylean* passes in the *Hindu-Kush* against the invasion of the first *Vedic Brahmans* "from the *Oxus*." Withal the Buddhist dates are either rejected or—accepted *pro tempore*. Well may the Hindu resent the preference shown to the testimony of Greeks—of whom some at least, are better remembered in Indian History as the importers into *Jambudvîpa* of every Greek and Roman vice known and unknown to their day—against his own national records and history. "Greek influence" was felt indeed, in India, in this, and only in this one particular. Greek damsels mentioned as an article of great traffic for India,—*Persian* and *Greek Yavanis*—were the fore-mothers of the modern *nautch-girls*, who had till then remained pure virgins of the inner temples. Alliances with the *Antiochuses* and the *Seleucus* *Nicator* bore no better fruit than the rotten apple of *Sodom*. *Pataliputra* as prophesied by *Gautama Buddha* found its fate in the waters of the *Ganges*, having been twice before nearly destroyed, again like *Sodom*, by the fire of heaven,

Reverting to the main subject, the "contradictions" between the Ceylonese and *Chino-Tibetan* chronologies actually prove nothing. If the *Chinese Annals* of *Souï* in accepting the prophecy of our Lord that "a thousand years after he had reached *Nirvana*, his doctrines would reach the north" fall into the mistake of applying it to *China*, whereas *Tibet* was meant, the error was corrected after the XI century of the *Tzin* Era in most of the temple chronologies. Besides which, it may now refer to other events relating to Buddhism of which Europe knows nothing, *China* or *Tzina* dates its present name only from the year 296 of the Buddhist era\* (vulgar chronology having assumed it from the first *Hoang* of the *Tzin* dynasty): therefore the *Tathâgata* could not have indicated it by this name in his well-known prophecy. If misunderstood even by several of the Buddhist commentators, it is yet preserved in its true sense by his own immediate *Arhats*. The *Glorified One* meant the country that stretches far off from the *Lake Mansorowara*; far beyond that region of the *Himavât*, where dwelt from time immemorial the great "teachers of the *Snowy Range*." These were the great *Srâman achâryas* who preceded *Him*, and were His teachers, their humble successors trying to this day to perpetuate their and His doctrines. The prophecy came out true to the very day, and it is corroborated both by the mathematical and historical chronology of *Tibet*—quite as accurate as that of the *Chinese*. *Arhât Kâsyâpa*, of the dynasty of *Môryas*, founded by one of the *Chandraguptas* near *Pâtali-putra*, left the convent of *Pâñch-Kukkutarama*, in consequence of a vision of our Lord, for missionary purpose in the year 683 of the *Tzin* era (436, West: era) and had reached the great *Lake of Bod-Yul* in the same year. It is at that period that expired the millennium prophesied. The *Arhât* carrying with him the 5th statue of *Sakya Muni* out of the seven gold statues made after his bodily death by order of the first Council, planted it in the soil on that very spot where seven years later was built the first *gunpa* (monastery), where the earliest Buddhist lamas dwelt. And though the conversion of the whole country did not take place before the beginning of the 7th century (Western era), the good Law had, nevertheless, reached the North at the time prophesied, and no earlier. For, the first of the golden statues had been plundered from *Bhikshu Sali Sûka* by the *Hiong-un* robbers and melted, during the days of *Dharmasôka*, who had sent missionaries beyond *Nepaul*. The second had a like fate, at *Ghar-zha*, even before it had reached the boundaries of *Bod-Yul*. The third was rescued from a barbarous tribe of *Bhons* by a Chinese military chief who had pursued them into the deserts of *Schamo* about 423 *Bud*: era (120 "B. C."). The fourth was sunk in the 3rd century of the Christian era together with the ship that carried it from *Magadha* toward the hills of *Ghangs-ehhèn-dzo-ngá* (*Chitagong*). The fifth arriving in the nick of time reached its destination with *Arhât Kasyapa*. So did the last two† .....

On the other hand, the Southern Buddhists, headed by the Ceylonese, open their annals with the following event:

\* The reference to *Chinahunah* (*Chinese* and *Hans*) in the *Vishnu Parva* of the *Mahabharata* is evidently a later interpolation, as it does not occur in the old MSS. existing in Southern India.

† No doubt since the history of these seven statues is not in the hands of the Orientalists, it will be treated as a "groundless fable." Nevertheless such is their origin and history. They date from the 1st Synod, that of *Rajagrîha*, held in the season of war following the death of *Buddha*, i. e., one year after his death. Were this *Rajagrîha* Council held 100 years after, as maintained by some, it could not have been presided over by *Mâhâkasyapa*, the friend and brother *arhat* of *Sakya Muni*, as he would have been 200 years old. The 2nd Council or Synod, that of *Vaisali*, was held 120 not 100 or 110 years as some would have it, after the *nirvana*, for the latter took place at a time, a little over 20 years before the physical death of *Tathâgata*. It was held at the great *Saptaparna* cave (*Mahavamsa's Sattapanni*), near the Mount *Baibhâr* (the *Webhâra* of the *Pâli* Manuscripts), that was in *Rajagrîha*, the old capital of *Magadha*. Memoirs exist, containing the record of his daily life, made by the nephew of king *Ajâtasatru*, a favourite *Bikshu* of the *Mahachârya*. These texts have ever been in the possession of the superiors of the first *Lamasery* built by *Arhât Kasyapa* in *Bod-Yul*, most of whose *Chokas* were the

They claim according to their native chronology that Vijaya, the son of Sinhabahu, the Sovereign of Lala, a small kingdom or *Raj* on the Gandaki river in Magadha, was exiled by his father for acts of turbulence and immorality. Sent adrift on the ocean with his companions after having had their heads shaved, Buddhist-Bhikshu fashion, as a sign of penitence—he was carried to the shores of Lanka. Once landed, he and his companions conquered and easily took possession of an island inhabited by uncivilized tribes generically called the Yakshas. This—at whatever epoch and year it may have happened—is an historical fact, and the Ceylonese records independent of Buddhist chronology, give it out as having taken place 382 years before Dushtagamani (*i. e.*, in 543, before the Christian era). Now, the Buddhist Sacred Annals record certain words of our Lord pronounced by him shortly before his death. In Mahavansa He is made to have addressed them to Sakra, in the midst of a great assembly of Devatas (Dhyan Chohans), and while already “in the exalted unchangeable Nirvâna, seated on the throne on which Nirvâna is achieved.” In our texts Tathâgata addresses them to his assembled Arhâts and Bhikkhus a few days before his final liberation:—“One Vijaya, the son of Sinhabahu, King of the land of Lala, together with 700 attendants, has just landed on Lanka. Lord of Dhyan Buddhas (Devas) ! my doctrine will be established on Lanka. Protect him and Lanka !” This is the sentence pronounced which, as proved later, was a prophecy. The now familiar phenomenon of clairvoyant prevision, amply furnishing a natural explanation of the prophetic utterance without any unscientific theory of miracle, the laugh of certain Orientalists seems uncalled for. Such parallels of poetico-religious embellishments as found in Mahavansa exist in the written records of every religion—as much in Christianity as anywhere else. An unbiassed mind would first endeavour to reach the correct and very superficially hidden meaning before throwing ridicule and contemptuous discredit upon them. Moreover, the Tibetans possess a more sober record of this prophecy in the *Notes*, already alluded to, reverentially taken down by King Ajâtasatru’s nephew. They are, as said above, in the possession of the Lamas of the convent built by Arhât Kasyapa—the Moryas and their descend-

descendants of the dynasty of the Moryas, there being up to this day three of the members of this once royal family living in India. The old text in question is a document written in *Anudruta* Magadha characters. [We deny that these or any other characters—whether Devanagari, Pali, or Dravidian—ever used in India, are variations of, or derived from, the Phœnician.] To revert to the texts it is therein stated that the Sattapanni cave, then called “Saraswati” and “Bamboo-cave,” got its latter name in this wise. When our Lord first sat in it for *Dhyana*, it was a large six-chambered natural cave, 50 to 60 feet wide by 33 deep. One day, while teaching the mendicants outside, our Lord compared man to a *Saptaparna* (seven leaved) plant, showing them how after the loss of its first leaf every other could be easily detached, but the seventh leaf,—directly connected with the stem. “Mendicants,” He said, “there are seven Buddhas in every Buddha, and there are six Bhikshus and but one Buddha in each mendicant. What are the Seven ? The seven branches of complete knowledge. What are the six ? The six organs of sense. What are the Five ? The five elements of illusive being. And the one which is also ten ? He is a true Buddha who develops in him the ten forms of holiness and subjects them all to the one—the silent voice” (meaning *Avolokitesvara*). After that, causing the rock to be moved at His command the Tathâgata made it divide itself into a seventh additional chamber, remarking that a rock too was septenary, and had seven stages of development. From that time it was called the *Sattapanni* or the *Saptaparna* cave. After the first Synod was held seven gold statues of the Bhagavat were cast by order of the king, and each of them was placed in one of the seven compartments.” These in after times, when the good law had to make room to more congenial because more sensual creeds, were taken in charge by various vihâras and then disposed of as explained. Thus when Mr. Turnour states on the authority of the sacred traditions of Southern Buddhists that the cave received its name from the Sattapanni plant, he states what is correct. In the *Archæological Survey of India*, we find that Genl. Cunningham identifies with this cave one not far away from it and in the same Baibhar range, but which is most decidedly not our Saptaparna cave. At the same time the Chief Engineer of Buddha Gaya, Mr. Beglar, describing the *Chetu* cave, mentioned by Fa-hian, thinks it is the Saptaparna cave—and he is right. For that as well as the Pippal and the other caves, mentioned in our texts, are too sacred in their associations—both having been used for centuries by generations of Bhikkhus, unto the very time of their leaving India—to have their sites so easily forgotten,

ants being of a more direct descent than the Rajput Gautamas, the Chiefs of Nagara—the village identified with Kapilavastu—are the best entitled of all to their possession. And we know they are historical to a word. For the Esoteric Buddhist they yet vibrate in space; and these prophetic words together with the true picture of the Sugata who pronounced them, are present in the aura of every atom of His relics. This, we hasten to say, is no proof but for the psychologist. But there is other and historical evidence: the cumulative testimony of our religious chronicles. The philologist has not seen these; but this is no proof of their non-existence.

The mistake of the Southern Buddhists lies in dating the *Nirvana* of Sanggyas Pan-chhen from the actual day of his death, whereas, as above stated, He had reached it over twenty years previous to His disincarnation. Chronologically, the Southerners are right, both in dating His death in 543 “B. C.,” and one of the great Councils at 100 years after the latter event. But the Tibetan Chohans who possess all the documents relating to the last 24 years of His *external* and *internal* life,—of which no philologist knows anything—can show that there is no real discrepancy between the Tibetan and the Ceylonese chronologies as stated by the Western Orientalists. \* For the profane, the Exalted One was born in the 68th year of the Burmese *Featana* era, established by Featzana (Anjana) King of Dewaha; for the *initiated*—in the 48th year of that era, on a Friday of the waxing moon, of May. And, it was in 563 before the Christian chronology that Tathâgata reached his full Nirvâna, dying, as correctly stated by Mahâvana—in 543, on the very day when Vijaya landed with his companions in Ceylon—as prophesied by Loka-râtha, our Buddha.

Professor Max Müller seems to greatly scoff at this prophecy. In his chapter (*Hist. S. L.*) upon Buddhism, (the “false” religion,) the eminent scholar speaks as though he resented such an *unprecedented* claim. “We are asked to believe”—he writes—“that the Ceylonese historians placed the founder of the Vijayan dynasty of Ceylon in the year 543 in accordance with their sacred chronology”! (*i. e.*, Buddha’s prophecy), “while we (the philologists) are not told, however, *through what channel* the Ceylonese could have received their information as to the exact date of Buddha’s death.” Two points may be noticed in these sarcastic phrases: (a) the implication of a false prophecy by our Lord; and (b) a dishonest tampering with chronological records, reminding one of those of Eusebius, the famous Bishop of Cæsarea, who stands accused in History of “perverting every Egyptian chronological table for the sake of synchronisms.” With reference to charge one he may be asked why our Sakyasinha’s prophecies should not be as much entitled to his respect, as those of his Saviour would be to ours—were we to ever write the true history of the “Galilean” Arhât. With regard to charge two the distinguished philologist is reminded of the glass house he and all Christian chronologists are themselves living in. Their inability to vindicate the adoption of December 25th as the actual day of the Nativity, and hence to determine the age and the year of their Avatar’s death—even before their own people—is far greater than is ours to demonstrate the year of Buddha to other nations. Their utter failure to establish on any other but traditional evidence the, to them, historically unproved, if probable, fact of his existence at all—ought to engender a fairer spirit. When Christian historians can, upon undeniable historical authority, justify biblical and ecclesiastical chronology, then, perchance, they may be better equipped than at present for the congenial work of rending heathen chronologies into shreds.

\* Bishop Bigandet, after examining all the Burmese authorities accessible to him, frankly confesses that “the history of Buddha offers an almost complete blank as to what regards his doings and pronouncements during a period of nearly twenty-three years,”—Vol. I p. 260.—*Ed.*

The "channel" the Ceylonese received their information through, was two Bikshus who had left Magadha to follow their disgraced brethren into exile. The capacity of Siddhartha Buddha's Arhâts for transmitting intelligence by psychic currents may, perhaps, be conceded without any great stretch of imagination to have been equal to, if not greater than that of the prophet Elijah, who is credited with the power of having known from any distance all that happened in the king's bed-chamber. No Orientalist has the right to reject the testimony of other people's Scriptures, while professing belief in the far more contradictory and entangled evidence of his own, upon the self-same theory of proof. If Prof. Müller is a sceptic at heart, then let him fearlessly declare himself: only a sceptic who impartially acts the iconoclast, has the right to assume such a tone of contempt toward any non-Christian religion. And for the instruction of the impartial enquirer only, shall it be thought worth while to collate the evidence afforded by historical—not psychological—datas. Meanwhile, by analysing some objections and exposing the dangerous logic of our critic, we may give the theosophists a few more facts connected with the subject under discussion.

Now that we have seen Prof. Max Müller's opinions in general about this, so to say, the Prologue to the Buddhist *Drama* with Vijaya as the hero—what has he to say as to the details of its plot? What weapon does he use to weaken this foundation stone of a chronology upon which are built, and on which depend all other Buddhist dates? What is the fulcrum for the critical lever he uses against the Asiatic records? Three of his main points may be stated *seriatim* with answers appended. He begins by premising that:—

1st—"If the starting point of the Northern Buddhist chronology turns out to be merely hypothetical, based as it is on a prophecy of *Buddha*, it will be difficult to avoid the same conclusion with regard to the date assigned to Buddha's death by the Buddhists of Ceylon and of Burmah" (266). "The Mahavansa begins with relating three miraculous visits which Buddha paid to Ceylon." *Vijaya*, the founder of the first dynasty (in Ceylon) means *conquest*, "and, therefore, such a person *most likely never existed*." (p. 268.) This he believes invalidates the whole Buddhist chronology.

To which the following pendant may be offered:—

William I, King of England, is commonly called the *Conqueror*; he was, moreover, the illegitimate son of Robert, Duke of Normandy, surnamed *le Diable*. An opera, we hear, was invented on this subject, and full of miraculous events, called "Robert the Devil," showing its traditional character. Therefore shall we be also justified in saying that Edward the Confessor, Saxons and all, up to the time of the union of the houses of York and Lancaster under Henry VII—the new historical period in English history—are all "fabulous tradition" and "such a person as William the Conqueror *most likely never existed*?"

2nd—In the Chinese Chronology—continues the dissecting critic—"the list of the thirty-three Buddhist patriarchs .... is of a doubtful character. For Western History the exact Ceylonese chronology begins with 161 B. C." Extending beyond that date there exists but "a traditional native chronology. Therefore, . . . what goes before . . . is but fabulous tradition."

The chronology of the Apostles and their existence has never been proved historically. The history of the Papacy is confessedly "obscure." Ennodius of Pavia (5th century) was the first one to address the Roman Bishop (Symmochus)—who comes fifty-first in the Apostolic succession, as "Pope." Thus, if we were to write the History of Christianity, and indulge in remarks upon its chronology, we might say that since there were no antecedent Popes; and since the Apostolic line began with Symmochus (493 "A. D.") ; all Christian records begin-

ning with the Nativity and up to the sixth century are *therefore*—"fabulous traditions," and all Christian chronology is "purely hypothetical."

3rd.—Two discrepant dates in Buddhist chronology are scorchingly pointed out by the Oxford Professor. If the landing of Vijaya, in Lanka—he says—on the same day that Buddha reached Nirvâna (died) is in fulfilment of Buddha's prophecy, then "if Buddha *was a true prophet*, the Ceylonese argue quite rightly that *he must have died in the year of the Conquest, or 543 B. C.*" (p. 270). On the other hand the Chinese have a Buddhist chronology of their own; and—it does not agree with the Ceylonese. "The life-time of Buddha from 1029 to 950 rests on his own prophecy that a millennium would elapse from his death to the conversion of China. If, therefore, Buddha *was a true prophet*, *he must have lived about 1000 B. C.*" (266). But the date does not agree with the Ceylonese chronology; *ergo*—Buddha *was a false prophet*. As to that other "the first and most important link" in the Ceylonese as well as in the Chinese chronology, "it is extremely weak." . . . In the Ceylonese "a *miraculous genealogy had to be provided for Vijaya*," and, "a *prophecy was, therefore, invented*" (p. 269).

On these same lines of argument it may be argued that:—

Since no genealogy of Jesus, "exact or inexact," is found in any of the world's records save those entitled—the Gospels of SS. Matthew (i. 1 to 17), and Luke iii. 23—38); and, since these radically disagree—although this personage is the most conspicuous in Western history, and the nicest accuracy might have been expected in his case; therefore, agreeably with Prof. Max Müller's sarcastic logic, if Jesus "*was a true prophet, he must have descended from David through Joseph (Matt.'s Gospel)* ; and "if he *was a true prophet*" again, then the Christians "argue quite rightly that he must have" descended from David through Mary (*Luke's Gospel*.) Furthermore, since the two genealogies are obviously discrepant and prophecies were truly "invented" by the post-apostolic theologians [or, if preferred, old prophecies of Isaiah and other O. T. prophets, irrelevant to Jesus, were *adapted* to suit his case—as recent English commentators (in Holy Orders), the Bible revisers, now concede] and since moreover—always following the Professor's argument, in the cases of Buddhist and Brahmanical chronologies—"traditional and full of absurdities... every attempt to bring them into harmony having proved a failure (p. 266)" are Bible chronology and genealogies less so? Have we, or have we not a certain right to retort, that if Gautama Buddha is shown on these lines a *false prophet*, then Jesus must be likewise "a false prophet?" And if Jesus was a true prophet despite existing confusion of authorities, why on the same lines may not Buddha have been one? Discredit the Buddhist prophecies and the Christian ones must go along with them.

The utterances of the ancient pythoress now but provoke the scientific smile: but no tripod ever mounted by the prophetess of old was so shaky as the chronological trinity of points upon which this Orientalist stands to deliver his oracles. Moreover his arguments are double-edged, as shown. If the citadel of Buddhism can be undermined by Prof. Max Müller's critical engineering, then *pari passu* that of Christianity must crumble in the same ruins. Or have the Christians alone the monopoly of *absurd* religious "inventions" and the right of being jealous of any infringement of their patent rights?

To conclude, we say, that the year of Buddha's death is correctly stated by Mr. Sinnett, *Esoteric Buddhism* having to give its chronological dates according to *esoteric* reckoning. And this reckoning would alone, if explained, make away with every objection urged, from Prof. M. Müller's *Sanskrit Literature* down to the latest "evidence"—the *proofs* in the *Reports of the Archaeological Survey of India*. The Ceylonese era, as given in Mahâ,

vansa, is correct in everything, withholding but the above given fact of Nirvana, the great mystery of *Samma-Sambuddha* and *Abhidjña* remaining to this day unknown to the outsider; and though certainly known to Bikshu Mahânâma—King Dhâtusena's uncle—it could not be explained in a work like the *Mahāvansa*. Moreover the Singhalese chronology agrees in every particular with the Burmese chronology. Independent of the religious era dating from Buddha's death, called "*Nirvanic Era*," there existed, as now shown by Bishop Bigandet (*Life of Gaudama*), two historical eras. One lasted 1362 years, its last year corresponding with 1156 of the Christian era: the other, broken in two small eras, the last succeeding immediately the other, exists to the present day. The beginning of the first, which lasted 562 years, coincides with the year 79 A. D. and the Indian Saka era. Consequently the learned Bishop, who surely can never be suspected of partiality to Buddhism, accepts the year 543 of Buddha's Nirvana. So do Mr. Turnour, Professor Lassen, and others.

The alleged discrepancies between the 14 various dates of Nirvana collected by Csoma Cörösi, do not relate to the *Nyr-Nyang* in the least. They are calculations concerning the Nirvana of the precursors, the Bodhisattvas and previous incarnations of Sanggyas, that the Hungarian found in various works and wrongly applied to the last Buddha. Europeans must not forget that this enthusiast acted under protest of the Lamas during the time of his stay with them; and that, moreover, he had learned more about the doctrines of the heretical Dugpas than of the orthodox Gelugpas. The statement of this "great authority (!) on Tibetan Buddhism," as he is called, to the effect that Gautama had three wives whom he names—and then contradicts himself by showing (*Tibetan Grammar*, p. 162, see note) that the first two wives "are one and the same," shows how little he can be regarded as an "authority." He had not even learned that "Gopa, Yasodhara and Utpala Varna," are the three names for three mystical powers. So with the "discrepancies" of the dates. Out of the 64 mentioned by him but two relate to Sakya Muni: namely, the years 576 and 546—and these two err in their transcription; for when corrected they must stand 564 and 543. As for the rest they concern the seven *ku-sum*, or triple form of the Nirvanic state and their respective duration, and relate to doctrines of which Orientalists know absolutely nothing.

Consequently from the Northern Buddhists, who, as confessed by Professor Weber, "alone possess these (Buddhist) Scriptures complete," and have "preserved more authentic information regarding the circumstances of their redaction"—the Orientalists have up to this time learned next to nothing. The Tibetans say that Tathagata became a full Buddha, *i. e.*, reached *absolute Nirvana* in 2544 of the Kali era, (according to Souramma) and thus lived indeed but *eighty* years, as no *Nirvanee* of the *seventh degree* can be reckoned among the *living* (*i. e.*, existing) men. It is no better than loose conjecture to argue that it would have entered as little into the thoughts of the Brahmans of noting the day of Buddha's birth "as the Romans or even the Jews (would have) thought of preserving the date of the birth of Jesus before he had become the founder of a religion." (M. Müller's *Hist. S. L.*) For, while the Jews had been from the first rejecting the claim of Messiahship set up by the Chelas of the Jewish prophet, and were not expecting their Messiah at that time, the Brahmans (the initiates, at any rate) knew of the coming of him whom they regarded as an incarnation of divine wisdom and therefore were well aware of the astrological date of his birth. If, in after times in their impotent rage, they destroyed every accessible vestige of the birth, life and death of Him, who in his boundless mercy to all creatures had revealed their carefully concealed mysteries and doctrines in order to check the ecclesiastical torrent of ever-growing superstitions, there had been a time when he

was met by them as an Avatar. And, though they destroyed, others preserved.

The thousand and one speculations and the torturing of exoteric texts by Archæologist or Palæographer will ill repay the time lost in their study.

The Indian Annals specify King Ajatasatru as a contemporary of Buddha, and another Ajatasatru helped to prepare the council 100 years after his death. These princes were sovereigns of Magadha and have naught to do with Ajatasatru of the *Brihad-Aranyaka* and the *Kaushitaki-Upanishat*, who was a sovereign of the Kasis; though Bhadrāsena, "the son of Ajatasatru" cursed by Aruni—may have more to do with his namesake the "heir of Chandragupta" than is generally known, Professor Max Müller objects to two Asokas. He rejects Kalasoka and accepts but Dharmasoka—in accordance with "Greek" and in utter conflict with Buddhist chronology. He knows not—or perchance prefers ignoring—that besides the two Asokas there were several personages named Chandragupta and Chandramasa. Plutarch is set aside as conflicting with the more welcome theory, and the evidence of Justin alone is accepted. There was Kalasoka, called by some Chandramasa and by others Chandragupta, whose son Nanda was succeeded by his cousin the Chandragupta of Seleucus, and under whom the Council of Vaisali took place "supported by King Nanda" as correctly stated by Taranatha. [None of them were Sudras, and this is a pure invention of the Brahmans]. Then there was the last of the Chandraguptas who assumed the name of *Vikrama*; he commenced the new era called the *Vikramaditya* or *Samvat* and began the new dynasty at Pataliputra, 318 (B. C.)—according to some European "authorities;" after him his son Bindusara or Bhadrāsena—also Chandragupta, who was followed by Dharmasoka Chandragupta. And there were two Piyadasis—the "Sandracottus" Chandragupta and Asoka. And if controverted—the Orientalists will have to account for this strange inconsistency. If Asoka was the only "Piyadasi" and the builder of the monuments, and maker of the rock-inscriptions of this name; and if his inauguration occurred as conjectured by Professor Max Müller about 259 B. C., in other words, if he reigned 60 or 70 years later than any of the Greek kings named on the Piyadasian monuments, what had he to do with their vassalage or non-vassalage, or how was he concerned with them at all? Their dealings had been with his grandfather some 70 years earlier—if he became a Buddhist only after ten years occupancy of the throne. And finally three well-known Bhadrāsenas can be proved, whose names spelt loosely and phonetically, according to each writer's dialect and nationality, now yield a variety of names, from Bindusara, Bimbisara, and Vindusara, down to Bhadrāsena and Bhadrāsara, as he is called in the *Vayu Purana*. These are all synonymous. However easy, at first sight, it may seem to be to brush out of history a real personage, it becomes more difficult to prove the non-existence of Kalasoka by calling him "false," while the second Asoka is termed "the real," in the face of the evidence of the Puranas, written by the bitterest enemies of the Buddhists, the Brahmans of the period. The *Vayu* and *Matsya Puranas* mention both in their lists of the reigning Sovereigns of the Nanda and the Mōrya dynasties. And, though they connect Chandragupta with a *Sudra Nanda*, they do not deny existence to Kalasoka—for the sake of invalidating Buddhist chronology. However falsified the now extant texts of both the *Vayu* and *Matsya Puranas*, even accepted as they at present stand "in their true meaning," which Prof. Max Müller (notwithstanding his confidence) fails to seize, they are *not* "at variance with Buddhist chronology before Chandragupta." Not, at any rate, when the *real* Chandragupta instead of the false Sandracottus of the Greeks is introduced and authenticated. Quite independently of the Buddhist version, there exists the historical fact recorded in the

Brahmanical as well as in the Burmese and Tibetan versions, that in the year 63 of Buddha, Susinago of Benares was chosen king by the people of Pataliputra, who made away with Ajatasatru's dynasty. Susinago removed the capital of Magadha from Rajagriha to Vaisali, while his successor Kalasoka removed it in his turn to Pataliputra. It was during the reign of the latter that the prophecy of Buddha concerning Patalibat or Pataliputra—a small village during His time—was realized. (See *Mahāparinibbāna Sutta*).

It will be easy enough, when the time comes, to answer all denying Orientalists and face them with proof and document in hand. They speak of the extravagant, wild exaggerations of the Buddhists and Brahmans. The latter answer: "The wildest theorists of all are they who, to evade a self-evident fact, assume moral, anti-national impossibilities, entirely opposed to the most conspicuous traits of the Brahmanical Indian character—namely, borrowing from, or imitating in anything, other nations. From their comments on Rig Veda, down to the annals of Ceylon, from Pānini to Matouan-lin, every page of their learned scholia appears, to one acquainted with the subject, like a monstrous jumble of unwarranted, and insane speculations. Therefore, notwithstanding Greek chronology and Chandragupta—whose date is represented as "the sheet-anchor of Indian chronology" that "nothing will ever shake"—it is to be feared that as regards India, the chronological ship of the Sanskritists has already broken from her moorings and gone adrift with all her precious freight of conjectures and hypothesis. She is drifting into danger. We are at the end of a cycle—geological and other—and at the beginning of another. Cataclysm is to follow cataclysm. The pent-up forces are bursting out in many quarters; and not only will men be swallowed up or slain by thousands, "new" land appear and "old" subside, volcanic eruptions and tidal waves appal; but secrets of an unsuspected Past will be uncovered to the dismay of Western theorists, and the humiliation of an imperious science. This drifting ship, if watched may be seen to ground upon the upheaved vestiges of ancient civilizations, and fall to pieces. We are not, emulous of the prophet's honours: but still, let this stand as a prophesy.

#### QUESTION VII.

INSCRIPTIONS DISCOVERED BY GENERAL A. CUNNINGHAM,

By T. SUBBA ROW, B. A., B. L., F. T. S.

WE have carefully examined the new inscription discovered by General A. Cunningham on the strength of which the date assigned to Buddha's death by Buddhist writers has been declared to be incorrect; and we are of opinion that the said inscription confirms the truth of the Buddhist traditions instead of proving them to be erroneous. The abovementioned archaeologist writes as follows regarding the inscription under consideration in the first volume of his reports:—"The most interesting inscription (at Gaya) is a long and perfect one dated in the era of the Nirvana or death of Buddha. I read the date as follows:—*Bhagavati Parinirvrite Samvat 1819 Karthike badi 1 Budhi*—that is "in the year 1819 of the Emancipation of Bhagavata on Wednesday, the first day "of the waning moon of Kartik." If the era here used is the same as that of the Buddhists of Ceylon and Burmah, which began in 543 B. C. the date of this inscription will be  $1819 - 543 = A. D. 1276$ . The style of the letters is in keeping with this date, but is quite incompatible with that derivable from the Chinese date of the era. The Chinese place the death of Buddha upwards of 1000 years before Christ, so that according to them, the date of this inscription would be about A. D. 800, a period much too early for the style of character used in the inscription. But as the day of the week is here fortunately added, the date can be

verified by calculation. According to my calculation the date of the inscription corresponds with Wednesday, the 17th September A. D. 1342. This would place the Nirvana of Buddha in 477 B. C., which is the very year that was first proposed by myself as the most probable date of that event. This corrected date has since been adopted by Professor Max-Müller."

The reasons assigned by some Orientalists for considering this so-called "corrected date" as the real date of Buddha's death have already been noticed and criticized in the preceding article; and now we have only to consider whether the inscription in question disproves the old date.

Major General Cunningham evidently seems to take it for granted, as far as his present calculation is concerned, that the number of days in a year is counted in the Magadha country and by Buddhist writers in general on the same basis on which the number of days in a current English year is counted; and this wrong assumption has vitiated his calculation and lead him to a wrong conclusion. Three different methods of calculation were in use in India at the time when Buddha lived, and they are still in use in different parts of the country. These methods are known as *Souramanam*, *Chandramanam* and *Barhaspatyamanam*. According to the Hindu works on Astronomy a Souramanam year consists of 365 days 15 ghadias and 31 vighadias; a Chandramanam year has 360 days, and a year on the basis of Barhaspatyamanam has 361 days and 11 ghadias nearly. Such being the case, General Cunningham ought to have taken the trouble of ascertaining before he made his calculation the particular *Manam* employed by the writers of Magadha and Ceylon in giving the date of Buddha's death and the *Manam* used in calculating the years of the *Buddhist era* mentioned in the inscription above quoted. Instead of placing himself in the position of the writer of the said inscription and making the required calculation from that standpoint, he made the calculation on the same basis on which an English gentleman of the 19th century would calculate time according to his own calendar.

If the calculation were correctly made, it would have shown him that the inscription in question is perfectly consistent with the statement that Buddha died in the year 543 B. C. according to Barhaspatyamanam (the only *manam* used in Magadha and by Pali writers in general). The correctness of this assertion will be clearly seen on examining the following calculation.

543 years according to Barhaspatyamanam are equivalent to 536 years and 8 months (nearly) according to Souramanam.

Similarly 1819 years according to the former *manam* are equivalent to 1798 years nearly according to the latter *manam*.

As the Christian era commenced on the 3102nd year of Kaliyuga (according to Souramanam) Buddha died in the year 2565 of Kaliyuga and the inscription was written in the year 4362 of Kaliyuga (according to Souramanam). And now the question is whether according to the Hindu Almanac, the first day of the waning moon of Kartik coincided with a Wednesday.

According to Suryasiddhanta the number of days from the beginning of Kaliyuga up to midnight on the 15th day of increasing moon of Aswina is 1,593,072 (the number of Adhikamasanas (extra months) during the interval being 1608 and the number of Kshayathithis 25,323).

If we divide this number by 7 the remainder would be 5. As Kaliyuga commenced with Friday, the period of time above defined closed with Tuesday, as according to Suryasiddhanta a week-day is counted from midnight to midnight.

It is to be noticed that in places where Barhaspatyamanam is in use Krishnapaksham (or the dark half) commences first and is followed by Suklapaksham,

Consequently the next day after the 15th day of the waxing moon of Aswina will be the 1st day of the waning moon of Kartika to those who are guided by the Barhaspatyamanam calendar. And therefore the latter date, which is the date mentioned in the inscription, was Wednesday in the year 4362 of Kaliyuga.

The geocentric longitude of the sun at the time of his meridian passage on the said date being  $174^{\circ}-20'-16''$  and the moon's longitude being  $7^{\circ}-51'-42''$  (according to Suryasiddhanta) it can be easily seen that at Gaya there was Padyamithithi (1st day of waning moon) for nearly 7 ghadias and 50 vighadias from the time of sunrise.

It is clear from the foregoing calculation that "Kartik 1 Badi" coincided with Wednesday in the year 4362 of Kaliyuga or the year 1261 of the Christian era, and that from the stand-point of the person who wrote the inscription the said year was the 1819th year of the Buddhist era. And consequently this new inscription confirms the correctness of the date assigned to Buddha's death by Buddhist writers. It would have been better if Major General Cunningham had carefully examined the basis of his calculation before proclaiming to the world at large that the Buddhist accounts were untrustworthy.

### THE CABBALLAH.

By J. D. BUCK, M. D., F. T. S.

OF late, numerous articles in the *Theosophist* refer either directly or indirectly, to the anthropomorphic idea, which has long been held to be the Shibboleth, not only of orthodoxy, but of life or death to the souls of men. "The nations without God" are still the "heathen" to the Christian. The growth and development of the God-idea among the religionists of India, as amply shown by the recent utterances of so eminent a Sanskritist as Max Müller, touching, but one side of the question, will have but little weight with the orthodox Christian, who appeals to the Jewish and Christian scriptures, and is unable or unwilling to make distinction between the scriptures themselves, and traditional interpretation of the same. There are, however, even among Christians, those who hold that, "There is no religion higher than TRUTH," and to these actual knowledge will be more welcome than false traditions. The stronghold of anthropomorphism in its present form is the Jehovistic idea, drawn from the Pentateuch, but while of direct Jewish lineage, the child has received much from its modern mother, Humanity, herself the heir of modern civilisation.

"I, the Lord am a jealous God," &c., has been converted into "the fatherhood of God, and the brotherhood of man."

There is, moreover, a trinity of ideas, going to make up the anthropomorphic as now received, viz., the Jehovistic, Elohistie, and Messianic, and in the application of these measures, there is a great lack of unanimity among Christians, unless it can be found in this, that a large proportion of the individuals of Christian nations, are Messianic on Sunday, and everywhere in theory, but essentially Jehovistic in practice.

Almost every one now-a-days has heard the name "Cabballah." A very few have read far enough to learn as to what the name refers to, and not one even among the Rabbis themselves seems to know what it really is. Natural ability and human attainment have never been equal. There is, and has ever been, in all great religions, an *exoteric* for the ignorant masses, "anxious about many things," and an "esoteric" for the few who have "chosen the good part." The injunction "Cast not your pearls before swine," has been found in all these religions, as the swine would not be benefitted, and the pearl and its possessor would only be trampled in the mire. History has proved the wisdom of the injunction. Cabballah refers to this secret wisdom as underlying the

text of the Jewish scriptures, and supposed to belong at the same time to the Jewish hierarchy. Hebrew records are full of hints that this secret wisdom existed. Traditions were gathered and compiled, commentaries were written upon traditions, and commentaries upon commentaries, everywhere the secret wisdom was hinted at, till in modern times even among Rabbis this tradition became a myth, and Judaism little more than a close corporation for commercial speculations and mutual protection, a body from which the soul had departed, ritualism representing the lost religion. All efforts at revival, or at rebuilding the old Jerusalem, have failed, and why?—simply because the inner temple has been desecrated and the "race of the prophets" is no more.

It might be interesting to many of your readers to point out the general character of the hints found abundantly among Rabbinical and other sources, which like finger-posts indicate the outer form of Cabballah, but which nowhere give the KEY, and which show conclusively, in nearly every instance at least, that the writer did not possess it, but further pursuit of the subject not only time and space forbid, but there are others more competent to the task than I am. I shall content myself with simply calling attention to the work of abler hands. Briefly, then, let us compare the Hebrew scriptures, and especially the "books of Moses" to a series of wheels, "wheels within wheels." Of these the simple Hebrew text with its literal interpretation, is the outer or exoteric. This text was read in the synagogues, as to-day by Christians, and occasionally portions of the next inner wheel were allowed to glimmer through, as now-a-days by Swedenborg's interpretations, law of correspondences, &c. These glimmerings-through have generally been but vague mysticisms, more or less apprehensible to the spiritually minded, but evanescent. Tradition teaches that these inner truths were unfolded to the neophytes in the rabbinical schools, according to their apprehension, and to a few a *final initiation* into deeper mysteries was vouchsafed. Now it is a mark of the signs of the times that a key has been found fitting the lock of the outer wheel, and which by exact relations to the outer text, gives the "signs and measures" of the next inner wheel. The outer covering being shown to be rather a mask of the inner, the inner being "embodied" or clothed-upon, hence concealed. And all this not by speculation and mystification, but by *exact mathematical demonstration* every step proving itself. This key has a three-fold root of interpretation. First, it gives the real meaning of the text of the Hebrew Bible, as it was in the mind of those who first indited it; second, it gives the original concept, plan and purpose of such ancient monuments as the Pyramids, and the remains of the "Mound-Builders" found here in America; and thirdly, connects these by an "eternal fitness of things" with measures, motions, times, and spaces of the heavenly bodies, through inherent relations, by a primary postulate, or unit of measure, and law of relation. This discovery is so simple as to be called a key, but the mysteries which it unfolds and explains are startling and overwhelming. This key is a new value of  $\pi$  in which an apparently insignificant correction of the received or Legendra value is made, the value of the ancient Egyptian cubit restored, and found to be a multiple of the English inch as are also all the other measures as determined. The commonly received value of  $\pi$  while as a "working hypothesis" may be well enough, is false in fact, and false in philosophy, and its warrant is "authority" but not truth. However all this must rest on its merits—"figures will not lie" if allowed to tell their own story. One more point, and I have done. It is well known that in Hebrew there are no numerals as such, but each of the twenty-two letters of the alphabet have a numerical value, and are hence to be used and read, either as letters of a word, or numbers according to intent. A page of Hebrew text, therefore, while to one person reading in plain words, would appear

to another like a page of logarithms, and while this fact is well known to Hebrew scholars, it has however remained a dead letter. A very learned Rabbi recently told me (one who has the courage of his convictions) that since this fact had been pointed out to him, and the key to its value and interpretation furnished him, the scriptures had become a new revelation.

To return now to our starting point, viz., anthropomorphism, the Jehovistic idea, &c., it will be found that when such words as Jehovah, Elohim, Adam, Abraham, &c. &c. are read by their numerals—not hap-hazard—but by the true key, according to which they were first set forth, that in this old text resides a knowledge so vast, a science so profound, mathematics so exact, and a revelation so wonderful, as to startle the reader, and enable him to see therein a Divine revelation which though obscured, and lost through superstition and worldliness, has not been permitted to be destroyed, and the origin and intent of the word Jehovah, will receive a new interpretation. The God-idea will no longer rest for honest and intelligent Christians, barely on the authority of a text so long misinterpreted, but will be found related to the evolution of the God-idea in all time, and all religions. It will be observed that but two of the “wheels” have been herein referred to. That still deeper meanings lie concealed in this much-abused, and much-misused old book is by no means unlikely; and that these inner mysteries may be revealed, as the ground now reclaimed is more and more comprehended, who shall deny? Surely the conscientious and intelligent study into the foundations of ancient religions, is bringing forth a rich harvest.

“Ever the Truth comes uppermost,  
“Ever is Justice done.”

The author of the work above referred to is J. Ralston Skinner of Cincinnati O., a man of profound learning, (one of the first of mathematicians) and of profound loyalty to truth. Hitherto he has published, aside from some pamphlets, but one volume, viz., a “System of Measures” as related to the Pyramids, which work can be had by those interested of Robt. Clarke & Co. of Cincinnati. Mathematicians ought to be among the first to examine these works, but those who are satisfied with present methods, will be the first to scout and sneer and the last to examine, and the same might be said of both Christians and Jewish Rabbis. There are certainly among the many readers of the *Theosophist* those who will thank me for pointing out, though so very imperfectly, the value of Mr. Skinner’s discovery, and who will eventually benefit themselves by aiding in the publication of these rare and valuable works, or in creating a demand that they shall see the light.

### LUMINOSITY OF THE MAGNETIC FIELD.

Communicated by EUSTACE J. LOPEZ, F. T. S., Assoc. Soc. Tel. Engrs. and Electricians, Sub-Assistant, Superintendent Indian Government Telegraphs.

Note on the Alleged Luminosity of the Magnetic Field. By W. F. BARRETT, Professor of Experimental Physics in the Royal College of Science, Dublin.\*

It is well known that the late Baron von Reichenbach claimed to have discovered a peculiar luminous emanation arising from the poles of a magnet, resembling a faint electric discharge in rarefied air. This peculiar luminosity was only to be seen in a perfectly darkened room, and even then was only visible to certain persons. Since the publication of Reichenbach’s elaborate investigations on this subject.

\* Communicated by the Author to the *London, Edinburgh and Dublin Philosophical Magazine and Journal of Science*, (being a continuation of Tilloch’s ‘Philosophical Magazine,’ Nicholson’s ‘Journal’ and Thomson’s ‘Annals of Philosophy’) conducted by Sir Robert Kane, L. L. D., F. R. S., M. R. I. A., F. C. S., Sir William Thomson, Knt., L. L. D., F. R. S., &c.

AND

William Frances, Ph. D. F. L. S., F. R. A. S., F. C. S., 5th Series—Vol. 15—No. 94, April 1883.

numerous attempts have been made by competent observers to see this luminous smoke; but these attempts have generally resulted in failure;\* and amid the few cases of success that are recorded (such as by the late Professor Gregory and by Dr. Ashburner) I can find no evidence that proper precautions were taken to avoid the effects of imagination, of deception, or of chance. It is not surprising therefore that the discovery claimed by Reichenbach has been very generally discredited among scientific men in all countries. It has, however, always seemed to me very difficult to explain away the abundant, and in some cases weighty, testimony which Reichenbach adduces—such as the evidence of Professor Endlicher, and others in high social position, who in their normal healthy condition describe these appearances in minute detail, the luminosity they assert springing into existence whenever the magnet was excited, as if a phosphorescent cloud had suddenly been created over the magnetic poles.

Affirmative statements of this kind, however foreign to our present knowledge, are surely worthy of respectful inquiry; and though my own attempts to see the glare have been entirely unsuccessful, I prefer to think some of the necessary conditions of the experiment—such as extreme sensitiveness of the retina—have been absent in my case, rather than conclude from my want of success that the phenomenon has no existence.

Considerations such as these led the recently formed Society for Psychical Research to appoint a Committee to repeat Reichenbach’s experiments with the object of testing their accuracy, when a wide range of individuals were examined. As a member of that committee I have lately been present at a course of experiments, where a remarkable verification was afforded of the fact that, to certain eyes, a faint luminosity accompanies the creation of a powerful magnetic field. The evidence, so far as it goes, seems to me so absolutely unexceptionable that I venture to ask you to place on record a brief statement of the facts so far obtained. The positive evidence afforded by the experiments now to be described cannot be annulled by the fact that on subsequent occasions the trials were, as I am informed, less successful. It is, I think, not unreasonable to conclude that conditions, not yet understood, were sometimes favourable, sometimes the reverse.

The experiments were made in the rooms of the Society, No. 14 Dean’s Yard, Westminster; one of these rooms was so arranged that it could at pleasure be made into a perfectly dark chamber, no glimmer of light being perceived even after an hour’s immersion in the darkness. A powerful electro-magnet was mounted on a heavy wooden stand, and stood by itself in the centre of the room; wires led from the magnet to a commutator in another room, and thence to a large Smee’s battery outside. Three observers (Mr. Walter H. Coffin, the Honorary Secretary of this Committee, Mr. Edmund Gurney, and Mr. E. R. Pease) were in charge of the commutator, making and breaking the current at their own pleasure and noting down the exclamations, made by the observers in the adjoining darkened room, the voice being easily heard through the intervening curtains. In the dark chamber were Mr. F. W. H. Myers, Dr. A. T. Myers, Mr. H. N. Ridley, and myself, and in addition, on a subsequent occasion, Mr. W. R. Browne, together with two persons who on a preliminary trial a day or two before, had declared they saw a luminous glare over the poles of a permanent steel magnet. These were Mr. G. A. Smith and a boy, Fred. Wells, who is an assistant in a baker’s shop; both of them were entire strangers to these experiments up to the time of our preliminary trials, and disclaimed any knowledge of Reichenbach’s work. In the first instance they were not told what to look for, but merely to note if they perceived anything amid the darkness, and if so, what and where.

For some time after entering the dark chamber nothing was seen, though during this time the electro-magnet was frequently excited. After about half an hour had elapsed, Wells and subsequently Mr. Smith declared they saw a faintly visible smoke in the room; being asked where, each in turn led me directly up to the magnetic poles as the seat of the luminosity. One pole (the north-seeking pole) they said was brighter than the other. The luminosity was described as like two waving cones of light, with the apex of each cone on the magnetic poles; the breath was able to deflect but not to

\* See, for example, Dr. W. H. Stone’s very careful and excellent experiments described in the *St. Thomas’ Hospital Reports* (1860), vol. x., p. 100.

extinguish the glow.\* It was not intercepted, they said, by a black velvet cloth nor by a deal board laid flat over the poles, but they declared it was at once obscured when these bodies were held between the eyes of the observers and the magnet—the absolute darkness being of course preserved continuously. When the current was cut off, both the observers simultaneously exclaimed that the light had disappeared.

The current was now at irregular intervals made and broken, by means of the commutator in the next room, and the exclamations of the observers in the dark chamber noted down by those who had charge of the commutator. The commutator worked noiselessly; and no indication whatever was given of the movement when the current was to be put on or taken off. During the experiments Mr. Smith stood near the magnet, touching one of us, and remote from the curtains which separated the dark from the lighter room beyond.

After a few preliminary trials to test the arrangements, a consecutive series of observations extending over an hour was then made by Mr. Smith. From time to time during this period the observers in the next room silently and unexpectedly closed or interrupted the current, the intervals being purposely varied from a few seconds to several minutes. In this way fourteen consecutive trials were made; and in every case except one the exclamations made by Mr. Smith, such as "Now I see it," "Now its gone," were absolutely simultaneous with the movement of the commutator—according to the unanimous report of the witnesses in the adjoining room. In the one exception referred to, a delay of five seconds occurred between the breaking of the current and the exclamation: this, however, may easily have been due to a momentary relaxation of attention on the part of Mr. Smith. The strain on the attention was indeed so severe, that after the fourteenth observation Mr. Smith complained of considerable pain in his eyes and head and was obviously much exhausted. During a succeeding half hour two or three further experiments were made; but the results were uncertain, and may, I think, be fairly excluded. It may be noted that Mr. Smith and Wells did not at any time appear to have unusual powers of vision for the objects in the darkened room.

It is obvious that a series of accidental coincidences between the act of closing or opening of the circuit and the exclamation of the observer cannot explain the facts here noted. As there are 3,600 seconds in an hour, to hit off any one right moment by pure chance would be very improbable; but the chances against success increase in geometric progression when 14 right moments are successively hit off. The probabilities against mere coincidence as an explanation are therefore many millions to one.

More important was the possibility of indications being afforded by the act of magnetization and demagnetization, which might give notice to the observer and suggest to the imagination the conversion of an illusion into a fancied reality.

Of these indications the so-called "magnetic tick" at once suggested itself. Knowing precisely what to listen for, and therefore more keenly alive to the sound than Mr. Smith, who presumably knew nothing of this molecular crepitation, I failed to detect the faintest sound on the "making" of the circuit; and a barely audible tick on "breaking" contact was heard only when my ear was in close contact with the magnet or its support. This was due to the massive character of the magnet and stand, which also prevented any other discernible movement when the magnet was excited. Further I satisfied myself that, at the distance at which Mr. Smith stood from the magnet, it was impossible to discover when the circuit was completed or interrupted by the attraction of any magnetic substance about one's body; as a precaution, however, Mr. Smith emptied his pockets beforehand. At the same time it is quite possible a skilful operator, bent upon deceiving us, might be able to detect the moment of magnetization and demagnetization by feeling the movement of a concealed compass-needle. Against this hypothesis must be placed the fact that no information was given to Mr. Smith beforehand of the nature of the experiment; and he had no object to serve by professing to see what he really did not see. Ultimately all scientific observation rests upon

\* So far as I could judge, the appearance must have resembled the long ascending stream of faintly lambent aqueous vapour which is to be seen far above the flame of pure hydrogen, when viewed in a well-darkened room. I have referred to this luminosity in my paper on "Some Physical Effects produced by a Hydrogen flame," Phil. Mag., November 1865.

the good faith of the observers; and there was nothing to arouse the smallest suspicion of the good faith of the observer in the present instance.

Similar experiments were made on another evening with the boy Wells, with fairly satisfactory results. In the case of Wells the luminosity, from his description, must have appeared to be brighter and larger; and on the interruption of the circuit it was not instantly extinguished, but rapidly died away; \* his frequent exclamation on breaking the current was "Oh, you are spoiling it."

Wells was also tried in the dark chamber with two permanent horseshoe magnets, and saw the luminosity clearly on both. Unknown to Wells, I silently changed the position of the two magnets; he at once detected where they were placed. Holding one of the magnets in my hand, Wells told me correctly whether I moved the magnet up or down or held it stationary; this was repeatedly tried with success. In this case the poles of the horseshoe were very close together, so that there was a small intense magnetic field; from the juxtaposition of the poles no effect could be produced on a small compass-needle at one-tenth of the distance at which I ascertained Wells actually stood—supposing, which is highly improbable, that the lad had the intention to deceive and knew how to attempt it.

Numerous questions of interest suggest themselves, such as the photographic and prismatic examination of the luminosity and whether the light is polarized or capable of being polarized, or whether the refraction and removal of the air around the poles affects the luminosity. The answer to these and cognate questions, together with the examination of some remarkable collateral phenomena that presented themselves—such as the variation of the intensity of the light when viewed in different azimuths, or along or across the magnetic axis, and the effect of certain bodies on the light—will become the subject of investigation by the Committee whenever the testimony to the simple fact itself has been sufficiently well established by various observers. The object of the present note is merely to demonstrate that there is a strong *prima facie* case in favour of the existence of some peculiar and unexplained luminosity, resembling phosphorescence, excited in the region of the atmosphere immediately around the magnetic poles, and which can only be seen by certain individuals.

#### THE ST. JAMES' GAZETTE AND "ESOTERIC BUDDHISM."

"LEARNING is light, ignorance is darkness," says a proverb. It is good to be learned, when one's knowledge rests on facts; it is wise to remain modest when our speculations go no farther than hazy hypotheses. It is pretty well known, with regard to Buddhism, that it is the latter kind of superficial knowledge that the most learned of our Orientalists can claim—and no more. From Bishop Bigandet down to Childers, and from Weber to Rhys-Davids, in summing up the results of their knowledge, they have all confessed at one time or another that "despite all that has been written about it, Buddhism still contains many mysteries relating to its history and doctrines that require clearing up; and others of which we (Orientalists) know so far nothing." Nevertheless, each of them is ready to claim papal authority: he is the infallible interpreter of Buddhist dogmas—chiefly evolved through himself. This conceit has been amply shown now in the *Replies* to "An English F. T. S." in our columns. The recipe for making a great "authority" on Oriental religions, especially on Buddhism—the one least understood—is easy enough. Take a tolerably good writer. [He may be as ignorant as a carp as to the *true* facts, but must have a retentive memory and be acquainted with all the speculations that preceded his own upon the subject]. Let him spin out an extra hypothesis or two—of a nature giving precedence to, and interfering in no way with, other divinely revealed hypotheses and crazes in favour with public prejudice; make other Orientalists of less imaginative temperament taste and approve of it; shake well the mixture, bottle and label it:—THE LAST WORD OF SCIENCE UPON THE

\* There was considerable amount of residual magnetism in the electro-magnet.

SACRED RELIGIONS OF THE EAST. The authority is ready, and ignorant Mrs. Grundy

"Soft on whose lap, her laureate sons recline"—

will crown the new Pope, and force him upon the acceptance of the ignorant public. Truth and fact will be left out in the cold, to go a-begging from door to door. Indeed nepotism in science can be as remarkable as anywhere else, we see!

The above reflections were suggested to us by a satirical article in the *St. James' Gazette*, whose partiality for India and everything connected with it, is too well known to require mention. In its issue of August 24, it introduced to the cultured public a squib as a review of *Esoteric Buddhism*, and called "The Cosmogony of an Artificial Fifth Rounder." Whether an editorial playing flunkey to western Orientalism, or a contribution from the pen of an Orientalist, whose feathers were too much ruffled, it is an excellent illustration of what we have said. It is evidently the production of one who has either to defend his own pet hypotheses, or feels it his sacred duty to fight under the banner of recognized authorities "in conjectural sciences," as our Masters so happily call them. It is no review at all, but rather a meaningless, *ex-cathedra* chaff. Among the many gloating criticisms of *Esoteric Buddhism*, this "review" is the most coolly impertinent, the most charmingly conceited. Some of its remarks are simply delightful. "Most amusingly bumptious and conceited" in its tone itself, it applies these epithets with very questionable good taste to the author of a work, which it is unable to analyze or even to remotely comprehend. Therefore—we are told, that "the truth of the matter is the author knows nothing about Buddhism." That gentleman, however, having pleaded guilty to the charge in his work, from the first, and being—as far as the subject-matter goes—only an amanuensis, we have hopes of finding him surviving the terrible blow. "Simple, Mr. Sinnett," may yet laugh at no distant a day at his too wise reviewer, whose unblushing bumptiousness asserts itself most brilliantly in various ways. First, we are told, that "it would be a serious task to undertake to give in a few words (as it would, indeed) any sketch of this truly vast and complicated system which is not Buddhism, esoteric or exoteric." The sentence that we have italicised, finds a prominent place among the *ipse dixit* of the "Sir Oracles" of Oriental religions. Notwithstanding, the incessant confessions of the Orientalists that beyond the mere exoteric rites and dead letter of Buddhism, they know next to nothing about this system of religious philosophy, the reviewer has the impudent hardihood of rushing to the assertion of his equal familiarity with *esoteric* and *exoteric* Buddhism. Witty criticaster reminds us of that naive witness, a tailor, who claimed better acquaintance with the defendant's murdered father than his son, on the ground that the old coat and hat of the victim had been made and bought at his establishment. On this principle the Orientalists must surely know more of genuine Buddhism than the Buddhists themselves; and that is not very surprising, since it is they, indeed, who have themselves fabricated "Western" Buddhism or the "old coat and hat" which Buddhism wears in Europe. Asiatic scholars who know only of the Buddhist philosophy of Gautama Buddha fail to recognize it in the fanciful theories of Messrs. Weber, Rhys-Davids, Max Müller and others. But before the Orientalists are able to prove that the doctrines as taught in Mr. Sinnett's exposition are "not Buddhism, esoteric or exoteric," they will have to make away with the thousands of Brahmanical Adwaita and other Vedantin writings—the works of Sankaracharya in particular,—from which, it can be proved that precisely, the same doctrines are taught in those works, esoterically. This criticism is made the more ludicrously absurd by its allusions to the possibility of finding "in place of one Oriental sage (Mr. Sin-

nett's guru), two Occidental humourists." From this rather convenient, if otherwise absurd premise (cherished chiefly by the spiritualists), the reviewer draws his conclusions; he asserts most confidently, that he is "bound in charity to conclude that the *Adept guru knows no more than his ingenious disciple about Buddhism.*" (!) Otherwise he complacently adds—"the misuse of familiar terms—Arhat, Karma, Nirvana, and the like,—would deserve to be qualified by a word too severe to apply. . . ." &c.

We beg to make a remark. If "severe" and irrelevant in its application to the "candid if not overwise disciple" of the doubted "guru," no adjective would be found strong enough if used in reference to the flippant reviewer. The latter would, if permitted, not only deny any knowledge of the meaning of the commonest words in use in Buddhism to its most learned professors, but would drag down to his own material level the loftiest truths of that religion, simply because he is unable—or shall we say unwilling, for very good reasons—to comprehend the too profound tenets of this grandest of the world's religious philosophies. The loss is certainly his—not ours.

So much for the "tall talk" of the *St. James' Gazette* reviewer. We are hardly surprised to find it receiving a ready hospitality in the columns of our friendly contemporary of *Light*. And it is only as it should be when we see "M. A. Oxon," greeting it with open arms. Among other things he says that—

"It is almost pardonable to guess that Mr. Rhys-Davids himself has relieved his overcharged feelings in that review by warning Mr. Sinnett of his own private reserves of Buddhism."

Being such a remarkable medium, "M. A., Oxon," ought to know instead of merely "guessing." In his case we might have, perhaps, been justified in replacing the modest word—"guess" by a more proper one, and called it a *fact*, a revelation, on a par with those in his "Spirit Teachings," but for a certain scruple. We do not think it fair to hang the reputation of an Orientalist—however mistaken in some of his views—on the inspired utterances of any medium. We hesitate to attribute such a spiteful and profitless criticism to the pen of the famous Pali scholar. We love to think that amid his arduous, and not always profitless, labours, Mr. Rhys-Davids would hardly lose his time and reputation to ventilate his feelings in anonymous editorials, especially when these sentiments are of a character that he would most likely refrain from expressing over his own signature. But if "M. A., Oxon," is after all right, then we welcome the threat held out by him on behalf of Mr. Rhys-Davids, of bringing forward "his own private reserves of Buddhism." That accomplished Pali scholar has studied his Southern Buddhism in Ceylon, we believe, under the same masters of Buddhist religion, who have sanctioned Colonel Olcott's *Buddhist Catechism*. That the "Buddhism" of Mr. Rhys-Davids, is *in spirit* quite at variance with the teachings of the *Catechism* is evident. Let the Buddhists "choose this day whom they will serve," whether the esoteric or the exoteric doctrine, the tenets of the Southern, Siamese, or of the Southern Anarapura sect, as explained and amplified by the *esoteric* tenets of the Arhats which are *utterly unknown to the Buddhist Orientalists*. The fact alone, that Mr. Rhys-Davids, in his *Buddhism*, defines "Avalokiteswara" (p. 203) as "the Lord who looks down from on high," is sufficient to show to any student of Eastern languages, not to speak of occultism, how deplorably ignorant of the metaphysical meaning of words and names may be the greatest of Pali scholars in the West. Would Mr. Rhys-Davids resent the respectful contradiction were he told that his definition is entirely and diametrically opposed to the real meaning of the term? That Avalokiteswara, is so far from being "the Lord who looks down," is actually "the object of perception" himself. Grammatically the word means either the "lord who is seen" or the "state in which the lord is seen." Esoterically "Avalo-

kiteswara" is "the Lord," or our seventh divine principle, the Logos, perceived or sensed during the hours of extatic trance by the sixth principle or our spiritual soul. Verily, the greatest, the profoundest mystery is contained in the sacred name—a mystery which it is given to know but to the faithful followers of the All-merciful Master, or to those of Sri Sankaracharya, never to the positivists of the exoteric southern school of Buddhism. We are ready, and shall wait impatiently, for the coming "reserves of Buddhism."

Meanwhile, we may be permitted to give "M. A., Oxon," a word or two of friendly advice. He, who presents the world with the "Spirit Teachings,"—a revelation written through his medium by an alleged disembodied "spirit"—and who resents so bitterly any doubt as to the identity of "Imperator," ought to be more careful than any other as to how he throws doubt and sarcastic slur upon the *living* teachers of other people. To the world at large, and the average sceptic, "it is better to be a living dog than a dead lion," "a living slave than a dead master." Unless the body of the master is shown, the profane will always doubt rather the existence of the dead master than that of the living slave. He who has to tax so heavily the credulity of all but the spiritualists, ought, in charity to himself, to abstain from joining those who seek to throw a doubt upon the existence and knowledge of an Occultist, who, avoiding the world, has reluctantly consented to impart a few of the doctrines he and his fraternity believe in, and who, instead of forcing them upon, would rather withhold those sacred tenets from an indifferent public.

Therefore, when we are chaffingly told that the writer in the *St. James' Gazette* "shares an opinion widely held that-Koot Humi's existence and identity are not sufficiently proven to lift him out of the region of myth into that of sober fact," we would enquire of "M. A., Oxon," what would be the same writer's opinion, of "Imperator?" Has he reviewed the "Spirit Teachings?" We think not,—luckily for "M. A., Oxon." Had he done so, and found himself forced to choose between an alleged *living*, and an alleged *defunct*, master—a man and a Spirit—we fear even the sarcastic reviewer of the *St. James' Gazette* would have to confess, that, however insufficiently proven "Koot-Humi's existence and identity," yet he belongs far more to the "regions of sober fact" than a "returning Spirit." The *Gazette* with all its staff of Sadducees led on by the "reviewer," would not hesitate for one moment to dismiss "Imperator" to the limbo of myth and superstition, and with a far more hideous grin of scepticism on their faces. Living, as he does, in such a fragile glass house himself, our friend "M. A., Oxon," might have been expected to show a little more prudence, if not actually of charity, than he generally does with regard to us, and abstain from trying to break the windows of the Theosophical abodes. It is rather startling to find him siding with sceptics and bigotted Christians and quoting with such evident relish the sarcasms of both. It is quite possible that the uninitiated reader should discover (to his own satisfaction only) "that the Devachan of Koot-Humi no more resembles the Buddhist Devachan or Paradise than do the "periods of suspended animation.... the ideal nirvana of Buddhists." But, unless they are incurable fanatics and ignoramuses, they will be as prompt to find out that Christian paradise and purgatory—if there be any, on the orthodox models—no more resemble the conceptions of Christ upon those subjects, even in his parables, than the meritorious preachings of the members of Temperance Societies are one in spirit with Bible teachings. The miracle of the changing of water into wine; Noah's little solitary picnic on Mount Ararat, and the distinct affirmation of the talkative vine (*Judges ix. 13*), that her "wine cheereth God and man"—are as opposed to temperance, as the armless cherubs playing upon the golden harps of orthodoxy clash with the "many mansions in my Father's house," and the "Summer land" of the Spiritualists,

whose notions are as much, if not more, laughed at as the teachings of *Esoteric Buddhism*. Yet, between the respective and so diametrically opposed views of Mr. Lillie's "Buddha and Early Buddhism," and Mr. Rhys-Davids' *Buddhism* "M. A., Oxon," shows no preference. Both are good as weapons against the Theosophists. He made a lengthy and a loving review of the former work (which, by the bye, contains as many mistranslations and errors in it, as it has pages) and accepted it as an authoritative document to break our heads with. Its views corroborated those of the Spiritualists by showing *belief in spirits* and a personal God at "the very root of Buddhism" (!?) hence, Mr. Lillie is accepted as an authority. Mr. Rhys-Davids' *Buddhism*, laughing at such God and spirits, and shewing Buddha as an uncompromising positivist and materialist, cannot be of any service to spiritualism, but may be used against *esoteric* Buddhists; and forthwith we find the name of the Pali scholar, with quotations from his supposed effusions in the *St. James' Gazette*, gracing the columns of *Light*.

It is precisely to this policy of inimical partisanship, losing no opportunity to insult its opponents, that we express our objection. Very few of the Theosophists are spiritualists, most are against vulgar spiritualism, more still, decidedly *anti-spiritualistic* in their views. Nevertheless, none of the latter have been so indelicate, and if we may say so, brutal, as to use the columns of their magazine to try to prove *quand même* that the teachings of "Imperator" are due to the brain of his alleged medium; or that he has no independent existence from "M. A., Oxon." Moreover, we would remind that gentleman that, while the author behind the veil of "Spirit Teachings" is known *personally* but to one man on earth, namely, his amanuensis, "M. A., Oxon," Mahatma Koot-Hoomi is *personally* known to many. He is a *living* not a *dead* man. Yet, however doubted and even laughed at by more than one sceptic we know of, the veracity and good faith of "M. A., Oxon," would never be allowed by the editors of the *Theosophist* to be publicly (or even privately, for the matter of that) discussed, and he himself traduced in the pages of this journal. "Do as you would be done by" is not, we see, the motto of the Spiritualists. So much the worse for them. In this light they commend themselves still less to the consideration of the Theosophists.

#### CHRONOLOGY OF THE CURRENT BENGALI EPHIMERIS.

By DHARNIDHAR SARMA KAUTUMHI, F. T. S.

THE present Kalpa is known as the *Sveta varaha* (white boar) Kalpa. Its duration is 4,320,000,000 years, of which 1,929,481,764 years have elapsed. Since the birth of Earth 19,558,884 years have rolled over it.\* This Kalpa has already witnessed several *Manvantaras*, the current one being known as that of Valvasvata. 27 great *Yugas* have passed and three minor *Yugas* of the 28th, namely, *Satya*, *Treta* and *Dvapara*, have already been completed. The present minor *Yuga* is known as Kali.

The *Satya Yuga* commenced on a Sunday, the 3rd day on the lightside of the moon in the month of Vaisakha (April-May). There were four avatars in this *Yuga*, namely, Fish, Tortoise, Boar and Nrisinha (half man half lion).† Now virtue prevailed everywhere and no sin existed. Kurukshetra was the only sacred place. Brahmans were portions of stars (astral), *prana* inhered in

\* More correctly, perhaps, since the commencement of the present round.

† Cf. the four geological ages—

1. The age of Fishes.
2. The age of Reptiles (which Tortoise typifies.)
3. The age of Mammalia, during which strange animals of the boar species predominated, in India specially (See Blandford and Medlicott's *Geological Survey of India*, Vol. I.)
4. The age of Man, who at the beginning had many points of contact with the lower kingdom.

the marrow, death subject to will, the human form measured 21 cubits, natural term of life extended to a lac of years, and men ate out of golden dishes.

The *Treta*, which began on a Monday, the 9th day of the light side of the moon in the month of Kártika (October-November) saw three avatars, *viz.*, Váhamana, Parasurama and Rama. In this *Yuga* there were three parts of virtue and one of sin. Pushkara was the sacred place. Brahmans used to preserve the sacred fire, *prána* dwelt in the bones, and human form measured 14 cubits, natural term of life extended to ten thousand years, and domestic utensils were made of silver.

The *Dvápára*-*Yuga* set in on a Thursday, the 13th day of the dark side of the moon in the month of Bhadrá (August-September). Krishna and Buddha\* were the avatars; virtue and vice prevailed in equal proportion; Naimisáranya was the sacred place, *prána* permeated the blood, human form measured 7 cubits, natural term of life extended to a thousand years, and copper utensils were in use.†

The present *Yuga*—Kali—dates from a Friday, the day of the full moon in the month of Mágha (January-February.) There will be one avatar named Kalki. In this *Yuga* there are three parts of sin and one of virtue, sanctity attaches only to the Ganges, Brahmans are without fire,‡ *prána* depends on food, the human form measures only three cubits and a half, natural term of life has dwindled down to 120 years, no fixed material for domestic utensils. This *Yuga* has already lasted for 4,984 years and 427,016 years yet remain to run. The twilight and dawn|| will extend to 720,000 years.

(Continued from the May Number of the Theosophist.)

### MEDICAL MAGNETISM AND THE HEALER MAGNETIC.

BY SEETA NATH GHOSE.

AFTER the publication of these explanations in the *Tattva-bodhini Patrika*, I became very anxious to know positively whether they were mere conjectures of mine or capable of undergoing the ordeal of actual scientific experiments. From that time forward I always thought that if the explanations given and published were found experimentally true, an instrument made with a mechanism capable of magnetising the whole human body artificially, might be quite competent to create as well as cure diseases of almost every description. Afterwards, when in course of time I came in possession of galvanic instruments for practising the European system of electric treatment, I found it convenient to construct of insulated wire a coil after the fashion of a native turban. This coil or electric turban had the ends of the insulated wire composing it projected out for connection with the two poles of a galvanic-battery.

The magnetising power of this coil was, as I tested, very limited. It was first experimented upon Babu Bani Kanta Mozoomdar, an assistant of mine who is now working with me. The coil was loosely placed on his head, around his eyes, and ears, and the ends of the insulated wire projected out were connected with the poles of a

galvanic-battery in such a manner that north polarity was induced in his head and south polarity in his feet. The subject, Babu Bani Kanta, had an amount of heaviness in his head and ears with partial deafness from his infancy, and was under my treatment for that complaint. After half an hour's application of the coil he, on being questioned, said that he felt a sensible diminution of the heaviness, and that the deficiency of his hearing was much removed, I immediately changed the poles of the battery and connected them with the ends of the insulated wire in such a manner that the head received southern polarity and the feet northern polarity. After another half an hour's stay he, without being asked, said that his head and ears were again becoming heavy and in consequence he felt uneasy. Without disclosing to him the mystery of the affair, I again changed the poles and made the connections in the manner they had been made at first. About half an hour after this, I, on enquiry, was told that he was again feeling better. After the lapse of an hour he said he felt all right. This experiment serving to prove clearly the truth of the Slokas cited before, elated me so much that I knew not how to express my feelings. I was then in that state of mind which led Archimides to run naked through the street, exclaiming "Eureka! Eureka! Eureka!" and thanked God for having disclosed such a grand thing to the mind of one like myself.

From the next day I began to use that turban in various complaints of other patients. But unfortunately the diameter of the turban being much less than that of my head, I could not use it to experience its effects on myself. However, those upon whom I tried it invariably experienced relief of their complaints. In some cases permanent cures were effected by it.

While I was engaged in experimenting upon the effects of the turban in question, one day I happened to come home from the Narail sub-division in a boat in company with a cousin of mine named Babu Hridaynath Ghose. A piece of horse-shoe magnet was with us. Having no business in hand in the boat, I showed him the powers of attraction and repulsion exercised by the magnet on nails, keys, needles and other articles of iron, found in the boat; while we were thus amusing ourselves with the magnet, he said that he had got a sharp headache, giving him hopes of instantaneous relief I applied one of the poles of the horse-shoe magnet to the top of his head, and asked him to perceive the effects. After two minutes' application he said that the headache became worse than before. I immediately changed the pole of the magnet and put the other one on the vertex of his head. After about five minutes' application he said that he felt much better. I therefore continued the application, and in about ten minutes I succeeded in removing his headache perfectly. As the poles of the magnet were not marked, I could not ascertain which pole aggravated the disease and which cured it. However, on reaching home I determined by means of a magnetic needle suspended freely, that the pole which aggravated the disease was the north pole and that which cured it was the south pole of the magnet. This fact having corroborated the validity of the experiment made by the turban, convinced me of the truth of the theory enunciated at the beginning, and in consequence gave me enhanced pleasure.

After this, the question that rose in my mind was what are the two poles of the human body, considered as a magnet: my first conclusion was that if the head be a pole, the two feet considered as one, result be the other pole but the relation which the hands bear to the head considered as a pole, was not determined easily. I was much perplexed from the following considerations. If the hands be raised up, the palms are seen to assume a polarity opposite to that of the feet. While, if the hands be hung down parallel to the trunk, the palm

\* This is clearly a mistake. According to all Hindu authorities Buddha was not born in *Dvápára* *Yuga*. Krishna, is universally admitted to have lived before Buddha, and Krishna, the Mahabharata says, lived during a portion of Kali-*Yuga*. In the Puranas, *e. g.*, Skanda and Bhagvata, Buddha is distinctly stated to have been born in Kali-*Yuga*.

† With reference, I suppose, to the order in which the metals were discovered and brought into use.

‡ *i. e.*, without developed astral bodies.

|| As explained in the Fragments.

assume a polarity opposite to that of the head, instead of that of the feet. Under these circumstances I could not easily determine the polarity of the palms of the hands when the head or the feet were magnetised by the north or the south pole of a magnet. Some circumstances led me to suppose that the polarity of one palm may be opposed to that of the other instead of being the same.

However these questions I settled by the following experiments.

One day, I placed the two north poles of two horse-shoe magnets under my feet, and within an hour perceived a tangible improvement of appetite, an irresistible tendency to sleep, and a diminution of that peculiar sort of uneasiness which is constantly present in my head. On another day I caught hold of the two north pole of the same pair of horse-shoe magnets with my hands; and within less than half an hour I perceived the very same effects. These two experiments led me to conclude that the palm of the hands are of the same polarity with the feet. Again, on another occasion I caught hold of the north pole of a horse-shoe magnet with the left hand, and the south pole of another horse-shoe magnet with the right hand. The effects I perceived were very striking. Before an hour elapsed I felt a constant sharp aching in my right temple and my right eye became congested somewhat painful and constricted in appearance. The left temple and left eye remained as sound as they had been before catching the magnet. Afterwards I caught hold of the two north poles of the same magnets with both the hands, and within a very short time, there remained not the least trace of uneasiness in my right temple or affection of the right eye. In other words, every part of my head and eyes became all right. This experiment clearly proved that instead of the polarity of one palm being opposed to that of the other, the polarities of both the palms are the same. Now, by the results of the foregoing experiments, the poles of the human body considered as a magnet, were determined as follows:—The head is the north pole and the feet and the palms are the four branches of the south poles.

After determining the natural poles of the body, I began to treat various disorders by applying horse-shoe and bar magnets to the soles of the feet, the palms of the hands, and the heads of the patients. There has scarcely been a medical case in my practice but has derived some benefit from such applications when persisted for sufficient length of time. A good number of cases of Fever, Dyspepsia, Diarrhoea, Habitual Costiveness, Catarrh, Bronchitis, Head-ache, Neuralgic pains, Ascitis, and many other affections have been treated successfully by applying the north poles of magnets to the feet and palms, and the south poles to the head. Some surgical cases have also improved, though indirectly and imperfectly.

I applied the magnets not only to cure diseases, but in some instances and as a scientific experiment to create them in apparently healthy persons, the diseases which had a latent tendency to break out were very easily developed by such applications of magnets on their heads, palms or feet as tend to upset the natural magnetic polarity of the body. Those diseases were again cured by such applications of magnets on their heads, palms or feet as have a tendency to restore the natural magnetic polarity. I must here admit that in some cases I had to encounter some sad failures both in curing and creating diseases by the applications of magnets, but I attributed them all to the want of sufficient power in the magnets in my possession or of practical experience in myself. However, being sufficiently emboldened by the results of the experiments about a year, I determined to magnetise the human body in a better and easier way by means of a large coil of insulated wire of considerable length put into activity by a suitable galvanic battery. In the middle

of 1880, when I opened the Electro-Medical Treatment Rooms at 54, Machua Bazar Street, Calcutta, I got from London 6,000 feet of insulated copper wire, and in October of that year, I, with the help of my assistants, constructed with that wire the large coil which is now in daily use. This coil has been fondly termed the "Magnetic Healer."

This instrument has been built upon an oblong wooden frame; hollow within like a square spool. Around this wooden frame the insulated copper wire, which is 9/16 of an inch in diameter and about 600 feet in length, has been carefully wound from one end of the frame to the other in four layers, one superposed above the other.\* The two ends of that wire have been connected with two brass-screws fixed to one end of the frame.

The inside of the frame has been lined with *pâti* (a kind of Indian mat), and the outside has been covered with gunny cloth, oil cloth and varnished leather. The instrument is 24 inches in length and 10 and 14 inches in its two diameters.† When the two brass screws are connected with the two poles of a galvanic battery, the instrument acquires a great magnetising power.

For the convenience of application, I place the instrument in such a position that its screw-end may look towards the south pole and the other end towards north pole of the earth. Now viewing it from any place south of the screw-end, I mark the screw lying on the left side with the letter (A), and that lying on the right side with the letter (C); the insulated wire in its course round the wooden frame runs from the screw (A) towards the screw (C) in such a manner that the screw-end of the instrument lies always on the righthand side of the current. Now, if the *anode* pole of a galvanic battery be connected with the screw (A) and the *cathode* pole with the screw (C), the instrument will magnetise the man lying down within it with his head placed towards the screw-end, in such a manner that his head would be rendered the north pole and feet the south pole. Again, if the positions of the two poles of the battery be exchanged with each other, that is, if the *anode* be connected with the screw (C) and *cathode* with the screw (A), the man who lies down within the instrument with his head placed towards the screw-end shall be magnetised in such a manner that his head would be rendered the south pole and feet the north pole.

(To be continued.)

\* Our contributor was anticipated by at least twenty years by Dr. John Ashburner, the celebrated London mesmeric practitioner. In his translated Edition (London 1857) of Baron Von Reichenbach's grand work on Odic Force (p. 13, Foot-note), he describes an "apparatus thirty-three inches high, made of iron wire a quarter of an inch in diameter, coiled fifty-six times in a circumference of eight feet." A fuller description of which appeared in the *Zoist*, vol. iv, p. 137. "This coil was of an oval form, so constructed in order to enable me to place it with ease over any individual seated in an arm chair. By means of one, two, three, or four of Smee's elements, each ten inches by five, a more or less powerful current was established, enabling me to use a magnetic force adapted to different susceptibilities." Dr. Ashburner effected some notable cures with his apparatus, one that of an ununited fracture of the right leg, which had kept the patient, "a nervous, highly sensitive, and strumous young man of 17," lame for about twelve years. Six months' daily treatment with the coil caused the bones to reunite. Dr. Ashburner also passed electrical currents through baths, and ascertained that when the currents were passed from the head towards the feet, the bath was tonic and exhilarating; but being induced on one occasion, when he was himself in the bath, to try the current in the inverse direction, he had a most intense headache. The electric and magneto-electric, bath are now in world-wide use; and the only special feature in Seeta Nath Babu's researches is that he reconciles this supposed modern discovery of electrical therapeutics with the Aryan Shastras. His conclusions with respect to the proper direction in which sensitives should lie to sleep are opposed to those of the leading Western authorities. If he is right, they are wrong. And *vice versa*.—Ed.

† As a larger instrument answers the purpose better, the second instrument which has been constructed here on the same principle measures 4 feet in length and 21 and 41 inches in its two diameters. About 10,000 feet of insulated copper wire of 1/16 of an inch in diameter has been wound round it in 4 layers.

## AN AVATAR OF CHRIST.

THE *New Dispensation* of Calcutta carries its jokes a little too far, as it would seem. We wonder whether the Christians are prepared to support Keshub Chunder Sen's pretensions so far as to even countenance his attempts at proving that Jesus and Keshub Babu are one and the same personage! It says:—

“Rather sensational heading! Yet stumble not, reader, but read on. Jesus Christ came to the world to save sinners, He had no other object in view. Keshub Chunder Sen is also anxious that the world should be freed from error and sin and regenerated in righteousness. Christ preached the Kingdom of Heaven as the ideal of progressive humanity. Keshub too is trying humbly and prayerfully to establish the holy Kingdom of Heaven in India. Christ demanded absolute self-abnegation and asceticism. Keshub too tries to make men give up all worldliness and carnality, and take no thought whatever for the morrow. Christ laid great stress on the virtue of forgiveness and preached the highest doctrine of love, the love of enemies. That most exalted of ethics Keshub also preaches to his countrymen. In water-baptism, said Christ, is the type of spiritual purification and in bread-eating the type of spiritual assimilation of godly life. So says Keshub to the Hindus. Christ had no other creed than this,—Love God and love thy neighbour. Keshub too recognizes no other creed, and always preaches that simple and sweet gospel. Christ did not proclaim the whole truth, but left it too the Holy Ghost to lead men to all truth. Keshub also magnifies the Holy spirit as the Living Guru that teaches all truth, and supplements and perfects the teachings of Christ. Salvation according to Christ is not mere emancipation from the bondage of sin but partaking of the divine nature. And what else does Keshub preach as the highest mukti but the eternal yoga of the human and the divine? Christ said, Be perfect even as God which is in heaven is perfect, and he would have men acknowledge no lower aim of life. Keshub's theology too ignores all lower standards of earthly excellence and condemns all manner of compromise and half-reform. Christ announced his mission to be not to destroy but to fulfil the other dispensation and perfect it. So is Keshub not an enemy or destroyer of the previous dispensations of God, but a friend who seeks to fulfil them and carry them out to their ultimate logical sequence. Christ preached faith and hope and heaven to the vilest sinner in the parable of the Prodigal Son. Keshub had no other gospel to preach than this parable, which is the essence of all Scripture. Christ spoke of himself as the Son of God, and declared himself as the universal and eternal atonement of sinful humanity with the holy Father. Keshub also believes thoroughly in Christ's sonship and reconciliation, and bears witness unto this truth. Christ said, I am the way. So art thou, O Jesus, says Keshub. I am the bread of life and shall be eaten by my disciples, that I may become flesh of his flesh and blood of his blood, says Christ. And Keshub, the loyal disciple of the Lord Jesus, lives in Christ Jesus, grows in his strength, and rejoices in his joy, and verily Keshub's flesh is Christ's flesh through faith, and his blood the blood of Christ.”

To this the *Indian Opinion* remarks:—“We are now fully satisfied with the identity. We hope the Christians will lose no time in falling on their knees and praying to this new avatar.” No more comments are surely necessary.

## SALVATIONISTS—JESUITS.

We copy the following from the *Indian Churchman* of Calcutta:—

“Lastly we find a most able article on the Secret Books of the Salvation Army, the constrained publication of which throws new and startling light both on its character, and on that of its leader. The Society is a ‘would-

be Jesuit-Society,’ and certainly the ambition of General Booth is a good parody of the magnificent schemes of Hildebrand.

“The books were only published in answer to the revelations of the Rev. J. Charlesworth, in his letters to the *Times*; and it is said that there are five others still withheld from the public.

“They were given with directions for secrecy to trusted officers, and they are found, we are told, to teach the following principles.

- “1. The religious world is in all but total darkness.
- “2. The Sacraments of Baptism and the Lord's Supper are not of obligation, though allowable—(we suppose as a concession to the direct command of our Lord.)
- “3. The field officer is at liberty to give to the people, *as from God*, whatever he feels bound to tell them.
- “4. No opportunity for voting opposition to the Commanding officer is to be given.
- “5. The Bible is over-estimated; (Section 25,) and God still raises up prophets.
- “6. Baptism is a form by which parents of children may consecrate and set them apart, and declare their intention of training them up, for ‘God and the Army.’
- “7. All ordinary religious books eschewed, only those ‘published at our own stores,’ being allowed.
- “8. No courting allowed for first twelve months of service; all matrimonial engagements subject to the consent of the General.
- “9. The special fruits of entire sanctification are the giving up tobacco and worldly articles of dress, and the wearing of the Army badge, with obedience to all Army regulations.
- “10. ‘An officer (of either sex) on this duty has no business with bashfulness or propriety.’ This refers to the selling of Salvationist books, &c. Comments are not needed, and we make none.”

## THE REV. W. HASTIE'S KARMA

AND

## THE PROGRESS OF POESY IN BENGAL.

ACCORDING to some contemporaries:—“A copy of the pamphlet containing a full account of the trial of Pigot *vs.* Hastie, has been presented by the plaintiff to the Revd. defendant, with the following lines written on the fly-leaf:—

“To the Revd. Mr. Hastie, with inexpressible admiration and gratitude for his *hasty* condemnation and relentless Christian persecution of the donor.

“O false Priest! in your hours of ease,  
I'm wanton—vile—whatever you please,  
And deadly as the baleful shade  
By the poisonous Upas made.  
When pain was yours, crookedest of men!  
Was't I am a ministr'ring angel then?”

Rev. Mr. Hastie has indulged in defaming and slandering, in a pseudo-Christian pamphlet 200 millions of living Hindus collectively, the millions of their dead ancestors retrospectively, their gods, lares and penates; and besmeared generously with theologico-missionary mud their wives, mothers and sisters. He had set off Christian morality and virtues against heathen “immorality and vice,” and proclaimed in bitter tones his regret that he, the “reverend” writer, and his colleagues of the missions in general, and the Scotch Mission in particular, should not be accepted by the unredeemed gentile of India as exemplars of Christian righteousness. And now he has fallen the first victim to *karma*—a heathen doctrine accepted unreservedly by the Theosophist, whom, in his day, he spared as little as their pagan brethren the natives. Miss Pigot, as the avenging (not “ministr'ring”) angel has left the “Reverend” Hastie to point a moral and adorn a tale, shewing at the same time the danger of—telling tales. We, the “unredeemed” and much slandered Theosophists of the UNIVERSAL BROTHERHOOD, can only admiringly exclaim:—“See how these Christians love each other, and how morality is practised by some of them!”

## A CHRISTIAN MINISTER ON THEOSOPHY.

WRITING to the *Indian Mirror*, the Rev. C. H. A. Dall says:—  
 “*Skeptomat* is Greek for “I enquire.” In the radical sense I am a sceptic regarding Theosophy. I do not understand it but am trying my best to find out what it is. I have carefully read the green pamphlet you gave me. I mean that “Full Report of the Proceedings of the Seventh Anniversary Meeting of the Theosophical Society, held at the Framji Cowasji Institute, Bombay, on the 26th of November 1882;” (the “seventh” including four New York Anniversaries?) You may well believe that it held my attention to the end; as a quarter part of it fell from your lips, and from the pen of my cousin Tilden of Simla in the Himalayas. Yes: I see good in it. It is clear that Theosophy just now means freedom. It means self-trust and self-control. It means, to-day, courage and independence. What I fear is its narrowness, as a plan of life. Nothing is clearer than the fact that old Hinduism strikes for one good thing; and that is *worship*. It says God is all, and all is God, and nothing exists, or should exist but God. So far, so good. Hinduism and Buddhism would kill feeling, kill enquiry, kill enterprise to secure Union with God—*Nirvana*, the perfection, at once, of Hinduism and Buddhism, means Rest; rest in the Infinite from work, from study, and from society. I do not want that self-centred rest; here or hereafter. I want rest; eternal, sacred, sure; rest in God, for ever. But not a rest that denies me association with Him and with kindred spirits, in beneficent power. I seek rest in the fellowship with the Infinite and Eternal Worker, Thinker, Lover, Life-giver. I do not wish my son to lose himself in me. And I think Hinduism and Buddhism err, in bidding me lose myself in God. The patriarchal Debendronath Tagore one day said to me “I like your definition of *Nirvana*, ‘Lost in God;’ you have it exactly.” Hinduism and Buddhism, pure and simple, forbid thought; which Life and God command. Men *will* think; so there are several schools of *Nirvana*, or modes of defining it. And one eminent Hindu has assured me that his *Nirvana* permits the recognition of friends in heaven. To me all religion is Life, and all Life is growth; out of the old stock; and all growth is new. If Theosophy would turn back the sun, and invert the Divine law of progress and evolution, I take issue with it, and deny it. I need not do this more openly than is done by some of your anniversary speakers at Bombay. Yet some of them speak otherwise. For example, Theosophy, on page 77, “is ancient Aryan Philosophy,” and no more. The speaker is an “uncompromising Theosophist” on this line. Whether he accepts the *Ishwara* or the *Nirishwara* Saikhya, the theistic, or the agnostic, he does not say. He cannot accept both. Manifestly he has a very definite creed, which, as he says, defies compromise. He wants old Hinduism and nothing else, this Master of Arts delegate from Rohilkhand. But Mr. Sinnett takes direct issue with him. He says, p. 6, Theosophy “embraces all seekers for truth, whatever their creed.” He bids “the Indian philosopher realize (p. 7) by working with the European, how much his philosophy has to gain by contact with the clear practical methods of thought which European science teaches.” “That quality in the European mind renders it the needed complement” of the Hindu (Aryan). Colonel Olcott endorses his friend, Mr. Sinnett. And the Editor of the *Indian Mirror* says (p. 19)—“I am concerned more with the practical work of our Society.” “I do not condemn English education *in toto*. What I condemn is an exclusive English education, leaving out our national literature and science. I do not want to convert the distant past into the immediate future of our country. Such a thing would be the very height of absurdity. What I wish to impress upon my countrymen is to catch our national spirit (*quere*, of Reverence and God-consciousness?) “from a study of the past, and to be guided by its light in our future onward progress.” Who, I ask, can object to this? No sane man.

Again, the delegate of the Puna Theosophical Society, the one Hebrew speaker, values Theosophy as the “key to a correct interpretation of the Jewish scriptures:” (not Aryan, but Semitic.) There is nothing mystic about him. He says, (p. 49) “Not even a tenth part of the members of the Theosophical Society believe in any abnormal phenomena, as a matter of blind faith. They only believe when they know a thing to be true. . . . Not rejecting well-authenticated phenomena, they desire to enquire into the matter without prejudice. Theosophy affords a broad platform for inquiry into every branch of knowledge without prejudice or dogmatism of any sort. It looks upon religion as a part of science: and one of its objects is to inquire deep into the religious systems of old, to find out whether these systems rest on fancies, or on a solid foundation of scientific facts.” This is Baconian, and no mistake. It is the very business of the Asiatic Society; from the days of Sir William Jones. My fear is that Theosophy will undertake so much as to accomplish very little. “Do a little, and do it well,” is a good motto. Was he a good Theosophist, who, in thought and hope, twenty centuries ago, gathered “all nations,” and said to religions “of the East and of the west,” “I was hungry and you fed me, I was naked and you clothed me?” And when some of the nations said “how could we feed you when we never saw you?” Jesus replied,

“In doing it to your own poor, *my brothers*,—You did it to me.” This sounds like human brotherhood. So with other sayings of this child of Abraham, and son of David (Theosophist?) such as “call no one your father on the earth; for one is your father, even God; and all ye (all men)—are brothers.” And a leading pupil of his said, “Prove all things, and hold fast that which is good and true.” “Glory, honor, and peace (*Nirvana*) to every man that worketh good.” And another of his pupils said, “In every nation he that feareth God, (hath the Aryan reverence?) and does right, is accepted of God” as a true man.

If this is Theosophy, the more of it the better. This, I take it, made Ram Mohun Roy the true eclectic, who never, so far as I see, called himself a “Christian,”—repeatedly declared himself “a follower of Christ.” See, in Ram Mohun Roy’s “*Precepts of Jesus, the Guide to Peace*,” his latest and largest work (an octavo of 640 pages) how clearly he proclaims himself a follower of Jesus Christ, after being born a Hindu; and studying many religions. Fair play’s a jewel. All I ask is reason and light and fair play. Colonel Olcott has emphatically declared at Utacamund that he is a friend of radical Christianity, and of radical and essential truth. Past and Present, and in all directions. So far, I agree with him, and Mr. Sinnett.

We extract this letter from the pen of the Revd. Mr. Dall—the cousin of one of our good members at Simla, of the “Himalayan Theosophical Society”—for two reasons. First, to thank him for the fairness of opinions expressed; secondly, —to correct a few erroneous impressions he seems to be labouring under.

Yes; Theosophy is the science of all that is divine in man and nature. It is the study and the analysis, within the known and the knowable, of the unknown, and the otherwise UNKNOWABLE.

“In its practical application it certainly means—freedom (of thought), self-trust and self-control, courage and independence.” And if, all this, how can our revd. well-wisher “fear, its narrowness, as a plan of life”? Nor, is it easy to comprehend how can “*Nirvana*” which, in our benevolent critic’s estimation, means “LOST IN GOD,” “Rest in God, rest in the Infinite,” suggest to him at the same time, the picture of “association with Him and with kindred spirits...the fellowship with the Infinite and Eternal Worker, Thinker, Lover, Life-giver?” Could we, for one moment, anthropomorphize the Infinite; imagine a thinking brain in ABSOLUTE thought; etc. we would yet express our idea otherwise. We would not say “fellowship” and “association,” (which words mean in every language mutual association or relationship of persons on equal terms); but rather assimilation or identity with, and absorption in, the ABSOLUTE. Where there is absolute and final blending and identity of a part with the whole—there can be no *fellowship*. There is a vast difference between a separate drop of water thrown back or attracted into the ocean, and two drops of oil and water. The former is a drop “lost in”, absorbed by and assimilated with the Parent Source: there results no “fellowship” or “association” but actual *identity* in this case. While the drop of oil and the drop of water are two distinct compounds, and though made to associate, in their finiteness, they can never be said to be *lost* in each other. Therefore, we must take exception to this definition of *Nirvana*, lowering both man and “God,” by mutual dwarfing. If the definition of *Nirvana* is “lost in God”—and we accept it, only replacing the latter name by Parabrahm—the Universal Divine Essence—then Mr. Dall’s further addition to programme of *Nirvana*, *i. e.*, personal fellowship and association with “kindred spirits,” is unphilosophical. It is indeed difficult to understand what he means when we find him saying, “I think Hinduism and Buddhism *err* in bidding me *lose myself* in God;” and then informing us in the same breath that the “patriarchal Debendro Nath Tagore” liked his, the revd. Dall’s definition, saying:—“Lost in God; you have it exactly.”

Whatever may be the occult meaning of this evident contradiction, in everything else our critic comprehends theosophy rightly in his letters, “Radical” Christianity is as welcome in its ranks as radical Buddhism, Judaism, or Hinduism. For, all religions divested of their man-made theologies and superlatively human ecclesiasticism rest on one and the same foundation, converge towards one focus: an irradicable, congenital belief in an *inner* Nature reflected in the *inner* man, its microcosm; on this our earth, we can *know* of but one Light—the one *we see*. The Divine Principle, the WHOLE can be manifested to our consciousness, but through Nature and its highest tabernacle—man, in the words of Jesus, the only “temple of God.” Hence, the true theosophist, of whatever religion, rejecting acceptance of, and belief

in, an extra-cosmic God, yet accepts this actual existence of a *Logos*, whether in the Buddhist, Adwaitee, Christian Gnostic or New Platonic esoteric sense, but will bow to no ecclesiastical, orthodox and dogmatic interpretation. Theosophy fights every anthropomorphic conception of the great UNKNOWNABLE, and would impress upon the growing world, that its days of babyhood and even adolescence are over and gone by to return no more. Theosophy would teach its adherents that *animal* man, the finite, having been studied for ages and found wanting in everything but animalism—he being the moral as well as physical synthesis of all the forms and beings through which he has evolved, hence beyond correction and something that must be left to time and the work of evolution—it is more profitable to turn our attention to the spiritual or inner man, the infinite and the immortal. In its higher aspect, Theosophy pities and would help every living sentient creature, not man alone. He is a “good Theosophist,” and so far as exotericism goes, a *grand* Theosophist who said, and says, to “all nations” and to “all religions” “I was hungry and you fed me, I was naked and you clothed me,” meaning by “I,” the human *Logos*—spiritual mankind collectively, the spiritual whole manifested in its parts and atoms or—if so preferred, “God manifested in Humanity.” He is a better one who realizing deeply the profound esoteric meaning of this exoteric parable, *feeds and clothes all nations and all religions unconditionally*; one ever ready to trace back the personified pronoun “I” not to Jesus only, or even to any of the respective Christs and Gods manifested at different ages and to various nations, but to the universal *Logos* or divine Ego; one, in fine, who feeds the hungry and clothes the naked irrespective of their creed or nationality—as even the good king Asoka did.

A “personal God” says the *true* Theosophist, is the creation of the ephemeral and animal, though intellectual man. Therefore, the Rev. gentleman is wrong in querying whether David could be a Theosophist. A man who murders another to deprive him of his wife and thus satisfy his lust may be the “friend” of an anthropomorphic God; he cannot be a Theosophist. He is right, when asking whether Jesus was a Theosophist for “the Son of Man” and the “Man of Sorrow” was one in the full acceptance of the term, and this, perchance, is the very reason why so few have understood and appreciated him and why he was crucified. He was a lover of Truth Divine. No Theosophist, whether Heathen or Christian, Jew or Gentile would ever think of rejecting the ideal Jesus, or refusing reverence to one who during life was one of the noblest and grandest of men, only to suffer the *post-mortem* degradation of being niched with the pettiest and smallest of gods in the world’s pantheon of deities. The Theosophist only refuses to accept the Jesus Christ of the misinterpreted and grossly disfigured, ecclesiastical gospels. True to the colours of Universal Brotherhood, the Theosophist is always ready to accept undisguised truth; to bow before the man of whatever race or creed, who, *being but mortal* has struggled onward, and achieving purification *through his own exertions*, risen to the eminence of the imaginary personal God. But he will ever refuse worship or even recognition, to the virtue and righteousness of that extra cosmic deity. For if he is all that the Theist and Christian maintain him to be, he has no personal merit whatever. *If he is*, the “god” from, and in, eternity, the culmination of every perfection in heaven and on earth, perfection therefore is his inherent attribute: and what personal merit can there be in a Being that can neither be tempted nor commit sin? Instead of offering to such god worship, the true Theosophist, who rejects supernaturalism and miracle would feel inclined on the contrary, to take such a deity to task and ask him why—Essence of Bliss and Perfection as he is, he yet made man, “nominally” in his own image” yet so helpless and so miserable, so sinful and so imperfect. As Buchanan says:—

“Almighty Fiend! who will judge *Thee* on *Thy* judgment day?”

This, of course, will be set down as ‘blasphemy’. But it seems to us that there can be no more blasphemy in analyzing a personal God, which, we maintain to be the creation of man’s mind alone, than, in dissecting morally and physically the creature of God,—MAN, made by him in his own *physical* image for we trust that the likeness can apply still less to the *spiritual* “image” when one thinks of the average sinful man of this, our humanity?

Thus, a Theosophist will always respect and admire, if not follow a true “servant of Christ.” And he will always openly

despise a professing Christian, with not one of the Christ-like virtues; such, for instance as we find mirrored retrospectively in the great light thrown upon some *soi-disant* Christian teachers, by the recent trial of “Pigot vs. Hastie”. Shall we, Theosophists, feel anything but scorn for the *Christians*, big and small fishes, who figured in this most disgraceful, legal tragi-comedy? Avaunt, *such* Christians. They may be fit for the front ranks of the pseudo-christian but not, we hope, even for the back ground of the Theosophical Society.

## Answers to Correspondents.

Mrs. E. KNOWLES, F. T. S. (Woodbridge, Suffolk, England) Yes, the Articles on “Transmigration of the Life-atoms” in this journal for July and August last, pursue a different phase of the doctrine, partially unfolded in Patanjali, B. IV. pp. 197 to 199 (Tukaram Tatyā’s Edn.) The two should be read together to be properly appreciated.

A THEOSOPHIST (UNINITIATED).—The subject of prevision has been so often and so exhaustively treated in these columns, that we are sorry we cannot notice your case at length. Magnetic harmony between persons often serve to lift the veil which enshrouds our senses. The letter communicating the news of your brother-in-law’s illness put you into magnetic sympathy with the writer and his surroundings, and you looked into the astral ether in which the whole funeral procession was reflected.

S. V. K., B. A. (Tanjore).—The threat contained in your letter—worthless as a literary production—render it impossible even to consider its fitness for publication.

P. T. S. (Negapatam).—The subject is too indecent to claim any lengthy discussion. The very fact that it is admitted by you to be unlawful proves it immoral.

Pressure on our space obliges us to hold over, among others, the following articles, already in type:—

- (1.) “God-Idea,” by Babu Rajnarain Bose.
- (2.) “On Cholera,” by Dr. L. Salzer, F. T. S.
- (3.) “Shamanism amongst the Kolarian tribe,” by M. K. K. H., F. T. S.
- (4.) “Notes and Queries on Ghosts and Apparitions,” by H. G. Atkinson.

## Letters to the Editor.

### SOLAR SPOTS AGAIN:—A BLUE RAYLESS SUN AND ARYAN WISDOM.

It will be in the recollection of your readers that in the June (1882) issue of the *Theosophist* I have quoted extracts from Varaha Mihira Brihatsanhita to show that solar spots forebode famine in the land—an instance of Aryan wisdom which was exemplified by the famine of 1876—77, when spots of considerable dimensions were observed in the sun’s disc. Now during the last three days not only the natural color of the sun appears to have quitted it, but there is a big spot about 2 minutes in diameter in the lower right quarter of the sun’s disc a little below the central line when I made the observation in the morning through my telescope. The Spot is also visible to the naked eye.

Varaha Misira describes as follow a few terrestrial phenomena at the time of the appearance of the spots. Chapter III, Slokas 9 & 10.

तेषामुदयेरूपाप्यंभः कलुषंरजीवृत्तव्योम ।

नगतहृशिखरविमदीं सशर्करोमास्तुश्चंडः ॥

ऋतुविपरीतास्तरवोदीप्ता मृगपक्षिणोदिशांदाहः ।

निघर्तमहीकपाद योभवंत्यत्रचोत्पाताः ॥

(9.) “When spots appear on the disc of the sun the following phenomena will be witnessed on earth: The waters will get disturbed; the sky will be filled with dust; high winds capable of turning down the tops of mountains and trees will carry pebbles and sand along their course.”

(10.) “The trees will fail to yield in their appropriate seasons; birds and animals will begin to howl; there will be appearance of false fire all round; and lightning and earthquake will afflict mankind.”

Here follows a description of famine, vide page 235, June 1862, issue of the *Theosophist*.

As regards the present color of the sun some think it to be blue; some green; some that of copper; while a few think it to be that of peacocks’ plume. The true color

of the sun appears to be that of the paper on which the title page of the *Theosophist* is printed. It is not improbable that like the chameleon the color of the sun is different at different times. I have therefore deemed it advisable to quote here *nearly all* that Varaha Mihirar has written about solar color and its effect on earth.—Chap. III, Slokas 21 & 22.

ऊर्ध्वकरोदिवसकरस्ताम्रस्येनापतिविनाशयति ।

पीतोर्नरेद्रपुत्रं श्वेतस्तुपुरोहितहंति ॥

(22) चित्रोथवापिभ्रोरविरश्मिं यंकुलांकरोतिमहीं ।

तस्करशस्त्रनिपातैर्यं दिसलिलं नाशुपातयति ॥

\* \* \* \* \*

(25) रूक्षश्वेतोविमान् रूक्षाभः क्षत्रियान् विनाशयति ।

पीतोवैश्यान् कृष्णस्त तोपरान् शुभकरोऽस्निग्धः ॥

\* \* \* \* \*

(26) वर्षास्वसितः करोत्यनावृष्टिं ॥

\* \* \* \* \*

(27) प्रावृत्काले सद्यः करोति विमलद्युतिर्वृष्टिं ॥

(33) वर्षाकाले वृष्टिकरोति सद्यश्शिशिषिपुष्पाभः ।

शिखिपत्रनिभस्सलिलं न करोतीद्वादशाब्दानि ॥

(29) श्यामेर्कीर्कीटभयं भस्म निर्भयमुशांतिपरकृत् ।

\* \* \* \* \*

(30) शशरुधिरनिर्भेमानौ न भतलस्ये भवति संग्रामाः ।

शशिसृष्टेनृपतिवधः क्षिप्रंचान्योनृपो भवति ॥

\* \* \* \* \*

(21.) "If when the rays are turned away from earth the color of the sun be that of copper, the commander-in-chief dies; if it be green or yellow the king's son dies; if it be white the high priest dies."

(22.) "If the sun be variegated in color, or of the color of smoke there will either be immediate rain or mankind will suffer from robbers and from weapons."

The author then describes the effect of solar color in the various seasons.

(25.) "If in Varasha, (Rains, August and September) when the rays are sharp, the color be white then the Brahmans, if blood color then the Kshatriyas, if yellow or green then the Vaisyas, and if black then the Sudras and others will be afflicted with miseries."

(26.) "If in Varasha the color be black there will be no rain."

(27.) "If in Varasha the disc be clear there will be immediate rain."

(28.) "If in Varasha the solar color be that of the flower of Siroesha (*Mimosa flexuosa*) there will be good rain; if, on the other hand, the color be that of a peacock's plume, there will be no rain for 12 years to come."

(29.) "If in Varasha the color be blue mankind will suffer from worms and reptiles; if the color be ashy pale (which happily is not the case) the reigning sovereign will be dethroned and another will take his place."

(30.) "If the color be that of the blood of a hare, there will be war in the land; if the sun should appear like the moon the sovereign will be killed and he will be succeeded by a foreign prince."

In chap. 97, sloka. 1, the author says.

पक्षाद्भानैः (पाकः)

"In the case of solar symptoms the effects described will begin to be felt *within a fortnight* after the appearance of such symptoms."

It is probable that those that have no respect for Aryan wisdom will consider the present symptoms as foreboding nothing, or, in the language of Emilia, "it is neither here nor there" But we shall wait and see what happens.

Yours obediently,

N. CHIDAMBARAM IYER, F. T. S.,

AND

SUNDARESVARA SROUTHY,  
Hindu Astronomer.

TRIVADI,  
JOTISTANTRA SABHA,  
September 9th, 1883. }

*Postscript*:—Just as described in sloka 10, Chapter II<sup>I</sup> of his work on Samhitu, by Varaha Mihira, you will have learned that shocks of earthquake were felt in several parts of India, and that there were also volcanic eruptions in Java of a serious kind. You will also see that all this took place within a fortnight after the appearance of the spots on the solar disc, *just as* stated in sloka 1, Chapter 97. Nothing more is required to shew the depth of Aryan researches in matters about which men of modern science as yet know little or nothing.

Now as regards the change in the solar hue, a writer in the *Madras Times*, who appears to be no less important a personage than the Government Astronomer himself, explains the change by attributing it, according to his belief, "to the passage across Indra of the tremendous amount of sulphurous vapors emanating from the grand volcanic disturbances which occurred in the south-east extremity of Java." In support of this view the writer says that the "Moon and brighter stars were all similarly affected with the Sun."

1. Now as regards the Moon the change in her appearance need not necessarily support the writer's view; for, independently of any atmospherical affection by volcanic smoke as supposed, the Moon must necessarily undergo a change of color along with the Sun, for this simple reason that she receives all her light from the Sun.

2. As regards the brighter stars, it is doubtful whether they lost any of their lustre; on the other hand it is certain that stars of even the sixth magnitude continued to be visible, which could never have been the case if the atmosphere had been charged with a "tremendous amount of sulphurous vapors" capable of depriving even the Sun of much of its lustre.

3. Nobody in India found that the atmosphere ever smelt sulphur as ought to have been the case under the conditions supposed.

4. It is exceedingly unlikely that the smoke from Java, situated on the other side of the Equator (Latitude 8° S., and Longitude 110° E.) could ever travel so far west and north, a distance of over 3,000 miles, as to reach the west coast of Sunda, and who knows that the phenomenon was not witnessed further west.

5. It is exceedingly improbable that the smoke could so much mix with the atmosphere as not to expose the Sun at intervals, for over a week.

6. The change in the solar and lunar color continued only for about a week; for a week more the luminaries resumed their former lustre, and again they changed color! Surely there was no repetition of the volcanic eruptions on an equally large scale.

7. Again, how came the spot to appear, and how came they to appear at the very time a change of color took place?

8. Now if the Sun and Moon should have presented the same appearance to our antipodes as to us here, it would go to shew that the Government Astronomer's theory is untenable, unless he goes to the length of also believing that Java smoke could circumnavigate the globe.

Now the Aryans speak as well of solar color as of solar spots without assigning any reason for the phenomena as far as we could gather from the books now in existence. Considering that the appearance of the spots in the solar disc is accompanied by earthquakes and the like terrestrial disturbances, we are of opinion that the spots as well as the change in the solar aspect may not probably be due to the circumstance that erratic comets and crippled planets, probably belonging to the Asteroid group, whose course may have been run, meet with their final doom by suddenly wheeling round and precipitating themselves in the Sun, and there consumed, as by this means the equilibrium of the system is disturbed, and the system itself feels a sudden jerk which on earth results in earthquakes and volcanic eruptions—the spots being no other than the dark mass of the burning orbs, the color being the result of the enveloping fume. It also follows that along with earthquakes, there are, probably, more or less of Mercuryquakes, Venusquakes, Marsquakes, and Jupiter, Saturn, Uranus, and even Neptunequakes; and who can affirm that such is not actually the case?

THE BRAHMAN CASTE, PARIAH AND PINDAM.

I HAVE a right to be heard when questions affecting the Hindu social and religious polity are raised in the columns of the *Theosophist*. The Hindus are indebted to the Founders of the Theosophical Society for spreading the Gospel of

Living Himalayan Brothers, willing to assist theoretically and practically men of character who care to study and to advance in Divine Wisdom. The much neglected and even condemned Yoga and Vedanta Sastras have been vindicated by their explanations and phenomenal proofs. My alliance with the President of the Theosophical Society has served all its purposes, inasmuch as educated Hindus have joined the Society, and intelligent theosophists of all races have appreciated Hindu sacred literature and favored the revival of Sanscrit learning.

I have now to exhort fellow-Hindus to examine and repair the structure of the Hindu nationality in the light of the solemn truths of universal Theosophy. But theosophic generalisations are as dangerous in the hands of revolutionists as political principles of Liberty and Equality have been among Frenchmen, and as Malthusian principles and Darwinian survival of the fittest are among Materialists. Just as styles of architecture and arrangements of rooms are different while the building materials may be the same, just as individuals differ in size and complexion while partaking of the same humanity: so national civilisations may vary on the same theosophic grounds. Every nation has its own history and genius, and every country its climate and scenery.

Nay, more may be said of *the Brahman caste*. I have propounded in the October *Theosophist* the fact that caste pervades the universe, and that the Hindus preserve the classification as the immutable result of previous Karma and test of capacity for present culture. Neither in the Mahatmas, nor in Chelas, nor in formal theosophists, nor in men, are Karma and culture the same. Caste may be defined among men as *the distance from Adeptship*. The Adept or true priest is casteless or has transcended the castes. Indeed he sees himself even in the mineral, vegetable and animal kingdoms. He is a perfect celebate. *The Brahman caste* is the body of men in the world qualifying themselves to be Chelas, or in the language of the Mahabharata, "Bodhyamonas," on the road to "Buddhaship." To save Brother Subba Row the trouble of showing that Buddhism as theosophy is not opposed to Brahmanism, I shall transcribe two lines from that sacred book, which is the fifth Veda, being the Key to the occult meaning of the Four:—

"Yena sarvam idam *Buddham*  
Prakritir Vikritischayá  
Gatijnas sarvabhutánám  
Tam Devá *Brahmanam* viduh.  
Yetad budhvá bhavet *Buddhas*  
Yetad vai janma sámarthyan  
*Brahmanasya* viseshatah."

*The caste-Brahman is the qualified student and the caste-transcending Brahman is the Buddha.* There are astrologers who will tell the caste of a person from an examination of the horoscope. How is this possible if caste were not a natural institution? If Prakriti has three Gunas, and the Vedas are "Tri-gunya-vishyah," as defined in the Bhagavadgita, till one becomes a "Nis-Trigunya;" he is a composition of the qualities, and that is *the touchstone of caste*. Ramasamy kicks and robs Kristnasamy with the lip-theosophy that they are both one and Brahman and that separate body, property, &c. are unreal! Such is the conduct of some who confound caste under cover of platitudes, and want withal a caste status, while breaking from its restraints culture and duties.

Now from the above hints if it is recognised that *caste* is a theosophic classification open to all, ascertainable at birth, and modified by culture; and if further it is perceived that in the Brahman caste the husband is the mesmeriser and the wife the sensitive, the rationale of child-marriage and widowhood will be clear to the readers. If the Brahmins of *the day* have not the yogic culture to live long and control their wives, let such by all means call themselves Sudras, but they are not justified in quarrelling with the Brahman caste as it *ought to be*. There is no objection to re-marriage, or free-love, or beef-eating, or drinking (what will *our* objection avail against the law of Karma and habit?), but the parties cannot be of *that caste* in which restraints and sacrifices of bodily desires are enjoined.

I know many are calling me inconsistent and unpatriotic, because I do not fall in with their views, which seem to me to be inconsistent and unpatriotic—as coveting a caste-rank while behaving as out of the casté, and parading a theosophic independence without allegiance to theosophic priests. A slip in the dark and in haste in such matters cannot be retrieved easily. While I look upon the Founders of the The-

osophical Society as gifted fellow-workers to evoke good-will and sympathy amongst all races and churches, some of my brothers look upon the Adyar residence as a New Church and the Theosophists as a new race. The Theosophical Society as such has only the three external objects mentioned in the Rules, and in Colonel Olcott's letter to the Governments of India and of Madras. A church of priests exists to minister to believers, but the Theosophical Society does not exclude those who do not believe in an inner man. *The Highest Priest is within each man* to whom all bow, whether Himalayan Brothers, or Siva, Vishnu, Brahma, Buddha, Christ, &c. and in whom all these live, as indeed the whole phenomenal world. Yet to throw off veil after veil which hides Him, or, in the language of Vyasa, to cross the ocean of Births and Desires, men want the aid of men, having life-boats, ships and steamers according to their resources of virtue and knowledge. Every church of priests is useful so long as there are laymen deriving consolation from their aid and teaching, and no man need kick off the ladder by which he has risen, while he can climb higher heights by the ladders always ready for him there. Many others will want the particular ladder which he has no occasion for.

The Brahman caste is divided into *Gotras*; the Mahabharata says:—

"Utpádyá putran Munayo  
Nripate yatra tatra ha,  
Svenaiva tapasá tesham  
Rishitvam pradaduh punah."  
"Mulagotrani chatvari,  
Samutpannani Parthiva,  
Angiráh Káshlyapaschaiva,  
Vasishtho Bhrigur éva cha".  
"Karmato anyáni gotráni  
Samutpannani Parthiva,  
Námadheyani tapasá  
Táni cha grahanam satám".

The substance of the above is that the Adepts founded the *Gotras* by initiating pupils or *sons* from any place they chose, and that there were originally four gotras after the four Rishis, and others were instituted gradually. Dead-letter scholars should remember that a *pupil* is often called a son and even a wife. Even the Christians call their church as married to Christ and Christ as the Son of God.

The *Pariah* is not casteless as the Adept, but an *Outcaste* or so distant from Adeptship by his previous Karma and present life, as to contaminate the castes by his foul magnetism. That is the definition, but many so-called Pariahs now may have transcended and can transcend that stage. If love of solitude in Satviya gunam is the feature of the Brahman caste, if philanthropy in Rajasa Gunam of the Kshatriya caste, if material and commercial blessings in Rajasa spirit of the Vysia caste, and if appreciation of the above ranks in Tamasa Gunam of the Sudras; ignorant isolation from the caste is the feature of the Mleecha and positive and reckless dereliction that of the Pariah.

By all means let Pariahs rise in status, but if they rise and especially have "*their own* preachers of religion and morality," it will be a misnomer to call them Pariahs ever afterwards. The philanthropic movement started at Bangalore is in my theosophy calculated to give the Pariahs such duties and education as to give them a caste status. Many a born Brahman, Kshatriya, Vysia and Sudra, are virtual Pariahs now. One object of the Hindu Sabha is to promote and degrade men from one caste into another. Tiruvalluvar, whom we rank amongst Adepts and whose Tamil works are prescribed for the University examination was a Pariah by birth; but rose silently through the caste definitions above the Brahman status. With reference to the above premises, I am glad to note that my poor friend Venkatarama Sastry of Coimbatore has by his discourses amongst the lower orders done an immense deal singlehanded to preserve the Hindu faith amongst them and to refute missionary Christianity. The second object of the association will strengthen the efforts of such men as the Sastry, and as my support, save as regards the objectionable phrase "*their own preachers*" for I should be ashamed to call competent preachers Pariahs. The first and third objects are needless, for those who want more than the preachers can do had better join the schools open to all classes instead of keeping themselves aloof.

I had rather that all business of this nature were assigned to committees of the Theosophical Society than that separate funds and organizations should be instituted by numberless

by-bhoriders. While the Founders of the T. S. with ever increasing branches spend their private resources for the propagation of Hindu ancestral philosophy, I consider it almost culpable that those who have read a leaf of that literature should imagine that they know the whole and are superior to the Brahmans of hereditary training and accumulated experience. After thirty minutes' talk I was able to put into the Malabar branch most respectable Yogis and Dikshitas. And if only the hobby-riders keep quiet, the *Mathadhypatidhis* and Achariars of southern India will own and endorse the Adyar Head-quarters as Theosophists. Missionaries may be content with the lower orders, but Theosophists ought to reach the clergy and not simply the discontented laity. I had rather that the Padre changed the Pariah into the Christian and that the Theosophist stepped in then to redeem the Christian, and that the clergy then conferred upon the Theosophist a right to *Vedic Kriyas* than that Pariahs and Sudras, however educated and pious, SHOULD FOR EVER remain Pariahs and Sudras.

I pass now to the question of *Pindam* or Vedic Kriyas, to divest the soul of lingering and ungratified earthly attachments. To learn to do the Kriyas objectively is the *sine quâ non* of ability to do the same subjectively. This is *Yogam* and that is *Vedam*. This is Uttara Mimamsa and that is Purva Mimamsa. The Tamil quotation in the October *Theosophist* and many similar Sanskrit teachings I can quote, are deluding many who do not see that there is a graduated series of lessons in every branch of knowledge and art, and that higher propositions are grasped only by those who have learnt the lower. There is no leaping at a bound into Nirvanam, and in every page of sacred literature the higher meaning of a lesson is reserved for the obedient pupil and prohibited to the mere inquisitive scholar. Whatever may be the *immediate* value to the dead or the living of the external Kriya at the geographical Gaya, the internal Yoga at the psychological Gaya, is the merit of the adept. I should not deny the immediate value of ceremonies, which Rama and Pandu observed, and all Brahmans at all times perform. Cunning, cheating and priestcraft are out of place when Brahmans do things *amongst themselves*, and I beg to complain of such charges as untheosophic and worthy only of dogmatic missionaries. I have said that the prospective value of the rite to the student of occultism is great. The rite may be even of no immediate use and yet important to the student, just as the letters of the alphabet are which boys have to learn to pronounce and write before knowing their combination into words having a meaning. Esoterically the three Pindams are the three Karmas of Word, Thought, and Body, and they are consumed in Gaya by the Fire of Knowledge. The Yâgams, where sheep, cows and horses are offered, are similar exoteric lessons to students who will ultimately see that the animals are technical names of parts of the human organisation.

In philosophy all but The All is a shadow—the creation of the Manas. But till the Pralayam everything exists as real, and the blunder of Reformers is to feel and act as if the universe or the “Jagrata” stage were real, and yet to plead for objectionable feelings and acts, the philosophy of the “Samadhi” stage. “Kuru Karma Tyagetacha,” or, *do and give up*, is the Guru's advice to all honest pupils.

If Pindam and Gaya involve so much sacrifice of time, comfort and money, cheerfully and intelligently doing it, will on that very account make a good Chela. The benefits reaped by good pilgrims are never trumpeted forth by them, while the disappointments of bad pilgrims and the scepticism of no pilgrims are paraded to undermine the faith which leads to knowledge. Most pilgrimages are the trials instituted by the Gurus to purify the would-be Chela, and most ceremonies are illustrative representations to the outer man of the organisation of the inner man. Every man who will be saved must go through some trial and ceremony, and the same trial and ceremony will not suit all. And the paradox is that all trials and ceremonies are one in esoteric truth. If a man has bathed in the true Ganges, he has at the time bathed at the true Ramesaram. If a man has truly made his pindam at Gaya, he has made Soma Yajnam and Brahma Yajnam.

My advice to all is let the body steadily fulfil mysterious injunctions, and the mind reflect upon the mysteries and the budhi and the truths.

A. SANKARIAH, F. T. S.,  
President-Founder Hindu Sabha.

## SPECIAL NOTICES.

It is now evident that the THEOSOPHIST offers to advertisers unusual advantages in circulation. We have already subscribers in every part of India, in Ceylon, Burmah, China and on the Persian Gulf. Our paper also goes to Great Britain and Ireland, France, Spain, Holland, Germany, Norway, Hungary, Greece, Russia, Australasia, South Africa, the West Indies, and North and South America. The following very moderate rates have been adopted.

## ADVERTISING RATES.

First insertion.....16 lines and under.....1 Rupee  
For each additional line.....1 Anna

Space is charged for at the rate of 12 lines to the inch. Special arrangements can be made for large advertisements, and for longer and fixed periods. For further information and contracts for advertising, apply to

MESSRS. COOPER & Co., MEADOW STREET, FORT, BOMBAY;

## TO SUBSCRIBERS.

The Subscription price at which the THEOSOPHIST is published barely covers cost—the design in establishing the journal having been rather to reach a very wide circle of readers, than to make a profit. We cannot afford, therefore, to send specimen copies free, nor to supply libraries, societies, or individuals gratuitously. For the same reason we are obliged to adopt the plan, now universal in America, of requiring subscribers to pay in advance, and of stopping the paper at the end of the term paid for. Many years of practical experience have convinced Western publishers that this system of cash payment is the best and most satisfactory to both parties; and all respectable journals are now conducted on this plan.

The THEOSOPHIST will appear each month. The rates, for twelve numbers of not less than 48 columns Royal 4to each of reading matter, or 576 columns in all, are as follows:—To Subscribers in any part of India, Ceylon, Straits Settlements, China, Japan, and Australia, Rs. 8; in Africa, Europe, and the United States, £ 1. Half-year (India, &c.) Rs. 5; Single copies Rupee 1. Remittances in postal stamps must be at the rate of annas 17 to the Rupee to cover discount. The above rates include postage. *No name will be entered in the books or paper sent until the money is remitted; and invariably the paper will be discontinued at the expiration of the term subscribed for.* Remittances should be made in Money-orders, Handis, Bill, Cheques, (or Treasury bills if in registered letters), and made payable only to the PROPRIETORS OF THE THEOSOPHIST, ADYAR P. O., (MADRAS), India.

Subscribers wishing a printed receipt for their remittances must send stamps for return postage.

ONLY ONE NUMBER OF VOL. I BEING AVAILABLE, THE CHARGE FOR them will be Annas 12. Subscribers for the Second Volume (Oct. 1880 to September 1881) pay Rs. 6 only in India; Rs. 7 in Ceylon; Rs. 8 in the Straits Settlements, China, Japan, and Australia; and £ 1 in Africa, Europe and the United States.

### COL. OLCOTT'S HEALING STOPPED.

AFTER the above Programme was issued, the Order alluded to in the subjoined Notice was most unexpectedly received. What makes the fact the more striking is that Madame Blavatsky received at Madras from the "Paramaguru" the message and an order to deliver it with certain other instructions to Colonel Olcott in person at Bombay, and at that very time the identical communication was made to the President-Founder at Bombay through another chela. The reason alleged is that any further continuance of his mesmeric treatments at the rate at which he has been making there, will break down the President's health, besides absorbing too large a share of time which the Society needs to be devoted to its interests.

### THE PRESIDENT-FOUNDER'S CIRCULAR.

SINCE the printed programme of his tour was despatched on the 18th, the President-Founder has received peremptory ORDERS from his SUPERIORS not to take a single case for treatment until further advised. For fear, therefore, that this prohibition may not be removed before his reaching your Station, the President-Founder requests you to notify the fact of the ORDER to parties who have been promised or may be expecting his help. This, however, will not interfere with his giving full instructions in the Science or lecturing upon the same.

DAMODAR K. MAVALANKAR,  
*Joint-Recording Secretary.*

CAMP BOMBAY, }  
20th October 1883. }

### COL. OLCOTT AT NAGARCOIL.

ON his way to Trevandrum, Colonel Olcott halted for refreshment in the Travellers' Bungalow at Nagarcoil on the 20th July at 1 P. M. He was the guest there of our worthy Judge, Mr. Aryanayagam Pillay. Before the Colonel started from that station to the capital of the "Land of Charity," Mr. Sreenevasa Iyer, a graduate of our University, accompanied by some other influential gentlemen of that place, paid a visit to the President-Founder, and warmly requested him to spend a day with them and to address the public on Hinduism, which they said had suffered so much unmerited calumny at the hands of the selfish Padris. They told the Colonel that they were in the midst of the meek Christians, who never left a stone unturned to add more of the unwary youth to the flock tended by Reverend and Right Reverend shepherds. The Colonel was pleased with their invitation, and informed them that he would save time on his return and spend a few hours profitably in lecturing to the public at large, and in conversing with the people. Accordingly a note was dropt by me on the 22nd under the direction of our President to intimate to Mr. Sreenevasa Iyer, B. A., Assistant Master, Cottar High School, to give notice to the public that a lecture would be delivered at 3 P. M. on the 25th July 1883. The Assistant Master informed the gentry, the nobility and the officials, &c. of the station, as well as the adjacent suburbs to attend to the lecture. Then the leader of the Theosophical Society arrived at Nagarcoil at 2 P. M. on the day promised. A few gentlemen waited at the bungalow to conduct the Colonel to the place set apart for the delivery of the lecture. The place selected for the purpose was the local Malayalam School. The arrival of a white

man from the other side of the Globe to uphold the cause of the Aryans, amazed the enthusiastic people to a great extent, and the hall was crowded to suffocation. The lecturer was received with every mark of respect and honor due to his position, and to the noble undertaking for which he has sacrificed his health and wealth. M. R. Ry. Kulanthivelu Moodaliar Avergal, B. C. E., Assistant Engineer, was voted to the Chair, and the meeting was respectfully attended by the Tahsildar, Munsiff, District Court Vakils and Chockars, &c. &c. M. R. Ry. Sashu Iyengar Avergal, Sadr Court Wakil, the gentleman who first boldly led the vanguard of the Widow Marriage Reform by marrying his daughter, a child widow, to a Brahmin of his own caste, opened the meeting in Tamil, by explaining the object of the Colonel's coming from the other side of the world to our native shores. The Colonel then lectured on the all-important question of Transmigration, and adduced scientific reasons for the support of it. He impressed on the minds of the hearers the bad logic of the doctrine of translating the human soul to the ever-burning Hell for doing the forbidden deeds mentioned in the so-called sacred and self-contradicting Bible during so short a span of life as three score and ten years in this world. His explanation of eternity convinced every one of the audience about the fallacy of the Jesuitical doctrines of the West. In the concluding portion of his lecture he dwelt on the historical fame of the place as a repository of Sanskrit literature. And as an historical authority to the said fact he referred to the works of some French Orientalists. The lecture was attended by some of the Eurasians and the native representatives of Padristical Christianity. Now and then his speech was interrupted by loud and deafening shouts. When the Colonel came back to his temporary residence, the Engineer, the Tahsildar, some District Court Vakils, Chockars and others came to the place to say good-bye to him. To the Tahsildar and some Vakils he gave some mesmerised oil before he departed.

TINNEVELLY, }

S. PERIASWAMY PILLAY,  
*Ag. Private Secretary*  
to the President-Founder T. S.

### COLONEL OLCOTT AT BELLARY.

BELLARY, 1st October 1883.

THE President-Founder arrived here with his Private Secretary on the morning of the 28th September and was met at the platform of the Railway Station by the members of the Local Branch and Messrs. Vencata Gopaul Row Puntulu, the Sub-Judge; T. Rungasawmy Moodr., Court Sheristadar; A. Sabapathy Moodr.; Vassoodevooloo Naidu; P. N. Daivanaigam Moodr.; A. P. Sadasivam Pillay; M. Abraham; Dodu Bheema Row; Lutchmana Moodr.; Vencoba Row, B. A.; P. Rama Row, B. A., and numerous other native gentlemen of the station.

He was then driven to the bungalow provided for his accommodation, where the accompanying address was read to him by Mr. A. Sabapathy Moodr, President. After replying in suitable terms, Colonel Olcott thanked those present for the kind reception they had given him and explained the object of his visit.

3. In the evening he delivered a most interesting Lecture to an appreciative and very numerous audience, principally composed of Hindoos, with a fair sprinkling of Europeans and Eurasians. The numerous interruptions occasioned by clappings of hands and cries of "hear, hear," showed how hear-

tily the words of the venerable lecturer were appreciated; the lecture lasted over an hour and embraced a variety of subjects connected with Theosophy. After which the Chairman, Mr. Venkata Gopaul Row Puntulu rose and in short but pointed speech thanked the Lecturer and drew the attention of the hearers to some of the Colonel's most remarkable utterances. The meeting then dissolved with loud cheers.

4. The following morning, the Colonel again delivered a most elaborate lecture at H. R. H. the Prince of Wales' choultry, at which no less than 200 people were present. It was ably interpreted by M. R. Ry. Kristuama Charriar, after which the Chairman M. R. Ry. A Sabapathy Moodaliar addressed the audience on the importance of the advice given by the Lecturer and urged upon them the necessity of leading moral and virtuous lives.

5. Photographs of the assembly were then taken, after which the Colonel with the members of the Society and many others returned to the bungalow, where some experiments in mesmerism were made.

6. At 3 o'clock in the afternoon, photographs of the members, with the President and his Secretary were taken.

7. At 6 o'clock 15 new members were initiated by the President-Founder, after which he lectured on various interesting subjects until 9 p. m., when all departed, highly pleased with all that they had seen and heard.

8. On Sunday the 30th, the Colonel left by the 6 a. m. train for Adoni, accompanied by some of the Bellary members and carrying away with him the hearty and good wishes of all.

C. S. RUNGANADHAM MOODR,  
Secretary.

BELLARY, 28th September 1883.

TO COLONEL H. S. OLCOTT,

PRESIDENT-FOUNDER OF THE  
THEOSOPHICAL SOCIETY.

DEAR SIR AND MOST WORTHY BROTHER,

We, the members of the Bellary branch of the Theosophical Society, desire to accord you a most hearty welcome on this your first visit to Bellary.

We deem ourselves singularly fortunate in being favored with a visit from you so soon after the establishment of this branch. We anticipate the grandest results from this visit as our townsmen will have the opportunity of hearing from the lips of the Founder the aims and objects of the Society and the work it has accomplished. Many, we have no doubt, will be convinced of their past apathy in not attempting a search after the truth as inculcated in the ancient philosophy and sciences by the Hindu sages and resolve that such a state of things shall no longer exist. Your own and Madame Blavatsky's disinterestedness, self abnegation and labour of love on behalf of the people of this country are too well-known to need repetition.

In conclusion, we beg you will accept our welcome, given in the spirit of friendship and brotherly love.

A. SABAPATHY MUDALIAR,  
President.

#### COLONEL OLCOTT AT ADONI.

At the earnest request of the Theosophists of the place, Colonel H. S. Olcott, President-Founder of the Theosophical Society, arrived here on the morning of the 30th September. He was received by a large number of native gentlemen at the Railway platform, and conducted to a suitable bungalow close to Mr. A. Teruvengadam Mudaliar's house. The whole of the day was spent in receiving visitors, and in the evening the Colonel delivered *ex tempore* an interesting and instructive lecture to a large and appreciative audience, consisting of the local Pandits, officials and merchants. The venerable Colonel made a strong impression on all of the importance of studying the Aryan Philosophy and Religion.

The next morning, between 7 and 11 A. M., Colonel Olcott cured a number of patients by mesmerism; the most important cure was of a paralytic of many years' standing, who was unable to move his paralysed hand except with the assistance of the other. The sufferer is so far cured that there is very little remaining to restore him to perfect health.

In the afternoon the Colonel gave instructions to our fellows on Mesmerism. At 6 o'clock in the evening he initiated new members into the Society. A Branch was then organized here under the name of "The Adoni Theosophical Society."

On the morning of the 2nd instant the President-Founder cured a woman of severe chronic pains in the abdomen. After breakfast he left for Hyderabad by the Mail Train.

ADONI THEOSOPHICAL SOCIETY, } C. MUNISAMI NAYUDU,  
5th October, 1883, } Secretary.

#### COLONEL OLCOTT IN THE HYDERABAD STATE.

In compliance with an invitation to visit Secunderabad given by the Members of the Secunderabad Branch, Colonel Olcott, our President-Founder, accompanied by his Private Secretary, L. Venkatavuradarajulu Naidu, arrived at the Hyderabad Railway station on the morning of the 3rd October from Adoni. He was met by the Members of the Bolaram, Secunderabad, and Hyderabad Branches, our President Mr. Etherajulu Naidu and our brother Mr. Iyalu Naidu having gone down to the Wadi Junction to meet our Colonel with his staff. He was conducted to the late Mr. Nursimloo Chetty's Bungalow at Chudderghat. A long line of carriages of members came behind the Colonel's.

Several educated men were also present at the Bungalow. A short address of welcome was read to him on behalf of our 3 branches. His reply was as usual, very impressive and touching. In the evening he showed some practical experiments in Mesmerism to the members of the 3 branches.

On the 4th October the President-Founder delivered an elaborate lecture on "Theosophy," in Mr. Shapoorjee's Bungalow at the Hussain Saugor Tank Bund. There were more than 600 persons present on the occasion including all high Native and European Officials. He said that Theosophy was no new religion or creed and that he was not a propagator of any particular religion. He was a humble follower of the dictates of the MAHATMAS whose desire it is that the degenerate sons of Aryavarba should be enlightened in Aryan philosophy, and clearly explained what Theosophy is, who are real Theosophists, and how the Theosophical Society of which he is the President, has been progressing during the past 7 years of its existence. By this able lecture which lasted an hour, several gentlemen, who were under the impression that Theosophists are atheists and that any Member who joined the Society loses his religion and caste, and some others who were also laboring under various misconceptions about our Society, were convinced that they were all misinformed and had many of their doubts removed.

On the 6th, the Colonel delivered a very interesting and instructive *extempore* lecture on "Does man live after Death?" After a few preliminary discussions as to how the soul survives the shock of death and also giving several proofs that soul never dies as supposed by the materialist, he dwelt at length on the philosophy of the Rishis. He showed by examples how human beings can attain Divinity by a thorough study and practice of *yoga*. He described some experiments in mesmerism which go to prove what wonderful phenomena could be manifested by "will power" through the agency of Sensitives or Mediums and Psychometers. He quoted a passage from the Atharvana Veda and proved that it teaches the same as the theory of Dr. Reichenbach on "Odyle." The Colonel translated it thus:—"No two persons, either of whom is diseased, shall approach each other to within a space of 2 cubits between them, be they the father and the son of his own loins." He concluded his worthy lecture with an exhortation to those present (especially Hindus) to infuse life into the old mother India and revive her past glories. The last portion of the lecture was very pathetic and touching.

On Sunday about 25 candidates were initiated, 2 of whom are great Pandits. Col. Olcott with his usual kindness undertook some mesmeric cures, of which 2 cases are most important.

No. 1. A gentleman, who has been suffering for the past 3 years from certain nervous disorders caused by the practice of *Hatha Yoga* so much disapproved by our Society, was publicly treated under the manipulation of the Colonel's fingers: the Colonel assured him that he may not be cured of this long-standing disorder in one or two days but must be treated for a number of days. The patient himself tells me he feels far better.

Case No. 2. Another of our own brothers, by name Syed Mahomed, clerk of the Cantonment Court, was for a long time suffering from rheumatism on the right elbow. He could not use the hand without difficulty. He was completely cured of the disease in less than 5 minutes.

Now to our branch Society. The President-Founder seems to be much pleased with the progress which some of the members have been making in the study of different sciences, and suggested that they should form different committees, each taking up one for subject its study and report its experiments to the whole committee during their meetings. Some

of the members of our branch have already taken up the study of mesmerism and animal magnetism. The Colonel explained to the members the mode of treating the different kinds of diseases.

In conclusion it must be stated that this Branch Society, formed in December last through the indefatigable exertion of Brother S. Ramasami Aiyar, continues to progress fairly under the management and unselfish exertions of our President, Mr. Etherajulu Naidu Garu, and by the great help of our energetic and liberal-minded Vice-President, Mr. Ranganayakulu Naidu Garu.

C. KUPPUSWAMI AIYAR,

*Secretary, Secunderabad Theosophical Society.*  
15-10-83.

Col. Olcott, accompanied by Mr. Brown, F. T. S., Messrs. Narayensamy and Dorasawmy and a Theosophist of the Sholapore Branch arrived at Poona at 4-40 A. M., on Friday the 12th Inst. Although it was a very early hour several of the members of the branch were present and received the party at the Railway Station; whence they were taken to the bungalow of brother A. D. Ezekiel who had offered them his hospitality. Several visitors dropped in during the day and at 6 P. M. there was a "conversation" held at the residence of a Parsee gentleman of this station where a number of educated and influential persons met the Colonel who gave a short and impressive account of the progress of Theosophy. This was received with applause, and he was followed by two other speakers, after which the meeting separated at about 8 P. M. The next day Mr. Damodar K. Mavalankar arrived and in the evening at 5 P. M. a lecture was delivered at the Poona Town Hall when the Honorable Sir Jamsetjee Jeejeebhoy, Bart, presided. The subject of the lecture was "*Is there a future life,*" and the lecturer delivered a very eloquent and well reasoned address, in the course of which he pointed out that the evidence offered by spiritualism, mesmerism, the apparitions at the time of death and the *Muyarirupas* of the Mahatmas was most important and its bearing on the subject of a future life had carefully been considered. There was an appreciative audience of over 300 persons, and the treatment of the subject from the above mentioned point of view, arrested the attention of the hearers.

On the mornings of the 13th and 14th Inst. from about 8 to 11 A. M., Col. Olcott tried the effect of mesmerism upon some persons suffering from various complaints. A large number of such unfortunates had been collecting every day, but before trying his power the Colonel used to question all one by one and keep for treatment only those whom in his opinion mesmerism might do some good. He explained at once that diseases arising from syphilis or the like causes, or in those cases in which there is some lesion or destruction of some organ or where there are defects from birth, mesmerism is not efficacious. He also said that he was a traveller, and his stay in all places being very short, he expected perfect cure in only those cases where the patient was intensely sensitive to his magnetism. About 20 or 25 persons were treated magnetically, but there was scarcely one patient that was sensitive in any marked degree. We were not therefore fortunate enough to see perfect cure effected. Two or three persons having pain in some parts of the body were relieved of that pain, and in the case of two paralytics a little more ease of motion of the paralysed parts was induced. Mesmerized water and oil were also given to some of these persons. It is truly astonishing to see the President-Founder patiently and perseveringly mesmerizing a number of sufferers for hours together. The drain upon his vital powers must be immense, and all our Fellows here are of opinion that he should as soon as possible give up this practice which is sure to be injurious to his health. The energy and health of Col. Olcott are all required for other and higher purposes in connection with our Society for which he has so unselfishly been working, and as he has in various places encouraged several of our Fellows to try mesmerism and has given them practical instructions, he should now leave the practice of this subject for which he could ill-afford time and health. Numerous patients, not at all knowing the truth about mesmerism and the extent to which it could afford relief, go away dissatisfied, and where some cure is effected the report of that cure although thoroughly trustworthy in itself is liable to mislead, as the readers in such cases are apt to draw a great deal upon their imagi-

nation. Our President has acquired through the report of his cures a reputation that may be said to be "dangerous" to himself and to the Society, for, people expect too much and disappointment is sure to cause dissatisfaction. Taking all these things into consideration it is best that our worthy Colonel should now give up curative mesmerism and leave it to be practised by our Members who have time and health to spare, and are truly desirous of doing good. Col. Olcott left for Bombay on the night of the 14th. Inst.

NAVROJI DORABJI KHANDALVALA,

*President of the Poona Theosophical Society.*

#### THE PRESIDENT-FOUNDER AT BOMBAY.

Col. H. S. Olcott and staff left Poona, on tour, by 10-30 P. M. train, on Sunday the 14th instant and arrived at the Boree Bunder Station (Bombay) at 6-30 A. M., the next morning. The Members of the local Branch Society met him on the platform and escorted him to the camp of tents prepared for him on the Esplanade. Two days were devoted to seeing the Members and giving them advice and instruction, at the same time explaining to the outside sympathisers the aim and objects of the work of the Society.

On the evening of the 17th the President-Founder gave a public *ex tempore* speech at the Framji Cowasji Institute Hall, on the "Progress of Theosophy." The chairman, Dr. Pandurang Gopal F. T. S., opened the Meeting by referring to the rapid growth of the Society and to the wonderful mesmeric cures of Col. Olcott, which had a special scientific value. He dilated a little upon this branch of the subject and then formally introduced the lecturer to the audience. Col. Olcott spoke at great length, showing the progress of Theosophy. While in December last, at the time of the celebration of the Seventh Anniversary of the Society in that very Hall from which he first addressed the Indian Public and made Theosophy known to them, while there were but thirty-nine shields representing the Branch Societies in India and Ceylon, the number of Branches up to the day of the lecture was in India alone 83 and nine in Ceylon. While only twenty-two Delegates were present last year as representatives of different Branch Societies, this year's celebration at Madras would be attended by no less than one hundred and fifty Delegates. One of them would be Dr. F. Hartmann to represent four of the American Branches—a fact giving the lie to the false and malicious para. circulated here to the effect that Theosophy was at an end in America. Delegates from France and Germany were also expected, while the one from England, Mr. W. P. Brown, B.L., was there with him on the platform. This gentleman had come to India, not as a stranger who despises all that is native, but as a friend, a sympathiser and a student of the ancient philosophies of the land. Like the lecturer himself, Mr. Brown had determined to devote himself to the cause of the Theosophical Society. Col. Olcott then referred to his Bengal work, the assistance that he rendered to the Sinhalese in their late troubles, and his labours in Southern India. The order of the Govt. of Madras, mentioned in the Circular "Government and Theosophy," had a very beneficent influence upon the cause of the Society. He then referred to the various Sanskrit and other schools started under the auspices of some of the Branch Societies and suggested that although there were a few such Institutions in Bombay they should be supported, as they were dying for want of maintenance. After reviewing in short the work of the Society and its progress, he called upon Mr. Brown to make a few remarks. This gentleman made a short but a very impressive speech. He mentioned some eminent names to show what sort of persons had joined the Society in London, and added that the Theosophical Society was an Institution for the good and benefit of the whole world. With a vote of thanks to Col. Olcott and Mr. Brown, the Meeting adjourned.

On the 18th., candidates desirous of joining the Society were initiated by the President-Founder at a Meeting of the Branch held at its Hall in the Elphinstone Circle. Today some patients will be treated mesmerically, and on the 21st Col. Olcott and party leave Bombay for Jubbulpore.

BAL NILAJI PITALE,

*Secretary, Bombay Theosophical Society.*

MEMORANDUM.

The President-Founder extremely regrets that the enormous growth of the Society and the heavy work which it entails on him, prevents his giving more than a day and a half to each place instead of at least three, as he was very anxious to do. He, therefore, hopes that the Branches will utilize every available moment and arrange the times of public meetings and private ones for admission of candidates, in such a way that all the work may be got through in one day. The next morning may be devoted to the treating of patients by Mesmerism. Even with all this shortness of visits, he fears very much that he may not reach the Head-Quarters in time to prepare for the celebration of the Society's Eighth Anniversary.

Col. Olcott is accompanied, on tour, by (1) Mr. W. T. Brown, *Bachelor Legis* of Glasgow University, *F. T. S. of the London Branch*; (2) Damodar K. Mavalankar, *Joint-Recording Secretary of the T. S.*; (3) Mr. L. Venkata Varadarajulu Naidu, *Honorary Secretary to the Head Quarters Fund Committee*; (4) Mr. Toke Narainasawmy Naidu, *F. T. S., of Madras Branch*; and by one Mahomedan servant.

This Programme will be as strictly adhered to as possible. Any change, necessitated by unforeseen contingencies, will be signified by telegram. Branches wishing Col. Olcott to lecture, must not wait to consult him as to time or subject: they may choose their own.

DAMODAR K. MAVALANKAR,  
*Joint-Recording Secretary.*

CAMP OF THE PRESIDENT-FOUNDER OF THE  
THEOSOPHICAL SOCIETY,  
ESPLANADE, BOMBAY, 17th October 1883.

A PADRE EDITOR!

[WE give below copy of a letter by *Observer* to the Editor of the *Madras Mail*. In connection with this we call attention to the article "A Padre Editor" in our present number in reference to a leading article of the *Madras Times*. We also give a letter by our correspondent "O. V. N." (Bellary) to the Editor of the latter paper.—*Ed.*]

On the 11th of October the *Madras Times* was good enough to review in a leader Colonel Olcott's letter to Bishop Gell; the gist of the article is that "the Bishop is a man of lamb-like appearance" (?) adored by the public of Southern India (?) and one 'sans peur et sans reproche'. If Bishop Gell were a Lord Bishop, as his friends and admirers are so fond of calling him, and which he permits them to do, we should say that "Our Pecksniff"\* dearly loved a Lord, or what is the next best thing to it, a much belauded Bishop, who would be a Lord.

"Our Pecksniff" declares, "nor do the Bishop or the Clergy need any instruction". Surely he is not well up in his Gospels or is he a Roman that he considers the Bishop and his Clergy infallible? Pecksniff is "delighted that the Bishop and Clergy have incurred Colonel Olcott's hostility;" it assures him that they are doing their duty, the said duty consisting in, according to Pecksniff, abusing those who do not agree with them—this must be his idea of the Christ principle. Now-a-days every sinner dubs himself a Christian, without having a particle of the Christ principle in him. St. Augustine, whom perhaps even Pecksniff acknowledges, has written, "The same thing which is now called Christian Religion existed among the ancients, they have begun to call *Christian* the *truo* Religion which existed *before*." It is to be regretted that those who call themselves Christians do not act up to the standard that Jesus preached. There are Christians and Christians, and Colonel Olcott is the last person in the world to blame those who profess the Christ principle. As for the lives of Colonel Olcott and Madame Blavatsky, any one can know their lives for the last five years in India, and it is truly Pecksniffian to write "there come accounts which are not reassuring to Christians; and Christian teachers put these facts before their flocks." To disseminate gross calumnies without due inquiry is Pecksniffian Christianity, and it was open to the Christian (?) teachers to learn what were the lives of the Founders. The writer again tries—by giving a garbled account of Colonel Olcott's various quotations from Christian Magazines—to do away with the impression they must have made amongst reasonable people, but—he has signally failed in his attempt. Further on Pecksniff finds it convenient to ignore those lights of the Christian Church, the Bishops Tertullian and Athanasius—and treats us to ideas of his own on the subject of Theology, and which look very like as if he was in the pulpit holding forth to his unfortunate hearers. He should remember that the revision of the New Testament has been fatal to its authority, as once revised, no one can tell where revision will stop—and then why quote Scripture? It is very dangerous to write "No man has seen God at any time." It is somewhere mentioned in the Bible that several persons had seen God (Exodus xxxiii. 11.) And the Lord "spake unto Moses face to face as a man speaketh unto his friend.".....

For instance Pecksniff cannot understand Colonel Olcott's esoteric doctrine; he reads his Bible and understands only its exoteric meaning.

It is generally admitted that the Divine principle is in man, if so, the ancient saying "nosce te ipsum," *Know thyself*, meant nothing more or less than knowledge of the Divine. What is the good of an open Bible in which "all his teaching is exhibited," if you cannot understand his teaching? Is Pecksniff sure that he is not one of the blind, and to quote his own words, "those who pretend that they see and are blind are the most hopelessly blind." The jaunty manner in which with a "light heart" he views the poor Bishop without a salary, must be very comforting to Bishop Gell. Like Artemus Ward he too "would not mind sending all his wife's relatives to the wars." We presume the Editor, the Rev. J. F. Spencer, does not receive a salary from the Government, but is supported entirely by the *Madras Times*? Possibly he may make more out of it than Colonel Olcott does of the Theosophical Society, whose gains are represented by a Minus rather than a Plus. We suspect Bishop Gell won't agree with

\* "Our Pecksniff." See the correspondence of Mr. Howard with the *Madras Times* addressed to its Editor the Rev. J. F. Spencer—"The Charge against the *Athenum* Clerics."

the Reverend Spencer in his congratulation regarding Colonel Olcott's letter. His Reverence's abuse of the Madras Government is charming. Are the grapes sour, because he receives no salary from the vineyard? Or is it on account of certain missing documents, the property of Government, which were traced to the *Madras Times*? Does the Rev. Spencer not know that the Government has to ignore Religion? That it cares neither for the Bishop nor Pecksniff? That the duty of the Government is to mete out even-handed justice to all? It is not only in the High Court of Madras that Justice is to be found. The Madras Government, at all events, is desirous of rendering justice to all—and to the Theosophists, among the rest.

H. R. M., F. T. S.

TO THE EDITOR, "MADRAS MAIL."

SIR,

Your correspondent of the 8th October "Ooty Notes," writes:—"the greater part of society here think it would be as well if the good gentleman had not so openly expressed his 'Vipery' (to use his own words) intentions with regard to our much beloved and honored Bishop." The "greater part of Society" must consist of your own correspondent. The fact is that society is too intent upon its own pleasures to care anything about Col. Olcott or the Bishop and leaves them to settle their own quarrels. As for his final quotation—"tis pitiful! very pitiful." I must agree with him so far, that if the Bishop will introduce controversial subjects at his own dinner table in a company composed of many different thinkers—it is pitiful. Every man has a right to have his own opinion, but this freedom of thought is exactly what your correspondent condemns—if we are all to set to and abuse each other's religious opinions, it must end in a free fight all round, and he who, like the Irishman in the fair, drags his coat along the ground entreating passers by to tread upon it—must expect to have his coat trod upon and be taken at his word.

It is not the Theosophist, a seeker of Divine Wisdom, who seeks quarrels, he must be the exact opposite—and here I would remark that the crass ignorance regarding Theosophy that seems to prevail, is, in this age of inquiry, marvellous. One man says the Society is political, another that it means the study of Black magic—a third that it means Atheism. It is lamentable to hear people of "position and culture" discoursing on matters they do not even care to comprehend. The *Theosophist* journal, published monthly, is open to all for the small subscription of Rupees 8 per annum. The motto of the journal is "There is no Religion higher than Truth." If the writer of *Ooty Notes* can improve upon the above, let him do so.

Amongst so many diverse Religions—there can be but one true one—and that is Truth. In this materialistic age, every man is his own Padre and Bishop, whether he call himself Gnostic or Agnostic, and Priestcraft is as dead as Julius Cæsar. If A abuses B and his opinions in a mixed company, be sure B will hear of it, and take his own measures for clearing himself. It would have been well if the writer of "Ooty Notes" had let Col. Olcott's letter alone. "Let sleeping dogs lie" is a saying that he has apparently forgotten—but one he may have reason to remember.

Yours faithfully,

OBSERVER.

11th October 1883.

TO THE EDITOR OF THE "THEOSOPHIST."

The *Madras Mail* once famous for letting both sides be heard, now closes its columns in the most unfair manner, and only inserts one side; "Audi alterem partem" only was its motto when the paper was first started. The Editor now thinks he can do without "Justice." Let us see.

Yours,

OBSERVER.

COLONEL OLCOTT AND THE "MADRAS TIMES."

TO THE EDITOR OF THE "MADRAS TIMES."

SIR,—In your issue of the 12th instant you have taken to task Colonel Olcott for his "open" and (in your opinion) insolent letter to the Bishop of Madras. I assure you that I am not a member of the Society of which Colonel Olcott and Madame Blavatsky are the Founders, and that it is only in justice to fair play that I undertake to point out some erroneous impressions contained in the said article. I therefore hope, with your usual kindness, you will allow

some space for this letter in your columns. With great diffidence I say erroneous impressions, because for a long time you have been discussing questions, political as well as religious, with great impartiality, as the public are well aware.

Doubtless, you know, soon after their arrival in India, Colonel Olcott and Madame Blavatsky laid before the public the records of their antecedents. Colonel Olcott is careful in remarking in his letter to the Bishop "you have grievously wronged us\*\*\* and without sufficient inquiry, giving them (reports) currency"—you say that Christian teachers place before their flocks accounts not reassuring to Christians which come from places where Colonel Olcott and Madame Blavatsky have been before. Granting this to be the case, Colonel Olcott contends that currency is given to the reports "without sufficient inquiry." And you meet this point by throwing on the Colonel and Madame Blavatsky the burden of refuting the calumnies they complain of. A careful consideration of the stories from time to time set up against the Founders of the Theosophical Society will convince the public that the statement of Colonel Olcott is not false. A very striking instance of this can be found in the action of the missionaries with regard to the cocoanut tree, which was planted by Colonel Olcott in the Tinnevely Pagoda. This was in our own Presidency, and now what weight could be given to the stories coming (from missionary sources certainly!), from places where Colonel Olcott and Madame Blavatsky have been before? The law of evidence does not allow the burden of proof being thrown on the defending party until the prosecution has made out a *prima facie* case, and considering the official records of Colonel Olcott's and Madame Blavatsky's antecedents, their closely watched movements and operations in India and the false stories spread against them so far as are known to the Indian public, I leave it to them to judge if you have not thrown the burden of proof on the wrong party.

And with regard to the action of the Madras Government, while you carry it too far, that Government and Colonel Olcott are as candid as can be expected, the former, if my memory is correct, promising only to follow the lines laid down by the Government of India, and the latter assuring us "we shall take care to continue to deserve the boon." It is therefore very lamentable that you, who criticised the actions you refer to, of the Madras Government, to the great satisfaction of the public, should make of them an argument for the Colonel enjoying "any special aid and protection." No one who is acquainted with the writings and doings of the Colonel and Madame Blavatsky would ever think of laying such a charge at their door.

As for any miscarriage of justice which you seem to apprehend, experience has shown that for numerous and various reasons, if miscarriage of justice there be in religious matters in any country, it will not be in favour of any other religion than that of the State. But fortunately, such cases are, it must be admitted, of rarer occurrence in British rule than in any other.

That ultimately "justice will be found in the High Court of Madras"—a well-known fact—is undoubtedly the greatest of blessings which people of this Presidency, irrespective of color or creed, are now enjoying.

O. V. N.

BELLARY, }  
October 16th. }

ESOTERIC BUDDHISM.

[We subjoin copy of a letter from Mr. W. T. Brown, B. L., F. T. S., to the Editor of "Light" on the subject of Esoteric Buddhism and Mahatmas.—We add another from the same gentleman on different subjects to the Editor of our local "Madras Times".—*Ed.*]

TO THE EDITOR OF THE "MADRAS TIMES."

Sir,—I beg to call your attention to a paragraph in your issue of the 4th instant entitled "The End of Theosophy in America."

It is very surprising to me, who am a Fellow of the London Society and who have come recently to India, to get experience in this philanthropic work, to find an article such as this reprinted in your paper.

In all who know the leading members of the Theosophical Society and their nobility of character, the article referred to raises feelings of righteous indignation, and it is to be regretted that the article complained of should have been permitted to be put in type. The association of our Madame Blavatsky's name

with that of base and immoral spiritualists is disagreeable, but the using in reference to her of such epithets as "ignorant and blasphemous charlatan" is revolting.

The statement referred to is from first to last a lie, and has been concocted by some malicious person.

Our President-Founder, Colonel H. S. Olcott, had occasion to notice this article some time ago on its appearance in another Indian paper, and was at the trouble to call the proper attention to it. You will thus understand, Sir, how disagreeable it is to Theosophists of all countries to find this scurrilous production turning up again.

So far from Theosophy being at an end in America it is growing (from, no doubt, its own inherent goodness) and four respective Societies in that country have appointed Dr. Hartiman, F. T. S., to be their delegate and to represent them here at the Society's Annual meeting. As for England, I may say that the Society's influence among metaphysicians and religious thinkers is becoming greater day by day, as is exemplified by the large audience which assembled recently in Picadilly to listen to addresses from our London President and Mr. A. P. Sinnett.

Now, Sir, I make no threats in this letter, which I ask you to be so good as to publish but need hardly say that I expect you as a Christian gentleman, to notice the matter editorially and to express regret in regard to the offensive paragraph referred to.

I am, Sir,

Your obedient Servant,

W. T. BROWN, F. T. S.

(B. L. Glasgow.)

ADYAR, MADRAS; }  
9th October 1883. }

#### TO THE EDITOR OF "LIGHT."

SIR,—May I be allowed to say some words once more upon the subject of *Esoteric Buddhism*? Having left England for India on August 25th, I have been unable to keep "en rapport" with the discussion, while it lasted, and to communicate with you at a time perhaps more suitable than the present.

I am enabled to write in answer to your spiritualistic correspondents, because I am in sympathy with all honest spiritualists and am a corresponding member of the Central Association in London. While acknowledging, however, the phenomena of Spiritualism to be scientific, I have been enabled by some study to see their rationale and to rise to Esoteric Truth, which MASTERS of Occultism and Theosophists can understand.

Well then, I proceed now to offer some resistance to the attacks of your contributors and of the journalists of London generally.

I refer first to an opinion expressed in regard to the erudition of Mr. Rhys-Davids as opposed to that of our President-Founder. It would not be real modesty to refrain from asserting that no one with so-called normal powers can know nearly so much of Buddhism as the prominent members of the Theosophical Society.

I now proceed, Sir, to deal with some contributors to the paper under your editorial direction. In answer to them generally, it may be said that we expect, and are prepared for, the Scepticism, of which we have recently had a sample. It would be vain to expect other things from those, who having eyes yet do not see. The doubting of the existence of the Occult Brothers is a matter, which in the real Theosophist, provokes a quiet laugh. The speaking disparagingly of them raises feelings of indignation and of pity. Accepted Chelas, of whom there are many in this Empire and four of whom I have the honor of knowing personally, are in constant communication with their MASTERS, have seen them frequently in both ordinary and to us extraordinary circumstances, and knew them as they know their own selves. The statement that "the Brothers" are not seen is indeed absurd and untrue.

And now I proceed to notice particularly the letter of one of your correspondents, Mr. Henry Kiddle. Mr. Kiddle's letter is written conscientiously and in a good spirit; and there is no doubt but that, from an ordinary stand point, there is fair reason for the protest with which we have been favoured.

Mr. Kiddle, "not to put too fine a point upon it," accuses one of our respected MASTERS of nothing short of plagiarism. Mr. Kiddle will not, I am sure, maintain that the ideas contained in his excerpts are original and are placed by him for the first time before an attentive world. Our MASTER puts the same ideas before us (in pretty much the same words, it is true) but refers, beforehand, to a gentleman of the name of Plato. The sentences, to which Mr. Kiddle lays claim, are found among a number of others bearing on the subject, but the latter are not, so far as we heard, to be found in any discourse delivered at Mount Pleasant or elsewhere. Whence come they? is the query which arises.

We will not answer Mr. Kiddle by saying, in the words of Solomon, that there is nothing new under the sun; but will tell him, instead, that the explanation is occult, and deals with an essence known as "astral light". Our MASTER has, no doubt, seen the idea, and, being tired, as indicated at the close of the paragraph referred to, has written or impressed it hurriedly and without regard to the feeling of Mr. Kiddle on the one hand or of Plato on the other.

To us, who are within the pale, it is unpleasant to write letters of a nature such as this in answer to unsympathetic and scepti-

cal men. But as time goes on it will be recognised (though we say it, perhaps, we should not) that an explanation such as this is good-natured; for the absence of knowledge on the part of Mr. Kiddle is assuredly his loss—not ours.

I am, Sir,

Yours truly,

W. T. BROWN, F. T. S.,

Bachelor Legis.

ADYAR, (MADRAS); }  
8th October 1883. }

WE are requested to make room for the following:—  
A PROTEST OF THEOSOPHISTS.

TO THE EDITOR OF "LIGHT."

SIR,—The undersigned Hindu Theosophists, having been made acquainted with the expressions used by "G. W., M. D." in your journal, with respect to Aryan Esoteric Philosophy and our revered Mahatmas, do indignantly protest. Such language as the gentleman has indulged in, every Hindu, whether educated or not, would regard as shocking and blasphemous, evincing in its author a bad heart, bigoted prejudice, and the grossest ignorance about our ancient Philosophy and Esoteric Science.

We are, Sir,

Your obedient Servants,

Madras Theosophical Society.

- Sreemati Swarna Kumari Devi, and others.

## Official Reports.

### THE IONIAN THEOSOPHICAL SOCIETY.

[The necessity of the organisation of committees by our members for the investigation of psychometry and the cognate sciences has been reiterated in these columns over and over again and also by the President-Founder in his public and private discourses. Knowing the splended results achieved by the Society for Psychic Researches in England, it is a wonder that our advice has not been followed to the extent desired. It is with a real pleasure that we make room for the following letter from the Psychic Research Society to Count Gonemys, F.T.S., of our Corfu Branch. We hope our other branches will not beslow to profit by the example set by the Ionian Society. In each branch according to their numerical strength, committees should be formed for the study of the various elementary branches of Occultism. It is rather strange that those who profess to thirst after knowledge should yet neglect the food placed before them. Ed.]

CAMBRIDGE, 2nd September 1883.

SIR,

We have read with the greatest interest your communication which is exactly within the circle of our investigations and we shall make use of it with great pleasure by printing it in full or by translating it summarily. I regret very much not to be more in the habit of writing in French. The difficulty of expressing myself in this foreign language hampers me so that I cannot express to you as I would my gratitude for a letter which is certainly the most important we have hitherto received.

I hope you will continue to communicate to our Society your experiences and reflexions; they will certainly meet with our utmost attention.

At the next meeting of the council of the Society, which will take place in the month of October, I shall have the honor of proposing you as a member.

Receive, Sir, the assurance of my best respect and believe me,  
Your most obliged servant,  
(Signed) FREDERIC W. H. MYERS.

### THE SATYA MARGA THEOSOPHICAL SOCIETY.

At a meeting of the "Satya Marga" Theosophical Society, Lucknow, held on the 3rd October 1883 for the election of Officers for the current year, the following gentlemen were nominated:—

- |                      |   |
|----------------------|---|
| President.....       | Pandit Pran Nath.                       |
| Vice-President.....  | Roy Devi Prasad.                        |
| Secretary.....       | Jwala Prasad Sankhadhara.               |
| Joint Secretary..... | Pandit Sheo Narain Upadhea.             |
|                      | JWALA PRASAD Sankhadhara,<br>Secretary. |

Approved.

H. S. OLCOTT, P. F. T. S.,

### THE NEGAPATAM THEOSOPHICAL SOCIETY.

The following Officers were elected for the current year by the "Negapatam Theosophical Society," and approved by the President-Founder;—

- |                     |                                  |
|---------------------|----------------------------------|
| President.....      | N. P. Subramania Iyer.           |
| Vice-President..... | P. Ratnasabhapathy Pillay, B. A. |
| Secretary.....      | S. A. Saminadier.                |
| Treasurer.....      | T. K. Annasami Iyer.             |
| Hony. Pandit.....   | Mahadeva Sastrial.               |

### THE ADONI THEOSOPHICAL SOCIETY.

At a meeting of members of the Theosophical Society, held this day, the President-Founder in the chair, it was unanimously resolved that a Branch of the Society be formed with the title of the "Adoni Theosophical Society."

Upon motion of B. Veerasamiah Garu, seconded by C. Munnasamy Nayudu, it was unanimously resolved to adopt the bye-laws of the Parent Society temporarily; and the following gentlemen were appointed a committee to draft bye-laws and report to the next meeting: B. Veerasamiah Garu, A. Theruvengada Mudaliar, A. Akelanda Mudaliar, C. S. Vasudevaiah Garu, A. Muthva Row Garu.

An election being held for officers, the following gentlemen were chosen for the ensuing year:—

- |                             |                           |
|-----------------------------|---------------------------|
| President.....              | B. Veerasamiah Garu.      |
| Vice-President.....         | A. Theruvengada Mudaliar. |
| Secretary and Treasurer ... | C. Munnasamy Nayudu.      |

There being no further business, the Society adjourned to meet on Saturday, the 6th Instant, at 3 P. M.

ADONI, } L. VENKATA VARADARAJULU NAIDU,  
October 1st, 1883. } Ag. Secretary to P. F. T. S.

Approved. Let Charter issue.

H. S. OLCOTT,  
P. T. S.

Ed. Note.—Thus, over 400 Hindu Theosophists are found to vehemently protest against Dr. Wyld's uncalled for satire and sneers. It is well, we think, that the ex-Prest. of the London Lodge T. S. has resigned his connection with our Society. It remains to be seen whether Light will have the fairness to publish the above protest.

### THE COIMBATORE THEOSOPHICAL SOCIETY.

At a meeting of Fellows of the Theosophical Society, the President-Founder in the Chair, it was moved by Mr. T. M. Sundram Pillai and seconded by Mr. A. Periasawmy Moodaliar, that a branch of the Society be organized under the name of "The Coimbatore Theosophical Society." Carried unanimously.

Upon motion the Bye-Laws of the Parent Society were temporarily adopted. The following gentlemen were selected as a Committee on Bye-Laws:—1. T. M. Sundram Pillai, 2. M. K. Soobba Row, 3. N. Annasawmy Row, 4. A. Periasawmy Moodaliar, and 5. Nott Sreenevassa Row. The following gentlemen were then elected as office bearers for the ensuing year:—

*President*, Mr. N. ANNASAWMY ROW; *Vice Presidents*, Messrs. A. PERIASAWMY MOODALIAR and M. K. SOOBBA ROW; *Secretary and Treasurer*, Mr. T. M. SUNDRAM PILLAI; *Assistant Secretary*, Mr. R. CHENGULVARAYA NAIDOO GARU; *Councillors*, Messrs. A. PONNOORUNGA MOODALIAR, NOTT STREENEVASA ROW, R. COONJUPPA PILLAI, C. VENKATARAMA NAIDOO, A. PONOSAWMY PILLAI, and T. RAMACHENDRA ROW.

The President Founder then gave some instructions of a private nature to the members, and there being no further business, the Society adjourned, subject to the call of the President.

T. SEETHARAM SING,  
*Acting Secretary.*

COIMBATORE,  
18th September 1883.

Approved. Let Charter issue.

H. S. OLCOTT, P. T. S.

### THE PONDICHERY THEOSOPHICAL SOCIETY.

The first meeting of our Society was in an isolated special chamber belonging to our Brother Tandou Sundira Poulle, at which seven members were present.

Mr. Tandou Sundira Poulle was unanimously elected as President, and M. Murugappa Modeliar as Secretary.

M. MURUGAPPA MODELIAR,  
*Secretary.*

PONDICHERY, 24th September 1883.

### THE MYLAPORE THEOSOPHICAL SANSKRIT SCHOOL.

As announced in the handbills, the ceremony of opening "The Mylapore Theosophical Sanskrit School" took place at 6 A. M. on the 7th September 1883, at Kristnavilass (the residence of Dewan Bahadoor R. Ragoonath Row), Mylapore.

There were amongst those present:—M. R. Ry. P. Strinivasa Row Pantulu Garu; M. R. Ry. T. Vencasami Rowji; M. R. Ry. P. Chenshal Row Pantulu Garu; M. R. Ry. V. Bhashiam Iyengar Avergul; M. R. Ry. S. Strinivasa Raghava Iyengar Avergal; M. R. Ry. Ramanadha Iyer Avergul; M. R. Ry. S. Gopalachariar Avergul; M. R. Ry. M. Seshageri Sasstryar Avergul; M. R. Ry. T. Subba Row Pantulu Garu; M. R. Ry. R. Ragoonath Row, Dewan Bahadur; M. R. Ry. A. Ramachendra Rowji; M. R. Ry. Rajam Iyengar; M. R. Ry. V. Desikachariar; M. R. Ry. G. Soobbiah Chetty Garu; M. R. Ry. Jayaraja Row; M. R. Ry. R. Ranga Row; M. R. Ry. Parthasarathy Iyengar Avergul; M. R. Ry. N. Kristnasami Iyer; M. R. Ry. L. C. Kristnasami Iyer; and others.

The ceremony began by Dewan Bahadur R. Ragoonath Row, President of the Local Committee for the management of "The Mylapore Sanskrit Theosophical Society," explaining to those present the objects and aims of the Society in the establishment of such Sanskrit schools. He said it was one of the chief objects of the Theosophical Society to create a desire in, and a thirst after, the study of the Sanskrit literature. In order to give practical effect to it, the Society, in one of its meetings resolved to start Sanskrit Institutions of this description in which will be taught Tamil and Telugu besides Sanskrit. The moral principles as inculcated in the ancient Hindu Shastras will be impressed on the mind of the students.

That a series of readers will be printed in the aforesaid languages, containing Moral precepts, extracts from the Vedas, the Smritis, the Bhagavat, the Mahabharata and the important Puranas, and dissertations on subjects concerning Occultism, Mesmerism, Psychology, &c., for the use of those schools. He hoped the Society will be able to achieve its ends sooner or later in course of time. The school was then declared open.

The ceremonies terminated by distribution of flowers, sandal, and *pan supari* to those who had honored the occasion with their presence, and of sugarcandy to the students, numbering about 20, and alms to indigent persons.

R. RAGOONATH ROW,  
*President.*

In the last line but one of page 6, column 2, of the *Supplement to the Theosophist* for September 1883 T. Krishna Row's name is by mistake given as a Vice-President of the "Nachiyar" Theosophical Society, Srivilliputtur, instead of T. Narasimhacharyar.

## Our New Branches.

### THE ADONI THEOSOPHICAL SOCIETY.

A Branch Society has been formed by Colonel Olcott at Adoni. It is to some extent due to the exertions of our indefatigable brother, S. Ramaswamier, B. A., of Tinnevely,

### THE PIONEER THEOSOPHICAL SOCIETY OF SAINT LOUIS.

I HAVE the honor to report to you, that on the 17th July a Branch of the Theosophical Society was organized in this city, under the provisions of a charter granted 5th June to Elliott B. Page, Frank Kraft, Thomas M. Johnson and Edward H. Gorse, the members who took part in the organization having been duly initiated by Frank Kraft, who acted by authority of a special resolution passed by the Council at New York.

At the meeting mentioned above, the following officers were elected to serve for the ensuing year:—

ELLIOTT B. PAGE, *President*,  
FRANK KRAFT, *Secretary and Treasurer.*

The full report of our proceedings which should have been sent to Head-quarters before this time, has been delayed by the unavoidable absence of our Secretary, who is now absent under orders from the P. O. Department with which he is connected.

This notification is only to apprise you that we have made a commencement here: details will be forwarded as soon as Mr. Kraft returns.

ST. LOUIS, Mo. U. S. A. }  
August 17th 1883. } ELLIOTT B. PAGE.

## Personal Items.

It affords us much pleasure to notice that by the exertions of the "Saru Hitkari" Theosophical Society, six night schools have been opened at Gorakhpur for imparting an elementary instruction in Hindi reading, writing and oral arithmetic to persons actually earning their livelihood by manual labour. There are above 250 persons who are taking advantage of the schools. One Sunday School has also been started with a strength of about 50; and in this lectures on moral subjects are delivered for the benefit of the young men of the town. In this connection, our brother, Pandit Saligram, deserves prominent mention.

Babu Parmeshri Sahaie, F. T. S., of Moradabad, read a very interesting lecture on Theosophy, at a public meeting at Fyzabad, in which Mr. Kacoo Mal presided.

Babu Jwala Prasada Sankhadhar, Secretary of the "Satya Marga" Theosophical Society, Lucknow, gave a lecture at Rae Bareilly on the "aims and objects of the Theosophical Society." His Highness the Prince Shadoo Singh Bahadoor took the chair.

### THE EIGHTH ANNIVERSARY OF THE THEOSOPHICAL SOCIETY.

The coming Anniversary of the Parent Theosophical Society will be celebrated at the Head quarters on the 27th December 1883 and the following days. Delegates will make their arrangements accordingly. Further particulars will follow.

Damodar K. Mavalankar, Joint Recording Secretary of the Theosophical Society, left Adyar on the evening of the 11th October and joined at Poona the President-Founder whom he will accompany in his Northern Tour.

### OBITUARY.

WITH deep regret we have to announce the death of Mr. C. T. Winfred, B. A., a Fellow of the Trichinopoly Theosophical Society, which occurred a few weeks ago.

OUR friend and Brother, Mr. G. C. A. Jayasekara, President of Galle Buddhist Theosophical Society, thus reports:—

"With feelings of deep regret, I have to announce the death of Mr. Emanis de Silva Gunasekara, a very useful and earnest member of our Society and one of the Trustees of the Southern Province Fund. He was ailing for some time, and was removed to the residence of his son Mr. U. D. S. Gunasekara, F. T. S., Colombo, for obtaining medical aid, where he died on the 7th September. His remains were removed to his native village here and buried in great pomp and style. Our Society was well represented at the funeral."

# THE THEOSOPHIST

A MONTHLY JOURNAL DEVOTED TO ORIENTAL PHILOSOPHY, ART, LITERATURE AND OCCULTISM:  
EMBRACING MESMERISM, SPIRITUALISM, AND OTHER SECRET SCIENCES.

Vol. 5. No. 3.

MADRAS, DECEMBER, 1883.

No. 51.

सत्यात् नास्ति परो धर्मः ।

THERE IS NO RELIGION HIGHER THAN TRUTH.

[Family motto of the Maharajahs of Benares.]

## HAVE WE TO LOWER THE FLAG OF TRUCE?

The spiritualistic journals, with the honourable and solitary exception of the *Banner of Light*, lose no opportunity for effecting Quixotic thrusts in the direction of Theosophy. That they are made generally at random, and thus fall as harmless as the blows of the Knight of the Rueful countenance—is not from any want of benevolent intention in our generous friends. For several years we have borne their ill-natured remarks with theosophic forbearance and have never attacked either Spiritualism as a belief, or its adherents, with those few exceptional cases when we had to defend ourselves. Nor have we, though ourselves disbelievers in their orthodox tenets, been ever tempted to carry the war into the enemy's country. In silence we pursued our work, expecting every earnest seeker of Truth to do the same. Tolerant of their belief we hoped for the same tolerance on their part. But we were doomed to disappointment. The achievements of the doughty champions of returning "Spirits" in their latest skirmishes against the "Brothers" and their humble agents—Colonel Olcott and H. P. Blavatsky, though amusingly absurd to our Fellows, are yet so calculated to hurt the feelings of the Hindu Members of our Society that we can no longer ignore the charges preferred. After receiving a number of letters from certain regular *Chelas* whom we have personally persuaded to co-operate with us, we are obliged, in due discharge of our duty, to enter the arena of controversy, under the penalty of having our silence construed into tacit consent. In the present instance we are moved to this course by sundry remarks in *Light* in connection with Mr. Kiddle's fancied *exposé* of Mr. Sinnett's "Guru"—who stands accused of having "appropriated" some stray sentences from a lecture by that new convert to Spiritualism!! It is not to defend the Mahatma however, or to explain the "mystery" of the parallel passages that we now enter the lists. To undertake the former would be irreverent presumption on our part, while the latter would require a full and entire explanation of "a deeply interesting psychological problem" as "A Student" fitly puts it in *Light*,—a task with which we are not so far entrusted. [We are glad, however, that others, in the present number, lift the veil considerably and disclose the mystery, as far as permitted—General Morgan for one.] As to our own intention it is simply to show the utter absurdity of the whole accusation, in whatever way and from whatsoever stand-point one may look at it. The whole question resolves itself into this:—

The letters to Mr. Sinnett were written either by a real living Mahatma, a personality quite distinct from

Colonel Olcott and Madame Blavatsky; or, they are the production of the "two Occidental humourists" (a very mild way of putting it, by the bye) as suggested by the *St. James' Gazette*. On either supposition the charge of plagiarism is the very height of the ridiculous, is "perfect nonsense," as Mr. Sinnett justly remarks. To suspect the writer of such letters, the Teacher of such a grand system of philosophy (even in its simple outlines, so far) of *plagiarizing* a few stray sentences from a very indifferent lecture, remarkable for nothing but its correct English, is an insanely absurd improbability. Upon the other hypothesis, even if ground be granted to it sufficiently firm to enable it to raise its head, the charge becomes, if possible, more untenable still. If the "two Occidental humourists" were capable of evolving from their inner consciousness the grand doctrines, now outlined in *Esoteric Buddhism*—a system of philosophy which is receiving (thanks to the intense activity created among all religious thinkers in the East by the revelations of our Mahatmas through Mr. Sinnett) daily corroboration from the esoteric doctrines of Hinduism, Zoroastrianism and even of Judaism—as some Hebrew Kabalists are preparing to prove—surely such clever philosophers and scholars ought to be credited with some grains at least of common sense. But where, we ask, was that common sense at the time of forging (for such is the proper term) those "bogus letters," if any of the said "two humourists" turned for a few stray sentences to the *Banner of Light*,—the most widely known spiritualistic organ in America, read, perhaps, by 100 thousands of believers! One need have been no great genius or prophet to have felt sure that detection would follow immediately upon any such plagiarism; that the chances were a hundred to one that the "parallel passages" would at once be detected, the more especially as some of Mr. Sinnett's friends who had access to the letters were spiritualists and probable readers of the *Banner of Light*. It is preposterous, therefore, to connect such insane actions with any one outside a lunatic asylum. Thus it becomes evident that our generous opponents are not very particular as to the nature of the weapons wherewith an unsympathetic rival is attacked, and still more clear that none of their offered theories can ever be made to fit the present case.

Whatever the final result of the ado created, meanwhile we are forced to perform a very disagreeable task. It is not the personalities in which our opponents have so freely indulged of late that induces us to lower the flag of truce which we have hitherto presented to the spiritualists, but simply the impossibility to refuse to insert a number of letters on this subject which are pouring in upon us from all sides. Space does not permit our publishing them all, but the most important ones are given elsewhere. We have sought to help the world to comprehend some important psychological problems, but instead of doing good, we have, it appears, committed a sin. We find we have gone too far, and are now reaping the just reward of giving to the world what it is not prepared to receive. Warning to this effect was offered though never accepted, as the author of *Esoteric Buddhism* is well

aware of; and the result is, that we now find ourselves in the midst of two fires. It will be seen from the letters we have mentioned how we are traduced and reproached by both friends and enemies. Well, we must try and survive the storm. Yet, while the most low and vulgar personal jokes, the most scurrilous and unmerited abuse and slander for several years running in the "high toned" Anglo-Indian and English journals have left us alive; and the pious fibs and incessantly repeated calumnies,—the outcome of *odium theologicum*—in the missionary organs have failed to annihilate us; and even the constant innuendoes and venomous remarks scattered against the theosophists in the *friendly* spiritualistic journals, have done no more than destroy for a few brief minutes our natural placidity, the reproaches we are now receiving are of a far more serious nature. So long as the thousand and one false charges, one more absurd than the other, were brought against us, we could afford to despise and even laugh at them. But since we feel that the reproaches poured on us by brother-chelas are neither unjust nor unmerited, we have but to bow down our head and receive the castigation with unfeigned humility. *Mea culpa!* is what we shall have to repeat, we fear, to the end of our life-journey. We have sinned heavily, and we now reap the fruits of our well-meant and kindly-intentioned but still a grievous indiscretion. Some of our theosophists, the most prominent, will have to share with us the just reproaches. May they feel as much and as sincerely as we do that they deserve them, and that they were the first to have a hand in, and to profit by, the desecration we now stand accused of!

#### DISCRIMINATION OF SPIRIT AND NOT- SPIRIT.\*

(Translated from the original Sanskrit of Sankara Acharya.)

BY MOHINI MOHAN CHATTERJI, M.A., B.L., F. T. S.

Q. What is Spirit?

A. It is that principle which enters into the composition of man besides the *three bodies*, and which is distinct from the five sheaths (*Koshas*), being *sat* (existence), † *chit* (consciousness), ‡ and *ananda* (bliss), ¶ and witness of the *three states*.

Q. What are the three bodies?

A. The gross (*sthula*), the subtle (*sukshma*) and the causal (*karana*).

Q. What is the gross body?

A. That which is the effect of the *Mahabhutas* (primordial subtle elements) differentiated into the five gross ones (*Panchikrita*), || is born of *Karma* and subject to the six changes beginning with birth. § It is said:—

What is produced by the (subtle) elements differentiated into the five gross ones, is acquired by *Karma*, and is the measure of pleasure and pain, is called the body (*sarira*) *par excellence*.

Q. What is the subtle body?

A. It is the effect of the elements not differentiated into five and having 17 characteristic marks (*lingas*).

Q. What are the seventeen?

\* Continued from the November *Theosophist*, 1882.

† This stands for *Purusha*.—Tr.

‡ This stands for *Prakriti*, cosmic matter, irrespective of the state we perceive it to be in.—Tr.

¶ Bliss is *Māyā* or *Sakti*, it is the creative energy producing changes of state in *Prakriti*. Says the *Sruti* (Taittiriya Upanishat):—"Verily from Bliss are all these *bhutas* born, and being born by it they live, and they return and enter into Bliss."—Tr.

|| The five subtle elements thus produce the gross ones:—each of the five is divided into eight parts, four of those parts and one part of each of the others enter into combination, and the result is the gross element corresponding with the subtle element, whose parts predominate in the composition.—Tr.

§ These six changes are:—birth, death, being in time, growth, decay, and undergoing change of substance (*parindam*) as milk is changed into whey.—Tr.

A. The five channels of knowledge (*Jnanendriyas*), the five *organs of action*, the five *vital airs*, beginning with *prāna*, and *manas* and *buddhi*.

Q. What are the *Jnanendriyas*?

A. [Spiritual] Ear, skin, eye, tongue and nose.

Q. What is the ear?

A. That channel of knowledge which transcends the [physical] ear, is limited by the auricular orifice, on which the *ākas* depends, and which is capable of taking cognisance of sound.

Q. The skin?

A. That which transcends the skin, on which the skin depends, and which extends from head to foot and has the power of perceiving heat and cold.

Q. The eye?

A. That which transcends the ocular orb, on which the orb depends, which is centred in the black iris and has the power of cognising forms.

Q. The tongue?

A. That which transcends the tongue and can perceive taste.

Q. The nose?

A. That which transcends the nose, and has the power of smelling.

Q. What are the *organs of action*?

A. The organ of speech (*vāch*), hands, feet, etc.

Q. What is *vach*?

A. That which transcends speech, in which speech resides, and which is located in *eight different centres\** and has the power of speech.

Q. What are the *eight centres*?

A. Breast, throat, head, upper and nether lips, palate ligature (*frenum*), binding the tongue to the lower jaw and tongue.

Q. What is the *organ of the hands*?

A. That which transcends the hands, on which the palms depend and which has the power of giving and taking. \*\*\* (The other organs are similarly described).

Q. What is the *antahkarana*?

A. *Manas*, *buddhi*, *chitta* and *ahankara* form it. The seat of the *manas* is the root of the throat, of *buddhi* the face, of *chitta* the umbilicus, and of *ahankara* the breast. The functions of these four components of *antahkarana* are respectively doubt, certainty, retention and egotism.

Q. How are the five vital airs, † beginning with *prana*, named?

A. *Prāna*, *apāna*, *vyāna*, *udāna* and *samāna*. Their locations are said to be:—of *prana* the breast, of *apana* the fundamentum, of *samana* the umbilicus, of *udana* the throat, and *vyana* is spread all over the body. Functions of these are:—*prana* goes out, *apana* descends, *udana* ascends, *samana* reduces the food eaten into an undistinguishable state, and *vyana* circulates all over the body. Of these five vital airs there are five sub-airs, namely, *naga*, *kurma*, *krikara*, *devadatta* and *dhananjaya*. Functions of these are:—erructations produced by *naga*, *kurma* opens the eye, *dhananjaya* assimilates food, *devadatta* causes yawning, and *krikara* produces appetite—this is said by those versed in *Yoga*.

\* The secret commentaries say seven; for it does not separate the lips into the "upper" and "nether" lips. And, it adds to the seven centres the seven passages in the head connected with, and affected by, *vach*; namely—the mouth, the two eyes, the two nostrils and the two ears. "The left ear, eye and nostril being the messengers of the right side of the head; the right ear, eye and nostril—those of the left side." Now this is purely scientific. The latest discoveries and conclusions of modern physiology have shown that the power or the faculty of human speech is located in the third frontal cavity of the left hemisphere of the brain. On the other hand, it is a well known fact that the nerve tissues inter-cross each other (decussate) in the brain in such a way that the motions of our left extremities are governed by the right hemisphere, while the motions of our right hand limbs are subject to the left hemisphere of the brain.—Ed.

† A flood of light will be thrown on the text by an editorial note in *Theosophist*, vol. IV, 11, 269:—"Antahkarana is the path of communication between soul and body, entirely disconnected with the former, existing with, belonging to, and dying with the body." This path is well traced in the text.—Tr.

‡ These vitals airs and sub-airs are magnetic currents.—Tr.

The presiding powers of the five channels of knowledge and the others are *dik* (akas) and the rest. *Dik, vata* (air), *arka* (sun), *prachetá* (water), *Aswini, bahni* (fire), *Indra, Upendra, Mrityu* (death), *Chandra* (moon), *Brahmá, Rudra, and Kshetrajesvara*,\* which is the great Creator and cause of everything. These are the presiding powers of ear, and the others in the order in which they occur.

All these taken together form the *linga sarira*.† It is also said in the *Shastras* :—

The five vital airs, *manas, buddhi*, and the ten organs form the subtle body, which arises from the subtle elements, undifferentiated into the five gross ones, and which is the means of the perception of pleasure and pain.

Q. What is the *Káрана sarira* ?‡

A. It is ignorance (*avidyá*), which is the cause of the other two bodies, and which is without beginning,¶ ineffable, reflection [of Brahma] and productive of the concept of non-identity between self and Brahma. It is also said :—

“Without a beginning, ineffable *avidyá* is called the *upádhi* (vehicle)—*káрана* (cause). Know the Spirit to be truly different from the three *upadhis*, i. e., bodies.

Q. What is *Not-Spirit* ?

A. It is the three bodies [described above], which are impermanent, inanimate (*jada*), essentially painful and subject to congregation and segregation.

Q. What is *impermanent* ?

A. That which does not exist in one and the same state in the three divisions of time [namely, present, past and future.]

Q. What is *inanimate* (*jada*) ?

A. That which cannot distinguish between the objects of its own cognition and the objects of the cognition of others. \* \* \*

Q. What are the three states [mentioned above as those of which the Spirit is witness] ?

A. Wakefulness (*jágrata*), dreaming (*svapna*), and the state of dreamless slumber, (*sushupti*).

Q. What is the state of *wakefulness* ?

A. That in which objects are known through the avenue of [physical] senses.

Q. Of *dreaming* ?

A. That in which objects are perceived by reason of desires resulting from impressions produced during wakefulness.

Q. What is the state of *dreamless slumber* ?

A. That in which there is an utter absence of the perception of objects.

The in-dwelling of the notion of “I” in the gross body during wakefulness is *visva* (world of objects)||, in subtle body during dreaming is *taijas* (magnetic fire), and in the causal body during dreamless slumber is *prajná* (One Life.)

Q. What are the five sheaths ?

A. *Annamaya, Pránamaya, Manomaya, Vijnanamaya, and Anandamaya*§.

\* For an explanation of this term See Sankara's commentaries on the *Brahma Sutras*.—Tr.

† *Linga* means that which conveys meaning, characteristic mark.

‡ Mr. Subba Row understands it in exactly the same way. See *Theosophist*, Vol. IV, 10, 249. See also in this connection an editorial note in the same number of that journal, p. 255, running thus :—

“This *Karana sarira* is often mistaken by the uninitiated for *Linga sarira* (e. g. Sridhara Swami in his commentaries on the *Bhagavat gita*—Tr.), and since it is described as the inner rudimentary or latent embryo of the body—confounded with it.”

I am under the impression that I follow the best authorities in regarding *Karana sarira* as surviving in *devachan*, and when the proper time comes, furnishing the monad with the other two bodies, of which it embodies the causal germs.—Tr.

¶ It must not be supposed that *avidyá* is here confounded with *prakriti*. What is meant by *avidyá* being without beginning, is that it forms no link in the *Karmic* chain leading to succession of births and deaths, it is evolved by a law embodied in *prakriti* itself.—Tr.

|| That is to say, by mistaking the gross body for self, the consciousness of external objects is produced.—Tr.

§ This subject is also treated of by the author in the *Atmabodha* and has been admirably expounded in this journal for July last, p. 255, q. v.—Tr.

*Annamaya* is the transformation of *anna*\* (food), *Pranamaya* of *prana* (life), *Manomaya* of *manas*, *Vijnanamaya* of *vijnan* (finite perception), *Anandamaya* of *ananda* (illusive bliss).

Q. What is the *Annamaya* sheath ?

A. The gross body.

Q. Why ?

A. The food eaten by father and mother is transformed into semen and blood, the combination of which is transformed into the shape of a body. It wraps up like a sheath and hence so called. It is the transformation of food and wraps up the spirit like a sheath—it shows the spirit which is infinite as finite, which is without the six changes beginning with birth as subject to those changes which is without the three kinds of pain† as liable to them. It conceals the spirit as the sheath conceals the sword, the husk the grain, or the womb the fetus.

Q. What is the next sheath ?

A. The combination of the five organs of action, and the five vital airs form the *Pranamaya* sheath.

By the manifestation of *prana*, the spirit which is speechless appears as if the speaker, which never gives as the giver, which never moves as if in motion, which is devoid of hunger and thirst as if hungry and thirsty.

Q. What is the third sheath ?

A. It is the five (subtile) organs of sense (*jnánendriya*) and *manas*.

By the manifestation of this sheath (*vikára*) the spirit which is devoid of doubt appears as doubting, devoid of grief and delusion as if grieved and deluded, devoid of sight as if seeing.

Q. What is the *Vijnánmaya* sheath ?

A. [The essence of] the five organs of sense form this sheath in combination with *buddhi*.

Q. Why is this sheath called the *jiva* (personal ego), which by reason of its thinking itself the actor, enjoyer, &c., goes to the other *loka* and comes back to this ?‡

A. It wraps up and shows the spirit which never acts as the actor, which never cognises as conscious which has no concept of certainty as being certain, which is as never evil or inanimate as being both.

Q. What is the *Anandamaya* sheath ?

A. It is the *antahkarana*, wherein ignorance predominates, and which produces gratification, enjoyment etc.

It wraps up and shows the spirit, which is void of desire, enjoyment and fruition as having them, which has no conditioned happiness as being possessed thereof.

Q. Why is the spirit said to be different from the three bodies ?

A. That which is truth cannot be untruth, consciousness inanimate, bliss misery, or *vice versa*.

Q. Why is it called the witness of the three states ?

A. Being the master of the three states, it is the knowledge of the three states, as existing in the present, past and future.¶

Q. How is the spirit different from the five sheaths ?

A. This is being illustrated by an example :—

“This is my cow,” “this is my calf,” “this is my son or daughter,” “this is my wife,” “this is my *anandamaya* sheath,” and so on||—the spirit can never be connected with these concepts ; it is different from and witness of them all. For it is said in the *Upanishat* :—

[The spirit is] “naught of sound, of touch, of form, or colour, of taste, or of smell ; it is everlasting, having no beginning or end, superior [in order of involution] to

\* This word also means the earth in Sanskrit.—Tr.

† The three kinds of pain are :—

*Adhibhautika*, i. e., from external objects, e. g., from thieves, wild animals, &c.

*Adhidáivika*, i. e., from elements, e. g., thunder, &c.

*Adhyatmika*, i. e., from within one's self, e. g., head-ache, &c. See *Sankhya Karika*, Gaudapada's commentary to the opening Sloka.—Tr.

‡ That is to say, fits from birth to birth.—Tr.

¶ It is the stable basis upon which the three states arise and disappear.—Tr.

|| The “heresy of individuality” or *attaváda* of the Buddhists.—Tr.

*Prahriti*,\* whoever correctly understands it as such attains *muktī* (liberation.)”

The spirit has also been called [above] *sat*, *chit* and *ánanda*.

Q. What is meant by its being *sat* (existence)?

A. Existing unchanged in the three divisions of time and uninfluenced by anything else.

Q. What by being *chit* (consciousness)?

A. Manifesting itself without depending upon anything else and containing the germ of everything in itself.

Q. What by being *ánanda* (bliss)?

A. The *ne plus ultra* of bliss.

Whoever knows without doubt and apprehension of its being otherwise, his self as one with Brahma, which is eternal, non-dual and unconditioned, attains *moksha*.

## APPENDIX.

### I.

In the opening Sloka all *drisya* is described as *anatma* (not spirit) and the spirit of one possessed of right discrimination is called *drik*. These two Sanskrit words are thus described in the author's *Brahma nāmavalimáli* or the String of names of Brahma, Sloka 18 :—“ *Drisyā* and *drik* exist, different from each other; the former is *máyá* and the latter Brahma—this is celebrated in all Vedantic works.”

### II.

*Sarira* (body) is derived from the root *sri*, to shrink, and is so called because it shrinks with age or when the knowledge of identity of self with Brahma is realised.

*Deha* (body) is from the root *dah*, to burn, so called on account of its being burnt up after death or at all events by the three-fold pain in life (*vide supra*.)

## THE BHATTARH MIRRORS.

Transcribed from Colonel Stephen Fraser's  
“*Twelve Years in India*.”

“ WE joyfully, gladly, went—five of us, Her Majesty's officers, on a tour of military inspection, the toils of which were likely to be rewarded by an opportunity of witnessing the Dance of Illumination, of the Muntra Wallahs, or Magic-working Brahmans, whose strange miracles, worked apparently by the triple agency of Battasahs (rice), Goolal (red powder), and strangest of all, by means of oval glasses or crystals, but black as night, in which it is reported some very strange things were to be seen. We were all prepared to witness skilful jugglery, for which the residents of Muttra (in Agra on the west bank of the Jumna, a place famous for the manufacture of magical apparatus, and one of the only two places on earth where the Paraphthaline gum is prepared, wherewith the adepts smear the backs of those extraordinary mirrors, so celebrated by the various authorities named in the text) are renowned, but fully resolved to ascertain, if possible, how it was all done, rejecting, of course, everything claimed to be either super-mortal or hyper-natural, so far as the underlying principles were concerned \* \* \* It was sheer skill, but such as no European could pretend to equal, yet how the sleeping girl could tell our names, ages, places of birth, and fifty other true facts, she never having seen either of us before—because the dust of Jubal-pore was still upon our clothes, we having been one day in Muttra—was a problem not easily solved. They call it the sleep of Sialam, and she passed into it by gazing into a dark glass. After reading Lane's story about the Magic Mirror, in his ‘*Modern Egyptians*,’ what DeSacy says in his famous, ‘*Exposition de la Religion des Druses*,’ Makrisis' account in his ‘*History of the Mamelukes*,’ J. Catafago and Defremeny in the ‘*Journal Asiatique*,’ what Potter affirms as truth in his ‘*Travels in Syria*,’ Victor L'Anglois in ‘*Revue D'Orient*’, Carl Bitter,

\* Differentiated matter.

Dr. E. Smith, Von Hammer in his ‘*Hist. des Sasseins* ;’ the ‘*Gesta Magica*’ of Lespandla: *Lettres Edifiantes et Curieuses*, Youatts' ‘*Researches into Magic Arts* and innumerable other unquestionable authorities, it was far less difficult to believe in the existence of some occult visual power possessed by those mirror-gazers, of both sexes, all ages, and diversity of culture, than to attribute it all to chicanery and lucky guesswork \* \* \* ‘*Sahib*, it is true,’ said our Wallah, next morning, when, speaking of the exhibition of the previous day; ‘and now I s'pse you go to see Sebeiyeh dance (the Mirror-bridal-Fete of a renowned Brotherhood of Mystics, Philosophers and Magicians no doubt.) Well, we all determined to go, and a three hours' ride brought us to a plateau in a mountain gorge of the Chocki-Hills. We were not too late, and were kindly offered vantage ground of view, by the Sheikh—a man of at least 135 years of age, judging from the fact that his grandchildren were white with snowy locks, and beards waist long. \* \* \* The two brides entered the circle followed by the two grooms, all four bearing large earthen pots full of a black, smeary, tarlike substance, which on enquiry of the Sheikh, we learned was the product of the volcanic springs of the Mahadeo Hills, in the far-off province of Gondwana, in the Deccan; that it only flows in the month of June, is collected by girls and boys who are virginal, that is, before puberty; and must be prepared for use within the ensuing forty-nine (7×7 ?) days, by similar persons on the eve of actual marriage, as it is supposed certain properties of a magical nature attached to it when handled by *such* persons under *such* circumstances. Of course I, with my Western habits of thought and European education, could but laugh at this, which seemed so very palpable and gross a superstition (!); and yet, strange to relate, when I expressed my sceptical views to the old Sheikh, he laughed, shook his head, handed me two parts of the shell of a large nut, and requested me to fill one with the crude material, and the other with the same after it had been prepared. I did the first, and reserved the empty shell for the other, taking care to hold both in my hand well wrapped up in a brown bandana \* \* \* \* The circle had a pile of stones in the centre, upon which coals were brightly burning, and even the fire—which by the way is the eternal, sacred fire of the Garoonahs, which is never allowed to go out from one year's end to the other—was suspended from a tripod of betel rods, a coarse earthen vessel, into which the four expectant marriages poured about one-fourth of the contents of the Simla gourds already mentioned; amid the din of an hundred tom-toms or native drums, the clashing of rude cymbals, and wild, clarion-like bursts of the strangest, and, shall I, a staid Briton, confess it? most soul-stirring and weird music that ever fell upon my ears, or moved the man within me! After this was done, the Sheikh's servitors erected a pole near the fire, around which pole was coiled the stuffed skins of the dreadful hooded snake of India,—the terrible Naga or Cobra; while on top was an inverted cocoa-shell and two others at its base—understood by the initiated as symbolising the Linga,—the male emblem, or creative principle of Deity; while the suspended vessel over the fire represented the yoni, or female principle; the tripod emblematising the triple powers or qualities of Brahm—Creation, Preservation, Perpetuation:—The fire below corresponding to Love, or the infinite fire which is the Life of all. \* \* \* \* And now began a strange, weird dance, to the wild mellow of five hundred singing devotees of that wonderful Phallic, or sexual religion; mingled with the mellow breath of cythic flutes, the beating of tambours, the thrumming of various stringed instruments, and an occasional Ziraleet, or rapture-shriek from the lips of women and young girls, whose enthusiasm was unrestrainable, and who gave vent to it in wild movements of their graceful and supple bodies, and in shrill cries that might be heard long miles away, like

voices from heaven awakening the echoes of space! \* \* \*  
 \* \* \* Advancing with a slow, voluptuous, rhythmic movement, not of the feet alone, but of the whole form from crown to toe, the girls—aged above fifteen, brown as berries, agile as antelopes, graceful as gazelles; lovely with barbaric splendour, as an Arab's ideal horse; they swayed, but, advanced by twists and curves, by nameless writhings, by sweeping genuflexions, by movements the very poetry of passion, but passion of *Soul* far more than that of body, with suffused faces and moistly gleaming eyes, toward the fallen emblem, round which they slowly whirled and danced, ever and anon stirring with a silver spatula the dark substance contained in the vessel they bore. This by turns. While the two youths, bearing similar vessels, performed corresponding movements about the vessel, which symbolised Nature in her productive aspect—until we five Europeans were lost in a maze of astonishment at the capacity of the human frame to express mutely, but with more meaning and eloquence than a thousand tongues could convey, the amazing heights, depths, and shades of passion, but a passion totally free from vulgarity or indecency; and as pure as that of the ocean billows when they kiss each other over the grave of a dead cyclone \* \* \* \*

Observing my surprise, the old Sheikh touched my arm, and in purest Bengali, whispered—'Sahib, Ardor begat the universe! There is no power on earth either for good or ill, but passion underlies it. That alone is the spring of all human action, and the father and mother alike of all the good and evil on the Earth! It is the golden key of Mystery, the fountain of Weakness and of Strength, and through its halo alone can man sense the ineffable essence of the Godhead! The materials in the vessels are charged with life—with the very essence of the human soul, hence with celestial and divine magic power, for oh Sahib, it is only lust and hatred that keep closed the eyes of the soul, and in the crystals whose backs we cover with the contents of these five vessels, the earnest seeker may behold, not only what takes place on earth, but also what transpires on other globes, and in the *SAKVALAS* of the Sacred Gods!—and this is the only true Bab (door). 'But', I rejoined, 'we of the West magnetize people, who in that mysterious slumber, tell us amazing'—'Lies'! he said, interrupting the sentence,—'for no two of them tell the same tale, or behold the same things. Why? Because they explore the kingdom of *Fancy*, not of *Fact*, and give you tales of imagination and distorted invention, instead of recitals of what actually exists beyond! But wait'! I acquiesced, and turned once more to the dance of the *Alewchek*, who by this time were moving in a more rapid manner to the quickened strains of the more than ever wild and fantastic music. \* \* \* Three of them began stirring the contents of the cauldron, into which all the material from the gourds had now been poured, murmuring strange, wild bursts of Phallic song the while; and the fourth, the taller maiden of the two, stripped herself entirely nude above the waist and below the knee; her long raven hair streaming around her matchless form—a form of such superlative contour proportions, lively peach-blow tint, and rounded beauty, as made me blush for the imperfections of the race that mothered me! There were no violent exertions of legs and arms; not the slightest effort at affect; none of the gross motions in use in the West, on the stage or off it—whose palpable object is the firing of the sluggish blood of half-blasé spectators; but a graceful movement, a delicious trembling, half fear, half invitation:—a quivering, semi-longing, semi-reluctant undulation of arms; bosom, form, eyes even—rippling streams of most voluptuous motion; billowy heavings and sobbings of soul through body, so wonderful, so glowing, that one wished to die immediately that he might receive the reward of centuries of toil in the ravishing arms of the houris of the seventh age,—even the *first* Paradise of the Ghillim, and

the resplendent Queens of the Brahminical Valhalla. And yet there was nothing absolutely suggestive of coarse, gross, animal passion in all this transcendental melody of hyper-sensuous motion; on the contrary, one felt like seizing her by the waist, drawing his sword and challenging all earth, and hell to boot, to take her away, or disturb her tranquillity of celestial—what *shall* I call it? I am lost for a name!

Presently both the girls joined the mystic sensuous-magic dance; and one of them seized me suddenly by the arm and dragged me to the central vessel, saying, 'Look, Sahib, Look!' I did so, but instead of a black mass of seething, boiling gum, I beheld a cauldron bubbling over with the most gorgeously pink-tinted froth that the imagination ever dreamed of; and while I stood there marvelling at the singular phenomenon,—for every bubble took the form of a flower—lotus, amaranth, violet, lily—*Rose!* the old Sheikh drew nigh and said, 'Sahib, now's the time,' pointing to the bundle containing the empty shell, and the one already half-filled. Acting on the suggestion, I held forth the empty shell; into which the girl ladled about a gill of the contents of the swinging vessel; and the Sheikh produced two perfectly clean ovoid-glass plates over which he poured respectively the contents of the two shells, and held both over the fire for a minute, till dry, and then handing them to me, said, 'Look, and wish, and *will*, to see whatever is nearest and dearest to your heart.' Internally I laughed, but he took the two shells, and while he held them I looked into the hollow face of the glass which was covered with the singular substance first handed to me, and gazing steadily about half-a-minute, the mystic dance going on meanwhile—I willed to see my home and people in far-off Albion, but nothing appeared. The old man smiled. 'Now, look at the other one which is a true *Bhatteyeh*—full of divine light and imperial power, and you will'—Before he finished, I glanced into the other and—scarce, hoping that the western reader will credit me with any thing loftier than a vivid imagination, fired almost beyond endurance by the lascivious surroundings in the midst of which I was, I nevertheless clearly and distinctly affirm, on the hitherto unsullied honor of an English gentleman, and a colonel in Her Majesty's service, that I saw a wave of pale, white light, flit like a cloud-shadow over the face of the mysterious disc, and in the centre of that light a landscape composed of trees, houses, lands, lowing cattle, and forms of human beings; each and every item of which I recognised as the old familiar things of my boyhood and youth, long ere the fires of ambition had turned my face toward distant India. I beheld the simulacrum of a dear sister, whom I had left in perfect health, I saw her to all appearance very, very sick,—the physicians, nurses, troops of friends, and faithful servitors, gathered round her; *she was dying; dead!* I saw the funeral *cortege* set out for the cemetery, and I marvelled greatly that they buried her by the iron ribs of a railway; because, when I left, no road of that kind ran through my native town. I saw the silver plate on the coffin, and most clearly and distinctly read the inscription thereon; *but the surname was one I had never heard of!* I looked up at the Sheikh, who was eyeing me with strange interest and intensity, as if to ask an explanation, but he only smiled and repeated the one word 'See.' Instantly I rivetted my eyes to the ovoid again, as likewise did three of my European friends, and to my, and their utter astonishment, beheld a shadow, an exact image of *myself*, standing near the well-curb of my native manse, weeping as if its heart would break, over the prostrate form of my elder brother, who lay there dying from a rifle-bullet through the groin—the result of an accident that had just befallen him while in the act of drinking from the swinging pail, or bucket! Now came the most astonishing phenomena of all,—for each of the three friends who were looking with me, started in surprise, and uttered exclamations of undisguised astonishment, for each had seen

things beyond the range or pale of trickery, or the play of excited fancy. One beheld the three forms of his dead father, sister and uncle,—the latter pointing to a sealed packet, on which was inscribed the words, 'Dead—Will—Heir—October 11th—Go home.' The other beheld the drawing-room and the occupants of the old house at home; and on the table lay a large pile of gold coin, across which lay a legend thus; "Jem and Davids; winnings; Lottery; Paris; June 18th, 10,000 Pounds!" The third man saw a battle or skirmish waging in the Punjab, and his senior officer struck down by a shot in the side, thus opening the road to his own promotion. Much more we saw and noted in that wonderful scene of *diablerie*, portions of which I shall detail hereafter; but it became necessary to attend to other matters. I did so (as will be hereinafter cited), and then accompanied the Sheikh to his tent, where the marriage was celebrated; and he told me then certain wonderful secrets in reference to the further preparation of the strange material composing the reflective surfaces of the curious Bhats, which, while exceedingly mystic and effective, at the hands and offices of the newly-married people, is yet of so singular and delicate a nature as not to be admissible to these pages; for while really of the most holy and sacred nature, yet the mis-education in certain vital respects and knowledges—of the civilised Teutonic (?) Anglo-Saxon, and Latin races, would render the matters to which I allude subjects of either well-based blushes, or infinite mirth. \* \* \* \* \*

Seven long months after these memorable experiences, I parted with three of my then comrades and accompanied by no others, embarked on one of the steamers of the *Messageries Impériales* from Bombay, homeward bound. Before I left, one of my friends had sold his commission in consequence of having fallen heir to an uncle's estate, who the letters of re-call stated had died in England, on October 10th, and not on the 11th as the ovoid had stated. It had actually taken the difference of Latitude, and was correct to an hour! The second man on arrival in England proved the truth of the mirror, for Jano, not 'Jem,' as the glass stated, and Davidson, not 'Davids—cousins of his—had fallen on a Lottery-fortune of over a lac of rupees in India money! The other officer was promoted in consequence of the death of his Lieutenant Colonel, in a skirmish in the Punjab, which event was the result of a shot in the loins, not the side. Arrived at home I found my people in deep mourning for my younger sister, the widow—after a wife-hood of less than a year—of Capt. H—of Her Majesty's Navy, whom she had niet for the first time only a few months before their marriage. I had left for India five years before, and though I had often heard of my brother-in-law's family, yet we had never met. He went down in one of the new crack iron clads on her trial-trip. The awful news occasioned premature motherhood; she died, and her remains were deposited in the hillside vault, skirting which was a railway just equipped and opened for traffic a month or two prior to the marine disaster! Lastly, within eight months after my return, I became sole male heir to our family-property, in consequence of the death of my brother by a charge of shot, not a bullet in the groin as the mirror shewed:—but full in the abdomen while climbing a fence for a drink at the brookside, and not at a well. Every fact shown so mysteriously was proved strangely true, though not literally so. I just previous to my departure from the strange bridal, asked the old Sheikh some questions; and learned that the material on the crystal surface whereon we saw the strange miracles was but partially prepared:—as my readers will also recollect; but some which he placed on a glass just before I left had been fully prepared, the finishing process being a secret one and conducted by the newly wedded couples by a peculiar process—and nameless—never made a mistake while in my possession, for I confess I lost it from a silly servant having shown it boastingly to a gipsy, who stole it that same night through the most adroit bit of scientific burglary I ever

heard or read of. The loss however was not irreparable, for I have since found that the strange Muntra-Wallahs as they are contemptuously called by their Islamic foes in the Carnatic (but true Magi in the opinion of better informed people) have brethren and correspondents in nearly every country of the globe, Brazil, China, Japan, Vienna, and even in our London; while they have a regular Lodge in Paris, of some of whom the initiated, and favored ignorants even, can and do obtain occasionally, not only well-charged and polished Bhatteych, but actually, now and then, a gourd full of Moulveh—Bhatah—the strangely mysterious substance which constitutes the seeing surface, as mercury does in the ordinary looking-glass, and the two are alike in all save that the latter reflects matter and the living, while the former sometimes—but not at all times, or to all people or to the successful seers on all occasions—reveals only spirit and the dead—aye, and things that *never die!* Heaven help all whom a Muntra-Wallah hates; or loves either, for that matter, unless that love be returned for the magician in one case will bring up the hated one's shadow, and the strange horrors will seize him or her; and in the latter case—well, *stranger things happen, that is all!*

EDITOR'S NOTE.—This curious passage found in the *Memoirs* of Col. S. Fraser, and transcribed for our journal by our brother, Mr. P. Davidson (Banchoy, Scotland) is republished for good reasons. First, to show that but about two dozens of years ago, (namely, before the Mutiny) no English gentleman was afraid of being laughed at for telling the truth—however wonderful and, as in this case, incredible and *unscientific* in the eyes of the profane. Secondly, with an eye to the considerable number of otherwise (in their conceit, of course) European critics (many of them Spiritualists with a firm belief in their materializing grand dames and relatives) of *Isis* and the *Theosophist*, we shall not miss this good opportunity of turning the tables upon them. To do it we have but to oppose to some narratives of eye-witnesses given in *Isis*, and so vehemently cried down on the ground "of their inaccuracy" those of Col. Fraser, an author who "clearly and distinctly affirms, on the hitherto unsullied honor of an English gentleman, and a Colonel in Her Majesty's service" that he was an *eye-witness* to all the wonders he relates above.

Indeed, the strange confusion in the above accounts between a "Sheik" (who can be but a Mahomedan) and a Brahman, is by itself highly instructive. It shows that even a comparatively long residence (twelve years) in India, and a Colonel's commission in H. M.'s Army does not procure immunity from blunders in connection with the mystic side of India. Nevertheless, Col. Fraser, whose veracity as to magicians and their psychological phenomena seen by himself is as unimpeachable as his blundering with regard to mystic names and things is self evident—was never, to our knowledge either doubted or publicly traduced as a *liar*? Even the undeniable inaccuracies of a Colonel in "Her Majesty's Army" become "probable facts," while plain and accurate statements of realities and truth when given out by a foreigner—have to be not only doubted but publicly set down without investigation as deliberate *falsehoods*. What can the author mean, when speaking of the "Seboiyeh" dance, the Brahman "Sheik" the fire of the *Gavoonahs* (?) or the "Ardon who begat the Universe?" All of these words are unknown and *un* Brahmanical. Yet from the substance of the narrative however muddled up, we know who are the members of that "renowned Brotherhood of Mystics, Philosophers and Magicians." They are a Fraternity of true magicians, now disbanded and so widely scattered about the country as to be virtually extinct. They are "left-hand" adepts, Mahomedans belonging nominally to the sect of the Wahabees, who learned throughout centuries their magical art, (or rather added to the knowledge brought by their ancestors from Arabia and Central Asia) from the Tantrikas of Eastern Bengal and Assam. That part of the country has been famous for its magic and sorcery from a very remote period of antiquity. In the Mahabharata, we read of a fight between Sri Krishna and the king of the Magicians, Anusavra to the utter discomfiture of the latter. The proximity of the Dngpas of Bhootan and the neighbouring hill-tribes, famous for their sorcery and magical practices, has had a good share in the growth of the black arts in those parts of the country. To this day their fame survives in Bengal; Kamarupa in Assam is still an enchanted city to the many. But the manufacturers of the "Bhatta Mirrors" are not regular practitioners of Black magic. The knowledge they have acquired by the "left hand" path is used for good or bad purposes according to the inclination of the practitioner. It is a curious feature in the mystic sects of Indian Mussulmans that they always make a jumble of Mahomedanism and Hinduism in their rites and ceremonies. Their magical formulae we know are partly in Arabic or rather its dialects in India and in Sanskrit, or one of its living representatives; the Hindu Gods and Goddesses are also freely invoked therein. The whole account of Col. Fraser, with the exception of inaccuracies above adverted to, is substantially correct. But at the same time it is but proper that attention should be called to his blunders, for otherwise the statements of any well-informed writer—especially a foreigner, if clashing with those of any of the numerous authors of the stamp of Col. Fraser, will render the former liable to be set down as "an impostor or charlatan"—the latter epithets having now become the most aromatic flowers of rhetoric of the leading representatives of the English Press.

## THE GOD-IDEA.

BY BABU RAJ NARAIN BOSE.

I DEEM it necessary to reply to some of your remarks on my letter published in the *Theosophist* for the current month.

You say, "Since few of us have identical beliefs and every religionist of whatever faith is firmly impressed with the truth and superiority of his own creed....., the result is sectarianism is ever kept alive." To this my reply is: Let every religionist preach his own religion, and that which is the truest religion is sure to prevail. If religion be preached according to my plan, there would be different sects but no sectarian animosity. As different men have got different countenances, so there must always be different religious sects in this world. That cannot be helped.

You say: "Would our Atheists be welcome in the Brahma Mandirs?" I say no, because Atheism is no religion. It is the negation of belief. Any religionist who would discourse upon general religion would certainly be welcome.

You say that you do not propagate your religious opinions, and that you give out your views on the subject of religion only when challenged to do so. Granted. But do you not endeavour to prevail upon people to believe in *Occultism and the existence of Spirit*? If you do not do so, what is the use of these Theosophical Societies? Is not this a kind of religious propagation? Does it not lead sometimes to angry discussion like other kinds of religious propagation?

I have not the returns of the last census of Bombay at hand, nor is it easy to lay hold of them in this out-of-the-way place. Will you therefore kindly inform me of the number only of Theists in that city whom, poor men! you have put in the same category with Christians, and the percentage of crime committed by them as compared with orthodox Hindus.

You believe in a "living God in man himself," a "divine indweller," a "divine Presence" and not a God outside of man himself. This, as far as I understand, means that you believe in the Eternal and All-pervading Principle manifesting itself in a personal and therefore a worshipable form in the human soul. You charge us, Theists, with believing in Existence and not Presence, and represent that you, believers in the human soul as God, are real believers in the Presence. To this I answer that we go further than you in believing in Presence. We believe in a soul of the soul, in a being in whom the soul or spirit lives, moves and has its being,† in a *Sarva-bhūtāntarātma*, or Inner Soul of all things as preached by our venerable Upanishads.‡ This we call God. He is as

\* We join issue with our respected friend here; followers of all religions can be and have always counted among their numbers students of the subject in question, namely:—Occultism.—Ed.

† We are forced to reply to our venerable friend that if the Theists claim to go "further," the Theosophists (of that school, at any rate, to which the writer belongs) claim to go deeper. Rejecting all *Externals* as true guides, they accept but the *Internal*, the invisible, the never to be described by any adjective or human qualification. And going deeper they reject the idea of "the soul of the soul"—*anima*; from which the word *animal* is derived. For us there is no *over-soul* or *under-soul*; but only *ONE—substance*: the last word being used in the sense Spinoza attaches to it; calling it the *ONE Existence*, we cannot limit its significance and dwarf it to the qualification "over;" but we apply it to the universal, ubiquitous Presence, rejecting the word 'Being,' and replacing it with "All-Being." Our Deity as the "God" of Spinoza and of the true Advaitce—neither *thinks*, nor *creates*, for it is *All-thought* and *All-creation*. We say with Spinoza—who repeated in another key but what the Esoteric doctrine of the Upanishads teaches: 'Extension is visible Thought; Thought is invisible Extension' For Theosophists of our school the Deity is a *UNITY* in which all other units in their infinite variety merge and from which they are indistinguishable—except in the prism of theistic *Maya*. The individual drops of the curling waves of the universal Ocean have no independent existence. In short, while the Theist proclaims his God a gigantic universal BEING, the Theosophist declares with Heraclitus, as quoted by a modern author that the *ONE Absolute* is not Being—but *becoming*: the ever-developing, cyclic evolution, the Perpetual Motion of Nature visible and invisible—moving, and breathing even during its long Pralayaic Sleep.—Ed.

‡ It is easy to prove that the *Upanishads* do not teach belief in a personal God—with humanly conceived attributes, etc. *Isvar* is not mentioned in the *Upanishads* as a personal noun. On the other hand we see *Guhya Adesa*, the strictest preservation of the secrecy of the doctrines, constantly urged, the *Upanishads*, showing in their very name that the doctrines taught were never revealed but to the Initiates. At the very outset the seeker after knowledge of Brahma is enjoined to repair to a guru (*tad vijñāsarūtham sa guru mevāvīyachchet*), which is simply unmeaning if a literal interpretation of the text was capable of conveying the intended sense. This quotation from the *Upanishad*, we may add, is adopted by the Brahmos of the *Adi Samaj* and finds a place in their *Brahma Dharma Grantha*, compiled by the Pradhanaacharya.—Ed.

much the life of the soul or spirit as of the physical world. He is the life of life and the soul of the soul and is immanent to all things. He is the Spirit of Spirit, the Perfect Spirit on whom this imperfect spirit of ours always depends for its existence. That the imperfect depends always on the perfect is an axiomatic truth.

You say that Theosophy is the in-forcing life of every religion. How can it be so when its principal article of belief is that God is impersonal and has no *gunas* or attributes? The belief in one Personal God or Theism is the inforcing soul of every religion. Every religion recognizes a Personal Divinity—I observe that men, who do not believe in God, are led as it were by a curse of Nature to substitute infinitely less worthy objects of reverence or adoration in His place such as Humanity—as is the case with Positivists, departed Spirits—as is the case with some Spiritualists, or Human Reason or Logos†—as is the case with you, Theosophists.

You say that the *Adi Brahma Samaj* movement has not succeeded, because the principal members of the *Samaj* have not the *Yoga* power. I need tell you that these members believe that the highest *Yoga* is the concentration of mind upon God even amidst the transaction of worldly affairs. This *Yoga* has been illustrated by a sloka given in my "Superiority of Hinduism," containing the beautiful comparison of the real *yogi* to a female dancer with a pitcher full of water upon her head, singing and dancing according to the strictest rules of music, but still preventing the pitcher from falling down. This best of all *yogas*, the real *Raj* *yoga*, is to be attained by long practice requiring constant and tremendous exercise of will-power as was done by *Rajah Janaka*. But do not think, therefore, that I do not believe in theosophic *yoga* apart from its, what I think, unnatural alliance with Agnosticism or Buddhism. Theosophic *yoga* has its use.‡ It enables us to show that the people of Asia are possessed of scientific knowledge to which European science is as nothing. I cannot disbelieve in the marvellous effects of such *yoga*. I cannot discredit the testimony on this point of such honest and intelligent individuals as yourself, Messrs. Hume, Sinnett and Olcott, Captain Osborne and Col. Wade who lived in the Court of *Runjeet Sing* and my personal friend, *Babu Akshaya Kumar Datta*, former Editor of the *Tatvabodhini Patrika*, who collected with so much care the evidence about the *Sunderbun yogi*. I admit the importance of theosophic *yoga*, but it would prove a calamity to India if it led to a general exodus of most of our best men to the jungles. It would be adding another serious evil to those under which India is already groaning. I think the highest *yoga* is best practised at home.

With reference to your allusion to the supposed future of the *Adi Brahma Samaj*¶ movement, allow me to inform you that the *Adi Brahma Samaj* is no organized church like the *Brahmo Samaj* of India or the *Sadharan Brahma Samaj* and has no muster roll of members. All educated men, who believe in a formless God, but yet do not think it proper to wound the feelings of parents and other dear relatives by diverging widely from prevailing customs and usages, are members of the *Adi Brahma Samaj*.|| They form a very considerable section of the community. The orthodox *Hari Sabhas* of Bengal have been evidently affected by the influence of the *Adi Brahma Samaj*. Their proceedings are now-a-

\* We may be allowed to point out that we do not maintain that *Parabrahm* is absolutely without any *guna*, for *Presence* itself is a *guna* but that it is beyond the three *gunas*—*Satva*, *Rajas* and *Tamas*.—Ed.

† When the term *Logos*, *Verbum*, *Vach*, the mystic *divine voice* of every nation and philosophy comes to be better understood, then only will come the first glimmering of the Dawn of one Universal Religion. *Logos* was never human reason with us.—Ed.

‡ We are afraid some misapprehension exists in our correspondent's mind as to what "Theosophic *Yoga*" is. *Rajah Janaka* was a Theosophic *Yogi*. See in this connection *Sankara's Commentaries on Bhagavat Gita*.—Ed.

¶ Our esteemed correspondent misunderstands us. We never spoke of the "Adi Brahma Samaj," of which we know next to nothing, but of the spurious *Brahmo Samaj* calling itself *New Dispensation* where all is to be taken on faith and the Universal Infallibility is claimed to have taken its Head-quarters in the person of *Babu Keshub Chender Sen* who has now come to comparing himself publicly—nay with identifying himself—with *Jesus Christ*. Again—the *Sadharan Brahma Samaj*, a body whose members—all those we have met, at any rate—scoff at the idea of *yoga* powers and laugh at the word phenomenon.—Ed.

|| Are we to understand that when the "parents and other dear relations" of the present generation will drop off the scene the *Adi Brahma Samaj* will itself drop off the sphere of activity as an effete anachronism?—Ed.

days held according to its model, and the discourses delivered in them are gradually becoming more and more theistic than before.

My health does not unfortunately permit me to continue this very interesting discussion further. I therefore conclude it on my part with this letter.

DEOGHAR,  
August 10th, 1883. }

### POST MORTEM RISE OF TEMPERATURE.

BY DR. LEOPOLD SALZER, M. D., F. T. S.

THERE is a peculiarity connected with the variation of temperature in cholera—the rapid rise of body-heat soon after death, and often even a short time before death takes place. The *post mortem* rise of temperature in cholera is not only external and relative; there is a real increase of heat production shortly before, or soon after death—an increase which might amount to about 3 or 4 degrees, and sometimes even to more than that. The question arises then, whence comes this increase of caloric production in a dead or a dying body.—This is a question which interests the Pathologist, the Physiologist and the medical Jurist in a like manner, and I shall try to lay before you their respective opinions on the subject.

“It is not a little remarkable,” says Dr. Carpenter,\* “that the temperature of the body should frequently rise considerably after death; and this not merely in such cases as cholera, in which it has undergone an extreme depression during the latter part of life; but even in the case of febrile disorders, in which the temperature during life has been above the usual standard. This has been ascertained by Dr. Bennet Dowler of New Orleans, on the bodies of those yellow fever subjects which may be especially referred to as exhibiting a remarkable degree of *molecular* life after somatic death. In one case for example the highest temperature during life was in the axilla 104°; ten minutes after death it had arisen to 109° in the axilla; 15 minutes afterwards, it was 113° in an incision in the thigh; in twenty minutes the liver gave 112°: in an hour and forty minutes the heart gave 109° and the thigh in the former incision 109°; and in three hours after the removal of all the viscera, a new incision in thigh gave 110°. It is curious that the maximum heat after death should have been in the thigh, and the minimum in the brain. The *post-mortem* rise in temperature appears to be essentially due to the passage of the muscles of the body into the state of *rigor mortis*, a change that is associated with chemical action analogous to that occurring during contraction, and accompanied by a corresponding elevation of temperature. Ackermann has pointed out that the *post-mortem* rise may, in part, be due to the persistence of the heat-producing chemical changes in the deeper parts of the body, whilst the radiation and loss of heat from the surface by evaporation is reduced by the contraction of the cutaneous vessels and the cessation of the circulation; and Wunderlich suggests that it may be also in some measure owing to the paralysis of that part of the nervous system which inhibits or regulates the generation of heat, supposing such centre to exist.”

The above quotation contains a fair *resumé* of what physiologists have to say in explanation of the *post-mortem* rise in temperature. You will have observed how vague and unsatisfactory each and all of those explanations are. If the rise in temperature be due to “the passage of the muscles of the body into a state of *rigor mortis*”—then how are we to account for the *post-mortem* rise in temperature of cholera and tetanus-subjects?—In both of these subjects there have been excessive muscular spasms during life; in tetanus they are accompanied by a rise in temperature of 3° to 4°, while in cholera the temperature is ordinarily so much lower, and often lower still. How is it then that the spasmodic

muscular contractions during life could not raise the temperature, while the mere passage of the muscles of the body into a state of *rigor mortis* is sufficient, shortly before death, or, soon after death, and before *rigor mortis* could actually have set in, to raise the temperature to a considerable height? In cholera, we are given to understand, the temperature “has undergone an extreme depression during the latter part of life;” and this is true enough, there having been, owing to causes mentioned before, a reduction in the process of tissue oxidation, and, consequently, a steady decrease in the production of heat. But this is no reason why such a depression of heat during life must result in an elevation of temperature after death.

Professor Wunderlich’s suggestion, I am afraid, does not make matters clearer. There is good reason to believe that a caloric centre does exist in all warm-blooded animals which regulates either the production of heat, or its expenditure by means of radiation, conduction and evaporation, or, what is more likely, the balance of caloric production and expenditure. Independently of certain physiological experiments which point to the existence of such a heat-centre, we have the fact before us, that warm-blooded animals maintain the same body-temperature under extreme varieties of their atmospheric surroundings—a phenomenon which can only be explained by some such regulating agency as suggested.

Now Professor Wunderlich gives us the choice between two hypotheses, according, I suppose, as the circumstances of the case may be. In febrile diseases it is likely that the augmented temperature is due to excessive production of heat; (although this is still an open question, for the augmented temperature may be due to diminished elimination of heat). Assuming, however, this to be the case, it would appear, that during life the caloric centres exert an inhibitory action upon the morbid over-production of the fever heat; and as with the approach of death, or soon after, the inhibitory action of those centres ceases, over-production of heat takes its unrestrained course, with the consequent *post-mortem* rise in temperature. This, I must confess, appears to me to be a sort of explanation which assumes to take for granted the very subject of explanation. What we want to know is this: where does the increase of heat come from after death, since both circulation and respiration have ceased, consequently the very hearth of combustion has been extinguished for want of oxygen? In answer to this we are told, that with the cessation of life there is no more any inhibition in the production of heat—an answer which, in order to be satisfactory, must necessarily suppose that neither the impulse towards heat production, nor the materials of combustion have experienced the slightest diminution for some time after the cessation of life. I need not tell you that this is just what we wish to have explained.

As to non-febrile diseases, where the inhibitory theory is out of place altogether, for the simple reason, that there is nothing to inhibit, we could only fall back upon the supposition that with the approach of death the *regulating* influence of the caloric centre ceases. A moment’s reflection on the subject will however show you, that in such cases, Wunderlich’s explanation fares even worse than in the previous, febrile case.

As far as I know, I hardly think that pathologists have thrown any more light upon the subject. Dr. Radcliff says: “the body has been found to become very hot before death and to remain very hot after death in cholera, in yellow fever and in several other cases in which instances are given by Dr. Erb and by several other writers in Germany, and by Drs. Ringer, Weber, Murchison, Sanderson and many others. The cause of death in the majority of these cases being some sudden affection of the brain, coma in others. The temperature rises as the time of death approaches, when the state of the circulation must every moment be becoming more and more the reverse of increased activity; the temperature conti-

\* Human Physiology, p. 505.

nues to rise even after actual death, when the blood has come to a stand still . . . It is not easy to connect the increased heat of tetanus with the spasms. A part of the increased heat may be accounted for in this manner, but only a small part. Indeed the simple fact that in one of the cases which has been instanced a marked abatement in the severity of the spasms was accompanied by an actual rise in the column of mercury, and that the column continued to rise after death, when all spasm is at an end, is in itself a sufficient proof that it is not in muscular action that the explanation of the increased temperature of tetanus is to be found. Moreover the fact that the temperature rises in the same way before and after death in cases where neither convulsion nor spasm was amongst the symptoms during life, must lead to the same conclusion . . . It seems as if one condition of this change in temperature was the paralyzing of a regulating cerebral influence; and beyond this it is difficult to see further, except it be that this paralysis reaching to the vaso-motor nerves, allows the minute vessels to dilate and receive more blood, and that the increased quantity of blood, even though this blood may be stagnant, may lead to increased molecular changes, of which increased heat is an effect."

No wonder after this, that Professor Taylor\* sums up his considerations on the subject with the following words of half despair: "The facts connected with the production of heat in the dead body have not received much attention from physiologists."

In fact a little more attention to the subject could have spared the authors quoted a great deal of perplexity in explaining, or rather in attempting to explain the phenomenon so often mentioned, regarding the body-temperature before, and soon after death. They have, it appears to me, entirely left out of consideration the fact that there must be stored up in the living tissues of an animal a considerable amount of potential energy in the shape of irritability.

(To be continued.)

### YOGA AND KALPA.

[We fully appreciate the kindly feeling in which we are referred to in the following article. But there should be a limit even to sincerely-felt expressions. We have no desire of following in the steps of Babu Keshub C. Sen and never have or will lay claims to being classed with Sadhus or Gurus, "who have attained the whole truth," least of all with "gods." We warn our kind Brother: too much of enthusiasm degenerates generally into fanaticism.—Ed.]

#### AUPANISHADAYA NAMA.

Tatvagnánavidám sákshát  
Brahmibhútátmanám satám  
Blávatsky álkán mukhánámcha  
Sakásáy éyam iritá  
Nabóddháham navaktáham  
Yathá dévé yathá gurun  
Tathá bhrátrushu yushnásu  
Vignaptim kalayé tathá.

"To Madame Blavatsky, Colonel Olcott and other Sadhus who have attained the truth and are Jivan Muktas this letter is addressed. I come neither to teach nor to expound, but appeal to you, my good brothers, as one would to one's guru or the gods."

In my fourteenth year I met a Lambika Yogi, who, though not an adept of the first order at that time, was sufficiently advanced to instil into me faith in the existence of the Mahatmas, and to teach me the elementary principles of the secret path. Following certain directions he gave me, I began my researches and have since continued them with varied success till the present time. During this period of about 30 years I have studied several books and come in contact with many great men, some of whom have had the rare good fortune of being

personal acquaintances of the Mahatmas. It is now my settled conviction that the *Yoga Marga* is the only way to absorption in Brahma and the perfect culmination of bliss. The study and practice of the earlier stages of Yoga have occupied the major part of my time, and I have also been taught to believe in the efficacy of *Kalpas*. With the latter I have successfully made certain experiments, but for want of sympathy and co-operation, have been obliged to suspend them. By the good graces of my Guru, I was able to discover "the base and summit of the middle," and some other secrets of *Yoga Vidya*. Some time before the separation of his soul from his body, which took place about three years ago, he kindly permitted me to seek instruction and aid from other quarters. Ever since I have been seeking for guidance, practising meanwhile the little already learnt by me before.

Práyaso rúdhá múlanam  
Chintvám ubhayi gatih  
Siddhirarthasya mitréshu  
Sankramah kévalóthavá.

"All long-cherished and deep-rooted desires must find vent in one of two ways, viz., the accomplishment of their object, or their complete disclosure to friends," and unless the GORDIAN knot of the heart known as the "Avidya granthi" is untied, there is little hope for a man of ever becoming a *Brahma Jnani*.

Yadá sarvé prabhidayanti  
Hridayasycha grandhayah  
Atha martya' nritó bhavati  
Étavadanusasanam—Katha  
Atra Brahma samasanti—Katha.

In the Chhandogya Upanishad Uddalaka says to Svétaketu. "Acháryaván purushó véda"—none can know but through an *Acharya* (teacher). I therefore feel myself called upon to communicate to you the state of my mind in the expectation of being favored with spiritual advice.

It will be admitted on all hands that this our body is the principal medium in the accomplishment of our ends, namely—the attainment of the Siddhis; and that the prevention of death is an essential condition of success therein. Various are the ways pointed out for securing this immunity from death—an immunity which is universally considered by the uninitiated to be impossible to obtain. Some hold that by a careful and systematic regulation of the organs of respiration and the adoption of particular kinds of diet death may be avoided for a long time. Others believe that the administration of certain Kalpas or of particular preparation or compounds of them will give one the power to sustain his body, through all eternity, without destruction or decay.\* These methods have several minor sub-divisions, every one of them differing in detail from the rest. Respiration and diet, however well regulated, cannot, though capable of prolonging life to wonderfully long periods, give body that eternal immortality which, I believe, is an essential requisite of Yogic success, and which, *Agastya Bhagavan* says, can be secured only by Kalpa administration accompanied by *Itaja Yoga*. In his usual mystical language he says:—

நினைவாகப் புருடனுக்குப் பெண்மேல் மோகம்  
நெரிகரிபூங் குழன்மகட்கா டவன்மேன்மோகம்  
கனமருவு மிருவருமே கலந்தபோது  
கமலமலர் வதனமோ இதிக்கும்பிள்ளை  
இனிதான பிள்ளையினுலெல்லா முண்டாம்  
இந்தவிதமாயிருக்கும் தலைகூறமார்க்கம்  
வனயாசமாய்த்திரியும் வேடத்தேதாரோ  
மன்னவர்க்கு மங்கையர்க்கும் உயதுகேளே.

"The man's love is directed toward the woman: the woman's love is towards the man: When these two join together, the issue is a lotus-faced child. This sweet child will give everything. The way to adeptship will

\* This, the Mahatmas deny most emphatically. To make one and the same body last eternally, i. e., to prevent the tissues from wearing out is as impossible as the communication of perpetual motion to any finite object in nature. Though *per se* perpetual motion is a fact, the eternal duration of the materials to which it may be imparted is unthinkable.—Ed.

lie in this wise. O, pretenders who roam about the jungles, hear the ages of the man and the woman.\*

There can be no difficulty in understanding what the child here stands for, when it is borne in mind that the man and the woman are intended to signify respectively Yoga and Kaipa. By the reciprocity of affection, Agastya seems to me to declare the indispensableness and union of both for the production of the desired result—namely, the Siddhis. The same view is expressed in another stanza of this sage:—

பாரப்பா விரண்டிற்று மொருபேரிட்டு  
பாடினொருவமானப் பாயையாலே  
வாரப்பா நாதவித்து வழலைக்கும்பேர்  
மவுனமென்ற சிவயோக வாழ்க்கைக்கும்பேர்  
ஆரப்பா விதையெடுத்தி ததிலே சொல்லார்  
அதையெடுத்தி திதிற்புகட்டி யதுவாமென்பார்  
கூரப்பா நாதவித்து முடித்தபேர்க்கு  
கூச்சமுற்ற ஞானமென்னும் பொருடானவாய்க்கும்.

“You will see that he gives the same name to both and sings in allegory. *Nada Bindu* stands for *Valalai* as well as *Siva Yoga*. Who is there to append the latter to the former, or explain the connection between them and say that the two are identical. Depend upon it, the perfection of knowledge will be the reward of those who accomplish *Nada Bindu*.” According to this Rishi, it is the combination of Yoga and Kalpa that constitutes the surest method of obtaining Brahmajñana. The designation adopted by him to denote this combination is “*Brahma Garbha*,” a term which seems to convey the double meaning intended and to fit in equally well with the objects of both departments. It is described under 400 and odd distinct denominations, every one of them applying to a distinct stage in its formation or chemical combination. Among these denominations are *Nada Bindu*, *Valalai*, *Isan Uppu*, *Vamam*, *Kal Chunnambu*, *Sarai Pambu*, *Pasumpon* and *Akasa*, occurring in the stanzas quoted in this letter. The advantages of resorting to *Brahma Garbha* are thus described by this Mahatma:—

இருக்கலாம் வெஞ்சமனு மெவல்செய்ய  
இவ்வலகு மவ்வலகு மென்றும்போற்றப்  
பெருக்கலாம் கைலையாழிசன்பாதம்  
பெற்றிடலாம் சித்தரூடன் பேசலாகும்  
நெறுச்சமுறு மாயிரத் தெட்டண்டர் தம்மை  
நிமிடந்நிற் சுற்றிவந்து நிலைக்கலாகும்  
முருக்கெலா மீசனுப்பு முருக்கேயல்லால்  
முத்துமேற்றவுப்பின் முடியாவாறே.

“One may live on, exacting servitude from *Yama* himself: may grow big so as to be an object of wonder to this world and the next: may obtain the feet of the God who lives in Kailasa: may hold communion with the Siddhas: may go round the whole cosmos of 1008 worlds in an instant. But all these powers result only from *Isan Uppu* and no other.”

போச்சப்பா பிறப்பிறப்பு மாண்டுபோகும்  
புகழுடைய வாசனம்பான் மெனியாகும்  
வாய்ச்சுதுபார் வாசியது நிலைத்துப்போகும்  
மகத்தான காயமது பெலத்துப்போகும்  
கூச்சமுறே றர்க்குணைற் குணங்களாகும்  
கோடான கோடியுகம் வாழலாகும்  
சூச்சிதுபார் வாமத்தால் யோகமாகும்  
அவையன்றி யொன்றிலை சாயம்பாழே.

“There will be an end of births and deaths: the body will look like the most precious of metals: respiration will stand still: the body will acquire very great strength: all bad nature will be turned into good: and one may thus live crores of Yugas.† Mind that *Yoga* comes of *Vama*, and without these there can be nothing and the body itself is useless.”

\* What Agastya Bhagavan meant was not the eternal duration of any physical body, but of the inner, divine man in his individuality; and thus by avoiding reincarnations in other personalities, the unbroken preservation of one's own higher personality. This may be reached only by such great adepts as he was himself.—*Ed.*

† Not quite so. “Crores of Yugas” in one's self-conscious “inner self,” not in one and the same physical body.—*Ed.*

சொல்லாத பொருளையா பிரமகற்பம்  
சொல்லாமன் மறைத்தார் சன் சித்தர் தாமும்  
கொல்லாமற் கொல்லுமையா வெளிவிடாதே  
சொந்தையர் சளாசையிலே சிக்கிடாதே  
பொல்லாத பொருளதுகைக் கொண்டாயானால்  
புசலறிய பிரமலிபி தவறிப்போகும்.  
வெல்லாமல் வெல்லுமந்த தீகைக்கண்டால்  
வெருகோடி வித்தையெலா மாடலாமே.

“*Brahma Garbha* is a thing which cannot be published. The Siddhas have kept them concealed. Seeming not to kill, it will kill, disclose it not. Get not entangled in the love of females. It is a dangerous substance and if secured will avert *Brahma Lipi* itself. This course, which while seeming not to succeed, will succeed, will, if found out, enable one to practise crores of arts.”

பசும்பொன்னே மாற்றுகி மாணியிலிலை  
பருகினு லாதுகண்ட பரமனாவீர்.

“It is gold of such high quality that it is beyond the capacity of a touchstone to test it. By imbibing it you may become *Pralaya*-witnessing *Parama*.”

It will be seen from these stanzas that Agastya, while extolling “*Brahma Garbha*” as the most efficacious means of securing the Siddhis, seems also to point out in unmistakable language, that Yoga and Kalpa go hand in hand, and, without either, true Yogic success is impossible. What *Brahma Garbha* is, is described by him in a series of stanzas of which the following are among the foremost. The language used is, as a rule, allegorical, and the ideas abstruse, and certainly above the comprehension of the uninitiated. He says:

மண்ணிலெழு பிறப்பாகும் பிரமகற்பம்  
வானேவிட்டுச் சீழிறங்கும் கற்கண்ணும்பும்  
விண்ணவர்க்கு மருந்தான சாணாப்பாம்பும்  
வெளியில் வெளியானவர்க்கே விண்ணுந்தாளே.

“The seven times born *Brahma Garbha*, the stone-churnam that descends from the sky, and the *Sarai* serpent which is the elixir of the gods, can be discovered only by those who have seen the light of lights.” The “seven births” or transformations referred to are then explained but in words as obscure as an enigma.\*

விள்ளுமே யானியிலே யொளியுமாச்சே  
வெந்தழலா மறுபிறப்பு நீலமாச்சு  
கன்னமதா யிறப்பிறப்பு சிவப்புமாச்சு  
காங்குகொண்டு மறுபிறப்பு வெள்ளையாச்சு  
துள்ளியது பின்பிறப்பு மஞ்சளாச்சு  
தோகையி னிறமாச்சு மறுபிறப்பில்  
உள்ளபடி கடைசி யெழுபிறப்பிற் ருணும்  
உயர்க்காழி முட்டைநீறம் படிசுமாச்சே.

“In the beginning it was light. In its fiery next birth it became blue. In its mysterious third, it became red. In the fourth it got heated and became white. Springing then, it became yellow. In its next birth its color was that of the feathery peacock. In its seventh and last, it became, indeed, an egg-colored crystal.”†

\* When Mr. Simeon's *Esoteric Buddhism*, and *Fragments of Occult Truth* are read and comprehended, it will be easy to understand that the “seven births” or transformations refer to the seven births in the seven root races. Every such birth being the key-note struck for other and subsequent births in sub-races, each key-note resounding in a higher key than the preceding one on the scale of tones; or, in other words, every new root-birth carrying the individuality higher and higher until it reaches the seventh root-race, which will bring man finally to the highest, eternal Buddhahip or “*Brahma Garbha*” in a degree corresponding to that he will have acquired by his enlightenment during his lives on earth.—*Ed.*

† The meaning of this is simple enough to him who has studied the theory of rebirths in the Esoteric doctrine. This gradation and change of colour refers to our physical and moral constitution on (a) the various seven planets and (b) in the seven root races. Planet A, corresponds to pure light—the essence of man's primeval body when he is all spiritual; on planet B man becomes more objective—assumes definite color; on C, he becomes still more physical—hence red, the red-earth or Adam kadmon, being the material acquired by the monad in the preceding world prior to being developed as man—on this Earth; on planet D, while, the colour containing an equal proportion of spirit and matter; on E, he is yellow—(relating to the Yogi's robe) more spiritual; on F, he is fast approaching “the peacock” colour, that bird being the emblem and *rahana* of *Saraswati*, the goddess of universal occult wisdom; while in the seventh and last birth man's aura is compared to that of an egg-coloured crystal—pure crystalline, purity being the attribute of God-Man.—*Ed.*

படிக்கென்ற வண்டமெலாம் பிரமகற்பம்  
பார்க்கவென்ற லாகா சப்பிரமவந்தூ.

"It is this crystal globe that is known as Brahma Garbham, the seed of the Akasa Brahma." Not Agastya alone, but all the Siddhas speak of the extraordinary powers of this Bindu. The same idea is expressed in the Chhandogya Upanishat by Jaivali, when in answer to Salavutya he said that "Akasa"\* is the ultimate course of this world.

"Asya lokasya ka gatiriti?  
Akasa iti hè va cha."

I am therefore in earnest search of instruction regarding Agastya's mysterious teachings about the *Brahma Garbha*, and as it has pleased *Paramatma* to place the key to the SECRET WAY in the hands of worthy people like you, *Mumukshus*, who have renounced everything worldly for the sake of Truth, I have deemed it my duty to appeal to you for that instruction which, I hope, you will, after consultation with the Mahatmas, if necessary, be gracious enough to give me, together with any further advice you may consider necessary for my guidance. I am sanguine that you will not disregard my humble solicitations, but will count me as one of 'your own,' and that, with your aid, I shall one day be brought face to face with the Mahatmas themselves.

ஸாமர பிங்கவ சாஸ்திரி.  
(SAMAR PUNGAVA SASTRI)

[EDITOR'S NOTE.—This does not depend on us, but on the writer himself. We can help him in the esoteric interpretation of that which he seems to understand quite *ecoterically* as far as we ourselves know. But we can give no promise on behalf of our Mahatmas.—Ed.]

### BUDDAH

The following poem, signed "A. C. Benson," appeared in the London *Spectator* :—

Whoe'er hath wept one tear, or borne one pain  
(The Master said, and entered into rest),  
Not fearing wrath, nor meaning to be blest,  
Simply for love, howbeit wrought in vain,  
Of one poor soul, his brother, being old,  
Or sick, or lost through satisfied desire,  
Stands in God's vestibule, and hears his Choir  
Make merry music on their harps of gold.  
What is it but the deed of Very Love,  
To teach sad eyes to smile, mute lips to move?  
And he that for a score of centuries  
Hath lived, and calls a continent his own,  
Giving world-weary souls Heaven's best surprise,  
Halts only at the threshold of the Throne.

Referring to the above, *Truth* says:—The *Spectator*, last week, published a short and rather neat poem on "Buddha," signed "A. C. Benson, Addington Park, Croydon." Of course, a father is not to be held responsible for his son's opinions; but it will certainly be taken as a sign of the times that a son of the Archbishop of Canterbury should publish some verses in vindication of a "heathen" religion and declare that Buddha himself—

"Halts only at the threshold of the throne."—*Times of India*.

### ADEPTS AND POLITICS.

By CHHABIGRAM DOLATRAM (*Dikshita*.)

THE perusal of an article headed "The Adepts in America in 1776," published in the October number of the *Theosophist*, has suggested the following doubts, which, on account of the extraordinary felicities of personal communication, which you seem to claim with the Adepts, you are specially fitted to solve. The article is no doubt written on his own responsibility by the writer, who is particularly careful to inform his readers that his statements have been made "without the knowledge and consent—as far as he knows—of the Adepts." The views advanced, however, falls in, entirely with those held in general by the Theosophical Society, and the Editor of the *Theosophist* is the sole authority on a subject of this sort.

\* "What is the ultimate end of this *Loka* (cosmos)?—It is Akas."—Ed.

The gist of the article referred to above is contained in the concluding paragraph. It seems to create the impression that the Adepts, as a natural consequence of their universal sympathy for the well-being of the human race, participated in the great American Revolution and brought about its happy results through, as it were, the medium of Washington and others. In short, it is intended to say that Thomas Paine, Brother (?) Benjamin (bye the by, history has kept us entirely in the dark about his connection with Theosophy) and a host of other leaders of this Revolution worked in the particular manner, they are said to have done, simply because they were moving under the guiding inspiration of the Adepts. In fact the article means that the necessity of a Revolution in America, and, for the matter of that, a rough plan of all the subsequent operations, were preconceived in the minds of these Mahatmas long before the so-called Freemason brothers had an earthly existence. The principle involved, evidently, seems to be that the first conception of all such Revolutions, as are, in the opinion of the writer, in their ultimate results, beneficial to humanity, and the subsequent selection of human agency for working them out, have invariably had their first origin in the laudable solicitude of the Adepts for the progress of humanity.

Will the writer, therefore, or the Editor, undergo a little trouble to satisfy our curiosity, which a perusal of the article very naturally raised as to the part which the Adepts took in the English Revolution of 1649? Was President Bradshaw, who, in a self-constituted Court of Justice, tried and condemned to death, his lawful sovereign Charles I., under the celestial influence of the Mahatmas, as Citizen Paine subsequently was?

Was Cromwell then no more than a mere puppet dancing to the pulls of the string, which the Adepts, of course, kept in their own hands? Why were they, poor souls, who did everything but in strict obedience to the inward dictates of superior spirits, allowed, then, by the all-powerful Adepts to suffer the indignity of having their dead remains (may they rest in peace!) disinterred and hanged by the public executioner?

The French Revolution of 1789, too, which has been fruitful of such vast consequences, could, by no means, be conceived to have taken place without the Adepts having lent a powerful helping hand to it. Citizen Paine had no doubt long since been prepared for the work; but it was to Danton, Robespierre and Marat, who have acquired so world-wide a notoriety by their deeds, and to whose influence the French Revolution is chiefly indebted for the turn it subsequently took, that the Mahatmas must have turned with a peculiar feeling of gratification as a set of instruments incomparably superior to Paine, Washington and all the other American Revolutionists. Will you, then, enlighten us how much of this rare inspiration, under which they acted, they owed to the Mahatmas?

Were Victor Emmanuel and Garibaldi, while working out the revolution in Italy, doing no more than carrying out the wishes of the Tibetan Brothers? It cannot, I think, adopting the line of arguments the writer has adopted, be denied that all these revolutions have been brought about by, and the agents employed in them have been mere instruments in the hands of, these Mahatmas. It is said, of course as a proof of the actual share the Mahatmas had in the work, that Thomas Paine saw or at least thought he saw "a vast scene opening before him," and in another place that "some thoughts bolt into the mind of their own accord." If these simple things are sufficient to entitle Paine to a claim to supernatural visitations, is it unreasonable to argue that Lord Byron was also actuated by the same benign influence when he, with a self-abandonment of worldly comforts and conveniences, and a voluntary submission to physical hardships and privations which merit the highest praise, repaired to Greece to take an active part in the work of its liberation and at last died amidst the swamps

of Missolonghi? How far this is correct you alone are in a position to say, as you alone enjoy a familiar intimacy with the Mahatmas.

To prevent misapprehension, I should conclude with the remark that as an orthodox Hindu I do believe in the existence of Mahatmas, though I must candidly confess that such arguments as have from time to time, appeared in your very interesting journal in proof of the existence of *the Mahatmas*, have failed to bring convictions home to me.

BROACH,  
27th October 1883. }

EDITOR'S NOTE.—Our Journal is open to the *personal* views of every Theosophist "in good standing", provided he is a tolerably good writer, and forcing his opinions upon no one, holds himself alone responsible for his utterances. This is clearly shown in the policy, hitherto pursued by the Magazine. But why should our correspondent make so sure that "the views advanced falls in entirely with those held in general by the Theosophical Society?" The Editor of this periodical for one disagrees *entirely* with the said views, as understood by our critic. Neither the Tibetan nor the modern Hindu Mahatmas for the matter of that, ever meddle with politics, though they may bring their influence to bear upon more than one momentous question in the history of a nation—their mother country especially. If any Adepts have influenced Washington or brought about the great American Revolution, it was not the "Tibetan Mahatmas" at any rate; for these have never shown much sympathy with the Pelings of whatever Western race, except as forming a part of Humanity in general. Yet it is as certain though this conviction is merely a *personal* one, that several Brothers of the Rosie Cross—or "Rosicrucians," so called—did take a prominent part in the American struggle for independence, as much as in the French Revolution during the whole of the past century. We have documents to that effect, and the proofs of it are in our possession. But these Rosicrucians were Europeans and American settlers, who acted quite independently of the Indian or Tibetan Initiates. And the "Ex-asiatic" who premises by saying that his statements are made entirely upon his own personal responsibility—settles this question from the first. He refers to Adepts *in general* and not to Tibetan or Hindu Mahatmas necessarily, as our correspondent seems to think.

No Occult theosophist has ever thought of connecting Benjamin Franklin, or "Brother Benjamin" as he is called in America, with theosophy; with this exception, however, that the great philosopher and electrician seems to be one more proof of the mysterious influence of numbers and figures connected with the dates of the birth, death and other events in the life of certain remarkable individuals. Franklin was born on the 17th of the month (January, 1706) died on the 17th (April, 1790) and was the youngest of the 17 children of his parents. Beyond this, there is certainly nothing to connect him with modern theosophy or even with the theosophists of the 18th century—as the great body of alchemists and Rosicrucians called themselves.

Again neither the editor nor any member of the Society acquainted even superficially with the rules of the Adepts—[the former individual named, disclaiming emphatically the rather sarcastic charge of the writer to her being "alone to enjoy or claim the extraordinary fecundity of personal communication with the Adepts"]—would believe for one moment that any of the cruel, blood-thirsty heroes—the regicides and others of English and French history—could have ever been inspired by any Adept—let alone a Hindu or Buddhist Mahatma. The inferences drawn from the article "The Adepts in America in 1776," are a little too far-fetched by our imaginative correspondent. President Bradshaw—if such a cold, hard and impassive man can be suspected of having ever been influenced by any power outside of, and foreign to, his own soulless entity—must have been inspired by the "lower Jehovah" of the old Testament—the Mahatma and Paramatma, or the "personal" god of Calvin and those Puritans who burnt to the greater glory of their deity—"ever ready for a bribe of blood to aid the foulest cause"—alleged witches and heretics by hundred of thousands. Surely it is not the living Mahatmas but "the Biblical one living God," he who, thousand of years ago, had inspired Jephthah to murder his daughter, and the weak David to hang the seven sons and grandsons of Saul "in the hill before the Lord;" and who again in our own age had moved Guitau to shoot President Garfield—that must have also inspired Danton and Robespierre, Marat and the Russian Nihilists to open eras of Terror and turn Churches into slaughter-houses.

Nevertheless, it is our firm conviction based on historical evidence and direct inferences from many of the *Memoirs* of those days that the French Revolution is due to *one* Adept. It is that mysterious personage, now conveniently classed with other "historical charlatans" (*i. e.* great men whose occult knowledge and powers shoot over the heads of the imbecile majority), namely, the

Count de St. Germain—who brought about the just outbreak among the paupers, and put an end to the selfish tyranny of the French kings—the "elect, and the Lord's anointed." And we know also that among the *Carbonari*—the precursors and pioneers of Garibaldi there was more than one *Freemason* deeply versed in occult sciences and Rosicrucianism. To infer from the article that a claim is laid down for Paine "to supernatural visitors" is to misconstrue the entire meaning of its author; and it shows very little knowledge of theosophy itself. There may be Theosophists who are also Spiritualists, in England and America who firmly believe in *disembodied* visitors; but neither they nor we, Eastern Theosophists, have ever believed in the existence of *supernatural* visitors. We leave this to the *orthodox* followers of their respective religions. It is quite possible that certain arguments adduced in this journal in proof of the existence of our Mahatmas, "have failed to bring conviction home" to our correspondent; nor does it much matter if they have not. But whether we refer to the Mahatmas he *believes* in, or to those whom we personally *know*—once that a man has raised himself to the eminence of one, unless he be a sorcerer, or a Dugga, he can never be an inspirer of sinful acts. To the Hebrew saying, "I, the Lord create evil," the Mahatma" answers—"I, the Initiate try to counteract and destroy it."

### HIMALAYAN AND OTHER MAHATMAS.

(An Open letter to Madame Blavatsky.)

BY RAMA SOURINDRO GARGYA DEVA.

BEFORE I come to the subject-matter of the present communication, namely, the existence of the Himalayan Mahatmas as living persons, I beg to be indulged with a few remarks suggested by their present position with regard to the world at large—a position into which they have been brought chiefly through the instrumentality of you, Mad : Blavatsky, Colonel Olcott, Mr. Sinnett and a few others, and one which, with the latest developments in London, is being bitterly resented by all Hindu students of Occultism.

As time rolls on, I hope the above named Theosophical leaders will see how unjust and unjustifiable were their reproaches on the Hindus, for looking from the beginning on the Founders and their mission with a certain amount of distrust and want of cordiality. Those who did not believe in the science of Occultism and its great Masters naturally opposed them; those who believed in both or were students of occultism themselves opposed them still more strongly. They shrunk from them as desecrators of the Holy Name of Rishis and our modern Mahatmas. They have talked of the Masters before an irreverent and unsympathising world, and thereby rendered our Lares and Penates the plaything of the sceptical mob of nominal Christians, Spiritualists and Materialists. In their defence the Founders might urge that their endeavours have not been unproductive of good to our country, and have brought over a few Europeans to the right path. But surely they do not believe that the gain of a few Europeans is at all counterbalanced by such acts, as for example, the profaning the name of my most beloved and venerated Chohan. I To find how sadly every idea of real respect is misunderstood by the Occidental, one has but to turn to Mr. Sinnett's *Occult World* and glance at the dedication disfigured by grotesque additions to my Master's *one* name—however flattering they might seem to the profane eye.

Addressing my grievance to the two chief Theosophists personally, I may be permitted to state the following:—

If you had any good hopes as to the issue at the beginning, I suppose you have learned better from what we painfully look upon as the gross blasphemy of the Spiritualists in England and America. They know not what they do, but you knew only too well how much it would grieve us all the same. I suppose you will readily admit that the blame is more on you than on the ignorant Spiritualists. For they can plead their ignorance which you cannot, and you know that it is no defence that your acts are sanctioned by the Mahatmas. The Great Ones who have conquered the hideous monster of Ahankara will look with an equal eye on abuse or adulation. But we Hindus, who reckon it a sin to help a Brahman in his

\* See *The keys of the Creeds*, by a Roman Catholic Priest.

acts of self-abasement and sacrifice, however meritorious their object, can hardly be made to forget your indiscretions.

So long as the existence of the Mahatmas formed one branch of a dilemma, with your alleged "trickery" for the other branch, we were quite content to let you fight your own battle in the best way you could. But when the genuineness of the phenomena is admitted, and our venerated Masters, the Mahatmas, who produce them, are sought to be dragged down to the level of the *bhutas* and *pisachas* of the Spiritualists, it becomes our unpleasant yet sacred duty to do what we can to lay facts before the public, such as might inspire fair and unprejudiced persons at any rate, with an assurance in the existence of the *BLESSED ONES*—however ludicrous in our sight such an attempt might appear.

That there are men in this country who constantly exercise powers resembling those of our *Guru devas*, under circumstances to render the suspicion of mediumship perfectly impossible, has been well established by the testimony of witnesses, whose judgment and veracity are beyond question, being natives and Europeans of education and high position. The limited time at my disposal renders it impossible to bring to a focus all the available evidence; it will be quite enough for my present purpose to cite Hurry Dass Sadhu, who visited the Court of Runjit Singh of the Punjab (see *Camp and Court of Runjit Singh*), and the Bhu Kailas Yogi who was seen by all Calcutta of the last generation, and among others, by the eminent scholar Dr. Rajendra Lala Mitra, L. L. D., c. 1. E. Let your spiritualistic friends, before they sit in the critic's chair again, acquaint themselves with these facts and examine their theories and hypotheses in the light we furnish them with.

Unless they first qualify themselves for their self-constituted censorship, their opinions will not be entitled to much consideration; so long as they do not first investigate the capacities of the *living* man, their explanations of, and belief in, the powers of the *dead* in the production of their phenomena cannot by any means get beyond half truths. We have no objection if they fondly hug the half as exceeding the whole. But when, intoxicated with their young discovery, they seek to conform everything to their procrustean bed, the whole affair puts on an amusing but mischievous aspect. It has been admitted by some of the advanced thinkers of the spiritualist party that there is no *a priori* impossibility for *living men* to exercise the powers they claim for departed "spirits;" then does it not strike them that it is the reverse of wisdom to ignore this branch of the enquiry altogether, and bend everything to their hasty hypotheses, which have remained stagnant all these years? Surely Circe has cast her spells over the spiritualistic wise men! I shall take an instance. Mr. Harrison, on the strength of an alleged "plagiarism," in the *Medium and Day-break* comes to the conclusion that Madame Blavatsky *must* be a strong physical medium; that, therefore, she *must* be living a luxurious life, and therefore, again, she is guilty of affectation in directing aspirants for occult knowledge to lead an ascetic life...The whole thing has been thus crammed into the nutshell of an hypothesis.

This line of argument reminds one of the solemn wise-acres who launched into the ocean of speculation without waiting to see if the fish was really heavier when dead than when alive. The elaborate structure evolved from Mr. Harrison's brain will melt into thin air if submitted to a single ray of fact. Those who know Madame Blavatsky, *know* what a strictly simple life she has always lived while here, in India, and is now living the same life to the knowledge of all. I for one will unhesitatingly put my stone in the cairn of proof that may easily be raised in regard to that fact in answer to Mr. Harrison's funny syllogism. I will destroy it with another one, built on impregnable premises. Madame Blavatsky, I emphatically assert is not

living a luxurious life. She lives the most isolated and hardworking, as well as the simplest of lives; therefore she cannot be a physical medium; hence all the arguments of Mr. Harrison are completely demolished. The keystone of the arch being gone, the whole fabric necessarily crumbles down in hideous ruin. Having thus repulsed the charge of *Spiritual* Mr. Harrison I come to the consideration of positive proofs required by the Spiritualists from us to demonstrate to them the actual existence of our Masters. We can offer them no better one than the fact of some of us (the writer included) *having lived long years with them*.

The disinclination of the Mahatmas to convince the world of their existence, and the reasons for such disinclination have been sufficiently explained by Mr. Sinnett in his *Occult World* and *Esoteric Buddhism*. Hence, all that *Ohelas*, who know their Masters, and others, who know—but are forbidden to take the public into their confidence—can be expected to do is to declare what they know. In cases on the right decision of which human lives are at stake, no better evidence is ever obtained or required. But facts, though stubborn things, are also double-edged, and I shall not be surprised if some wise man of the West, eager to emulate the memorable feat of that French Abbé who conclusively disproved the historical existence of Napoleon I. and showed his history to be only a solar myth, should come forward and, shaking their logical kaleidoscope, rearrange the entire thing. But it is not to such superb geniuses that I address myself. The testimony I now put forward is intended for those whose spiritual faculties are sufficiently developed to allow their taking advantage of the well-proven existence of the Mahatmas. Yes; I most emphatically declare that the holy Sages of the snowy range—the Blessed Himalayan Mahatmas—do exist and *Guru deva* K. H., has this one point in common with his presumptuous critics of the West, that he is as much a living man as they. I have lived with Him and some of us, *Chelas*, whose names from time to time have appeared in your journal, still live under their protection and in their abodes. I, the writer, am one of the privileged. But when the time comes for me to have the right of imparting for the benefit of the world, a portion of what I shall have learned, I shall not forget the treatment of my beloved Master at the hands of of your Occidental would-be Brahmans, the wise-acres who think they know so much when they know so little. Nor are the present events calculated to make *any* Hindu *Chela* anxious to share his knowledge with Europeans.

One word more. We, Hindus, who know why the injunction has been laid down in the *Bhagvat gita* against unsettling the faith of the multitude, have nevertheless been dragged into a declaration, before an unbelieving and unsympathetic world, of that which has hitherto been known only to a few unpretending Brahmans: and I, for one, felt compelled to publish this protest. But I cannot let this letter go without expressing my sincere pain in having to address it to *you*, for whom personally my feelings are too well-known.

DARJILING, November 1883.

#### PSYCHO-PHYSIOLOGICAL NOTES.

BY ALEXANDER WILDER, F. T. S.\*

ONE of our best writers on Psychology, if we can but read him intelligently, is Shakespeare. He seems to have been an adept in psychologic science; an expert, really, who surpasses every one that we observe to be called out in great trials and celebrated cases. He had no microscope to look up molecules with and guess whether they betrayed intellectual health or moral weakness; so he could hardly pass in the mechanic shop of a modern scientist. The great world, however, has passed its Judgment more intelligently.

\* Dr Alexander Wilder, M. D., F. A. S., F. T. S., Professor of Psychological Science in the U. S. Medical College of New York, Vice President and Counsellor of the Parent Theosophical Society.

I have often wondered who Shakespeare was—whether Plato, Zoroaster, or Kapila; I never considered him the disciple of Francis Bacon. He passed not into the intellect from the world of sense, but wrought in the region of mind what he has personated and represented so gloriously. One could imagine that he had read the inscriptions on Apollo's Temple at Delphi, "ΕΙ, ΤΗΟΥ ΑΡΤ, and "KNOW THYSELF." He gave God his faith; and thus outfitted, he began the study of man. A more accurate and profound knowledge than he exhibits, a better conception of human nature, a more thorough apprehension of what constitutes disorder—all that concerns the physician, the student in mental science, the real psychologist, we find set forth. He that hath ears to hear, can hear it; he that hath eyes to see, can see it in his pages. Every phase of the subject is represented as nowhere else.

Another most valuable auxiliary to such study is Doctor Wilkinson's treatise on "The Human Body and its Connection with man." Few writers handle these matters so ably and elaborately as this most deserving man and author. But for the fact that in certain of his views, he does not accord with the prescribed dogmas, he would rank now among the first. I admire the very title of his book; it recognizes psychologic science as the true human science, the genuine Anthropology.

Herbert Spencer says: "Though we commonly regard mental and bodily life as distinct, it needs only to ascend somewhat above the ordinary point of view to see that they are subdivisions of life in general, and that no line of demarcation can be drawn between them otherwise than arbitrarily." If we accord with this proposition, we must of necessity look upon the higher manifestation as having more intimate relations with the psychic entity. The bodily life, then, is for the sake of the other, to afford it a medium for becoming objective and invested with physical conditions. The mind is the energy or force that pervades the body, keeping it together and in activity. When it dissolves the connection, the body falls under the action of other laws, and dissolves into its molecular constituents.

When the physician is called upon to advise with the patient, he considers whether the disease, or rather the manifestation which the morbid condition makes, is organic or functional. In the former case, there will be actual lesion, what is technically denominated a loss of continuity in a part of the body. In the other instance, there is only the disturbed action of organic structure. This disturbance is only the effect of a cause which is interior and hidden from sight. The every-day practitioner will be content with affording relief to the symptoms which have been ascertained. We would suggest a further inquiry. It is our place and duty to search for the causes, examining the matter as psychologists, and, therefore, as philosophers—perhaps as seers and prophets.

Doctor Jahr in his treatise on Homœopathy, has uttered the same thing. He says: "We are to regard every given case of disease less as a local affection of this or that organ, causing a general derangement in the organism, than as a consequence of or disturbance in the principle which governs and preserves in harmony all the vital functions of the body. From this it results that, in practice, it is less important to remove the affection of an organ than to regulate the normal state of the principle of health in the organism; convinced that the normal state of this principle being re-established, all the consequences arising from its disturbances would also naturally cease, and in a much more certain and permanent manner than if they had only been transferred from one part to another by derivatives, or momentarily suppressed by palliatives."

Physiological science, as it now consists, has not settled the fact in regard to what the essential principle of health really is. We may be pretty certain that chemical preparations and pharmaceutical compounds

will not reach to it. The body is only an incident of our individuality, and whatever disturbance may be going on in and about it, is superinduced from that which permeates it, and at the same time extends infinitely beyond. It is the life itself, the very life, with which we have to do. This life is a one—an ocean so to speak, extending everywhere, as the ocean of water extends over a large part of the earth, and the nobler ocean of air all over it, to many miles above our heads. That ocean of life subsists every living creature; it maintains our bodily organism and all its tissues. It adds no weight to our bodies, no bulk, or anything of dimension; but it keeps them alive. It is not just, therefore, to consider that the student of the healing art is going at all out of place, in the endeavour to learn what he can of this all-pervading principle.

About the time of the Christian era, this doctrine was revived in the world of scientific learning. Athenaios, a physician born in Pamphylia, seems to have been instrumental in this matter. He taught *Materia Medica* as distinct from Therapeutics, and also wrote upon Food and Diet. He went afterward to Rome, where he acquired distinction. He maintained that there was an immaterial, active principle in the body, which he denominated *pneuma*, or spirit; and he considered the state which it was in as the source of health or disease.

Hippocrates, four hundred years before, had taught something of a very similar character. He named the principle which regulated the bodily functions *phusis*, or nature. From this word, those who practice the healing art are now called *physicians*, or servants of nature. What Hippocrates meant was an all-pervading principle in the body. It is now called the *vis medicatrix naturee*, the healing force of nature. It is an energy essentially superior to material substance. Athenaios very properly designated it as spiritual. It is an historical fact that a school of medicine sprang up by the title of *Pneumatists*, or Spiritists, and prevailed more or less in Asia Minor and Syria, through the Apostolic age and long afterward. It was predominant in Pergamos, the city where Galen was born and educated.

Another theory grew out of this; that there is an animal spirit generated in the blood. Many believe it now; and it seems to be the doctrine of the Books of Moses. "The life of the flesh is in the blood," we are told in the English version of Leviticus.\*

Untzer and Prochaska give this animal spirit the name of *vis nervosa*, or nervous force; and propounded the hypothesis that it has its origin in the brain. We are further told that this organism is the most important of all in the body; that it is the seat of the rational soul, or interior mind; and further, that it is the link by which the soul and body are united, and the instrument by which the soul, so long as it is united to the body, performs its uses. By it, in short, the mind acts on the body, and the body, in turn, acts upon and influences the mind.

I cannot accept this dogma without certain qualifications. It is true in a great degree, but the current ideas upon the subject are more or less at fault. There is somewhat of exaggeration in the statement, so frequently made, that the soul, through the instrumentality of the cerebro-spinal axis, has the power of exciting in the body various movements that are involuntary, but which are essential to it: as digestion, assimilation, secretion, and the other physiological processes. These functions are as correctly performed by individuals with a deficient quality of brain, as by those who are more nobly endowed. The horse and the ox digest and are nourished, and go through with all the physiological processes as well as the clearest-headed man. The fishes, reptiles, insects and other creatures tell a like story. In a very

\* This theory and belief as in echo from the Sanctuaries of the initiated hierophtants. It is not "an animal spirit generated in the blood" but blood itself is one of the innumerable states of that Spirit or the One Life of Esotericism: Ether, vapour, ozone, animal electricity etc., and finally animal blood.—Ed.

strict analogy, the grass, trees, and all the vegetable kingdom feed, digest, assimilate, secrete, excrete and perform other functions. I see no way to escape from the conclusion that the brain and its dependencies, important as they are, do not eliminate the vital or nervous force which controls in these matters. If they could be removed without shock, clear down to the medulla oblongata and its associate ganglia, there might be no hindrance whatever to all these physiological acts.

Professor George Ernest Stahl, of the University of Halle, appears to have approximated more closely to the philosophical foundations. He propounded the hypothesis that health depended upon the integrity of the fluids of the body. He has good reason for his dogma, for all that is most essential to our existence is fluid. Five-sevenths of the body are constituted from water. The parts which we denominate solids are chiefly from that origin. The nervous system is fluid, or nearly so; the fats in the body are fluid, and so to a great extent are the muscles. The circulation of the blood sustains every part of the structure. When any part fails to get its due allotment, its strength ebbs away, and it becomes inert. The brain stops work when the blood becomes deficient in nutritive material and vital force.

Professor Stahl had been court physician at Weimar, the metropolis of the intellectual world of Germany. He did not rely upon books for his instruction so much as upon his observation and contemplation. This is by no means an unreasonable method. There is a prescience in the human intellect which usually anticipates the discovery of truth, a criticism which concerns itself with the profound significance of things, even beyond theory or calculus; and all phenomena eventually resolve themselves in accordance with it. Reason itself is but radiation, a saying of the Absolute Verity. Stahl relied upon his intuitive perception as the means of knowing the truth. He attempted a revolt against the physico-chemical dogmas which had swept over the medical world like a sirocco, debilitating every heart and intellect where it blew. The body is passive, he taught, receiving influences from the soul; and it is necessary to the soul, in order to establish conscious relations with the external world. No muscle of the body is a force, but only the instrument of a force. All motion implies and requires the operation of a spiritual moving agency.

He affirmed that every pathological affection was the result of the reaction of the soul against the mortific agent, and that the totality of the symptoms of any given case of disease only represents and indicates the succession of vital movements. Samuel Thomson and the more philosophical Eclectics taught the same doctrine. I have repeatedly heard it uttered by broad-browed, sun-burnt men. The logical outcome of this doctrine is, that the physician's duty is either to remain as the inactive witness of the struggle, or to aid the soul intelligently in her endeavors to restore the body to a state in which it will be her unobstructed and passive instrument. As phenomena, the things which appear about us, are not the genuine realities, so symptoms are not disease. It requires intelligence, spiritual insight, to deal with symptoms. We are liable otherwise, with our bungling and crude remedies, to derange the wise combinations of the soul, the supreme regulator of the economy; to impede and hinder its efforts to set itself right with the physical organism.

The learned and wise German, however, seems not to have been clear in regard to the mode of communication between the two. Barthez mentions the *vital principle*, but curiously declares that it is neither a subtle entity intermediate between soul and body, nor a mode of organized matter. It is more common at the present time to name it the *vis vite* or *vires vitales*; but even with this it seems to be regarded as some blind principle about us which physicians talk about—a kind of salt to keep the body from decay. "I marvel," says the Druidic poet Taliesin, "that in their books they do not

know with certainty what are the properties of the soul, of what form are its members, what region is its abode, what spirit, what inflowing sustains it." This is perhaps as just a criticism now as twelve centuries and more ago.

Van Helmont, the father of modern medicine, was clearer in his conceptions. He declared that the soul was not fettered to any one organ of the body, but diffused itself through all. He ventured to experiment on himself with aconite, and found his very sense and consciousness transposed. He no longer thought and felt with the head, but with the organism in the region of the stomach. His power of perception was clearer than ever. He neither slept nor dreamed, but thought with the consciousness at the epigastric centre. He denominates the nervous structure at that point the sun-tissue, from the ancient designation. "The sun-tissue is the chief seat and essential organ of the soul," he declares; "the genuine seat and sensation is there, as that of memory is in the head. Reflection, the companion of the past and future, inquiry into circumstances, are the functions of the head; but the rays are sent by the soul from the centre, from the region of the stomach. The isolated cognitions of the future, and that which is independent of time and place, belong solely and alone to the central hearth of this epigastric region. Notwithstanding this, however, the feeling soul is not enclosed in the stomach as in a bag; she only has her chief seat there. From that point proceed the light and warmth which diffuse themselves through the whole body; from thence is the power of life which prevails in all the organs."

The medium for the diffusion of life over the body, it will be seen, is the ganglionic nervous system, which radiates from the solar ganglion as sunbeams from the great orb of day. In it, substantially, "we live and move and have our being." It is the older part of the nervous organism, the first formation in the embryo. Its functions are perfect before birth; it is the foundation of the whole physical being. It connects each organ of the body with every other, and the whole physical structure with the informing soul. All asthma has its origin from this fountain, and the energy which restores to health must emanate from this source. It is the seat, also, of the moral faculties, to which we instinctively refer our affections and emotions.

"There is an inmost centre in us all,  
Where truth abides in fulness; and around,  
Wall upon wall, the gross flesh hems it in,—  
This perfect, clear conception, which is Truth.  
A baffling and perverting carnal mesh  
Blinds it and makes all error: and to know  
Rather consists in opening out a way  
Whence the imprisoned splendor may escape,  
Than in effecting entry for a light  
Suppose to be without."

Brain and mental culture deserve higher honor than is paid them, yet it is the higher moral nature at the foundation of life which is nearest to accord with the truth of things. "This," says Dr. Burke, "is why we rank a man of genius (that is, whose greatness essentially consists in moral elevation) above a man of talent (that is, a man who is great by his intellect alone, or by his intellect chiefly)."—*Medical Tribune*. New York.

#### THE HIMALAYAN BROTHERS—DO THEY EXIST?\*

By MOHINI MOHAN CHATTERJI, M.A., B.L., F. T. S.

"ASK and it will be given you; knock and it will open"—this is an accurate representation of the position of the earnest enquirer as to the existence of the Mahatmas. I know of none who took up this enquiry in right earnest and was not rewarded for his labours with knowledge—certainty. In spite of all this there are plenty of people who cavil and cavil but would not take the trouble of proving the thing for themselves. Both by Europeans and a section of our own countrymen—the too European-

\* See in this connection editorial note to a letter published elsewhere.—*Ed.*

ized graduates of Universities—the existence of the Mahatmas is looked upon with incredulity and distrust, to give the thing no harder name. The position of the former is easily intelligible, for these things are so far removed from their intellectual horizon, and their self-sufficiency is so great, that they are almost impervious to these new ideas. But it is much more difficult to conceive why people of this country, who are born and brought up in an atmosphere redolent with the traditions of these things, should affect such scepticism. It would have been more natural for them on the other hand, to hail such proofs, as those I am now laying before the public with the same satisfaction as an astronomer feels when a new star, whose elements he has calculated, swims within his ken. I myself was a thorough-going disbeliever only two years back. In the first place I had never witnessed any occult phenomena myself, nor did I find any one who had done so in that small ring of our countrymen, for whom only I was taught to have any respect—the “educated classes.” It was only in the month of October 1882 that I really devoted any time and attention to this matter, and the result is that I have as little doubt with respect to the existence of the Mahatmas as of mine own. I now *know* that they exist. But for a long time the proofs that I had received were not all of an objective character. Many things which are very satisfactory proofs to me would not be so to the reader. On the other hand I have no right to speak of the unimpeachable evidence I *now* have. Therefore I must do the best I can with the little I am permitted to give. In the present paper I have brought forward such evidence as would be perfectly satisfactory to all, at all capable of measuring its probative force.

The evidence now laid before the public was collected by me during the months of October and November 1882, and was at the time placed before some of the leading members of the Theosophical Society, Mr. Sinnett, among others. The account of Bro. Ramaswamiar's interview with his “guru” in Sikkin being then ready for publication, there was no necessity, in their opinion, for the present paper being brought to light. But since an attempt has been made in some quarters to minimize the effect of Mr. Ramaswamiar's evidence by calling it most absurdly “the hallucinations of a half frozen strolling Registrar,” I think something might be gained by the publication of perfectly independent testimonies of, perhaps, equal, if not greater, value, though of a quite different character. With these words of explanation as to the delay in its publication, I resign this paper to the criticism of our sceptical friends. Let them calmly consider and pronounce upon the evidence of the Tibetan pedlar at Darjiling, supported and strengthened by the independent testimony of the young Brahmachari at Dehradun. The persons who were present when the statements of these persons were taken, all occupy very respectable positions in life—some in fact belonging to the front ranks of Hindu Society, and several in no way connected with the Theosophical Movement, but on the contrary quite unfriendly to it. In those days I again say I was rather sceptical myself. It is only since I collected the following evidence and received more than one proof of the actual existence of my venerated master—Mahatma Koothoomi, whose presence—quite independently of Madame Blavatsky, Colonel Olcott or any “alleged” Chela—was made evident to me in a variety of ways, that I have given up the folly of doubting any longer. Now I believe no more—I know; and knowing I would help others obtain the same knowledge.

M. M. C.

During my visit to Darjiling I lived in the same house with several Theosophists, all as ardent candidates as myself for chelaship, and most of them as doubtful with regard to the Himalayan Mahatmas as I was myself at that time. I met at Darjiling persons who claimed to be chelas of the Himalayan Brothers and to have seen and lived with them for years. They laughed

at our perplexity. One of them showed us an admirably executed portrait of a man who appeared to be an eminently holy person, and who, I was told, was the Mahatma Koothoomi, (now my revered master) to whom Mr. Sinnett's “Occult World” is dedicated. A few days after my arrival, a Tibetan pedlar of the name of Sundook accidentally came to our house to sell his things. Sundook was for years well-known in Darjiling and the neighbourhood as an itinerant trader in Tibetan knick-knacks, who visited the country every year in the exercise of his profession. He came to the house several times during our stay there, and seemed to us, from his simplicity, dignity of bearing and pleasant manners, to be one of Nature's own gentlemen. No man could discover in him any trait of character, even remotely allied to the uncivilized savages, as the Tibetaus are held in the estimation of Europeans. He might very well have passed for a trained courtier, only that he was too good to be one. He came to the house while I was there. On the first occasion he was accompanied by a Goorkha youth, named Sundar Lall, an *employé* in the *Darjiling News* office, who acted as interpreter. But we soon found out that the peculiar dialect of Hindi, which he spoke, was intelligible to some of us without any interpreter, and so there was none needed on subsequent occasions. On the first day we put him some general questions about Tibet and the Gelugpa sect, to which he said he belonged, and his answers corroborated the statements of Bogle, Turnour, and other travellers. On the second day we asked him if he had heard of any persons in Tibet who possessed extraordinary powers besides the great lamas. He said there were such men. That they were not regular lamas but far higher than they, and generally lived in the mountains beyond Tchigatze and also near the city of Lhassa. These men, he said, produce many and very wonderful phenomena or “miracles” and some of their *chelas* or “lotoos,” as they are called in Tibet, cure the sick by giving them to eat the rice which they crush out of the paddy with their hands &c., Then, one of us had a glorious idea. Without saying one word, the abovementioned portrait of the Mahatma K. H. was shown to him. He looked at it for a few seconds, and then, as though suddenly recognizing it, he made a profound reverence to the portrait, and said it was the likeness of a Chohan (Mahatma) whom he had seen. Then he began rapidly to describe the Mahatma's dress, and naked arms; then suiting the action to the word, he took off his outercloak, and baring his arms to the shoulder, made the nearest approach to the figure in the portrait, in the adjustment of his dress.

He said he had seen the Mahatma in question accompanied by a numerous body of gylungs, about that time of the previous year (beginning of October 1881) at a place called Giansi, two days' journey southward of Tchigatze, and whither the narrator had gone to make purchases for his trade. On being asked the name of the Mahatma, he said to our unbounded surprise—“They are called Koothum-pa.” Being cross-examined and asked what he meant by “they,” and whether he was naming one man or many, he replied that the Koothum-pas were many, but there was only one man or chief over them of that name; the disciples being always called after the names of their guru. Hence the name of the latter being Koot-hum, that of his disciples was “Koot-hum-pá” Light was shed upon this explanation by a Tibetan dictionary, where we found that the word “pá” means “man;” ‘Bod-pá’ is a ‘man of Bod or Thibet,’ &c. Similarly Koothum-pa means man or disciple of Koothoom or Koothoomi. At Giansi, the pedlar said, the richest merchant of the place went to the Mahatma, who had stopped to rest in the midst of an extensive field, and asked him to bless him by coming to his house. The Mahatma replied he was better where he was, as he had to bless the whole world and not any particular man. The people, and among them our friend Sundook, took their offerings to the Mahatma, but he ordered them to be distributed among the poor. Sundook

was exhorted by the Mahatma to pursue his trade in such a way as to injure no one, and warned that such was the only right way to prosperity. On being told that people in India refused to believe that there were such men as the "Brothers" in Tibet, Sundook offered to take any voluntary witness to that country and convince us through him as to the genuineness of their existence, and remarked that if there were no such men in Tibet, he would like to know where they were to be found. It being suggested to him that some people refused to believe that such men existed at all, he got very angry. Tucking up the sleeve of his coat and shirt, and disclosing a strong muscular arm, he declared that he would fight any man who would suggest that he had said anything but the truth.

On being shown a peculiar rosary of beads belonging to Madame Blavatsky, the pedlar said that such things could only be got by those to whom the Teshu lama presented them, as they could be got for no amount of money elsewhere. When the chela who was with us put on his sleeveless coat and asked him whether he recognized the latter's profession by his dress, the pedlar answered that he was a "Gylung" and then bowing down to him took the whole thing as a matter of course. The witnesses in this case were Babu Nobin Krishna Bannerji, Deputy Magistrate, Berhampore, M. R. Ry. Ramaswamiyer Avergal, District Registrar, Madura (Madras), the Goorkha gentleman spoken of before, all the family of the first named gentleman, and the writer.

Now for the other piece of corroborative evidence. This time it came most accidentally into my possession. A young Bengali Brahmachari, who had only a short time previous to our meeting returned from Tibet and who was residing then at the house of my grandfather-in-law, the venerable Babu Devendra Nath Tagore of the Brahma Samaj, gave most unexpectedly in the presence of a number of respectable witnesses, the following account:—

On the 15th of the Bengali month of Asar last (1882), being the 12th day of the waxing moon, he met some Tibetans called the *Koothoompas* and their *guru* in a field near Taklakhar, a place about a day's journey from the Lake of Manasarawara. The *guru* and most of his disciples who were called *gylungs*, wore sleeveless coats over under-garments of red. The complexion of the *guru* was very fair, and his hair, which was not parted but combed back, streamed down his shoulders. When the Brahmachari first saw the Mahatma he was reading in a book, which the Brahmachari was informed by one of the *gylungs*, was the *Rig Veda*.

The *guru* saluted him and asked him where he was coming from. On finding the latter had not had anything to eat, the *guru* commanded that he should be given some ground gram (*Sattoo*) and tea. As the Brahmachari could not get any fire to cook his food with, the *guru* asked for, and kindled a cake of dry cow-dung, the fuel used in that country as well as in this, by simply blowing upon it and gave it to our Brahmachari. The latter assured us that he had often witnessed the same phenomenon, produced by another *guru* or *chohan*, as they are called in Tibet, at Gauri, a place about a day's journey from the cave of Tarchin, on the northern side of Mount Kailas. The keeper of a flock, who was suffering from rheumatic fever came to the *guru*, who gave him a few grains of rice, crushed out of paddy, which the *guru* had in his hand and the sick man was cured then and there.

Before he parted company with the *Koothoompas* and their *guru*, the Brahmachari found that they were going to attend a festival held on the banks of the Lake of Manasarawara, and that thence they intended to proceed to the Kailas mountains.

The above statement was on several occasions repeated by the Brahmachari in the presence (among others) of Babu Dwijender Nath Tagore of Jorasanko, Calcutta; Babu Cally Mohan Ghose of the Trigonometrical Survey of India, Dehradun; Babu Cally Cunar

Chatterji of the same place; Babu Gopi Mohan Ghosh of Dacca; Babu Priya Nath Sastri, Clerk to Babu Devendernath Tagore, and the writer. Comments would here seem almost superfluous, and the facts might very well have been left to speak for themselves to a fair and intelligent jury. But the averseness of people to enlarge their field of experience and the wilful misrepresentation of designing persons know no bounds. The nature of the evidence here adduced is of an unexceptional character. Both witnesses were met quite accidentally. Even if it be granted, which we certainly do not for a moment grant, that the Tibetan pedlar, Sundook, had been interviewed by some interested person, and induced to tell an untruth, what can be conceived to have the motive of the Brahmachari, one belonging to a religious body noted for their truthfulness, and having no idea as to the interest the writer took in such things, in inventing a romance, and then how could he make it fit exactly with the statements of the Tibetan pedlar at the other end of the country? Uneducated persons are no doubt liable to deceive themselves in many matters, but these statements dealt only with such disunited facts as fell within the range of the narrator's eyes and ears and had nothing to do with their judgment or opinion. Thus, when the pedlar's statement is coupled with that of the Dehradun Brahmachari, there is, indeed, no room left for any doubt as to the truthfulness of either. It may here be mentioned that the statement of the Brahmachari was not the result of a series of leading questions, but formed part of the account he voluntarily gave of his travels during the year and that he is almost entirely ignorant of the English language and had, to the best of my knowledge, information and belief never, even so much as, heard of the name of Theosophy. Now, if any one refuses to accept the mutually corroborative but independent testimonies of the Tibetan pedlar of Darjiling and the Brahmachari of Dehradun on the ground that they support the genuineness of facts not ordinarily falling within the domain of one's experience, all I can say is that it is the very miracle of folly. It is, on the other hand, most unshakably established upon the evidence of several of his chelas, that the Mahatma Koothoomi is a living person like any of us, and that moreover he was seen by two persons on two different occasions. This will, it is to be hoped, settle for ever the doubts of those who believe in the genuineness of occult phenomena, but put them down to the agency of "spirits." Mark one circumstance. It may be argued that during the pedlar's stay at Darjiling, Mme. Blavatsky was also there, and who knows, she might have bribed him (!) into saying what he said. But no such thing can be urged in the case of the Dehradun Brahmachari. He knew neither the pedlar nor Madame Blavatsky, had never heard of Colonel Olcott, having just returned from his prolonged journey, and had no idea that I was a fellow of the Society. His testimony was entirely voluntary. Some others who admit that Mahatmas exist, but that there is no proof of their connection with the Theosophical Society, will be pleased to see now, that there is no *a priori* impossibility in those great souls taking an interest in such a benevolent Society as ours.

I purposely leave aside all proofs which are already before the public. Each set of proofs is conclusive in itself, and the cumulative effect of all is simply irresistible.

EDITOR'S NOTE.—Secondary evidence is no longer necessary. On November the 20th at 10 A. M. two telegrams were received by us, dated Lahore, one from Colonel Olcott, who notified us that he had been visited in person by Mahatma "K. H." on the preceding night; and the other—from Mr. W. T. Brown, F. T. S. of the "London Lodge," Theosophical Society in these words: "Visited early this morning by Mahatma K. H. who left me a silk handkerchief as a memorial, &c!" and today 22nd having telegraphed to both those gentlemen for permission to announce the long expected event in the *Theosophist*, we received an answer that not only could "Master's visit be mentioned," but that our President, Mr. Brown, and Mr. Damodar "had another call last night near their tent, the Master being accompanied in flesh and body by brother Djal Khol." Unless Mr. W. T. Brown, to complete the trio, be classed by our Spiritualistic friends also among the "Occidental Humourists," the question as to the real existence of the Mahatma, is

pretty well settled now. One witness may be mistaken as to facts, and even a doubt may be cast upon the evidence of two witnesses. But when it comes to the testimony of three or more witnesses speaking to a fact that occurred in their presence doubt would become absurd even in a Court of Justice. We have not yet received the particulars, but since we have been notified that Mahatma K. H. on his way to Siam would most likely pass *via* Madras in a week or so, we have every reason to suppose that our President and Mr. Brown saw the real, living body not merely as before—the astral form of the MASTER.—Ed.

### OCULT WORLD—

#### HAPPY MR. HENRY KIDDLE'S DISCOVERY.

BY T. SUBBA ROW, B. A. B., L., F. T. S.

I HAVE been watching with considerable interest the effect produced on the western Public by Mr. Sinnett's book on "Esoteric Buddhism;" and I have not been disappointed in my expectations. There is nothing surprising in the attitude of the Spiritualists towards Theosophy and its Teachers. Startled by the strange phenomena—erroneously called *spirit* manifestations, which have been witnessed during the last few years, the majority of the so-called Spiritualists have firmly persuaded themselves into the belief that those manifestations indicate a turning point in the history of mankind, that they are destined to introduce into the world a sublime system of religious philosophy which will supplant every other existing system whether in the East or in the West, and that for the first time in the annals of this globe man is being permitted through the instrumentality of the manifestations to have a glimpse into the mysterious inner world. They are not probably aware of the fact, or they are extremely unwilling to believe, that these phenomena were known in the East for long ages and that their mysterious causes were carefully studied by esoteric mystics. They are evidently offended at being told that these phenomena are rather stale to the Eastern nations; that there is nothing very profound either in their manifestations or in their immediate causes, that they can never unravel the real mystery of the manifested Cosmos or of the human Spirit (7th principle); and that all that they can teach was long ago known to the Eastern Occultists. And probably there is another reason why the Spiritualists and the Theosophists of the West do not treat the teachings embodied in Mr. Sinnett's "Occult World" and "Esoteric Buddhism" with the serious attention that they deserve. Western nations are accustomed to look upon the Easterns as their inferiors in every respect. In their opinion, as it seems, muscular strength is always co-existent with intellectual powers and spiritual insight; and European political ascendancy means and includes intellectual and spiritual superiority. Hence they are too proud to admit that there are mystics in the East who know a good deal more about nature and her laws than all their scientists, philosophers, Spiritualists and religious teachers put together. The discovery of Mahatmas in the East is almost a nightmare to them; and they would feel very happy to get rid of it as soon as possible. Therefore instead of carefully examining the theories propounded in Mr. Sinnett's book, they are trying their best to ferret out a few facts and incidents which will enable them to disprove the existence of our Mahatmas, or render it extremely doubtful; or if both these courses be found impracticable, to show the Sadhus extremely inferior to themselves. Several prominent Spiritualists have already been giving absurd, superficial and one-sided accounts of the doctrines contained in Mr. Sinnett's book apparently with a view to allay the fears of orthodox Spiritualists, to soothe their own feelings and to vindicate the importance and incomparable grandeur of the "New Dispensation" ushered into the civilized and enlightened West by spirit-rapping and table-turning; while some other Spiritualists are probably consoling themselves with the idea that even if the Mahatmas should be proved to have an actual existence (outside of Mad : Blavatsky) they cannot be anything more than spirits (Pisachas!), or, at best—strong physical mediums.

Under such circumstances any thing like argument with the Spiritualists is worse than useless. Mere phenomena however wonderful can never prove to their satisfaction either the actual existence of Adepts or the nature of true Adeptship. Any phenomena that you may show them will at once be attributed to the agency of spirits (as they are called by them) or elementals as we call them, and classed with their own *séance* room manifestations. Even if we were to effect an impossibility and induce one of our Eastern Adepts to appear in London and prove his existence and knowledge before their eyes, these phenomena-hunters would proclaim him by way of compliment an excellent medium and nothing more. Hence, it is not difficult to foresee that so long as the general body of Spiritualists or their leaders are satisfied with their own illogical and fanciful hypotheses and make no attempt to investigate scientifically their phenomena and their causes in connection with the ancient systems of religious philosophy and occultism, it is impossible to expect them to give a patient hearing to the teachings of our Mahatmas. To a real scientific investigator who is attempting to ascertain the general law governing a particular class of phenomena, even the suggestion of a plausible hypothesis is of considerable value. The Mahatmas have never declared that they would give a systematic and exhaustive exposition of the Occult Science, but only that they intended to place before the general public a few general doctrines which might suggest some reasonable hypotheses by which the experience of ancient mystics and the so-called Spiritualistic phenomena of modern times may be knit together, and brought under one general law, and which may also show to some extent the scientific basis of all ancient religions whose teachings are generally supposed to be diametrically opposed to those of modern Science. To every genuine Occultist and every student of science these doctrines are of immense importance; especially at the present time, when old religious systems are dying out from want of real vital strength, when science has as yet found no means of penetrating into the inner world of noumena, and when the strange manifestations taking place in *séance*-rooms are rejected by the majority of the men of science as absurd superstitions, while they are regarded by the Spiritualists as indicative of the existence of disembodied Spirits!

Our Eastern doctrines having been proclaimed by the general body of Spiritualists as impertinent intruders, leaders of that body seem to have discovered at last a very simple means for getting rid of them. Mr. Henry Kiddle has found out that the Mahatma whose instructions are embodied in Mr. Sinnett's publications has committed an act of plagiarism in borrowing certain sentences from one of his lectures without admitting his obligation. He tells us, he wrote to Mr. Sinnett about his discovery more than a year ago; and though Mr. Sinnett distinctly states that he never heard from him, this American discoverer has been very persistently complaining to the public of the great injury done to him. This is considered as a very "grave charge" by the Spiritualists, who suppose that it "strikes at the very root, of the pretensions of the Adepts." But if these spiritualists—"Perplexed Readers" and "Students" who are making such a terrible fuss about the matter were to examine the passage in question carefully, they will, perchance, be able to perceive that there is evidently some confusion and mistake in the whole matter, and that the probabilities of the case are against the truth of Mr. Kiddle's complaint. Upon a closer examination of it I find that—

I. So far as the leading idea in the passage is concerned, if any body has committed literary theft it is the complainant himself and not the accused. I find no reference to Plato in the passages quoted from Mr. Kiddle's lecture in his letter published in "Light,"\* and the complainant has very prudently omitted the reference

\* Nor is there in his now famous lecture at Lake Pleasant, for we have procured and carefully read it.—Ed.

to the Greek philosopher that precedes the passages which he reproduces from the Mahatma's letter.

II. There seems to be nothing very sublime in the language used by Mr. Kiddle in the passage under consideration; and it may be easily seen from the other letters written to Mr. Sinnett by the Mahatma concerned, that the said Mahatma's English vocabulary is not more limited than his own and that he is not wanting in power of expression. It is, therefore, very difficult to see why the Master should have borrowed Mr. Kiddle's language, unless some good reason can be shown for it.

III. There are certain expressions and certain alterations of Mr. Kiddle's language in the passage in question which show that the Mahatma never intended to borrow Mr. Kiddle's ideas and phrases but that he rather intended to say something against them. Where the Spiritualistic lecturer says that "the world advances," the Mahatma says that "the world will advance" for the purpose of showing that this change in ideas must inevitably take place by reason of the great cyclic Law to which the Universe is subject. Where the lecturer says that "the agency called Spiritualism is bringing a new set of ideas into the world," the Mahatma emphatically affirms that "it is not physical phenomena" that he and his brother Occultists study, but "these universal ideas" which are as it were the noumena underlying all physical manifestations. The contrast between the Mahatma's view of the relationship between these ideas and physical phenomena and Mr. Kiddle's view is striking. The latter thinks that new ideas are being introduced into the world by physical phenomena, while the former thinks that new physical phenomena have begun to manifest themselves by reason of a change in these general ideas (noumena) which govern all physical phenomena in the objective world. It seems to me that even the word 'idea' has been used in two different senses by the Mahatma and Mr. Kiddle respectively. The former means by the word 'idea' the original form or type according to which the objective manifestation takes place. And this is Plato's meaning which the Spiritualistic lecturer has not properly understood. Mr. Kiddle, on the other hand, uses the same word in the sense it is ordinarily used by English writers. And again, where the lecturer speaks of "the universal reign of law as the expression of the divine will," the Mahatma postulates the existence of "an immutable Law" not depending on any divine will.

But "A Perplexed Reader" writing to *Light* says that the Mahatma "has omitted inconvenient words and has so distorted the ideas he has borrowed as to divert them from their original intention to suit his own very different purpose." If there is a difference of words and ideas where is the offence? Or is it a law of plagiarism that the person who borrows from another's writings should do so without making the slightest alteration in the passage extracted? If this "Perplexed Reader" were not also a perplexed thinker, he would have seen that these very alterations in the passage in question go very far to show that there was no intention on the Mahatma's part to borrow Mr. Kiddle's inaccurate language and erroneous ideas and that there is some misconception—some mistake in all this.

IV. It is quite evident from the wording of the passage under examination that there is "something wrong somewhere." Plato is introduced into it rather abruptly and the grammatical construction of the last sentence is by no means clear. Apparently there is no predicate which refers to "ideas larger, &c."

A part of the sentence is thus evidently lost . . . From the foregoing considerations it will be clearly seen that it could not have been the Mahatma's intention to borrow anything from Mr. Kiddle's lecture. On the other hand, the Mahatma's emphatic declaration immediately preceding the passage in question that Adepts of the "Good Law" do not believe in any other but planetary spirits, his remarks regarding the insufficiency

and worthlessness of mere physical phenomena in unraveling the mysteries of the noumenal world, and his enunciation of the existence of an immutable law in no way subject to the divine will, the existence of which is assumed by the lecturer, all tend to show that the Mahatma's real intention was rather to criticise than adopt the views of the Spiritualists as embodied in Mr. Kiddle's remarks. Therefore, from a careful perusal of the passage and its contents, any unbiassed reader will come to the conclusion that some body must have greatly blundered over the said passage and will not be surprised to hear that it was unconsciously altered through the carelessness and ignorance of the Chela by whose instrumentality it was "precipitated." Such alterations, omissions and mistakes sometimes occur in the process of precipitation; and I now assert, I know it for certain from an inspection of the original precipitation proof, that such was the case with regard to the passage under discussion. I can assure the "Student" who throws out a suggestion in his letter to *Light* that there might be some deep psychological problem involved in the matter in dispute, that there is one, and that one is no other psychological mystery than the is above indicated. The Mahatma against whom the accusation has been brought, will, of course, think it beneath his dignity to offer any explanation in his own defence to Mr. Kiddle or his followers and supporters. But I hope Mr. Sinnett will be good enough to place before the public as soon as possible such explanation or information as he may be permitted by the Mahatma concerned, with regard to the "Mystery" of the passage in question and the manner in which the letter which contains the said passage was received by him.

In conclusion I cannot but regret that some writers in the Spiritualistic organs and other English journals have thought it fit to drag our Mahatma's name into public print without any necessity for doing so, using, moreover, such remarks and insinuations as are fully calculated to be highly offensive to those who have the good fortune to be personally known to, and acquainted with, the Mahatma in question. The reproach contained in the *Protest* of 500 Hindu theosophists—just published in *Light*—may be fairly applied to many a Spiritualist besides "G. W. M. D."

(Continued from the November Number of the Theosophist.)

#### MEDICAL MAGNETISM AND THE HEALER MAGNETIC.

BY SEETA NATH GHOSE.

Now, as the preservation of the natural magnetic polarity of the body induced by the earth, serves to adjust all its natural functions properly and thereby maintain health, and, on the other hand, as the reversion of the magnetic polarity, natural to the body, serves to obstruct, or derange the natural functions and thereby cause ill health, the treatment of diseases by this instrument is effected simply by connecting the *anode* pole of the battery with the screw (A) and the *cathode* pole with the screw (C) and making the diseased person lie down within the instrument in such a manner, that his head may be projected out from the screw-end, and his feet projected out from the other end of the same. The intensity of the current of electricity applied to the instrument by the poles of a galvanic battery, and the length of time for which a patient is kept within the instrument, are regulated according to his temperament which is determined by feeling his pulse in a peculiar way. Instead of using this instrument according to the pathology or the symptomatology of diseases, it is simply used according to the temperament of the patients. When the quantity of the electric current applied and the length of time for which a patient is kept within the instrument, are properly regulated according to his pulse, every function of his body, deranged, obstructed or rendered inactive by any cause, is

corrected and set to proper order. In consequence of the correction of functions thus effected every description of indisposition, known or unknown, felt or slighted by the patient, is partially or entirely removed as it is slight or serious.

To create disease by this instrument is likewise a very simple thing. If a man be made to lie down within the instrument with his head projected out from its screw-end, and his feet projected out from the other end, and if the *anode pole* of a powerful Galvanic battery be connected with the screw (C), and the *cathode pole* of the same with the screw (A), he is sure to fall a victim to such disease or diseases which may have a latent tendency to break out in him. On connecting the Galvanic battery with this instrument in the manner aforesaid, the current of electricity runs from the screw (C) towards the screw (A), keeping the head of the man lying within, on the left side of the current. In consequence the man lying within the instrument becomes magnetised in such a manner that his head is rendered the south pole and his feet the north pole. The magnetic polarity, induced by the instrument, being opposed to the natural magnetic polarity of his body, the potency of the latter must be reduced to some extent. The reduction of the potency of the natural magnetic polarity of his body being thus effected, very soon develops the disease or diseases latent in his body.

According to their respective physiological actions, the drugs embodied in our *Materia Medica* have been judiciously classed into astringent, tonic, stimulant, sedative, alterative, emetic, expectorant, purgative, deobstruent, demulcent, antiseptic, and antizymotic orders. In treating diseases we administer different drugs of the different orders with the intention of producing different healthy actions in the system, but in treating diseases with our Magnetic-Healer, we have nothing more to do than to put the patients within it for a certain length of time. By simply doing this we are in a position to produce any action in the system which may be deemed necessary for the removal of a disease. From what has been just now said it should not be inferred at once that we are quite averse to use any material drug for the removal of a disease. We are rather in favour of judicious administration of the most innocent drugs of our *Materia Medica* in times of urgent need. Those drugs which when misapplied through mistake or ignorance, may produce serious evil effects, are now being carefully avoided by us.

We have already mentioned that the length of time for which a patient is kept within the instrument and the degree of battery power ordered for a patient, are regulated according to his temperament, which is ascertained by simply feeling his pulse. There are seven varieties of temperaments usually met with in patients on examining their pulse; viz., *nervous, bilious, phlegmatic, nervo-bilious, nervo-phlegmatic, bilio-phlegmatic, and nervo-bilio-phlegmatic*; of these seven varieties, the first three are pure, and the last four are mixed. Of the three pure temperaments the phlegmatic requires more time and battery-power than the bilious, and the bilious requires more time and battery-power than the nervous in being treated by the Magnetic Healer. In other words the phlegmatic and the nervous temperament stand on maximum and minimum points of time and battery-power respectively, and the bilious is nearly intermediate between them regarding the same. From the datum thus obtained it becomes very easy to decide how much time and battery-power are required by the four mixed varieties of temperaments mentioned above in being treated by the Magnetic Healer. How the pulse is examined with a view to determine the temperament, is a subject of vital importance in my estimation. The mode which I have adopted in examining the pulse, differs, in many respects, from what is in vogue amongst the *Allopathic* and *Homœopathic* practitioners. As that mode of examin-

ing the pulse is also of very great service in diagnosing diseases pathologically and selecting appropriate remedies for their treatment, it would be better to dwell upon it at large on a future occasion than to describe it shortly in this. It is so exquisitely nice that a short description is more likely to murder than to elucidate it.

(To be continued.)

#### A PSYCHOLOGICAL PHENOMENON.

WE have much pleasure to be able to lay before the public a remarkable psychological phenomenon, as interesting as it is well authenticated. On November 10th, a European gentleman attached to the Theosophical Head Quarters was engaged in some work in a room adjoining that of Madame Blavatsky, when he heard a voice, which he believed was that of Mr. D—K—M, an officer of the Parent Society, speaking to Madame Blavatsky in her room. As this young man had, to that gentleman's knowledge, left the Head Quarters some weeks previously to join Col. Olcott at Poona, he naturally thought at the time that he had come back and so entered Madame Blavatsky's room to greet the officer in question on his return. But fancy his surprise when on entering the room he found that D—K—M was nowhere to be seen; and his surprise positively grew up to amazement when on enquiring he found that, though this young Brahman was at the moment at Moradabad, N. W. P., yet Madame Blavatsky who was then standing looking very much perplexed, before the shrine setting it in order, had also not only heard that chela's voice, but assured the gentleman that she had a message from D—K—M, which was of great importance—the words of which *she* was asked to repeat by telegram. She immediately proceeded to have them wired to Moradabad and the message was sent. In the evening, General and Mrs. Morgan from Ooty, Miss Flynn from Bombay, Mr. Mohini Mohan Chatterji from Calcutta, and others then on a visit at Adyar, talked the matter over a good deal, all expressing surprise and intense curiosity as to how far the phenomenon would be verified.

With these prefatory remarks we may safely leave the following documents to speak for themselves and invite our Spiritualistic friends to explain away the occurrence on their orthodox theories. These documents were received from Moradabad five days later:—

“On the evening of November 10, Mr. D—K—M—having at the request of Mr. Shankar Singh of Moradabad promised to ask the Mahatmas whether Col. Olcott would be permitted to treat mesmerically two children, in whom Shaugar Sing was interested, and having at his request gone to the Adyar Head-quarters in the *Shukshma sarira* (astral body) told us that he had received a message at the Adyar “Shrine;” at the same time he also said that he had asked Madame Blavatsky to give Col. Olcott a confirmation of his visit as well as of the order received through the shrine from Col. Olcott's *guru* by sending a telegram to him, D—K—M. or Shankar Sing; after which he reported (4-50 P.M.) its substance in these words:—*“Henry can try the parties once, leaving strongly mesmerised. Cajaputti oil to rub three times daily to relieve sufferers. Karma cannot be interfered.*”

(Signed) Shankar Sing.	(Signed) Narottam Dass.
( „ ) Pundit B. Sankar.	( „ ) L. Venkata Varadarajulu Naidu.
( „ ) W. T. Brown.	( „ ) Toke Narninasamy Naidu.
( „ ) Purnmeshri Dass.	( „ ) Chiranjee Lall.
( „ ) Farshotam Dass.	( „ ) H. S. Olcott.
( „ ) Ishri Prasad.	( „ ) Pran Nath Pandit.

The telegram mentioned by D—K—M. has just been received (8-45 A. M., November 11th) as a deferred or night message of 34 words, in which the above exact words are repeated. Madame Blavatsky says a “voice from the Shrine” spoke the words, and adds that D—K—M. heard the voice, and the telegram is sent at his request.

Copy of the telegram received from Madame H. P. Blavatsky by Mr. D—K—M.

(Class D †)

To Moradabad	From Adyar (Madras)
Words.	Hours.
49	17
Days.	Minutes.

“To: D—K—M.

care of Col. Olcott, President  
Theosophical Society,

From  
H. P. Blavatsky.

“Voice from Shrine says Henry can try parties once, leaving strongly mesmerized Cajaputti oil, rub three times daily to relieve suffering. Karma cannot be interfered with. D—heard voice; telegram sent at his request.” Noted that the telegram is dated Adyar, 5-15 P. M., or but 25 minutes later than the time when D—K—M.’s psychic message was reported at Moradabad. The two places are 2,281 miles apart.

(Signed) Ishri Prasad (Signed.) Purashotham Dass.

W. T. Brown.	Chendra Sekhara.
H. S. Olcott.	Toko Narainasamy Naidu.
Pundit Sankar.	J. Venkata Varadarajulu Naidu.

Editor's Note.—Mr. D—K—M. is a chela of hardly 4 years' standing, his remarkable psychic powers having received their development but lately. He is of a very delicate health and lives the life of a regular ascetic. Whenever the phenomenon of the separation of the astral from the physical body takes place, we are told, he falls invariably asleep or into a trance a few minutes before.

### NOTICE.

Complaints have reached us from our subscribers in Europe and America regarding the state in which the *Theosophist* for September last has reached them. A friend writes to us from Hartford on the subject:—“My *Theosophist* for September has just come in such a mutilated condition that I must ask, if you will not send me another, as I can neither have it bound with the others, nor read it with any comfort. Some one has taken some sharp instrument and stabbed it through and through—from cover to cover, 16 times; each stab an inch long; four in a row, and four rows of them, making sixteen, and pretty well covering the page. Every page, or leaf in the book is thus mutilated; and the margins hang in tatters. What possible object could any one have in doing this? It was done after the wrapper was on, for the stabs go through the wrapper.” Our subscribers are not perhaps aware that during the prevalence of cholera in Egypt all letters and papers from India were held in quarantine at Brindisi by the Italian Government and had to undergo the customary stabbing and smoking before being forwarded. We hereby inform all subscribers whose copies have suffered from the quarantine to apply for fresh copies, which we have already forwarded to those whose complaints have reached us up to date.—Manager.

### Answers to Correspondents.

P. C. MUKERJI.—(Oudh). The subject is a debatable one, and you give but your own views, without reference to those of eminent authorities.

AN INDIAN GRADUATE F. T. S.—The least said about the intolerent bigotry of ignorant sectarians the best. A Brahmo missionary who speaks of others as “swines” (*sic*) is certainly a foeman unworthy of your steel.

KUNJA VIHARI BHATTACHARYA.—The conclusions of Drs. Salzer and Dods do not touch each other. Dr. Salzer speaks of the protoplasm of different species of animal organism having different odorant properties. What Dr. Dods says about certain causes preventing children from resembling their parents, refers to the exceptional suspension, within the limits of the species, of the general law expounded by Dr. Salzer. In the absence of the writer of the article on “Lamp of Life,” we are sorry we cannot furnish you with any fresh particulars relating to Chidananda Swamy's life. A pure

physical body is absolutely necessary for success in occultism, and students of that sacred science have not seldom to disincarnate themselves to find bodies better suited for the purpose.

N. S. G.—On reflection, you will find that your “City and Country Life of Parsees” is unsuited to our columns.

P. D. K.—Your “Problem of the Existence of the Body” is out of our province.

A. B.—We never notice anonymous correspondents.

### Mystic Lore.

#### SILAMANISM AND WITCHORAFY AMONGST THE KOLARIAN TRIBES.

By MIAD KOYORA KORIA HON, F. T. S.

HAVING resided for some years amongst the Múndás and Hós of Singbhoon and Chutia Nagpur, my attention was drawn at times to customs differing a good deal, in some ways, but having an evident affinity to those related of the Nijghipi “Kurumbers” in Mrs. Morgan's article in the September number of the *Theosophist*. I don't mean to say that the practices I am about to mention are confined simply to the Kolarian tribes, as I am aware both Oraons (Dravidian tribes) and the different Hindu castes living side by side with the Kòls count many noted wizards among their number; but what little I have come to know of these curious customs, I have learnt among the Múndás and Hós, whose language I speak, some of the most celebrated practitioners among them being Christian converts. The people themselves say that these practices are peculiar to their race and not learnt from the Hindu invaders of their plateau, but from what I have read at times in the *Theosophist* of the Tantric ceremonies, I am inclined to think that some at least of the operations have a strong savour of the Tantric Black Magic about them, though practised by people who are often entirely ignorant of any Hindu language.

These remarks must be further premised by a short sketch of the Kòl ideas of worship. They have nothing that I have either seen or heard of in the shape of an image, but their periodical offerings are made to a number of elemental spirits, and they assign a genie to every tree or rock in the country whom they do not consider altogether malignant, but who, if not duly “fed” or propitiated, may become so.

The Singbonga (*lit.* Sun or light spirit) is the chief; Búrú Bonga (Spirit of the hills) and the Ikhir Bonga (Spirit of the deep) come next. After these come the Darha, of which each family has its own, and they may be considered in the same light as Lares and Penates. But every threshing, flour and oil mill has its spirit, who must be duly fed, else evil result may be expected.

Their great festival (the Karam) is in honor of Singbonga and his assistants; the opening words of the priest's speech on that occasion sufficiently indicates that they consider Singbonga, the creator of men and things. *Máú re Singbonga manokoa luckikoa* (In the beginning Singbonga made men).

Each village has its Sarna or sacred grove where the hereditary priest from time to time performs sacrifices to keep things prosperous; but this only relates to spirits actually connected with the village, the three greater spirits mentioned being considered general, are only fed at intervals of three or more years, and always on a public road or other public place, and once every 10 (ten) years a human being *was* (and as some will tell you *is*) sacrificed to keep the whole community of spirits in good train. The *Páhans* or village priests are regular servants of the spirits and the *níjo*, *dóna*\* and *Bhagust* are people who in some way are supposed to obtain an influence or command over them. The first and lowest grade of these adepts called *níjos* (which may be translated as practitioners of witchcraft pure and simple) are frequently women. They are accused like the “Mula Kurumbers” of demanding quantities of grain or loans of money, &c., from people, and when these demands are refused, they go away with a remark to the effect “that you have lots of cattle and grain just now, but we'll see what they are like after a month or two.” Then probably the cattle of the bewitched person will get some disease and several of them die, or some person

\* Cf. Sanskrit *Dikini*, a witch.

† Cf. Sanskrit *Bhakta*, a devotee.

of his family will become ill or get hurt in some unaccountable way. Till at last, thoroughly frightened, the afflicted person takes a little oil and a little uncooked rice and goes to a *deona* or *máti* (as he is called in the different vernaculars of the province)—the grade immediately above a *nájo* in knowledge—and promising him a reward if he will assist him, requests his aid; if the *deona* accedes to the request, the proceedings are as follows. The *deona* taking the oil brought lights a small lamp and seats himself beside it with the rice in a *surpa* (winnow) in his hands. After looking intently at the lamp flame for a few minutes, he begins to sing a sort of chaunt of invocation in which all the spirits are named, and at the name of each spirit a few grains of rice are thrown into the lamp. When the flame at any particular name gives a jump and flares up high, the spirit concerned in the mischief is indicated. Then the *deona* takes a small portion of the rice wrapped up in a *Sál* (*Shorea robusta*) leaf and proceeds to the nearest new white-ant nest from which he cuts the top off and lays, the little bundle, half in and half out of the cavity. Having retired, he returns in about an hour to see if the rice is consumed, and according to the rapidity with which it is eaten he predicts the sacrifice which will appease the spirit. This ranges from a fowl to a buffalo, but whatever it may include, the pouring out of blood is an essential. It must be noted, however, that the *máti* never tells who the *nájo* is, who has excited the malignity of the spirit.

But the most important and lucrative part of a *deona's* business is the casting out of evil spirits, which operation is known variously as *áshúb* and *langhan*. The sign of obsession is generally some mental alienation accompanied (in bad cases) by a combined trembling and restlessness of limbs, or an unaccountable swelling up of the body. Whatever the symptoms may be, the mode of cure appears to be much the same. On such symptoms declaring themselves, the *deona* is brought to the house and is in the presence of the sick man and his friends provided with some rice in a *surpa*, some oil, a little vermilion, and the *deona* produces from his own person a little powdered sulphur and an iron tube about four inches long and two *tiklis*.\* Before the proceedings begin all the things mentioned are touched with vermilion, a small quantity of which is also mixed with the rice. Three or four grains of rice and one of the *tiklis* being put into the tube, a lamp is then lighted beside the sick man and the *deona* begins his chaunt, throwing grains of rice at each name, and when the flame flares up, a little of the powdered sulphur is thrown into the lamp and a little on the sick man, who thereupon becomes convulsed, is shaken all over and talks deliriously, the *deona's* chaunt growing louder all the while. Suddenly the convulsions and the chaunt cease, and the *deona* carefully takes up a little of the sulphur off the man's body and puts into the tube, which he then seals with the second *tikli*. The *deona* and one of the man's friends then leave the hut, taking the iron tube and rice with them, the spirit being now supposed out of the man and bottled up in the iron tube. They hurry across country until they leave the hut some miles behind. Then they go to the edge of some tank or river, to some place they know to be frequented by people for the purposes of bathing, &c., where, after some further ceremony, the iron is stuck into the ground and left there. This is done with the benevolent intention that the spirit may transfer its attentions to the unfortunate person who may happen to touch it while bathing. I am told the spirit in this case usually chooses a young and healthy person. Should the *deona* think the spirit has not been able to suit itself with a new receptacle, he repairs to where a bazaar is taking place and there (after some ceremony) he mixes with the crowd, and taking a grain of the reddened rice jerks it with his forefinger and thumb in such a way that without attracting attention it falls on the person or clothes of some. This is done several times to make certain. Then the *deona* declares he has done his work, and is usually treated to the best dinner the sick man's friends can afford. It is said that the person to whom the spirit by either of these methods is transferred may not be affected for weeks or even months. But some fine day while he is at his work, he will suddenly stop, wheel round two or three times on his heels and fall down more or less convulsed, from that time forward he will begin to be troubled in the same way as his dis-obsessed predecessor was.

Having thus given some account of the *deona*, we now come to the *Bhagat* called by the Hindus *Sokha* and *Sivnath*. This is the highest grade of all, and as I ought to have mentioned before the *ilm* (knowledge) of both the *deona* and *Bhagat* grades is only to be learned by becoming a regular *chela* of a practitioner; but I am given to understand that the final initiation is much hastened by a reasonable liberality on the part of the *chela*. During the initiation of the *Sokha* certain ceremonies are performed at night by aid of a human corpse, this is one of the things which has led me to think that this part at least of these practices is connected with Tantric black-magic.

The *Bhagat* performs two distinct functions: (1st), a kind of divination called *Muco*\* (the same in Hindi), and (2nd), a kind of Shamanism called *Darasta* in Hindi, and *Bharotan* in Horokaji, which, however, is resorted to only on very grave occasions—as, for instance, when several families think they are bewitched at one time and by the same *Nájo*.

The *Bhagat* is performed as follows:—The person having some query to propound, makes a small dish out of a *sál* leaf and puts in it a little uncooked rice and a few pice; he then proceeds to the *Bhagat* and lays before him the leaf and its contents, propounding at the same time his query. The *Bhagat* then directs him to go out and gather two *golaichi* (varieties of *Posinia*) flowers (such practitioners usually having a *golaichi* tree close to their abodes); after the flowers are brought the *Bhagat* seats himself with the rice close to the inquirer, and after some consideration selects one of the flowers and holding it by the stalk at a distance of about a foot from his eyes in his left hand twirls it between his thumb and fingers, occasionally with his right hand dropping on it a grain or two of rice.† In a few minutes his eyes close and he begins to talk—usually about things having nothing to do with the question in hand—but after a few minutes of this he suddenly yells out an answer to the question, and without another word retires. The inquirer takes his meaning as he can from the answer, which, I believe, is always ambiguous.

The *Bharotan* as I have above remarked is only resorted to when a matter of grave import has to be inquired about; the *Bhagat* makes a high charge for a *séance* of this description. We will fancy that three or four families in a village consider themselves bewitched by a certain witch, and they resolve to have recourse to a *Bhagat* to find out who the witch is; with this view a day is fixed on, and two delegates are procured from each of five neighbouring villages, who accompany the afflicted people to the house of the *Bhagat*, taking with them a *dáti* or offering consisting of vegetables, which on arrival is formally presented to him. Two delegates are posted at each of the four points of the compass and the other two seat themselves with the afflicted parties to the right of the *Bhagat*, who occupies the centre of the apartment with four or five *chelas*, a clear space being reserved on the left. One *chela* then brings a small earthenware-pot full of lighted charcoal, which is set before the *Bhagat* with a pile of mango wood chips and a ball composed of *dhunia* (resin of *Shorea robusta*), *gur* (treacle) and *ghee* (clarified butter), and possibly other ingredients. The *Bhagat's* sole attire consists of a scanty *lenguti* (waist cloth), a necklace of the large wooden beads such as are usually worn by fakeers, and several garlands of *golaichi* flowers round his neck, his hair being unusually long and matted. Beside him stuck in the ground is his staff. One *chela* stands over the firepot with a bamboo-mat fan in his hand, another takes charge of the pile of chips, and a third of the ball of composition, and one or two others seat themselves behind the *Bhagat*, with drums and other musical instruments in their hands. All being in readiness, the afflicted ones are requested to state their grievance. This they do, and pray the *Bhagat* to call before him the *nájo*, who has stirred up the spirits to afflict them, in order that he may be punished. The *Bhagat* then gives a sign to his *chelas*, those behind him raise a furious din with their instruments, the fire is fed with chips, and a bit of the composition is put on it from time to time, producing a volume of thick greyish blue smoke; this is carefully fanned over, and towards the *Bhagat*, who, when well wrapped in smoke, closes his eyes and quietly swaying his body begins a low chaunt. The chaunt gradually becomes louder and the sway of his body more pronounced, until he works himself into a state of complete frenzy. Then with his body actually quivering, and his head rapidly work-

\* *Tikli*—is a circular piece of gilt paper which is stuck on between the eyebrows of the women of the Province as ornament.

\* Cf. Sanskrit *Bhava*, technically applied to the ecstatic trance of some mystic sects of Vaishnavas in Bengal.

† This is the process by which the *Bhagat* mesmerizes himself.

ing about from side to side, he sings in a loud voice how a certain *najo* (whom he names) had asked money of those people and was refused, and how he stirred up certain spirits (whom he also names) to hurt them, how they killed so and so's bullocks some one else's sheep and caused another's child to fall ill. Then he begins to call on the *najo* to come and answer for his doings and in doing so rises to his feet—still commanding the *najo* to appear; meanwhile he reels about; then falls on the ground and is quite still except for an occasional whine and a muttered "I see him!" "He is coming!" This state may last for an hour or more till at last the *Bhagat* sits up and announces the *najo* has come; as he says so a man apparently mad with drink rushes in and falls with his head towards the *Bhagat* moaning and making a sort of snorting as if half stifled.\* In this person the bewitched parties often recognize a neighbour and sometimes even a relation, but whoever he may be they have bound themselves to punish him. The *Bhagat* then speaks to him and tells him to confess, at the same time threatening him, in case of refusal, with his staff. He then confesses in a half stupefied manner and his confession tallies with what the *Bhagat* has told in his frenzy. The *najo* is then dismissed and runs out of the house in the same hurry as he came in.

The delegates then hold a council at which the *najo* usually is sentenced to a fine—often heavy enough to ruin him—and expelled from his village. Before the British *Raj* the convicted *najo* seldom escaped with his life and during the mutiny time, when no *sahibs* were about, the Singbhoom Hos paid off a large number of old scores of this sort. For record of which, see, Statistical Account of Bengal, vol. xvii, p. 52.

In conclusion I have merely to add that I have derived this information from people who have been actually concerned in these occurrences and among others a man belonging to a village of my own, who was convicted and expelled from the village with the loss of all his moveable property and one of his victims, a relation of his, had sat by me when the above was being written.

### PHENOMENAL POWERS OF LIVING YOGIS AND FAKIRS.

BY UMA CHARAN MUKERJI.

I HAVE been for some time past a constant reader of the *Theosophist* and have procured and read several works upon Mesmerism, Spiritualism, &c. These created in me a strong desire to verify personally the truth of what is narrated in our sacred books. Being a Government servant, I had very little time at my disposal, but devoted the whole vacation every year to travel far and wide in search of Fakirs and Yogees said to possess phenomenal powers. I am happy to be able to place before the readers of the *Theosophist* some of the startling facts that fell under my observation.

The banks of the Nerbada River are the habitual dwelling place of some of these people. I have met a large number of them and have seen them perform various phenomena. I shall, however, here mention only three or four striking cases, which no theory of deception or jugglery can explain away. I first went to Amarakantak, a place about ninety miles from here, where the sacred river of the Hindus takes its source. There I went to a reputed Hindu Yogi, a perfect stranger to me. No sooner did I put my foot into his cottage than he called me by my name, which was entirely unknown to any one in the town, that being my first visit there. He then told me whence I came, what my father's name was, and what was then passing in my mind. This thought-reading completely stunned me. After conversing with him for a short time and being satisfied of his power, I left him and proceeded on my travels. In a jungle about a mile from that place, I heard a voice which attracted my attention to a big banyan tree on the Karokamandala Hills. On approaching the spot, I perceived an emaciated Hindu Yogi sitting on a small wooden plank hanging in the air *without any rope or support* I saluted and addressed him. But having no response and being afraid of the tigers and other wild beasts, so numerous in that jungle, and it being near evening, I went on with my journey. The next year I went to Mundla, about sixty miles to the

east of Jubbulpore. The forest is dense and the habitation of tigers and other wild beasts. The town is situated on the rocky bank of the Nerbada River. I was at the time employed there as a Police Head Clerk. While there, I heard of a Mahomedan Fakir, known by the name of Data-shah. Before going to him, I went to Babuji Ojha, the late Honorary Magistrate of that town, to enquire about the age of the Fakir, and how long he was there. The Babu, who was then ninety years old, told me that his grandfather had seen the Fakir in his early years appearing as I myself then saw him. It is for the readers to judge how old this wonderful man may be. My curiosity was so much excited that I immediately went up to see him. The most marvellous thing that I noticed was when he was bathing in the river. Many had been the lives lost in the jaws of the crocodiles which infest that stream; but no alligator approached the man. I, in company with various other people, have actually seen ferocious saurians pass quite close to his body without touching him. Near his cave is the hole of a tremendous snake, about thirty cubits long, but the man has never yet been hurt. On another occasion, the Fakir, who hardly ever talks to one, suddenly came up to me and when I had resigned my service and was thinking of taking up another employment. He told me not to be sorry but to go to Jubbulpore, where I would get a suitable permanent post. I did so, and his prophecy has been fulfilled. I have also seen him cure various diseases, by giving Vibhuti (holy ashes) and sometimes even when using abusive language. After coming here, I met a Babu, the brother of a Deputy Collector in Bengal. Twice or three times I have seen him seat himself in a large vessel of water after the European fashion of a hip-bath, and by some remarkable pumping or siphonic action of the intestines described in the works on Yoga, distend himself with water, which he would then suddenly expel in a torrent. Once I saw him carrying on for some two hours a certain process of contraction and expansion of the abdominal and thoracic muscles, and for about half an hour suspending the breath—which latter process is known as Kumbhaka. He then levitated\* and sat in the air, about half a foot from the ground without the slightest mechanical support, for over fifteen minutes. He then recommenced the previous muscular process, and he gradually descended to the ground. These are some of the facts to which I bear witness. All these men are still living in the places mentioned by me. Let the men of science investigate the facts if they would have earnest Hindus believe in their desire to promote knowledge, and explain to us, if possible, more clearly than do our sacred books, the laws governing these occult manifestations of natural law,

JUBBULPORE,  
24th October 1883. }

### "HOW SHALL WE SLEEP?"

(The Opinion of a European.)

BY GUSTAVE ZORN, F. T. S.

IN the September Number of this Journal, the above question has been raised by a writer who finds the opinions of Mr. Seeta Nath Ghose and of Baron Von Reichenbach sorely clashing on this point; the latter recommending the head of the sleeper to be northward, the former entirely disapproving it.

It is my humble opinion that both writers are right, each from his own standpoint, as I shall try to show. What is the reason that our position in sleep should be of any consequence? Because our body must be in a position at harmony with the main magnetic currents of the earth; but as these currents are not the same in all parts of the world, the positions of the sleeper must, therefore, vary.

There are three main magnetic currents on our earth, *viz.*, in the northern hemisphere from north pole to the equator; in the southern hemisphere from south pole to the equator; these two currents meeting in the torrid zone continue their combined course from east to west. So the position of the sleeper must vary according as he finds himself to the north or south of the torrid zone or within it.

In the north frigid or temperate zone, he has to lie with his head northward,

In the southern	"	"	"	"	southward,
" torrid zone	"	"	"	"	eastward,

\* Cf. The account of Shamanism in a paper of thrilling interest called "Cave of Echoes," published in this journal for April last.

\* The phenomenon of levitation is due to the change of magnetic polarity of the man with regard to the spot supporting him. It has been fully explained in *Isis Unveiled*, vol. i.—*Manager*.

in order that the magnetic current may pass through him from head to foot without disturbance, as this is the natural position for magnetisation.

The following diagram may give a still more clear view of the case, and thus help us to answer the second part of the question, whether and when we ought to lie on the right or the left side, on the stomach or on the back.

The able writer of "How shall we sleep?" shows, in his cross diagram, that he thinks the head to be entirely positive and both feet negative. I think that this is not the case, but that the right side of the head and the left foot are positive, and the left side of the head and the right foot negative, and similarly the right hand is negative and the left hand is positive.

As the north pole is positive and the left side of the head negative, the natural position in sleep for those living within the northern zones would be on the right side, head northward and, it is obvious, that in the southern zones the position must be exactly the reverse; as to those who live under the tropics, lying on the stomach seems to me to be the most natural position, since the left, or negative side of the head, is turned to the north or positive current, and *vice versa*.

For many years, I and my family, have been sleeping with our heads either to the north, or the west (the right position in our hemisphere in my opinion), and we had no occasion to regret it, for from that time forward the physician has become a rare guest in our house.

Mr. Seeta Nath Ghose says in his interesting article on "Medical Magnetism" that *Mandulies* (metallic cells) are worn to great advantage in India on diseased parts of the body. The curative properties of these cells I have seen verified in authentic instances. When, years ago (I believe about 1852), cholera was devastating some parts of Europe, it was remarked at Munich (Bavaria) that among the thousands of its victims, there was not a single coppersmith. Hence, it was recommended by the medical authorities of that town to wear disks of thin copperplate (of about  $2\frac{1}{2}$  inch diameter) on a string, on the hollow of the stomach, and they proved to be a powerful preventive of cholera. Again, in 1867, cholera visited Odessa. I and my whole family wore these copper disks; and while all around, there were numerous cases of cholera and dysentery, neither of us was attacked by either. I propose that serious experiments should be made in this direction, and specially in those countries which are periodically devastated by that disease; as India, for instance. It is my conviction that one disk of copper on the stomach, and another one of zinc on the spine, opposite the former, will be of still better service; the more so, if both disks are joined by a thin copper chain.

Cressa, September 22 (O. S.) October 4th (N. S.) 1883,

## HOW SHALL WE SLEEP?

(The opinion of an Oriental.)

By NOBIN K. BANERJEE,

Pres. of A. B. B. Theo. Socy of Berhampore.

I BEG now to say a few words about the position in sleep which was originally mooted by the electrophath Babu Sita Nath Ghose, and then noticed in the September number of the *Theosophist* by correspondent \* \* \* 10 \* \* \*.

In the first place it is necessary, I think, to say that the rules of Garga, Markandeya, &c. &c., refer to the inhabitants of the plains only and not to persons on the mountains; (2) on retiring the rule is that a man should first lie on his right for the period of 10 breathings, then turn on his left for double that time, and after that he can sleep in any position; (3) that a man must not sleep on the ground, on silken or woollen cloth, under a solitary tree, on cross roads, on mountains, or on the sky (whatever that may mean). Nor is he to sleep with damp clothes, wet feet, or in a naked state. Unless he be an initiate one should not sleep on Kustra grass or its varieties. There are many more such rules. I may here notice that in Sanskrit the right hand or side and south are denoted by same term. So also the front or east is one and the same thing. The sun is the great and chief source of life and magnetism in the solar system. Hence to the world the east is positive as the source of Light and Magnetism. For the same reason, to the Northern Hemisphere the south (the equator and not the north) is positive. Under the laws of dynamics the resultant of these two forces will be a current in the direction of from S. E. to N. W. This, I think, is one of the real causes of the prevailing south-east wind. At any rate, I do not think the north pole to be positive, as there would be no snow in such case. The aurora cannot take place at the source of the currents, but where the currents come to a close. Hence the source must be towards the equator or south. The course of life, civilization, light and almost everything seems to be from E. to W. or S. E. to S. W. The penalty for sleeping with head to the west is said to be anxiety of mind, while that of the north is said to be death. I will here beg to invite the attention of the Hindus to a similar penalty of death in the case of any but an initiate (Brahman) pronouncing the sacred Pranava. This does not prove that Pranava is really a mischievous bad word, but, that with incompetent men, it is fraught with immense dangers. So also in the case of the ordinary men of the plains there may be unknown dangers which it would not be prudent for them to raise so long as they do not know how to meet them, or so long as they are not under the guidance of men who can protect them from their influence. In short, ordinary men should move on in their lukewarm course without deviating from the current of the tide, and these rules are for such men only.

As an instance of the infringement of the rule the following anecdote is given:—

After Ganesha (Siva's son) was born, the various Devas came to congratulate the family and bless the child. Sani, or Saturn was the last to come, and even then he came after he had been several times enquired after. When he went to see the infant, it appeared headless! This at once created a sensation, and all the Devas were at their wits' end. At last Saturn himself approached Mahadeva with folded hands and reminded him that it was due to his presence, and the child having been kept on bed with head to the north! For such was the law. Then the Devas consulted together and sent out messengers to find out who else was sleeping with head to the north. At last they discovered an elephant in that position. Its head was immediately cut off and affixed on the trunk of Ganesha. It needs not to be told that Ganesha was afterwards so learned and wise that if he had not an elephant's head, a human head would never have been sufficient to hold all he knew. This advantage he owed to the circumstance of his sleeping with head to the north, and the blessing of the Devas. To the beast the elephant the same position, but *minus* the blessing of the Devas, proved absolute death. I need not say more.

## AN "EXPOSER" OF SPIRITUALISM EXPOSED.

By L. SALZER, M. D., F. T. S.

I BEG to enclose herein a correspondence which has passed between Professor Baldwin and myself in the columns of the *Statesman*. Professor Baldwin, it may be stated, is one of those conjurers who, like John Nevil Maskelyne, of the Egyptian Hall,

London, professes to be an "exposer" of spiritualistic or mediumistic phenomena, and advertises accordingly. This introductory remark of mine will suffice to make the reader understand the correspondence which follows. The same opened with the letter, which I designate as I. In reply to this there appeared Professor Baldwin's letter II. This was responded to by a correspondent signing himself "Faith," (III) and by a letter of mine IV signed L. S. Professor Baldwin's reply is numbered V, to which I replied by letter marked VI, and soon afterward by a further letter (VII).

I have only to remark that what the Professor calls "Edgerton's séances," is something which he chooses to call so. The whole affair consisted in this, that while Mrs. Baldwin was tied in the cabinet, three different faces appeared at the little window of the cabinet, and then the doors of the cabinet were thrown open and she herself appeared, while the lights were lowered, on the stage, dressed in white. After she returned to the cabinet, she was found tied there, as before, the rope around her neck and fixed at the outside of the walls of the cabinet. The whole phenomenon resolves itself into the performance of the rope-tying trick of the Davenport Brothers. Any one who can perform that trick, (and Professor Baldwin himself had shown before that he can untie himself, however tightly tied), will have no difficulty in making some faces (Mrs. Baldwin's own face in different masquerades) appear at the little window, nor will it be difficult for him, to make her go in, and out of, the cabinet.

Professor Baldwin's thought-reading and Mrs. Baldwin's clairvoyant feats are, as far as I can see, genuine, beyond any farther doubt. There are men who kick the ladder by which they have risen; Professor Baldwin, it appears, kicks the ladder upon which he stands, and by which he tries to rise in public favor.

### PROFESSOR BALDWIN AND SPIRITUALISM.

#### I.

SIR,—I cannot refrain from trespassing on your valuable space regarding a matter which concerns a number of people who will shortly be asked to witness, as the advertiser says, results attained through the medium of Spiritualism, without resorting to this grand, but unfortunately undeveloped, philosophy.

I refer to Prof. Baldwin and his wife who announce their appearance at the Theatre Royal on Saturday next, and have endeavoured to secure a large attendance by a display of beautifully printed designs, supposed to represent the *fac-simile* of their so-called exposures of Spiritualism, and circulated with a view of leading the public to believe that they are really capable of producing materializations (as mediums do) of those who have long since departed this life, and entered into a higher sphere of existence; communicating with deceased friends, and obtaining correct answers to questions from those who were once dear to us.

Too much space would be occupied to fully describe the utter impossibility of his being able to fulfil one single thing which he claims to do, in the direction referred to, and I should very much like to have an opportunity of proving to him, the absolute difference between the results he obtains, and those that are obtained by spiritualists through mediums. He is very wrong in thus endeavouring to trifle with one of the most sacred beliefs of this enlightened era, in trying to convince people that Spiritualism is trickery, with the greatest impudence flatly contradicting some of the most eminent men of the day. He also asserts that Spiritualism is a myth. What I want to know is this—Has Prof. Baldwin attended any *séances* given by really first class and well-known mediums; if so, does he maintain that the marvellous and absolutely inexplicable results, can be obtained without the aid of 'spiritual agency,' and if he can prove to me that the supernatural achievements of the mediums are the results of mere trickery or of human agency, I should almost feel disposed to resign my belief, were it not that I am pretty well acquainted with conjurors' tactics, and candidly confess that I do not believe he can do any one thing he advertises in connection with Spiritualism.

The mere fact of Prof. Baldwin's having appeared before the Prince of Wales, and possessing references from eminent clergy, men, does not prove him any less the humbug. I do not wish the Baldwin any ill luck, but consider that it would be wise on their part to withdraw the exposure of Spiritualism from their programme.

A BELIEVER IN SPIRITUALISM.

October 25th, 1883.

#### II.

SIR,—I do not often notice anonymous writers of letters that may doubt my skill and proficiency in my peculiar business. All over the world my advent has been heralded by foolish people writing indignant letters to the local press, calling into question my ability to produce the manifestations (?) I advertise.

The Calcutta public, who may know nothing of me or my previous career, may be misled by the letter in your paper, signed A BELIEVER IN SPIRITUALISM, and I desire briefly to say that I have visited the *séance* of every prominent Spiritual medium in the world, and I have yet to see any so-called spiritual mani-

festation that I cannot duplicate, and explain and show to be produced by trickery or by human agency, and in nine-tenths of all cases purely by trickery.

The only exceptions are in some cases of clairvoyance and thought-reading, and nearly all so called thought-reading is but the cultivation of a little known physical force—especially much of the work done by W. Irving Bishop recently in London. In my performances, I duplicate the performances of the Davenport Brothers, of Anna Eva Fay, Dr. Slade, Foster, and the celebrated Eddy Brothers so highly praised by Col. Olcott. Besides duplicating their performances, I really and fully explain how they are done. The explanations are *bonâ fide*, and really show how the most puzzling manifestations are produced.

I have letters of reference from more than one thousand clergymen in England, America, and Australia, among them the most eminent doctors of divinity, all testifying to the good I have done by my full and thorough exposures. Men of this class do not readily endorse a mere charlatan, and a mountebank.

In conclusion, allow me to say I really do all I advertise, and I challenge any spiritual medium for £500, to produce any manifestation I cannot duplicate, or explain, after seeing it three times.

I believe Spiritualism (as it is generally understood) to be a humbug, and I have never seen or heard of any physical manifestation which was not a swindle and a fraud. Some eminent men are eminent fools, and especially those who take much stock and faith in modern physical Spiritualism.

S. S. BALDWIN,

*Spiritual Exposer.*

#### III.

SIR,—Professor Baldwin's letter in your issue of Saturday last has really astounded me. Professors Kellar and Cooke entertained the world with the representations of Spiritualistic manifestations. But they could not shake our faith in spiritualism. In the spirit-manifestations the media can perform their feats in any place and under any manner of circumstances, Professor Baldwin and others of his crew may probably imitate them under the favorable environments of stage and apparatus. If Professor Baldwin can imitate the manifestations, outside the stage and under any circumstances, I shall be highly obliged to him, for he will then shake my firm belief in the power and existence of spirits.

The cabinet manifestations of the Davenport Brothers have been successfully performed by many a magician both here and in the West, I firmly believe that if we are allowed to tie the hands of Professor Baldwin or any other magician with *our own* ropes, he cannot (at least in the short time he is wont to do) untie them. I can fairly and with all propriety challenge the Professor on this count. I therefore hope that Professor Baldwin will kindly select a day for our experiment.

FAITH,

#### IV.

SIR,—In his letter appearing in your issue of October 27th, Professor Baldwin states that "besides duplicating their performances of the Davenport Brothers, of Anna Eva Fay, of Dr. Slade, Foster, and the celebrated Eddy Brothers, so highly praised by Colonel Olcott, I really and fully explain how they are done. The explanations are *bonâ fide*, and really show how the most puzzling manifestations are produced." Further on he says, "In conclusion, allow me to say, I really do all I advertise."—This was written and published a day before his first performance in Calcutta. A report of his performance has appeared in the three dailies of this city, but I see it nowhere mentioned that Professor Baldwin has explained anything of his doings. He has even failed to explain why he omitted to explain. It is then too much to call upon Professor Baldwin to be kind and sincere enough to withdraw his statement to the effect that he really does all he professes to do in his advertisement? He asserts he has letters of reference from more than one thousand clergymen in England, America, and Australia, among them the most eminent doctors of divinity, all testifying to the good he has done by his full and thorough exposures. Exposures of what? Exposures of so-called spiritual mediums, as he tells us a few lines afterwards. And how has he exposed them? How has he shown that the manifestations brought about by spiritual mediums are nothing but swindle and fraud? He challenges any spiritual medium for £500 "to produce any manifestation I cannot duplicate, or explain, after seeing it three times." He would then *either* duplicate it, or explain it. If he duplicates it, he has by no means yet exposed spiritual mediums, for he might, for all we know, be himself a spiritual medium, who, for the sake of money-making, finds it to his advantage not to acknowledge himself as such. His whole assertions rest, then, upon his willingness to explain them, to show them off as mere trickeries. Has he given any proofs of this?—All he claims is, that such manifestations can be effected by means other than mediumistic. Are we then not to believe that electricity can drive a car, because the Professor has shown that it can just as well be driven by steam or horse-power? Let our Professor formulate his challenge in the following

straightforward way:—I challenge any spiritual medium for £500 to produce any manifestation. I cannot duplicate and explain as of non-mediumistic origin, after seeing it three times;—and I doubt not he will find his match in Calcutta.

As Professor Baldwin is guarded with regard to explanations, however free he is with regard to "exposures," I believe it is not out of place to close this letter with a little "explanation." So called spiritualists have spoiled their cause by a gratuitous hypothetical assumption. They had no business to attribute certain phenomena to *Spiritual* manifestations. Crookes called such phenomena 'psychic phenomena' in order to express that they are not physical in their nature. The late Professor Zollner (Professor of Physical Astronomy at the University of Leipzig) classed them as belonging to 'transcendental physics.' The genuineness of these manifestations under certain conditions is scientifically established.

"Some eminent men," says Professor Baldwin, "are eminent fools."—Well, I have yet to learn that I am an eminent man,

L. S.

CALCUTTA, October 30, 1883.

#### V.

SIR,—A correspondent in your paper, signing himself "L. S." makes a number of absolutely false statements, as can be proved by any one who cares to investigate. He says "a report of his performance has appeared in the three dailies of the city, but I see it nowhere mentioned that Professor Baldwin has explained anything of his doings." (The italics are mine.) This statement is simply untrue, and "L. S." must apologize or stand convicted, as I will show below. Fortunately, like many sneaking individuals, he can attack me personally by name, and coward-like hide his own identity under the *nom-de-plume* of "L. S." (probably meaning Low Sneak). Now to prove him a falsifier.

The *Englishman* of Monday, October 29th, in its first notice of my opening entertainment said as below—I shall italicise a few lines to call especial attention to them:—

"The first portion of the programme consisted of sundry tricks in which the delusions were explained to have been produced by chemical agency. After these, the well known cabinet performance was gone through, in which Mr. Baldwin and Mr. Lingard, after being securely fastened within the cabinet by a committee selected from amongst the audience, went through all the usual manifestations in the way of ringing bells, striking tamborines, waving spirit hands, and the rest of the phenomena well-known in connection with the late Davenport Brothers' performances. These were eventually shown to be due purely to the agency of the performers themselves; and the dexterity exhibited by them in releasing themselves from and returning into their fastenings was quite wonderful."

If the above quotation does not prove "L. S." to be guilty of deliberate falsehood, then "I miss my reckoning." The *Daily News* said: "He caused paper to burn apparently spontaneously, and then showed how it was done."

On my first evening I stated to my audience that I should each night change my performance somewhat, making different exposures and explanations each evening. On my first evening I did carefully explain more than one-half of the tricks I gave. I explained the burning paper as produced before me by William Eddy. I explained fully the Davenport cabinet business. I explained Jennie Holmes' transmutation test. I explained Cutler's handcuff test. Last night (Tuesday) besides the above tests, I also explained the ring test of Monk, and which is also given by dozens of mediums. And during my stay here I do really and fully expose all the most prominent tests of the best-known professional mediums. Like all other professional performers, I advertise my full repertoire, but no one except some antiquated ass, would expect it all in one night. The Opera Company advertise a long list of operas to be produced by them, but no one expects all these operas to be given in one performance.

Now as to the absurd idea that I am a medium in disguise, and that my challenge is peculiarly worded, I mean what I say. Spiritualism in the generally understood sense is a humbug, and all professional mediums are swindlers, and I can duplicate and explain the performances of any I have ever seen. I said "duplicate or explain" in my challenge; because I might find a medium who, from some physical peculiarity or gift, might produce some manifestation (?) which I might, through physical weakness or ill-health, be unable to duplicate; but I will back myself to expose and explain anything done before me by any medium anywhere in Calcutta or in the whole world. If "L. S." will put his money up, I will make my challenge so plain and comprehensive that I will win his money at any rate. To conclude: The genuineness of the manifestations before Zollner and Crooke (Sic.) have not been established; very few of the sensible thinking people of the world have any faith in them, and I myself do and explain the seances that Crooke endorsed as genuine. I can easily believe "L. S." when he says he has yet to learn that he is an eminent scientific man, but if he will sign his own name, probably there are dozens of people in Calcutta who would testify that he has all the necessary qualities to make an eminent ass.

S. S. BALDWIN,

P. S.—I do not wish to take up more of your space to-day to answer a communication signed FAITH; but to-morrow I will, with your permission, write a short reply and give FAITH all the chance he desires to test his powers of rope-tying with "his own ropes."

S. S. B.

CALCUTTA, October 31, 1883.

#### VI.

SIR,—I beg to return to my charge concerning Professor Baldwin's "spiritualistic exposures," regarding which you were kind enough to publish a letter of mine in your issue of the 31st instant. Professor Baldwin has since come forward, in a letter published in the *Statesman* of this day, purporting to refute my remarks previously made. Before all, he takes objection to my having assumed a *nom-de-plume*, while he himself comes out with his real name. I really thought the name of the writer had nothing to do with the subject under discussion; but since Professor Baldwin thinks otherwise, I have no objection to giving him my name. It is not "Low Sneak" as he suggested, but Leopold Sälzer.

Having thus far satisfied the legitimate claims of the Professor, I am further expected to apologise for alleged false statements made, or to stand convicted as a falsifier of truth. I believe there is no reason for doing either the one or the other. What I said was this. "In his letter appearing in your issue of October 27th, Professor Baldwin states that, besides duplicating their performances (the performances of the Davenport Brothers, of Anna Eva Fay, of Dr. Slade, Foster, and the celebrated Eddy Brothers, so highly praised by Colonel Olcott) 'I really and fully explain how they are done; the explanations are *bona fide*, and really show how the most puzzling manifestations are produced; further on he says, 'In conclusion allow me to say, I really do all I advertise.' This was written and published a day before his first performance in Calcutta. A report of his performance has appeared in the three dailies of this city, but I see it nowhere mentioned that Professor Baldwin has explained anything of his doings. He has even failed to explain why he has omitted to explain." As a proof that this statement of mine is false, Professor Baldwin quotes the reports from the *Englishman*, of which he italicises such sentences as are, according to his view, calculated to show the falsehood of my statement. The report runs as follows:—"The first portion of the programme consisted of sundry tricks in which the delusions were explained to have been produced by chemical agency. After these, the well-known cabinet performance was gone through, in which Mr. Baldwin and Mr. Lingard, after being securely fastened within the cabinet by a committee selected from amongst the audience, went through all the usual manifestations in the way of ringing bells, striking tambourines, waving spirit hands, and the rest of the phenomena well-known in connection with the late Davenport Brothers' performances. These were eventually shown to be due purely to the agency of the performers themselves; and the dexterity exhibited by them in releasing themselves from and returning into their fastenings was quite wonderful."

Professor Baldwin continues then as follows:—"If the above quotation does not prove L. S. to be guilty of deliberate falsehood, then "I miss my reckoning." The *Daily News* said: "He caused paper to burn apparently spontaneously and then showed how it was done."

The first portion of the programme then is described by the *Englishman's* reporter as having consisted of "sundry tricks," and they have been explained to have been produced by chemical agency. Surely Professor Baldwin does not mean to say that the performance of such tricks touches in any way the question of so-called spiritualistic manifestations. Many professional conjurers have done such things before him, and do it every day, without ever thinking of proving or disproving thereby the class of manifestations just mentioned. The reporter himself understood this so well, that he designated that part of the performance as "sundry tricks."

I see, however, in reading over Professor Baldwin's letter, that he does think otherwise. He says, "On my first evening I did carefully explain more than half the tricks I gave. I explained the burning paper as produced before me by William Eddy." In so far I am open to conviction and am ready and willing to offer my apology to the Professor. I was not aware that William Eddy had ever produced such a phenomena in his quality as a medium; the impression left upon my mind by the report of the *Englishman*; was that the paper-burning was simply done to amuse the public, before introducing them to the true business of the evening, which was to deal with a class of performances reputed to be of a more or less spiritualistic or mediumistic nature.

While then I am so far fully prepared to apologise to the Professor, I wish to be as fully understood that I do not look upon that part of his performance as an exposure of mediumistic phenomena. I say again, "Are we not to believe that electricity can drive a car, because the Professor has shown that it can just as well be driven by steam or horse power?"—Prof. Baldwin says he has letters of reference from more than one thousand clergymen and doctors of divinity, all testifying to the good he has done by his full and thorough exposures. I wonder if one of those thousand clergymen has ever read the following passages (Exodus vii. 8-12)—"And the Lord spake unto Moses and unto Aaron, saying, when Pharaoh shall speak unto

you, saying shew a miracle for you; than thou shalt say unto Aaron: Take thy rod and cast it before Pharaoh, and it shall become a serpent. And Moses and Aaron went in unto Pharaoh, and they did so as the Lord had commanded, and Aaron cast down his rod before Pharaoh, and before his servants, and it became a serpent. Then Pharaoh also called the wise men and the sorcerers and the magicians of Egypt, and they also did in like manner with their enchantment; for they cast down every man his rod, and they became serpents."

I return now to the second portion of the *Englishman's* report, italicized by Professor Baldwin, as intended to prove that I was guilty of false representation. This part of the performance refers to what is known as the Davenport Brothers' performance, and the manifestations of ringing bells, waving spirit-hands, &c. "These," says the reporter, "were eventually shown to be due purely to the agency of the performers themselves." Now no reader will take this statement of the reporter to convey the meaning of a "full explanation how it is or was done" if it is to be meant as an explanation at all, it can only be meant so in the negative sense. It was shown *not* to be due to any known physical or chemical agency, so that there remained nothing else but purely human agency to account for the phenomenon. This is just what mediums assert to be the case with regard to all so-called spiritualistic phenomena. These phenomena, they tell us, are produced, not by physical or chemical agencies, but by some agency dwelling in man, in fact by "the agency of the performers themselves."

In conclusion, I beg to say that I am no medium, no spiritualist, and certainly no professional medium or spiritualist. The latter may all be swindlers; I have not a word to say in their defence. Professor Baldwin himself admits in his letter, that "I might find a medium, who, from some physical peculiarity of gift, might produce some manifestation which I might, through physical weakness or ill-health, be unable to duplicate." He acknowledges then the existence of mediumship and the dependence of such mediumship, and the manifestations occurring under its influence, not on some trickery surpassing his own cleverness in legerdemain, but on some physical peculiarity of gift. And this is all I want to establish by the present and the previous letter of mine. The genuineness of the manifestation before "Zöllner Crooke," says Professor Baldwin, "has not been established." I wonder who has ever dis-established it? The Professor continues, "Very few of the sensible thinking people of the world have any faith in them, and I myself do and explain the *séances* that Crooke endorsed as genuine." Professor Baldwin has been in England; he has testimonials from English clergymen: what a pity he has not submitted his *séances* to Mr. Crookes. One word of the inventor of the radiometer and the discoverer of radiant matter, would have had at least as much weight as the opinion of any doctor of divinity.

L. S.

## VII.

Sir,—Having been ruthlessly attacked by Professor Baldwin in the columns of your valuable journal, on account of certain statements I made regarding his alleged explanations of so-called spiritualistic manifestations and his pretended exposure of mediumistic performances, I went to see the Professor's performance on Saturday night. It was to be an exceptionally grand performance, if we were to believe his advertisement. "To-night, to-night," ran the advertisement, "The great rope tying—explained (so all can do it at home); the handcuff trick—explained (so any one can free himself) . . . The dark *séances* and circles of Eglinton, the Calcutta medium—explained. All explanations given in the bright light on the open stage. . . . The attention of spiritualists is especially called to this grand night of full exposures and explanations of the most marvellous mediumistic tests."

As an eye-witness, I state now that Professor Baldwin neither explained, nor exposed, nor did he even attempt to explain or expose any of the above-mentioned feats. If he exposed anything, it was himself he exposed to a severe and well-deserved censure. If this statement of mine contains anything untrue, then I am prepared to stand publicly convicted of falsehood.

Professor Baldwin is one of the cleverest conjurers I have ever seen, and I have seen some of them while lately in Paris. His thought-reading and bank-note test are alone worth the money and the time spent in going to see them, not to say anything of the cabinet performance. Mrs. Baldwin's feats of clairvoyance are most attractive and charming. Then there are a number of tricks the Professor performs and explains in the neatest manner possible. But as to his alleged explanations and exposures of mediumistic phenomena, he must submit to what I have said, and to what others have said besides myself.

## Letters to the Editor.

## ON PRAYER.

Why are some people averse to prayer? We solve it in this way:—

Jivatmá and Brahmátmá are the same. Atmá in reference to *Brahmánda* is called Iswara; and with reference to *deha* called Jiva. Now were the latter to pray to the former, it would be self-applause—one of the worst faults. We should therefore, I think, and rightly too—never pray; but most assiduously identify ourselves with the "Great-Self" by *Samádhi*. If any one were to say that Atmá with reference to body becomes somewhat lowered, *we wish him long life*.

V. K. RAJWADE.

## ATTEMPTS AT MESMERISING.

I just completed the study of mesmerism by Captain James, and though I endeavoured my utmost to mesmerise persons by will-power instead of by passes, I regret I did not succeed.

My choice in trying to mesmerise by will-power is based on the assumption that persons who fail, after repeated efforts, to produce mesmeric sleep by power of will, will succeed better in producing the desired effect by having recourse to passes, and I shall thank you or any of your numerous readers to kindly correct me if I am wrong in thinking so.

Another defect that I found in the course of practice is, that instead of producing sleep on a person, I myself feel drowsy and inclined to sleep. Will you or any of your readers kindly enlighten me as to why this is so, and whether by perseverance, my efforts are likely to be crowned with success?

C. V. LOGANADAN, F. T. S.

27—7—83.

NOTE:—The gentleman did not succeed, because he did not exercise sufficient will-power. He only succeeded in deadening his own intellect by the monotony of his stare. He did not force the current of his will-power into his subjected nervous system. It is very unwise especially for beginners to abstain from availing of the assistance of the hands which are nature's magnetic poles in the body.—Ed.

## BUDDHISM BEFORE BUDDHA.

Will you kindly tell me what it was that drove Buddhism out of India and led to the persecution of the adepts which forced them to fly beyond the mountains? Were these two events simultaneous?

You say Buddhism existed in India even before the advent of Gautama Buddha. I have met with words and allusions in our books which tend to confirm the fact you assert, unless we subscribe implicitly to the chronology set up by the European Orientalists.† But if Buddhism existed in India anterior to Gautama and was in all likelihood tolerated, if not practised, by the Rishis of old, what was it that made it intolerable to the people of the country after the coming of Gautama and, as you say, of Sankaracharya?‡

I know of no books where I can find the information I require. The persecution of the adepts is a subject which no human being ever thought of before, much less wrote upon,—of course by such a human being I mean one not inside the "adept circle," for those who are within that circle may know much about it, without any profit to us outsiders. This, I believe, accounts for the non-existence (so far as I know) of any books on the subject.‡

AN OUTSIDER.

## NOTES AND QUERIES ON GHOSTS AND APPARITIONS.

I would send you "Notes and Queries" of this week, August 25th, but it is not to be had here, and the one I have seen is lent me by the famed Philologist Dr. Chamock. There is a long article on Ghosts, and the author says, "If I mistake not, haunting spirits are not unknown to India, and India, I suppose, has lustrous nights too." The writer says, "The most delightfully quaint invention for accounting for apparitions and ghost stories is to be found in Guffarel's *Unheard-of Curiosities*. He first tells the tale that, if the ashes of certain plants, *e. g.* roses and nettles, are put in a glass and held over a lamp, they will rise up and resume their original form:

"Secret, dont on comprend, que, quoique le corps meure,  
Les Formes font pourtant aux cendres leur demeure."

and hence he proceeds to draw the conclusion that ghosts of dead men, which he says are often seen to appear in church

\* The divulging to the lower non-Brahminical castes and to the world in general, by the Lord Buddha, of secrets known unto his day only to the initiated Brahmans.—Ed.

† Certainly no Hindu—least of all an Initiate or even a Chela—would ever accept their arbitrary and fanciful chronology.—Ed.

‡ Simple truth—which can never hope to win the day when in conflict with theology—the selfish concoction of priests interested in the preservation of superstition and ignorance among the masses. Sankaracharya was more prudent than Gautama Buddha, but preached in substance, the same truths, as did all the other Rishis and Mahatmas.—Ed.

§ Quite so. But he who joins the "adept circle" and will shrink before no sacrifice, may learn all this and ascertain the truth easily enough with regard to Asia. During the middle ages down to hardly 100 years ago the persecution and even the burning of Adepts in Europe, is a fact in history.—Ed.

yards, are natural effects, being only the forms of the bodies which are buried in those places, and not the souls of those men, nor any such like apparitions caused by evil spirits.\* This idea is clearly founded on Plato's theory of abstract forms as efficient causes of the actual forms. Bacon says that "Plato supposed forms (Laws) were the true objects of knowledge, but lost the real fruit of his opinions by considering that forms as absolutely abstracted from matter, and not confined and determined by matter, and so, turning his opinions upon Theology, wherewith all his natural philosophy is infested," &c. Now supposing we could entertain any such like abstract notions, it would not account for the clothes and armour, which are artificial productions, and their ashes scattered to the four winds; but we are not bound to have our one theory cover the whole question.† However the matter is open to experiment if any Theosophist cares to give the matter a trial. Reichenbach made some curious experiments in church-yards with his 'sensitives,' or those persons having finer perceptions than others—experiments which, as far as I know, have not been repeated or verified. But Theosophists may possibly open a way to the investigation of such matters and to which animal magnetism opens the door.

HENRY G. ATKINSON, F. G. S.

BOULOGNE, FRANCE.

### THE THEOSOPHICAL SOCIETY IS OF ALL CREEDS.

A DISTINGUISHED European gentleman explains to me thus why he and Christians cannot join the Theosophical Society:—

"We believe that we have got in the compass of that portion of our Bible, which we call the New Testament, all possible Theosophy. Best of all we have got a *Person* whom we are to love and worship first as our Peace-maker with God, next as our Light through this dark world. You may exhaust a book but you can never exhaust a person."

I have replied to him as follows, and shall be thankful for any observations which the Editor and President-Founder may append in order to remove the hesitation of Christians and Mohammedans. It is strange that the Missions should consider it honorable to convert those heathens who are mostly fools, knaves or beggars, in and behind heathen houses and streets and should fear the Society of the Theosophists, most of whom are graduates of the Universities and officers of Government with a sincere regard for Jesus and Mahomet and their *esoteric* philosophy.

My reply:—"I believe a Christian's beliefs are as much respected as a Hindu's, for the Theosophical Society is not of any one creed. It is a Society which freely but without offence and bigotry studies the sacred records and consults the eminent men of every creed. Such study and consultation would add to knowledge and work to confirm Faith."

"I believe too in a Person who is the Peacemaker and Light of this dark world, who is to be loved and worshipped and who is in the Universe from and in, the Eternity (and not shut up in a book). He is the Word, the Man-God, the Son of Woman, the Kshetrajna, &c. Those terms as well as the terms God, Soul, and Heaven, and Apostolic succession are differently understood not only by different creeds but by different men in the same Christian or Hindu creed. Hence combined study and consultation are most necessary."

"And further, as the Christian and the Mohammedan owe to their Person the duty of proclaiming Him and bringing other souls to acknowledge Him, I humbly think that they must either justify or improve their belief and convince or be convinced on the Theosophic Platform from which no one of character and education is excluded by reason of his color or creed."

\* This is precisely that which is held by the Theosophists in all such cases of apparitions long after death.—Ed.

† And why not? Anything, of whatever material, and be it an organic or inorganic tissue, once it has imbibed the magnetism of the body it was in contact with, becomes, so to say, part and parcel of the latter. Burn a body clad in a uniform, and the uniform will appear as the aura of these ashes, together with the form of the dead man. The ghosts of the Hindus who are burnt quite naked will never appear clad—unless in the imagination of the Seer. The tale told by Claffarel is not a fiction. The experiment was made and the assertion found correct.—Ed.

"We have a right to our own beliefs and practices whatever may be those of Madame B. or of Colonel Olcott, or of Raghonatha Row or of any President of any Branch."

A. SANKARIAH, F. T. S.

ED. NOTE.—Quite Theosophical this. No one will ever interfere with your belief or creed.

### THE TANTRAS AND BUDDHISM.

AT page 227 of the *Theosophist* for July last, it is said that there are a number of *Tantras* which inculcate teachings on the principles of the *Vedanta*. *Maha Nirvan* is one of those. The chief or earliest of the series, appears to be the *Mula Tantra*, and its very name signifies that it is the root or basis of all the rest. The educated votaries of the *Tantras* admit this, but, they say that it is not easily procurable. Perhaps most of them are not aware that it was originally a Tibetan Book. Its Tibetan name is *Rtsa-rgyud*. It was compiled by Chandra Bhadra (according to some Soma Bhadra) called in Tibetan Davazangpo (commonly Dazang), a king of Shambhala,—a fabulous city according to the Europeans, but according to Hindus the city, whence the Kalki or the last Avatar (incarnation) of Vishnu is to come.\*

This king visited Nilachala (literally the Neilgheris, but is meant to signify Puri (or Jageruanth) and Katak (in Tibetan—*Dhal-ldan kbras-spung*, meaning the city of accumulated rice) to hear the teachings of Lord Budha, and on his return compiled the book in accordance with what he had heard from the MASTER. Such was the noble origin of this *Tantra*. Soon after Lord Buddha's departure from this life, much of his pure teachings was corrupted and gave rise to the sect now known as the *Dugga* Bouddhs in Bhotan and Sikkim. Corresponding *Tantras* soon made their appearance, and these inculcate all sorts of abominations under the guise of *Shatikarma Mantra* or *Yoga*, &c. &c., which are strictly prohibited in Manu. The fact is that men with mediumistic tendencies and selfish motives—a characteristic sign of weakness and ignorance—take to these *Dugga* or Black *Tantras* in preference to the White *Tantras*. Their weakness and selfishness render them easy dupes, and in their turn they try to dupe others. They are not averse to consulting what Rishis like Manu, Vasishtha, and Vyasa have said, but like all mediums they fail to see any difference in the teachings. They have, in general, a great hankering after phenomena, owing to their senses and feelings having got the better of their reason, and thus they are easily led away by phenomena alone. What is strange in these men is that they generally admit Vasishtha to have been their chief and original teacher, and that Vasishtha was a Buddhist by faith. But they do not like to stop to inquire what his tenets were, and whether these tenets clash with their modern practices or not! Of course there are few who are exceptions to this rule, but these few pass for *Vedantins*.

It would not, I think, be inopportune to mention in this place that not only *Saktism* (or *Tantricism*) has degenerated but also *Vaishnavism* has fared no better in Bengal. *Vaishnavism* (although the name suggests devotees of Vishnu) was essentially a revival of *Vedantism* according to the schools of Sankaracharya, Madhwacharya and Ramanujacharya. In Bengal and a portion of Orissa, Chaitanya was the last teacher of the *Vaishnavas*, and he is believed by them to have been an incarnation of Bhagavana. He was a great pundit, but did not write any books. His associates (disciples), whose lives in many respects show a strange contrast with that of their Master, wrote the books after his death. Of course, in these books sanction is accorded to all that they did, and therefore the teachings inculcated have in many respects to be accepted with caution. At any rate it is now widely known that the modern votaries of the school seldom hesitate to surround themselves each with a number of devotees of the other sex, while Chaitanya had refused to see or have anything to do with even his mother and ex-wife, who had travelled from Nuddea to Jagermauth simply to meet him.

Vaishnavism predominates among the lower classes and especially among the sellers of spirits, and the women about town. Of course it is no fault of the system that it has such persons among its votaries, but at the same time it is not creditable to the class which supplies *Gurus* to such persons, while actually carrying on their immoral vocations and paying the *Gurus* out of their sinful earnings!

\* And a locality known to every Tibetan to exist; an oasis within the Shamo (Gobi) desert—whence its first syllable.—Ed.

After the above, I don't think you will be shocked to hear that the very low and selfish among the *Vaishnavas* have degraded some of its noble teachings by interpretations which very few outside its pale can even imagine or guess at. For instance the phrase "*Sadhu Sangah*," signifying (as it literally does) in their secret, disfigured code, "*Sadhu*," a *Vaishnava*, and "*Sanga*," cohabitation with. This (would-be) esoteric meaning is revealed secretly to the ear of unwary young women only. The prelude to its being the signification (esoteric of course, in their sense) of the phrase *Sat-Chit-ananda*. In Bengali "*Sat*," means "Being" or to be, *Chit*—or, on one's back (this according to vulgar slang only) and *Ananda*=happiness. I need not proceed further. The above is sufficient to show how the noblest teachings can be degraded by cunning, low and selfish persons to subserve their purposes. These pious *padres* explain esoterically and show by practice that all males are *Krishna* (*Purusha*=spirit) and all females are *Radha* (*Prakriti*=matter), and *Yoga* (union) consists in bringing as many as possible of the one to the other in the position of husband and wife. This is the at-one-ment, the only way to happiness, prescribed for the effacement of the heresy of individuality !!!

T. S.,

Berhampore.

3-10-83.

## AN INQUIRER ABOUT ADEPTS.

ARE there any Jain Rishis among the Himalayan Brothers? Is the *Yoga Marga* of the Jains and the Buddhists the same? This much is certain that Jainism and Buddhism go side by side to a certain extent. In what chief points then do they differ so as to give rise to two distinct religions?

How is the practice of *Hatha Yoga* dangerous? Is it not the most certain way of taming the mind? I think some persons are suited to *Raj Yoga*, but there are others who cannot subdue their mind so as to keep it fixed on one object for a time. Have such any other means of learning *Yoga Vidya* except *Hatha Yoga*?

Somewhere in the 3rd volume of the *Theosophist* there is a foot-note to the effect that the spirit liberated in *Samadhi* can go only as far as the lowest *Deva-loka*. This does not agree with what is given in the *Hindu Shastras*, where the assertion is that the spirit thus liberated has no check and can go anywhere it chooses. How is that?

Can *Yogis* of a lower grade than the Himalayan Brothers, change their body at will, *i. e.*, leave their own body lifeless and enter one dead so as to make it alive? Is *Koot Humi* a title and not a part of the name of our revered Brother?

Are there any *Mahatmas* in India equal in rank (of adeptship) to the Himalayan Brothers? If there are, where do they chiefly live? Are there any such in *Rajputana*? If any, in what part of the country and by what names are they known to the world?

Have these any communication with the Brothers?

JAGANNATH.

JEYPORE, }  
19-10-1883. }

ANSWER.—It is very painful to observe that even our professed friends and sympathisers should be so inattentive in reading the *Theosophist* and other publications of our esteemed members. An ordinarily earnest student of theosophic literature is aware of the oft-repeated fact that the esoteric truth underlying all religions is the same. The different ritualisms and formalities of various religions resemble the different costumes a man wears to suit himself to the surrounding atmospheric conditions and those of the country he temporarily occupies. A keen observer pierces through the mask, and recognising the hidden individuality cares but little for the external form. In all ages the masses of all religions have but clung blindly to the shell, while the philosopher, penetrating to the innermost kernel, has met, on the principle of Mutual Toleration and Mutual Intellectual Sympathy, his co-worker in the search after truth, whatever may be his caste, creed or colour, externally. This Brotherhood of true Philosophers or Adepts, caring but little for exoteric religions, have united themselves into a compact body to lay this Truth before the followers of Religions, of which they are the respective representatives. And it was with this view that the Theosophical Society adopted as its first object the formation of the nucleus of a Universal Brotherhood of Humanity. Like the travellers following different paths but meeting at the same mountain summit, the mystics of all times and all religions, going deep into a study of the faith of their forefathers, have met at the same altar of Truth—Esoteric Philosophy. The readers of Col. Olcott's lectures will remember his constant remark that the Theosophical Society does not ask any one to leave his religion, but to find out all of Truth that may be in that Religion and to try to live up to that Truth. The observations now made will make clear Col. Olcott's meaning. It is therefore difficult to see what is meant by the enquiry whether there are Jain *Mahatmas*? If

esoteric Hindus, esoteric Buddhists, and in fact mystics of all religions, have arrived at the same Truth, through a deep study of their respective Religions and have consequently been admitted into the ranks of the Himalayan Brotherhood of Adepts, is our correspondent aware of any particular reason why the Jains should alone be excluded? At least, to the knowledge of occultists, there exist no such reason. Having said that the Esoteric Doctrine is the same, in whatever religion it may be found, it is needless to enter here into the external differences between Buddhism and Jainism, for Esoteric Theosophy has nothing to do with exotericism, except in so far as to study the symbols to find out the meaning underlying them.

The dangers of *Hatha Yoga* will be quite apparent to one who knows what mediumship is. Its practices only induce some physiological changes and tend to develop into mediumship. It does not help in any way psychic development. This will be apparent from the fact that *Hatha Yogis* can produce only that particular phenomenon for which they undergo, by special preparation, a gymnastic training. And it must be so in the case of physical powers. Only psychical powers are permanent and can be carried from birth to birth. The *Hatha Yogi* dies with no acquisition to help him in his next re-birth, except a strong and sincere desire for advancement. His gymnastic performances end with the death of his body. The control over the mind must be obtained by strong will, a dogged determination, and high moral and spiritual aspirations. It cannot be obtained by stopping the breath or in-and-outletting a quantity of water, curds, or milk.

Our correspondent seems to confound *Samadhi* with the higher perceptions of a *Raja Yogi*. When he studies the difference carefully between *Hatha* and *Raja Yoga*, he will find the teachings in *Fragments* is in entire consonance with those of the Aryan Adepts. No *MAHATMA* or even a High Chela will pose himself before the public. At the same time there is not one true aspirant with a firm will that has not found out the custodians of the Aryan treasure. It is therefore improper to enquire where the ADEPTS live, since, as in ancient times, the *Chela* has to find out his Guru by self-evolution and self-exertion.

As to the other questions, most of them are not a fit subject to treat upon in the columns of our journal. Whether "a title or part of his name," the name of our revered Master Koot-Humi has been sufficiently desecrated in the pages of spiritualistic papers, and even in this magazine owing to the indiscretion of his most ardent followers to permit of any more discussion of that topic than can be strictly helped.

B. S. D.

(A Chela.)

## HUMAN AND ANIMAL MAGNETISM.

BEING a student of Animal Magnetism, and having some experience in the same, I for myself and many more like me take the liberty of offering the following questions in *The Theosophist*.

Dr. Dod, in his able lecture, says that it is the nervo-vital fluids when introduced into the brain of a subject that places the latter in the magnetic state. The chief source of the fluid is electricity. Is the fluid electricity alone or something in combination with electricity? If it were alone, can we with a battery as is used in other electrical experiments bring a subject to the magnetic sleep? If that fluid be in combination with something else, is that something else known? If so, what is it? The questions mentioned above being of great importance to all students of the divine science, will plead for my taking up valuable space in the Journal.

Yours truly,

H. HARDY,

Vice-President, Aryan Legends

Investigating Society.

BOMBAY, }  
10th August. }

ANSWER.—The Magnetic force in man is not the same force as the electricity of modern science, although having a great similarity in its operations to that subtle agent. The second principle of man—*prana* or vitality—is the one concerned in the production of mesmeric phenomena, and a careful consideration of what has been said about that principle in these columns may be studied with profit in this connection. The mesmeric fluid or vitality is matter in a subtle supersensuous state and permeates the whole of the outer man, from the constituents of which it is generated by the action of the spleen—an organ quite unknown in its functions to science. One of the arguments advanced by the German atheist Struthers against the existence of an intelligent God is the presence of this "useless organ," as he considers it, in the human body. This point no theistic man of Science could disprove. But irrespective of a "personal god," as all occultists know, there is nothing useless in Nature. The spleen is the reservoir of animal magnetism and the original centre of the force which evolves the astral man. Considering the long ages for which all knowledge of these things, theoretical or practical, has disappeared from Europe, it is no wonder that in the Western world, under the well-known physiological law, the spleen should have fallen into a state of atrophy.

D. DHAR K.

(A Chela.)

### QUERIES FROM AUSTRALIA.

ALLOW me to address you on a subject of vital importance to me in connection with Spiritualism and Spiritualistic phenomena, which have occurred to me during the last 15 years. I consider you above all persons with whom I have any acquaintance through the literature of Spiritualism competent to give me a final explanation of the phenomena which I am now going to submit to your critical judgment. I have of late got tired of the unsatisfactory and unprogressive state of what is termed Spiritualism, and seeing in Theosophy and Occultism a step in advance of our old movement, I wish you to be kind enough to tell me what the interpretation of my experiences is from an Occult or Theosophical point of view.

For this purpose I have enclosed an old lecture of mine, delivered in 1874, which you will find contains a passage or portion marked with brackets A—A; this is the *First Query* put to you, and in your kind answer you will point out to me where I have erred in my own attempts at explanation.

*Second Query* refers to a painful subject—an accident in my family—which I shall detail as briefly as possible. On 17th March, 1870, a boy of mine was accidentally thrown out of my buggy and he sustained fracture of the skull. When I picked up the child (4 years old) I found him bleeding from a branch of the temporal artery, and whilst I was dressing the wound on the road and in the dark, my mind involuntarily was turned homeward where my wife was lying ill and in a very weak state from loss of blood after her confinement. I thought that the news of the fatal injury of our child would also prove fatal to herself in consequence of the shock produced by the news. Fancy, then, my astonishment when I came home to find that at about the same time that this accident happened, I appeared to my wife spiritually or phantasmically (?) with the child in my arms, which fact she mentioned to her nurse, who, however, could not see me or my apparition. Now what do you make of this phenomenon and what is your explanation of it?

*Third Query* is connected with what I would consider a case of clair-audience which happened to me some 8 or 9 years ago. I had scarcely turned into bed at 11 o'clock on a certain night (date I cannot at present ascertain), when I found myself all night up to half-past 4 A. M. disturbed from sleep by the constant crying out of 'doctor!' 'doctor!' in a distinctly plaintive tone, the voice being that of a female. At 6-30 the same morning I was called to attend a woman at a distance of 15 miles from my residence, a perfect stranger to me and to my astonishment her voice was identical with the one of my nocturnal disturber! The woman, having been in labour all night and crying out for the doctor—for me—her husband cruelly paying no attention to her lamentation until it was almost too late to send for medical aid. Now, I would ask you, how could I hear the voice of this woman a distance of 15 miles?

*Fourth Query* concerns a mesmeric subject or experience of mine which took place 14 years ago. A friend of mine, named Mr. Crone, who is a powerful mesmeriser, brought a boy to my surgery one night at 8 o'clock; and this boy told me the time on my watch to a minute correctly four times in succession, although his eyes were bandaged and lie himself in a state of mesmeric coma. Three times the boy indicated the time on my watch correctly, even after I had turned the hands round with my key until I did not know myself to what figures they pointed.

Now these may very possibly be all simple questions to you to solve, but I have never in all my reading and studying on the subject found an explanation which satisfied my scientific or philosophical demands, really furnishing a tangible and reliable exposition of the

different *modi operandi* by which the four above mentioned phenomena or facts were produced.

Hoping you will kindly answer my four queries in one of the numbers of the *Theosophist*. I am, etc.

C. ROHNER, M. D.

BENALLA,  
VICTORIA (AUSTRALIA). }

EDITOR'S NOTE.—We are extremely sorry to be unable to answer *Query No. 1*, owing to the lecture in question having been either lost in transit or mislaid here during our prolonged absence from home.

*Query No. 2* is easy enough to answer from the standpoint of occultism. It is a case of thought objectifying itself by its intensity to the person on whom it is centred. The sad occurrence was reflected in the sympathetic aura of the suffering (hence more than ever spiritually receptive) lady and she saw it in her mind's eye. We have amply discussed in previous numbers the phenomenal effects of thought intensified to the last degree, whether consciously through will-power or unconsciously through the strength of desire, produced by fear, joy or any other feeling. The ordinary phenomenon of the thoughts of the mesmeriser appearing to the subject as objective reality belongs to the same class though different in degree. The present case affords some light for the examination of the spiritualistic speculations of Mr W. H. Harrison, editor of the defunct *Spiritualist* in a recent number of the *Medium and Daybreak*. After a free use of his dissecting knife on Theosophy and Colonel Olcott, Madame Blavatsky and the Himalayan Brothers, Mr. Harrison comes to the conclusion that the worthy President of the Theosophists, Colonel Olcott, is "a seeing medium and a physical medium too, but not very powerful in the latter capacity," and seeks to prove his case by reminding the reader that since "once he (Colonel Olcott) saw a Himalayan Brother and two well-known Anglo-Indian Theosophists, were unable to see the distinguished visitor"—*ergo* that visitor must have been some "lower intelligence acting on physical mediums." On this rather one-sided and not over-logical theory, the apparition which Mrs. Rohner saw must have been made up by some "lower intelligence," since the nurse did not see the eidolon. The consequences in the present case having been beneficent, however, the "lower intelligence" will have to be raised a few degrees in the estimation of the Spiritualists and regarded as some "dear departed angel" masquerading before the sensitive to save her from the effects of a too sudden shock. But whatever their theory—even if it be granted that in Dr. Rohner's case the double was projected from the gross body by the force generated by intense anxiety—the obnoxious Theosophists, will never be allowed to take advantage of it in support of their case. Yet whatever their opinion, we affirm, that in our correspondent's case there was nothing spiritualistic at all. It was simply and purely a psychophysiological phenomenon.

*Query No. 3* will be sufficiently elucidated by what has been said above. Our respected correspondent seems to be somewhat of a clairaudient sensitive himself; the agonised cries were directed towards him, and as the Doctor's thought made itself objectively perceptible to Mrs. Rohner's astral sense of sight, similarly the poor woman's cries affected his sense of hearing. The one was a case of clairvoyance, the other of clairaudience.

*Query No. 4*.—This a common case of clairvoyance induced by mesmerism. The physical man when rendered comatose by the influence of mesmeric currents, leaves the inner man free to act and acquire knowledge without the mediation of sense.

A careful study of what has been said in these columns about the septenary constitution of man will throw considerable light on the whole subject. These abnormal developments of sense may be effected by conscious efforts of the will, by disease or by mesmeric influence.

### EXISTENCE OF THE HIMALAYAN MAHATMAS.

In May or June last, a young Bengali Bramachari happened to pass through this station on his way to Almorah. During his stay here he put up in the house of an up-country gentleman where I met him to hear his discourses on Vedantic Philosophy and Hinduism in general. He kindly called on me and then at our request narrated certain incidents of his travels to Mansarovara and back. One of them was very remarkable. He said that on his way back from Kailas he met a party of Sadhus. They were resting in a small tent which they had pitched for their accommodation. He went amongst them to beg for some food, as he had taken none since two or three days excepting leaves of trees and grass. He saw an elderly Sadhu engaged in reading the Vedas whom he took to be the chief. On enquiring the name of this Sadhu he was told by some that his name was Kauthumpa, and by others as Kauthumi.\* He waited till this gen-

\* Our Mahatma does not look "elderly" whatever his age may be.  
—Ed.

tleman had finished his reading and after the exchange of the customary greetings the sadhu ordered his cholas to give some food to our Bramachari. A chela brought a piece of dried cow-dung and placed it before his guru who breathed on it and it was lighted. The Bramachari waited there for an hour or two and during this interval he saw one or two persons suffering from some disease or other coming there for treatment. The chief gave them some rice after breathing upon it; they ate of it and walked away cured. I forgot to tell you that the Bramachari had been to Mansarovara in 1882. Are we to understand that the Kauthumi or Kauthumpa whom this Bramachari saw somewhere near Kailas is the same personage who is now known as Koothumi, one of the Himalayan Brothers? If this be so, then we have the testimony of an uninterested person who saw him in his living body. I may mention to you that this Bramachari told us he never heard of Theosophy or of the Himalayan Brothers till he returned to the plains. He is a young man about 24 years old and knows English but imperfectly. He is a Chela of the Almorah Swami with whom he is now studying Sanskrit and we saw him again at Almorah at the end of October last. He is not a Theosophist and in fact his views and those of his guru who are pronounced Vedantists do not agree with those of the Theosophists. So, in all respects, he is an uninterested witness. He is publishing an account of his travels in a Bengali Magazine called the "Bharati," published at Calcutta and edited by Babu Dijendra Nath Tagore. I believe he will give details of his interview with this Sadhu, whom he heard called as Kauthumpa, in that Magazine.

He told us that he saw several persons at, and near Mansarovara (there being a great gathering there that year on account of the Kumbhuk Mela) who could light fuel by breathing upon it. At Mansarovara he met a Chohan Lama but there were several of this name. Your Note on the above is kindly solicited.

PREO NATH BANERJEE, F. T. S.,  
Vakil, High Court.

BAREILLY,  
15th November 1883. }

EDITOR'S NOTE.—This new and unexpected testimony comes this moment, as we are correcting the proofs of Brother Mohini M. Chatterji's evidence about the same Bramachari. We had it from him 14 months ago, but, at the advice of Mr. Sinnett, withheld it from publication at the time. Evidently our Bareilly Brothers have not heard, as we have, of this first account now published by us on pages 83 *et seq.* If this is not an independent and strong testimony in our favour, then we do not know what any more proofs can be given. Whether the "elderly" looking "Kauthumpa" as the Bramachari calls the Saddhu seen by him is our Mahatma Koothumi or not (we doubt this, for he is not "elderly" looking) it is shown at any rate that there are men known by the name of *Kauthumpa* (or the disciples, *lit. men*, of Koothumi) in Tibet, whose master's name must, therefore, be *Koothumi*, and that we have not invented the name. Most probably the person seen by the Bramachari was Ten-dub Ughien, the lama next to our Mahatma—and the chief and guide of his chelas on their travels. He is an elderly man and a great book-worm. The polemics that have taken place on these pages some months back between the venerable Almorah Swami and our Brother T. Subba Row during which the Swami came down in his wrath upon the innocent editor—are a good warrant that neither the respected Sadhu of the Almorah Hills nor his pupil would be likely to corroborate us, unless they could not help it. Still, the Bramachari may have seen quite a different person. There are in Tibet many sects—and one of these is the sect of the *Kah-dán-pa*—a name bearing a close resemblance to that of *Kauthumpa*. There are among the former many learned lamas and adepts, but they are not *our* Mahatmas, who belong to *no sect*.

#### THE PURANAS ON THE DYNASTIES OF THE MORYAS AND THE KOOTHOOMI.

It is stated in *Matsya Puran*, Chapter 272, that ten Moryas would reign over India, and would be succeeded by Shoongas, and that Shata Dhanva will be the first of these ten Maureyas (or Moryas).

In *Vishnu Puran* (Book IV Chapter 4) it is stated that there was in the Soorya Dynasty a king called Moru, who through the power of devotion, Yoga, is said to be still living in the village called Katapa, in the Himalayas, (*Vide* p. 197, Vol. III, by Wilson) and who in a future age, will be the restorer of the Kshatriya race, in the Solar dynasty, that is, many thousands of years hence. In another part of the same *Puran*, Book IV., Chapter 24, it is stated that "upon the cessation of the race of Nanda, the Moryas\* will possess the earth, for Kautilya will place Chandragupta on the throne."

\* "Of the dynasty of Moriyan Sovereigns," as said in the Mahavanso—the particulars of this legend are recorded in the *Atthatakathá* of the *Uttaravaháro* priests.—*Ed.*

Col. Tod considers Morya, or Maurya, a corruption of Mori, the name of a Rajput tribe. The Tika on the Mahavanso thinks that the princes of the town Mori were thence called Mauryas. Vachaspathya, a Sanskrit Encyclopædia, places the village of Katapa on the northern side of the Himalayas—hence in Tibet. The same is stated in Chapter 12 (Skanda) of *Bhagavat* p. 325, Vol. III. The *Vayu Puran* seems to declare that Moru will re-establish the Kshatriyas in the 19th coming Yuga. In Chapter VI, Book III. of *Vishnu Puran*, a Rishi called Koothumi is mentioned. Will any of our brothers tell us how our Mahatmas stand to these revered personages?

Yours obediently,

R. RAGOONATH ROW,  
(Dewan Bahadur) *Prest. Madras*  
*Theosophical Society.*

EDITOR'S NOTE.—In the Buddhist Mahavanso, Chandragatto or Chandragupta, Asoka's grandfather, is called a prince of the Moriyan dynasty as he certainly was—or rather—as they were, for there were several Chandraguptas. This dynasty, as said in the same book, began with certain Kshatriyas (warriors) of the Sákya line closely related to Gautama Buddha, who crossing the Himavanto (Himalayas) "discovered a delightful location, well watered, and situated in the midst of a forest of lofty bo and other trees. There they founded a town, which was called by its Sákya lords—Moriya-Nagara." Prof. Max Müller would see in this legend a made-up-story for two reasons: (1.) A desire on the part of Buddhists to connect their king Asoka, "the beloved of gods" with Buddha, and thus nullify the slanders set up by the Brahmanical opponents to Buddhism of the effect that Asoka and Chandragupta were *Sudras*; and (2) because this document does not dovetail with his own theories and chronology based on the cock-and-bull stories of the Greek Megasthenes and others. It is not the princes of Moriya-Nagara who own their name to the Rajput tribe of Mori, but the latter that became so well known as being composed of the descendants of the first sovereign of Moriya Nagari-Môrya. The subsequent destiny of that dynasty is more than hinted at, on pages 39 and 40 (foot note) in the November number of the *Theosophist*. Page 43 of the same magazine gives full details. The name of Rishi Koothumi is mentioned in more than one *Purana*, and his *Code* is among the 18 Codes written by various Rishis and preserved at Calcutta in the library of the Asiatic Society. But we have not been told whether there is any connection between our Mahatma of that name, and the Rishi, and we do not feel justified in speculating upon the subject. All we know is, that both are Northern Brahmans, while the Môryas are Kshatriyas. If any of our Brothers know more or can discover anything relating to the subject in the Sacred books, we will hear of it with pleasure. The words: "the Moryas will possess the earth for Kautilya will place Chandragupta on the throne," have in our occult philosophy and interpretations a dual meaning. In one sense they relate to the days of early Buddhism, when a Chandragupta (Morya) was the King "of all the earth," i. e. of Brahmans who believed themselves the highest and only representatives of humanity for whom Earth was evolved. The second meaning is *purely esoteric*. Every adept or genuine Mahatma is said to "possess the earth," by the power of his occult knowledge. Hence—a series of 10 Moryas, all initiated adepts, would be regarded by the occultists, and referred to, as "possessing all the earth" or all its knowledge. The names of "Chandragupta" and "Kautilya" have also an esoteric significance. Let our Brother ponder over their Sanskrit meaning, and he will perhaps see what bearing the phrase—"for Kautilya will place Chandragupta upon the throne"—has upon the Moryas possessing the earth. We would also remind our Brother that the word *Itihâsa*, ordinarily translated as 'history,' is defined by Sanskrit authorities to be the narrative of the lives of some august personages, conveying at the same time meanings of the highest moral and occult importance.

#### RAIN-STOPPING BRAHMANS.

I SHALL be highly obliged if you kindly allow me to relate through the columns of your celebrated Journal, an event, whose seemingly recondite character may excite the curiosity and deserve the attention of a large majority of readers. There lived in the interior of the district of Hugli, a person named Ram Kany Ghosh, by religion a Vaisnavá, who was known to have attained a certain development of the higher faculties by a regular and constant practice of concentration in an enclosed room three hours a day. On a certain occasion he invited a number of Brahmans, who were seated to dine on the open yard of his homely village mansion. The day was cloudy and it began to rain. The man alarmed at the sight of Brahmans rising from their unfinished meal, hastened to the place, gazed on the sky, and loudly exclaimed, "Sir! stop a little." To the astonishment of the beholders the threatening sky maintained a sudden and sullen silence till the feast was completed.

A similar event occurred, a few years ago, at Satpokur, where during a long and severe draught, a sannyasi pronounced a successful prediction of a shower at two o'clock the next day.

Now, is it possible to determine, whether the events should be attributed to the gift of miracles or to the knowledge of futurity of the advanced students of Occult Philosophy? A solution of this difficulty would probably be deemed as a valuable contribution to the knowledge of uninitiated students.

I remain, Madam,  
Yours most obediently,  
H. MUKHOPADYAYA.

BHOWANIPORE, }  
November, 83. }

EDITOR'S NOTE.—We have much heard of, but little believed in, "gifts of miracles." We may go further and say at once that we deny most emphatically the possibility of producing "miracles," yet we believe as firmly in the possession by great Sadhus and Initiates of the power of stopping or rather of delaying and magnetically paralyzing the rain cloud. We say that the facts of the story given are possible, though by no means probable. Sadhus who possess such powers are not usually *grihasthas*, passing their lives in small villages; and certainly it requires more than three hours a day of "constant concentration" to produce such a phenomenon, however much it may be based on the knowledge of natural laws.

#### WART-CHARMING.

With reference to the following correspondence which appeared in *Knowledge*, dated 26th October 1883, a well-known weekly paper conducted by Mr. R. A. Proctor, it would be interesting if you would kindly explain the rationale of the transfer of the wart from the body of one individual to that of another, and also say whether the charm referred to by the correspondent in the concluding portion of his letter has any real effect.

Yours obediently,  
K. C. M.

"Allow me to tell you my own experience of warts. When I was a little boy I had a wart on the tip of my nose. They called me Cicero. My father's æsthetic taste was annoyed at this non-essential to the beautiful. He had recourse to the knife, and then stanced the blood with caustic. This process was equally unpleasant and unavailing. The cauterising was constantly renewed, but the blackened excrescence stubbornly remained rooted to my inflamed nose. Mr. Thomas, a Superior in the Exeise, took special delight in teasing me whenever we met. "Master Frederick," he would say, "I think you have a fly on your nose;" or "there is a spot of dirt," &c. &c. "Allow me to remove it." In the course of time I left home for a boarding-school, where the medical attendant gave me a powder with which to rub my wart. He also tied a piece of silk round another which grew on my eyelid. Both were gone in a few weeks. The holidays came, and one of my first visits was to my old tormentor, Mr. Thomas. He was out, but on my showing his wife that the wart was no longer to be seen, "Bless me!" said she, "Why my husband has it! &c." And sure enough, when he came in a few minutes later, there was the wart on the tip of his nose. I told him how the doctor at school had cured the one on my eyelid, and he allowed me to tie a piece of fine strong catgut round his, in doing which I paid him off by giving such a sharp pull at the two ends, that his eyes watered again as he howled and danced about the room. From time to time for some years the wart returned and disappeared. I always fancied that old Thomas had it, when I lost it, and *vice-versâ*. Whether it was so I cannot tell; all I can say is that his went and came at intervals in a similar way. This I heard from Mr. Thomas some years later. I have met and know several successful wart charm-ers. One told me that he had "charmed enough away to fill a bushel-basket." A very favourite charm in many parts of England was to bury a piece of meat secretly after touching the wart or warts with it. As the meat rotted in the ground so the wart died away. Years ago, I tried charming children's warts myself, and found that they vanished within the time I promised."

(Signed.) FREDERICK HELMONE.

EDITOR'S NOTE.—It may seem ridiculous to those who have never tried the latter *sympathetic* remedy, while to them who did and succeeded, it seems quite natural. In Russia they charm away warts both with meat and raw potatoes. Having rubbed the wart with one half of the potatoe cut in two, that half which has been rubbed is buried in the cellar in the sand and the other half planted near by. As the former decays, the latter sprouts and every one of the young shoots is covered with excrescences; and as this process is going on the wart on the person thins away, and soon disappears entirely. Then the potatoe leaves are nrooted with the half decayed vegetable and burnt over

seven sticks of wood. Unless this concluding ceremony is gone through,—say our "medicine men"—the wart is liable to reappear, and disfigure the patient, once more.

We feel incompetent to explain the *rationale* of the above and simply state a *fact*. Not only have we seen the experiment successfully applied in our own case—big warts on the neck—when about 12 or 13 years old, but we have known a number of persons delivered in this simple manner of disagreeable excrescences. It is a remedy known to every housewife in Russia and, France too we believe.

## Reviews.

### MAGNETISM AND HOMŒOPATHY.

IN THE LAW COURTS OF DENMARK, BY A HOMŒOPATH.

THIS little pamphlet tells us of the sufferings and persecution a theosophical brother of ours, Mr. C. E. Taylor, F. T. S., had to go through, for having practised Homœopathy and Magnetism in a little Island of the Danish West Indies.

Mr. Taylor is an Englishman by birth, but warmly attached to the country in which he has resided for over twenty years, where he has been noted during his residence for his devotion to study, his philanthropy and deep love of scientific pursuits, but more especially for animal magnetism and homœopathy, of which he has been a sturdy defender on every occasion. The gentleman is no stranger to our readers. In the *Theosophist* for April 1882 we reprinted extracts from an article of his, which originally appeared in the *St. Thomas' Times*, entitled "Animal Magnetism and Homœopathy in the Cure of Tropical Fevers." Mr. Taylor had been for years a devoted partisan of Homœopathy, and an indefatigable student of Medicine, and had found in his researches upon the curative value of animal magnetism, what he thought to be an invaluable addition to homœopathic therapeutics in the treatment of tropical diseases. He is a bookseller and dispensed his homœopathic medicines and his advise without any charge whatever. He had, however, one grievous sin; he cured, where the regular allopathic physicians failed to cure. This may appear quite pardonable to any simple-minded man; it did not appear so to the allopathic doctors of the little island; and they brought a charge against him before the St. Thomas' Police Court for illegal sale of medicine and quackery.

Though Mr. Taylor strictly denied anything that could be qualified as a *bonâ fide* sale; thought all the witnesses brought up against him testified to this fact it was of no use. It was quite enough that he healed by the lying on of hands; that he stoutly defended the Homœopathic system; that he did not buy his medicine at the apothecary shop, and that he dared to take a stand against the system of orthodox medicine. He was charged with having infringed an old law of the year one thousand six hundred and seventy two (1672) and condemned to pay a fine of 70 dollars or to undergo imprisonment for a fortnight. Mr. Taylor refused to pay the fine on principle; was actually put into prison; and was only released after the public had insisted upon paying the fine, almost against Mr. Taylor's own will.

Mr. Taylor has our full sympathy, and the sympathy of his Brothers of the Theosophical Society all over the world.

Examples of medical intolerance and trades-unionism are not wanting, we are sorry to say, even in such advanced countries as England. Major Vaughan Morgan recently offered £5,000 to St. George's hospital, on condition that the money be devoted to a fair trial of homœopathy; but the (allopathic) medical authorities declined the offer without thanks. *The Lancet* triumphantly proclaims, on the strength of this fact, that Homœopathy is going a-begging.

Before dismissing this subject, we throw one glance more on the under review, and we find there, on the title page, the following quotation from Hahnemann's *Organon*: "I again find it necessary, in this place, to say a few words on the subject of animal magnetism, the nature of which differs so greatly from that of all other remedies. This curative power, of whose efficacy none but madmen can entertain doubt which through the powerful will of a well-intentioned individual, influences the body of the patient by the touch, acts homœopathically by exciting symptoms analogous to the malady." This is a most remarkable and instructive passage. Hahnemann, from whose writings we know that he practised magnetism, believes then that cures by magnetism are homœopathic cures. In fact, when we compare the effects of magnetism on the healthy, with its curative sphere in disease,

generally speaking we find, that it paralyzes the sensorium and the motor nervous system in the healthy, and cures paralysis in the sick. Mr. Taylor makes a similar statement with regard to fevers. He quotes Dupotet who says in his *Therapeutic Magnetique*: "It is sure, as far as we know, that magnetism provokes, in a number of cases, a febrile movement in subjects of sound health." Mr. Taylor then continues "This I have often found to be the case myself: a considerable quickening of the pulse, sometimes reaching 120, and a dryness of the skin manifesting itself in susceptible persons."—

L. SALZER, M. D., F. T. S.

#### MORAL EDUCATION BY PROFESSOR BUCHANAN.\*

It affords us real pleasure to give an old and respected friend a greeting through the new edition of his valuable work—Professor Buchanan's latest thoughts on a complete scheme of education. This learned gentleman, as our readers may recollect, is the discoverer in the western world of that mysterious power latent in man, which has been further enlarged upon by Prof. Denton in his "Soul of Things." It is Professor Buchanan who is the real founder of the Science of Psychometry. The present work shows more than ever that like a few other spiritually wise men, the Professor does not feel himself at ease in the broad seat of modern civilization; he seems to have lost his way in the jungle of western materialism, but his brave spirit is struggling hard for the welfare of his race, who seem to be even unconscious of their degradation. He has hit upon the real source of danger which is so gloomily overhanging the Western world and threatening it with moral and spiritual ruin. The cultivation of mere intellect, as the means of material advancement, leaving out the higher nature of man to grow to seed, utterly untended and uncared for. The whole system of modern education is entirely at fault and the result is the production of ill-shapen monstrosities. Education is the attempt to realize the harmony between nature and man. It is to find out the real aim and object of life and when found to render them an unswerving and life-long devotion. Education is the acquirement of the capacity of enjoying life to its fullest extent, its want is suicide, partial or complete. Professor Buchanan's ideal lies in the same direction as our own. "A satisfactory knowledge" says the author, "of the psychic and physiological functions of life and their definite association with the brain and body and laws of interaction would necessarily indicate the laws of their development. That development is education."

In this present juncture when a commission is embarked on a perilous voyage for the discovery of a new and sounder basis for education in this country, Prof. Buchanan's work possesses a peculiar value and interest. Before the mould disprepared upon the western model for casting the minds of our future men and women it is profitable to consider what competent experts declare as to the value of that model. Prof. Buchanan after half a century's experience delivers his opinion thus:—

"There seems to be nothing in existence at present on a large scale in the leading institutions which can be properly called a *liberal education*, for that which makes the most imposing claims to be recognised as liberal education in the universities appears, when viewed from the stand point of anthropology, not only lame, feeble, and defective in the most essential elements of a liberal education, but positively *liberal* in its contractile influence upon the intellect and soul, as well as its degenerative influence upon the body.

The eminent Italian Professor, Signor Angelo de Gubernatis bears his testimony to the same effect:—

"Under the present system the university is too widely estranged from every day life, and too indifferent to it. Where vital force should be most felt it is wholly lacking. Students enter the universities and issue therefrom in much the same manner as did the prophet Jonah enter and come forth from the gloomy recesses of the whale. They go there to learn the mysteries of science, but of the science of life, by far the most important of all, they come away ignorant. One student studies four years, another five, another six; but they are all equally ignorant of the art of living. The university should properly be the *mother of genius and of character*; it is instead merely the censor for a certain number of years of a crowd of boys, who are forced to cheat at the examinations in order to rise from grade to grade till the desired

doctor's vote is obtained. Then they are all obliged to feed together like sheep in a pasture; the examinations are the same for all; votes are cast with the same judgment, or rather lack of judgment, since *the best parrot of the class* can pass the most brilliant examination, and consequently gain the vote, while the greatest genius may perhaps lose the contest, disheartened by the trying formalities of the proceedings. It is never taken into account that one student might perhaps merit the title of doctor after only a month of trial, while another might fail to deserve it even at the expiration of twenty years. Should there be a few intellects more active than those around them, this discipline speedily brings them to the common level." \* \* \* \* At present there is almost no intercourse between the university and the world without, and while from within it appears to be a great institution, outside its walls its influence is unfelt."

It is needless to multiply instances. Every thoughtful observer has found that the present pernicious system of pampering the intellect to the utter starvation of the other faculties can lead to no good result—not even lead the much favoured one to the highest pitch of development it is capable of attaining. Professor Buchanan, a student of the true science of man has put forward a system of education which is as scientific as beneficial. Education naturally admits of division into five classes, in accordance with the different classes of faculties to be dealt with. (1) Physiological development, aiming the formation of the manly, healthy constitution capable of lasting a hundred years and competent to enjoy life and make it a source of benefit to humanity. (2) Industrial Education, which alone can lead to the disappearance of those unproductive classes, now preying upon the life-blood of society like vampires. (3) Medical Education, supplying the people with means to stamp out diseases at their first approach and eradicate our splendid heritage of diseases. (4) Moral or Religious Education, whereby the life secured by the other three kinds of education, is made worth living. (5) and lastly comes intellectual education, which now holds its revels on the ruin and degradation of man. The scheme is complete but it is likely to provoke a sneering smile on the self-satisfied dogmatic lip, as being quite utopian. Life is not long enough, it may be urged, for such elaborate training. But the utter silliness of such objection has been conclusively shown by the learned Professor. The first eighteen years of life after the first dawn of intelligence is quite enough for the whole curriculum being gone through. We heartily commended this able and original work to our readers. Let it not be taken as unforgiveable sin that the book has come into the world a little too soon. It will be at all events one of the necessary missing-links in the evolution of human thought and institutions.

#### GEMS OF CHINESE LITERATURE.

By HERBERT A. GILES, *H. B. M., Vice-Consul, Shanghai.*  
*Author of 'Chinese Sketches,' 'Strange Stories from a Chinese Studio,' 'Historic China,' &c.* (LONDON: BERNARD QUARITCH, 15, PICCADILLY. SHANGHAI, KELLY AND WALSH, 1884.)

A LITTLE yellow volume, neatly gotten up in true Chinese fashion, with a Chinese preface in *cursive script* on the cover, "as an actual specimen of the best style of modern composition," written for the author "by a rising young graduate of Foochow, named Nieu Yün-Fing, through the medium of... Mr. Kau Hong-Beng (M.A., Edinburgh.)"

The volume is worth not only a hasty perusal, but also careful preservation in one's library for useful reference. It is full of original matter, of sentences 2,000 years' old, as highly philosophical and profound, as any of our century, and goes to acquaint the reader with at least a small fraction of those "untold treasures" that "lie hidden in the rich lodes of Chinese literature," in the opinion of Professor G. Von der Gabelentz, as quoted by the translator. As the latter justly remarks, his effort in this direction "will at any rate advance some English readers a step towards more intimate knowledge and warmer appreciation of an ancient and wonderful people." The text is preceded by a "Note on Chinese Dynasties, beginning with the Chou and Ch'in Dynasties (550—200 B. C.) up to the Yuan and Ming Dynasties (1200—1650 A. D.). The volume being so full of precious fragments, and real gems of thought, selected from the writings of philosophers and sages who had lived at various epochs embraced within the long period of 2200

\* MORAL EDUCATION: Its laws and methods. Governments, Churches and Colleges for many thousand years have striven in vain to conquer crime, disease and misery—A new method must therefore be adopted—if that method can be found in this volume, does it not indicate a better future for humanity? by Joseph Rhodes Buchanan, M. D., New York.

years, we can select but a very few for our special notice. Some of the oldest—such as maxims from the *Discourses* of Confucius (the latinised form of K'ung Fu-Tzū, who flourished in the 6th century B. C.) are more than suggestive. They will, no doubt, make many European readers painfully conscious of the fact that their respective mother-races, so proud and vain of their imagined superiority (in their own perceptions only, of course) over the less civilized races, owe in sober truth nearly all to the Asiatics—Turanian Mongols included. Their arts and sciences, their philosophy and religions, are all and one copies (perchance in some cases improved—still only copies) of old Asiatic originals. As the translator truly confesses, even “most Western proverbs, maxims, household words, &c., are to be found imbedded in the proverbial philosophy of the Chinese;...sometimes expressed in strictly identical terms, at other times differing only in point of local color.” He shows that this philosophy “is on a scale commensurate, in every way, with other branches of the voluminous literature of the Chinese.” To prove it, Mr. Herbert A. Giles quotes the following popular sayings:—

“One actor does not make a play.”  
 “Out of the wolf's lair into the tiger's mouth.”  
 “Prevention is better than cure.”  
 Better a living dog than a dead lion.  
 “When the cat's away, the rats play.”  
 “It is the unexpected which always happens.”  
 “Bees make honey and men steal it,” etc., etc.

To crown all, the Celestials show their mental superiority over Western “Barbarians” in the following aphorism that would hardly do for a motto in a “Book of Heraldry”—

“Only imbeciles want credit for the achievements of their ancestors.”

The name of these aphorisms “is legion,” their translator tells us. A full collection of such proverbs and sayings would probably embrace all that is contained in the corresponding literature of the West and leave a margin to the “credit of China.”

Some of these sayings are highly moral and philosophical, and probably, judging on general personal experience, more put into practice in barbarous China, than in civilized Europe. “DEAL WITH THE FAULTS OF OTHERS AS GENTLY AS WITH YOUR OWN”—is one of them. Others are as highly satirical, as for instance—“More trees are upright, than men.”—“With money you can move the gods; without it, you can't move a man;” or again—“No image-maker worships the gods. He knows what they are made of;” or, that other which would be still more at home in a European *salon*:—“We love our own compositions, but other men's wives.”

But it is not so much with the proverbs—the collective production of popular wisdom—that we are so concerned as with the sayings and maxims of such great sages as Mencius and Tso-ch'in Ming, and especially with those of Confucius—the “Socrates of China,” who “became the idol of the people and flew in songs through their mouths.” His maxims—as shown by Dr. Legge, “occupy much the same extra-literary position as the Bible does with ourselves;” while “in philosophy, the subtle speculations of Chuang Tzū” and Lieh Tzū, exponents of the doctrines enunciated by Lao Tzū, would, beyond all doubt, have commanded a hearing in the contemporary Schools of Greece.” The maxims, however, have done more than that; they have struck loud the very key-note of Christianity six centuries before the alleged, purely *Christian* (?) maxims were pronounced, and eight before they were recorded and reverentially repeated as the authentic and original thoughts uttered by the Founder of the Western Creeds. In the “Extracts from the *Discourses*,” the “Master” gives expression to such familiar sentences as the following:—

“LOVE ONE ANOTHER” was the Master's answer to a disciple who asked for a definition of charity,—a rule in life, thus anticipating Christ,

“Some one asked Confucius, saying, Master, what think you concerning the principle that good should be returned for evil?” The Master replied:—“What then will you return for good? No: RETURN GOOD FOR GOOD; FOR EVIL—JUSTICE.”

This is the apotheosis of practical good sense as of the highest charity; and it is in perfect accordance with Karma, and those other words, “with what measure ye mete, it shall be measured to you again.” And if Confucius, who “taught virtue for its own sake, unsupported by reference to the supernatural,” has never pronounced such words as “whosoever shall smite thee on the right cheek, turn to him the other also”—an injunction as impracticable as it is sublime; and taught not his disciples to practically encourage covetousness, theft and extortion by giving to him who takes away one's coat, one's “cloak also,”—on the other hand he inculcated that RECIPROCITY was “the rule of life, in a word.” And, he added:—

“WHAT YOU WOULD NOT OTHERS SHOULD DO UNTO YOU, DO NOT UNTO THEM!”

In connection with these words we are told by the author and translator that “an attempt has been made to show that this is after all only a negative (and therefore comparatively worthless) enunciation of the Golden Rule as expressed positively by Christ,”—and he very justly retorts upon the cavillers by saying, “the worthlessness, if any, lies in the terms of such an argument. For instance, you would not that others should abstain from helping you in trouble. Therefore you do not abstain from helping them in trouble. Consequently, you help them; thus doing unto others what you would they should do unto you.”

In Fragments from Lieh-Tzū (4th and 5th centuries B. C.) we find some admirable thoughts. . . . “How wonderful is death!” rejoined Tzū Kung, “The wise man rests, the worldly man is engulfed therein.”

“My son,” said Confucius, . . . “Other men know life only as a boon; they do not perceive that it is a bane. They know old age as a state of weakness; they do not perceive that it is a state of ease. They know death only as an abomination: they do not perceive that it is a state of rest.”

“How grand,” cried Yen Tzū, “is the old conception of death! The virtuous find rest, the wicked are engulfed therein. In death each reverts to that from which he came. The ancients regarded death as a return to, and life as an absence from, home. . . .”

Chuang-Tzū (4th century B. C.) treating of Life, Death and Immortality, asks (p. 23)

“Life is a state which follows upon Death, Death is a state which precedes life. Which of us understands the laws that govern their succession?”

“The life of man is the resultant of forces. The aggregation of those forces is life; their dispersion, death. If, then, life and death are but consecutive states of existence, what cause for sorrow have I?”

What Christian physiologist and philosopher of the year 400 and even 800 A. D. spoke as scientifically upon the subject as this Chinese barbarian—of 400 B. C.? And who of the great religious philosophers of the 18th and 17th centuries of our era of civilization said anything better or more profound than the same Chinese Spinoza who, in his disquisitions upon Life and Death, declares that;

“All things are *but phases of Unity*. What men delight in is the spiritual essence of life. What men loathe in is the material corruption of death. But this state of corruption gives place to that state of spirituality, and that state of spirituality gives place in turn to this state of corruption. Therefore, we may say that all in the universe is comprised in unity; and therefore, the INSPIRED among us (the initiates?) have adopted unity as their criterion.”

Truly—

"For those who accept the phenomenon of birth and death in this sense,\* lamentation and sorrow have no place. Death is but the severance of a thread by which a man hangs suspended in life. Fuel can be consumed; but the fire endureth for ever!"

When treating of "THE PERFECT MAN" (or initiated adept) Chuang Tzû describes him thus:—

"The perfect man is like a spirit; were the ocean to be scorched up, he would not be hot. Were the Milky Way to be fast frozen, he would not feel cold. Of thunder which ruins mountains, of wind which lashes the sea, he is not afraid; and thus, charioted on the clouds of heaven, or riding on the sun and moon, he journeys beyond the limits of mortality. Exempt from the changes of life and death, how much more is he beyond the reach of physical injury. The PERFECT MAN can walk under water without difficulty; he can touch fire without being burnt."

Two more charming fragments out of the writings of Chuang Tzû—"an advanced exponent of the doctrines of Lao Tzû and a most original thinker"—and we have done. One is on CAUSALITY, the other on DREAM AND REALITY.

1. The Penumbra said to the Umbra, "At one moment you move: at another you are at rest. At one moment you sit down; at another you get up. Why this instability of purpose?"

"I depend," replied the Umbra, "upon something which causes me to do as I do; and that something depends upon something else which causes it to do as it does. My dependence is like that of a snake's scales or a cicada's wings. . . . How can I tell why I do one thing or do not do another?"

2. Once upon a time I dreamt I was a butterfly, fluttering hither and thither, to all intents and purposes a butterfly. I was conscious only of following my fancies (as a butterfly), and was unconscious of my individuality as a man. Suddenly I waked; and there I lay, myself again. I do not know whether I was then dreaming I was a butterfly, or whether I am now a butterfly dreaming that he is a man. Between a man and a butterfly there is necessarily a barrier; and the transition is called *Metempsychosis*.

There are many very pointed satires in the little volume, on ANTIQUES by Hsu Hsich (16th century): on DIVINATION, by Lin Chi, (14th century), and some very poetical ideas in the bits of poetry given, much too numerous to be noticed even in part. The translator has done his best to supply the world with "a small Handbook of Chinese Literature," and he has fully succeeded in bringing out an interesting and useful volume. We regret, however, that out of "due regard to a general public impatient of unpronounceable names," in eliminating some of these, the translator should have also substituted for other familiar and quite pronounceable English nouns a term Confucius had never used or pronounced, namely, "God" as a personal Being. As Mr. Herbert A. Giles himself declares Kung Fu Tzû condemned steadily any reliance upon the supernatural, although, "he seems... to have believed in a power higher than man; but whether as a force physical, or a force moral, or both, it is quite impossible to decide." (p. 1.) Again, on page 2, we are told that this "indefinable power" is "explained by the most famous of all commentators as *abstract Right*." Why then translate the aphorism of the great sage, "He who offends (this) power (of abstract Right) has sought on which he can depend"—by—"He who offends against God, has none to whom he can pray?" Confucius and "God"—Confucius and prayer! Surely the couples can hardly go together. Nevertheless, it is the only instance in the whole book when we find the able translator wronging the spirit of a sentence to substitute for it the dead letter husk, because, it would otherwise

remain "shorn of all meaning and point" for the general public. The author, however, in explaining the difficulties under which he had to labour, honestly confesses that he has also been "compelled sometimes to expand and sometimes to compress;" and very wittily concludes by reminding the reader that it must always be borne in mind that "translators are but traitors at the best, and that translations may be moonlight and water while the originals are sunlight and wine."

May all other readers derive the same pleasure as we have from "Gems of Chinese Literature!"

## VIVISECTION.

By MRS. ANNA KINGSFORD, M. D.,

President of the "LONDON LODGE THEOSOPHICAL SOCIETY."

YEAR after year Parliament is called on to consider the question whether the practice of torture and the licensing of professional torturers are or are not consistent with civilization.

Now, I am among those who say they are not; and I purpose to state in the following brief paper the reasons I have for this conclusion.

By the term civilization we intend to represent a condition of humanity more or less superior to that of the brute, and we deem the level attained more or less elevated in proportion to the prominence given to those characteristics which we regard as distinctly human. And here comes the first difficulty, for on the threshold of the question two parties join issue, the Materialistic Scientists, who maintain that intellectual acquirement is all and morality nothing in the definition of human development, and the Spiritualistic Scientists, who, with myself, maintain that the true crown and glory of man is not his superior brain capacity, but his superior potency for goodness.

Man is man, in our view, chiefly because he can discern good from evil, not because he is a cleverer kind of monkey than other monkeys, or because he can recollect more facts and put them to better practical use than creatures in a lower stage of development. Humanity is, therefore, a word of which we fully accept the popular definition, and for us a man is human in proportion as he is humane. We do not admit a torturer to be a man; he is simply an individual of the genus Simia—an intelligent individual if you like, but he has nothing human about him. And when one of these animals says that "cruelty is necessary," it sounds in our ears precisely as if he had said, "robbery is necessary," or "deceit is necessary," or any other habit of the lower grades which humanity has outgrown.

We have just witnessed in Paris an unparalleled spectacle, the incongruity of which would be ridiculous if it did not also furnish melancholy evidence of the lack of understanding and thought prevalent in a nation which claims to rank among the most civilized in Europe. I refer to the part taken by M. Paul Bert, the most notorious vivisector of the day, in the discussion upon M. Ferry's Bill. What can be said of a state of manners which permits such a man as M. Paul Bert to pose as a moralist before the public,—a man whose whole career has been one long course of cruelties so varied and appalling that even here, under the shadow of the Ecole de Médecine itself, they have attracted special comment and associated the name of their perpetrator with all the worst of the barbarities of a fallen science? This Paul Bert, who appears now before Paris as the champion of morals, is the same who, at the Exposition last year, exhibited pictures of dogs undergoing the agonies of tetanus induced by the administration of various poisons at his hands, pictures the public display of which excited expressions of censure and disgust in the columns of a well-known Parisian journal. This is the same, too,

\* "The Master came, because it was his time to be born; he went because it was his time to die." On "The Death of Lao-Tzû."

whose laboratory is the scene of such awful horrors, that persons living near the waste grounds surrounding it have more than once complained to the authorities of the shrieks and groans issuing from its walls, and even now, while I write these lines, the Parisian law courts are occupied with an action brought against this man by the proprietor of a neighbouring hotel for loss of *clientèle* and other grievances, caused by the continual howling and cries of the dogs "used" in his experiments.

What better terms can be found to characterize the work of Paul Bert's own life than the words he himself used in the Chamber of Deputies on Saturday last:—

Such things as these, and such a method of teaching as this, inspire indignation and disgust; they are like a bog in which one treads in mire!

Paul Bert is himself one of the most distinguished of Jesuits, for he adopts in theory and carries into practice daily their distinctive doctrine. "The end justifies the means," and, in common with all vivisectionists, he argues that "cruelty is necessary," that good may be obtained by evil, and that private and professional motives sanctify the perpetration of deeds which, if committed by the vulgar outside the profession, would be highly reprehensible, and punishable by law. In the view of these priests of materialism, public opinion has no right to set moral limits to the pursuit of material science; knowledge, no matter how attained, is the one positive and good thing, and morality, being a mere question of national habit, is entitled to secondary consideration only, if, indeed, to any consideration at all.

By common consent, however, mankind, more truly inspired, recognizes as its highest ideal of development One whose greatness was not owing to scholastic learning or to retentive memory, but to those very attributes which materialistic experts (I will not call them "philosophers") regard as derogatory and unbecoming in an age of enlightenment; attributes such as mercy, gentleness, love, patience, sympathy with suffering and the like; in fact, to the identical qualities which they label in a bundle as "sentiment," and thrust aside with contempt.

Are we to go back to our monkey ancestors then, and relinquish all the advantages we have gained, and for which we have toiled so hard and endured so much since the anthropolithic days of Haeckel? God forbid! The manhood in this English nation protests, and will not protest in vain, against the attempt which is now being made upon national morality by formulating into a legal principle the axiom that might is right. For man is man, not because he is a strong beast or a supremely sagacious beast, but because he has it in him to know and to love justice and to refrain from doing evil. And to such an one the plea that a method involving the torture of others is a right method, because it has proved useful in the attainment of knowledge, carries no weight whatever. Is there any class of crime or any depth of baseness for which the same plea may not be urged? Does not falsehood sometimes appear useful to liars, and may not violence, fraud, theft, or even murder find apologists on the same grounds? True, the policy of the liar, thief, or coward generally fails in the long run, and so also does that of the professional torturer. It is no secret that the practice of Vivisection has given rise among scientists to dissensions, difficulties, and errors which are incessantly accumulating, and which have sown the paths of physiology with a fruitful crop of false deductions and bewildering contradictions. And if among the millions upon millions of cruel experiments on living animals, by means of which science has been well-nigh arrested, and true progress hindered so disastrously, some few have accidentally proved of service in the elucidation of a nascent discovery, no proof exists that such discovery would not have been vouchsafed by more legitimate means, nor do such isolated cases atone in the smallest degree for all the agony, heart-hardening, and degradation of manhood which they

entailed on the miserable victims and their more miserable tormentors.

Vivisection useful? Cowardice useful? Deliberate devilry useful? Sir, we who are men will not buy knowledge at the cost of our manhood, we will not sell for so pitiful a mess of pottage the divine birthright of humanity. As to our physical health that is not called in question for no one who has been medically educated will seriously assert that the science of healing is in any way related or indebted to the practice of physiological torture.

I have received my own medical education at the *Faculté* of *Médecine* in Paris. At the *Ecole*, Professors *Béclard*, *Vulpian*, and others vivisection almost daily. It is no exaggeration to say that the walls of that *Inferno* re-echo from morn to sunset with shrieks and cries and moans, the supreme pathos of which no pen can render. When first I heard them, now long ago, I took them for the cries of children under operation, so terribly human were they in expression and appeal. And now, whenever I go there, knowing what they are, these cries strike and tear my heart and move me to a passion of indignation which is all the more terrible to endure because it is so impotent.

I ask myself and you, Sir, by what right do vivisectionists thus outrage me and other men, and why are they permitted to make life intolerable to their superiors? It is not only a question of torturing horses and dogs and rabbits, it is a question of torturing men and women. I am tortured, and thousands of human beings are tortured with me every day by the knowledge that this infamous practice is being carried on in our midst with impunity. For my own part—and I know but too well that I express the feeling of a large number of my countrymen—it is literally true that the whole of my life is embittered by the existence of this awful wrong. Since I have known what Vivisection is, and how it is practised, I have moved and slept and eaten and studied under the shadow of it, and its effluvia has poisoned for me the very air of heaven.

I appeal in my own name and the names of all those men and women whom the vivisectionists are torturing with me,—I appeal to the English Parliament for personal relief and for example to the world, and I most earnestly press upon the members of both Houses not to regard this question as one having a merely technical or limited interest. The day on which England finally sweeps this curse of torture from her schools and affirms the principle that civilized man may not seek advantage for himself by means of the agony and tears of any creature whom God has made dependent on him, will be a day of mightier import to the advance of civilization than any which has dawned since she, first of all nations, spoke the word which made free men of slaves through every land in Christendom.

There were vested interests then, there are vested interests now. But she made no sordid compromises then, she stooped to no half-measures. She faced the outcry of opposition fearlessly, and she led the world. But now the old spirit seems wanting, and the only legislation she has dared to make on this new question of Right or Wrong is at once untenable and impotent. Here is an evil so base and so hideous that it has excited a national agitation, and the law, in order to satisfy the conscience of the country, restricts the perpetration of the offence to certain licensees! Why not treat burglary, arson, fraud, &c., in a similar manner? Either the practice is right or it is wrong. If right, interference is worse than impertinent; if wrong, it is as wrong for A as it is for B, and to license and protect the crime in A while condemning and punishing it in B is an insult to common sense, and an outrage on the most elementary principles of morals, of law, and of civilization.—*The Record*, July, 1879.

## FRENCH IDEAS OF ENGLISH PADRIS.

A Mr. Aurchen Scholl of Strasburg, commenting upon the Rev. Shaw's case in the French papers, sums up his "psychometrical delineation" of these "good and simple men" in this wise:—

"The English missionary is a being a part in creation. One of a large and poor family, his childhood is passed in the enforced austerity of destitution. . . . One morning he embarks, fierce and famished, to seek his fortune somewhere beyond the seas. . . . The missionary proceeds to regions where locks and keys are unknown, therefore instead of providing himself with the implement of the burglar, he takes as his stock in trade a long coat and a Bible. The English missionary partakes of the nature of the ecclesiastical student and of that of the pickpocket. He wanders about at random, beating up for a fruitful shore, and when he has settled anywhere, you see him airing his hungry covetousness in every hut and countinghouse. He gnaws like a rat, he crawls like a snake, he has sixty-four teeth, long and sharp as lance points, and under each his little pouch of venom. When opportunity offers the English missionary becomes a kind of political decoy. Like Pritchard at Tabiti, like Shaw at Madagascar, for cunning, hypocrisy and baseness, he has but one rival in the world—the Prussian spy."

Oh poor *Padri*! and to think that the writer of the above is not even a Theosophist!

### THE DEATH OF A GREAT MAN. PUNDIT DAYANANDA SARASWATI.

A Master Spirit has passed away from India. Pundit Dayananda Saraswati, the Founder and Supreme Chief of the Arya Somaj of Aryavarta, is gone. The irrepressible, energetic Reformer, whose mighty voice and passionate eloquence for the last few years raised thousands of people in India from lethargic indifference and stupor into active patriotism, is no more. He has passed out of this plane of strife and suffering, into a higher and more perfect state of being. . . . A special telegram from Ajmere brought to the many Somajes the melancholy news that their master Swamijee Dayananda Saraswati breathed his last at 6 p. m., on October 30th.

*De mortuis nil nisi bonum. . . .*

All our differences have been burnt with the body and with its now sacred ashes they are for ever scattered to the four winds. We remember only the grand virtues and noble qualities of our former colleague, teacher and late antagonist. We bear in mind but his life-long devotion to the cause of Aryan regeneration; his ardent love for the grand philosophy of his forefathers; his relentless, untiring zeal in the work of the projected social and religious reforms; and, it is with unfeigned sorrow that we now hasten to join the ranks of his many mourners. In him India has lost one of her noblest sons. A patriot in the true sense of the word, Swamijee Dayananda laboured from his earliest years for the recovery of the lost treasures of Indian intellect. His zeal for the reformation of his mother-land was exceeded only by his unbounded learning. Whatever might be said as to his interpretation of the sacred writings, there can be but one opinion as to his knowledge of Sanskrit, and the impetus to the study of both received at his hands. There are few towns and but one province we believe,—namely Madras—that Pundit Dayananda did not visit in furtherance of his missionary work, and fewer still where he has not left the impress of his remarkable mind behind him. He threw, as it were, a bomb-shell in the midst of the stagnant masses of degenerated Hinduism, and fired with love for the teachings of the Rishis and Vedic learning the hearts of all who were drawn within the influence of his eloquent oratory. Certainly, there was no better or grander orator in Hindi and Sanskrit than Swamijee Dayananda throughout the length and breadth of this land. And, if he did not always bear with noble fortitude sectarian persecution and contradictions, it is only because in him, as in all other mortal men, the maxim *errare humanum est* had to be exemplified in this world of imperfections.

As soon as the sad rumour was confirmed, Colonel Olcott, who was then at Cawnpore, paid a public tribute to the Swami's memory. He said that whatever might have been our rights or wrongs in the controversy, and whatever other Pundits or Orientalists could say against Swamijee's scholarship, there was room for no two opinions as to his energetic patriotism or of the nationalising influence he exerted upon his followers. In Pundit Dayananda Saraswati there was a total absence of everything like degrading sycophancy and toadyism towards foreigners from interested motives. At Bara-Banki, Lucknow, our President repeated the same ideas to an immense audience in the Garden Palace (Kaiserbag) of the ex-king of Oude, and the sentiment was warmly acknowledged.

Truly, however heretical and blasphemous might have appeared his religious radicalism in the sight of old orthodox Brahminism, still his teachings and the Vedic doctrines propagated by him were a thousand times more consonant with *Sruti* and even *Smriti* than the doctrines taught by all other native Samajes put together. If he merged the old idols into ONE living Being, Iswara, as being only the attributes and powers of the latter, he yet had never attempted the folly of forcing down the throats of his followers the hideous compound of a Durga-Moses, Christ-and-Koran, and-Buddha-Chaitanya mixture of the modern Reformers. The "Arya Somaj" rites make certainly the nearest approach to the real Vedic national religion. And now, on the death of Swamijee, there

is no one we know of in India capable of taking his place. The Arya Somajes, as far as we could ascertain, are all conducted by men who can as little fill the vacant place as a card-board tree of a dramatical stage can become a substitute for the strong cedar, the king of the Himalayan forests. Loving old Aryavarta, as we do, for its own sake, it is with sincere sadness and fear and with a deep sense of sympathy for bereaved India that we say once more:—the death of Pandit Dayananda Saraswati is an irreparable loss to the whole country. At the present chaotic stage of its reformatory progress, it is simply a national calamity!

In connection with the above sad event, we may take this opportunity to make a few remarks in answer to a certain surprise expressed by several correspondents. They are at a loss to realize, they state, that a Yogi credited with some psychological powers, such as Swamiji Dayananda, was unable to foresee the great loss his death would cause to India; was he then no Yogi, no "Brahma-Rishi," "as the organ of the Lahore Samaj called him, that he knew it not?"

To this we answer that we can swear that he had foreseen his death, and so far back as two years ago. Two copies of his will sent by him at the time to Col. Olcott and to the editor of this Magazine respectively—both of which are preserved by us as a memorial of his by-gone friendship—are a good proof of it. He told us repeatedly at Meerut he would never see 1884. But even had he not foreseen his death we do not see what bearing it can have upon the Yogi powers of the defunct? The greatest adepts living are but mortal men, after all, and sooner or later have to die. No adept is proof against accident, unless he uses selfishly his acquired powers. For, unless he is constantly watching over his own personality, and cares little for the rest of mankind, he is as liable to fall a victim to disease and death as any other man. The childish, not to say absurd, ideas about Yogis, and their supernatural powers—whereas they are at best but *super-human*,—that we often find current among our own Theosophists, and the superstitious and grotesque tales narrated of these holy personages among that class of Hindus, which being more orthodox than educated, derives all its ideas from the dead-letter traditions of the *Puranas* and *Shastras*, have very little to do with sober truth. An adept, or Raj Yogi (we now speak of the real not the fictitious ones of idle rumour) is simply the custodian of the secrets of the hidden possibilities of nature; the master and guide of her undiscovered potentialities, one who awakens and arouses them into activity by abnormal yet natural powers, and by furnishing them with the requisite group of conditions which lie dormant and can, rarely, if ever, be brought together if left alone. The *Arya* and the *Arya-Samajists* combat our views and criticize them whenever they can. We would seriously and in a spirit of earnest and sincere sympathy for *The Arya*, now left to float without rudder or compass, advise it to turn its attention rather to the wants and imperfections of poor India than the possible failings of the Theosophical Society. The latter does its duty in the best way it can, and would hardly lose its time in criticizing its colleagues or the work of the *Arya Samajes*, with which it has nothing to do whatever, since the separation of the two Societies. "The brave dog watches its premises in silence, the cowardly barks outside its domain," says an old proverb. Why lose one's energy in useless wrangle? It will be time for *The Arya* to lift its voice in legitimate defence when attacked. But so far it reminds us of the nervous way-farer, who travelling by night shouts at the top of his voice calling out to imaginary attendants to frighten away as imaginary assailants. Let it rest in peace. Less than ever the Theosophists feel inclined to attack the *Samajes*, the labour of love of their departed and once revered ally and teacher. Nor will they ever feel scared by a whole army of phantoms, least of all likely to be appalled by the attacks of one *Lanthorne*.

## SPECIAL NOTICES.

It is now evident that the THEOSOPHIST offers to advertisers unusual advantages in circulation. We have already subscribers in every part of India, in Ceylon, Burmah, China and on the Persian Gulf. Our paper also goes to Great Britain and Ireland, France, Spain, Holland, Germany, Norway, Hungary, Greece, Russia, Australasia, South Africa, the West Indies, and North and South America. The following very moderate rates have been adopted.

## ADVERTISING RATES.

First insertion.....16 lines and under.....1 Rupee.

For each additional line.....1 Anna.

Space is charged for at the rate of 12 lines to the inch. Special arrangements can be made for large advertisements, and for longer and fixed periods. For further information and contracts for advertising, apply to

MANAGER, THEOSOPHIST, ADYAR, MADRAS.

MESSRS. GRAVES, COOKSON AND Co., MADRAS.

PROPRIETOR, INDUSTRIAL PRESS, 3, HUMMUM STREET, FORT, BOMBAY.

MESSRS. COOPER & Co., MEADOW STREET, FORT, BOMBAY;

TO SUBSCRIBERS.

The Subscription price at which the THEOSOPHIST is published barely covers cost—the design in establishing the journal having been rather to reach a very wide circle of readers, than to make a profit. We cannot afford, therefore, to send specimen copies free, nor to supply libraries societies, or individuals gratuitously. For the same reason we are obliged to adopt the plan, now universal in America, of requiring subscribers to pay in advance, and of stopping the paper at the end of the term paid for. Many years of practical experience have convinced Western publishers that this system of cash payment is the best and most satisfactory to both parties; and all respectable journals are now conducted on this plan.

The THEOSOPHIST will appear each month. The rates, for twelve numbers of not less than 48 columns Royal 4to each of reading matter, or 576 columns in all, are as follows:—To Subscribers in any part of India, Ceylon, Straits Settlements, China, Japan, and Australia, Rs. 8; in Africa, Europe, and the United States, £ 1. Half-year (India, &c.) Rs. 5; Single copies Rupee 1. Remittances in postal stamps must be at the rate of annas 17 to the Rupee to cover discount. The above rates include postage. No name will be entered in the books or paper sent until the money is remitted; and invariably the paper will be discontinued at the expiration of the term subscribed for. Remittances should be made in Money-orders, Hundi, Bill, Cheques, (or Treasury bills if in registered letters), and made payable only to the PROPRIETORS OF THE THEOSOPHIST, ADYAR P. O., (MADRAS,) India.

Subscribers wishing a printed receipt for their remittances must send stamps for return postage.

ONLY ONE NUMBER OF VOL. I BEING AVAILABLE, THE CHARGE FOR it will be Annas 12. Subscribers for the Second Volume (October 1880 to September 1881) pay Rs. 6 only in India; Rs. 7 in Ceylon; 8 in the Straits Settlements, China, Japan, and Australia; and £ 1 in Africa, Europe and the United States.

AGENTS: London, Eng., Messrs. Trübner and Company, 57 and 59, Ludgate Hill; Bernard Quaritch, 15 Piccadilly, W.; Paris, France, P. G. Leymarie, 5, Rue Neuve des Petits Champs; New York, Fowler and Wells, 753, Broadway; Boston, Mass, Colby and Rich, 9, Montgomery Place; Chicago, Ill. J. C. Bundy, La Salle St. American subscribers may also order their papers through W. Q. Judge, Esq., Box 8, P. O. Brooklyn, New York; Melbourne, Australia W. H. Terry, Pub. Harbinger of Light; St. Thomas; West Indies, C. E. Taylor; Calcutta, India: Thacker Spink and Company, Booksellers, Babu Norendro Nath Sen, Indian Mirror Office, 24 Mott's Lane, Dhurrumtoolah Street; Madras, Messrs. Johnson and Co., 26 Popham's Broadway, Venkata Varadarajulu Naidu, Rayapetta, High Road; Bangalore, W. A. Leonard, Bangalore Spectator Office, 10, South Parade; Colombo, Ceylon: Greg. Ederewere, Galle, John Robert de Silva, Surveyor General's Office; Kandy, Don Timothy Karunaratne; Shanghai, China: Kelly and Walsh.

## SPECIAL NOTICE TO CORRESPONDENTS.

(I.) No anonymous documents will be accepted for insertion, even though they may be signed "A Theosophist."

(II.) Any contributor not desiring his name to be made public, should give the necessary intimation to the Editor when forwarding his contribution.

(III.) Contributors are requested to forward their articles in the early part of the month, so as to allow the Editor plenty of time for correction and disposal in the pages of the THEOSOPHIST.

(IV.) All correspondence to be written on one side of the paper only, leaving clear spaces between lines and a wide margin.

Proper names and foreign words should be written with the greatest care.

Adverting to articles and correspondence destined for the pages of the THEOSOPHIST, we would call the attention of intending contributors to the following instructions:—

The Editors disclaim responsibility for opinions expressed by contributors in their articles, with some of which they agree, with others not. Great latitude is allowed to correspondents, and they alone are accountable for what they write. The journal is offered as a vehicle for the wide dissemination of facts and opinions connected with the Asiatic religions, philosophies and sciences. All who have anything worth telling are made welcome and not interfered with. Rejected MSS. are not returned.

The Manager calls particular Notice to the fact that all Money-orders must now be sent payable at ADYAR (not Madras), P. O. India.

Great inconvenience is caused by making them payable to Col. Olcott or Mme. Blavatsky, neither of whom has to do with financial matters, and both of whom are often for months absent from Head-quarters.

Printed at the *Scottish Press* by GRAVES, COOKSON AND Co., and published by the THEOSOPHICAL SOCIETY at ADYAR, (MADRAS) INDIA.

No. 51.

## IMPORTANT NOTICE,

### TO OUR SUBSCRIBERS AND FELLOWS.

THE *Supplement* to the *Theosophist* has hitherto been the only channel of communication between ourselves and our numerous Branches and unattached Fellows, scattered far and wide all over the globe. The *Supplement* was first added for the benefit and convenience of the latter alone, non-theosophical subscribers, in general, caring very little to get acquainted with our Society's business, its progress, the various discussions and—to our great regret—disagreeable polemics published from time to time in its columns. Therefore, if subscribers, whether connected or unconnected with the Theosophical Society, have regularly received text and *Supplement*, it is only because the two were bound up together. As some of the last named class of subscribers have latterly objected to this arrangement, and expressed a desire to have the *Supplement* replaced by more interesting matter, we are forced to address to them the following respectful remark. They evidently forget that they received the *Supplement* *gratis*, and above the promised number of pages in the text, which, again, with very few exceptions, has always exceeded the limits originally proposed *i. e.*, “no less than 48 columns or 24 pages.” Their complaints, though unreasonable,—since it was easy for them to leave the supplement matter unread and even to detach it from the main body—have led us to adopt another and a better course that will, we hope, satisfy all parties. Since it is perfectly impracticable for us to personally correspond with all the Branches, and answer the inquiries which pour in upon us from all quarters of the globe, a “Journal of the Theosophical Society” is absolutely necessary to enable us to hold communication with our numerous Members and Fellows. Our readers and subscribers all over the world are therefore notified that from January 1884, the *Supplement* will issue as a separate publication under the name of the “Journal of the Theosophical Society.” For those who do not subscribe for the *Theosophist*, its annual cost will be Rs. 2. It will contain all the discussions and information connected with our Society, and its work, which may not be interesting to the general public, although of supreme importance to our Fellows and well-wishers. Each number will contain no less than 8 pages and may contain far more as occasion may require. We have, since the commencement of the *Supplement*, spent, on an average, Rs. 700 annually for that additional publication. As the expenses of the Head-Quarters are constantly on the increase in consequence of the rapid and steady growth of the Society, some new arrangements are rendered absolutely necessary. To relieve us, therefore, of double postage and all other unnecessary expenses, those of our subscribers who are not Theosophists, *unless they apply to us formally for it before January next*, will no longer receive the *Supplement* beginning with that month; for our foreign subscribers, however, the rule will not come into operation before February 1884. The main body alone will be sent to them. No need of stating that every Fellow of the Society who subscribes to the *Theosophist* will of course receive the Journal as heretofore with its *Supplement*, *without any extra charge*; while those of our Fellows who are now

unable or unwilling to subscribe to the whole Magazine, will thus be enabled to get the *Supplement*,—a Journal in itself—separately at the nominal cost of Rs. 2 annually. It may as well be brought back to the recollection of the reader that the *Supplement* has been, and will ever be, quite a distinct portion from the main Journal. From the beginning of next year, moreover, the *Supplement* will contain the minutes and reports of personal phenomenal experiences of our Fellows—those observations and investigations in occultism, mesmerism, magnetism and psycho-physiology in connection with the private researches and work of the Society, most of which were hitherto withheld to avoid ridicule and idle remarks painful to the Chelas and Followers of our Mahatmas.

## THE SARACENS OF THEOSOPHY

AND

### THE MADRAS CRUSADERS.

SOME of the Dailies and Weeklies—English as well as Vernacular—of this benighted Presidency feel very unhappy over the Theosophists. Their editorial plumage is painfully ruffled and stands on end with disgust. The few peacock's feathers, which are made to clumsily cover the ugly bird beneath, can no longer hide the ravenously cover, whose croaking betrays its vulgar *genus* and pours its daily plaint against Theosophy. The *Madras Mail* and the *Madras Times* are trying to outvie each other in libellous innuendoes and outrageous fibs. [We feel sorry to place the former on the same footing as the latter; but since in the matter of false denunciations of, and trumped-up lying charges against, Theosophy, one has to hesitate in pronouncing which of the two should now have the palm—the two Madras dailies should henceforth be regarded as chums.] Behold the literary Montagues and Capulets of Southern India join their hands in the common cause of hatred of everything concerning Theosophy and form their unholy alliance, offensive and defensive, against the Saracens of Adyar! Proceeding fraternally on the same war-path, the aristocratic vanguard is followed by the watch-cur of the Hills—*The South of India Observer*—barking in its rear. *Bon voyage* to the brave trio!

This crusade of the two Madras papers and their Ooty flunkey against the Adyar Head-Quarters reminds us of Draper's graphic description in his *Intellectual Development of Europe* of the ragged, rabble said to have composed the army of Peter the Hermit, and which, while crossing Europe, was being preceded and led by a gander, a goat and a cur, the first named leader being firmly believed by the crusaders to have been the Holy Ghost himself.

Indeed the grievances of the said local journals against our Society and its present leaders are quite unparalleled in the history of India. Instead of having a special Committee of Torture organised against the Theosophical “Innocents”—a kind of “a Scarabeus on the navel” or the “Kittee” of old Madras-Tanjore memory—these “godless infidels and heretics, who, paradoxically enough dub themselves *Theosophists*,”

have suddenly become the pets of the Legislative Council, and "Mr. Grant Duff and his Government are so weak as to be drawn by Colonel Olcott." The latter, moreover, is charged with having "attacked the Bishop" and sought the protection of Government from the hitherto only too well-felt pressure of the Missionary body upon their civilian friends.

Now, the truth is, that Colonel Olcott simply wrote a very respectful, though "Open letter" to Mr. Gell, reminding this too-zealous Doctor of Divinity that Christian charity and malicious slandering of innocent people were never known to go hand-in-hand with the true religion of Christ, however much they have become synonymous in the opinion of some Bishops and their clergy. And, it is not, as the *Madras Mail* asserts, "furious hatred of the Church and the clergy" that we feel, but rather a boundless contempt and disgust for the hypocrisy and cant found in too many of her unworthy sons. Of course, this is more than any "would-be" respectable and pious paper is prepared to stand. It matters not whether an editor is a scoffing materialist, not caring a fig for all the Bishops the world over; or a canting "Reverend" ready to play flunkey and second fiddle to every individual one inch higher in the hierarchy of the order than himself; or again one, more expert in promissory notes than galley-proofs,—all are equally shocked at the "preposterous impudence" of the two foreigners. Only fancy the unheard of insolence "of an American" who dares defend his assailed honour and to give the lie to those who concoct falsehoods about his "antecedents," or that of a Russian who having proved her well-meaning and loyal intentions to the country of her adoption, and having faith in the impartiality of British Justice claims from it the common protection of a peaceful citizen. To these charges, Colonel Olcott and Madame Blavatsky plead guilty. Having lived for a few years in India and under the watchful eyes of the law, having never transgressed it, and being prepared to prove the same, they defy the teeming millions of the Indian and Anglo-Indian populations, High Courts, and Police Magistrates, Laity and Clergy, Society and the *hoi polloi* to bring forward the slightest charge against them, which, for a moment, could stand ground in a Court of justice. Thus, since neither of them had ever purloined Government documents, (though mistaken for, and closely watched as, Russian spies for over two years); or committed forgery, or contracted debts and refused to pay them when claimed, or cheated one single tradesman, or ever been found guilty of dirty libels and defamations of the character of innocent persons to suit the taste of their pious readers, or obtained money under false pretences; and, again that they are neither returned convicts—like some of their detractors, since they have never stolen anything, no, not even a saddle—and that, in fine, they are quiet, law-abiding people, who defy the closest scrutiny into their private characters,—why should they be refused equal protection with the rest of the populations, many among whom are far less immaculate than they? Most of the Anglo-Indian editors have tried their hand to injure the Theosophists and have signally failed in their attempt. Quite the reverse; for, every fresh libel, whether followed by forced apology and retraction of the calumny, or passed over in silent contempt has only brought more branches to the Parent Society. Thus, while in 1881, at the time when the scurrilous article in the *Saturday Review* denounced us as "unscrupulous adventurers" was eagerly caught up and republished by some Anglo-Indian papers (the *Statesman* coming to grief thereby) we had hardly 25 Branch Societies (Europe and America included), now, at the end of 1883, we have 87 Branches in India alone. At this rate, specially as our friend, the hitherto high-toned and dignified *Madras Mail*, has condescended to ornament its columns with a silly and lying libel in verse, we may hope to multiply our Branches to 200 more by the end of 1884. This, considering the fact that we are but two to work at the head of such a tremendous body, is very undesirable. We beg, therefore, our unkindly disposed and but occasionally gentlemanly contemporaries who refuse to take pity and show mercy to the two over-worked and hapless founders, to cease for a time libelling us, were it simply out of regard to their good "Lord" the Bishop, whom the courteous editors defend tooth and nail. For verily and indeed, their abuse of theosophy proves itself more dangerous to meek Dr. Gell than to any of us. Not only is it calculated to thin the ranks of his converts, but it impairs his own prophetic previsions in the

*Indian Churchman*. Having had such success after, and for, having been at various times called in the Anglo-Indian papers "unscrupulous adventurers," "ignorant and blasphemous charlatans," "impostors and Russian spies," "unmitigated frauds and black-legs," now that the *Madras Mail* comes out with an anonymous poem (!!) where, under the very clever anagram of "Madame Blahetta," the editor of this magazine is alluded to as a THIEF in the habit of *spiriting away* precious rings,\* it is only natural to suppose that this delicately framed libel threatens to convert all India to theosophy and send millions on pilgrimages to the Adyar sanctum! Such libels, as this one—in this case the poetical production of some Ooty Civilian, or some brave "Colonel," assuming under the gaseous inspiration of champagne and the traditional "pick-me-up," the guise of Mrs. Grandy's "Avenging Angel"—are very, very dangerous to the work of the missionaries. They are calculated, as shown above, to bring us more than one christian, who his "Lordship" himself apprehends in the extracts that follows, and that we shall analyze with his permission—are ready to pass over to the enemy's camp. Notwithstanding the prognostication of the crusading *trio* to the contrary, we find that Dr. Gell *does* after all take notice of Colonel Olcott's "Open letter." As his entire and welcome confession from the *Indian Churchman* is quoted verbatim further on, in a letter signed "H. R. M." (see p. 26 of this *Supplement*), we now give but a few choice and suggestive sentences from the said extract. "H. R. M.," a high Military Officer, an Englishman and a Theosophist, reviews it too ably to require any additions to it.

"At our Madras Clerical Conference last week we considered whether it was desirable to take any special steps at the present time for counteracting Colonel Olcott's teaching, the subject having been appointed before the "Open letter" appeared. The European and native clergy who are most conversant with educated natives and who were present, stated that many Hindus here were attracted by the teachings of Theosophists, and that the minds of even some Christians were shaken by it, and urged the desirability of endeavouring to expose its errors..... We generally agreed that it was undesirable to take any notice of Colonel Olcott, or to adopt any special measures at the present time.... Father Black was present at our Conference; he mentioned that in Bombay Colonel Olcott had been let alone, and his Mission there had failed....

I have ordered a copy of the Rev. Theophilus's address on Theosophy to be sent to you.

Very sincerely yours,  
F. MADRAS."

The italics are ours. The above, besides failing to corroborate the *S. I. Observer's* soothsaying, to the effect that "it were almost an insult to our Bishop to attempt any defence," gives us an insight into the real feelings and present policy of the clergy. Unable to crush the Theosophical vineyard, they console themselves with the idea that its grapes are sour. If "Father Black" (a correctly suggestive appellation, no doubt, of the inner personage) asserted that "in Bombay Colonel Olcott's mission had failed," he asserted that which is an evident untruth. However this is only a trifle. But now, having read his "Lordship's" remarks, we feel at liberty to fathom them. We crave further explanation what may be the "special steps for counteracting

\* In this piece of silly poetry, which certainly disgraces only the editor who allowed it to appear and no one else, a legend about a certain credulous lady of high rank, a Spiritualist, and a Madame "Blahetta," a medium, raising the dead (!!) at Ooty is given. Those anxious to test the veracity of the *Madras Mail's* poetaster have but to apply to a certain lady and her husband, moving here in the highest rank of society, for particulars. We have too much regard and respect for both to drag their names into publicity; yet, since that name is an open secret to every one at Ootacamund and Madras, we do not see why we should not avail ourselves of their private evidence.

The facts are these:—A sapphire (not emerald) ring was taken from the finger of the lady and almost immediately—two minutes after—restored to her with another, the duplicate of the former, only a great deal larger, not of "brass and brummagen-make," but set with a sapphire of greater value than the original. The miserable versifier, whoever he may be,—for one, capable of inverting a lie to slander a woman under the veil of anonymity can certainly be no gentleman but simply a contemptible coward, is challenged to give his name. Let him do so, and his falsehood will be at once proved,—before a magistrate.—Ed.

Colonel Olcott's teaching?" The palmy days of thumb-screws, and of grilling living witches having vanished for ever, and Her Majesty's Imperial Government having vouchsafed religious equality and rights to all its *heathen* subjects of every persuasion, we would have been at a loss to realize the true meaning of the implied threat but for the concluding words of his Reverence "F. Madras." "I have ordered a copy of the Rev. Theophilus's address on Theosophy to be sent to you," he adds. This throws a flood of light upon the hidden meaning. The said address (a pamphlet) though in no way libellous, is yet full of mis-statements from the first page to the last. (We refer the reader for verification to the September *Theos.* 1882, p. 315.) In addition to this, a certain malicious and false statement, proved and recognized as such for over a year back, was, notwithstanding repeated refutations, *insisted upon and reiterated* by many missionaries. It refers to the old and clumsily gotten up story at Tinnevely, about Colonel Olcott and the king-cocanut incident. Although nothing of the kind had ever happened, and that the cocanut tree flourishes and is being well taken care of since the day the President-Founder planted it in the sight of 5,000 Hindus in the temple of Tinnevely; and that again he visited and saw it in the temple yard hardly five months ago when revisiting the Tinnevely Theos. Society; and that the story invented by the missionaries two years ago to the effect that the young tree had been uprooted and the Colonel denounced by the Brahmans as an imposter and an unclean *Mlechu* as soon as he had left that city—was once more refuted and proved a malicious invention in the *Theosophist*; still and notwithstanding all this, the undignified and false report is circulated! Given out as a *fact* and under the authority, and over the signature of Bishop Sargent, who was the first to set it going in a Madras paper—(this Bishop, at any rate, being hardly able to plead ignorance since he belonged to the place and had the means of verifying the statement at leisure)—it was allowed to take root, and has never been contradicted or even modified by Bishop Gell, so far as we know. We refer our Fellows and any reader who may see this to the back number of the *Theosophist*, the *Supplement* for Dec. 1881, p. 7; Feb., 1883, p. 3, etc., to the Brahmans of Tinnevely and—to the cocoa-nut tree itself, our best living witness. And now we ask: is, or is not, this sanctioning and spreading of a flagrant untruth, and other malicious innuendoes, to be regarded as a reprehensible and *dishonest* action? "Do not bear false witness" is an express commandment in both the Testaments. Yet we have but to turn to a pamphlet issued two years ago by the missionary Press of Bombay under the direct supervision of the renowned Mr. Squires, also a "man of God,"—entitled "The Truth about Theosophy," to find how the clergy headed by their Bishops deal with truth and facts. With the missionaries the coarse and vulgar chaff of every American reporter against theosophy, every falsehood passing for fun and joke, is accepted as gospel truth and circulated as an *undeniable fact*. This, they have the impudence to pass off as the "antece-dents" of Colonel Olcott and Madame Blavatsky!!

It is this that shows to us more clearly than day what will be the nature of the "special steps for counter-acting Colonel Olcott's influence" mentioned in the noble Bishop's letter: the clerical and jesuitical policy is to be carried by them to the bitter end. A selection of false rumours, malicious backbiting, wicked and stupid cock-and-bull stories, will be disseminated in the future, as they have been in the past, far and wide, by paid catechists, clever zenana-missionaries and padris and by all the brood of ignorant, half educated, as well as learned society people under the sanction and with the blessings of their respective Bishops. We have a proof of it already. The Bishop of Madras; *who knows*, who cannot help knowing that such pamphlets are full of untruth and calumny, goes to the trouble of sending them to various 'Mrs. Andrews' and 'Jones,' "with the compliments of the Bishop of Madras" in his own hand-writing on the covers! He places them personally upon the Library Table at Ootacamund, and allows them to remain there in the teeth of every refutation. This is the line of clerical policy we protest against and denounce as *unchristian, ungentlemanly and wicked*; and those are the men that public hypocrisy and cant would force us to respect! We are charged with *anti-Christism*, while we are guilty but of *anti-clericalism*; with a "fierce hatred of the Church" when we confess but to a ferocious contempt for the ecclesiastical system; the system that crucifies its Christ daily for 15 centuries, tramples His

commands in the dust under its feet, and disfigures His noblest and most divine teachings!\*

How much the defenders of Bishop Gell care themselves for truth and fact may be surmised by reading a certain idiotic article headed "Charlatans and Dupes" (October 20th, 1883.) in the *S. of I. Observer*. In this tissue of grandiloquent misrepresentations, falsehoods, and impertinent remarks, the writer speaks of "the imbecile credulity" of women, and asserts that "*the fundamental axiom of Theosophy is this preposterous belief, i. e. 'the power of mortals to raise the dead and place the spirits at their beck and call to minister to their trivial daily wants.'*" This, as Shakspeare says, "is a lie with a circumstance"—number one. No. 2 is shown in the comparing of Theosophy and the Theosophists to Mormonism and their "scoundrel Prophets." As to the rest it is too indecent to be even mentioned in these columns. There are editors and editors. There are such whose opinion one may care for, and others whose abuse is praise. And we have heard of those journalists who, having just escaped conviction and sentence (for playing at Tarquinus with under-aged Lucretias), only because parents would not dishonour their children, went home, and wrote a fulminating article full of virtue and moral gushing upon "the besotted superstition" of the theosophists in general, and "the adulterous villainy of the age" in particular. As to the writer of this special editorial, he expresses regret at the abolition of the Holy Inquisition. "In the Middle Ages," he says, "*the lust of no adulterous villain would have been pardoned to, in the name of religion.*" Were it thus in the present age, we fear this delightful article on "Charlatans and Dupes" would have never been written. As to the virtuous indignation of the writer, who *submits* "that though such remedies were barbarous, they effectually purged and purified Society from the charlatans and impure wretches that disgrace and pollute it in our day"—we share it entirely with him. Yet we remind him that the return of not only the obsolete and fiendish laws of the Middle Ages, but even of the laws of Merry old England that were enforced hardly a fifty years ago, would be very, very dangerous for some virtuous penny-a-liners. For in those days when people were hung for stealing a penny loaf, the theft of a *weightier* object would never have been limited to three months' imprisonment. Thus more than one canting church-going hypocrite and thief, would have paid their little larceny with their lives.

The remarks of our Ooty Grandison and moraliser concerning the variety and the degree of respectability of "faith" are most charmingly *naïve* and silly. "The faith that engen-

\* It is also proved to us by the following facts. Having presented the lady referred to in the previous foot-note with a sapphire ring as above explained, and finding ourselves, in consequence, slandered and our character defamed in silly libellous verses intended to be funny, we appealed to the editor of the *Madras Mail*. Ho being a gentleman, we thought, once that the full particulars are laid before him, he could not refuse to publish the truth and thus repair the mischief. The editor promised, assuring the gentleman who called on him on the subject, that as soon as we could show him a statement of the facts over the signature of the lady who had the ring, he would himself write a "serious editorial" giving the true version. The lady in question, extremely shocked at the insulting lie invented by her "Christian" friends, gave us a statement bearing her signature to the effect (1) that her own ring had *never been* "spirited away," as alleged, as she has it to this day on her finger and "knows it by two marks on it which I (she) can swear to;" (2) that in addition to her own ring "she was presented with a blue sapphire ring far more valuable than my (her) own ring." The statement in the lady's own hand-writing was taken to the editor of the *Madras Mail* by General and Mrs. Morgan—both Fellows of our Society, and at whose house at Ootacamund the ring was given to our mutual friend. Tho editor thereupon expressed himself satisfied, and remarked that such verses accusing a person of a "gipsy trick," ought never to have appeared in his paper, and have so appeared only because he, the real editor, was absent at the time. The outcome of all these fine words, however, was only a short editorial—neither an apology nor rectification but simply chaff in equivocal good taste, giving the mangled statement of the lady in question with more *persiflage* and quizes in addition. Why? Because the majority of the readers of that paper are Europeans (the *Madras Mail* having lost some hundreds of its Hindu subscribers in one day) who bitterly oppose our Society and would applaud every imaginable falsehood against us and have it circulated instead of truth. This, in its turn, is demonstrated by another fact quite as suggestive. Mrs.——, the lady concerned, has, since the publication of the statement received, as she says, some fifty letters finding fault with her for having told the honest truth about the matter. Thus, the high-minded *Christian* Society of Madras would subscribe joyfully to any lie and calumny to please their own prejudices, the Bishop and public opinion—even to calling a person a thief—rather than speak the truth and thereby vindicate a hated body of men who dare lift the standard of Truth against every sham, whether social or religious.—Ed.

dered an implicit belief in miracles, that inaugurated the stupendous spectacle of the Crusades" he "can understand and reverence." But faith in the psychological powers of man,—which, unable to understand our tenets, he calls belief in reversing "the laws of nature," (precisely that which we have been fighting against for years)—and sets it down as "rank blasphemy to the Almighty." Our puny foe ought to take heed and remember the fate that befell the Crusades—the offspring of the faith he reverences. Beginning with the tag-rag and bob-tail, the riffraff army of Peter the Hermit, who deserted the fools who had trusted him, and thus left his tatterdemalion crowd to be chopped up as mince pie, each of the eight Crusades ending with that of Edward II, had started with the cry of "God wills it!" "God wills it!" Yet, if we remember rightly, the Deity, gave flatly the lie to one and all by allowing them to be decimated in Bulgaria, destroyed by the Hungarians, and finally annihilated by the Saracens, who sold into slavery those whom they did not murder. With all their faith the Christians have not been able after all to wrest the "Holy Land" from the hands of the infidels.

We close our remarks and bid adieu to the righteous trio of our contemporaries by advising each of them to attend a little more to the beam in his own orb, before he sets out on the fool's errand of discovering (or rather—*inventing*) non-existing notes in the theosophical eye, though it is not certainly free of notes of other description. As to the incessant personal abuse showered upon us by the Madras and other dailies, luckily for us, we find that other persons—nobler, better and far higher in social position than the humble Theosophists, are no better protected against scurrilous abuse in the Indian Empire. We Theosophists have the consolation of finding ourselves standing on quite parallel lines with His Excellency the Viceroy in the estimation of some Anglo-Indians who pass for refined and educated gentlemen. In a circular against the Ilbert Bill which, we are told, is now being widely circulated in the N. W. Provinces, and whose author is said to be a lawyer (one who *ought* to know the value of words and epithets), we find the noble Marquis of Ripon referred to in the following elegant terms:—

"The Viceroy forced on us is *dishonest* and TRICKY and is "determined to stir up strife between us and the natives of "India for his personal advancement," &c.

And if the "free-born" Briton speaks thus of his own Viceroy, the representative of Her Majesty the Queen, calling him "*dishonest* and tricky" (!!) what can *we* expect at the hands of such *aesthetics*? Indeed we rather feel honoured than otherwise in being publicly called names from the cabman's vocabulary, alongside with a good and noble man; one whom even his position—the highest in the land—is unable to protect from the vilification of foul-mouthed bullies.

#### AN ANGLO-INDIAN THEOSOPHIST ON THE BISHOP OF MADRAS.

ON October 27th, the Bishop of Madras writes in the *Indian Churchman* as follows:—"At our Madras clerical conference last week we considered whether it was desirable to take any *special steps* at the present time, for counteracting Col. Olcott's teaching, the subject having been appointed before the "Open letter" appeared. The European and Native clergy *present* who were most conversant with educated Natives, and who were *present*, (*sic*) stated that many Hindoos, here were attracted by the teaching of Theosophists, and that the minds of even some Christians were shaken by it—and urged the desirability of endeavouring to expose its errors, while recognising the importance of the work in which Evangelists and Lecturers are engaged of refuting errors and maintaining that in Christ alone—is Light and Salvation. We generally agreed that it was undesirable to take any notice of Colonel Olcott, or to adopt any *special measures*\* at the present time: I may add that Father Black was present at our conference, he mentioned that in Bombay Col. Olcott had been let alone and his mission there had failed, and advised our adopting a similar course. I have ordered a copy

\* The italics are mine. They are meant to draw attention to the episcopal style as well as to the occult meaning underlying the whole.—H. R. M.

of the Reverend Theophilus' address on Theosophy to be sent to you.

Very sincerely yours,

F. MADRAS."

Here I, an Englishman, find the Bishop of Madras, a paid servant of Government, in a mixed Society of European and Native clergy, *plus* a Father Black, whoever he may be, calmly discussing whether he shall take steps in conjunction with bi-coloured and Mazagon missionaries to *repress* or *counteract* Col. Olcott's teaching. First I would here prominently notice what are the teachings which the Bishop and his co-adjutors consider require *special measures* for repression. I use the word repression advisedly.

The shortest way of doing this is to quote some of the chief objects of the Society, as printed in its Rules. 1st, the motto of the Society is, "There is no religion higher than Truth." Does the Bishop wish to put this down and substitute something better? Or, perhaps, being a Christian Bishop he would prefer to annihilate Rule I, which states that the Theosophical Society is founded upon the basis of a universal brotherhood of Humanity? Or, perhaps, again, he would like to put down Rule VI, viz., "no officer of the Society, in his capacity of an officer, nor any member, has the right to preach his own sectarian views and beliefs, or deprecate the *religion* or religions of other members to other Fellows assembled, except, when the meeting consists solely of his own co-religionists?" The above rules form the basis of the Theosophical Society.

It is something new to find that a Bishop, though receiving from the Government a salary of Rs. 24,000 a year, only for looking after his twenty-four Military Chaplains, should take upon himself the office of a Missionary. Disguise it how they may, the Bishop's action in this matter is nothing more or less than a trading in religion; and to undertake to convert the natives and make use of his official position for so doing, is a direct violation of the orders of Government, and contravenes the spirit of Government orders quite as much as when a Civil servant takes to trading. I ask the Bishop if he is paid to look after his twenty-four Military Chaplains or to turn Missionary and convert the Heathen? Surely his Reverence does not consider that he is nominated in *partibus infidelium*? I would further ask him if this Missionary enterprise of his does not compromise the Government in its aspect of religious neutrality towards the natives. That an officer, who in the table of precedence ranks above Members of Council, should use his position for furthering the spread of his so-called Christianity, is a thing that was never contemplated by the Government that appointed him. What the Bishop means by adopting "any *special measures* at the present time," is not exactly understood but may be guessed at. That is, the Bishop will use his *official position* when the proper time comes for putting pressure upon those who choose to differ from him. It would have been well if the Bishop had followed Father Black's advice "even before he received the "Open letter," and let Colonel Olcott alone. The Bishop, determined not to be accused of sloth in his crusade against Theosophy, takes the opportunity to send to the *Indian Churchman* a copy of the Rev. Theophilus' *Address on Theosophy* which is full of misstatements. The latter though originally they may have been attributed to mistakes, have now become full and deliberate *falsehoods*, as we can prove. But as the Bishop felt his hands tied at the present time not to be altogether idle, and in order to earn his pay of Rs. 2,000 a month, he seizes the occasion to disseminate a few more *slanders*, willingly and deliberately, this once, since they have been repeatedly contradicted. On looking over the Almanac, we find the Bishop is patron of some half a dozen religious Societies connected with the conversion of the Heathen, as they playfully dub the poor Hindus—who, it may be observed, *par parenthesi*, have a far more scientific religion than the Bishop possesses. The purity of it may have become dulled as Christianity has been when subjected to the influence of the Priesthood; nevertheless, free from Priests and books, I question, if the truths of Christianity were not preceeded by those of the Aryan Religion. To return to our theme: it is high time that this Government which professes absolute Religious neutrality should confine "our mild and harmless Bishop" to the performance of his proper functions. Unfortunately for the *Madras Mail* the natives do not share its opinions: for they consider

that when a high officer of Government is allowed to lend himself in his official position to their conversion, he is indirectly supported by Government in his acts. We know very well in modern History that missionaries are perfect fire-brands. They have been credited with being the authors of one or two big wars—China for instance and the Cape, besides several minor ones. The policy of the Government has hitherto, from the time of the Court of Directors up to now, been guided by wise neutrality. But "our mild and inoffensive Bishop," by his present action, is evidently preparing, as prophesied, for "an Ecclesiastical Sedan." Mr. Gladstone will have one more excellent reason for disestablishing even our Military Bishop and some of his Church militant.

I warn the Bishop that if he does not at once disconnect himself with all religious Societies whatsoever and restrict himself to his legitimate sphere, a petition may be prepared and sent Home to the Secretary of State, as not only Theosophists but a number of educated Hindus are complaining of the Bishop's interference with their religious matters. As for his signing himself "F. Madras," I should like to know who gave him the right to assume this territorial title? Is he Bishop of all the *heathen* population of Madras, or of whom, as I am under the impression that such titles belong only to Spiritual Lords and not to Colonial Bishops? It was only the other day that the title of "Lord Bishop" was found to have crept into the Government *Gazette*; this has now been corrected, and his proper title the "Right Reverend" been inserted instead. It is surpassingly strange that even a "mild and modest Bishop" should usurp a title that does not properly belong to him and yet call other persons "pretenders?" But the priesthood had ever been an encroaching order, given to pride and arrogance. This is what they call humility. Whether or no the Bishop adopts at any future time any *special measures* to counteract and repress Theosophy, matters little to the Theosophists, as the work of forming fresh Branches goes on merrily all the same. Already they number a great many in this country notwithstanding Father Black and the Bishop, and quite contrary to the veracious statement of the former, who reported that Theosophy had been a failure in Bombay. That missionaries should boast of the conversion of uneducated natives hurts not Theosophy, for it is to the educated *only* that the latter appeals. Well may Col. Olcott be proud of his 87 Societies scattered over India besides a number of others in Americ, Ceylon and Europe.

I had almost overlooked the Postscript in the *Indian Churchman* adverting to the fact that in Col. Olcott's letter "the charges of libel were not brought against any person in particular, nor in the charges against officials using undue influence," which procured the Government order were any names brought forward, &c. It must be a relief to the *Indian Churchman* to find that not only a specific charge is made in the present case, but Bishop Gell's name is given in full. Let the Right Reverend gentleman refute it, if he can; or he is at liberty to adopt the Reverend Editor's advice in the *Madras Times*, and disestablish himself and turn Missionary; but let him not use the cloak of Government authority and the means of Government pay, to *counteract*, as he phrases it, Theosophy. Let the Bishop understand once for all, that he is not here to promote what he calls Christianity, and what we call Priestcraft, but to look after his Military Chaplains. Colonel Olcott's letter is called "insolent" by the papers; what then is to be said of the conduct of a Bishop who oversteps his official position to adopt "special measures" against the Theosophists? If he is anxious for this crusade, why does he not give up the pay he receives from the country and like Paul work with his own hands? Firm on that wide independent platform he would, at all events, deserve the credit of honesty for his intentions; but in his present position to run a tilt against Theosophy, looks not as if the Church was in danger, but that his *pocket* was threatened. By receiving out of Court, and until he has divested himself of this encumbrance, let him not attempt to meddle with Theosophy on a plea of religious zeal. Such is the advice and warning of

H. R. M., F. T. S.

P. S.—As the Bishop has given most decided opinions against Theosophy and in the most public manner, it remains for Theosophists, to counteract any move he may make against them. I for one am not inclined to submit to such treatment and resent it accordingly. The Bishop might as well attempt to put down the Aryan Religion

as to smother our Society. Therefore, again I ask, who is he that he should attempt it so long as the Theosophical Society has a number of European and English members who may reverence the Christ Principle but who despise *Priestcraft*—past and present.

A HINDI HYMN TO A MAHATMA.

TRANSLATION OF THE ABOVE.

Have compassion, O Guru, on me: I would then receive the highest happiness,  
And my heart shall not elsewhere go.  
Without Thy favour unfortunate am I,  
Aware of this, mental peace have I none.  
O Guru hasten to save me.  
I worship Thee in song.  
Thou art pure and worthy of worship.  
Whither shall I go, if not to Thee?  
The world holds me in its chains, still Thy countenance  
Night and day, in the mind I meditate upon.  
Truth it is—my guardian Thou art.  
Take me by the hand and happy me shall I deem;  
O Rishi Raj, Thy feet I approach  
As a pupil, my head I bow.  
Without seeing Thee no tranquillity can I enjoy.  
How can I soothe my mind?  
Hear me, Oh, hear me, Venerable Rishi!  
Hear me all what I, Thy servant sing.

## EIGHTH ANNIVERSARY OF THE THEOSOPHICAL SOCIETY.

[OFFICIAL CIRCULAR.]

I. The President-Founder in Council announces that the question of fixing a date for the annual celebration of the Society's foundation having been submitted to the Branches in India and Ceylon, a majority have named the last week in December as the most convenient. He therefore gives notice that henceforth the 27th and 28th days of December shall be devoted to the said purpose, and the fact shall be regularly advertised in each year's edition of the Rules. Should any unforeseen contingency prevent the celebration in one year, the Branches will be timely advised from Head-quarters.

II. The proceedings at each Anniversary shall be as follow:—

- (a).—Upon arrival each Delegate shall register his name, and receive a ticket to secure him a seat within the space allotted to Delegates, upon the platform, or elsewhere, in the place or places where the meetings, public and private, are to take place.
- (b).—The President-Founder shall occupy the Chair and open the meeting, except when he may depute some other person as a substitute; the Secretary's and Treasurer's Annual Reports shall then be read, and other important documents that may have been received.
- (c).—The rest of the day shall be devoted to the transaction of the Society's business, including addresses by selected Delegates from the various countries, provinces, &c., represented in the Convention. On the second day, and succeeding ones—if the meeting be prolonged—unfinished business shall be attended to, and the Anniversary proceedings shall always terminate with a public meeting, at which shall be delivered the annual address of the President-Founder. Each evening there shall be a meeting of the General Council for the revision of the Rules, instruction in and discussion of Theosophical subjects, &c. By general consent, the present anniversary will be continued longer than the two days specified ending propably on December 31.

III. To prevent waste of time and unfair advantage to any one Branch or Delegate, it is required that all addresses shall be in writing, and in no case require more than FIFTEEN MINUTES for delivery. And, that the order of business may be systematically arranged, one month's previous notice must be given of any address intended for delivery. A like notice will be henceforth required—as in Parliamentary practice—of proposed important amendments to the Rules, or plans for augmenting the usefulness of the Society, improvements in the management of Branches, the creation of a permanent Maintenance Fund, increase of publications, selection and support of lecturers, &c., &c. As this Circular has been issued late, the time by which these papers should reach Head-quarters, is extended *only this year* to the 9th of December. The Society has now become so large that unless this methodical system be adopted and *strictly enforced*, it will be impossible to get through the work within any reasonable time. Judging from present indications, there is some reason to believe that nearly or quite one hundred Delegates will attend this year.

IV. The President-Founder intends to submit to the Convention for advice his proposal for the formation of "The Aryan League of Honour," to consist of school-boys and undergraduates, between the ages of 10 or 12 and 21, and to be governed by officers chosen from among themselves. The object being to foster in the youth of India loyalty, love for truth and especially ancestral virtues, and for the Aryan Sciences and Philosophies. The full scheme will be laid before the Delegates and the Public in the Presidential address. Meanwhile, every Branch is requested to forward opinions and suggestions upon the scheme, so as to reach the Headquarters not later than the 9th of December.

V. Mr. T. Subba Row, B. A., B. L., Secretary to the Madras Theosophical Society, had suggested that beginning with next year the occasion of the public celebration of the Anniversary should be taken advantage of, to give it, among other things, the feature of a Scientific Congress. Each Branch to select at this year's meeting a particular subject for investigation during the ensuing year, and lay before the next Convention, in the form of an *Essay*, through its Delegate, the results of its work for one year in that particular branch of Science. If the scheme be approved, the Branches

are requested to send in their opinions and advice for its perfection by the 9th of December.

VI. In conclusion, some remarks as to the accommodation and food of Delegates are necessary. The President-Founder regrets his absence in the North prevents his completing the arrangements in time to be embodied in this Circular. He has, however, orders to reach the Head-quarters by the 7th of December for that purpose, and he hopes to have all ready by the time the Delegates arrive in Madras.

VII. All official correspondence relating to the Anniversary must be invariably addressed to the "Recording Secretary, Theosophical Society, Adyar, Madras"—*without any individual name.*

By Order,

DAMDAR K. MAVALANKAR,  
Joint Recording Secretary.

CAMP OF THE PRESIDENT-FOUNDER  
OF THE THEOSOPHICAL SOCIETY,  
LAHORE:  
19th November 1883.

## Correspondence.

[We publish below Colonel Olcott's article in answer to "M. A. (Oxon's)" criticism of our Mahatma, in *Light*. Whether this letter appears or not in the said London Weekly, it is but fair that our Hindu Theosophists should have it reprinted for their benefit.—*Ed.*]

## ADEPTS AND MEDIUMS.

TO THE EDITOR OF "LIGHT."

SIR,—If there is a man whom I like to call friend, and whom I have so regarded for years, it is "M. A. (Oxon)." But still I must say what is to be said as though our friendship did not exist. In his "Notes" in your issue of 8th September he permits himself certain expressions about the Mahatma K. H.—sneers and innuendoes more natural to a *Saturday* writer than to so practised a medium and Spiritualist as himself. Surely my friend forgets himself and the record of the Spiritualistic movement, when he finds in the appearance of a few unquoted and unimportant sentences from Mr. Kiddle in the "Occult World" any warrant for such jealous nagging. Has he lost sight of the several instances of similar re-appropriation of ideas without credit in mediumistic literature, when the *bonâ fides* of the scribe was undoubted? Am I wrong in the recollection that the printing of Mr. Dugueid's *Hafed, Prince of Persia*, an "inspirational" work written under test conditions, as alleged, had to be stopped, because a very extended plagiarism was discovered and the publishers of the work affected sued for infringement of copyright? And that none were so surprised at the plagiarism as the witnesses to Mr. Dugueid's literary labour? How many such examples of this duplex—even coincident—writing might be discovered in literature perhaps the Encyclopædic bookworms of London may tell us. Outsiders ignorant of the very rudiments of spiritual phenomena and philosophy, may be exercised for seeking in craft and dishonesty the sole explanation of such facts: but we whose studies are of things noumenal have so many unexplained mysteries, that it seems in wretched taste to adopt the tone of the cheap-jacks of the Weekly press when a question of this sort is to be discussed. If "M. A. (Oxon)" thinks it so very funny that a very small patch from Mr. Kiddle's robe should have been stitched into the garment of K. H.'s thought, I can,—since he believes my word—give him a much tougher nut to crack. In the last number of the *Nineteenth Century*, in the very thoughtful article "After Death," occurs a passage of about a dozen lines, which is word for word identical with what was written by this same Koot Hoomi two years ago in a private letter to myself. Yet no third party has seen the letter, nor have I copied or printed the passage in question. Again, when the report of one of Mrs. Hardinge Britten's American lectures appeared in—if I mistake not—the *Spiritual Scientist*, Madame Blavatsky found in it a passage verbatim, from the as yet unpublished *Isis Unveiled*, which Mrs. Britten had not seen. And the M. S. S. were actually altered so as to avoid the appearance of plagiarism. I do not undertake to explain the Kiddle mystery at all, nor do I think it of much consequence. It is highly absurd to think that a mind capable of reducing to expression in a foreign tongue so lofty a scheme of evolution

as that in *Esoteric Buddhism*, would be driven to fish for ideas in Mr. Kiddle's journal. When my friend of London has explained away the mystery of his own mediumship, it will be in order for him to throw stones into his neighbour's garden. The Eastern Philosophy teaches us that nature carries her economical system even into the sphere of Ideas, and that not only is no atom of matter lost but also not even a thought. As the Ether is the matrix of visible nature and its phenomena, so, the Asiatic says, Ideas survive in the *Akasa* (their word for our Western Ether), and are carried from mind to mind throughout the ages. You will find in our Folklore even common proverbs which embody this thought; and most assuredly it betokens unripeness of experience in psychology to raise the hue and cry at any seeming "plagiarism." "M. A. (Oxon)" is a clergyman: suppose he sneers for a while at the identity of 2 Kings xx. and Issiah. xxxviii in language and ideas! Was this also a case of plagiarism or of duplex inspiration? However, let all this pass as fit only for children, and scientists of a certain type who grin at their "soul" through the horse-collar of matter. The suggestion that Mr. Rhys-Davids or any one else in the West knows more about Buddhism than the most learned living Buddhist philosopher is to the last degree absurd, but still only one more manifestation of the vanity which has made a conspiracy of our savants to put down the Asiatic pandit and Bhikku as persons of no account, so to say. When one sees Prof. Weber fancying he can crush out Indian antiquity by sitting upon its literary remains, like the pitying she-elephant upon the deserted brood of young partridges, and the Sanserit chairs of Indian Colleges filled, not by native but, by European professors, who have it not in their blood to comprehend the esotericism of India—what wonder that Buddhists should be called within the enchanted circle of Bow-Bells to hear the truth about their ancestral philosophy! Even I, your humble correspondent, who am a thousand leagues away from being an Adept, claim to know something about Buddhism in spirit and letter—as the High Priest Hikkadame Sumangala's certificate to my *Buddhist Catechism* also proves. I am just today starting on a journey to Upper India and Kashmir, where I shall see Koot Hoomi and one or more of his Tibetan chelas (pupils:)—and, by the way, many of the K. H. letters are written by them as his secretaries, he merely giving the general ideas, and they elaborating them, and even "precipitating" them in proper handwriting. The example of the precipitation of the portrait of the Fakir by Madame Blavatsky at New York will illustrate this scientifico-psychic phenomenon. I shall be tempted to ask him to have a glance at what "M. A. (Oxon)" thinks so very amusing a 'skit' at him.

I am, Sir,

ADYAR,  
27th September 1883. }

(Signed) H. S. OLCOTT,  
President, Theosophical Society.

#### THE CENTRAL ASSOCIATION OF SPIRITUALISTS.

[WE are requested by Mr. W. T. Brown, F. T. S., to publish the following correspondence.—*Ed.*]

CHURCH END, FINCHLEY, N.  
10th October 1883.

W. T. BROWN, ESQ., B. L.

DEAR SIR,—I have the pleasure to inform you that at a meeting of our Council yesterday evening, when your letters of August 16th and 18th last were read, you were transferred from the list of subscribing members to the class of Hon. Corresponding membership. It was thought that during your sojourn in India you may have opportunity for contributing valuable information, and I trust you will endeavour to communicate to the Association any incident which are likely to prove of interest to your fellow members, and conduce to a more thorough understanding of the laws and principles involved in our psychological studies. With kind regards and best wishes for your welfare.

I am,

Dear Sir,

Yours faithfully,

THOMAS BLAYTON,

Hon. Sec. Pro-tem.

MORADABAD, INDIA, N. W. P.

10th November 1883.

THOMAS BLYTON, ESQ.,

Hon. Secy, Central Association of Spiritualists,  
London.

DEAR SIR,

Your favour of the 10th ultimo has been forwarded to me here.

The kind feeling extended towards me makes it necessary to define my position, in order that there may be no equivocation.

I am a Fellow of the Theosophical Society and a student of Occultism, and in the latter capacity have views very different from those of Spiritualists in regard to so called "Spirits."

The ground of agreement between us must therefore be that of mutual honesty of purpose in the search for truth.

Please convey to your Council my due appreciation of the honor conferred upon me, while I remain, Dear Sir,

Yours faithfully,

W. T. BROWN, B. L., F. T. S.

#### MR. W. H. HARRISON'S DELUSIONS.

In the *Medium and Daybreak*, October 5th, 1883, under the heading of the "Himalayan Brothers," Mr. W. H. Harrison, Author of "Spirits before our Eyes," has written an article that is manifestly unfair, so far as its reasoning powers go, and is so wanting in knowledge of Madame Blavatsky, Col. Olcott and the BROTHERS, that it only seems right that such an article should not be allowed to go forth unchallenged.

He commences by saying "those who had given laborious study for years to the Media Phenomena, in the endeavour to discover their source, necessarily found it within their province to examine these new claims." Now what I complain of in Mr. Harrison is, not that he examined these new claims,—but that he proceeded to pronounce upon them. Had he restricted himself to the former, no one could have objected; but when he, a mere inquirer into Occult Science, possessing no previous knowledge or training, takes upon himself to deliver a verdict of 'not proven,' he oversteps the boundaries of what is fair and only shows himself to be a superficial examiner at best.

Had Mr. Harrison read in the "Occult World," the communications of Mahatma Koot Hoomi a little more carefully, he might have seen at page 100 (2nd edition), "that Occult Science has its own methods of research as fixed and arbitrary as the methods of its antithesis, physical science, are in their way." Now I would ask what qualifications has Mr. Harrison brought to enable him to decide on the powers of the Brothers, Madame Blavatsky and Col. Olcott? It appears that for some years he was occupied in probing Spiritualism and in testing Mediums, and that he thus considers that the numerous inquiries and tests instituted qualify him also to pronounce *ex cathedra* on the above persons' qualifications. Had he ever been in India and seen the wonders performed by jugglers, in the open air, without dark rooms, sealing of tapes and the hundred and one ways of testing Mediums, he might have ascertained that there are some secrets which he had yet to learn, and that his mode of examination could not qualify him to pronounce upon even the simplest wonder performed by a poor naked native juggler. These secrets have been mostly acquired by severe study, and the 'modus operandi' has been handed down for thousands of years. And if these poor minor students of Occult Knowledge have achieved so much, what must the leaders in the same science have accomplished? Does Mr. Harrison suppose for a moment that these mediums of yesterday are to be compared to those Occult students who are the recipients of a wisdom thousands of years old, and the result of which is the mastery of Nature's secrets? That some wonderful things have been done in the *seance* room, few who know anything of the subject will deny, but that simply proves, that the powers working in the *seance* room possess some of the secrets of nature. Mahatma Koot Hoomi's saying (page 144, 2nd Ed): that the Western mind was, as a rule, incapable of appreciating Occult Science is clearly verified by Mr. Harrison, who ignores study, the peculiar modes of life and the guiding hand of the Adept. Indeed one can hardly conceive him to be anything but a sceptic who has never fairly inquired. Let us examine a few of the so-called facts that he advances in support of his verdict. "1st, Madame Blavatsky is "a strong spiritual Medium; 2nd, that she could not control the manifestations; 3rd, that Mr. Sinnett's conclusions were mostly errors, "due to absence of antecedent knowledge, and experience of mediums "and physical phenomena; and 4th, that he, as a novice, believed "and printed what the communicating intelligences said of themselves." Now to oppose to all this I have the following facts.

On the one hand for over five years I have had personal knowledge and experience of Mediums and physical phenomena. A large Library of Spiritual works is on my shelves,—and the study of Spiritualism was at one time my special occupation. Moreover I know much more than most people about mediumship—because my mediums were not open to trickery, being among my own children, and thus my knowledge was not acquired by haunting *seance* rooms, but by unimpeachable testimony in my own family. On the other hand my knowledge of Madame Blavatsky's powers was acquired in the same way, namely, in my own house, where she remained for over two months. My mesmeric acquaintance with Col. Olcott, was derived in the same way, and what I know of the Brothers is from personal experience, not from hearsay. First, I know for a fact that Madame Blavatsky can produce raps when she likes, also the Astral bells; that her communication with the Brothers depends more on her trained magnetism (not mediumship) than on anything else; that she is a vegetarian; that she has a wonderful knowledge of the Occult

Sciences, but that her principal works are performed by the power of the Brothers; that her life has always been a pure one, all vile calumnies to the contrary notwithstanding; that she has devoted herself to the cause which the Brothers are concerned about. Hence it is not surprising that she should be able to perform wonderful feats, which certainly no medium that I ever heard or read of could perform, and if her magnetism may fail her sometimes, through ill health, this does not prove that she has not the phenomena under control. That Mr. Harrison "has held all along that her powers are but the usual John and Katie King" whoever they may be, proves nothing, for he has never seen her nor investigated her powers; nor does he know the Brothers with whom she communicates, and for whom she has given up everything and come to India. What was done in America has no connection with what she does here with the aid of the Brothers. That Madame B. should have investigated the materialisation of the Eddy Brothers surely cannot be construed into her being a spiritualist, and believing all that has been advanced regarding Spirits. If Mr. Harrison had read "Isis Unveiled" carefully and impartially, he never could have stated that John King "was a regular attendant of her's;" for I rather think (in Col. O.'s book "People from the other World") it is stated that Madame B.—on one occasion ordered John King to prepare a certain materialisation. Not having the book by me, I cannot quote chapter and verse, but my impression is very strong, that the fact was as above stated.\* So the "regular attendant Spirit" vanish into thin air, and the authority for this unfounded assertion is simply that of Mr. Harrison. "John King" is a generic name, as she often told her friends, and no one except herself and the Colonel know what is the entity hiding under this name. Again it is stated that at the Eddy séances several of the manifestations were due to Madame B.—. This surely is a double-edged statement. For, in such case, it remains to be settled whether these manifestations took place independently of her will and wish, or that they were produced at her command—the latter being a clear case of Occultism. Only as coming from Mr. Harrison, the assertion has very little foundation, since it is directly contradicted by that other statement of Colonel Olcott, who states very distinctly that several hundred manifestations were produced when Madame B.— was not present. I can give an instance of a marvel myself, and shall do so at the end of this paper, showing what the Brothers are capable of doing. As neither Colonel Olcott nor Madame B.—was present, some other hypothesis than their mediumship must be had recourse to, in order to explain the phenomenon. Mr. Harrison quotes from Colonel Olcott's book, who at that time was not a Theosophist, but who would now repeat what he then wrote, namely:—That she (Madame B.—) "differs from all other mediums he ever met;" for instead of being controlled by, she controls, the "Spirits" herself.

The above was written in 1875. And if Colonel Olcott was right at that time, then surely at this date (1883) Mr. Harrison has no right or reason to assume that Colonel Olcott was mistaken, for we know as a fact that she does control the elementals and elementaries—with our great Brothers' permission—as she always explains. With regard to the latter quotation, page 453, Colonel Olcott would probably, by the light of nearly eight years' experience, be inclined to modify his opinion on this head, viz., "that this very outbreak of *Spiritualistic Phenomena*, "is under the control of an order, which, while depending for its results "upon unseen agents, has its existence upon earth among men." In those days, Colonel Olcott had only just met with Madame B.—; hence his mistaken conclusion. It is not for a moment supposed that those who criticise our belief in the Brothers do it through "malice." At the same time, when, to support an untenable position, facts are distorted and quotations are introduced, which to experienced eyes do not suit, but are simply used for the purpose of throwing dust in the eyes of the unwary, what can be said of those who resort to such shifts to prove their case? It can only be assumed that Mr. Harrison has done so, through a profound ignorance of the subject he is dealing with. There is no question here of "Spirit identity," for the Brothers are not Spirits. In the *Occult World*, Mahatma Koot Hoomi distinctly states (page 148, 2nd Ed.) "that the only spirits we know of are the higher planetary Spirits." Once more here, Mr. Harrison has, for purposes of his own, misquoted Koot Hoomi. He writes that Mr. Kiddle's ideas have been purloined by K. H., and quotes what Mr. Kiddle said on August 15th 1880, viz., "My friends, ideas rule the world, and as men's minds receive new ideas laying aside the old and effete, the world advances," and Mr. Harrison then places opposite the identical words of K. H. a letter to Mr. Sinnett in the *Occult World*, but with *malice propense* carefully omits the fact that "K. H." preceded the said sentences with the remark—"Plato was right. Ideas rule the world," &c., giving thereby an oblique narration of what was said at Lake Pleasant, evidently on the strength of Platonic reminiscences. And when the ideas, if not the very sentences, can be proved Plato's, then who is the greater "plagiarist" of the two, Mr. Sinnett's correspondent, or Mr. Kiddle? The former, who shews the sentences to be if not quotations at least *not his own* ideas, or the latter who throws them out into the ears of his audience without tracing them by one word to their original source? The most that could be said is, that the Mahatma attributed to Plato that which belonged to KIDDLE, doing thereby the last named individual an honor that he certainly deserves very little, Inspector or Director of Public Instruction though he be. The significant fact that both Mr. Kiddle in *Light* and Mr. Harrison in *Medium and Daybreak* carefully omit the introductory words—"Plato is right"—is more than suspicious: it shows deliberate malice on its very face.

Happily, we have been permitted, many of us, to look behind the veil of the "parallel passages" mystery, and the whole affair is very satisfactorily explained to us; but all that we are permitted to say is, that many a passage was entirely omitted from the letter received by

\* On consulting Col. Olcott's book I find my memory has not deceived me. See p. 444.

Mr. Sinnett, its "precipitation from the original dictation to the chela. Would our great Master but permit us, his humble followers, to photograph and publish in the *Theosophist* the scraps shown to us, scraps, in which whole sentences, parenthetical, and quotation marks are defaced and obliterated, and consequently omitted in the chela's clumsy transcription—the public would be treated to a rare sight, something entirely unknown to modern science—namely, an *akasic* impression as good as a photograph of *mentally expressed thoughts dictated from a distance*. Moreover the world of sceptics and scoffers would be shown whether men possessed of such wonderful knowledge have any occasion to resort to plagiarism from unknown and very indifferently lecturers. It seems incredible that Mr. Harrison could write his flippant accusations! As for Mr. Kiddle, it is to be hoped he reads the *Theosophist*, and may see these lines, when perhaps he will find it was his guiding spirit that induced him to palm off on his audience indifferently constructed sentences of Plato's ideas, for his own. It appears Mr. Sinnett (so writes Mr. Harrison) could not account for the plagiarism except by supposing that the Himalayan Brothers wrote thus to test the faith of their followers." This reads very like a gratuitous supposition on the part of Mr. Sinnett, and I leave himself to answer. Mr. H. seems at one time to have held this theory regarding physical mediums, but had to give it up. It is to be hoped that his mind is now set at rest on this head, and that the reputation of the Brothers has been too triumphantly established to run the risk of being upset by his criticism. Truly may Mahatma K. H. write (page 144, *Occult World*) "Such is unfortunately the inherited and self-acquired grossness of the Western mind, and so greatly have the "very phrases expressive of modern thought been developed in the line of "practical materialism, that it is now next to impossible either for "them to comprehend or for us to express in their own languages anything of that delicate, seemingly ideal machinery of the Occult "Kosmos." These words apply most especially to Mr. Harrison's remark—but original document from a higher sphere do not receive the respect one would desire.

Mr. Sinnett's work on *Esoteric Buddhism* distinctly points out that the time had come for imparting some knowledge of the future to those whose minds were receptive but his book is too strong for the multitude amongst whom we may number Mr. Harrison. If Moses "had kept the text of the "ten commandments to himself"—the world would not have lost much. The captions manner of describing "some of the things recorded as occurring in the presence of Madame B.—as testified by seeing mediums," is another proof of the writer's unfairness, for how about those wonders described by those witnesses who are not seeing mediums? Of letters coming in full day-light through ceilings in closed rooms in the presence of several witnesses, *not seeing* mediums? This has been seen several times in my own family and house, where no medium was present unless Madame B.—could be called one. It is correct to say that if the magnetism is good, it can be used for performing what may appear magical feats, but is in fact nothing more than a knowledge of the secrets, of nature. However, Mr. Sinnett has evidently written the *Occult World* in vain for Mr. Harrison, who cries again—it is the spirits or humbug, never a human being... and Colonel Olcott is a medium" that is, his *magnetism* is made use of by the Brothers, as Mr. Harrison might have learnt in the *Occult World* on page 184, 2nd Edition. "The magnetism thus brought to the house "established conditions which for a short time rendered some "manifestations possible." Again, page 190, K. H. writes—"to force "phenomena in the presence of difficulties magnetic and other is "forbidden as strictly, as for a bank cashier to disburse money which "is only entrusted to him." Colonel Olcott is a strict vegetarian, he obeys all the rules laid down for an adept's pupil, hence—his excellent magnetism. Clearly Mr. H. is all abroad on this head; his mind is so saturated with *Séances*, Mediums and Spirits, that no room is left for belief in the Arcana of Nature. What have trance mediums to do with the subject? Has he read in the "Occult World" on page 147, 2nd Ed. that "The truths and mysteries of Occultism constitute indeed a body of the "highest spiritual importance at once profound and practical for the "world at large?" As for his question remaining unanswered, viz., "Theosophists who wish to come into communication with the Brothers "and to enter their *fraternity*, are told they must live a pure life, "abstain from wine, spirits, meat and tobacco \* \* \* How then is it "that Madame B.—who is not an ascetic has been successful, when "those who carry out the instructions she does not follow may fail? It may be answered now. First of all as *Poeta nascitur non fit*, "the Adept becomes and is not made." He is the efflorescence of his age, and comparatively few ever appear in a single century. (*Occult World*, page 134.) Secondly, Madame B.—is not an Adept, though she has gone through several stages of initiation. Thirdly, those who practise a pure life and practise asceticism may yet fail of Adeptship in this birth, but succeed in it in the next. What Mr. H.'s experiences with physical Mediums in England may have been, it is certain that they bear no relation to the powers of the initiates in India, and Mr. H. is clearly very ignorant of the subject if he can say that "asceticism "would probably reduce their Mediumship (*Powers?*) to Zero" "instead of strengthening their powers." Again he writes that Madame B.—is "inaccurate." To this may be replied "*humanum est errare*," the moroso, as some of the first who accused her of it are known to be still more "inaccurate" themselves. No one has ever claimed infallibility for Madame B.

And now I come to the "Toda" charges. Here I can speak with full authority, for if an accurate knowledge of the plateau and slopes of the Neigherries entitles one to an opinion, then my forty years of exploring these Hills should count for something. To begin with, it does not "so happen that the Toda country has been well "explored from end to end." The vast forests on the southern "slopes of the Neigherry Hills touching the silent valley" have never been explored; one or two sportsmen in the last fifty years have just skirted the valley, principally to stalk the bison and sambar in the open, I may say without being doubted that for

forty years I have known personally all the great elephant shots, and I never knew one who had explored the southern slopes. In fact in many places the vast forests are impenetrable, and unless following after elephant it would be simply impossible to explore them. As for the grand temples, they may have been in existence years ago (see *Isis Unveiled*, page 615, Vol. 2) in places that are surrounded by impenetrable forests, nay, they may even be in existence still, who knows, and rumours to their effect are many. Who the Todas still, no one knows. It is true that the present *visible mounds* are entered on all fours—but that proves nothing against the existence of other temples. It may not be easy for any one not an adept to ascertain the truth about these temples. One thing is certain: the Todas are the most mysterious, as the least known, of all the tribes in India who have many a secret unknown but the few.

In his final paragraph Mr. H. contends that it is against all experience that "abnormal purification" increases the power to produce physical phenomena. It may be asked what evidence to this does he produce? Does Mr. Harrison suppose that the wisdom of accumulated generations of adepts, is not superior to his ephemeral experience? All the ancient writings of India tend to show that certain powers have been always possessed by Rishis and the Adepts and for countless generations, yet, Mr. Harrison would put his pigmy experiences, forsooth, against such evidence! It must be confessed that the man who does not know how little\* he knows is very hard to deal with; arguments are wasted on him, assured facts become in his eyes no facts at all, and for such men "The Occult World," I say again, has been written in vain. They have a theory into which all things must fit, be they ever so contradictory. Here is a specimen, the attributes of the—Himalayan Brothers are "not very high ones" in Mr. H.'s estimation. How on earth does he know what their attributes are?

As to his coolly qualifying their powers, "not very high ones," this style of begging the question is not one that commends itself to the honest enquirer. Nor can there be anything "laborious" about it; it is simply hastily jumping to a conclusion on a subject that not only has not been carefully investigated, but one, of which the writer is positively ignorant. Let a few of the adept powers that are known, be enumerated, and it will be seen, that if they possess the powers we know of, these powers must include a number of the secret forces of nature, unknown to the greatest scientists of this generation.

The first and foremost is the power of dealing with ether or Akasa—a power which includes alone a vast number of minor wonders, such as causing writing to appear in closed letters—where none was before; the disintegration and reformation of substances,—thus enabling matter to pass through solid walls; the duplication of rings, brooches, etc., and other powers too numerous to mention. Again the Adept can send forth his Astral body to the Planets and accurately observe what takes place there, unlike the clairvoyant, who can retail but a very imperfect idea of what he has seen. He, the Adept, can in a few seconds transport his Astral body anywhere he pleases. In fact there "is no limit to his powers." All this, according to Mr. H., are not "very high attributes." It would be refreshing to know what he considers "as a high attribute. Again in that determined—"not-to-see" manner, he declares "the alleged (?) Brothers are secluded persons seeking their own advancement, instead of living the higher "life of self sacrifice in the world for the general good of others." Without being profane, it might as well be said that the Highest Power should consort with men for their general good. If the creative Spirit, or the Deity is everywhere, cannot Mr. H. perceive that in a minor degree the Astral body of the Adept may be working in the same way in various places for the good of mankind, but that being still human, though a highly perfected humanity—they cannot bear the coarse magnetism of the crowd and thus do not mix with the latter? If a delicate sensitive were thrust into, say, a gin shop reeking with bad tobacco, spirits and foul cloths, would the sensitive feel pleased or happy? The Adept has long ago lived "the higher life" and busied himself for a time far beyond the span of man's life, in working for mankind. What more does Mr. Harrison require? Surely his ideas of working for the benefit of mankind cannot equal those of the Adept. He should know that his knowledge compared with that of the Initiates is as that of the Australian savage compared with the most highly educated European.

I have written this article for two reasons; one is to assure the sceptical natives of India that so far as I know, the descendants of their ancient Rishis still exist, and the other to show to Western minds that what they do not know, would amount to a very large sum, indeed.

OOTACAMUND, }  
2nd November 1883. }

P. S.—Adverting to Mr. Kiddle's oration, in which he states Ideas rule the world, he certainly got this idea from Plato, for in the Dialogues (Whewell, Vol. iii., p. 291, &c.) we read of the Primordial essences being the Platonic "doctrine of Ideas," again, "Ideas, the only objects of real knowledge." "Real Philosophers are those who employ their minds upon absolute "ideas" and "Philosophers are the genuine rulers of the world"—here we see the connection with ideas ruling the world, and for their application we have only to go to the French Revolution of 1788 to see how ideas ruled the world. Liberty, equality and fraternity—how creeds and even powers crumbled before their onward march, crushed by their irresistible force—and so on \* \* \* Louis Napoleon in making war on Italy declared it was only France that went to war for an "idea." Probably he also plagiarised from Plato. Does Mr. Kiddle think, he alone is to have a monopoly of "ideas"? It is too absurd!

\* Socrates supposed that the Oracle declared him wise because he knew nothing, and knew that he knew nothing, while other people knew as little as he, and thought they know a great deal, (Vol. 1, page 7, Plato's dialogues.)

And Mr. Harrison—does he know what a Bukht is or ever read of a Bukht's doings? What does he think of a Bukht disembowelling himself *coram publico*, answering questions put to him whilst lying on the ground bleeding—the questions answered, taking up some of the blood (his own), waving it in the ether, replacing his bowels, applying the blood that has been subjected to the ether or Akasa to the vast wound, jumping up and showing scarcely a mark where before there was a huge gaping wound? These facts have been vouched for by several unimpeachable European witnesses. Does Mr. Harrison know of any medium who can do this?

#### TESTIMONY TO PHENOMENA.

In the month of August last having occasion to come to Madras in the absence of Col. Olcott and Madame Blavatsky, I visited the Head Quarters of The Theosophical Society to see a wonderful painting of the Mahatma K. H. kept there in a shrine and daily attended to by the chelas. On arrival at the house I was told that the lady, Madame C—, who had charge of the keys of the shrine, was absent, so I awaited her return. She came home in about an hour, and we proceeded upstairs to open the shrine and inspect the picture. Madame C—advanced quickly to unlock the double doors of the hanging cupboard, and hurriedly threw them open. In so doing she had failed to observe that a china tray inside was on the edge of the shrine and leaning against one of the doors, and when they were opened, down fell the China tray, smashed to pieces on the hard chunam floor. Whilst Madame C—was wringing her hands and lamenting this unfortunate accident to a valuable article of Madame B—'s, and her husband was on his knees collecting the debris, I remarked it would be necessary to obtain some China cement and thus try to restore the fragments. Thereupon Monsieur C. was despatched for the same. The broken pieces were carefully collected and placed, tied in a cloth, within the shrine, and the doors locked. Mr. Damodar K. Mavalankar, the Joint Recording Secretary of the Society, was opposite the shrine, seated on a chair, about ten feet away from it, when after some conversation an idea occurred to me to which I immediately gave expression. I remarked that if the Brothers considered it of sufficient importance, they would easily restore the broken article, if not, they would leave it to the culprits to do so, the best way they could. Five minutes had scarcely elapsed after this remark when Damodar, who during this time seemed wrapped in a reverie—exclaimed, "I think there is an answer." The doors were opened, and sure enough, a small note was found on the shelf of the shrine—on opening which we read "To the small audience present, Madame C—has occasion to assure herself that the Devil is neither so black nor so wicked as he is generally represented; the mischief is easily repaired."

On opening the cloth the China tray was found to be whole and perfect; not a trace of the breakage to be found on it! I at once wrote across the note, stating that I was present when the tray was broken and immediately restored, dated and signed it, so there should be no mistake in the matter. It may be here observed that Madame C—believes that the many things of a wonderful nature that occur at the Head-Quarters, may be the work of the Devil—hence the playful remark of the Mahatma who came to her rescue. The matter took place in the middle of the day in the presence of four people. I may here remark that a few days before I came into the room in my house just as Madame B—had duplicated a ring of a lady in a high position, in the presence of my wife and daughter in broad day-light. The ring was a sapphire and a valuable one—and the lady has preserved it. On another occasion a note came from the above lady to my wife and was handed into the drawing-room in the presence of several people. On opening it a message was found written across the note in the well known characters of the Adept. The question is how the message got into the note? The lady who wrote it was perfectly astounded when she saw it—and could only imagine it was done at her own table with her own blue pencil.

Whilst on the subject of the shrine I may mention that it is a small cabinet attached to the wall with shelves and double doors. The picture of the Mahatma that I came to see, lately given to the Founders of the Society, is a most marvellous work of art. Not all the R. A.'s put together could equal such a production. The coloring is simply indescribable. Whether it has been produced by a brush or photographed, entirely passes my comprehension. It is simply superb.

H. R. MORGAN, F. T. S.,  
Major-General.

OOTACAMUND, }  
2nd November 1883. }

To the Editor of the Theosophist.

MADAME.—Will you, with your usual kindness, enlighten me on the following points, some of them being not satisfactorily understood, even by the perusal of "Fragments of Occult Truth" and "Elixir of Life." The questions are raised, as they occurred to me while reading the said articles in your valuable journal. They are asked in the spirit of an inquirer after truth and not in the spirit of a biased sceptic. I hope, therefore, you will kindly publish the following questions with replies thereto, in one of your ensuing numbers, of course, as soon as it may please you.

1. It is usually affirmed, what is a fact, that the adepts live very much longer than ordinary mortals. What is the maximum number of years for which they live or can live before they die their physical death like men in general, who live or can live for not more than 200 years at the most?

2. Do all adepts of any particular age, live the same or almost the same number of years? Do adepts of all ages live for about the same number of years?

3. In the article "Elixir of Life" (Vol III, No. 7, p. 171), we read "By or about the time when the Death-limit of his race is passed, he is actually dead..... gone to join the

gods." What is the exact state of an adept by or about the time, when the Death-limit of his race is passed? If he die a physical death at such a time, though without the agonies of dying, where is the difference with respect to longevity between him and an ordinary man who dies at about 100 or 150 or 200 at the most?

4. An adept, after he is dead in the sense in which it is used in the said article, is not reborn, having no will to live or *Tanha* as they call it. Where is he not reborn? On this earth as well as on any other sphere? What then becomes of his body, the seven principles of which he is formed?

5. When can it be said that an adept has attained Nirvana or Moksha as the Hindus call it? What is the exact state of his body, *i. e.*, the seven principles of which he is composed, when he attains Nirvana?

6. The ancient Rishis of India, such as Vasistha, Valmiki, Viswamitra, Agastya, and other historical adepts do not exist in flesh and blood. Then, how, *i. e.*, in what form do they exist, if they still exist at all in any other form? What has then become of the septenary men of which they were formed?

7. "A very high adept, undertaking to reform the world, would necessarily have to once more submit to Incarnation." (Vol. III, page 171, No. 7) How, where, and when does he submit to Incarnation? Does he become incarnate in the sense in which Vishnu is said to have been incarnate by the Hindus.

8. Patanjali, in his Yoga Sutras, says that a perfect Yogi, becomes perfectly strong. Does he mean, by that, that he becomes physically stronger than the strongest athlete or gymnast, who is generally physically stronger than an ordinary man not taking exercise? And, if so, what makes him so very strong, since he eats very scanty or no food at all? Who is physically stronger—a vegetarian or a flesh eating man, not to say of the psychic powers he, the vegetarian, acquires?

9. Where is a man, an ordinary man, having *Tanha*, reborn immediately after his physical death, is it on this terrestrial globe or on any other planet of our system?

10. What becomes of an Elementary in the long run? Does or can it again become a human being? If it does, or can again become a human being, when is it and where, on this earth again or on any other planet of our system?

By throwing some light on the above questions, in an intelligible manner, you would highly oblige

Yours faithfully,

DINANATH PANDURANG DHUMBE.

BOMBAY, }  
21st September, 1883. }

Note.—It is to be regretted that the correspondents to this Journal do not seem to realize fully the importance of the following four considerations in putting forth their questions and difficulties.—

(1st) The *Fragments* are but mere crumbs, and necessarily incomplete. Moreover, not being intended for serial publication, as they subsequently were, they cannot but be unsystematic in their arrangement. They were meant rather as food for thought for such as had the capacity to develop the crude ideas presented therein, than as a complete exposition of the Esoteric Doctrine.

(2nd) Most of these crude ideas have been sufficiently expatiated upon in works like the *Occult World*, *Esoteric Buddhism* and other subsequent articles in this magazine. These subsequent expositions must be carefully studied before framing any questions.

(3rd) There are certain facts which can be divulged only to such of the Fellows of the Theosophical Society as have proved their worthiness to receive them; others can be taught only to *chelas* as they progress; while the rest unfold themselves to INITIATES in their onward march towards BUDDHAHOOD.

(4th) For a comprehension of many of these truths the development of the "sixth sense" to which reference has already been made in the replies to "An English P. T. S."—is an essential qualification.

If these four facts could but be realised by the well-meaning and earnest correspondents of the *Theosophist*, much unnecessary writing would be saved. Being bounded by these lines, the questions of Mr. D. P. D. may now be answered to a certain extent.

*Esoteric Buddhism* sufficiently deals with the first question. The physical life of the ADEPT is determined more or less by the conditions of the race in which he is born, by the energy of his Will and by various other circumstances. It will be admitted that each subsequent race after the middle point is once passed, must be more and more spiritual. So one ADEPT having to contend with a lesser amount of materiality than his predecessors, has his way much smoother. The exact number of years which an ADEPT of a particular race may live is a perfectly immaterial question and can be set down more to unscientific curiosity than to any philosophical enquiry. It must be at the same time remembered that when a certain stage is reached, the conditions which surround the ADEPTS of different races being nearly identical, their periods of existence must be almost the same. In this answer, question number 2 is anticipated. For a further explanation, *Esoteric Buddhism* may be studied with advantage.

Question three would never have been put by one who had properly studied the article on *Elixir of Life* and understood the spirit it conveys. Suffice it to say that the passage in that article which tells us that the higher bodies become accustomed to the atmospheric conditions of the earth before the grossest ones are cast off, is a broad hint for a student of occultism who has begun to live the life. Question four is partly answered in the above reply and partly in *Esoteric Buddhism*.

The ADEPT attains *Nirvana* or *Moksha* when he identifies himself with the ONE LIFE or rather puts himself *en rapport* with it. His state then is something like that of the *Dhyana Chohans* of the Buddhists or the *Pradjapatis* of the Hindus. D. P. D. would do well to study the *Upanishads*.

The four *Rishis* mentioned in the article live now as *Dhyana Chohans*. This of course does not mean that all the ancient sages have reached that stage.

The incarnation of Adepts is to be understood in the same sense in which Occultists interpret the incarnations of *Vishnu*.

What *Patanjali* means is that the Yogi becomes strong owing to the development of his Will Power to an enormous extent. Upon what he lives, is sufficiently answered in the article on the *Elixir of Life*. *Akasa* is the mother of all phenomena and the source of nourishment of him who knows how to use it. Vegetables have properties which are not fully known, and if certain undiscovered (to the general world) vegetables were prepared and eaten in a certain way, there is no reason why they should not give even more strength than animal food. Meat-eating is full of dangers, not only psychological but even physical; and the law which teaches the spread of contagion ought to have made this fact evident. How many diseases are inherent in an organised body and yet remain unsuspected? Vegetable diet is not attended with so many dangerous results.

The question of rebirth is extensively treated upon in the *Fragments* and in *Esoteric Buddhism* and it would be mere waste of space to go over the same ground. The tenth question also is pretty fully discussed there.

D. K. M.

(Chela.)

### SATYA MARGA THEOSOPHICAL SOCIETY (LUCKNOW) AND SWAMI DAYANAND.

To The Editor of the *Theosophist*, Madras.

MADAME,—I am directed to forward to you a copy of the proceedings of an extraordinary meeting of our Branch Society held today to express the deep sorrow with which the Branch has heard of the death of Pandit Dayanand Saraswati Swami.

I trust you would allot to the said proceedings a corner in your valuable Journal.

Yours faithfully,

JWALAPRASAD SANKHADHARA, F. T. S.

Secretary Satya Marga Theosophical Society, Lucknow.

LUCKNOW, November 2, 1883.

(COPY.)

*Proceedings of an extraordinary meeting of the Satya Marga Theosophical Society, convened on the 2nd of November 1883.*

Resolved, 1st, that the Lucknow Satya Marga Theosophical Society express its heartfelt regret at the untimely death of Pandit Dayanand Saraswati Swami—a circumstance that has deprived the Arya Samaj of its beloved founder, and the Indian people generally of a trusted guide and benefactor.

Resolved further, that a copy of the proceedings of this meeting be then forwarded to the Secretary to the local Arya Samaj, and to the Editors of the *Arya*, the *Theosophist*, the *Indian Mirror* and the *Oude Aklbar* for publication.

(True copy.)

JWALAPRASAD SANKHADHARA,

Secretary, S. M. T. S., Lucknow.

The following is an extract from the *Poona Observer and Civil and Military Gazette* of October 24:—

"Mr. Gerald Massey, the poet, has become a Theosophist.—'Massey' on us! Who next?"

*Editor's Answer*.—Not Mr. Gerald Massey, as far as we are aware, for he is not on the lists. Perchance the poet may be some day the "next," but the Editor of the *Poona Observer* was the "next" preceding one, and no great acquisition for the Society either.

A. F. S. of Tinnevely writes to us:—"The Padre Principal of our well known local Missionary College has been anxiously watching the progress of Theosophy, and from time to time expounding questions therewith connected in a complacent manner evidently to the great edification of his Hindu students. The latest development of his exegetic genius consisted in representing to the boys in open class that the recent Government Order published in the *Supplement* to the *Theosophist* for the last month marked the disapprobation bordering on contempt of Theosophical subjects on the part of the Government, that, on the whole, the order was if anything damaging to the cause, and that any other interpretation thereof necessarily argued a sad ignorance of the English language!!!"

Oh, Loyola, art thou not content to find so many Protestants among thy faithful followers and disciples?—Ed.

A HINDU'S APPEAL TO THE HINDU MEMBERS  
OF THE  
THEOSOPHICAL SOCIETY.

A GLANCE at the past bright History of our Aryan ancestors is sufficient to bring home the sad truth that our fall from the pinnacle of Aryan glory is lamentably heavy and heavier still enough to bleed the heart of a true patriot. To what can this fall be due? It is owing to the decadence of the ancient Aryan Faith. Will this state of circumstances continue ever long? Dear Brothers, ought we to remain silent at this critical period when the average Hindu has lost all his faith in anything spiritual under the dead weight of Materialism? Are we not responsible for this culpable neglect? Do we not feel ourselves ashamed when we see the missionaries of other faiths erect buildings for the spread of their own religions in countries foreign to their own, where we turn our back and let the richest of our possessions slip away out of our hands? Ah! Sad fate indeed for our sacred Motherland, the cradle of Humanity! Is it possible to avert this fate you may ask? Yes, it is, if we only WILL there is a way for it, and that is to revive the Sanskrit literature by establishing Sanskrit schools. When once a taste is created for the Sanskrit language, the rising generation, trained in the Western modes of thought, will cease to be sceptic; for their scepticism is based on ignorance, which is due to parental neglect. The other advantage of the study of Sanskrit is that it preserves one's own Nationality, for it is a truism that a nation can rise in its greatness only when the literature of its motherland is well studied. When the nationality is preserved, a necessary consequence which will follow it is Union. When that Union—the most sacred of all—is established, Dear Brothers, how much of our miseries, both physical and spiritual, will be removed, immense good will be done to Humanity and great prosperity will follow. The third point why it should be revived is that it furnishes the Key to the Science of Sciences which explains the mysteries of Life and Death; for its truths are recorded in our Ancient Shastras, Puranas and Philosophies a careful and diligent study of which will put on the hands of an earnest seeker the gem of gems which none can snatch away. When glimpses of these precious scientific truths contained in the ancient literature are given to the Western World, its master minds will give a sympathetic ear to us and the West will join the East in happy bonds of Brotherhood. Hence, Dear Brothers, we appeal to your liberality and patriotic instincts to establish Sanskrit schools which will mark an era in the Sacred History of Hindustan whence Aryan Glory spread throughout the whole World.

BAREILLY,  
8th Nov. 1883. }

A WARNING TO THEOSOPHISTS.

WE have of late come to know that certain persons have been trying to make the Theosophical Society a means of self-aggrandisement, by professing to be ardent Theosophists, when in reality they have not the least idea of what the Society seeks to accomplish. These persons, wherever they go, are ready to introduce themselves as Theosophists, as if that name were a passport for getting into influential and fashionable society. They rattle away a great deal of nonsense about occultism and such matters, and are ready to testify to things they know nothing about. Such persons may perhaps have honest intentions, but everything that is overdone causes mischief, and, as it is our solemn duty to watch carefully over the interests of the Society, every true Theosophist is requested to take note of such persons and report them to Head-quarters and suggest if possible the best means for putting a stop to such vagaries. There are some outside the Society who show a like mad enthusiasm, and we think that such persons ought not to be allowed to join the Society. A selfish motive evidently lies at the bottom of all this sham love and enthusiasm, and persons of this description should in our opinion be debarred from taking part in the working of the Parent Society or of any Branch Society. This is a subject that will have to be considered by the General Council before whom we intend to lay it at the ensuing anniversary gathering.

N. D. KHANDALWALA,  
President, Poona Theosophical Society.

The President-Founder's Tour.

COLONEL OLCOTT AT JUBBULPORE.

Col. H. S. Olcott, President-Founder, and party arrived here on the evening of the 22nd Instant.

The Members of the local Branch, including Babu Girish Chunder Mookerjee, Extra Assistant Commissioner, Babu Nivaran Chunder Mookerjee, Merchant, Babu Kali Charan Bose, Head Master, City School &c., &c., were present at the Railway platform to welcome their President and escort him and suite to the house of Babu Chunder N. Bose, who was kind enough to offer them hospitality during their stay at Jubbulpore. The next day their bungalow was thronged by visitors eager to have a sight of the "American Hindoo" and to talk to him upon scientific and philosophical subjects. On the evening of the 24th arrangements were made for a popular lecture, the subject being "THEOSOPHY, ITS AIMS AND OBJECTS." The Shivaram Pandit's Hall was crowded to suffocation, and many had to return disappointed for want of even standing room at the door. The entrance of Col. Olcott into the Hall was the signal for a loud and enthusiastic cheering. Mr. Balvantrao V. Gokhale, Supt. of the Normal School, in a short speech introduced the lecturer to the audience and interpreted his remarks into the vernacular for the sake of non-English-knowing hearers. Col. Olcott, who rose amidst loud cheers, explained to the public the importance and philosophical significance of the first object of our Society, viz., the formation of the nucleus of a Universal Brotherhood of Humanity without distinction of race, creed or colour. This was not to be interpreted to mean that the society interfered with caste or other social relations of its members. It only meant the inculcation of the principle of mutual tolerance and mutual intellectual sympathy. Hardly two persons could be found with exactly the same ideas; and yet man was arrayed against man for differences of opinion in regard to questions which philosophers and scientists have spent their lives in studying. Caste against caste, sect against sect, nation against nation, race against race, each took up arms against the other for not acknowledging belief in its own manner, in problems which have baffled the keenest intellect for ages upon ages. If people could be taught that their best interest lay in brotherly and kindly feelings towards their neighbours and extending to their fellow-men, the same rights which they demanded for themselves, the sum of human happiness would increase. This it was that the Theosophical Society attempted to do, and had done with success far beyond its own expectations. The second object, as published in our printed Rules was of particular interest to the East, especially, India, the "Motherland of Nations." Col. Olcott very feelingly showed the past intellectual glories of this once blessed land of Aryavarta. Not only were some of the physical sciences, in all their departments, carried to a far greater perfection, than those of the present day, but the Psychological science, of which the West has never yet had a proper glimpse, was fully developed in the ancient times when the Rishis, Mahatmas and Yogis mixed with the innocent, pious and devoted sons of the soil. These treasures they had handed down to us in our sacred books, the knowledge of which was unfortunately lost with the neglect of the Sanskrit language. If we would have a glimpse, a faint glimmer of the knowledge and philosophy attained by the giant intellect of our great ancestors, we must encourage a study of Sanskrit. The present generation was too old to undertake to learn the language. But if they realized the importance of the movement, they ought to start at once Sanskrit schools to bring up the younger generation in the proper mode of thought. The hope of the Nation lies in her children, whose minds could be turned into any channel. The third object of the Society was intermingled with the second and did not need any further explanation; it was, however, desirable for the audience to be impressed with the fact that the Theo. Socy. promised no guru nor did it undertake to teach every one who had a curiosity to know something of occultism. The *Gupta Vidya*, as in ancient times, must be learned by the aspirant, by cultivating within one's self the highest and noblest aspirations, a feeling of unselfish philanthropy, and thus bringing about a higher and higher self-evolution. The Laws of Nature are immutable, and the same conditions that were necessary in olden times for self-development are necessary now. Colonel Olcott finally urged more the necessity of Sanskrit schools. The substance of the lecture was then given in Hindustani by Mr. Narayan B. Nakhre, F. T. S. The desire to have the suggestion of Colonel Olcott for Sanskrit schools, given a practical turn being expressed, a committee was at once appointed to collect subscriptions for the purpose and report the result the next evening. On the 25th Colonel Olcott's second lecture came off. It being of a scientific and philosophical nature, was limited only to educated people of whom some hundreds, however, were present. The subject was "Our Relation to a future Life." The lecturer took the phenomena of Occultism, Mesmerism and Spiritualism as the basis upon which to erect the structure of future existence. These at any rate proved the existence of something in man besides his gross body, and its survival after what we call death. All the discoveries of modern science tended to confirm the statements of the ancient

Philosophers, the students of Psychology. Darwin's theory of Evolution, grand and startling as it unquestionably is, began now here and ended nowhere. But the Mahatmas of old Arjavarta had postulated the theory of Evolution in its completeness, and it was within the means of every earnest student to test its truth by experimentation. The lecturer begged his audience not to take anything on faith, but at the same time not to express an opinion in regard to matters they had not carefully and properly investigated. The speech was throughout very warmly applauded. Colonel Olcott then made a few remarks in regard to Theosophy for the benefit of those wishing to join it. The noble action of the students and teachers of the High School was then communicated by Colonel Olcott to the audience. Poor boys getting a scholarship of five rupees or thereabouts had expressed their willingness to forego a month's allowance to contribute their mite to the promotion of the National object of the establishment of a Jubulpore Sanskrit School. The teachers, drawing a salary of twenty rupees or so, had offered a month's pay for the same purpose. The audience gave vehement cheers when they heard of this noble patriotic feeling of the students and masters of the High School. A subscription list was then put on the table, and about fifteen hundred rupees were subscribed on the spot by the audience, mostly in small sums. We hope soon to be able to collect sufficient funds to start the institution very shortly. Babu Nivaran C. Mookerjee was elected Treasurer *pro tem.* of the fund. On the 26th candidates desirous of admission into the Society were initiated by the President. And in the evening he and his party left Jubulpore for Allahabad on their Northern tour.

JUBBULPORE, }  
27th Oct. 1883. }

N. B. NAKHRE,  
Secretary.

#### AN ADDRESS

ON BEHALF OF THE HINDU STUDENTS OF THE GOVT. HIGH SCHOOL,  
JUBBULPORE, TO THE TRUE PATRON OF ARYAN PHILOSOPHY,  
COLONEL H. S. OLCOTT OF AMERICA,  
THE BROTHER OF THE HINDUS.

SIR,

We beg to offer you this brief address which we expect you will condescend to accept.

The lectures you delivered on the previous two days have produced the desired effect on the minds of those upon whom God has bestowed the capacity of thinking for themselves, and, this deep impression will, we hope, never be erased. Your lectures have depicted a durable picture on our hearts and distressed us to contemplate the fallen condition of the Hindus.

We were on the point of drowning ourselves in the deep ocean of wretchedness, when all of a sudden the voice of true support is heard by us. We will reach the shore now. The personage who is going to guide us, the blind and bewildered Hindus, who even when convinced of our miserable condition, would not still strive to procure the remedy. We said we were falling into the well, still we did not check ourselves, showed no courage, prudence or activity, but took to the foolish task of bemoaning our lot. We were in the dark way, and never even showed any attempt to open our eyes to look at the brilliant world-illuminating light, the holy instructions laid down by our Mahatmas, but they have now come down to us through you, the foreign appreciator of the now derided Hindu Philosophy.

Now, we think, almost all of us have awoken from the sleep of unconscientiousness and non-appreciation. It is the greatest misfortune of those who have not taken advantage of your travelling throughout the country, for the benefit of all who are connected with you may be by a very feeble thread now, but your exertions will make it ere long as strong as an adamant chain.

Indeed, India had never the good fortune of getting a European man of science with your abilities, to take such burning interest in the noble cause of Hindu Religion and Philosophy. And it is and certain sure to us all that the tide of our good luck has begun to flow and will safely bring us to shore if we follow your footsteps. We, High School boys, are very glad to hear from you that Mr. Nivaran Chandra Mukerji has been appointed Secretary of your Theosophical Society here, may it be ever prosperous, and hope to join it after we have come to proper age!

Many pupils will support the Sanskrit School about to be founded in accordance with your proposal. We hope for its rapid progress. It is quite indisputable that unless we know the language of our religion, we cannot be acquainted with the hoarded up treasures of our venerated ancestors. We hope to be worthy of any inheritance and call on the whole world to share it with us.

We humbly beg of you to favour us with a few days' visit on your way back from the N. W. P. to your Head-quarters.

We are highly indebted to you for favours already shown, and solicit your continued favour of instructing us every now and then, when opportunity offers, and we shall always try to act up to your instructions with our heart and soul.

We, Hindus, can certainly never repay you for the manifold obligations you have rendered us in any other way than by obeying your god-like and holy orders.

We pray to the Supreme Being and the Divine Mahatmas for your long life and for the prosperity of your Society. We conclude this by offering our best thanks for your endeavours for our good, and beg to say that your generosity and greatness baffles all description.

Thanks, thanks, our good and many thanks! May you enjoy the divine favours for ever!

We beg to remain,  
Yours most obediently,

PURUSHOTTAM LAL.

On behalf of the High School Students, Jubulpore, Central Provinces.

JUBBULPORE,  
The 26th Oct. 1883. }

#### COLONEL OLCOTT AT ALLAHABAD.

Never was Allahabad so much excited as it was during the recent visit of Colonel Olcott. He reached here on the morning of the 27th October. He was received at the Railway station not only by the members of the Prayag Branch, but also by many of the gentry and nobility of this station. In fact the station platform was crowded, and those present were eagerly looking for the arrival of the train which arrived nearly one hour late. From the Railway station the party drove down to the National Club Bungalow, which was intended for their accommodation.

The whole day Col. Olcott and party, consisting of Mr. W. T. Brown, F. T. S., B. L. (Glasgow), Mr. Damodar K. Mavalankar, F. T. S., Recording Secretary Theosophical Society, and two Madras Fellows, Messrs. L. Venkata Varadarajulu Naidu and T. Narainswamy Naidu, received visitors till 5 p. m. In the evening several gentlemen were initiated. It was indeed an intellectual treat to hear Col. Olcott's address to the would-be Theosophists. After the initiation was over the Colonel was literally drowned with intricate questions on philosophy and science by the fellows present. The learned Colonel's answers satisfied one and all.

The next day (28th) was the day of the lecture. The subject of the lecture was "Theosophy, its History, Progress and Aims." The lecture was delivered at the Kayastha Pathshala Hall. The spacious large hall was crowded to suffocation. Many persons went away disappointed for want of space. The lecture began at 4 p. m. and ended at 7 p. m. I never found Colonel Olcott so eloquent, fluent and enthusiastic as on that occasion. The lecture was so impressive and well appreciated by large audience, that for three mortal hours perfect silence was maintained. The audience was as respectable as could be. Mr. H. C. Niblett was in the chair; among those present, Dr. and Mrs. Hall, Babu Oprocash Chandra Mukerji, Vakil, Pandit Nand Lal, Vakil, Pandits Rajnath, Bausidhar, Indernarain, Munsiff, Moulvie Zaka-ulla, Professor of Arabic, Muir College, Pandit Adityaram Bhattacharyya, M. A., Professor of Sanscrit, Muir College, Babu Abhay Charan Sanyal, M. A., Assistant Professor of Physical Science, Muir College, Moonshi, Bhowani Sahai, Deputy Magistrate, Lalla Ram Persaud, Government Pleader, Lalla Ram Charan, the richest banker, Babu Jogindro Nath Chowdry, M. A. B. L., Lalla Jagatnarain, Banker and Zemindar, Pandit Lachminarain Vyasa, the leading Kubiraj, Babu Gyanendranath Chakravarti, M. A., Sashi Bhusan Chatterji, B. A., Mohendro Nath Chakravarti, B. A., Jogendronath Gossain of Serampore, Drs. Brajendranath Banerji and Avinashchandra Banerji and a host of other respectable and influential gentlemen, too numerous to mention. The audience was so much carried away by the Colonel's enthusiasm, that when Colonel Olcott, after the lecture was over, proposed the establishment of a Sanskrit School, subscriptions began to pour in like torrents, and even Mahomedan gentlemen present freely subscribed. This is indeed true Brotherhood. What can be better proof of the success of the Theosophical Society and personal efforts of its indefatigable President, the self-denying good Colonel? More than Rs. 2,000 were subscribed on the spot.

Next day there was a private lecture on Mesmerism with experiments to the members of the Branch Society. It is needless to say that the lecture was edifying and very instructive and interesting to the members present. On the morning of the 30th there was another public lecture at the Allahabad Institute, when an address was presented to Colonel Olcott by the students of the Muir College. In the evening there was a private lecture among the fellows on "Life after death," besides several questions from fellows on "Life before birth," were answered by the learned Colonel to the entire satisfaction of them all. The party left the place for Ghazipore on the morning of the 31st, when there were present many fellows at the Railway platform, to bid farewell to the party.

Colonel Olcott's words were not uttered in vain. Since his departure fresh subscriptions have been coming in, and many Vakil, Mahajans and others have promised their influential support in the cause of the Sanskrit School. I learn from reliable source that several Vakil have promised to realize donations from their clients for this noble and patriotic purpose.

On Saturday next a public meeting of Pandits, Pragwallah's and Priests of this city will take place to consider the amount of support these men will be able to give to the cause of Sanskrit learning—more especially to the proposed Sanskrit School to be established by the Prayag Psychic Theosophical Society.

ALLAHABAD, }  
5th November 1883. } BRAJENDRA NATH BANERJI, F. T. S.

ADDRESS TO COL. OLCOTT BY THE STUDENTS OF ALLAHABAD HIGH SCHOOL.

It is with the deepest respect and the liveliest pleasure that we beg to welcome you in our midst. We do so out of the fulness of our heart. We are alive to your self-sacrificing devotion to the cause of our mother-land, and we, her children, are but doing our duty by honoring him, who honors her and works for her.

As members of society we feel in common with other members of the human family in the first and third objects of a great society of which you are the President-founder. But as Indian students and members of the Literary Institute, we hail your services coming under the second of the three grand objects of the Theosophical Society. Your eloquent appeals to our countrymen to feel respect for the ancient national literature of the land, and your practical work in promoting the establishment of Sanskrit Schools, demand our grateful acknowledgment. We sincerely wish that your labors will be directed with greater ardour to this arduous work. At the same time we will venture to make an observation, that, we fear, would look presumptuous, but which nevertheless may be set forth before you in all candour. It is this. A too exclusive study of ancient Indian literature will, we fear, not answer the requirements of the time, nor contribute to the development of the material resources of the country; and hence we fear any harmful reaction against the bracing education of Western literature and science. We could only wish that instead of the too exclusive devotion of Indian students to foreign literature—modern or ancient—the national educational systems were such as to combine the advantages of both the ancient literature of the country and of the modern literature and science of the West, together with the provision and encouragement for higher studies in Sanskrit literature for such as have a taste to make Sanskrit their speciality.

We have ventured to advert briefly to this subject in our address recognizing the defectiveness, as we do, of the present system of education both as imparted in State Colleges and Schools and in indigenous national Schools. The too Anglicised graduates of the Universities, as well as the old fashioned Pandit, both of them are outcomes of wrongly directed educational systems, and we pray that your endeavours will be directed to correct these opposite extremes.

In conclusion we pray for your unabated strength and energy and a long life.

THE PRESIDENT-FOUNDER AT GHAZIPUR.

Col. H. S. Olcott, President-Founder of the Theosophical Society, arrived at Tarighat on the 31st October 1883 at 2-35 P. M. where he was met by some of the leading gentlemen of Ghazipur. On crossing the river, he was received at Chitti Nath Ghat by a large number of Native gentlemen who were in waiting for the purpose. From the ghat he drove, accompanied by the gentlemen in waiting, to the house of Babu Shew Nath Sing, where an address of welcome, a copy of which is annexed, was given him. In reply, the President-Founder delivered a short speech, in which he thanked the gentlemen present for the hearty welcome given him, and pointed out in a few words how imperative it was for every Hindu to try and know something of the old Aryan theology and science. This closed the proceedings of the day.

On the following morning, private conversational meetings were held from 8 A. M. till 12 noon, and then again from 2 to 5 P. M. In these meetings most of the educated gentlemen of the Station attended and heard the Colonel with intense interest.

At 5½ P. M. Messrs. Brown and L. V. V. Naidu left for Gorakhpur by mail cart.

At 6-15 P. M. the President proceeded to the Victoria School and delivered a lecture on "the Invisible World." The hall was crowded to suffocation, and all denominations of the people, both European and native, attended. The subject was treated both scientifically and philosophically, and the effect the lecture produced was somewhat marvellous. Some of the staunch materialists and sceptics were heard to say that after what they had heard from the learned lecturer their grounds were certainly untenable.

On the morning of the next day, the following gentlemen were initiated into the Society,

- Babu Shankar Dyal Panday.
- " Gagan Chander Rai.
- " Ramsaran Lall.
- " Hira Lall.
- " Jugodishwar Chatterjee.

As the Colonel had to leave for Cawnpur by the 9-35 A. M. train the time under his disposal in the morning was very short, otherwise there are reasons to believe a few more gentlemen would have been initiated the same day. They will, however, join the Society almost immediately.

The President-Founder left Ghazipur by 8-15 A. M. train.

GHAZIPUR, }  
2nd November 1883. } JAGADISHWAR CHATTERJEE.

ADDRESS TO COLONEL OLCOTT BY THE THEOSOPHISTS OF GHAZIPUR.

To

COL. H. S. OLCOTT,  
President-Founder of the Theosophical Society,  
India, Ghazipur.

Sir,

We, the undersigned, residents of Ghazipur, beg to offer you a hearty welcome on your arrival in our city.

It is hardly necessary for us to say that your philanthropic zeal and disinterested labours have justly excited the admiration of the thinking portion of the Indian public, and have aroused an intense interest in the movement to which you have devoted yourself. No Hindu, who feels in any way concerned in the welfare of his country, could have failed to notice, without some interest, the steady progress which the cause of theosophy has been making in the southern and the other parts of India during the last few years through the generous endeavours of yourself and that noble and highly cultivated lady, Madame Blavatsky.

What India really was a few centuries before, is well known to you. You have devoted almost a lifetime in trying to unravel the mysteries of the Indian philosophy, and you fully understand how great is the grandeur of those occult sciences in which India alone of all other countries of the world, most excelled. The glorious truths of religion, life and death, enunciated by the venerable Saints, Muni and Rishi of India, were now fast dying away, and had it not been for your generous endeavours, all traces of the past greatness of Aryan philosophy would have been obliterated from the face of Hindustan. But so great a treasure is not destined to be lost to the Aryans, and the mysterious dispensation of Providence has, in fulness of time, sent you to India, from a far distant land, to open our eyes and to revive the former scientific glory of this poor and hapless country. Your labours have already borne fruit in many parts of India, and we therefore hope that your advent to this city will confer a lasting boon on us and lead us to realize the truths of old Indian theology and sciences, and thus enable us to form some idea of what our glorious forefathers were in ages past.

In conclusion, we beg to offer you, Sir, our most cordial thanks for your condescension in visiting Ghazipur, and to express a hope that your visit will not be without its usual salutary effects here.

We are,

Sir,

Your most obedient servants,

- |                        |                         |
|------------------------|-------------------------|
| SHANKAR DYAL PANDAY.   | JUGODISHWAR CHATTERJEE. |
| SHEWNATH SING.         | BINODI LALL MOOKERJEE.  |
| NILMADIUB RAI.         | KEDARNATH CHATTERJEE.   |
| GUNPUT SAMAI.          | DAMRT RAI.              |
| BHOLANATH RAI.         | GOPINATH.               |
| TARINY CHARAN BHADURY. | HARNARAIN RAI.          |
| BRIJRATTON DOSS.       | HIRA LALL.              |
| SIDHESHWAR CHATTERJEE  | RAMSARAN LALL.          |
| DABI DIAL PANDAY.      | JOGENDRONATH RAI.       |
| GUGAN CHANDER RAI.     | DEBENDRONATH RAI.       |

THE PRESIDENT-FOUNDER AT CAWNPORE.

After travelling by rail from 9 A. M., till after midnight of the 2nd instant, the President's party,—except Mr. Brown, and Mr. Doraswamy, who had been detailed to visit Gorakhpur from Ghazipur as Colonel Olcott's Deputies—reached Cawnpore safely.

The Maharajah of Burdwan, being blessed with a superabundance of wealth, has the rich man's caprice of owning bungalows and palaces in different places. He has a handsome one here, and upon being asked by the Local Committee for the loan of it telegraphed, to their surprise, that the larger of his two houses should be placed at Colonel Olcott's disposal and every attention shown him. As he has almost invariably refused similar applications before, his most obliging courtesy in this instance seems a proof of the sincere respect he feels for the President-Founder, and which was shown when the Colonel was his guest at Burdwan.

Upon approaching the "Koti" we found the place in a blaze of light. The Cawnpore Branch had lit up the grounds with Chinese coloured lanterns, and lamps on posts, and the whole façade of the building was illuminated by one thousand *chirajs* (native clay lamps), while the apartments were lighted up as brightly as day.

A number of our Fellows, resident in Town, escorted the President from the Station to the "Koti," although the hour of arrival there was late, the train being due at Cawnpore at 12-30 in the night. At the gate a tall arch bearing the inscription "Welcome Theosophists," was erected. The next morning the Cawnpore Brothers had long, interesting and instructive conversation with Colonel Olcott on Mesmerism and other scientific and metaphysical subjects, in which our Hindu Fellows, all over India, are generally interested. The whole day was passed in such pleasant and attractive discussions that most of the members remained with the President-Founder almost all day. The evening was fixed for a public lecture which was as usual delivered by Colonel Olcott, *ex tempore*, in the Public Buildings close to His Highness' Koti. The subject was "Theosophy and the future life." The lecturer dwelt upon the importance, the growth and development of the Theosophical Society, its good work in the moral and spiritual regeneration of India and of the world, and its significance as the possessor of the key which unlocks the treasures of esoteric knowledge—the common foundation of all religions. He then showed how Mesmerism proved the independent action of mind, apart from the brain, thus striking a blow at the Positivistic theory of the cessation of mental phenomena with the death of the brain. This latter hypothesis was the keynote upon which rested the whole harmony of Positivistic science. Prove its falsity, and the whole fabric tumbles down: there is nothing but discord. Mesmerism performed this important function and was as such a valuable science. He would have nothing to say if the men of science retained practically their professed agnostic position. But if while declaring themselves open to conviction, they would not undertake the investigation in the manner pointed out and still not scruple to ridicule what they practically were ignorant of, then he, as an honest searcher after truth, had to combat this dogmatism of science, as much as he does the bigotry of Theology. The Theosophical Society was not the enemy, either of Science or of Religion, but the companion of one and the handmaid of the other. In short it was an attempt—and a very successful one too—to apply scientific methods for the investigation of the hidden truths underlying the so-called religious myths and traditions, and thus to pave the way for the promotion of Scientific Religion which underlies all the faiths of the world, and the mystical meaning of which being forgotten and misunderstood, had led the ignorant to stick to the outward meaningless crust, while the so-called educated to laugh at it as an exploded superstition. The office of true Theosophy was therefore to reconcile Science with Religion, not to promote a conflict. This had been its important function in old times: this it tried to do now and Mesmerism furnished the key to the situation. It stood as the guide post to lead the wearied scientific traveller beyond his protoplasm into the abode of Religion, the world of force. From the phenomenal it took the student to the noumenal. The phenomena of modern spiritualism carried the student a few steps further, and these phenomena as well as those of mesmerism were perfectly comprehensible to the student of Esoteric Science. When the investigator crosses these two steps and comes over to the threshold of Aryan Psychology then he not only obtains theoretical knowledge but is in a position to have, if he earnestly and zealously works for it—an experimental demonstration of what he is taught. He can then postulate to himself the existence of his inner self apart from "the mortal coil," its rebirths and the laws guiding his reincarnations. Colonel Olcott did not want any of his audience to believe what he said upon blind faith. For himself, his investigations had brought him to a thorough conviction of the truth of what he was then stating, and it was open to any of the audience to undertake the same method of research, if they cared to learn the truth. The lecture was highly scientific, and although a large portion of the audience could not understand Colonel Olcott, owing to their limited knowledge of the English language, and of the subjects he was then so learnedly expounding,—still hardly any one from the Hall left the place, until after the lecture was over. So much attracted they apparently were by the lecturer's erudition. The speech lasted for over an hour. In the evening new candidates wishing to join the Society were initiated by the President-Founder. The next morning he gave practical instructions to members in the theory and practice of healing by mesmerism. A few more candidates were then admitted; and in the evening, Colonel Olcott and party left for Lucknow. Before closing, we must express our great regret that Rai Kishen Lal, President of the Branch, was prevented by severe illness from sharing the pleasure of these two days.

MAHENDRANATH GANGULI,

Secretary Chohan Theos. Socy.

CAWNPORE, 4th November 1883.

#### COL. OLCOTT AT LUCKNOW.

It will not be possible for me to send for publication in the *Theosophist* all the circumstances attending the visit of the President-Founder to this city, nor to convey in print an idea of the immense good done to the cause by him in Oudh. At

the same time it is necessary that I should send a brief, but by no means uninteresting, report of the proceedings which took place since Col. Olcott's arrival at Lucknow on the 4th instant at 8-30 in the evening. The President-Founder was received at the Railway station by the members of the local branch of our Society and by the *elite* of the city, and thence he was escorted to the temporary residence prepared for him, by a large number of sympathisers, Theosophists and non-Theosophists. Arrived at the residence, Col. Olcott was welcomed by the President of this branch, and soon after by a deputation from the *Jalsai-Tahjeeb* or the Reform Club, which presented him with an *Address*. In reply, Col. Olcott dwelt upon the good results that might follow an union with the Theosophical Society of all Indian associations which attempted to remedy the evils of Indian Society, social, religious and moral. In the course of the following day numerous visitors waited upon Col. Olcott, many of whom regretted the fact of their having been offered no opportunity to witness any of his marvellous cures, but fondly expressing the hope that they should be more fortunate another time. The afternoon was devoted to the private business of the branch. In the evening the large Town Hall in Kaiser Bagh was overwhelmingly crowded long before the hour announced for Col. Olcott's address. Hundreds were content with standing room only, while many more had to go away. The occasion was taken advantage of by our branch to celebrate its first anniversary. The President-Founder took the chair at six o'clock and called upon the Secretary to read the report of the working of the branch for the past year. Among other things the report went on to show that efforts to establish Anglo-Sanskrit schools were responded to by subscriptions up to date to the amount of over Rs. 6,000, and that the branch expected to raise a much larger sum to enable it to place the undertaking on sound financial basis. Col. Olcott then having expressed his satisfaction, delivered his presidential address on Aryan "Philosophy and its claims," and it was listened to with rapt attention, and was greeted with loud and frequent bursts of applause. The lecture was interpreted to the non-English speaking part of the audience by Pandit Prannath, the President of our branch, who also presented the President-Founder with portrait in oils, executed by Fazl Ali Khan Behzad Rakam, a noted native painter of Lucknow. The proceedings terminated amidst great and universal enthusiasm.

Later in the evening at a special meeting of the branch, Col. Olcott initiated several new candidates into the Society, and after that he discoursed on mesmerism, illustrating his remarks by highly interesting experiments, and giving practical hints for the treatment of various diseases. Early next morning he left for Burabanki, accompanied by Messrs. Brown and Mavalankar, and several other Theosophists. It is universally acknowledged here that the President-Founder's visit has put new life into the lovers and workers of the National Cause, the Regeneration of India.

JWALA PRASAD SANKHADHAR,

Secy. Satya Mengu Theo. Socy.

Colonel Olcott delivered an address to a large audience at Lucknow on Monday evening last. At the close of the meeting the local Theosophical Society presented him with an address, together with a portrait in oil, handsomely framed, which, it is said, appear to afford him great satisfaction. Colonel Olcott announced that real "Sunday" Schools were to be established in order to catch the young idea betimes. The Colonel was accompanied by Mr. Brown, whom he introduced to the meeting as a graduate of the Glasgow University, and an ardent admirer of German metaphysics, but who had given in his adhesion to Theosophy and intends to preach and practice its principles and teachings—(*Indian Mirror*.)

The *Sahas* of Allahabad writes:—

"Colonel H. S. Olcott, President-Founder of the Theosophical Society, with Mr. Damodar K. Mavalankar, Joint Recording Secretary, and Mr. Narainswamy Naidu, F. T. S., passed through Allahabad, en route to Cawnpore, on Friday evening last. There was a gathering of the local Fellows at the Railway Station. The party was reinforced here by Mr. Apropkash Chunder, Mookerji, Vice-President, and Mr. Charu Chunder Mitter of the Prayag Psychic Theosophical Society, and Mr. J. N. Ghosal, Vice-President of the Bengal Theosophical Society, who accompany the Colonel to Cawnpore. The Secretary of the Cawnpore Chohan Theosophical Society came up to the Mahar Station to receive the Colonel, and party. Mr. W. T. Brown, B. L., F. T. S., of the London Branch, and Mr. L. V. Varadarajulu Naidu, F. T. S., Honorary Secretary to the Head Quarter Fund Committee, have gone to Gorakhpore (where the Colonel was invited) to pay a visit to the Branch there. On their way to Lucknow they stop for a day at Fyzabad, where there is every probability of forming a Branch."

Says the up-country correspondent of a contemporary:—

“The long-expected visit of Colonel Olcott, the President-Founder of the Indian Theosophical Society, is the all-absorbing topic of conversation in this station. The splendid Mansion of His Highness the Maharajah of Burdwan and the garden attached to it are being tastefully decorated with evergreens and festoons for some days past: such a measure, no doubt, will entail some expenditure, which, otherwise, would better have been distributed to the poor in honor of the advent of this religious teacher of the Theosophists of this station. If I mistake not the Yankee Colonel has renounced everything secular. For the life of me then I am unable to understand why he allows such rank pageantry in his honor. Such honors are given to Kings and Princes, and not to religious devotees. Whatever it be, Colonel Olcott should set an example of self-abnegation. I am told by a correspondent at Allahabad that the gallant Yankee Colonel, during his sojourn there, was one day the guest of a leading native, and dined with a number of native guests with all the observances of native rites and costumes. It is said Colonel Olcott kept his shoes outside the dining room with the other guests, as it is customary with natives to dine sitting on a carpet. Alas! a Yankee Colonel converted at last into a Hindu in this fag-end of the nineteenth century, when the religious beliefs of the whole world are turning towards the blessed truths of Christianity—Perhaps it pays.”

The above is certainly inspired by the “green-eyed twin monster”—envy and jealousy of some Christian well-wisher. Would our Christian Brethren object to any such honours paid to their Pope or Bishop? The latter are also “religious devotees,” we suppose?—*Ed.*

COLONEL H. S. OLCOTT, the President-Founder of the Theosophical Society in India, is now in our midst. He arrived here last Saturday morning by down mail train, from Jabalpur, and was received at the Railway Station by a number of his disciples and admirers. He is stopping at the National Club house, as a guest of the Native community of this station. His presence here has created a great sensation among the educated portion of the Native community. What with the warm reception he has received, what with the filial regard, if I may be permitted to use the expression, with which he is looked upon, what with the attention paid to all his wants and requirements, it is manifest that the good old Colonel has made a great impression on the hearts of the educated natives. Even men who have not initiated themselves into the mysteries of Theosophy, actually esteem him, and bear grateful feelings towards him—at least such I find to be the case at the station. Last Sunday evening the Colonel gave a public lecture, at the Kyaslia Patshala, on “Theosophy, its History, Progress and Aim.” There was a great rush of people to hear the lecture. The great hall of the Patshala, the adjoining rooms and the openings in the verandah, were filled to suffocation. The Colonel spoke for about an hour and a-half, and vehement was the applause from the audience when the Colonel touched upon the glory of the Aryan literature, Aryan science and philosophy, and Aryan civilization. Among other things, he spoke at some length on the usefulness of the study of Sanskrit literature, and exhorted the audience to establish a Sanskrit school at this station, and he so far succeeded in this attempt, that he was able to raise Rs. 2,000 on the spot for the purpose. This morning, he gave another short address at the Allahabad Institute to an enthusiastic audience as on last Sunday evening. Last Saturday evening, he had the pleasure of initiating some ten new members as Fellows of the Theosophical Society. Last Monday evening, Babu Aprocash Chunder Mukerji, one of the leading members of the local Bar, and himself a Theosophist, entertained the Colonel and a few of his disciples at supper at his own residence. But one thing we have been very sorely disappointed with. We had expected that the Colonel, during his stay here, would prove the efficacy of Mesmerism in curing human diseases; but on his arrival here we were told that, since the 20th instant, he has been forbidden by his *Guru* to try his skill in this respect until further orders. Thus, we had the misfortune of losing a very good opportunity to show to the sceptics the truth of the reports of the innumerable cures made by the Colonel, and published in your paper from time to time.—*Indian Mirror's Correspondent.*

## Our New Branches.

Colonel Olcott formed a Branch Theosophical Society at Ghazipur, on the 1st November 1883.

Through the exertions of one of our worthy Brothers in the North and of Babu Ram Prasad, F. T. S., another Branch Theosophical Society was formed at Rae Bareilly under the name of the “Gyanvardhani Theosophical Society,” on the 22nd October last. Particulars are given elsewhere.

A Branch Theosophical Society was organised on the 4th November last at Fyzabad by Mr. W. T. Brown, B. L. (Glasgow) F. T. S., and Mr. L. Venkata Varadarajulu Naidu, F. T. S., special delegates from the President-Founder.

## Official Reports.

PANDIT SALIG RAM has been elected President of the Sarw Hitkari Theosophical Society, *vice* Babu, Ganga Saran, B. A., transferred to Saharanpore as Munsif.

At a meeting of the Fyzabad Theosophical Society held on the 4th November, it was resolved that the following Members be elected office-bearers for the ensuing year:—

Babu Gokul Chand, *President.*  
 „ Chandra Mohan Mukerji, *Vice-President.*  
 „ Bipin Bihari Banerji, M. A., *Secretary.*

It was further resolved that the Rules and Bye-laws of the Parent Society be adopted *pro-tem.*

BIPIN BIHARI BANERJI,  
*Secretary.*

### THE GYANVARDHANI THEOSOPHICAL SOCIETY.

At a meeting of the members of the Theosophical Society held on the 22nd instant in presence of the Delegate from the Head-quarters, it was proposed that a branch be formed by the name of *Gyan Vardhani Theosophical Society*, to give local support at Rai Bareilly to the Parent Theosophical Society, whose present Head Quarters are at Adyar, Madras.

2. The object of this Society would be similar to those declared and carried out by the Parent Theosophical Society.

3. The following gentlemen be appointed as office-bearers to carry out the business of this Society.

*President*... .. BABOO RAM PERSHAD.  
*Vice-do* .... .. DR. MUNNA LALL.  
*Secretary and Treasurer* ... BABOO SARADA PRASAD MUKERJI.

4. The Bye-laws of the Parent Theosophical Society be adopted for the present.

SARADA PRASADA MUKERJI, F. T. S.

23rd October 1883.

*Secretary, pro-tem.*

### REPORT OF THE DURBHANGA THEOSOPHICAL SOCIETY, 1883.

The Society in its infancy has done very little work: but the members are trying to improve themselves. Some of them are practising mesmerism or trying to cultivate healing powers. The Society's time has been mainly devoted to the study of books recommended by the Parent Society.

The Society held its meetings regularly every fortnight; in addition to that it held two Public meetings; one to welcome Brother Kaliprasanna Mukhopadhyay, F. T. S., when he visited our Branch. At that meeting he discoursed on some Theosophical subjects, namely *Karma* and transmigration of souls, and another meeting where our Brother Nabinchandra Dutt, F. T. S., delivered a lecture on “The Universal Religion of the World and the Brotherhood of Humanity.” These two public meetings were well attended, and the public, it appears, appreciate the teachings of Theosophy.

The Society applied to H. H. the Maharaja Bahadur of Durbhanga on the 1st of May last for some grant from him to establish a Library of Theosophical Books and Magazines, a Sanskrit school, and a Sunday school to teach moral lessons to boys. In reply to that memorial, His Highness has been pleased to grant us a set of Books and Magazines to form the nucleus of the Library of our Society. The books the Society expects to get soon, and it intends to draw the attention of H. H. the Maharaja Bahadur to the other clauses of the Memorial presented to him on the 1st of May last.

The best thanks of the Society are due to H. H. the Maharaja Bahadur of Durbhanga for taking a lively interest in the welfare of the Society.

By order,  
 KALIPADA BANDYOPADHYAY,  
*Secy. Durbhanga, T. S.*

DURBHANGA THEOSOPHICAL SOCIETY'S OFFICE,  
 The 18th October, 1883.

### THE NELLORE THEOSOPHICAL SOCIETY.

In pursuance of a notice issued by the Theosophical Society, a Public Meeting was held at 4 P. M., on the “Vijadasami” day (11th October 1883) to open a pure Sanskrit school in Nellore Town. Such an Institution unconnected with the existing English schools, where also Sanskrit education is provided, has long been considered a desideratum. M. R. Ry. R. Venkatakrishna Row Pantulu Garu, late Huzar Sheristadar, was in the chair, many native gentlemen and Pandits of the place besides the members of the Society were present.

The Proceedings commenced by Mr. Aravamudu Iyengar, F. T. S., reciting some Sanskrit verses in praise of “Sarawati” (goddess of knowledge). The object of the meeting was then explained by him to the assembly in Telugu, after which a dis-

discussion followed thereon among the gentlemen and Pandits present. The general opinion was in favour of the opening of the school. The Chairman then addressed the meeting, warmly sympathizing with the movement and declared the school open.

A Pandit (Vedam Aswaddha Narayan Sastry,) who had been previously engaged by the Society, immediately commenced his work with seven boys.

Flowers and *pan* having been distributed, the meeting dispersed.

It is the intention of the Society to engage two more Pandits in course of time, and the school is already 16 strong, (on the 13th).

V. SASHIAYER, V. P.  
Nellore, T. S.

## THE MAYAVERAM THEOSOPHICAL SOCIETY.

### RULES AND BYE-LAWS.

#### I. The objects of the Society are :—

- (i.) To cultivate a feeling of Universal Brotherhood.
- (ii.) To encourage the study of Sanskrit Literature and Aryan Philosophy.
- (iii.) To promote the moral well-being and the spiritual interest of the members especially and of our countrymen as far as it lies in the power of the Society.
- (iv.) To cultivate and promote as far as practicable a knowledge of the hidden laws of nature and psychical powers latent in man.

2. Any fellow of the Parent Society or one of its branches may be admitted as a fellow by the President and in his absence by the Vice-President and not less than five members.

3. Every candidate (who is not already a member either of the Parent Society or of any of its branches) for admission, shall be recommended by two of the fellows of this Society. Admission shall be made at a general meeting attended by not less than  $\frac{2}{3}$ ds of its strength. Candidates securing  $\frac{2}{3}$ ds of the votes of the members present, shall be declared duly admitted. Every candidate so admitted shall pay an initiation fee of 10 Rupees to the Parent Society, unless exempted from payment at the recommendation of the Society, and he shall be duly initiated by the President or by a fellow empowered by the President on that behalf.

4. Every member shall pay ordinarily in advance a monthly subscription of not less than two annas; but the President for special reasons is empowered to exempt any member from such payment.

5. Members will be at liberty to present the Society with any donation of cash, books or any other article as property; no member shall be compelled to pay such donations.

6. The affairs of the Society shall be conducted by a managing committee consisting of a President, two Vice-Presidents, a Secretary who is also the Treasurer for the present and three members all to be elected by ballot annually. The election will be on the 1st day in September every year. Retiring officers are eligible for re-election; and if any vacancy occurs in the mean time it will be filled up by election at a special general meeting.

7. The ordinary meetings of the Society shall be held fortnightly on sundays at 3 P. M.

8. One of the Vice-Presidents shall preside at a meeting if the President be absent; the meeting shall elect a chairman from among the members present if the Vice-President be also absent.

9. If the President or one of the Vice-Presidents, or at least 4 members desire, the Secretary shall convene extraordinary meetings on any day. Notice of such extraordinary meetings shall be given by the Secretary to all the members on the day previous to or on the day of the meeting. Such notice shall contain a list of subjects to be considered at the meeting.

10. All questions at the meeting shall be decided according to the opinion of the majority of the members present, the chairman having a casting vote.

11. Any three members shall form a quorum at a meeting.

12. All the resolution papers, all questions discussed and determined shall be recorded by the Secretary.

13. Any member is entitled to deliver a lecture written or oral at a meeting on any subject pertaining to Theosophy, and intending lecturer shall name the subject at the immediate previous meeting.

14. No outsider shall be admitted to the meetings of the Branch Society.

15. Lectures in Sanskrit or Tamil may be allowed by the President, to be delivered if the subject is such as to tend to the advancement of the objects of the Society.

16. The Secretary shall keep an account of funds and shall submit a report of the financial condition of the Society quarterly to the managing committee and annually to the general meeting. The Secretary shall also be the custodian of the books and other properties of the Society and the circulars of the parent Society.

17. Such of the Theosophical books and periodicals as may be selected by a majority of members, shall be sent for by the Secretary.

18. Any member wishing to sever his connection with the Society may do so by a written notice to the President, but such severance shall in no way relieve him from the solemn engagements into which he has entered to maintain absolute secrecy as to all matters connected with the society which have been communicated to him with the intention that they may not be revealed.

19. Any member conducting himself in a manner inconsistent with the rules, objects and dignity of the Society shall in the first instance be warned by the Society and if such warning be unheeded such conduct will be punished by expulsion, or otherwise as to the Branch may seem fit. If however the President-Founder should reverse the decision on appeal, it shall be binding on the Branch.

20. The above Bye-Laws may be modified and additional laws may be framed from time to time as occasion arises, with the consent of the majority of the members.

21. Any member who absents himself from 4 consecutive meetings without a written valid excuse, shall be dealt with in such a way as the Branch may see fit.

A. G. HARI RAO,  
Secretary.

8th October 1883.

To

GALLE, 17th September 1883.

DAMODAR K. MAVALANKAR, ESQUIRE, F. T. S.,

Manager of the "Theosophist."

MY DEAR SIR AND BROTHER,

The first year since the creation of the "Buddhist National Fund" having expired on the 2nd instant, a General Meeting was convened on the 3rd idem, and the annexed report of the Secretary was read and adopted, and Members for the Board of Managers for the current year were elected, a list of whose names is hereto appended. It was also resolved and unanimously carried that Mr. Gregoris Edrewere, the Secretary of the Board of Managers and of the Society, be as a mark of our sense of gratitude and esteem for his indefatigable and earnest discharge of duties, presented with a Gold Medal studded with precious stones with a suitable inscription, at the expense of the Society.

Yours fraternally,

G. C. A. JAYASEKARA,  
President, Galle Branch.

List of the Board of Managers of the Southern Province National Buddhistic Fund, for the 2nd year, from 3rd September 1883, to 2nd September 1884:—Messrs. G. C. A. Jayasekara; D. O. D. S. Goonesekara; Greg. Edrewere; Sinnotchy Perera Abeywardane; S. S. Jayawickrame; P. E. De Silva Ponnamparuma; Don Dinna Subasinghe; Don A. A. W. Goonesekara; Thomas Perera Abeywardane; C. F. S. Jayawickrame; Don Hendrick Madanayake; Colamba, Muhaidiranige Arnolis de Silva; Kalahé Patiranage Babapoochanny; Don Hendrick de Silva Gooneratne; and Akme-mana Acharige William.

 GREG. EPREWERE, Secretary, S. P. N. E. F.  
 GALLE, 3rd September 1883.

Personal Items.

Colonel H. S. Olcott delivered a lecture on "The Evils of the present day and how to remove them" in the Institute Hall, at 6 p. m., on Monday, the 12th November at Aligarh; and a lecture on "Theosophy and Mesmerism" at the premises of Lala Sahib Singh Hulas Rai, Rais of Sudder Bazaar Meerut Cantonment, on the 16th November 1883. He also lectured on the 19th and 20th November at 6-30 p. m. at his own camp, Parade ground, opposite Fort, Lahore.

Mr. W. T. Brown, F. T. S., B. L., deputed by the President-Founder, delivered a lecture on "Theosophy, its Aims and Objects," at Rawalpindi on the 18th November.

We have much pleasure to announce that a weekly piec paper in Hindi has been established at Bhagalpore under the conduct of our Brother, Babu Ladli Mohan Ghosh, to disseminate a correct interpretation of the Puranas.

M. R. Ry. A. Theagaraja Iyer, Assistant Secretary of the Madras Theosophical Society, is practising mesmerism with some success. Those interested are referred to the notice appearing in the Advertisement columns.

We are happy to announce the safe return from Europe of our Brother H. H. Dujiraj, Thakur Sahib of Wadhwan.

At a meeting of the Bellary Municipal Commission held on the 18th instant, Mr. A. Sabapathy Moodelliar Avergal, President of the Bellary Theosophical Society, made a free gift of a bungalow and land measuring about 27 acres, worth Rupees 20,000, to the Municipality for the use of the Civil Dispensary. Mr. Goodrich, the Collector, who presided over the meeting, warmly thanked Mr. Sabapathy Moodelliar for his public spirit and enlightened liberality on behalf of himself and the Municipality.

Says the *Indian Mirror* of 28th September 1883:—  
 A native of Joragram informs us that Babu Lolit Mohun Roy, F. T. S., Zemindar of Ohukdighi, has distinguished himself by several acts of charity, and has earned the gratitude of the people of Chuckdighi. The Saroda Prasad Institution of that place has been thoroughly remodelled under his wise supervision. Some fifty poor students of the said Institution are being supported at his own expense. Not long ago, "by the sudden and premature death of a gentleman of Joragram, a village, two miles distant from Ohukdighi, the family of the deceased person was reduced to such lamentable extremities that his old mother and his widow were about to have recourse to begging from door to door. Babu Lolit Mohun has magnanimously undertaken charge of supporting the whole family."  
 Mr. T. C. Gopal Singh, Assistant Secretary, Todabetta Theosophical Society, writes:—

"I succeeded in mesmerising a woman who was very severely suffering from a tumour in her neck. She was unable to eat or drink water. I only mesmerised her for ten minutes and she fell asleep, and after fifteen minutes I mesmerised her. She got up at once; and the tumour disappeared!"

We are glad to learn that through the exertions probably of our friend and one of the oldest officers of the Theosophical Society, Professor Alex. Wilder, M. D. of New York something like a sister Association to our Society has been established in that city. We subjoin two of the articles of Constitution of the American Akademie, as the new Society is called, and wish it every success:—

ARTICLE II.—OBJECTS.—The purpose of this Association is to promote the knowledge of Philosophic Truth and to cooperate in the dissemination of such knowledge, with a view to the elevation of the mind from the sphere of the sensuous life into that of virtue and justice, and into communion with the diviner ideas and natures.

ARTICLE III.—MEMBERSHIP.—Any person in sympathy with the purpose of this Association may become a member by nomination of the Executive Committee, the unanimous consent expressed by ballot of those present at a regular meeting and signing, either in person or by authorization, this Constitution.

Dr. F. Hartmann, M. D., F. T. S. of Colorado, U. S. A, the delegate of our American branches at the ensuing anniversary is expected here by the next Mail.

The President-Founder with the brothers with him will shortly complete his North-Western tour and is expected back at the Head-quarters towards the middle of the month. Mr. Damodar K. Mavalankar comes back direct from Lahore.

ANANDA BAI JOSHI'S RECEPTION.

GREETING TO THE BRAHMIN LADY WHO WILL BECOME A PHILADELPHIA STUDENT.  
 (Philadelphia Press.)

The parlors of Dr. Rachel L. Bodley, Dean of the Woman's Medical College, at 1400 North Twenty-first Street, were crowded yesterday afternoon with ladies and gentlemen, assembled to meet Mrs. Ananda Bai Joshi, a Brahmin lady, of Serampore, Hindustan, who has come to this country to study medicine, in order that the women of her Native land may be attended by skilled and educated physicians of their own caste.

Mrs. Joshi, a plump little woman but eighteen years of age and of a decidedly brown complexion, stood in the centre of the drawing-room, and shook hands with the guests as they were presented. She was dressed in her full Native costume with the characteristic sari, or a silk scarf of Pompeian red, bordered with gold thread, forming the overdress, covering the shoulders and bust, and if necessary, the head. This garment is about ten yards long, and has no fastening. The lady takes one turn about her waist, and then lets pleat after pleat drop to her feet, tucking it in each time at her waist, the mass of folds thus forming a skirt. The end is brought around the shoulders, leaving the left arm bare, and in her native land is carried over the head, and covers the face. Underneath the sari and visible on the left shoulder was a black silk waist with a V-shaped corsage. The sari was fastened at the breast by a beautiful brooch set with large pearls. In her ears were ornaments of gold filigree, set with pearls, and at her throat were

necklaces of gold filigree and pearls. Her bracelets were of jade, a sacred green stone, carved into rings. A wreath of jessamine was woven in with her hair, which was jet black and parted a little on one side. Her hands were encased in kid gloves, so that she could touch the hands of a stranger without being contaminated. Between her eyes was a peculiar mark in purple and red paint which denoted the caste of this lady to be a Brahmin.

Mrs. Joshi's husband is a prominent member of the Brahma Samaj or Progressive Hindu Society, of which Ram Mohun Roy was the founder, and Keshub Chunder Sen is the present leader. This society has about 1,500,000 members, and is striving to lift the Hindu race from its present religious condition. The idea of 3,000 gods is one of the many things that the society is trying to overthrow. In consequence of belonging to the Brahma Samaj, Mrs. Joshi is enabled to do many things that she would otherwise be unable to do, but she must still, even in this country, respect certain customs, in order not to lose her caste. She must live in a room by herself, and must prepare her own food until a Hindu woman comes to serve her. The little woman is quite intellectual, being able to speak seven languages—Hindustani, Sanskrit, Bengali, Mahratti, Canarese, Gujarati, and English. She talks English with ease, and expressed herself as being greatly touched at the kindness shown by her new friends.

Among those present were Miss Mary Jean, Mrs. Mumford, Rev. G. D. Boardman, D. D., Judge, W. S. Peirce, Dr. Atkinson, Rev. R. M. Luther, Secretary of the American Baptist Missionary Union, Mrs. J. F. Lean, W. W. Kean, M. D. and many graduates of and instructors in the Woman's Medical College.

EDITOR'S NOTE.—It affords us sincere pleasure to find honours so deservedly showered on that excellent young lady, Mrs. Ananda Bai Joshi, an ornament of the Calcutta "Ladies Theosophical Society." At the same time, with an eye to the dismal fate that befell poor Pandita Rama Bai, in England, we cannot help shuddering when we find the long string of *Reverends* among the citizens who greeted our little friend in the Quaker city. What a rush of candidates there will be to save a "heathen soul" from eternal perdition! What sweet persuasions and eloquent oratory are in store for the poor unwary victim! In the meanwhile we may as well note a few glaring—inaccuracies that have crept into the above extracted report. We are not told whether it is Mrs. Joshi who informed the reporter that she belonged to the "Brahmo Samaj; whose leader is Keshub Chunder Sen?" We have reasons to doubt it, for we never knew her addicted to false statements and that we find several such in the latter report. In the first place and so far as we knew, neither Mrs. Joshi nor her husband ever belong to the Brahma Samaj, certainly not to the *New Dispensation* of Keshub Babu. Secondly, the prophet of the Lily Cottage is wrongly styled the leader of the Brahmos who all decline the honour with the exception of a handful of enthusiasts. Thirdly, he has not 1,500,000 followers, since all the three divisions of the Brahma Samaj put together, *i. e.*, the *Adi*, the *Saddharan* and the *New Dispensation* Samajes cannot show on their muster rolls even a hundredth part of the number given above. We were told in Calcutta by a near relative of the Babu—that the direct followers, or the *apostles* of Babu Keshub could be counted on the ten figure—they do not exceed fifty men. We wonder which of the Reverends present gave the information. Mr. Joshi is a staunch Theosophist, and so is Mrs. Joshi we hope.

#### OBITUARY.

ONE more useful and beloved Brother-worker has dropped out of our Society. We regret extremely to have to announce the death of our valued colleague, BABU PEARY CHAND MITTRA, late President of the Bengal Theosophical Society, Calcutta. The melancholy event took place on Friday, the 23rd November last. He was a member of our Society ever since its foundation in New York, and was one of our first supporters in Bengal. In him India has lost a worthy son and Psychology a devoted student and champion. Many and various were his contributions to Theosophical and Spiritualistic literature. An excellent, sincere and learned writer, during his long and useful career his exertions were indefatigable in the cause of every reform whose truth and necessity were carried home to his mind. He also laboured hard for the prevention of cruelty towards the brute creation, as no one can be a true psychologist without having compassion for and feeling himself bound to protect the inferior creation, which, as he knows, have souls just as we have, though not so developed. Thus, he was all along a prominent member of the Calcutta Society for the Prevention of Cruelty to Animals, and was latterly the Honorary Secretary of that humane body. He laboured zealously for the spread of female education, and has, as a writer, left his mark on the literature of Bengal. Metaphysical studies also to a certain extent are indebted to his able publications. The news of his death will be received by his numerous body of friends and admirers, here and abroad, more with sorrow than surprise, for his death was long ago expected, he having attained the patriarchal age of three score years and ten and been in failing health for some time.

MADRAS, ADYAR.

1884.

(Price, Single Number, Eight Annas.)

MY DEAR BROTHERS,

The Cardinal principle of my movement in the Hindu Sabha is that Hindu social civilisation and religious institutions are or should be conformable to theosophical truths, and that the Clergy should be first reconstituted and honored so as to improve the beliefs and practices of the Laity. I recommend that the Hindu Sabha and General Council and a Pandit Priest Convocation should also meet at the Anniversary of the Theosophical Society, and I shall arrange for accommodation and food of the Pundits, in consultation with the President-Founder of that Society. Kindly reply at once what help you will give for this purpose and for honoring the Pandit Priests. I think that Astrologers whose assistance is so necessary to determine day, hour, horoscopic agreement, *Karma phala*, &c., &c., may have five prizes of Rs. 30, 25, 20, 15 and 10, and that other classes of Pandits as Logicians, Grammarians, Pauranikas with Ghanapatis and Purohits three prizes each of Rs. 15, 10 and 5.

A. SANKARIAH,

*President-Founder, Hindu Sabha.*

**The Constitution and Progress of the  
Hindu Sabha revised and repub-  
lished by the President-Founder,**

*December 1883.*

**THE HINDU SABHA.**

*Inaugurated Kali Era 4802.*

*Allied to the Theosophical Society.*

*General Object.*—Hindu national unity and progress.

*Specific Object.*—i. To adjust the beliefs, practices and institutions of the Hindus with the letter and spirit of the Vyasiyam or the Arsham (*i. e.*, teachings of the Rishies).

ii. To promote social and religious reforms with the support of Pandits and priests of standing.

iii. To promote good will amongst the sects and castes of India.

*Canons of the President-Founder.*—i. Any one apparently conforming to the Vyasiyam or Arsham of any clan or caste, is a Hindu.

ii. English-educated Hindus promoting the aforesaid objects and all Hindu Theosophists, are fit to be members of the Parent Sabha, and a Vice-President represents at least four members.

iii. Toleration of existing and newly rising principles and observances, whether Loukika or Vaidika under the denomination of clans.

iv. All Hindus, whether educated in English or not, may associate in local branches for objects consistent with those of the Sabha: The Secretaries of the Local Branches will be *ex-officio* councillors of the Sabha.

v. The unity and progress of the Hindu nationality is consistent with fraternal regards for all races and creeds.

**The General Council of the Sabha  
consists of Vice-Presidents and  
Secretaries.**

M. R. Ry.

Vice-President,

1. S. Ramasawmy Iyer, B. A., District Registrar, Madura.
  2. A. Cupiah, Pleader, Cuddapah.
  3. H. Subbaraya Iyer, Sub-Judge, Cochin.
  4. V. Ramen Menon, Government Pleader, Calicut.
  5. K. P. Sankara Menon, B. A., B. L., High Court Vakil, Mylapore.
  6. M. Nataraja Iyer, District Registrar, Cuddalore.
  7. A. S. Jugga Row, Daba Gardens, Vizagapatam.
  8. T. V. Seshagiri Iyer, B. A., Triplicane, Madras.
  9. Sathu Seshayya, B. A., Provincial College, Combaconum.
  10. C. Sriranga Chariar, District Munsif, Oodumulpet.
  11. C. V. Gurusamy Chettiar, Black Town, Madras.
  12. Kuppusamy Naidu, Dubash, Pondiarpet, Madras.
  13. Dharmalinga Chettiar, Railway Stn. Master, Salem.
  14. Narayanasawmy Iyer, Taluk Sheristadar, Erode.
  15. K. Rama Row, Hd. Master High School, Kurnool.
  16. J. Narasimhulu Naidu, Vakil, Chittoor.
  17. C. Lakshmiopathy Naidu, Barrister-at-law, Srirangam.
  18. Krishna Iyengar, District Court Vakil, Trichinopoly.
  19. C. Sundram Sastry, B. A., Sub-Registrar, Tripatore.
  20. V. Dorasamy Iyer, Dy. Collector, Bellary.
  21. P. Subramanya Iyer, Sub-Registrar, Madura District.
  22. T. Ramachandra Row, B. A., B. L., District Munsif, Trivellore.
  23. A. R. Venkatarama Iyer, B. A., B. L., High Court Vakil, Negapatam.
  24. M. Narayanasamy Iyer, B. A., Prov. College, Combaconum.
  25. V. Picboo Iyer, Head Master, Palghat.
  26. G. Sriramanna, Peddapore, Godavery District.
  27. S. Venkatesa Iyer, Stanes and Co., Coimbatore.
  28. Tiruvenkatasamy Mudaliar, Ootacamund.
  29. R. Padmanabha Charier, B. A., Dewan's Office, Trevandrum.
  30. Rangasamy Iyengar, B. A., Sub-Judge, Mysore.
- A. Cuddapa Branch.*
- (1) N. G. Gopalier, B. A., District Court Pleader (Secy.)
  - (2) M. Varadaraja Pillay (Asst. (Secretary))
- B. Our Aryan Fore-Father's Society Branch, Tinnevelly.*
- (1) S. Periasawmy Pillay (Secretary.)
  - (2) A. K. Krishna Iyengar (Asst. Secretary.)
- C. The Karala Dharma Vichara Branch, Trichoor.*
- (1) A. Velu Mannady Nair, F. T. S., Trichoor (Secretary.)
- D. The Peddapore Telugu Branch.*
- (1) G. Sriramanna, Peddapore (Secretary.)
- E. The Remarriage Friends, Madras.*
- (1) P. Ghentsal Row, Mylapore (Secretary.)
- F. The "No-Remarriage" Sabha, Madras.*
- (1) P. Gooroomoorthy Iyer, High Court Vakil (Secretary.)
- G. Hindu National Association, Saidapet.*
- (1)

*N. B.*—The Parent Hindu Sabha, which I have the honor of having founded, just registers and reconciles and focuses the activities of all Hindu Associations.

## **SPECIAL NOTICE.**

---

OWING to a heavy pressure on our space by the proceedings of our Eighth Anniversary, we regret we could not give, this month, some very interesting accounts of phenomenal occurrences and facts, which it is our intention to place every month before the readers of this Journal. As this Journal is intended mainly for the benefit of our members, who can obtain it much more cheaply than outsiders, it will contain every month, at least one or two stories based upon psychological truths, and also contributions from the pen of eye-witnesses to the wonderful phenomena now brought to public notice through the instrumentality of the Theosophical Society. Many of our brothers and friends have till now been reluctant to put in

a publication, likely to fall into the hands of profane readers, accounts of what to some of them are most sacred occurrences. The change in our programme in regard to the *Supplement* has, however, succeeded in breaking a deal of their reserve, and we may now hope and give the assurance to our readers that the future numbers of this Journal will form an interesting and instructive contribution to Theosophical literature; and the reports of the work of the Parent Society and the Branches will as heretofore keep our Fellows informed of the practical results achieved by the Society. In short, it will always be our aim to make this Journal as interesting and useful as possible to both exoteric and esoteric Theosophists.—*Ed.*

**THE SECRET DOCTRINE.**  
**A NEW VERSION OF "ISIS UNVEILED."**

**PUBLISHER'S NOTICE.**

NUMEROUS and urgent requests have come from all parts of India, to adopt some plan for bringing the matter contained in "Isis Unveiled," within the reach of those who could not afford to purchase so expensive a work at one time. On the other hand, many, finding the outlines of the doctrine given too hazy, clamoured for "more light," and necessarily misunderstanding the teaching, have erroneously supposed it to be contradictory to later revelations, which in not a few cases, have been entirely misconceived. The author, therefore, under the advice of friends, proposes to issue the work in a better and clearer form, in monthly parts. All, that is important in "Isis" for a thorough comprehension of the occult and other philosophical subjects treated of, will be retained, but with such a rearrangement of the text as to group together as closely as possible the materials relating to any given subject. Thus will be avoided needless repetitions, and the scattering of materials of a cognate character throughout the two volumes. Much additional information upon occult subjects, which it was not desirable to put before the public at the first appearance of the work, but for which the way has been prepared by the intervening eight years, and especially by the publication of "The Occult World" and "Esoteric Buddhism" and other Theosophical works, will now be given. Hints will also be found throwing light on many

of the hitherto misunderstood teachings found in the said works. A complete Index and a Table of Contents will be compiled. It is intended that each Part shall comprise seventy-seven pages in Royal 8vo. (or twenty-five pages more than every 24th part of the original work,) to be printed on good paper and in clear type, and be completed in about two years. The rates of subscription to be as follow:—

	Indian.	Foreign countries.
If paid Monthly ... Rs.	1 4 0	3 shillings;
„ „ Quarterly ... „	3 0 0	8 „
„ „ Half yearly .. „	6 0 0	16 „
„ „ Yearly ... „	10 0 0	27 „

Subscriptions payable invariably in advance, and no name entered on the list nor Part forwarded until the money is in hand. All applications to be made and sums remitted to the "Manager, Theosophist Office, Adyar (Madras), India;" at which office money orders must be made payable and always in his favour. In making remittances it should be noted that no other amount should on any account be included in the drafts or money orders, except that intended for this work. Should nothing unforeseen happen, and should a sufficient number of subscribers be registered, the first Part will be issued March 15th.

## JOURNAL OF THE THEOSOPHICAL SOCIETY.

VOL. I. No. 1.

MADRAS, JANUARY, 1884.

No. 1.

## EXPLANATORY.

WITH the present number begins the "JOURNAL OF THE THEOSOPHICAL SOCIETY," hitherto known as the *Supplement to the Theosophist*. As intimated in the December issue of the magazine, it is to be published solely for the benefit of our members, particularly for the poorer ones who cannot subscribe for the main journal. It will enable them to learn, for the small sum of Rs. 2 annually, everything that takes place in the Society, to help on its progress and to understand something of the philosophy it teaches. From this initial number, a good idea may be had of what can be made of the late *Supplement*.

As stated last month, it will not be sent any longer *gratis* as a *Supplement* to all the subscribers, but only to such of them as are our members. Exception to this general rule as to *non-theosophists* will be made in the cases of old subscribers, if they ask for it before the first day of February. Other Theosophists than the regular subscribers will be charged Rs. 2, (India and Ceylon) in advance for the 12 numbers, postage included, while, to *non-theosophists* the charge will be Rs. 5 (India and Ceylon). For foreign subscribers to the *Supplement* only, the charge will be 6s. for members, and 12 for *non-theosophists*. Frankly speaking, we would prefer that no *non-theosophist* should apply, as we do not care to have the record of our Society's affairs thrown broadcast upon the world. But, allowing privilege to a few, we have to give a chance to the others.

It is evident, at a glance, that we could not go on giving year after year, twelve such bulky *Supplements*, free of charge to every subscriber. And the expenditure was useless in the cases of the large majority who, not being as yet registered members, had a personal interest only in the general questions, involved in the Asiatic philosophies and sciences. The price to the Fellows has been put so low (2¼ annas per month) as to bring it within the means of the poorest; and if hereafter our liberality is not availed of very largely, it will be only too evident what cash value the Society's work has in the eyes of its members.

## THE WORK OF THE BRANCHES.

## MEMORANDUM.

NOTWITHSTANDING the repeated protests of the Parent Theosophical Society, there does yet seem to linger in the minds of individual members and of some Branches, a tendency to look upon the whole movement as a school where *Yoga Vidya* and Occultism may be learnt in a much more expeditious and easy way than heretofore. This arises out of an ignorance of the laws of Occult Institutions and those governing psychological development. Since the commencement, the Theosophical Society has tried to impress the fact that the Laws of Nature are immutable; and no living being, however high and powerful, can ever alter them to suit the convenience of students. The attempt, therefore, which is now being made is not to carry on the vain and profitless task of finding a short cut to *Brahma Vidya*, since this is an impossibility, but to revive once more its knowledge, and thus to stimulate a true aspirant to adapt his life and thoughts to that standard which will better him and lead him gradually to such ways as run their courses to the Divine Wisdom. It will thus be seen that the Theosophical Society promises no Teachers, no Gurus, to take every member, upon joining, under their special charge. Mr. Sinnett was distinctly warned on this point when he asked for the assistance of some adept as the guiding genius of the Simla Eclectic Theo. Socy., as will be seen on reference to his *Occult World*. No doubt there are individual members who have been fortunate enough to be accepted as *Chelas*, but their acceptance was due not to the fact of their being Fellows, but because they have been living the life and have voluntarily passed through

the training and tests, enjoined upon aspirants for occult knowledge of every age and nationality. In their case the Theosophical Society was only the means of giving them the conviction of their intuitive beliefs, and thus urging them to follow the promptings of their inner consciousness. For the comparatively easy mode they thus had of gaining the conviction, they have to make up by helping the building up of the Theosophical Society and putting it on a secure basis. This explanation ought to make it clear that what the Society expects from all its Branches and individual members, is co-operation and help in its grand task of uniting the East and the West, the North and the South, in a Scientific Brotherhood armed against discussion and consequent failure by the principle of mutual Toleration and mutual Intellectual Sympathy. It is an unthinkable proposition that any man with average intelligence cannot contribute his quota towards the realization of this noble scheme. If each man were but to do his duty to search, to investigate, to study, to digest, and join with his fellow-men, actuated by the same noble aspirations, in giving to mankind the benefits of their labour, the day would not be very far off when the Masters of Occultism might find the necessary conditions to enable them to once more live in the world as openly and freely as did their predecessors of times long, long gone by, and give to such a prepared people the benefits of THEIR knowledge. Until that blessed day comes, a duty is before us: we have to hasten its approach. And this cannot be done by merely joining the Theosophical Society and without preparation, training or qualifications, expecting the Adepts to place within our reach tremendous weapons of Power, FOR KNOWLEDGE IS POWER, which in the hands of the ignorant and the wicked is fraught with dangers to their holders and to Humanity at large. Enough has already been given out to bring home to any one, endowed with ordinary intelligence, fairness, and desire for knowledge—conviction of the truth of this Science and the Powers it confers upon its devotees. When once all this is clearly understood, the only question for solution is how best to promote the Cause, and thus by an unselfish effort for the good of our fellow-men and their regeneration, to fit ourselves for the higher life of a true co-worker with those who have devoted themselves to the amelioration of the moral and spiritual condition of Humanity. There are various ways of accomplishing this result, but as one man's meat is another man's poison, the Parent Theosophical Society has always endeavoured to leave the practical working of its Branches to their members, who are, or should be, the best judges of the circumstances they have to work under, and the material that can be utilized. Psychology is a vast field wherein many workers may employ themselves with advantage. The tastes of individuals must differ, but surely there can be found two or three in every Branch interested in the same subject. If a Branch divides itself into various Committees for the investigation of various subjects of Science, and communicates its results at general meetings, much good will ensue. Various articles in the *Theosophist* and other publications of the like nature might be taken up by different members, and the Society given the benefit of every individual exertion. Knotty questions arising out of such studies might be referred to the Head-quarters in the form of an article, or in any other shape which may be found best under the circumstances. Every legitimate demand for help and assistance has been, and will always be, granted by the Founders to their co-workers in this cause of Humanity. Several other matters of Reform might be undertaken by other Committees, without, of course, infringing upon any individual's or people's religious or social rights. For those who are capable of an unselfish impulse to work for the moral and spiritual regeneration of Humanity, there is plenty to do. And it is men of this stamp that are the pillars of such a grand movement, which must necessarily depend upon their co-operation and zeal for its success.

These are the lines upon which Branches are expected to be organised and worked.

By order.

ADYAR (MADRAS), }  
15th December 1883. }

DAMODAR K. MAVALANKAR,  
Joint Recording Secretary,  
Theosophical Society.

#### COLONEL OLCOTT AT MORADABAD.

COL. H. S. OLCOTT with seven other gentlemen, all Fellows of the Theosophical Society, arrived at Chandausi on his way to Moradabad on the evening of the 9th November last, and was received at the Railway Station by the Vice-President of our Branch, who had gone there to arrange for the entertainment of the party, which took place in the garden of Ch. Benarsi Dass, also a Fellow of the Society. After the party had rested, the Colonel was presented with the following address of welcome by the members and citizens of Chandausi who had collected there for the occasion.

"I, on behalf of the members of the "Atmabodh Theosophical Society" and the citizens of this station, have the greatest pleasure in addressing you with the object of tendering our best thanks to yourself and your party for accepting our humble entertainment and undergoing so much inconvenience in paying us a visit which we had long hoped for. Although we had long since heard much of you, we have had no opportunity of paying our personal respects to you. We are, therefore, very glad to see our long-cherished desires fulfilled at the moment which we regard as the best in our life and which is devoted to its best and highest purpose.

"But we are sorry to feel that the auspicious and joyful occasion is very transitory, and the time to give full vent to our feelings is very limited. We feel greatly indebted to you for your ceaseless and untiring labour in promoting the cause of human happiness and sowing the seeds of universal brotherhood of humanity so sadly needed in these parts of our degenerated Aryavarta, once a country of which fine culture as could have put to shame all the discoveries and philosophies of the West, but, alas, through successive ages of disturbed peace, totally ruined and deprived of its grandeur!

"It is, therefore, to our great pleasure that we have now been illuminated with this light of Theosophy which makes us believe with full confidence that there are yet hidden treasures of knowledge in this country which can be gained, if we but try to search after them with honest labor and persevering mind."

To this Colonel Olcott replied in a short, touching speech which was translated into Urdu to the audience, and was appreciated by all present on the occasion. After the speech was over, Colonel Olcott and party left for Moradabad, and reached there at 11-20 P.M. There they were enthusiastically received at the Railway Station by the members of our Branch and a few other gentlemen of the city, and just after alighting from the Railway carriage were presented with the address given below:—

"We, the members of the Atmabodh Theosophical Society and the citizens of Moradabad and its vicinity, take it a great pride to welcome and receive yourself and company in our midst. Our tongue is not eloquent enough to sing your praise for steadiness of purpose, continuous exertions to improve humanity, and strict observance of truth and justice which adorn your character. But we feel ourselves under heavy obligation to you when we think of the trouble you have taken in paying us a visit, which though the first will not be the last, as we hope to see you more and more, now that the bonds of union and fraternity have been closely fastened between you and us.

"Lastly—words are not sufficient to express our feelings of joy and gratefulness in taking this auspicious occasion as a great boon conferred upon us, for which we cannot but offer our cordial and united thanks."

From the station the party drove in carriages to the Kothi of Quazi Tajammul Hussain, a *reis* of the station, who had especially decorated and illuminated the building for their reception. On the morning of the 10th November the gentry of the district came to pay the Colonel a visit (as we had previously notified his coming and time of meeting). In the afternoon he called the boys of the Sanskrit school, established by our Society and was much pleased to hear the young children read Sanskrit verses. He distributed books and

fruit to all the boys who went away merrily receiving the *Inam* from the Sahib. In the evening he proceeded to the house of Raja Rai Kishen Kumar Bahadur, a great Zemindar and *reis* of the place, where he was received with expressions of joy by a large and enthusiastic audience who, long before the time notified, had assembled there in a crowd to see and to hear Colonel Olcott. We had already distributed copies of translation in Urdu of the aims and objects of the Theosophical Society to all present on the occasion. On taking his seat Colonel Olcott was introduced to the audience by Babu Baij Nath, a leading pleader of the station. He then rose and delivered an admirable lecture in his usual eloquent and masterly style. He strongly dwelt on the importance of the study of Aryan literature and science, proving by the discoveries of the greatest philosophers of the West their inferiority to our ancient scientific discoveries. He also sincerely regretted the untimely death of Swami Dayanand Saraswati, the founder of the Arya Samaj, the great reformer and the most eminent Sanskrit scholar, for whatever might have been the differences between the Theosophical Society and the Arya Samaj, and whatever the opinions of the orthodox Pandits in regard to his interpretations of the Vedas, no two opinions could exist concerning the fact that the Swami was a thorough-going Aryan and a true patriot. The lecturer felt much aggrieved in learning that other great men who had the reformation and welfare of Aryavarta at heart, such as the leaders of various other associations, were prevented from doing any substantial good to the country by one cause or another. He ended by reminding his audience that those were matters over which one had no control, and thereby we should not be discouraged, but should try our best to promote and further the cause of Sanskrit literature and science. After the speech was over, it was translated into Urdu for the benefit of those unacquainted with English by our worthy and learned Brother, Pandit Pran Nath, the President of the Satya Marga Theosophical Society of Lucknow, and greatly appreciated. When the Urdu speech was over, Raja Rai Kishen Kumar Bahadur offered a donation of Rs. 100 for the furtherance of the cause of Sanskrit education; many other gentlemen also came forward, and about Rs. 400 were subscribed on the spot. After a few minutes the audience were dismissed, and the Colonel with his party came back to his Kothi, where candidates were formally admitted into the Society. On the 11th he received visits from several sympathising gentlemen, and in the evening he left for Aligarh. He was accompanied to the Railway Station by the Fellows of our Branch, who had all along been conversing with him and who extremely regretted that his stay was necessarily so short. Indeed, he left many loving hearts behind. On the whole, his visit to us proved a great success, as it has thoroughly convinced the people of the importance of the objects of the Theosophical Society. In short, for two days Theosophy was the only subject of conversation in the city.

ESHRI PERSHAD, F. T. S.,  
President, Atma Bodh Theos. Socy.

#### COLONEL OLCOTT AT ALIGARH.

In compliance with an earnest request from the Theosophists of the place, Colonel H. S. Olcott, the President-Founder of the Theosophical Society, accompanied by Mr. W. T. Brown, B. L. (Glasgow), F. T. S. of the London Lodge T. S., Mr. Damodar K. Mavalankar, Joint Recording Secretary of the Theosophical Society, Mr. L. Venkata Varadarajulu Naidu, Honorary Secretary to the Head Quarters Fund Committee, and Mr. Toke Narainaswamy Naidu, F. T. S., of the Madras Branch, arrived here on Sunday, the 11th November, at 11-55 P. M. On the Railway platform the party was received by the members of the Branch, and a number of respectable and educated gentlemen of the station. They were thence conducted to a suitable bungalow, well-furnished for their accommodation.

The whole of the following day was spent by the Colonel in receiving visits from a large number of gentlemen—both of the town and the outlying district—who had long been anxious to hear from the lips of the President-Founder the aims and objects of the Society, and the work it has accomplished. In the evening, at 7 o'clock, some of the influential Hindu gentlemen accompanied the Colonel and his party to the Institute Hall, where a large and appreciative audience, principally composed of Hindus and Mussalmans;

with a fair sprinkling of European ladies and gentlemen, were waiting eagerly to hear the Colonel lecture on "The Evils of the day and their Remedy." The Chairman, Babu Jogendro Nath Chettarji, Vakil of the High Court, opened the meeting by referring to the three-fold objects of the Society, and the indefatigable and extraordinarily self-sacrificing labours of the venerable Colonel for their attainment. Amid loud and enthusiastic cheers of the assembly, the President-Founder rose and delivered *extempore* an eloquent and well-reasoned address which lasted for about two hours. In the course of his speech the lecturer pointed out that the innumerable evils, such as drunkenness, licentiousness and the like, with which the originally simple and sober people of India are sadly infected, have resulted, one and all, from the baneful influence of modern civilization, the outgrowth of the positivistic tendencies of the age, which dooms the fate of the Spiritual Ego by denying future existence, where the immutable Law of Nature metes out to every individual the results of his *Karma* on this earth. Then, after giving some undeniable scientific facts to prove the survival of the inner man after the death of the outer shell, and the independent action of the mental and spiritual principles in man, apart from the mechanism of the brain, the lecturer dwelt at length on the philosophy of the ancient Aryan Rishis. He pointed out how human beings attained divinity by a thorough study and practice of *Yoga*. He described some experiments in mesmerism which go to prove what wonderful phenomena could be manifested by "will-power", through the agency of Sensitives and Psychometers. And then in the most eloquent and pathetic words he stirred the sleeping souls of the degenerated sons of the mighty Aryans, by appealing to their sense of humanity, and by drawing their attention to the fact that their present deplorable condition was the fruit of their deviating from the path of wisdom and virtue, marked out by the holy Rishis of the ancient Aryavarta. He pointed out at the same time that their only chance of getting out of the mire and recovering their lost ground and former position lay in their strenuous efforts to revive and cultivate the sacred literature and matchless philosophy of their noble ancestors, the progenitors of all the diverse races of the earth, and teachers of the deepest philosophers of Egypt, Greece and Rome. The able lecturer resumed his seat amid a loud and prolonged cheering. He was followed by Mr. W. T. Brown, B. L. who like Colonel Olcott had forsaken his home and all, and come to India as a friend and sympathiser of the natives, and a student of the ancient philosophies of the land. Sweetly and pointedly he addressed the audience for some time, impressing upon them the usefulness of the toilsome work which the Founders have so nobly taken upon themselves to accomplish. The attentive hearers having shown by constant cheering their high appreciation of Mr. Brown's charming speech, the Chairman addressed the meeting on the importance of the advice given by the lecturers, and having urged upon them the necessity of following it, he, on behalf of the assembly, offered, in suitable terms, heart-felt thanks to the Colonel and his party for affording the audience an opportunity of seeing and hearing such good and sincere friends of India.

After the meeting was dissolved, the party, together with the local Fellows, returned to the bungalow, where some experiments in mesmerism were tried.

The next day, at 9-30 a. m., Colonel Olcott and Mr. Brown paid a visit to the Sanskrit Pátáshála at Soupal's Mandir. He was received at the entrance by Mr. Dhiraj Lal, Babu Tota Ram, Babu Mohan Lal, Lálá Sri Lal, Lálá Chiranjí Lal, and some other gentlemen, and then conducted to the garden house or Kothi attached to the Mandir. The hall of the Kothi was fairly filled by a number of respectable Hindus, who had assembled there to do honour to the occasion. Mr. Brown examined a few of the students and was much pleased to find that they had attained a fair knowledge of Logic and Philosophy.

By the evening train the Colonel and his suite left for Delhi. His brother-Theosophists and most of the respectable native gentlemen of the town assembled at the Railway Station to bid him a happy journey.

BAKHTAWAR LAL,  
Secretary,  
Aligarh Theosophical Society.

18th November 1883.

#### COLONEL OLCOTT AT MEERUT.

COL. OLCOTT, President-Founder of the Theosophical Society, accompanied by Mr. Damodar K. Mavalankar and Mr. Naidoo, arrived here by 11-30 p. m. train on the 15th instant, and was received on the platform of the City Railway Station by Babu Jwala Prasada, the President of our Branch, and a few other members. From the station the President-Founder and his companions drove to the house which was furnished for them in the city.

On the morning of the 16th, the Colonel gave instructions on Mesmerism to Babu Jwala Prasada and some other members. In the evening of the same day at 6-30, he gave a lecture on the relation between Theosophy and Mesmerism, at the premises of Lallas Saheb Sing and Holas Rai, Bankers. The lecture was attended by almost all the English-knowing residents of the city and the cantonments, and also by a few Europeans. Rai Bukhtawur Sinlia Bahadur, the Sub-Judge of Meerut, was voted to the chair. The President of the meeting in a short speech introduced Col. Olcott to the audience. The learned Colonel first gave a short history of Mesmerism. In his lecture he clearly showed how by the practice of Mesmerism the existence of the soul could be established. Under the influence of Mesmerism, while the body is dormant, the latent powers of the soul are awakened. The patient does not feel if his body is cut to pieces. He can read the contents of closed envelopes, describe things hundreds of miles away from him. All this he cannot do while in his normal state. This shows that, properly speaking, man is something other than the gross material body. Yoga was defined to be the mesmerising of oneself by oneself. After dwelling at some length on the three objects of the Theosophical Society, and on the progress it has made in the short space of these eight years, by spreading itself all over the world, and proving the usefulness of the Society by showing how hundreds of sick people are being daily cured by mesmerism, and how the divine Sanskrit language was reviving by the rapid growth and multiplication of Sanskrit schools in the country, under the auspices of the Theosophical Society, the eloquent Colonel resumed his seat. The lecture lasted for more than an hour. At the close of the lecture, the able Colonel was thanked by the Chairman on behalf of the audience, and by the Secretary of the Meerut Branch of the Indian Association on behalf of his Association.

From the Lecture Hall the indefatigable President-Founder drove to the new Medical Hall, where some new members were initiated. He returned to his quarters at about 11 p. m.

On the morning of the 17th, an oral address on behalf of the Meerut Theosophical Society was given to the President-Founder by Babu Baij Nath, B. A., the Munsiff of Meerut; and the Colonel made a short, touching reply. The President-Founder and his companions were escorted to the Cantonment Railway Station by the members of our Branch, and they left for Lahore by the Mail train of the 17th.

MEERUT, }  
The 19th Novr. 1883. } BHAGWAN CHAND,  
Secretary, Meerut Theosophical Society.

#### COLONEL OLCOTT AT LAHORE.

COLONEL H. S. OLCOTT, President-Founder of the Theosophical Society, with his staff, reached Lahore on the morning of 18th November. At the station he was well received by many friends, including Pandits of good repute and learning. H. H. Raja Harbans Singh and other Sirdars sent their conveyances to bring the party to their quarters. Pandit Govindsahaya, F. T. S., introduced all the gentlemen present to the Colonel, and all were well pleased with his gracious manner and good advice. After waiting for a few minutes, for the arrival of the down mail from Peshawar to receive Mr. W. T. Brown and Mr. L. Venkatavaradarajulu Naidu, who had been deputed to organise the Rawalpindi Branch, at the request of the members there, Colonel Olcott was conveyed to the Parade Ground (maidan) opposite the fort, where a camp of six tents and four *shamianas* had been pitched for the party.

Besides posting large notices on boards, walls and gates, letters of invitation had been sent beforehand to all the influential gentlemen of Lahore, interested in the subject. Among those who came to meet Colonel Olcott and had a talk on Theosophy and cognate subjects, may be mentioned the following gentlemen:—

H. H. Raja Harbans Singh (of Shephura); Dewan Mathura Das of Kapurthala State (who had specially come from

his State for the purpose); Lala Harichand, Judicial Commissioner, Kapurthala; Dewan Narendra Nath, *Reis*; Babu Navin Chandra Rai, Superintendent, Oriental College; Pandit Rishi Kesh, Honorary Magistrate (grandson of Pandit Madhusudan, Chief Priest of the late Mahārājā Ranjit Singh, "the Lion of the Panjab"); Lala Sewārām; Rāi Hukum Chund Bahadur, M. A.; Sirdar Dayāl Singh Majethiā, (*Reis* and Jāgirdar of Amritsar); Munshi Harsukhrāi, Proprietor of the *Kohinoor*; Hakim Bazurg Shāh; Pandit Janardun, Honorary Magistrate and Professor of Hindi Medicine in the Oriental College; Nawab Fatch Jang Khan of Jaggar; Pandit Gawi Shankar Goswamy; Lala Rattan Chaud Bary, Editor of the *Arya Magazine*; Mian Salal-uddin, *Reis* of Baghbanpura; Bhai Gurumukh Singh, President, "Guru Singh Sabha" (of the Sikhs); Sodhi Huken Singh, Mir Munshi to the Panjab Government; Maulvi Mahammad Husain Azad, Professor of Arabic, Government College, Lahore; Sheikh Wahabuddin, Commissioner, deputed by H. H. the Maharaja of Kashmir; Sri Nepali Swamiji Maharaj, an Occultist, &c. &c.,

On the 19th, the Colonel delivered a most impressive lecture to an unprecedentedly large audience, Dewan Mathura Das of Kapurthala, occupying the chair to the entire satisfaction of the meeting. This was the first time in the history of Lahore that a public lecture was delivered on the Parade Ground under *shamianas*; in fact no Hall here could have contained such a large concourse of people. The subject of the lecture was the "Aryan Philosophy." Even the most dogmatic persons had nothing to say against the arguments of the learned lecturer. Col. Olcott proved how both in theory and practical experiments the Aryan Philosophy was superior to that of the West—the latter ignoring the existence of the inner man. His comparing the Aryan Philosophy with the old lamp of Aladdin, in the Arabian Nights, made a very deep impression. He advised the people to rub the lamp and ascertain its potentialities; otherwise the cunning magicians of the West might offer their smart-looking and polished but practically inferior lamps, and take away in exchange the original lamp to enrich the Universities of Europe and America.

Col. Olcott then expressed his personal grief at the death of Swami Dayanand Saraswati, and declared him to be a patriotic Hindoo to the backbone; one who loved his country devotedly. \*Although the doctrine he preached might not commend itself to orthodox or European Pandits, yet his energies were devoted to the cause of national reformation, and thus deserved admiring recognition. The breach of the alliance with the Theosophical Society was due to his being misinformed on the matter, perhaps from the very beginning, and he had, as the Founders thought, done them wrong; yet he ought to be respected as a bold and patriotic son of India, and he, Col. Olcott, did not know where his successor could be found.

The lecturer afterwards introduced Mr. W. T. Brown, B. L., F. T. S., of the London Theosophical Society, who in the very prime of his life had left all his professional prospects in England and, like himself and Madame Blavatsky, had come to India to live and die among the natives. For the benefit of those who could not understand English and whose number was not few, Pandit Gopinath, F. T. S., (Editor *Mitra Vilasa*) translated the lecture into Hindustani.

The next day, the 20th, at the same hour (6-30 P.M.) Col. Olcott addressed the audience on "Theosophy." The attendance was larger still than the day before, and the management most satisfactory, Mr. W. Bull, F. T. S., occupying the chair. The meaning of *Theosophy* was well defined and its objects satisfactorily explained. After concluding his lecture amidst loud cheers, Col. Olcott gave Mr. W. T. Brown the opportunity of addressing the public on his behalf. This promising young gentleman expressed his ideas so clearly and boldly as to win the respect of every one present.

PANDIT GOPI NATH., F. T. S.

#### THE SAME.

LAHORE, 21st November.

THE topic and sensation of the moment is the visit of Colonel H. S. Olcott, President-founder of the Theosophical Society, to this ancient city. The worthy Colonel arrived in Lahore on Sunday last at 8-30 A. M., and drove from the Railway station, in company with his party and several native gentlemen, Theosophists and Aryans, to the parade ground in

front of the Fort, where several large tents and a spacious *shamiana* had been pitched for his reception and accommodation. In course of the day and evening he received visits from many of the leading *Raises* and gentlemen of the city. The Colonel looked fresh and strong in spite of the arduous and unremitting labor he has had to undergo of late. He talked with the visitors, and answered every question about the aims, creed and objects of the Theosophical Society, and those relating to Aryan philosophy and science, &c., as gaily as a cricket, and to the thorough satisfaction of those who put them. The next day (Monday) also there was no lack of visitors from morning up till 4 o'clock in the afternoon, Dewan Muthra Dass of Kapurthala and other officials of that State, in company with many learned Pundits and Sadhus being present, and conversed, in the morning, with the Americo-Aryan *Yogi* on many intricate subjects in connection with the human soul and Aryan religion and philosophy. The Pundits and the worthy Dewan were mightily pleased with the acquirements of the Colonel, and expressed their unfeigned delight in finding in him such a learned champion of all that is now left of the most ancient and glorious Aryavarta. Mr. Brown of the London Theosophical Society arrived the same morning from Rawal Pindi, whither he had been deputed by his chief in answer to the request of the Theosophists of that place. There was another gentleman with the Colonel, Mr. Damodar K. Mavalankar, the Joint Recording Secretary of the Society—a young man of remarkable intelligence and decidedly great Anglo-Aryan scholarship—an indefatigable worker for the cause of the regeneration of India, and last, though not least, an occultist of great promise. In the evening at 6-30 o'clock, the Colonel delivered a lecture in his *shamiana* on "The Aryan Philosophy." Shortly before that time, people began pouring in, and at the time of the Colonel's taking up his stand, there were gathered in and around the *shamiana* a crowd numbering thousands, some sitting in chairs, some squatting down upon the carpet on the floor, others standing. There was also a sprinkling of Europeans. On the Colonel entering his appearance, the entire audience greeted with loud and enthusiastic cheers. In course of his lectures also he was similarly cheered every now and then. After a few prefatory telling remarks the Colonel explained the objects of his Society at some length. He then spoke of the Aryan Philosophy, and in vindicating its superiority by comparing it with those of the West, he paid many a rich tribute of praise to those who had conceived it. He then expressed his regret at the neglect which the Sanskrit language at present suffers at the hands of the modern Aryans—the language in which Aryan Science and Philosophy are clothed—the consequence being that even the Pundits do not receive so much education as to enable them to comprehend the exact meaning of the pregnant *shlokas* they recite and chant, not to speak of the young Hindus who are being driven to scepticism. He made an eloquent appeal to those present for the revival of Sanskrit learning, and advised them not to be so foolish as the wife of Aladdin, who exchanged the old wonderful lamp for a new one by adopting new methods of thought in preference to old ones. He also said that the Theosophical Society has already been successful in establishing, and raising subscriptions for establishing, fifteen schools for the teaching of Sanskrit. Before taking his seat the Colonel expressed his deep sorrow and regret at the death of his distinguished co-worker, Swamiji Dayananda Saraswati who, he said, was a patriot to the very backbone, a bold and strong reformer such as he seldom met with among the modern Hindus. The breach which took place latterly between the *Arya Somaj* and the Theosophical Society was owing to some misunderstanding between him and the Swami, fostered by some evil-disposed persons. But now that he was dead he could not but express his sincere sorrow for his loss. The next day (Tuesday) the morning and afternoon were passed by the Colonel in receiving visitors and discussing about many religious and philosophical matters. In the evening at the same hour as the previous day, the Colonel delivered another of his eloquent and impressive lectures, the subject this time being "Theosophy." The audience was larger than that of the previous evening, and showed their appreciation of the Colonel's utterances by enthusiastic and repeated cheers. He said that "Theosophy" had no religion of its own. The objects of the institution were to search after the eternal Truth, wherever that was to be found, to form

the nucleus of an universal brotherhood by advising all religionists to rise above the bigotry and prejudice of sectarianism, and to co-operate with one another in a brotherly way to discover the divine Truth hidden beneath the foundation of every established form of religion, to vindicate the cause of all ancient philosophy, science, and religion, wherein lay the path to that glorious Truth, and lastly to discover the hidden mysteries in nature and the psychical powers latent in man. He then made a very eloquent appeal for the sympathies of all right-minded men with those objects, and assured the Hindus that though he was different in complexion, he was at heart but like one of them. On the Colonel taking his seat amid loud cheers, Mr. Brown rose and delivered a short but eloquent speech, telling the audience how he found the science and philosophy of Aryavarta to be superior to those of his own country, and how they were now attracting the attention of all learned men of the West. He referred to the establishment of a Branch Theosophical Society in London, of which some of the most eminent men, whether in point of rank or learning, were members. He then told the audience that he also, like Colonel Olcott and Madame Blavatsky, had come to India to live in it, to work for it, and die in it. The audience was greatly touched by Mr. Brown's words, and they expressed themselves by enthusiastic cheers. At the end of Mr. Brown's speech the proceedings closed with a few remarks from Pundit Gopi Nath, Editor of the *Mitra Vilas*. The next day the Colonel left the station in the evening for Jammu, whither he has been invited to go by the Maharajah of Kashmere.—*Punjab Times*.

#### COLONEL OLCOTT AT THE COURT OF KASHMIR.

At Lahore, Col. Olcott was met by a Councillor of His Highness the Maha Raja Saheb of Kashmir and Jammu, who had been specially deputed for the purpose of escorting the President and his party to Jammu. His Highness had sent a special request that before proceeding from Lahore to Jammu, Col. Olcott should consent to accept the *khilat*\* which it is customary for the Court to offer to its most honoured guests, as a refusal would be derogatory to his dignity. The President accepted the kind offer on the distinct understanding that the presents would be received not for his personal benefit, but on behalf of, and for the benefit of the Society. The necessary preliminaries having been arranged, the party, accompanied by Pandit Gopi Nath, F. T. S., Editor of the *Mitra Vilasa*, the organ of the orthodox Pandits of Lahore, and by His Highness' Councillor, left Lahore by the evening mail of the 21st November, and proceeded from the Wazirabad Railway station in carriages direct to Sialkot, where they rested for the night. The Maharajah had sent his State carriages to that place to take the party to Jammu which, after about four hours' drive, they reached in the evening of the 22nd. On this side of the Ravi river, two State elephants were in waiting to take the party to the city. One of these was fitted up with a silver *Howdah* in Kashmiri *repoussée* work, with dragon supporters and velvet cushions for the President. An hour's ride brought the party to the barracks, where the bungalow set apart for the British Resident and other distinguished European guests had been fitted up for their accommodation. The next morning, elephants were sent with an officer and a guard of honor, and upon arrival at the Palace, the whole guard presented arms, and His Highness gave audience in full Court. The Maha Rajah Saheb was very well pleased with Col. Olcott's exposition of Theosophy, and expressed great sympathy with the objects of the Theosophical Society, especially its efforts for the revival of the ancient intellectual and spiritual glories of India. Their Royal Highnesses Prince Rama Singh, Commander-in-Chief, and Prince Amara Singh, the junior Prince, also seemed very much interested in the subject. The same evening, Col. Olcott received the Royal presents. According to the ancient custom of the Court, first-class guests receive twenty-one pots of sweetmeats, those of the second class, fourteen, the third-class seven, while the fourth-class are given none. The President was treated as a first-class guest—a distinction shown to Princes and to the British Re-

sident and other high Europeans, and was thus presented with twenty-one pots of sweet-meats and a purse of five hundred rupees as *Dawat*, for which he immediately receipted in his official capacity and on behalf of the Society. Every day the Maha Rajah Saheb accorded him an interview of about two hours, and on some days even two. On each occasion, at the Palace, a guard of honour old turned out who presented arms, both at the time of his entering and leaving the Royal mansion. Two elephants and four saddled horses were all the time at the disposal of the party at the barracks—besides armed *chuprasis* and other servants. Col. Olcott had long discussions on matters of Aryan Philosophy and Religion with His Highness, who manifested a most thorough knowledge of the subjects, and seemed extremely gratified to find that the American *Chela* had derived his knowledge from the same school to which his own GURU apparently belonged. The Maha Rajah Saheb not only believed in the existence of the HIMALAYAN MAHATMAS, but seemed to be sure of the fact from personal knowledge. He expressed his entire approbation of Col. Olcott's work for the resuscitation of Sanskrit in which direction he himself was working hard in his own State. The party remained at Jammu for a week. On the last day, they were presented with the *khilat*, which consisted of an offering to Col. Olcott of seven "cloths"—technically so called,\* and three to each of the rest—as also an additional purse of two thousand rupees, which the President receipted for, as before, on behalf of the Society. Before quitting Jammu, the Colonel made over fifteen hundred rupees to the Honorary Secretary of the Head-quarters House Fund Committee towards the purchase of the Adyar Property, and the remaining rupees one thousand of the Maharajah's cash present, to the Treasurer of the Society, for the Society's general expenses. Col. Olcott had special interviews with His Royal Highness Prince Amara Singh, the youngest son of His Highness the Maha Rajah Saheb, with His Excellency the Diwan, and other high officials of the State, who were all more or less interested in what the President had to say, and professed themselves pleased with his advocacy of Aryan Philosophy. From Jammu to Sialkot the party was provided with State carriages. Thence they proceeded further on their journey. Col. Olcott's visit to the State of Kapurthala, where he was invited by the Diwan, who had specially gone down to Lahore for the purpose, will be found described elsewhere.

DAMODAR K. MAVALANKAR,  
*Joint Recording Secretary.*

#### COLONEL OLCOTT AT JEYPORE.

[FROM THE *Indian Mirror's* OWN CORRESPONDENT.]

*Jeyapore, 8th December, 1883.*

COLONEL H. S. OLCOTT, the President-Founder of the Theosophical Society, with the Honorary Secretary, Head-quarters Fund, Mr. L. Venkata Varadarajulu Naidu, and Mr. Brown, arrived here from Kapurthala on the 5th instant, at 6 P. M. There was a gathering of the members of the local Branch Society and of other Native gentlemen of the city at the Railway Station to receive the Colonel. He put up at the Dāk Bungalow, and stayed only for 24 hours, during which time he had various engagements. He delivered a lecture on "The True Art of Healing" in the College premises, where the *élite* of this place thronged to hear him. Every one was highly pleased with his excellent lecture, and praised the Colonel for his noble efforts to revive the Aryan spirit among the people. Fresh strength has been added to the Society by two new men joining it. He started for Bombay, *viâ* Baroda, on the 6th December 1883, by the evening mail.

#### COLONEL OLCOTT AT KURNOOL.

On his arrival at Kurnool, Colonel Olcott was presented with the following address by the local gentry:

"We, the undersigned inhabitants and residents of Kurnool, beg to accord you a most hearty welcome on this your first visit to Kurnool.

2. We deem ourselves singularly fortunate in having been favoured with your long-expected visit and thus allowed the opportunity, through your assistance and advice, of getting an insight into Oriental philosophy and sciences and of investigating the laws of nature in regard to occultism, and the psychical powers latent in man.

\* *Khilat* is a royal gift peculiar to Asiatic Courts: its richness and value being proportionate to the munificence of the Sovereign and the rank of the visitor.—*Ed.*

\* In point of fact they comprised an embroidered coat (*choga red*) "*pashminah*," silk-lined, a Kashmiri square shawl (*rumâl*) embroidered to the centre, a turban, an embroidered scarf, and three pieces of Kashmiri fabrics.

3. Deeply convinced as we are of the necessity of being in sympathy with the aims and objects of the Theosophical Society, to establish branches of which, in various parts of India, you and Madame Blavatsky have travelled and done not a little, at the risk of much personal comfort, imbued with the desire of resuscitating and promoting a study of our Aryan philosophies and religion and of convincing the people of the necessity of investigating and following them for their own future good—we are now assured in the belief that your stay amongst us, however short it may be, would be productive of much good among the people, who as yet from want of a systematic study of the philosophy of their own religion, and from various other causes are often led astray, and not unfrequently show a vast amount of indifference towards it and the cause of Theosophy.

4. We now, however, hope that such a state of things will cease to exist, and trust that before long our endeavours to establish here a branch Society through which we desire to create a feeling of brotherhood among the people and to be enabled to follow our time-honored customs *ceteris paribus* shall be crowned with success.

5. In conclusion, we beg that you will accept our welcome, given in the spirit of friendship and brotherly love.

We beg to remain,

Sir,

Your most obedient servants,

K. Rangamannar Iyengar, A. Lkshmandoss, V. Venkateshayya, L. Chendulala, T. Kumarasami Achari, C. Munusami Nayudu, S. Narayana Row, V. Varadarajulu, P. Ramanajulu Naidu, Sheroff Ummaji Row, C. Viswanadham, V. Pardasaradhy, N. Varadarajulu Naidu, D. Sambiah Devara, V. Abbot, Ch. Rangayya Naidu, and Hanumanta Row."

## Official Reports.

### THE DELEGATE FROM AMERICA.

[The following credentials were handed over to the Recording Secretary of the Parent Theosophical Society by Dr. Franz Hartmann, F. T. S., late of Colorado, U. S. A., who landed in Madras on 4th December last]

FROM THE THEOSOPHICAL SOCIETY OF N. Y., July 30th, 1883.

Greeting to all to whom shall come these presents, know ye, that Dr. Franz Hartmann, F. T. S., is hereby authorized and empowered to represent this Society as its Delegate, at the Anniversary celebration, in India. Witness our hands and the Society's great seal, at New York, U. S., the day and year above written.

(Sd.) ABNER DOUBLEDAY, [MAJ. GEN.]  
*President pro-tem.*

( „ ) WILLIAM Q. JUDGE,  
*Recording Secretary.*

FROM THE ROCHESTER BRANCH OF THE THEOSOPHICAL SOCIETY.

ROCHESTER, N. Y., August 9th, 1883.

Know all ye to whom these may come :

That the Rochester Branch of the Theosophical Society, have authorized, and by these presents, do authorize and empower

Dr. Franz Hartmann of the United States of America, to represent this Branch at the next Anniversary meeting of the Society which he shall attend at Adyar, or other place in that country.

Witness the hands of the President and the Corresponding Secretary of the said Rochester Branch, at Rochester, N. Y., this 9th day of August 1883.

(Sd.) W. B. SHELLY,  
*President.*

( „ ) J. H. CABLES,  
*Cor. Secy.*

FROM THE PIONEER THEOSOPHICAL SOCIETY.

Know all men by these presents : That Dr. Franz Hartmann, F. T. S., is hereby authorized and empowered to represent the Pioneer Theosophical Society of Saint Louis as its Delegate, at the next Anniversary celebration of the Theosophical Society in India.

Dated at St. Louis, Missouri, U. S. A., this ninth day of August, 1883.

(Sd.) ELLIOT B. PAGE,  
*President.*

( „ ) FRANK KRAFT,  
*Secretary.*

### THE PIONEER THEOSOPHICAL SOCIETY.

ST. LOUIS, U. S. A.

At a meeting of the Members of the Theosophical Society, held on the 17th of July 1883, at the residence of Mr. Elliot B. Page, No. 2714, Scot Avenue, St. Louis, Mo., U. S. A., the charter granted by the Parent Society in response to the application of the local Theosophists—was unanimously adopted.

The following office-bearers were then elected for the ensuing year :—

*President*, ELLIOT B. PAGE ; *Secretary and Treasurer*, FRANK KRAFT ; and EDWARD H. GORSE, Member of the General Council.

The above officers were constituted a Committee for the purpose of preparing a code of Bye-Laws and submitting it, for adoption, at the next Meeting of the Branch.

### THE LONDON LODGE

OF

### THE THEOSOPHICAL SOCIETY.

THE Theosophical Society, of which the London Lodge is a Branch, is permanently established in India, where its objects are (1) to promote the principle of a Universal Brotherhood of Humanity, without distinctions of race or creed ; (2) to encourage the study of Eastern Philosophy, from which the Society believes that important truths are to be learned ; and (3) to investigate the psychic powers latent in man.

The special objects of the London Lodge are :—

(1). The investigation of the nature of existence, with a view to the comprehension and realisation of the higher potentialities of man.

(2). The revival of research connected with occult science and esoteric philosophy.

(3). The examination of religious systems from an unsectarian standpoint, for the purpose of demonstrating the substantial identity subsisting beneath their apparent diversity.

(4). The reconstruction of religion on a scientific and of science on a religious basis ; and the elaboration of a perfect system of thought and rule of life.

#### RULES.

(1). The officers of the Society shall be a President, two Vice-Presidents, an Honorary Secretary and an Honorary Treasurer. The offices of Secretary and Treasurer may at any time be held by the same person, and the Vice-Presidents are eligible to them.

(2). The Council shall consist of the officers, and of not less than five nor more than seven other Fellows, three to be a quorum for the transaction of all business, save as provided in Rules 7 and 14.

(3). The officers and other members of Council shall be chosen at general meetings of the Society, to be held annually on a day in January, of which the Secretary shall give not less than twenty-one days' notice to the Fellows (other than honorary Fellows), by posting the same to the addresses entered against their names in the list to be kept by him. Any two Fellows can propose officers or other members of Council. Written notice of such nominations must be in the hands of the Secretary fourteen days before the meeting, and he shall then transmit the names of the proposed and proposers to all Fellows entitled to vote, one clear week at least before the meeting. Fellows not attending the meeting may signify their choice by letter to the Secretary which shall be counted as votes. The vote of those present shall be taken openly, unless any two members demand a ballot, in which case the elections shall be by ballot and by the letters of the absent Fellows.

(4). The Council shall have power to fill up vacancies therein, at any time between the general meetings, by a majority of two-thirds, at any of its meetings at which not less than six shall be present.

(5). The election of Fellows shall be by a majority of two-thirds of the Council present at any of its meetings, every candidate being proposed and seconded by Fellows of the Society.

(6). Persons of either sex are eligible to the Society, to the Council, and to any office.

(7). The initiation fee is £ 1, and the annual subscription is 10s. except in the case of honorary Fellows who may be elected by the Council free from all pecuniary liability, and in the case of any ordinary Fellow whom, for special reasons, the Council decide to exempt.

(8). Subscriptions are due on election, and on the first of January in every year, except in the case of Fellows elected during the last three months of any year, whose subscription shall cover the succeeding year.

(9). Honorary Fellows shall be entitled to all privileges of membership except the right of voting and eligibility to offices or to the Council.

(10). Notice, in writing, of resignation of Fellowship must be given to the Secretary before the 31st of December, or liability to the subscription for the succeeding year will be incurred.

(11). Fellows can be expelled by a vote of two-thirds of a Council meeting, at which not less than three of the officers and three other members are present.

(12). Power to transact all business connected with the Society, except the alteration of its constitution or rules, is vested in the Council.

(13). Every alteration of, or addition to, the constitution and rules shall be made either at the Annual General Meeting or at a Special General Meeting of the Society.

(14). Special General Meetings may be called for any purpose by the President or by the two Vice-Presidents, fourteen days' notice being given to the Fellows by the Secretary.

(15). All questions (other than the election of officers and Council) brought before the Annual General Meeting, or a Special General Meeting, shall be determined by a majority of those present.

#### THE TODABETTA THEOSOPHICAL SOCIETY.

##### BYE-LAWS.

1. ANY Fellow of the Parent Society or one of its branches may be admitted as a member by the President.

2. Every candidate for admission to the Society must be recommended by two Fellows.

3. The President, the Secretary, and the Assistant Secretary shall be elected for a term of one year, commencing from 1884 by a majority of the Fellows. The President may be re-elected with the sanction of the General Council obtained before the expiration of the year.

4. The President and two Fellows, or the Secretary and two other Fellows or any five Fellows, shall constitute a quorum in all cases.

5. Every member shall pay in advance a monthly subscription of not less than eight annas, towards the expenses of the Society. The Society may exempt a member who is unable to pay.

6. The Secretary shall keep a record of the proceedings of the Society and an account of its funds. He shall also correspond on behalf of the Society.

7. The members shall meet at least once a month on such day and in such place as may be found convenient and notified by the Secretary.

8. A small library, to begin with, of the books recommended by the Parent Theosophical Society shall be formed out of voluntary contributions by the members, while some periodicals, the *Theosophist* among them, shall be sent for out of the monthly subscriptions.

9. Each member shall select and study one of the books thus got out, and at the meeting communicate to others the portion he has studied, answering the question put by them in view to the proper understanding of the subject.

10. An extraordinary meeting may be called by the Secretary with the consent of the President.

11. No resolution shall be passed unless there be a majority of votes for it.

12. The President in case of a tie, shall have a casting vote.

13. Whoever infringes any of these Bye-laws or the Rules of the Parent Society, shall be called upon by the President to explain and defend himself. Should the President-in-Council with the Fellows think that his conduct is blamable, it shall be reported to the Parent Society for such action in the matter as the Founders may deem fit.

14. The above Bye-Laws may be modified, from time to time as occasion arises, with the consent of the majority of the members.

15. A copy of the Bye-Laws or any alterations therein shall be sent to the Parent Society.

(MAJOR GENERAL) H. R. MORGAN, F. T. S.  
President.

Approved:—H. S. OLCOTT,  
P. T. S.

17-12-83.

#### ROHILKHUND THEOSOPHICAL SOCIETY.

At a general meeting of the above Branch, held on the 25th November 1883, the following office-bearers were elected:—

President, BABU NIL MADHUB BANERJEE; Vice-President, PANDIT CHEDA LAL; Secretary, BABU PREO NATH BANERJEE; Assistant Secretary, LALLA DHURM NARAYAN; Librarian, RAI PEARL LAL; Treasurer, LALLA BALDEO SAHAY; Councillor, PUNDIT CHUNDRAS SEKHAH; RAJAH Madho Rao Vinayak, Patron of the Society (Branch).

PREO NATH BANERJEE,  
Secretary.

#### SANSKRIT SCHOOLS AT MORADABAD.

A MEETING was held on the 4th instant in which the proposal that both the schools (one is started exclusively by the Theosophists and the other by the citizens) should be amalgamated, was carried out. The school, thus established, will be entirely UNSECTARIAN. The Punjab scheme has been adopted for the guidance of the Pandits. The active management of the school has been placed in the hands of the Theosophists, though some outsiders are selected as the members of the Executive Committee. It is hoped that the step thus taken will end in producing important results, as the citizens have begun to feel that *Union is Strength*.

#### THE JEYPORE THEOSOPHICAL SOCIETY.

At a meeting of the Jeypore Theosophical Society, held on the 6th December 1883, the President-Founder in the Chair, the following office-bearers were elected for one year:—

Babu Opendra Nath Sen, President.  
" Purna Chandra Sen, Secretary and Treasurer.  
Lalla Durga Sahaic, Assistant Secretary.

#### THE JAMALPORE THEOSOPHICAL SOCIETY.

THE first anniversary of the Jamalpore Branch Theosophical Society was held on Sunday, the 18th November last. There were present on the occasion Baboo Parbutty Churn Mookerjee and Pandit Nitya Nanda Misra of the Bhagalpore Branch Society and the *élite* of the native community of this station.

The ceremony commenced at 7 A. M. with a hymn. Baboo Parbutty Churn Mookerjee, President of the Bhagalpore Branch, being requested by the members, presided at the meeting. The Secretary then read his annual report, giving a brief sketch of the rise and progress of this Branch Society, its list of members and a detailed account of its receipts and disbursements during the year under review. The report also dwelt on the importance of the study of Aryan philosophy, science and literature, and clearly stated the object which the Theosophical Society has in view by quoting its three fundamental rules in support thereof.

The President said that this Society has a high and noble mission to fulfil in so far as it seeks to form the nucleus of a universal brotherhood, and aims at the revival of oriental science and literature; and as such, it cannot fail to excite the sympathy of every true Indian who has the Aryan blood still running in his veins. This may be a lofty idea; but its consummation is possible. He also dilated at some length on the subject of concentration of the mind, which, he said, greatly depends on the discipline of the gross or material body, and cited several *slokas* from our *shastras* in support, which he explained in such lucid and appropriate terms as to make them intelligible to all present.

Baboo Tarini Churn Roy, F. T. S., a member of this Branch, then rose, and in a short but eloquent speech exhorted the audience with a view to enlist their sympathy on behalf of the movement. He said that if we wish to know anything about God and the human soul, we must turn the pages of our *shastras* for an explanation, as it can be found nowhere

else. The so-called enlightened West which has made such vast progress in all directions relating to the material prosperity of man is silent on this point, and we must either look back to our Aryan Rishis for a solution of this problem or despair to know. Western culture has made us grossly materialistic and thoroughly unmindful of our religion and science, and Theosophy has opened our eyes. He also dwelt at some length on the scientific basis of the Aryan religions, and illustrated it by examples. This lasted till 10 A. M. Then alms were distributed to the poor from 10 to 11 A. M.

From 11 to 2 P. M. entertainment of guests and rest.

From 2 to 4 P. M. hymns and religious discourse.

From 4-30 to 6 P. M. Pundit Nitya Nanda Misra replied to questions put by an outsider regarding Theosophy and its objects, in an able and satisfactory manner. The gathering was very large on the occasion, and all seemed pleased to hear him. The ceremony then ended:—

The re-election of office-bearers took place the next day. With the unanimous consent of all the members, the old office-bearers have been retained in office:—

Baboo Ram Chunder Chatterjee,	President.
„ Deno Nauth Roy,	Secretary.
„ Raj Coomar Roy,	Asst. do.

In conclusion, I beg to add that this Branch Society, although it has not been able as yet to do much towards furthering the cause of Theosophy, has at least succeeded in drawing public attention to the movement, as has been clearly evidenced by the large gathering that assembled at our anniversary meeting. Theosophy has become the current topic of the day, and is being widely discussed in all circles.

This Society has under contemplation the establishment of a Sanskrit school for children at this station, and endeavours are being made in this direction:

DENO NAUTH ROY,  
Secretary.

#### THE KURNOOL THEOSOPHICAL SOCIETY.

At a meeting of the members of the Theosophical Society, held at Kurnool (Madras Presidency) on the 12th day of December 1883—the President-Founder in the chair,—it was upon motion unanimously resolved that a branch be formed under the title of “The Kurnool Theosophical Society.”

Upon motion the bye-laws of the Parent Society were temporarily adopted, and M. R. RY. LUKSHMANDAS GARU, V. VENKATASASHIA CHETTY GARU and KOMARASWAMI ACHARI GARU were appointed a committee for framing new Rules for the guidance of the Branch.

The following gentlemen were elected office-bearers for the ensuing year:—

President, M. R. RY. V. VENKATASASHIA CHETTY GARU; Vice-President, S. V. VARADARAJULU NAIDU GARU; Secretary, S. KOMARASWAMY ACHARI GARU; Treasurer, A. LUKSHMANDAS GARU.

#### THE GOOTY THEOSOPHICAL SOCIETY.

At a meeting of the Theosophical Society, held at Gooty on the 14th day of December 1883, Mr. W. T. BROWN presiding—it was unanimously resolved to form a Branch Society in that town. It was resolved that the Branch be known as “the Gooty Theosophical Society,” and that the following gentlemen be elected office-bearers for the ensuing year:—

President, I. SRENEIVASA ROW GARU; Vice-President, PATTU KESAVA PILLAI AVERGAL; Secretary, BANGALORE PAPPU NARASIMHAH GARU, B. A.

The Branch Society then adopted the Bye-laws of the Parent Society for the time being, and the members formed themselves into a committee for the purpose of framing bye-laws for the Branch itself. The proceedings then terminated.

W. T. BROWN,  
Chairman.

Approved.

Let charter issue,

H. S. OLCOTT,  
P. T. S.

#### OXFORD MISSION SHOTS AT OCCULTISM.

OUT OF the clear sky of a correspondent's remarks on the comparative merits of Buddha and Christ, the thunderbolt has been hurled against Occultism by the Indra of the *Epiphany*. The startled Theosophist but meekly enquires how his humble self could be suspected of intrusion in such sublime regions as the arena of discussion of our contemporary's correspondent—“A. B. C.” In the meantime, however, as Great Indra threatens to bring his *Meghāstra* into play, it is necessary to avert the impending downpour by pointing out its unseasonableness. It is but proper that the misconceptions, so unmistakably glaring, should be, if possible, removed. The *Epiphany* thus begins what is meant to be a reply to its correspondent's remarks:—

“I never grumble when Theosophists tell me that in order to experience the power of the invisible worlds vouchsafed to them I must first practice *Yogi*.\* It is quite clear to me that there is a power working in them, to be attained only by certain processes. The only questions with me are (1) is the power of a kind worth attaining? (2) what is the nature and source of the power? (3) what is the trustworthiness of its result? To these questions I answer something as follows. 1. The power of supreme wisdom or of working what men call miracles is to my mind worthless compared with the power of love. I must learn to love, to labour for others, to desire their good more than my own, before I can be fit to be trusted with occult powers, which at present would only tempt me to pride, and be ill-used . . . . .”

The erudite critic is manifestly unaware of the fact that the true *Yogi* does not study Occultism for the purpose of acquiring powers. In his onward spiritual progress toward deliverance from the shackles of *Maya*, the *Siddhis* come to him of themselves. There can be no psychological perfection so long as the *Ego* is in the least affected by the trammels of *Avidya*, and these *Siddhis*, however high they may be, are yet within the domain of illusion. Every student, even a tyro, of occultism knows that the acquisition of *Brahma-Vidya* is dependent entirely upon the development of a feeling of universal love in the mind of the aspirant. For his final goal, the attainment of *Mukti*, is the very identification of the *Jivatma* with *Paramatma*, the Universal Spirit, which manifests itself in ALL—which can never be accomplished except by one's putting one's-self *en rapport* with Nature through a cultivation of the feeling of unselfish Philanthropy. It will thus become apparent to a mind free from preconception that the *Yoga Siddhis* are only the accessories of *Brahma-vidya*, i. e., Esoteric Theosophy, the acquisition of which is guided only by unselfish philanthropy and universal love. The misconception in the above extract is evidently due to the Reverend writer's confounding the path, pursued by a *real Yogi*, with that of ordinary jugglers and sorcerers. While the powers of the former are psychological, those of the latter are physical, pure and simple. If the writer had carefully studied the important articles in the *Theosophist* on this subject and various other publications on Rosicrucianism and Esoteric Theosophy, before hastily penning his remarks, the present controversy would have been saved. He says that he must “labour for others and desire their good” more than his own. The *true Yogi* replies:—“We postulate that the good of others is our own, since we are a part of the integral whole, and therefore it is not logical or wise to think of mere relative good to others.” “When the student has once realised this important fact—and until he has, he is not a fit student—where then is there room left for “pride” from which the Reverend writer shrinks with such pious horror? Self-conquest is the first step on the ladder of *Brahma-vidya* leading to *Nirvana* or *Mukti*. If it is thoroughly comprehended that *Avidya* in every shape is to be got rid of, and if the way to achieve that object is found to be as stated in the preceding remarks, the basis on which the Reverend gentleman has raised a structure of fears concerning *Yoga* is necessarily removed, and the whole edifice thus must tumble down. One or two more points may also be noticed, with advantage. He says:—

“The trance consciousness in me may be the gateway to imperfect and distorted visions, the creations of brain in an unnatural tension, and not free from its own preconceptions.”

\* The learned Editor of the *Epiphany* probably means *Yoga*. *Yogi* is the person who practises *Yoga*.

Precisely so: this is just what the occultist guards himself against by first passing through the process of unlearning before beginning to learn. He rests neither upon the deductive nor the inductive method solely, but employs both before accepting any fact. More than this: he practically and experimentally demonstrates to himself the truth of the conclusion he arrives at, before taking them as final. Human will is merely the manifestation of the *Divine Will* or rather *Paramatma*. But its action or expression depends upon its associations and the medium through which it has to act. It is all these disturbances or the veils of *Maya*, that the occultist guards himself against in his studies, and it will be admitted that this mode of procedure is a purer source of knowledge than any other where the counteracting influences are allowed their full sway. In conclusion, the Reverend gentleman adds:—

“ . . . . His (Buddha's) noblest merit is that he never claimed to be God. If Christ did so claim to be without being so in reality, He must have been one of the world's least souls, its most deluded Prophets. Do you believe this ?”

Before answering this query, it is essential to enquire whether Christ's Divinity is to be assumed on blind faith, or is the reason of the reader appealed to above? In the former case, silence is gold, but in the latter, the question becomes serious. In the first place, we defy the Christians to point out to us one sentence, one word, in the *Four Gospels* proving in plain and unambiguous language that Christ ever claimed or declared himself to be God. On the contrary—“Why callest thou me good? There is none good but one, that is, God” (Matt. xix 6)—is a rebuke showing plainly that Christ, far from considering himself God, looked upon any attempt to attribute Divinity to him as blasphemy; no amount of ecclesiastical sophistry can successfully distort the meaning. “I and my Father are one,” is entirely weakened by “I ascend to my Father and your Father, to my God and your God.” Moreover, the present writer very much doubts whether Christ, even if he did claim to be God, could ever have claimed divinity, as generally understood, if he was, as he is represented. What was there more, indeed, in Christ, not possessed by Buddha? Nay, the impartial student, whether Occidental or Oriental, must admit that in moral grandeur and unselfish philanthropy, Buddha is unequalled, at all events not inferior to Jesus. The whole question of divinity must, therefore, rest either upon their personal claims and powers, or those of their later followers, namely their respective clergy. Pride is inconsistent with genuine greatness, and humility is the essential qualification of a true philosopher. In this respect too, Buddha shows his superiority in not claiming divinity which might more appropriately be attributed to him by his unphilosophical followers than to the Galilean Prophet by his. As regards their respective powers, or (so-called) “supernatural” gifts, the question can very well be decided by those possessed by their respective followers at the present day. The readers of *Esoteric Buddhism* and the *Occult World* need, of course, no further dilation on this point.

Before concluding, an instance of the wonderful argumentative powers of the learned writer in the *Epiphany* may as well be noticed. While admitting the philosophical force of the defence of Vedic Pantheism and Idolatry by Babu Ishan Chandra Ghose, he remarks:—

“ . . . It may be very true that a mind capable of grasping only one million out of the thirty-three millions of idol personifications would have a very complex idea of God. But we would ask for an honest and candid answer as to whether the uneducated masses do not rather worship one or a few of these personifications. The Rishis made the analysis: what idol-worshipper, except an educated one like yourself, ever makes the corresponding synthesis ?” . . .

The fallacy of this argument is self-evident and needs no comment. The Babu may well retort by asking in his turn how many Christians, even of education and culture, understand the teachings of their religion in that high sense, put upon them by the philosophical few? The perversions and misconceptions that a religion suffers at the hands of its ignorant followers are no argument against the religion itself. The vices and superstitions of the lower order of the Hindus do not injure their philosophical faith any more than the following incident degrades the high moral worth of the teachings of Christ. Only the other day the papers published the account of an English Christian husband having

*sold his wife for a quart of beer!!* And the parties to the contract, witnesses and all, were so strong in a sense of their innocence, that each and every one acknowledged the fact freely in open court. The excellence of a religion depends upon its intrinsic philosophical value and its moral influence upon its followers. It is only Statistics and History that can show which Faith has acquitted itself most honorably of its task.

#### THEOSOPHY.

“A Native Thinker” writes:—

On the subject which heads this, a few observations from a disinterested spectator may not be unacceptable to the public, especially as much misapprehension has prevailed. It seems now beyond doubt that the Theosophical movement inaugurated in India by Colonel Olcott, assisted by Madame Blavatsky, is a reality. It can no longer be treated as a myth or a chimera. Its popularity and increasing success are visible, and even striking. The movement has a sound and solid, though necessarily a general, principle to support it. The object is to inculcate the fatherhood of God and the brotherhood of man. In this, there is nothing of the nature of a new revelation. What is new is that the object is sought to be gained with an earnestness, with a perseverance, with an intelligence, and with an organization, for superior to any heretofore employed. The credit of this is certainly due to Col. Olcott.

This Theosophical movement is the outcome of circumstances. I mean that it is not a mere accident. Education has made considerable progress, and has created a demand for some such general religion as would commend itself to the vast and heterogeneous population of India without a direct and destructive conflict with the existing beliefs. Theosophy is acceptable to the educated natives on account of its broad national basis. To the vast mass of the people, it is acceptable, because it disavows hostility to prevailing creeds—because it even professes to have been distilled from those very creeds. The theological necessity above mentioned could not be satisfied by the Christian religion which European and American missionaries sought to introduce and diffuse in India in a manner repugnant to the Indian conservative spirit, and highly aggressive towards the indigenous religious systems of immeasurable antiquity. Reasoning and experience have equally shown that India will not accept Christianity in supersession of Hinduism. In these circumstances, the *Bramha Samaj* made its appearance in Bengal and was eagerly welcomed. For a course of years it spread with rapidity under the guidance of able and earnest men. It is now giving place to Theosophy as expounded and propagated by Colonel Olcott. The Theosophical movement possesses a vitality and an energy superior to that of its predecessor, and commensurate with the knowledge, enthusiasm and perseverance of its founder. It already covers a vast area and embraces the representatives of many creeds. There is much reason to conclude that Theosophy will do good and will do no harm in India. It will serve to promote union and concord, and knowledge and enlightenment, though not to the extent of the sanguine expectations of the good Colonel Olcott. The ends he has in view will take generations to reach.

As matters stand at present, Colonel Olcott is the life and soul of the movement. Whether the movement will long survive him is a fair question. Even in his own time, it may suffer the moment he quits his lofty and cloudy sphere of generalities, and descends to any details, for, it is in regard to details that wide and innumerable differences prevail among the Indian populations. Nevertheless, Col. Olcott is doing good work with good motives. On this account he deserves respect. As for Madame Blavatsky, she appears to be a woman of extraordinary learning, ability and tact. She cordially cooperates with Col. Olcott. But she claims to be in direct communication with “the Mahatmas of the Himalayan Mountains,” and claims to be in possession of “occult powers.” Many native gentlemen of intelligence, too readily I fear, admit this claim: They had better, I think, at least suspend their judgment until they have some conclusive evidence. For instance let her ask the Mahatmas for some efficacious remedy for cholera or snake-bite, obtain it, and use it all over India, and save the immense loss of life which takes place year after year!

The recognition of the powers claimed by the lady in question is not, however, essential to Theosophy as proclaimed by its founder. On the whole, this Theosophical movement is a remarkable phenomenon of our times. It is too much of a reality to be despised. It deserves to be watched with interest. (*Madras Times*, Jan. 3.

#### OBSERVATION BY COL. OLCOTT.

The “Native Thinker”—whose identity as one of the most, if not the most, eminent among Indian statesmen his alias very thinly veils—having so unreservedly qualified

me as a witness as regards the theosophical movement, I proceed to testify as follows:—

1. I am *not* the sole but the joint Founder of the Theosophical Society.

2. Neither I nor my colleague is entitled to the credit of originating the movement: the impulse came from our Masters, Teachers, and Exemplars, the living Mahatmas of the Himalayan range. Moreover, the fact that we had been brought together, that we were in relations with them, and that we would come from America to India to extend our Society's operations, was declared by them to several living Hindu witnesses, who are accessible now at Jeypore, Benares, and elsewhere.

3. To Madame Blavatsky directly, as the visible agent of the MASTERS, sent to me in America for the purpose, do I owe all my initial instruction in Asiatic Philosophy and science. Her learning is far greater than mine, her zeal has ever warmed my own enthusiasm, and I owe her the greatest debt: I could owe any one in her having shown me the path to wisdom, and brought me to the feet of the Blessed Ones.

4. The movement was for a time dependent largely upon the lives of the Founders, but that stage is passed. We have proclaimed our message, and the joyous tidings of which we were the heralds, have now been received so widely and thankfully, that if we were to withdraw tomorrow, the quiver of this new life would continue to thrill the heart of our generation. For those who stand behind and tower above us will not suffer it to die out.

5. For an answer as to the practicability of reconciling "details" under theosophical influence, I need not point to the spectacle, witnessed by our distinguished critic himself at the late anniversary, when he saw men of many races and creeds sitting and working of good-will.

6. The ends we have in view are immediate and remote; our plans cover the present and the future. We are until now working against not only the positive obstacles raised by hatred and stupidity, but also the very serious one of lack of money. If we were supported by the liberality of our sympathizers as anti-theosophical, and non-philanthropic Societies are by theirs, we would have made the "phenomenon" of our success still more staggering to that great body of superficial students of their kind who, having ever dealt with the selfish and worldly shell of human nature, have not suspected what lies beneath.

7. I thank our critic for not having descended, while defining his crucial test, to the stupid vulgarity of some Lawn Tennis philosophers, who have asked that the Mahatmas should prove their control over the laws of matter by bringing them boots or clothing from London through the *Akasa* ahead of the Parcel Post. Doubtless, it would be a good thing to "save the immense loss of life" which takes place in India yearly from cholera and snake-bite, if—special interferences with the operation of general law are ever desirable. In such case, however, why make two bites of the cherry? Why not vanquish death entirely, and earn the praise of "A Native Thinker" by keeping the successive generations of mankind alive indefinitely, to continue Mr. Darwin's Struggle for Life and prove his theory of the Survival of the Fittest? Let our critic bend the powers of his splendidly practical mind to gain as much experience with the realm of his inner, as he has with the—in comparison—beggarly one of his outer self, and he would come to know that even ten thousand proofs or "tests" do not suffice of themselves to bring conviction. As research into the phenomena of sentient corporal life has its methods, so equally has Psychic Research its imperative methods. One cannot extract the "Soul" with a corkscrew, nor carve it with a bistoury.

ADYAR, 3rd January 1884.

H. S. OLCOTT.

A splendid photograph has been made of a group comprising eighty-three Delegates attending the eighth Anniversary celebration of the Theosophical Society, together with a view of the portico of the Adyar Head-quarters Mansion. Every portrait is excellent. Copies may be had at Rs. 2-8-0, inclusive of postage and packing. Apply to the Manager of the *Theosophist*.

#### A GENEROUS GIFT FROM LONDON.

On behalf of the Theosophical Society we have to render our best thanks to the unknown benefactor who has contributed a sum of £50 to the funds of the Society. The handsome donation was accompanied

by the following note:—"A contribution towards 'paying the way' and in grateful acknowledgment of light from the East, from F. T. S., London Lodge, 30th November 1883." The circumstance is not so gratifying to us for the addition made to the Society's funds as for the discovery that the Western mind is showing signs of a new Spiritual awakening. May the day be not distant when the East and the West will be knit together in the bonds of a real Intellectual Brotherhood.

## Our Eighth Anniversary.

THE unprecedented success with which the eighth Anniversary of the Theosophical Society was celebrated on the 27th December 1883, and the following days, most clearly shows that the Mission of our great Association is far from being chimerical. At the early part of the last month Dr. F. Hartmann of Colorado, U. S. A., landed in Madras and was received at the Head-Quarters as the delegate of three American Branch Societies. Mr. Brown of the London Lodge T. S. had arrived from England some two months previously. There is no other philanthropic Society in any part of the world which can point to so much self-devotion on the part of its members as to lead them to travel over vast stretches of seas and continents to give their fellow-workers in so unpopular a cause the grip of true brotherhood. Although the 27th ultimo was announced as the day of the celebration, Indian delegates from all parts of the Peninsula began to drop in as early as the 23rd. In a few days the Theosophical Home became so full that every nook and corner of the main building and several out-houses were occupied, and tents had to be pitched on the compound for the accommodation of our welcome guests and the large gathering of delegates and Fellows, gave to the place the character of an epitome of India, by their variety of dress, manner, speech and religion. There is no other Society in the world capable of bringing together on such fraternal footing men of so many faiths and nationalities; and who shall say the cause is not worthy of such devotion?

At 9½ o'clock on the morning of the 27th ultimo, nearly 500 members and delegates, decorated with their appropriate badges of pretty blue ribbon with the word "Delegate" or the letters "F. T. S.," printed thereon in golden lace, assembled before the grand pavilion, erected in front of the Head-quarters, and then with a solemnity befitting their cause proceeded to the *pándal* (pavilion) erected for the occasion. Although the pavilion was constructed in the greatest hurry, after the Syndicate of the Madras University, to their great shame, had refused us the use of the Senate House Hall, it was a vast and magnificent structure, tastefully adorned with flags and festoons, and matted with rich carpets. The pavilion contained accommodation for about two thousand persons. The *dais* upon which were placed the presidential chairs was overhung with a rich canopy, an exquisite specimen of native workmanship, and supported by four massive silver posts. As we close the present account with a paragraph from the *Madras Times*, describing the evening *fête*, we shall say no more of it. The programme of the three days' festival ran as follows:—

### "THE THEOSOPHICAL SOCIETY, EIGHTH ANNIVERSARY. PROGRAMME, Thursday, 27th December 1883. AT THE PARENT SOCIETY'S HEAD-QUARTERS.

ADYAR—(MADRAS.)

From 9-30 A. M. to 10 A. M.

(1)—Distribution of badges to Delegates and Members.

(2)—Band playing.

(3)—Assembling of Delegates and Members.

(4)—Procession to the Pavilion.

" 10 A. M. to 10-30 A. M.

(1)—Addresses of welcome to the Delegates by the officers of the Parent Theos. Socy and the Madras Branch.

" 10-30 A. M. to 11 A. M.:

The appointment of Committees and distribution of work.

" 11 A. M. to 1 P. M. Consultation by the Committees on the subjects before them.

" 1 P. M. to 2 P. M. Refreshments.

" 2 P. M. to 4 P. M. Discussion on the proposals submitted by the Committees.

" 5 P. M. to 8-30 P. M. Public reception, with addresses by Delegates, Illuminations, Music, &c., &c.

Friday 28th December 1883.

From 9-30 A. M. to 10 A. M. Music by the band.

" 10 A. M. to 1 P. M. Unfinished and new business.

From 4-30 p. m. to 5-30 p. m. Assembling of the Delegates and Members at Patcheappa's Hall for the Public Meeting,  
 ,, 5-30 p. m. to 7-30 p. m. Public Meeting:—Address by Col. Olcott and presentation of the American, English, French, and other Delegates.

Saturday, 29th December 1883.

From 9-30 a. m. to 10 a. m. Music.

,, 10 a. m. to 2 p. m. Further discussions on the subjects selected. Adjournment of the Convention.

NOTE—The subjects for discussion will be the following:—

(1) The desirability of imparting to future Conventions of Delegates and Theosophists on the occasion of Anniversaries of the Parent Society, as far as possible, the character of a literary and scientific Congress.

(2) The necessity of instituting an Aryan League of Honour as proposed by the President-Founder; Report of Head-quarters Fund Committee; and the reading of the names of the Subscribers.

(3) Appointment of Trustees for the Adyar property, and the framing of Rules for the due administration of the Trust.

(4) On the adoption of necessary measures for raising a permanent fund for the support of the Theosophical Association.

(5) Discussion on the proposal of the London Lodge to call Branch Societies by the names of "Lodges."

(6) Discussion on the necessity of appointing inspectors for periodical examination and supervision of the work of the Branches.

(7) Revision of Rules and Bye-Laws.

By order of the President-Founder,

DAMODAR K. MAVALANKAR,

Joint Recording Secretary.

25th December 1883.

### PRESIDENTIAL SPEECH.

At 10 a. m. the President-Founder in welcoming the Fellows and Delegates present spoke as follows:—

I welcome you, gentlemen delegates, in the name of the Parent Theosophical Society, which looks upon your respective Branches with a father's solicitude and care to the new home, our home, where under the same roof-tree we, though of diverse faith and nationality, may live in peace and harmony like children of the same father and mother. It is a matter of rejoicing, gentlemen, that the Society has found a home at last and has no longer to wander about, a stranger, unhoused and uncared for. The soul-cosoling spectacle of Brotherhood and Unity, now presented to us, is perfectly unique in its character and could not have owed its parentage to any thing but Theosophy, the Universal solvent of hearts. Tempests of hatred may blow with all their fury, and waves of bitterness raise their foamy crests. Theosophy has found a safe harbour, and the power of wave and wind can naught avail against her security. The movement is now too strong to be stopped: it must run out its career and exhaust its momentum. Ideas penetrate the carcasses in which error reincarnates itself as a rifle bullet does the body of an ambuscading assassin. The antagonisms and antipathies of mankind all lie upon the surface of being; the inner man of each of us is kin to all humanity. The surface stream may run muddy, but the water that trickles through the gravel bed beneath the clay is limpid. The surface stream brawls and mingles its tide with the offal of life's selfish industries, but the vapor of the clouds which afterwards drains from the glaciers of the mountain peak, to sink out of sight until it reappears and refreshes the valley, is crystal-pure. This is the secret of Theosophy. This the key to its success. Just in proportion as Theosophists keep this in view, will they enjoy peace and happiness, and spread them around.

Our Society is young as yet: it has all before it. It has gained its foothold and done much. But in comparison with what there is to do, it is nothing. But never despair. Lasting reforms grow slowly. We have no compulsion here. We are winning men by persuasion: drawing them out of their baser selves to a higher ideal of life and conduct. It is a slow process, because the odds are tremendously against us.

We are met, gentlemen and brothers, for a very lofty purpose: it behoves us to rise to the dignity of the occasion. No political question will trouble our harmony, no sectarian differences breed disunion of counsel, no worldly objects appeal to that base spirit of selfishness which is the bane of mankind. From homes thousands of miles apart, we have gathered together as seekers after spiritual truth, as lovers of mankind. The word has come to us that in the ancient days our forefathers had solved the mystery of human existence and the riddles of natural phenomena. We have been convinced that they had evolved out of their highly refined moral perceptions a code of ethics that leaves nothing to desire. These facts have been long forgotten. For lack of them human society has been making to itself false creeds and low ideals. Man has gone so far down the scale that our best moralists plead the argument of utility as the best provocative to clean living and good thinking. Things

could have never come to this, if there had survived an experimental metaphysics with the full realisation of the limitless potentialities that ennoble human nature. We are groping on the level of a physical humanity, a sort of higher automatic existence, a single span of life, bounded at one end by the cradle; at the other by the funeral pyre or the grave. Hindu, Buddhistic, and Parsi philosophy alike protest against so imperfect a conception. Ours is the task to show its scientific and moral fallacy, and to point out the safe and sure paths to perfect knowledge which our progenitors discovered, and upon which we are entering with firm purpose, even if with faltering feet.

You came here, for the most part, as strangers, gentlemen; you will leave as so many brothers. But the object of this Convocation will not have been attained if these friendships which you are cementing do not lead to concerted action, all over India, for the promotion of the objects which our Society has in view. You have made yourselves, in point of fact, the volunteer champions of the moral and spiritual interests of your Motherland. Her hopes are in you, her honour is in your keeping. If the glory of the Aryan name shall once more fill the earth, to your labors will be due the triumphant result. The names of the Founders of Asiatic religions have grown tarnished with the lapse of the centuries, and the dust of neglect obscures the pages of their immortal works. Superstition is rampant, and ignorance has filled the world with grotesque distortions of religious truth. Many—nay, I might say most—branches of science are, by the confession of their best exponents, full of gaps, of half glimpses of first principles, of misconceptions of natural law. The human body is a mystery to our doctors, almost as puzzling as the human mind. So there is a wide enough field awaiting the seed of Aryan thought if you are ready to sow it. You may answer me that this has already been done to a considerable extent. You may point to the intellectual quiver that is running throughout India and the Western world, as ample proof that Theosophy is already a powerful factor in the social problem of our day. True, we can see these signs. Theosophy is in every man's mouth and has crept into thousands of hearts. To many it has come like a beam of golden sunlight, a rift in the black cloud of doubt. It has been a blessed comforter to many, who were in despair for the present, and in perplexity as to the future. Blessings, a thousand blessings, upon those Masters who saw our necessities and helped us to enter the safe path! The woes of humanity are myriad, but Theosophy giving Wisdom reduces their sting to the minimum; and such as it cannot remove it teaches us to bear with courage and hope. If an ideal of human perfectibility, and of the truest manhood was ever held up to view, it has been by Theosophy, the wisdom of the ages, the priceless heirloom left us by the Pitris. Heart to heart and hand in hand, come, brothers of many nations, tongues and faiths, let us pledge the best efforts of our lives to the cause of Universal Brotherhood, and of the propagation of truth, whencsoever we may be able to derive it. For,

"The Truth is perilous never to the True.

Nor knowledge to the Wise: but to the fool,

And to the false, error and truth alike."

[Bailey's *Festus*, p. 41.]

### NEW BRANCHES FOUNDED IN 1883.

In no other way can the progress of our Society be so clearly shown as by a simple, numeration of the statistics of our new branch organisations. At the time of the celebration of our Seventh Anniversary, on the 7th of December 1882, at Bombay, there were in existence but thirty-nine Branches in Asia. All of these had been formed since the arrival in India of the Founders, on the 17th of February 1879. But, whether as the result of last year's Convention or not I cannot say—the greatest interest was soon manifested in our cause throughout India, and invitations to visit distant places and form Branches came crowding in at Head-quarters, and my time has been continuously occupied since then in answering the calls. On the 17th of last December, the Head-quarters staff left Bombay for Madras; on the 19th we all safely reached our new and beautiful home at Adyar, and took up our residence in it. On the 17th of January I took steamer for Calcutta where, on the 20th, I began a tour which led me 2,000 miles of a journey through Bengal and Behar within 92 days. On the 27th of June I sailed from Madras for Colombo, whither I had been urgently called by the leading Sinhalese Buddhists to advise them about the recent religious riots. I stopped there a fortnight and then crossed over to Tuticorin, where a South Indian tour arranged for me began. By the 23rd of September I was back again at the Head-quarters, after having visited almost, if not quite, every important station in Southern India, and spent some three weeks at Ootacamund, in the Nilgiris, to have the relations between the Madras Government and our Society properly defined. After four days of rest at home, I began my third and last tour of the year—a tour of over 7,000 miles, taking me to the extreme northern limits of British India, and enabling me to found new Branches in Northern Madras, the Nizam's, Hyderabad, the North-Western Provinces, the Punjab, and Rajputana. Thus I have made since the last Session of this Convention in December last, journeys in the aggregate to the extent of 16,500 miles on Society's business, and by the gracious favor of our Masters, the

Mahatmas, not only I but the brother-Theosophists who have kindly accompanied me, lending me their invaluable services, have enjoyed throughout excellent health, and met with not a single accident.

The fruits of all this work are to be seen in the number of Branches, inscribed in our Register. Since the last Anniversary there have been organized the following

NEW BRANCHES OF THE THEOSOPHICAL SOCIETY:—	
In India ... ..	46
„ France... ..	2
„ U. S. of America ... ..	2
„ Queensland (Australasia) ... ..	1
„ Russia... ..	1

Total New Branches formed in 1883... 52

We have now in India 77 Branches, in Ceylon 8, or 85 in all as against 39 in December 1882—an increase of 120½ per cent. I have also been fortunate enough to raise subscriptions at Tinnevely and Ombaconam for the purchase of libraries for the sole use and benefit of Hindu school-boys and undergraduates.

While the thanks of the Parent Society and General Council are due to our brothers and well-wishers at all the stations I have visited during the year for their exertions to make my tours successful and to arouse an interest in Theosophical ideas, I have personally to express my grateful recognition to the gentlemen who have shared the fatigues of my journeys and aided me in the capacity of Private Secretaries. Messrs Coopposwamy Iyer and Soondaram Iyer of the Madura Branch, Babu Nivaran Chandra Mukerji of the Calcutta Branch, and Mr. L. V. V. Naidu, Honorary Secretary of the Head-quarters Fund Committee and Fellow of the Madras Branch, have severally laid me under deep personal obligations in this manner; and very warm thanks are also due to Babu Norendronath Sen, of Calcutta, M. K. Ry, S. Ramaswami, of Tinnevely, L. V. V. Naidu, of Madras, Babu Avinash Chandra Bannerji, of Allahabad, and Pandit Gopinath of Lahore, for special services in the arrangement of tours and management of correspondence. But when I glance back in memory to the thousand and one acts of brotherly kindness, shown me by our friends throughout the four quarters of this dear land of Bharat Varsha, my heart is so full of thankfulness that I do not find words to give it expression. If there was ever a man who has felt the kindly beating of the Aryan heart, surely it is I; and why, then, should it be expected that I could ever despair of “forming the nucleus for a Brotherhood of Humanity” which is what our Theosophical Society aspires to? And now, dear brothers of many races, religions, and complexions, behold us gathered together from the very ends of the earth into our common home, to pledge once more our allegiance to the sacred cause of humanity, and to the MASTERS who whispered into our willing ears that noble watch-word!

#### SANSKRIT AND OTHER SCHOOLS.

I am happy to say that the past year has furnished many practical proofs of the interest which the members of our Society take in the revival of Sanskrit learning and the education generally of the natives. There are now in existence the following schools which we have founded—mainly since the last anniversary:—

At and near Guntur, 3 schools for boys and two for girls.

At Bhagalpur, 1 Anglo-vernacular school for boys (the Tej Narain City School), with above 300 scholars.

At Calcutta, 1 Religious (Sunday) school for boys, where the Bhagvad Gita is expounded.

At Naldauga, 1 Anglo-Sanskrit and 1 Sunday school.

At Moradabad, 1 Sanskrit school, established by our local Branch, and 1 (new one) by public subscription after my recent lecture there, which is now to be amalgamated with the older one;

At Madras, 4 Sanskrit schools established by our local Branch, and two receiving aid from the latter. Also 1 religious school.

At Nellore, 2 schools.

At Gorakpur, 6 night schools for imparting elementary instruction in Hindi reading, writing and arithmetic, to persons who are actually earning their livelihood by manual labour. There are above 250 persons in these schools. Besides these there is 1 Sunday school for instruction in the Hindu religion, with about 50 scholars.

At Gooty, 1 Sanskrit school recently established and in a flourishing state.

At Srivilliputtur, 1 elementary Hindu school.

In addition to these there are to be at once begun schools for Sanskrit and English at Jubbulpur, where about Rs. 1,700 was subscribed after my lecture; at Allahabad, where Rs. 2,700 was subscribed at my lecture, and Rs. 2,500 more pledged on the next day; at Ghazipur, where a self-imposed cowrie tax upon each box of sugar and package of goods passing through the bazaar was voted by the merchants, for the upkeep of a Sanskrit school. The revenue from this source is estimated at Rs. 50 per month, and additional sums are counted upon.

At Lucknow, where our Branch has already raised a popular subscription of Rs. 7,000 and expects to make it more than one lakh, and thus found not merely a school but a Sanskrit college.

So here we have a total in India alone of 27 schools in actual operation, and 3 schools and 1 college for Sanskrit teaching to be opened.

#### THEOSOPHICAL WORKS PUBLISHED.

The year has also been fruitful in useful books and pamphlets upon subjects cognate to Theosophy. Among them are—

1. An excellent Sanskrit Primer, by Pandit Nitya Nanda Misra, F. T. S., of Bhagalpur;

2. 3. An Elementary and a more advanced Primer for Sanskrit, Telugu and Tamil students, by Dewan Bahadur R. Raghunath Row, F. T. S., President of our Madras Branch.

4. Hints on Esoteric Theosophy, No. 2, by A. O. Hume, Esq., F. T. S.

5. Paradoxes of the Highest Science; a *resumé* of unpublished writings of Eliphas Levi, the great French Occultist.

6. The Occult World, 3rd Edition, by A. P. Sinnett, Esq., Vice-President of the Parent Theosophical Society.

7. Esoteric Buddhism, 2 Editions, by the same Author.

8. Thoughts on the Metaphysics of Theosophy, by a fellow of Tinnevely.

9. A Collection of Lectures, by the President Founder, edited by M. A. Theyagarajier, Assistant Secretary of the Madras Branch.

10. A French Translation of my Buddhist Catechism, by M. D. A. C.—F. T. S., of the Paris Branch.

11. Theosophy, a highly praised pamphlet, by M. P. Sreenivas Row, Vice-President of the Madras Branch.

12. La Quadruple Constitution, by the Dowager Countess of Caithness and Duchess of Pomar, President of the Paris Société Théosophique d'Orient et d'Occident, one of our new Branches.

13. A Tamil translation of the 1st Upanishad, by M. Theyagarajier, F. T. S.

14. At Poona a Marathi Edition of the *Theosophist* is being issued monthly. And to crown all, the entire contents of Madame Blavatsky's *Isis Unveiled* have been translated into French, and the MSS. are now on their way hither for revision by the Author.

The above facts will show how rapidly a new literature of Theosophy is growing both in Asia and Europe, and how things are tending towards a collaboration of our students in these several quarters of the globe for occult research. The taste for this, as for every other branch of knowledge, grows with the supply furnished, and we see every promise of an enormous development of ancient ideas upon the subjects of Philosophy, Science and Religion.

#### MESMERIC CURES.

Many of you will recollect that I began last year in Southern Ceylon to give some practical illustrations of the curative power of vital magnetism, by restoring to health about sixty persons afflicted with partial or complete paralysis. The rumour of these cures preceded me to Bengal, and I was so strongly pressed to afford similar examples in that country, that I finally, with the permission of my blessed Gurn, yielded. I was fortunate enough to effect many very striking cures, and, first and last, gave relief to a greater or less extent to above 2,000 patients during that tour. In Southern India, I treated in one way or another about 5,000 more; and at stations between Madras and Bombay perhaps another 1,000. But such an enormous drain upon my vitality could not be kept up indefinitely, and so upon reaching Bombay a peremptory order came from the revered Mahatmas to discontinue healing, and reserve my strength for my legitimate presidential duties. The relief was most timely, for it was only when I had actually stopped the work that I could realise how near I had come to complete exhaustion of my vital power. Even now, after a rest of some weeks, I have not fully recovered my normal nervous tone. I have mentioned these facts for two reasons. 1st, to enforce upon your minds the fact that the power of a healthy person to heal the sick of a wide range of diseases by the impartation of his vital aura has been absolutely proved by a large number of examples; and 2nd, that it is most unwise to overdo the thing. There is a just limit within which one benevolently inclined can safely exercise the healing power, and that differs greatly with different individuals. One may without injury to himself treat ten or a dozen parties of a morning, while another ought not to venture upon more than half or fourth of that number. The morning is the best time to choose, and the sensitiveness of each patient to the mesmeric current should be invariably tested by the simple and scientific method which I have shown you all when visiting your several stations. I am glad to see before me a number of brothers among the delegates whom I have cured of various afflictions, and who will doubtless be quite ready to give you the particulars of their respective cases. Among others, Babu Laddi Mohan Ghose of our Bhagalpur Branch, can certify to the restoration of sight to one of his eyes after he had been blind from childhood.

#### FINANCIAL.

Our Society has, for the first time since its organisation, received enough from various sources to defray its ordinary and extraordinary expenses. In fact, but for the very heavy cost of removing the Head-quarters' installation in the new premises, erection of new chambers, repairs, purchase of furniture, &c., the

Treasurer's account would have shown a handsome surplus. This fact is most gratifying, and we may all hope that before long our pecuniary condition will be as satisfactory as could be desired. You will have laid before you the Report of the Head-quarters' Fund Committee and certain suggestions by the Poona and other Branches as to the future up-keep of the organization. The Founders feel that they should leave all these matters to be settled by the Convention according to its best judgment, and content themselves with the promise to co-operate in carrying out any and every wise plan that may be agreed upon by their colleagues. For my own part, as the party most interested, I would wish that a limit should be fixed to the expenditure to be incurred by local Societies for the entertainment of visiting officers from Head-quarters. I fully appreciate the desire of our brothers to testify their affection by lavish hospitalities, but at the same time I think it would be better to keep the same within such moderate limits as to prevent the visit from becoming at all burdensome to young Branches, not yet supplied with the necessary theosophical libraries. With these few words, I leave the matter to be disposed of by the appropriate committee.

#### FUTURE WORK.

The Theosophical Society has two parallel and distinct lines of work laid out before it. I wish this to be very clearly understood, so that all unjust suspicions and misconceptions may be avoided, alike by friend and foe. These are—(1) The reformation and re-habilitation of pure Buddhism in Ceylon and other Buddhistic countries, where it has become degraded by admixture with superstitions of various kinds; and (2) The revival of the Aryan and other non-Buddhistic philosophies, religions and sciences throughout India, and the vindication of their merits. These fields of labour do not clash with each other, and both are alike important to the world's moral and spiritual well-being. The Founders of the Society were long ago taught the essential identity of basis under all these ancient faiths. Accepting, as they do, the fact that all rest upon the archaic secret doctrine, of *Brahma jñanam* it seems to the Founders equally important that all should be studied, and expounded by the common key which that esoteric doctrine provides. If, then, we are seen at one time doing our best to help Hindus to understand the Hindu Shastras, at another the Parsis to catch the glorious hidden light of Zoroastrianism, and anon the Buddhists of the Southern and Northern Schools to confound their differences and mutually compare ideas, it must not be inferred that our own belief is but an intellectual phantasmagoria. Far from it; we have very distinct and pronounced convictions upon religious subjects. But our Masters have ever taught us that man never did and never will think alike, and that this diversity is but the necessary corollary of the universal harmony of nature—a symphony composed of apparent discords. The corner-stone of our Society is, as you all know, Tolerance and Reciprocity of Good-will. So attuned is the human mind to this sense of essential religious harmony, that you can find the more spiritual thinkers of even the most bigoted exoteric crudal groups agreeing upon a common esoteric basis. There is an esoteric Christianity under the bigotry of its externalism which is almost identical with our own Eastern *Gupta Vidya*. And some of our warmest friends in Europe and America are such, because they hope we and they can agree to bring out this truth before the world. Then again, as to Mohammedanism. There is a bitter hatred between the orthodox followers of Islam and the orthodox Hindus of all our sects. Yet what can come nearer to our highest Indian philosophy than the Mohammedanism of the Sufis—of which class we now have a number of the most intelligent in our Society? These Sufis say that there are four stages of spiritual development, corresponding with the Hindu Dhyana:

1. *Shriyat*, or Ceremonial worship, dogmas, and civil observances.
2. *Tarikat*, simpler ceremonials, with a preponderance of spiritual training. This includes secret teaching as to methods of practice, given by the *Murshid* (Guru) to the *Murid* (Chela.)
3. *Hakikat*, attainment of true knowledge of the Divine Being (Allah) who seems to correspond with Jehovah, Brahma, &c. &c. in attributes.
4. *Marafat*. The merging of self into the Divine Principle.

When that splendid Arabian philosopher of the XIth Century, Averroes, had evolved out of crude Mahammedanism, the quintessence of his philosophical Islamism—as Draper calls it—and had penetrated the thought of Europe, the fanatical and ignorant masses of his co-religionists were allowed to spit in his face and beat him with their shoes, while, by a brutal decree, he was forced to sit in the mosque to receive these indignities. The same spirit wars at this moment in the breast of every rabid sectarian of whatsoever creed; and from them Theosophy expects no mercy, nor asks any favors. Perhaps the day will never dawn when the world will be more tolerant, yet I am sure that none of us who call ourselves Theosophists and aspire to be worthy of the name, would on that account relax a single effort to try to hasten its coming. We may never realise a noble ideal, yet it is always profitable to make the attempt. The world is never the worse for the proclamation of a truth, but always the sufferer by its suppression.

#### THE ARYAN LEAGUE OF HONOUR.

In the progress of my work I have been, of course, compelled to keep, if possible, the future outcome always in view. We are building for all time and not for a day, and unless we are content to have theosophy written by the future historian in the list of social ephemera, we must lay our foundations deep and strong. Our successors in Society work are now in the cradles or sitting on school-benches. To their hands must we commit the perpetuation of reforms by us inaugurated. The question of the hour with us is to arrest the tendency to Aryan denationalization; to save the tottering temple of ancestral wisdom from a fall; theirs will be that of rebuilding and restoring it to its pristine perfection. On the 7th of June 1882, during the first visit to Madras of the Founders of our Society, I gave a special lecture to University graduates. I then showed to them that in the Indian graduates and matriculates was slowly differentiating itself what was practically a new caste—a sociological evolution almost identical with that which in the early morning of Aryan civilization developed the Brahman caste, is now accreting a social group which may very well be the dominant social and moral force of the future. Among the potential agencies that can be employed by the well-wishers of India to mould the aspirations and furnish the motives of this group, none can be compared with Theosophy. We are all aware that it is the dream of the Founders of our Indian Missionary colleges, schools and societies that the social destinies of our country shall be controlled by them. But without laying myself open to the charge of prejudice. I feel that the experience of the past makes it but too plain that this dream can never be realised. No one can doubt that a powerful influence has been and may be exercised by the Christians upon our educated youth; nor that this influence is most unfortunate in its effect upon the Asiatic mind. Its tendency is to subvert all religious belief rather than to make the student accept Christianity. Passing out of the reach of ancestral religious influence at a tender age, the youth is brought into contact with religious ideas, for which he has no sympathy, and with one-sided free-thinking companions and books which soon make him irreligious. It is clear, therefore, unless I sadly mistake the signs of the times, that the future graduate caste, whatever it may be, will not be Christian. Now, we Theosophists, pretend to a thorough devotion to Indian moral and spiritual interests, and our chief desire is to bring about the resuscitation of the ancient Aryan Wisdom and Virtues. We may do this in part by reforming our own conduct according to the ancient model, but the full fruition of our hopes lies in the womb of the future; In the Madras Address to graduates, referred to, I ardently besought them to promote Sanskrit learning; to make themselves familiar with its contents, at least at second hand; to learn at least theoretically the secret doctrines of the Hindu Shastras; to agree upon a higher standard in their *corps* which a new public opinion among them should compel every graduate to live up to; and to form a Graduates' Union in each Presidency, with such of their illustrious colleagues as Sir T. Madhava Row and others at their head. The two years and a half which have come and gone since that Address was delivered, have seen me travelling in every part of India within the extreme limits of the Peninsula. And now, after having come into personal contact with almost all our educated men, I have reached the conclusion that our purpose can never be fully accomplished without the concurrence and co-operation of Indian youth. In this conviction, I, in the month of November, addressed a circular to our Branches, asking for suggestions as to the best way of forming what I am inclined to call the "Aryan League of Honour." The time has been too short to elicit anything like a general expression of opinion, but some minutes have been handed in which are under consideration. Without venturing upon an exact scheme, I may state my views generally as follow:—

(a) The League to be composed of school boys and undergraduates between the age of 10 and 21.

(b) Membership should be confined to youths, whose ancestral religions have the same foundation of esoteric philosophy, viz., Hindus, Parsis, Buddhists, and Jains.

(c) Upon attaining the maximum age of 21, a member's active relation with the Society shall terminate.

(d) The League should be organised independently of the Theosophical Society, but nevertheless be under its fatherly care and protection. Our local Branches to be, as it were, appellate and advisory bodies, to which the boys may have the right to appeal for advice in case of necessity.

(e) Each member should have the right to wear a distinctive badge—a medal, ring, pin, or *Keyura* (armlet)—upon complying with certain very rigid conditions as to morality, &c. This medal to be worn after a strict preliminary probation of six months, to be forfeited upon a breach of either of rules of conduct, and to be redeemable after a subsequent additional probation. No espionage whatever to be practised, but every boy to be put on his own honour to decide as to his fitness or unfitness to wear the badge; but with the distinct understanding that if any misconduct not voluntarily confessed shall be brought home to him, his badge shall be forfeited, he shall be expelled from the League, and for ever disqualified from readmission.

(f). That no attempt should be made to compel boys to hold stated meetings of their several Lodges, or to make any organization likely to be burdensome to themselves or to be supervising Branches of our Society: the object being only to create a healthy moral tone among the rising generation, and a deep sense of obligation to be worthy of the ancestry from which they spring.

The virtues which adorned the character of the mighty dead of Aryavarta are exhaustively enumerated in *Srimad Bhagvat* (Skanda vii, ch. XI. v. 9 & 10). They are, truth, generosity, harmlessness, command over passions, charity, study, honesty, equanimity, a spirit of enquiry, love, piety, kindness, courage, sympathy, straightforwardness, and others.

It is to be expected that the rising generation of India should try to live up to the high ideal of moral greatness here delineated, and must always guard themselves against the ten cardinal sins mentioned and deprecated alike by Lord Buddha and Bhagavan Manu. Purity of life will always follow a sleepless watch against the sins of body, mind and speech. The sins of body, say the Shastras, are:—

- |            |  |
|------------|--|
|            | (1) Unchastity,                              |
|            | (2) Theft,                                   |
|            | (3) Taking life;                             |
| Of mind,   | (4) Disbelief in a future life,              |
|            | (5) Harboursing thoughts of injuring others, |
|            | (6) Grieving at the prosperity of others;    |
| Of Speech, | (7) Lying,                                   |
|            | (8) Slander,                                 |
|            | (9) Abuse,                                   |
|            | (10) Empty talk.                             |

There are pessimists in plenty who will declare that such a League as this is impracticable. In view of the prevalent loose notions of truthfulness, they will smile at the idea of expecting school-boys to come forward, declare their breast too polluted to wear the Aryan Medal, and give it to their officers to be held in trust until they can win it back. With such gloomy natures, I do not sympathize. I have, and have always had, a perfect conviction of the inherent nobleness of human nature. Boys, I love and have the utmost confidence in. Let 10 boys pledge to me their word of honor in support of some high and noble cause, and I should expect at least 8 of them to keep it loyally. Why, our own Theosophical Society is based upon our mutual pledge of the simple Word of Honour; and although our membership has increased to thousands, and embraces almost every nationality, those who have actually broken their pledge of secrecy may be counted upon the fingers of a single hand. What, then, if men, all more or less tainted with the bad influences of Society, and who were never put under so noble a self-restraint as this League of Honor contemplates, can keep their pledges, why should not the dear boys, who are still "unspotted of the world" and in the state to receive the best as readily as the worst influences—he trusted. At any rate, I do trust them, and have the greatest hopes of the future through their enthusiastic and loyal co-operation. During my recent tours I have by special request lectured to the boys of nearly all the Colleges and Universities, and I can assure you that not one of us feels so strong a love for the cause of Aryan moral regeneration as has been shown by them. Seeing this, the idea of this Boys' League gradually developed itself in my mind. I then began broaching the subject to the parties interested in the several Presidencies, and am in a position to say that the League can be formed with very little trouble simultaneously in all parts of India. What I aim at is to make the medal or Keyura which indicates membership in the League of Honor as highly prized and valiantly struggled for as the Victoria Cross of Great Britain, the Iron Cross of Prussia, and the Cross of St. George of Russia, are by the soldiers and sailors of those great empires. Breed up a boy to base ideals, and you make him a human scourge; give him a worthy one, and the heroic character evolves out of the slime of physical grossness, as the spotless lotus in yonder tank has under the stimulus of sunlight drawn the vital essences which make its beauty and its fragrance out of the muddy bottom. So, trust the lads; make them feel that the honor of Aryavart, the reformation of religion, the revival of the ancestral wisdom, is a duty they must perform, and, my word for it, you will not be disappointed. When we have passed behind the veil, they will carry on our work, emulate and better our example, and crown the edifice of the house whose foundation stones we are now laying.

#### NECROLOGY OF THE YEAR.

In a widespread association like ours, whose membership includes persons of various ages, nationalities and possessional occupations, the inroads of death are always noticeable. It has been our misfortune to lose during the past twelve months various colleagues of marked merit in the Theosophical sense,

and some whose loss is felt by a wider circle than ours. The reported deaths of Theosophists are in number nine: D. M. Bennett, of New York, the fearless and indefatigable Editor of the *Truthseeker*; G. Narasimhulu Chetty, a higher official in H. H. the Nizam's service; Jogendronath Basu Sarbadhikari, the touching story of whose death, recently told in the *Theosophist*, shows that it might better be termed a translation or spiritual rebirth; C. T. Winfred, of Trichinopoly; Peary Chand Mittra, of Calcutta, gentlest of spirits, purest of minds, our dear brother; P. Teroomal Rao, Sub-Judge of Tinnevely, whose eyes had been but too recently opened to the glimmer of the divine light, and who would have been, I am sure, as devoted and unselfish a helper as his brother, of Madras; Gregoris Edrewere, a member and officer of the the Galle branch, whose equal in untiring zeal, in sweet tolerance of disposition, in perfect loyalty to the cause and affectionate regard for myself, I can hardly name; Emanis DeSilva Gunasekera, of Ceylon; and Baldeo Prasad, an officer of the Educational Department of the N. W. P., whose integrity and efficiency had just been rewarded by deserved promotion, and whose interest in our Society had never flagged since we first met him at Meerut in the year 1879. When the roll of our early colleagues in the Indian field comes to be compiled by the historian of this movement, let these names be written among these whose memories deserve to be preserved.

DEWAN BAHADOOR R. RAGOONATH ROW, President of the Madras Theosophical Society, then rose, and having addressed a few words of welcome to the Delegates assembled, on behalf of his Branch, delivered the following address:—

MR. PRESIDENT, DELEGATES AND GENTLEMEN,—I rise to address you a few words on behalf of the Madras Branch which I have the honour to represent. Since the celebration of the last anniversary of the Parent Society, the Theosophical Society has made considerable progress in this Presidency. The number of new Branches established in various parts of this Presidency, the books and pamphlets published to explain the aims and objects of our Association and to promote its cause, the schools opened for reviving the study of Sanskrit literature and philosophy, and the interest evinced by the public in our work, unmistakably show that the Society has acquired no small amount of additional strength and vigour. And even those who do not sympathize with us, are obliged to admit the power and influence which our Association is gradually acquiring in the native community. However Utopian the idea of a Universal Brotherhood may be in the opinion of some people, the Society is doing all that it can, and decidedly more than any other institution has as yet done, or attempted to do in this country, to strengthen the ties of friendship and intellectual sympathy between the intelligent sections of the various races of this country and induce them to work together on a common platform to accomplish the mighty work undertaken by it. This very assembly, which I am now addressing, consisting of delegates who came here from places at an enormous distance from the Head-quarters of the Society for the purpose of exchanging thoughts with their brethren and co-operating with each other for achieving a common object and promoting a common cause, proves the truth of my assertion.

But, gentlemen, a Universal Brotherhood of Humanity can only be practically realised in this country to some appreciable extent at least, when the other two objects of the Society are gained. It is absolutely necessary that a vigorous effort should be made in every part of India for reviving the study of ancient Aryan literature and philosophy and recovering the grand truths regarding the mysteries of nature and the "psychical powers latent in man," disclosed therein. Divergent creeds, customs and usages are very often traced to a common source, and are professedly derived from a common authority in this country. That common source is Sanskrit science, philosophy and literature, and the ancient Rishis of India constitute that common authority. It may appear strange that such marked differences in religious opinions, ceremonies and usages should have been brought into existence by different teachers relying upon the same books and upon the same authority. But when the real key to our ancient religion and philosophical mysteries, which is only to be found in the "psychical powers latent in man" is lost sight of, later interpreters of the writings of our Rishis have failed to realize the intellectual and spiritual stand-point of their authors, and have, in consequence, constructed to the best of their ability various dogmatical systems of religious faith, each of which claims a monopoly of the philosophical truths, revealed by the ancient Mahatmas. And until the original

sources of our true religion are thoroughly investigated with such help as is derived from psychological science of the ancient Aryan mysteries and the practical knowledge of living Adepts, it will not be possible to test scientifically the claims of these various religious systems, and recover in all its purity, simplicity and scientific completeness the ancient wisdom-religion, professed and preached by the Aryan Rishis. In order to accomplish this object, it is highly essential, as I have already stated, that every possible effort should be made to revive the study of Sanskrit literature and science. The foundation of a few primary Sanskrit schools for children will not serve the purpose above indicated. And, moreover, practical experience has shown the utter uselessness of getting the Vedas by heart, or cramming for a certain number of years works on grammar or logic. It is hardly necessary for me to point out to you how very insufficient is the knowledge of Sanskrit acquired in English colleges and schools for the object above mentioned. For national progress and for the improvement and systematic exposition of our religion and science, we require a class of Pandits who have added to the purely literary acquirements of the best of our modern Pandits, an accurate scientific knowledge of the subjects investigated by our ancient Rishis, a good knowledge of modern science, an aptitude for scientific investigation and an unprejudiced mind. Such are the teachers that are needed for the purpose we have in view, and for assisting the Theosophical Society in its work.

It is not my purpose here, gentlemen, to lay before you, any definite plan for securing the aforesaid object, and it is impossible for me to do anything more than make a few suggestions for your consideration within the limited time allotted to this address. Before any decided advance can be made on the existing system of imparting instruction in Sanskrit literature and science, the most important works on the various branches of modern science may be translated into Sanskrit, and the sciences already existing in that language in a form, more or less developed, must be improved by the help of modern scientific discoveries, instead of being altogether superseded or replaced by systems of foreign growth. And it is my humble opinion that a beginning should be made in this direction as soon as possible.

It is also necessary that the Society should, as far as practicable, collect funds and organize printing establishments at a few prominent centres in this country for the publication of important Sanskrit works on philosophy, science and religion. And the members of the Theosophical Society and others who have some sympathy for the proposed object, should be invited as soon as possible to suggest such schemes of imparting Sanskrit education as are calculated to secure the desired result. Before concluding this short address, I cannot help inviting your attention to a very important subject in this connection. One of the greatest philosophical writers of England, John Stuart Mill, enumerates in his essay on Bentham and Coleridge, three important conditions required for the formation of a nation, viz., (1) the absence of great physical barriers between the different parts of the country, inhabited by the people comprising the nation in question and the presence of well-defined geographical boundaries separating the said country from its neighbours; (2) similarity of political and social institutions throughout the length and breadth of the country; and (3) a common language. In the case of our country, the first condition is supplied by nature, and the requisites for the second condition are being rapidly brought in to existence by the political power which reigns in the country. I sincerely hope that, through the agency of our Association, the last and the most important condition of national unity and strength will be brought into existence.

Telegrams were read from various Branches expressing congratulation and good wishes—some of which are given below:—

From Allahabad:—"Some fellows here are distributing blankets to the needy in honor of Anniversary celebration."

From Avinas Chandra Banerji, F. T. S., Allahabad:—"I am sorry I am unable to attend the Anniversary. My best wishes for its success."

From a Chela to Colonel H. S. Olcott:—"Congratulations to Brothers, Theosophists and Chelas. Humble *pranam* to most venerated Gurudeva."

From J. Ghosal, F. T. S., Calcutta:—"On this auspicious day my congratulations to you all, and humble *pranam* to most venerated Gurudeva."

From Saligram (Gorakhpur), to Thakur Ganesh Singh, Dy. Collector, Gorakhpur, care of Secretary, Theosophical Society:—"I congratulate the Founders and Brothers, assembled, on behalf of our Branch and myself on the occasion of the Anniversary."

From K. M. Shroff, Vice-President, Bombay Theosophical Society:—"Absence unavoidable. Bombay Branch offers sincere congratulations to the Congress."

From Govindprosad, (Aligarh, N. W. P., President A. B.) Theosophical Society:—"In the absence of delegate we hereby congratulate Brothers present. May Parabrahm bless the day."

From Srischandra Basu, F. T. S., Calcutta, "Salutations to Mahatmas. Congratulations to Brothers. Success to Anniversary."

From N. B. Nakhre, (Panchmarhi):—"Circumstances prevent my presence; though absent in body, yet present in spirit. Pachmarhi brothers send greeting to the delegates assembled."

From G. H. Crichton, F. T. S., (Bombay), "Anniversary congratulations; Philindianism great as ever. Theosophical greetings."

From Mrs. Gebhardt (F. T. S.) Elberfeld, Germany, *via* Turkey, to Colonel Olcott, Adyar:—"Our best wishes and congratulations."

Etc. Etc. Etc., all in the same brotherly spirit.

After the President-Founder had appointed various committees for the consideration of the several propositions before the Convention, the meeting was adjourned.

At 5 p. m. took place the Public Reception, during which many addresses were delivered.

Dr. F. Hartmann, Delegate of the American Societies, having been introduced to the audience, read the following paper:—

MR. PRESIDENT, BRETHREN OF THE THEOSOPHICAL SOCIETY, LADIES AND GENTLEMEN,—Having been delegated by some of the Theosophical Societies of the United States of America to represent them at this our Eighth Anniversary, I feel it my duty to say a few words and to present their congratulations and sympathies to you, and especially to our esteemed President and Founders, Colonel Olcott and Mme. Blavatsky.

The Theosophists of the United States see with astonishment and admiration (not to say envy) the rapid progress which you have been making, and if they have not progressed as fast as you, it is because there is no Colonel Olcott to lead them. They have to look to the East, to this far-off land of India, for light and the long-lost word.

This is a fact too little taken into account by some who have been writing upon the spread of Theosophy. Imagine only what would have been the numerical strength of the Theosophical Society in India and Ceylon, if the two Founders had passed out of Asia into Europe within a year or two after their first appearance at Bombay in the year 1879, and left the movement to take care of itself? Imagine this, I say, and no longer wonder that, while nearly one-hundred Branches of the Parent Society have sprung up in this your sacred country, only a handful of stars have been added to our bright galaxy in America, the birth-place and cradle of this wonderful movement of our times. If Colonel Olcott had expounded Theosophy and Aryan Philosophy throughout his native country as vigorously and persuasively as he has in his new motherland—as he likes to call India—we would undoubtedly now be able to count at least two or three hundred American Branch Societies, and the public mind would have enthusiastically accepted the Aryan esoteric ideas, so incomparably grand and inspiring are they. And the spread of these ideas would have been doubtless greatly hastened by the wide and national reputation for sincerity and honesty of purpose which Colonel H. S. Olcott gained by his services to the country during the late civil war, as an officer of the War Department.

I am glad to be asked to give our Indian friends this personal assurance of the honorable esteem in which our venerable President-Founder is held by his countrymen, and it is with no little indignation that I have read from time to time the calumnious aspersions upon his private character and that of his equally respected colleague, Mme. Blavatsky, which interested parties have put in circulation. But still the Theosophists of America are neither dead nor asleep. Our regular Societies in New York, St. Louis, Rochester and Chicago are in a flourishing condition, counting among their members men of great talent and high social standing; new Societies are in the process of formation, and isolated Theosophists can be found all over the country, in cities as well as among the rural districts of the west, the plantations of the south, and in the solitary cabin of the miner.

Three months ago, I left my home amongst the snowy peaks of the Rocky Mountains in Colorado, some 15,000 miles from here; crossed the blue waters of the Pacific Ocean, and I am now standing in your midst, as a living representation of the fact that Theosophy is not dying out in America.

No, the work has just begun. The tree planted eight years ago in New York, has spread its roots all over the American continent. New trees are springing up everywhere, and only require sufficient sunshine and rain, and the hand of an experienced gardener to keep them from growing in the wrong direction. America is a land of rapid progress. Where yesterday you beheld only a wilderness, there tomorrow you will see a city appearing as if by magic, provided with steam engines, electric lights, telephones, printing presses and all modern improvements. Thousands of railroads are stretching their iron arms over immense tracts of territory, and a journey which formerly occupied many months of toil, can now be made in a few hours in flying palace cars. Waste tracts of land are rapidly settling up by thousands of emigrants from Europe, escaping from poverty to comparative affluence. We have free schools, free lands, free elections, free thought and a free government. There is no distinction on account of race, or color or religions. America is not a Christian country. Our Government fortunately does not intermeddle in any manner whatever with religious matters, and to this our progress is principally due. As yet we have neither Pope nor King, and it is to be hoped that we never will have either. The prevailing tone of thought in America is agnosticism, or an assumed indifference to things which are considered unknowable. But this indifference is only apparent. The intense enthusiasm, which the free-thought lectures of Robert B. Ingersoll have awakened all over the country, prove that the material cares of this world do not make men indifferent to spiritual progress. No, we are only indifferent to the unprofitable and useless wranglings of a hundred different sects, who are fighting each other, and whose contradictory doctrines do not interest us. Instead of mere assumptions and arrogant dogmatisms, we want facts. Let it once be known that some of these supposed unknowable things can be known, and there will be thousands eager to learn. The proof of this lies in the rapid spread of Spiritualism, so far the only system in America, which, instead of theological assertions, furnishes men with solid, although often wrongly-explained, facts, upon which the Spiritualist can build his little paradise, until the light of Theosophy awakens him to the appreciation of the grand and majestic truth, which is open before him.

If the ancient esoteric philosophy were properly promulgated in America, thousands would fly to its banner; because, as I understand it, it exacts no blind credulity from this thoroughly practical age, is ready to submit its pretensions to severe scrutiny, and is in accord with the latest discoveries of science. Already these discoveries touch upon occult ground. The new and interesting work of Professor Wms. A. Hammond on Insanity, in which he speaks of the relation of mind and instinct to the brain and spinal cord, contains opinions, in many respects identical with those printed seven years ago in *Isis Unveiled*; he says that "three hundred years from now, those who came after us may be ashamed of their ancestors for doubting that a man can be in two places remote from each other at the same time,"—even the mere fact of his expressing such a prophetic (?) sentence is a sign of the times. Of course, if I should tell him, that I have indisputable proof that a person can be consciously in one place, while his physical body lies slumbering in another, a hundred miles away, I would certainly incur the displeasure of the Professor, and he would

classify me as a lunatic, affected with intellectual monomania, with exultation, because in spite of his learning, he knows nothing yet of the secret science.

We must not judge these scientists too severely. I know from personal experience how painful it is to have your acquired scientific convictions slapped in the face by occult facts, to have the basis upon which your opinions rest shaken by a mental earthquake, and to see all your dear little authorities tumbling down into the dust, at the magic touch of a Mahatma.

Let modern scientists once grasp the idea of the seven-fold constitution of man; let them comprehend that this physical body with all its perplexing nerve-centres is nothing but a temporary condensation of matter, a necessary shell for the development of the higher principles of man, which in their turn are only matter in a higher state of evolution; and they will find that their scientific bibles are full of superstitions and need to be revised, and their infallible dogmas require modification. They find that the existence of the soul is as much amenable to proof and experiment as the existence of electricity or magnetism or any other so-called force, whose existence has been ridiculed in the not far distant past.

It seems to me, that if Scientists, Theologians and Spiritualists would direct their attention to Theosophy and Occultism, and carefully read the Theosophical Journal, they might save an immense amount of useless labor and tons of waste paper, and they would not need to puzzle their brains over questions which have been satisfactorily answered thousands of years ago.

The *Scientists* would find that the existence of elementals, elementaries and spirits is as necessary in the chain of evolution of matter from the mineral kingdom, through the vegetable, animal and human kingdoms up to the spiritual kingdom, as the missing link for which they are seeking is necessary to complete the chain of the evolution of man. They would find that man is not a mere automatic machine, whose existence is dependent on the possession of a physical body; they would find this speck of mud, which we call the planet-earth, has been inhabited and *civilized* in such remote ages, that the number of their years must be counted by hundreds of thousands, and that there are yet an infinite number of things in the universe, of whose existence they know absolutely nothing.

The *Theologians* would learn that the God to which they pray they carry around within themselves; that it is in their own power to grant their own prayers; that their fighting and wrangling about the merits of their different theological systems is profitless; because the common foundation of all religions, which is the only true religion, is in all systems one and the same, and that their so-called holy books are often full of errors; that they do not need inspiration from without, if they will only listen to the divine voice within themselves; and that no man can be saved by vicarious atonement or in any other way, unless he makes an effort to save himself. Furthermore, it would help them to understand the symbolical and allegorical language in which their books are written, and which as yet not one in a thousand from the Pope down to the youngest Missionary seems to understand.

The *Spiritualists* would learn that their material conceptions of the spiritual universe are entirely too little to explain the sublime grandeur upon which the cosmic constructive energy has evolved the universe; they would learn that their "angel guides" and "celestial visitants" are not always the innocent creatures which they suppose them to be, and that they may be seriously injured by them, or injure them in their turn. They may learn that many of the incongruities of messages and tomfooleries are only the innocent effusions of their own minds; they may learn that a continuance of their family relations in the *post-mortem* condition would lead to interminable quarrels and difficulties, and that they may have to take up the thread of life again where they left it, after shuffling off this mortal coil, and return to a world they despise.

As to what the so-called *Materialists* could learn, I will say nothing. They can learn nothing under any circumstances, because they are blind; and, besides, there are at present very few outspoken materialists in America—outside the lunatic asylums.

So far even the meaning of the word Theosophy is a puzzle to them. Let me, therefore, tell them, that "Theosophy" or divine wisdom is the intuitional perception of the truth. It proves that every man is a "son of God," or a part of the divine essence, out of which the universe is formed, and that

he possesses extraordinary powers, which can be developed by a course of proper physical and mental training.

A Theosophist is one who has learned to subdue his passions and to keep his desires within due bounds, who is a perfect master of himself and acts up to his highest intuitions, especially in accordance with the principles of justice and truth. He has purified himself and his spirit, and being free from the attractions of matter, is able to soar to higher spheres and perceive verities, which are yet a mystery to the ordinary run of mankind. As he advances, he grows stronger, until he becomes a god himself.

So far the blind have been leading the blind, and vice and social corruption have followed; but let it once be understood that after the dissolution of the physical body, there is a far higher existence, which we may obtain by will and determination, and that in the beautiful language of Edwin Arnold.—

“Before beginning and without an end,  
As space eternal and as surety sure,  
Is fixed a power divine which moves to good,  
Only 'ts laws endure.”

If this idea is grasped and realized, then man becomes a responsible being, and his will becomes free. It will then appear foolish and unprofitable to do wrong; there will be no more inducement to be selfish; war and bloodshed will cease; and the angel of peace step in their place. The devil will be killed; his professional combatants will find their occupation gone; harmony will prevail; and we all will take our refuge in the law of good, whose concrete embodiment is to be found in the esoteric philosophy, evolved and perfected by the old Aryan Rishis and Munis.

Mr. T. W. Brown of the London Lodge Theosophical Society, read the following address, sent by its President:—

From MRS. A. KINGSFORD, M. D., President of the British London Lodge (Branch) Theosophical Society.

TO THE PRESIDENT OF THE THEOSOPHICAL SOCIETY.

DEAR SIR AND BROTHER,—It gives me great pleasure to address you officially, for the first time, as President of the British Theosophical Society. This letter must do duty as a delegate from our Lodge to your Anniversary Meeting of December, it being impracticable to send you any one of our brethren as a representative.

I venture, therefore, to ask that you will permit me, as chief of your British Fellows, to lay first before you, in your official capacity, and subsequently before the readers of the *Theosophist*, a brief *resumé* of what I believe to be the right aims and method of our work in future, and the wisest policy possible to our Society.

I have read with interest, and hail with joy, the evidences published in the October number of your Journal, (pages 10 and 11 of Supplement) of a *rapprochement* between the Theosophical Society of India and a Christian Mission established in that country.

To me personally, it has always been a matter of regret that in attacking the orthodox presentation of Christianity, your Society has hitherto been hardly careful to guard itself against the imputation of antagonism to the essential mysteries of that religion.

In my inaugural address, delivered at the *soiree*, held by the London Lodge last July,—an account of which is given in p. 4 of the Supplement to the October *Theosophist*,—I endeavoured to put before our Fellows and our guests what I hold to be the true attitude of Theosophy towards all the great popular creeds of past and present; and I was gratified to have read, quite unexpectedly, in the course of Mr. Sinnett's subsequent discourse, a letter from one of the Indian adepts, in which my own view was emphatically endorsed and ratified. The writer said:—

“Once delivered from the dead weight of dogmatic interpretations and anthropomorphic conceptions, the fundamental doctrines of all religions will be found to be identical in their esoteric meaning. Osiris, Krishna, Buddha, Christ, will be shown as different means for one and the same highway to final bliss. Mystical Christianity, that is to say, that Christianity which teaches *self-redemption* through one's own seventh principle,—the liberated Paramatma or Aurgocides, called by the one, Christ, by the other, Buddha, and equivalent to regeneration or re-birth in spirit—will be just the same truth as the Nirvana of Buddhism.”

These are wise and far-seeing words, and ought to sound for us the key-note of our policy and aims, especially in regard to the work of the Society in Christian lands like

England and France. It is not by wholly setting aside and rejecting names and symbols, hallowed by familiar use among our people from their birth as a nation, that we shall create for ourselves the largest sphere of usefulness. It is not so much the revelation of a new religious system that is needed here, as a true interpretation of the religion now existing.

In the country in which your labours are conducted, you are undoubtedly right in adopting as your platform the exposition of that form and system of doctrine which is indigenous to the race and soil of India. The terms you employ, the names of the various deities, principles and conditions, etc., to which continual allusion is made, whether in the pages of the *Theosophist* or in your own oral addresses, are familiar to the mass of your Oriental readers and hearers. But in this quarter of the world, they are meaningless and unintelligible save to a few—a *very* few—students of Asiatic literature. Most of us, in reading such expositions, skip the terms and names unfamiliar to us, and lose, of course, utterly, the force of their interpretation. Not knowing their exoteric acceptance, it is impossible for us to appreciate the demonstration of their esoteric value. And if this be the case with Fellows of the Society, it is easy to judge of the insuperable difficulties which such reading must present to those who are altogether strangers to our system and design. It is too much to ask English-speaking people, with but little leisure, to devote the necessary time, toil and trouble to the study of a foreign language and theology, as a preliminary to the explanation of problems which are related to that theology, and which do not immediately involve or concern their own, so far as they can see. Much more, the mysteries of existence which underlie all religions structures, ought to be expounded in familiar terms, as well to Occidental as to Eastern enquirers, without need of recourse to foreign epithets or reference to processes which, to the Western mind, must necessarily be so obscure and difficult of comprehension as to repel it from the serious consideration such matters demand.

Orthodox Christianity, both in Catholic and in Protestant countries, is languishing on account of a radical defect in its method,—to wit, the exoteric and historical sense in which, exclusively, its dogmas are taught and enforced. It should be the task of Theosophy in these countries, to convert the materialistic and, therefore, idolatrous interpretation of the ancestral faith and doctrine into a spiritual one,—to lift the plane of the Christian creed from the exoteric to the esoteric level, and thus, without touching a stone or displacing a beam of the holy city, to carry it all up intact from earth to heaven. Such a transmutation, such a translation as this, would at once silence the objections and accusations now legitimately and reasonably brought by thinkers, scholars and scientists against ecclesiastical teaching. For it would lift Religion into its only proper sphere; it would enfranchise the concerns and interests of the soul from the bondage of the Letter and the Form, of Time and of Criticism, and thus from the harassing and always ineffectual endeavour to keep pace with the flux and reflux of material speculation and scientific discovery.

Nor is the task, thus proposed, by any means a hard one. It needs but to be demonstrated, first, that the dogmas and central figures of Christianity are identical with those of all other past and present religious systems,—a demonstration already largely before the world; next, that these dogmas being manifestly untrue and untenable in a material sense, and these figures clearly unhistorical, their true plane is to be sought not where hitherto it has been the endeavour of the Church to find them—in the sepulchre of tradition, among the dry bones of the past, but rather in the living and immutable Heaven to which we, who truly desire to find ‘the Lord,’ must in heart and mind ascend.

“Why seek ye the Living among the dead?  
He is not here, He is risen.”

Lastly, it should be demonstrated that these events and personages, hitherto wrongly supposed to be purely historical, accurately represent the processes and principles concerned in *interior development*, and respond perfectly to the definite and eternal needs of the human ego. That thus the Initiate has no quarrel with the true Christian religion or with its symbolism, but only with the current orthodox interpretation of that religion and symbolism. For he knows that it is in the noumenal and not in the phenomenal world, on the spiritual, not on the material plane that he must look for the whole process of the Fall, the Exile, the Immaculate Conception, the Incarnation, the Passion, the Crucifixion, the Resurrection, the Ascension, and the Coming of the

Holy Spirit. And any mode of interpretation which implies other than this, is not celestial but terrene, and due to that intrusion of earthly elements into things divine, that conversion of the inner into the outer, that materialisation of the spiritual, which constitutes idolatry.

For, such of us as know and live the inner life, are saved, not by any Cross on Calvary eighteen hundred years ago, not by any physical blood-shedding, not by any vicarious passion of tears and scourge and spear; not by the Christ-Jesus, the God within us, the Immanuel of the heart, born and working mighty works, and offering oblation in our own lives, in our own persons, redeeming us from the world and making us sons of God, and heirs of everlasting life.\*

It is because I earnestly desire to rescue the divine and lovely teachings of Christianity from the abyss of anthropomorphism, idolatry and contempt, that I have deprecated with fervour the apparent endorsement given by the *Theosophist* to the coarse and ignorant ribaldry with which these teachings are befouled by such writers as the authors of certain Antichristian literature. These men are materialists of the grossest type, and their indecent onslaughts on Christian faith and doctrine are wholly devoid of intelligence and learning. They are ignorant of the very alphabet of the sacred tongue in which are written the mysteries they presume to criticise and vilify. It is no love for orthodoxy nor desire to spare it that calls forth from me this protest. Bigotry and religious exclusivism are intolerable to me; such movements and demonstrations as that afforded by the Salvation Army, are to me the very type of the abomination that maketh desolate. But it is inconsistent with the whole end and aim of Theosophy—the science of the Divine—that it should lend its countenance to the desecration of Divine things, and to the dissemination of shallow witticisms and flippant suggestions bordering on the obscene. Many of the men who perpetrate these attacks on the Christian mysteries, are upholders of the worst crudities of materialism; the special organ of their school advocates vivisection and ‘Malthusianism,’ and pleads the lowest utilities and the most sensual enjoyments as a sufficient vindication of practices alike repugnant to justice, to morality and to the highest interests of the race. Surely our Society would wish its fair fame cleared of the suspicion of approving such views of Man’s destiny and place in Nature as these teachings imply.

Confident as I am that the idea, I have thus ventured to put forward, of the attitude which our Society ought to take in respect of Christian doctrine, will meet with the approbation of those highest in authority among you, I venture to add a few words on a kindred subject affecting the direction to be taken, in this country above all, in regard to what I may fairly call the Theosophical creed. That creed should be essentially *spiritual*, and all its articles should relate to interior conditions, principles and processes. It should be based upon experimental knowledge, not on authority, and its central figures should be attributes, qualities and sacraments, (mysteries)—not persons nor events, however great or remarkable. For persons and events belong to Time and to the phenomenal, while principles and processes are eternal and noumenal. The historical method has been the bane of the Churches. Let Theosophy and Theosophists remember that history and individual entities must be ever regarded by them as constituting the accidental and not the essential element in a system which aims at repairing the errors of the theologians by reconstituting the mysteries on a scientific and intelligent basis.

Suffer me, in conclusion, to expound for your readers’ meditation a certain passage in the Christian Evangel which has hitherto been supposed to bear a meaning purely circumstantial, but which, in the light of the interpretative method, appears to carry a signification closely related to the work which I trust to see inaugurated, under the auspices of a truly Catholic Theosophy:—

“And it came to pass that as the multitudes pressed upon him to hear the Word of God, he stood by the lake of Genesareth.

And saw two ships standing by the lake; but the fishermen were gone out of them, and were washing their nets.

And going into one of the ships, that was Simon’s, he desired him to draw back a little from the land. And sitting, he taught the multitudes out of the ship.

Now when he had ceased to speak, he said to Simon: Launch out into the deep, and let down your nets for a draught.

And Simon answering, said to him: Master, we have laboured all the night, and have taken nothing: but at thy Word I will let down the net. And when they had done this, they enclosed a very great multitude of fishes, and their net broke. And they beckoned to their partners that were in the other ship, that they should come and help them. And they came and filled both the ships, so that they were almost sinking.

Which, when Simon Peter saw, he fell down at Jesus’ knees, saying: Depart from me, for I am a sinful man, O Lord.

For he was wholly astonished, and all that were with him, at the draught of the fishes which they had taken.

And so were also James and John, the sons of Zebedee, who were Simon’s partners.

And Jesus saith to Simon: Fear not: from henceforth thou shalt catch men.”—St. Luke, ch. v. (*Douay Version*).

In this parable, the Christ standing by the water-side is the Logos, the Word of God, and the lake by which he stands is the Psychic element, the soul of the Macrocosm and Microcosm. (Genesareth,—the garden of God.) Beside these spiritual waters there are two ships, but they are empty; their owners have gone out of them and are washing their nets. These empty ships are the two ancient Parent Churches of East and West, the Asiatic and the Pagan. At the time of the re-birth of the mysteries under the Christian dispensation, both these Churches were barren and vacated, the life and vital power which once thundered from their Sinais and Olympuses were dead and gone out of them, the glory of their ancient oracles and hierarchies was no more, the nets with which they once had caught the *Gnosis* and spiritual graces needed cleansing and renovation; the vivifying spirits or angels which had animated these two Churches had forsaken their shrines.

And the Christ, the Word, entered into one of them, which was Peter’s, and desired him to thrust out a little from the land. The ship into which the Christian Logos thus entered at its outset was undoubtedly the Pagan Church which had its head-quarters at Rome. It can be proved from monumental evidence and from the writings of the Fathers—(see, *inter alia*, *Monumental Christianity*, by Presbyter Lundy,) that the new faith, whose epiphany must have been at Alexandria, adopted from its earliest age the symbols, the rites and the ceremonials of the expiring Pagan system, incorporating them into its own mysteries, endowing them with new vitality, and thus perpetuating and preserving them almost intact to our own times.

Peter is the universally accepted representative of the Genius of Rome. Peter’s Ship is the Roman Church of this day, even as the ship of Jannus was in pre-Christian times the appropriate symbol of Pagan Rome. Peter is the opener and shutter of the gates of the Church, even as Jannus was of the portals of heaven. It is, therefore, into this Pagan Church of Rome that the Logos enters, and prays its genius to thrust out a little from the land. Now in sacred allegory, the ‘land’ or earth is always a figure for the bodily element, as opposed to water, or the soul. It represents matter, and material plane and affinities.

We see then that the Word, or ‘Christ’ demanded in this first age of the Christian dispensation the partial spiritualisation of the existing Church,—demanded the basis of doctrine and dogma to be shifted from the mere dry earthly bottom of materialism and hero-worship on which it had become stranded, to the more appropriate element of ethical religion, the province of soul,—not yet however far removed from the shallows of literalism and dogma. This done, the word abides on the renovated Church and, for a time, teaches the people from its midst.

Then comes the age which is now upon us, the age in which the Logos ceases to speak in the Christian Church; and the injunction is given to the Angel of the Church;—Launch out into the deep and let down your net for a draught. Quit the very shores and coasts of materialism, give up the accessories at human tradition which, in this era of science, are both apt to offend, and so to narrow your horizon as to prevent you from reaping your due harvest of truth; abandon all appeals to mere historical exegesis, and launch out into the deep of a purely spiritual and metaphysical element. Recognise this, and this alone henceforward, as the true and proper sphere of the Church.

\* See *The Perfect Way*, p. 117, ‘The Atonement.’

And the Apostle of the Church answers, "Master, all through the dark ages, the mediæval times in which superstition and sacerdotalism reigned supreme and unquestioned,—the night of Christendom,—we toiled in vain; the Church acquired no real light, she gained no solid truth or living knowledge. But now, at last, at thy word, she shall launch out into the Deep of Thought, and let down her net for a draught."

And a mighty success is prophesied to follow this change in the method and system of religious doctrine. The net of the Church encloses a vast multitude of mystic truth and knowledge,—more even than a single Church is competent to deal with; their number and importance are such that the Apostles or Hierarchs of the Christian Church find themselves well nigh overwhelmed by the wealth of the treasury they have laid open. They call in the aid of the ancient oriental Church, with its Angels, to bear an equal hand in the labours of spiritualisation, the diffusion of truth, the propaganda of the divine *Guosis* and the triumphs of esoteric Religion. Henceforth the toilers in the two Churches of East and West are partners; the Vedas and the Tripetika find their interpretation in the same language, and by the same method as the Christian Evangel, Krishna, Buddha and Christ are united, and a true Brotherhood—a true *Eirenicon* is preached to men.

From that day forth, 'the Church Catholic and Christian need have no fear, for she shall indeed, catch men.'

And so, suffer me to remain,

Fraternally yours,

*A Toiler in the Ship of Peter,*

and

*President of the British Theosophical Society.*

LONDON LODGE, }  
October 31st, 1883. }

MAJOR-GENERAL H. R. MORGAN, President of the Todabetta Theosophical Society, Ootacamund, then kindly undertook to read the address of one of our Paris Societies:—

FROM THE COUNTESS MARIE CAITHNESS,

*Pres. of the Société Theosophique d'Orient et d'Occident;*

TO H. P. BLAVATSKY,

*Corr. Secretary of the Parent Theosophical Society.*

51, RUE DE L'UNIVERSETÉ,

PARIS, 19th November 1883.

DEAR MADAME AND SISTER,

In view of the coming conference of the Theosophical Society at Madras, I desire to place before its leaders some thoughts which have been forcibly impressed on my mind regarding the position and action of our Society in this part of the world; and which, I find are shared by my friends and colleagues, Mrs. Kingsford and Mr. Maitland, the President and Vice-President of the London Lodge Theosophical Society.

In all the joint ideas and views of these our Brethren in England I fully concur, knowing, as I have done from the first, the nature and source of their Mission, and it is because I know that their work will be carried to completion, whether alone or in conjunction with the Theosophical Society, and that it is essentially one with that of the Theosophical Society. Especially as formulated in the revised rules of the London Lodge, that I desire to combine the aims and forces of both movements, their special one in which I take a personal interest, and that of the Theosophical Society.

With union both may succeed. With antagonism *one* must fail. The acceptance of the idea in my mind, will at least prevent the rise of what might become an *opposition* to the Theosophical Society, and that a formidable one.

Indeed, it is essential to the success of the Theosophical movement in a part of the world, already pre-occupied with, and committed to Christian ideas, that the platform adopted be harmonious to those ideas. Your own experience in India will have shown you the impossibility of effacing traditional and indigenous ideas, and replacing them by new and foreign ones.

The attempt to replace Hinduism by Christianity there has failed. Similarly, an attempt to replace Christianity by Buddhism here must fail also.

For the Theosophical Society to succeed here, therefore, it must recognise the Christian forms of Theosophy, and encourage the study of these, as well as those of the Orient—and to this end, all appearance of rivalry and antagonism must be carefully excluded from the Society's publications and programmes generally.

In order for Theosophy to succeed in France its members must be free both to seek for truth in all questions, and to submit it to the test of intelligent criticism. We cannot accept anything on "authority."

Already has one good result of your work been to rehabilitate Buddhism in the esteem of the Western world. This is because you have shown that beneath the apparently material forms, there lies a sacred system of thought. The application of the same method of analysis and interpretation to Christian forms will have the same result in regard to Christianity. When like you in the East we shall get rid of all incrustations and perversions, and so shall be in a position to compare and prove the substantial identity of the two systems, a course more than any other calculated to procreate a firm bond of Brotherhood.

By thus acting we should reap the success denied to the "Missionaries." For we should be working on a method infinitely surpassing theirs, in charity, in intelligence and in knowledge.

If only you can acquiesce in, and act on these suggestions, which after all are in strict accordance with, and conformity to, your Programme, you would enable us to present our Society to the world as bent not on destroying any particular form of religion, but as interpreting all religions, I believe we may anticipate results of incalculable magnitude. If, on the contrary, we remain fixed to a narrow and exclusive programme, we shall not only fail ourselves, but minister to the success of others.

I have the honour to remain, Dear Madame,

Sincerely yours,

MARIE CAITHNESS,

*Duchesse de Pomar.*

After which Major General Morgan delivered, on behalf of himself and his Branch at Ootacamund, the following address:—

As the Delegate of the Todabetta Theosophical Society, it is my pleasing duty to congratulate the Founders of the Parent Society on the great accession to their numbers they have lately received, and our Branch trusts that there is a magnificent future in store for the Society. The motto of the Society being, "There is no Religion higher than Truth," I would earnestly commend it to the attention of all Theosophists and to those inquiring regarding Theosophy. I have watched for a number of years the spread of Truth in India, and I regret to say, so far as I can learn, it is infinitesimal. Annual addresses have been delivered by the leading members of society both at the Senate House and Patcheappab's Hall, and these, though voluminous, do not dwell upon Truth,—which should be the beginning, middle and end of every exhortation—and the motto of our Society, fully bears me out in this.

MR. SOUNDRA POULE, Delegate from, and President of the Pondicherry Branch, delivered in French an address which will be translated and given in the separate pamphlet of the Annual Report. This gentleman was covered with gold medals of honour, and held in his hand the golden cane, given to him and his family by the French Government for various services rendered by them to the State. The biography of this, our Brother, is given in the October No. 1883.

PUNDIT PRAN NATH, Delegate and President of the Satya Marga Lucknow Theosophical Society, next read the following address:—

MR. CHAIRMAN AND GENTLEMEN,—We, the Members of the Lucknow Satya Marga Theosophical Society, have sent Pandit Pran Nath—our President—to represent us at the celebration of the Eighth Anniversary of the Parent Society. It is the custom on all such occasions for each Branch to say what it has effected during the year, what it is occupied with at present, and what it hopes to do in the future. This

Mr. H. C. Niblett, Delegate and President of the Prayag Psychic Theosophical Society, addressed as follows:—

MR. PRESIDENT AND BRETHREN,—I consider it the highest honor to represent the Prayag Psychic Theosophical Society as its delegate, an honor the more pleasurable in that it fully shows the brotherly feeling of the Hindus towards the foreigners now residing in their midst—a brotherly feeling which, I am sorry to say, is not shown by Christians towards one another. With this little addition I shall now read the address with which I have been entrusted:—

This Branch Society was originally formed on the 6th November 1881 under the designation of the Prayag Theosophical Society, but this designation was changed into the name, under which it now goes, on the 8th of November 1882.

This Branch Society was opened with only eight Fellows, and now in this short period of two years it has vastly augmented in number. Since its establishment it has been twice visited by the President-Founder, and once by our respected Madame Blavatsky.

At the last anniversary meeting it was said that this Branch 'have been trying mesmeric healing experiment with success beyond our expectation,' but during the last year greater success has attended mesmeric cures. An old gentleman who had the paralysis of the left hand has been wonderfully benefited, so that where he could not use that hand he has now the free use of it. Many other cases have been cured by mesmerism, and, among these, many cases of fever have given way, simply by tying round the neck of the patient mesmerised charms, given by one of our Fellows.

At the last visit of the President-Founder ample explanation and instruction in regard to mesmeric cures were given. A special Sub-committee has now been formed, where the greater part of our Fellows are practically learning the science, and the Branch hopes that in time the Fellows will become a real blessing to our city. Some of our more experienced Fellows in mesmerism have taken up chronic cases of fits, rheumatism, dyspepsia with painful fits, deafness and other diseases of a like nature. Some of these have been cured; others are in a fair way towards cure. Mesmerised oil and water have also done some good, and in a case of asthma, mesmerised water used for 14 days has done a deal of good, and it is expected and hoped that in another fortnight's time it will effect a perfect cure.

Some of the Fellows who have been successful with mesmeric cures are on the eve of opening a Mesmeric Hospital as soon as a convenient and central place is obtained. An institution of this kind is much needed.

A subscription list was opened at the last visit of our President-Founder for the establishment of a Sanskrit school. A large subscription was obtained the same evening, and the amount is daily being augmented. It is hoped that the required amount will be soon made up.

The President of this Branch had been engaged some time in translating for publication, in a book form, an abstract of the Occult Teachings, as given out by the Parent Society in the different publications. The translation is now complete. It is in the vernacular of the N. W. Provinces—the Urdu language.

The President of this Branch has also prepared a pamphlet in Hindi characters for free distribution among the Magh Mela brothers, which Mela will take place about the middle of January next. This pamphlet contains a short address calling upon the readers to study their religious philosophy, not to read their religious works according to the literal meaning of the words, but to search for their hidden or spiritual meaning, for in them will be found the true source of life, and also telling them that the statement of interested priests that the Mahatmas do not exist in this Kaliyuga is not true—that the Mahatmas do exist—that it is only the bad Karma of the people that keeps them away across the Himavat; and that our President-Founder and Madame Blavatsky are working under the orders of the Mahatmas for the good of the nation, and of all mankind. It is to be hoped that this small publication, which will be carried to all parts of India, will do a great deal of good.

The general public of Allahabad are now coming to know that the Society is not sectarian, but that it is based upon the platform of Universal Brotherhood, and the false rumour that the Theosophical Society was an apostatizing body preaching a strange doctrine, is fast losing ground. The last lecture, delivered by our President-Founder, has been the means of opening the eyes of truth-loving people, and if they but learn how to bring their intuitive powers into play, the regeneration of India will be complete, and the old happy Aryan days will once more be seen flourishing in this land.

Brethren, it is with extreme pleasure and heart-felt gratitude that we look back to that period when the Founders first landed in India. May they long reside with us and see the fruit of their unselfish devotion to our cause!

As it is impossible to publish in the *Supplement* the speeches, delivered by all the delegates, we give but three more. The complete account of the Anniversary will be found in a separate pamphlet—*Manager*.

The Ceylon Delegate of the Colombo Theosophical Society, Mr. William de Abrew, F. T. S., was next in order. He spoke as follows:—

MR. CHAIRMAN, BROTHERS OF THE THEOSOPHICAL SOCIETY, LADIES AND GENTLEMEN,—Within the short space of time allowed to a speaker, it is not practicable to talk very long. Moreover, it is needless for me to expatiate upon the beauties of Theosophy, as it has been often done by abler persons. I shall, therefore, confine myself to the work of the Theosophical Society in Ceylon, which island I have the honor to represent along with my three colleagues on this most auspicious occasion.

The readers of the *Theosophist* are aware that the respected Founders came to our island in the year 1880, accompanied by a delegation of Hindu and Parsi Theosophists from Bombay. Notwithstanding the opposition which a philanthropic body must pass through at the hands of dogmatism, bigotry, uncharitableness and ignorant superstition, the Founders met with a success unparalleled in our small island. By degrees the misunderstanding about them in the minds of some of our people who look upon every foreigner—not quite unreasonably—with suspicion, faded away. And now every Buddhist, of whatever sect, has so much confidence in the Founders of our Society, that when justice was not properly done to them in the recent riots at Colombo, of which every one of you who reads newspapers is aware—at such a critical time the eyes of all Ceylon were turned to Colonel Olcott as the only person who could have their grievances redressed. We, therefore, at once telegraphed to him for assistance, and he kindly came over immediately. His labor in our behalf at such a trying time has been immensely beneficial to us.

His greatest service to our country is the raising by him of a National Fund for the revival of our religion and the education of our children in the ancestral Faith. We have already been able to start several schools, a weekly vernacular paper, and several publications for the benefit of those of our co-religionists, who, without the proper means of knowing the truths about their Faith, are led away from it.

Colonel Olcott's Buddhist Catechism, of which almost every one of you, I presume, is aware, has done an immense service to our cause. It has created an interest in our religion not only in our island, but almost all over the world. Its English edition and translation into the French are proofs of the admiration it has excited in the Western world in our Lord's teachings. It has also been the means of healing sectarian differences among ourselves, and we cannot sufficiently thank the author for this most important work.

And we are proud to say our efforts have been crowned with success beyond our expectations. Another good we have derived is, that having been led to a deeper study of our religion through the instrumentality of the Theosophical Society, we have learnt the most important fact that all sectarian differences are but matters of detail, and in many cases a mere war of words. There has thus been a friendly and brotherly feeling among the various sects; and who will dispute the fact that union is strength? Not only this: we have discovered that in essentials the doctrine taught by our world-over-honored Lord Buddha is identical with what the Illuminated Sages have been expounding to our brothers in this country. Forgetting, therefore, the disputes between our fathers and those of our Indian brethren, we have been inspired with a sincere admiration and love for our common ancestors, the ancient Aryans. The practical proof of this will be found in the fact of a committee of our Colombo Buddhist Branch coming here and planting a coconut tree in a Hindu Temple in this Presidency—a fact so grossly misrepresented by some narrow-minded bigots and fanatics, and in our standing on this platform in the company of Hindus of all sects and extending to them the right hand of fellowship. We have now only to take advantage of this opportunity to publicly express our appreciation of the kind treatment and brotherly hospitality we have received in this country at the hands of our brother-Theosophists from Tuticorin to Madras.

Then came the Parsee delegate of the Bombay Branch, Mr. Sorabji Davar, who read the following address on behalf of his Branch:—

It is now nearly five years since Theosophy first appeared in the city of Bombay. The difficulties and obstacles the Society had to fight its way through seemed insurmountable, and the prospect gloomy. After all the reverses that have been suffered, it is a source of the greatest joy to witness her triumph which this occasion of the 8th Anniversary fully testifies.

So long as the Head-quarters were in Bombay, the Bombay Branch had only a nominal personality. It was dependent on the generous protection of the Parent Society. But the time came, as it comes in everything mundane, when the responsibilities of a mature manhood had to be undertaken. Since the departure of the Founders our Branch has obtained its own local habitation where our meetings are regularly held. Recently we have purchased a number of books which form the nucleus of a Library. One of our members has recently published Dr. Ballantyne's translation of the Yoga Sutras of Patanjali, with Commentaries. The work has gone abroad, and the ideas it embodies are sure to attract sympathetic souls, waiting for more light on Theosophical subjects. There is a work in Marathi by Dnaneshwar, called "Ambrūt Anubhava" which, to translate freely, means the "Taste of Ambrosia," containing in aphorisms the Advaita Philosophy in all its purity, free from the strange incongruities which disfigure some recent treatises on Vedantism. This work is very difficult to understand, partly on account of the abstruse character of the subject treated, and partly on account of its being written in archaic Marathi. It has recently been commented on and edited with notes in Marathi by a competent authority who has fully seized the spirit in which Dnaneshwar has written the work. Arrangements are being made with its talented author for its publication. The work will be

of the greatest service to those engaged in the study of Adwaitic Philosophy. As regards practical work there is not much to say. But it must be stated that some of the members who have understood the aims and objects of the Parent Society, are trying to shape their life according to the high standard, placed before them by Theosophy; and although bound hand and foot by the inexorable law of "Karma," they fail to advance now, yet they look hopefully forward to a brighter future. At present one of our members is engaged in practising curative mesmerism with considerable success. We again have this consolation that Bombay has given to Theosophy two members, who, by their unselfish devotion to the cause, have attracted universal attention. The psychological development of one of them recorded in the last No. of the *Theosophist* is a source of the greatest encouragement to us all in the unselfish luxury of doing good.

All the ridicule and misrepresentations which the press of Western India indulged in, are being replaced by a more guarded tone towards Theosophy. People have begun to inquire about Theosophy, and show it a spirit of tolerance. There is a Marathi magazine published every month at Poona, containing translations of some of the selected articles from the *Theosophist*. This periodical is doing a great service in familiarising the people of Western India with Theosophical lore and securing their sympathy. In the biography, recently published under the patronage of the Dakshina Prizo Committee in Marathi of Eknath, one of the galaxy of saints, philosophers and poets of Western India, while discussing the credibility to be attached to the so-called miracles, performed by the saint, the authors make mention of our Founders and the *Theosophist*. He asks if Col. Olcott and Mmo. Blavatsky by purely scientific means perform some spiritual phenomena, why the so-called miracles performed by the great saint could not be believed in?

These facts show that the Theosophical movement is not ignored in Western India, but that it occupies the attention of discerning persons. There is, therefore, every encouragement for us to work hard in the cause of truth.

The last and most stirring address by a Delegate was that delivered by Babu Norendra Nath Sen, the President of the Calcutta T. S., and the eminent Editor of the *Indian Mirror*. He was received with every possible mark of appreciation by his brother-Delegates, and the Madras native public in attendance. He spoke as follows with his usual vigor and impressiveness:—

FRIENDS AND BROTHERS OF MADRAS,—I have come from Calcutta to offer you my friendly and fraternal greetings on the occasion of this eighth Anniversary of the Theosophical Society. You, my countrymen of Madras, form an important branch of the great Indian family; and I come from the other side of India, historic Bengal, as a brother from the East, to extend the right-hand of fellowship to my brothers of the South, assembled here to-night to celebrate this jubilee of Universal Brotherhood; and I hope to find a warm response and to be greeted as an Indian, as one of you, and not simply as a Bengali. My brothers, I hate to see ourselves called Bengalis; and yourselves, Madrassesees. I hope the day is not distant when we all, the people of this country, will be welded into a homogeneous whole, and forget to call ourselves by any other name than Indians or Aryans. Let us drown all our sectional prejudices, and look upon each other, as, in fact, we are, and as is intended by our Great Maker—as units of the ONE LIFE pervading this universe, and as members of one great family. Our first duty should be to form a Universal Brotherhood among ourselves, and, unless we do so, it is of no use expecting to form a Universal Brotherhood with the other branches of the human race. Let us in our own small family in this home of the ancient civilization of the world, set an example, so that we may attract other nations to our fold. Let us try our best to realise in ourselves in every shape and form the character of the Aryans of old. The number of religions in the world, my brothers, is endless. The first object of every religion should be to bind together men of all races and of all classes by ties of Universal Brotherhood. If any religion fails to fulfil this cardinal principle, it is wholly useless. But Theosophy makes Universal Brotherhood its first object. And whether it be a religion or not, it is the best religion that can be preached to the world. Let each of us, Theosophists, then by his own conduct in life, show that Universal Brotherhood is not a myth, but a reality, and, thus, go on adding to our numbers considerably from year to year. Example teaches better than precept; and the days of preaching, my friends, are passed. We have had enough of preaching. The day of action has arrived; let us now practise what we have hitherto

preached. Gentlemen, it so happens, that, while we are celebrating this annual commemoration of our Society, the Christians are celebrating their great religious festival. They consider this to be the peculiar season for the cultivation of peace and good-will among mankind. It is rather a strange coincidence that we should, at exactly the same time, be preaching and, I hope, also practising, the principle of Universal Brotherhood. We, are not Christians—we are regarded as heathens. We are traduced as a debased race. We are calumniated, I am sorry to say, in unmeasured terms. But let us be traduced and calumniated as much as possible. We have found a haven in Theosophy. We had hitherto been wayward strangers in our own home. But, thanks to the High Powers, the voice of Theosophy, which contains the germs of our ancient religion, philosophy and science, has at last made itself heard through foreign tongues in our dear land of *Aryavarta*, and called us back from our wayward course. Let us now act up strictly to the teachings of Theosophy, and by our own personal lives give the lie to all the calumnies that may be heaped upon us, as a nation; and though we may not be Christians, let us yield the palm to none in love of Humanity and in fear of God. That should be the great aim of life among us all. The tongue of calumny will then be effectually silenced and, in spite of ourselves, we shall raise ourselves in the estimation of the whole world, if we shame even the Christians themselves by our own practical lives and examples. Our duties and responsibilities as the descendants of the great Aryans, as the inheritors of a great name, and the possessors of glorious traditions are vast and manifold. We are a fallen nation; it is now our turn to retrieve our ancient reputation and, if possible, try even to excel the glory of our great ancestors. When we consider the degradation of our mother-land, we are overpowered by our sense of responsibility. We, Indians, must not consider our duties in life fulfilled, if we only faithfully perform all that we owe in our personal relations in the world. Every native of India is a guardian of his country's interests; the more so, every educated native. He is in his own person the representative, as well as the guide of his less educated and his uneducated countrymen. The responsibilities of education cannot be over-estimated. We are all answerable for our own deeds. If an educated native be wanting in his duty to his country, he proves unfaithful to the sacred trust, impliedly vested in him by his education.

And when his world's career is over, he will be answerable for this, as well as for all other failures in life. Our time is too valuable to be lost in frivolous amusements; for every moment wasted we shall be called to a strict account. Life in all cases is a continued struggle. But it is the more so in our case, as we have to rebuild the ancient fabric of our national greatness. When we get a glimpse into the future of human existence, it will be found that our struggle does not end here below, but that it begins anew in another world, and that there is almost an endless succession of lives till *Nirvana* is attained. So we must not allow ourselves to be idle for a moment and to complain of want of rest. As we go on working for the good of our country, we shall find ineffable pleasure in the work that we do. The dignity of labor is always great, but it is particularly so, when labor is directed to the furtherance of the cause of one's fallen country. Brothers and fellow-workers of Madras, last year I had the pleasure of addressing a Bombay audience, and expatiated on the good that Theosophy is likely to do to India. This year I have the pleasure of appearing, before you, as a laborer in the same vineyard. Bombay is too commercial; but still for all that she in her own way is contributing to the progress of India. If Bombay is commercial, Madras, I should think, is spiritual and, Bengal, as some people say, is intellectual. Madras is proverbially the land of conservatism. Theosophy has found its proper home among you, and should find a more congenial soil here than anywhere else. While in Bengal the teachings of Theosophy may

sound new to many Europeanised Hindus; to you, people of Madras, they are nothing new. Western education has not done the same work of destruction among your ancient usages and traditions, as in other parts of India. I think you and the Cingalese still approach more nearly the ancient Aryans than any other race in India.

It is a pleasure to be in your midst; for you remind me, however remotely, of the marked characteristics of our common ancestors. As, therefore, one of your humble brothers, I greet you with as much warmth as my feeble tongue can express. At all events, it is a pleasure, even for a time, to come away from Calcutta, amid the jarring elements that are now dividing society in our city, to cultivate brotherly feeling among you. Gentlemen, since the celebration of the last Anniversary at Bombay, Theosophy has made a deeper impression upon me than ever. I consider it a great piece of good fortune that I have had the opportunity of learning its esoteric doctrines. I have found a new world opened to me. In fact, I have suddenly discovered a mine of gold in my desultory researches in life. I feel a happier and stronger man. *I now know what I am*, and what I am likely to be, if I only try to be what I should be. I regret that this new light did not dawn upon me at an earlier stage of my earthly career. It pains me to think that so much time of my life has been wasted. I hope only that by the blessings of the High Powers ruling the destinies of this world, I may yet acquire a larger knowledge of the mysteries of nature and be enabled to attain that standard of excellence, of which, I am grieved to say, I feel very far short. Every event in life possesses a deep significance and interest for me now, and I feel peculiar joy in watching and analysing the events of the world, as controlled by the higher Providence. My belief in the existence of the great Himalayan Brothers has been even more strengthened this year than in the last; and however an incredulous and unthinking public may disbelieve their existence, considering all the events that are transpiring around us and watching of the signs of the times and their gradual development, I feel almost a presentiment that the day is not far distant, when the existence of the Brothers will make itself more perceptibly felt and the world will be astounded and stand aghast at its own scepticism and unbelief! But I believe it is in our power to accelerate the approach of that day, if we only show ourselves worthy of their favors. We are now at the dawn of a new era; and the approaching light will gradually disperse the gloom of ignorance and unbelief in which we have hitherto been enveloped. The great theory of evolution will apply to time; and it will always be an interesting study from this time forward to watch the gradual development of events which promise to bring us to that happy day, on which all the races, peopling this world, will form one Universal Brotherhood, and we shall revel in peace in the simplicity of old. I look upon Theosophy as a priceless gift to the children of India, vouchsafed in the mercy of those Great Beings, who are the custodians of a knowledge of the deepest secrets of nature. We should feel deeply thankful to them for the more than fatherly interest they have displayed towards us by spontaneously affording us a chance of sharing that knowledge with them. This fact in itself ought to be sufficiently hopeful and encouraging to induce us to meet their efforts to give us an insight into that knowledge in a corresponding spirit, and to show ourselves deserving of what they have already done, and are prepared to do for us. It rests with us alone to reach the goal, which they have pointed out to us. Remember that we are likely to lose an inestimable prize, if by our neglect we prove ourselves in the least undeserving of their efforts to promote our weal. When we know that the Theosophical Society is under their special protection and care, we cannot but be led to redouble our energies to work for the furtherance of its

great cause. The light of the West was derived from the East, and the extinct light in the East is being rekindled to diffuse itself far and wide again. History always repeats itself, and we shall have a repetition of it in our own native land. We are now only receiving our first lesson in that repeated history, and many a page has yet to unfold itself. With patience and perseverance you will reap your reward in time. The world in its learned ignorance may laugh at the Theosophists now, but we pity it in the present, and a day will come when we shall be able to remind the world that "he laughs best who laughs last." We can afford to be laughed at, but we cannot certainly afford to allow the world to wilfully shut its eyes to the truths of Theosophy and to refrain from enquiring into them.

The circumstances of India have come exactly to that stage in which Theosophy more than anything else is needed to elevate us as a nation, and to make our foreign rulers interested in our country, more for its moral and intellectual treasures than for its material wealth, and to persuade them not to scorn us but to cherish a more kindly feeling for us. To me the future of India is an open book. Take courage, my friends. Always act, as Theosophists should act. Cast away base selfishness in your efforts to serve your country. Be honest and truthful, as the old Aryans were, not in word only, but in deed also. Fear no man; for we are all equal. Always speak out, especially when the interests of the country are concerned. If you want to win your own respect and the respect of others, be not hypocrites, toadies or time-servers. We can only correct ourselves and correct others, and remove all the abuses and evils in this world by having the courage of our convictions in speaking the truth. We badly want some men of true metal among us—men, whom no difficulties will daunt, who will not sacrifice truth on any account, whom no worldly inducements, however high or dazzling, will lead astray from the straight path of duty. And then, and then only, we can expect to be a great nation, but not before.

If all other addresses had been applauded, this one was the most vociferously so. After this several letters were read, of which two are given below, one of the Rev. Sumangala, Buddhist High Priest, the other from our respected friend and Brother, Iyaloo Naidoo, of Hyderabad:—

From REV. SUMANGALA, Buddhist High Priest at Colombo;  
To COL. H. S. OLCOTT, President T. S.

DEAR SIR AND BROTHER,—I have much pleasure to inform you that Dr. Hartman paid me a visit on his way to Madras as a delegate representing the American Societies at your Parent Society's Annual Meeting, which is to be held on the 27-28th Inst., and I am doubly happy to see that Theosophy so far from being at an end in America, as falsely reported in some local papers, is growing daily stronger, and that its members take so much trouble in coming over to India on its work. I would have been also glad to be present at your meeting, but old age and my much impaired health do not permit me to leave the Island. I, therefore, have much pleasure in introducing brother W. de Abrew and C. P. Gunawardana, our able and much beloved Secretary, of the Colombo Society, as delegates to represent the Buddhist members in Ceylon to the Annual Meeting. They carry with them my best wishes and fraternal greetings to all good Theosophists who meet on that auspicious occasion.

As to the Colombo branch, it is not altogether what it ought to be, and considering the responsibilities which lie on it, should carry on the work more boldly, more vigorously and with a stronger hand, since it is surrounded by powerful and implacable enemies—it is very weak indeed. The cause of this backward state may be traced in the want of a competent leader to take care and to work it properly. We admit that you, Sir, of course, are quite unable to devote the whole of your time to this work in the Island; for it is certain that India with its crores of inhabitants will deeply feel the loss of your beneficial acts and philanthropic work. Still, if you are in a position to spend more time in Ceylon for the benefit of the Buddhists, who look to you as the only fit person to bring on the revival of their religion to its ancient glory, they would no doubt prefer your presence to that of any body else.

But, as the case stands now, we shall be relieved of much anxiety if you could make arrangements to send some competent person to remain here, at least for some time, even until the great work you have begun in raising the Buddhist National Fund could be brought to a successful issue and the Society placed on a sound footing.

There is every indication of success in this matter, if the work is properly carried on. So far as I can gather from the local press, the policy, of our new Governor in regard to the education question, seems to me quite a different one from that of his predecessor. So I could see that you would find much good and substantial work in that direction before long, if you could only impress on their minds the usefulness and the immense good that could be done to Buddhists if they would see to the question in its proper light, specially at the present time.

The only reason in bringing these facts at this time to your notice, is that I see delay or procrastination is dangerous in this instance as in many others. Last year, within three months you were able to raise some 6,000 Rs. in the Southern Province for the Fund, and in the year before last you collected some 4,000 Rs. in the Western Province within a very limited time; but this year nothing has been done, as you had no time to devote to it. So you can judge that the Buddhists are willing to give you a larger measure of help and sympathy if you only come among them.

Therefore, it seems to me that had you been able to engage in this work without any interruption during the last three years, I am certain Rs. 30,000 could have been collected without much difficulty, and a practical effect would have been given to so beneficent a work. You will agree with me that immediate steps ought to be taken in carrying on this much neglected and most important work. I have full confidence that with your continual and earnest efforts the improvement of education among Buddhists will be a *fait accompli*.

HYDERABAD, CHUDDERGHAT,  
24th December 1883.

DEAR AND RESPECTED SISTER AND BROTHER,—My desire to be present at the ceremony of the Anniversary which is to take place on the 27th Instant cannot, I am very sorry, be accomplished owing to domestic difficulties, some of which you are, I suppose, aware of. This Anniversary is a very important one and an historical event, as it is the first to be held at Madras, the capital of the Southern country, where the existence of Mahatmas and Siddhas is known to man, woman and child, and where psychical phenomena are performed by some Adepts through their chelas daily in one part or the other. Delegates from different parts of the world will attend the grand meeting, and some of them are no doubt approved chelas of our Holy and Illustrious Masters. The mere act of my paying them my respects will be a happy occurrence in my life.

Some of the venerable brothers and Adepts will bless the meeting with their presence in spirit if not in physical body, so my desire has been great to be present at the occasion; but unfortunately family affairs prevent my leaving Hyderabad at the present juncture.

But although I may not be with you at the Anniversary in body, yet I beg to assure you that my spirit will be there to thank you both gratefully and sincerely for the *great* and *earnest* work you have at such *great sacrifice* undertaken for the spiritual welfare of Aryavarta.

May I ask you to cause this letter to be read to the delegates, and to tender them my heartfelt thanks for the real devotion and admiration they evince for Theosophy or Universal Brotherhood bound together to develop Psychical powers latent in man.

Yours fraternally and obediently,

P. IYALOO NAIDU, F. T. S.,  
Vice-President Madras Branch and a  
Councillor of the Parent Theos. Society.

To

MADAME H. P. BLAVATSKY and  
COL. H. S. OLCOTT,  
Founders of Theosophical Society.

We copy from some independent and hitherto not very friendly testimony—the Madras papers.

#### THE THEOSOPHICAL ANNIVERSARY.

The eighth anniversary of the founding of the Theosophical Society was celebrated, on Thursday evening, by the members of the local branch and the Indian and foreign delegates, under the presidency of Colonel Olcott and Madame Blavatsky. The occasion seems to have been one of more than ordinary interest, as addresses were to be delivered not only by delegates from London, America, France and Germany, but by about seventy others, including those from Calcutta, Bombay, Lucknow, Ceylon and even Pondicherry. Calcutta was represented by Mr. Norendra Nath Sen, the talented Editor of the *Indian Mirror*, whose address was the *piece-de resistance* of the evening. The gathering, which included a good many notabilities, was in a spacious and magnificent *shamiana* erected before Colonel Olcott's residence. A thousand chairs, we are told, were provided (all of which were occupied) besides benches,

and standing room; and so crowded was the place that it is estimated that not less than a thousand and six hundred persons were present. Among the more noticeable were Rajah Sir T. Mahdava Rao, K. C. S. I. Rajah G. N. Gajapathi Rao, Dewan Bahadur Ragooath Rao, Mr. Seshagiri Rao, Mr. Sreenivasa Rao, Mr. Mutturaviny Chetty Gann, Mr. C. V. Cunniah Chetty, Major General and Mrs. Morgan and the majority of the Vakils of the High Court. The carpeted *dais* on which the presidential chairs were placed, was surrounded by a canopy supported by massive silver posts, the canopy itself being an exquisite work of art, of cloth of gold. Beside the *dais* was suspended the banner of the Theosophical Society, upon which were the letters T. S. and the motto of the Society in Mahratti. The *shamiana* was brilliantly illumined by shades and chandeliers, Madame Blavatsky wore the glittering badge of the Society, consisting of the double triangle in precious metal. The meeting seemed very enthusiastic, and the speakers were frequently interrupted by vociferous cheering. There were about seventy delegates present, all of whom were prepared to speak; but as so many speeches would most probably have lengthened out the meeting till day-light, only the most prominent of the delegates delivered addresses, the President announcing that all the addresses would be published, in their entirety, in the Society's journal, the *Theosophist*. After the meeting, a grand reception was held in the spacious verandah and hall of the Theosophists' residence, which was brilliantly illumined and furnished. A band was in attendance to enliven the occasion, and the gathering dispersed, to the strains of the National Anthem, at about half past 8 o'clock.—(*Madras Times*).

On December 28th, the Convention devoted the morning to business and adjourned at 1 p. m. at 5, the Delegates met at Patcheappa's Hall. Dewan Bahadur R. Ragnath Row, in charge of the arrangements, had caused the building to be decorated inside and out with flags and evergreens around. In the Hall were suspended 85 shields, inscribed with the name and date of formation of each of our Indian and Ceylon Branches. A brilliant illumination was made by a range of handsome lustres kindly lent by our Vice-President C. V. Cunniah Chetty Garoo; and on the platform outside the building were a great quantity of lights, among them many electric lamps. The columns supporting the portals were wreathed with coloured streams and greenery; the stair-case was lined with potted plants and over the arch doorway leading from the street was a transparency with red and gold inscribed

"TRUTH, THEOSOPHY, UNIVERSAL BROTHERHOOD."

A band of native musicians playing upon European instruments discoursed native and foreign airs. We have always been accustomed to crowds at our several meetings at the Hall, but the building and its approaches were never so blocked up as on this occasion. Even the roofs of the adjacent buildings were black with spectators. When the hour for commencement arrived, the President-Founder preceded by the standard-bearer carrying the splendid Banner of the Parent Society, had great difficulty in forcing his way into the building. The entrance of the Banner was greeted with deafening applause. And this enthusiasm was the key-note to the whole affair. First came the delegates, of whom only one half had time to say a few words,—and they were applauded with enthusiasm,—most of all those from America, Europe, Ceylon and French East-Indies. Of the Indian orators Babu Norendra Nath Sen received the greatest ovation. As we were ourselves too actively occupied to make any notes, we are glad to be able to copy the Report of the *Madras Mail*, which—thanks to some miraculous change of temper—seems to have tried to make amends for its recent surry-treatment of Theosophy. It is as follows:—

#### THE THEOSOPHICAL SOCIETY.

##### MEETING OF THE MADRAS BRANCH.

Colonel Olcott, Madame Blavatsky, and other leaders of the Theosophical movement are now in Madras. Last night Patcheappa's Hall was crowded to hear a number of delegates from various parts of India, Ceylon, one from England, and one from America report as to the work of the branches of the Society. Among those present on the Theosophical side of the platform, were Rajah the Hon. Gajapathi Row, the Rajah of Pittapur, Major General Morgan, C. V. Cunniah Chetty, Babu Norendra Nath Sen (editor of the *Indian Mirror*, a daily Calcutta paper), Mr. Ezekiel (a member of the Sassoon family), Mr. Niblett (of Allahabad), Mr. Jugga Row (Sellore), Rewal Shree Hoopsingji Harrisingji (cousin of the Thakore of Bhowngger), M. R. Ry Soobra manya Iyer (Madura), Mr. de Abrew and three others from Ceylon. On the side of the platform devoted to non-Theosophists were Rajah Sir T. Madava Row, Mr. Willie Grant, Mr. Ananda Charu, Mr. Aléxan der, and others.

The President-Founder, Colonel Olcott, called upon some of the delegates to briefly address the meeting when their names were mentioned by the Secretary. A large number responded, among whom were the following:—

Dr. Franz Hartmann, representing the Theosophical Societies of America.

Mr. W. T. Brown, B. L. of the London Theosophical Society, said that "the glorious truths of ancient science are being appreciated in the West; and that the spirit of brotherly love is having its due appre-

ciation also." It was extraordinary that those in the West could now look through their holy scriptures and the Orientals could look into the Eastern sacred books and both find the same glorious truths. Instead of coming and asking the Hindus to leave their caste, their manners and customs, and their family circle, the Theosophists simply asked them to search their own scriptures, and live up to the grand principles found therein. He greeted the Eastern Theosophists with the very best wishes of those of the West, and remarked that there was a most glorious future before them. Major-General Morgan, of Ootacamund, representing the three Paris Societies as well as the Duchess de Pomar (President of the Occidental and Oriental Society), said that the Societies he represented studied the Aryan religion and literature, and were in accord with the Parrot Society now assembled. Mr. Ezekiel, from Poona, made a few remarks as to the co-operation of Jews with the Theosophists. Mr. Wind'Abrew, of Colombo, alluded to the wonderful progress of Theosophy. Mr. Soondrum Poulle of Pondicherry, greeted the Theosophists present on behalf of their brothers in the French East Indies. Mr. Norendra Nath Sen, of Calcutta, met with an ovation. He said that Theosophy was making considerable progress in the Bengal Presidency. Branches were springing up as fast as those of the Brahma Somaj did some years ago. The Bengal Branch had the largest number of Theosophists, excepting the Sinhalese branch. A Pundit from Lucknow remarked that he felt quite happy and "at home" among so many Theosophists in Madras. Another Pundit and Mr. Niblett of Allahabad, having spoken, Mr. Jugga Row, of Nellore, said one good result of the working of the Theosophical Society had been the formation of Sanskrit schools.

The Secretary of the Madras branch then welcomed the delegates, on behalf of the local Theosophists. A Bombay delegate spoke of the improvement in the moral character of Theosophists in the western city. The Caynpore delegate said the Society was working wonders in that part of the country, uniting the people in bonds of friendship and brotherhood.

Colonel Olcott (Chairman) claimed to have fulfilled the promises he and his colleague had given when the Society was first started. He asked whether the Society had not been true to the spiritual and moral welfare of India. He refuted the idea that the founders of the Society had done their work with a personal, selfish object in view. What they were now trying to do was to revive the study of Sanskrit, so that it might be made familiar throughout the length and breadth of the land. The influence of the Society had made many persons get together, and found Sanskrit schools and colleges, and he hoped that at the close of their labours, which would be the close of their lives, India would be dotted all over with Sanskrit colleges and schools, and the old blessed mother-tongue spoken as it should be (applause). The old records were written in the most perfect of all languages, Sanskrit. The object of the Society was not to fill the country full of poor bogging pundits; they wanted to raise a class of men well up in the physical science of the day. They wanted the means of comparison. They had reason to believe that what was necessary for every age was to take advantage of that which their fore-fathers had discovered, and add to it all which had been discovered in latter days. There was a one-sided development going on now. People said that a greater knowledge of agriculture was necessary. Mr. Sabapathy Mudaliyar had told him that he had used European ploughs and doubled his crops thereby. India did want better agriculture, but they could not live on ploughs and seed corn for ever. They had something spiritualistic within, and must attend to that. They were all in want of something more than physical needs which would clothe and support and warm the body. The oblivion of that fact was due to the negligence of Sanskrit. All those cunning men who had learnt to make cheap cloth and railways and telephones were under the delusion that they were the apex of human development, and that after them would come the deluge. The Aryan fathers might not have had fine Pullman cars and railways, but they had what was more, a perfect philosophy, and without that we are all at sea in making our plans for life. No one could guide us unless he had attained to the knowledge himself so as to fit him to speak with authority on the subject of the survival of the man after the death of the body; they would not find a psychology worthy of the name. The physiologists did not even know the function of one of the most important organs in the body, the spleen. They supposed it to be so and so. They did not know the reason of the convulsion in the brain, and many other things. There was a large amount of conjecture still in what was called the science of physiology. If they had not got a perfect physiology, how could they have a perfect system of medicine? Nothing could be done until they had cleared away the idea that after this life man is to be obliterated. One of the cardinal principles of Theosophy was to vindicate the importance of the study of the ancient of Aryan philosophy and science. They had simply to prove by an abundance of citations that there did exist in man those rare peculiar psychological powers, and they could prove it. That was the beauty of the ancient Aryan system, that the physiology was drawn from observed facts. We of modern days had not had time yet to evolve a thoroughly spiritualistic system of philosophy; it would take ages. The evolution of language required thousands of years. It took that time to evolve Sanskrit, and with it the philosophy contained in it. Western people had not arrived at the time when they could present a perfect philosophy. What the Society was trying to do here in India, was to impress upon minds of the Indian youth the fact that if they would only take the trouble to read the national records they would find that Mill, Bain, Spencer and others had evolved nothing which was not to be found in the Hindu Shastras, and nothing half so good as what could be found there (Applause). The speaker then referred to the rapid growth of the Society, notwithstanding that they had met with many difficulties. He urged his hearers to purge themselves of their weaknesses and vices and be examples to the youth around them.

The meeting then terminated. A band of native musicians was stationed on the upper verandah.

Fair as this report is, it conveys but an imperfect idea of the temper of the audience, which was evidently in the mood to applaud every good point in the various speeches. This was especially the case, as regards Col. Olcott's extempore address, his popularity with the Madras public having been again proved by round after round of applause and a roar of laughter at each of his hits at the fertile efforts of our enemies to put down the theosophical movement. The presence of Dr. F. Hartmann, the representative of our American branches, who had made a journey of 15,000 miles from his home in Colorado to attend the anniversary, and the earnestness of Mr. W. T. Brown, B. L., the chosen Delegate of the London Lodge Theosophical Society, made a profound impression.

There being no room at the Adyar head-quarters large enough for the sittings of the convention, a *pandal*, or temporary structure (technically called a *wigwam* in America) 100 x 50 feet in size, lined inside throughout with white cloth and decorated with a great number of flags and pennons, chandeliers and globes, had been erected under the superintendence of our excellent brother Judge P. Sreenivas Row, Vice-President of the Madras Branch. Over a raised *daig* carpeted with costly Persian rugs, was erected the gorgeous canopy of embroidered cloth of gold supported by pillars of solid silver, mentioned in the *Madras Times*. Under this the late sovereign Prince of Arcot was accustomed to sit on occasions of state. Here were placed the chairs of the two Founders. Each evening after nightfall the grounds were brilliantly illuminated, and the main approach to the house was lined on both sides with gay flags alternating with cressets and torch lights fixed in bamboo staves. At the principal gate stood two huge colored elephants over bamboo frames, with their trunks elevated as if giving the salute to the arriving guests. The Society's flag streamed from its staff upon the roof of the main bungalow, and that of the President Founder in front of his quarters. The appearance of the place when the towers and buildings when covered with an Indian crown in their picturesque costumes, and the illumination made it almost as light as day, was really a most enlivening scene. The whole Anniversary, in fact, from beginning to close was a grand success without an incident to mar its completeness. The whole day of the 29th was devoted to Theosophical business, and a brief session of a couple of hours on Sunday, the 30th ultimo, sufficed to dispose of all the unfinished work; at 3-27 P. M. the annual convocation of the General Council was brought to a close, and the body adjourned *sub die*. The little speech of the President-Founder, bidding farewell to the Delegates and invoking upon them the blessing of the Mahatmas, whose philanthropic work they were assisting to carry forward, was delivered with visible emotion and brought sympathetic tears to many an eye. Immediately after the adjournment a large photographic picture was taken of the members of the Convention—a group of 83 persons in all—in which the crimson and gold banner of the Society had a conspicuous place. Taking it all in all, the Convention of 1883 was a most impressive practical proof of the potential unity of men of every race, colour, and creed upon a common platform of UNIVERSAL BROTHERHOOD.

M. A. (OXON) writes in *Light* :—

Society journals reflect, in a certain way, the floating opinion of what in London passes for fashionable life. It is so far interesting, therefore, to find the *World* concerning itself with what it calls "The New Religion." "Aestheticism is becoming obsolete, and the new gospel of Buddhism is rapidly supplementing it in drawing rooms and boudoirs." "The modern *Leconçoe*," it seems "reads 'Isis Unveiled,' and fervently accepts the new revelation according to Mr. Sinnett and Madame Blavatsky. . . . Few male worshippers are associated with her in the new religion, and these few are of the weak-kneed race. . . . The new religion is essentially feminine. . . . The air is heavy with aspiration (sic), ghostly forms sweep round the threshold, and the astral body of Madame Blavatsky stands within before the vision of the sacred Lotus." And so forth. The stuff is poor enough, and the writer is ignorant of what he (or is it she?) deals with. The fact is that some very powerful and robust intellects have been and are influenced by this new religion. The dealing at all with the subject in a society journal is the only point worth noting, unless I accept the admission that "literature and conversation

witness on all sides to a decay in the general conviction of immortality." This note of the age is beginning to strike even observers so superficially flippant as the writer in the *World*. What he calls "the preposterous imposture," which he fails to understand or appreciate, is not the only answer to this craving for new spiritual food.

#### OBITUARY.

Another of my earnest fellow-workers has been stricken down by death. I am extremely grieved to hear of the death of our Brother Gregoris Ediriwera, Secretary of the Galle Theosophical Society, Ceylon, at this early age of 31 years. His death has produced a gap which will not be very easily filled. The particulars of this melancholy occurrence will appear from the following letter:—

H. S. OLCOTT.

GALLE, 10th December 1883.

MY DEAR SIR AND BROTHER,

One of the greatest calamities that ever could have befallen our Society took place on the 3rd instant, in the death of Mr. Gregoris Ediriwera, the indefatigable Secretary of this Branch. He was attacked with dysentery about ten days previous to his death, and was under native treatment for seven days; and when the case was hopeless, his relatives resorted to English practice, when it was too late. He was sensible up to the last moment, and about twelve hours before his death he requested his wife and children not to disturb him but allow him the short time he was to live to contemplate about the various acts of benevolence and charity he had done during the 31 years he was in the world, and to enjoy the hope of future bliss. He declined the brandy and water prescribed by the Doctor, as he said he should have his presence of mind when dying.

His place in our Society is not filled up as yet, and I am sure we can never get his like in Ceylon to succeed him.

I remain, dear sir,

Yours obediently,

G. C. A. JAYASEKERA,

To COL. H. S. OLCOTT, President, Galle Theosophical Society.  
Adyar, Madras.

It has been our sad fate this year to chronicle the passing away of our earnest and devoted fellow-workers month after month. This time it is our dear friend and brother Pandit Baldeo Prasad Sankhdhar, for sometime Secretary to our Meerut Branch, who departed this life on the 14th December last at Lalitpur, N. W. P. It is our melancholy task to pay the last tribute to him, who was one of the most indefatigable labourers in the field of Theosophy and one of its staunchest advocates, a personal, and a devoted friend. He leaves a large family to mourn his untimely end. We all know Death is not a respecter of persons and—

Seeing that Death, a necessary end,

Will come when it will come,

—we have all of us to prepare, sooner or later, to fall into her fatal embrace. Yet though "great proprietor of all" she be, when implacable Death carries away men so full of life at its prime and so necessary to their families, one has a right indeed to murmur against her blind and brutal decrees. It is such daily and hourly events that strengthen the hands of the materialist and widen the gulf between the philosophical Pantheist and the profoundly unphilosophical believer in a conscious intelligent Providence, caring for its creatures. Were it all that, such idiotic blows could escape censure from only the credulous victim of that sophism of ages which teaches that its decrees and mysteries are inscrutable and must not be questioned.

#### SPECIAL NOTICE TO CORRESPONDENTS.

(I.) No anonymous documents will be accepted for insertion, even though they may be signed "A Theosophist."

(II.) Any contributor not desiring his name to be made public, should give the necessary intimation to the Editor when forwarding his contribution.

(III.) Contributors are requested to forward their articles in the early part of the month, so as to allow the Editor plenty of time for correction and disposal in the pages of the THEOSOPHIST.

(IV.) All correspondence to be written on one side of the paper only, leaving clear spaces between lines and a wide margin.

Proper names and foreign words should be written with the greatest care.

Adverting to articles and correspondence destined for the pages of the THEOSOPHIST, we would call the attention of intending contributors to the following instructions:—

The Editors disclaim responsibility for opinions expressed by contributors in their articles, with some of which they agree, with others not. Great latitude is allowed to correspondents, and they alone are accountable for what they write. The journal is offered as a vehicle for the wide dissemination of facts and opinions connected with the Asiatic religions, philosophies and sciences. All who have anything worth telling are made welcome and not interfered with. Rejected MSS. are not returned.

The Manager calls particular Notice to the fact that all Money-orders must now be sent payable at ADYAR (not Madras), P. O. India.

Great inconvenience is caused by making them payable to Col. Olcott or Mme. Blavatsky, neither of whom has to do with financial matters, and both of whom are often for months absent from Head-quarters.

#### SPECIAL NOTICES.

It is now evident that the THEOSOPHIST offers to advertisers unusual advantages in circulation. We have already subscribers in every part of India, in Ceylon, Burmah, China and on the Persian Gulf. Our paper also goes to Great Britain and Ireland, France, Spain, Holland, Germany, Norway, Hungary, Greece, Russia, Australasia, South Africa, the West Indies, and North and South America. The following very moderate rates have been adopted.

##### ADVERTISING RATES.

First insertion.....16 lines and under.....1 Rupee.

For each additional line.....1 Anna.

Space is charged for at the rate of 12 lines to the inch. Special arrangements can be made for large advertisements, and for longer and fixed periods. For further information and contracts for advertising, apply to

MANAGER, THEOSOPHIST, ADYAR, MADRAS.

MESSRS. GRAVES, COOKSON AND Co., MADRAS.

PROPRIETOR, INDUSTRIAL PRESS, 3, HUMMUM STREET, FORT, BOMBAY.

MESSRS. COOPER & Co., MEADOW STREET, FORT, BOMBAY;

To SUBSCRIBERS.

The Subscription price at which the THEOSOPHIST is published barely covers cost—the design in establishing the journal having been rather to reach a very wide circle of readers, than to make a profit. We cannot afford, therefore, to send specimen copies free, nor to supply libraries, societies, or individuals gratuitously. For the same reason we are obliged to adopt the plan, now universal in America, of requiring subscribers to pay in advance, and of stopping the paper at the end of the term paid for. Many years of practical experience have convinced Western publishers that this system of cash payment is the best and most satisfactory to both parties; and all respectable journals are now conducted on this plan.

The THEOSOPHIST will appear each month. The rates, for twelve numbers of not less than 48 columns Royal 4to each of reading matter, or 576 columns in all, are as follows:—To Subscribers in any part of India, Ceylon, Straits Settlements, China, Japan, and Australia, Rs. 8; in Africa, Europe, and the United States, £ 1. Half-year (India, &c.) Rs. 5; Single copies Rupee 1. Remittances in postal stamps must be at the rate of annas 17 to the Rupee to cover discount. The above rates include postage. No name will be entered in the books or paper sent until the money is remitted; and invariably the paper will be discontinued at the expiration of the term subscribed for. Remittances should be made in Money-orders, Hundis, Bill, Cheques, (or Treasury bills if in registered letters), and made payable only to the PROPRIETORS OF THE THEOSOPHIST, ADYAR P. O., (MADRAS,) India.

Subscribers wishing a printed receipt for their remittances must send stamps for return postage.

ONLY ONE NUMBER OF VOL. I BEING AVAILABLE, THE CHARGE FOR it will be Annas 12. Subscribers for the Second Volume (October 1880 to September 1881) pay Rs. 6 only in India; Rs. 7 in Ceylon; Rs. 8 in the Straits Settlements, China, Japan, and Australia; and £ 1 in Africa, Europe and the United States.

AGENTS: London, Eng., Messrs. Trübner and Company, 57 and 59, Ludgate Hill; Bernard Quaritch, 15 Piccadilly, W.; Paris, France, P. G. Leynarie, 5, Rue Neuve des Petits Champs; New York, Fowler and Wells, 753, Broadway; Boston, Mass, Colby and Rich, 9, Montgomery Place; Chicago, Ill. J. C. Bandy, La Salle St. American subscribers may also order their papers through W. Q. Judge, Esq., Box 8, P. O. Brooklyn, New York; Melbourne, Australia W. H. Terry, Pub. *Harbinger of Light*; St. Thomas; West Indies, C. B. Taylor; Calcutta, India: Thacker Spink and Company, Booksellers, Babu Norendro Nath Sen, *Indian Mirror* Office, 24 Mott's Lane, Dhurrantollah Street; Madras, Messrs. Johnson and Co., 26 Popham's Broadway, Venkata Varadarajulu Naidu, Rayapetta, High Road; Bangalore, W. A. Leonard, *Bangalore Spectator* Office, 10, South Parade; Colombo, Ceylon: Greg. Ediriwera, Galle, John Robert de Silva, Surveyor General's Office; Kandy, Don Timothy Karunaratne; Shanghai, China: Kelly and Walsh.

Printed at the *Scottish Press* by GRAVES, COOKSON AND Co., and published by the THEOSOPHICAL SOCIETY at ADYAR, (MADRAS) INDIA.

## THE BEST FOOD FOR MAN.

BY MRS. A. KINGSFORD, M. D., F. T. S.\*

BEFORE we can form any correct and valuable idea as to what is 'best' in food, in morals or in anything else, we must learn to reason and to think for ourselves, independently of respect for prevailing habits and beliefs. The first and the chief quality necessary to the man who seeks to attain excellence in any practice or vocation is *courage*, and if he has plenty of it and uses it in the right direction, he will, in due time, become a king of men, in the truest and worthiest sense, that is by virtue, not of physical, but of moral force.

Now I preach a doctrine which it requires some courage to put into practice. It is, however, a doctrine based on reason and on science, and there need be no fear that its adoption can lay open to the charge of fanaticism. Courage, supported by sound knowledge and directed by high aims, is the characteristic virtue of saints, heroes and redeemers of men; but when backed by ignorance and prejudice it degenerates into mere bravado and fool-hardiness. I ask my readers, therefore, to be courageous in seeking for the truth, and, regardless of common opinions and popular beliefs, to follow with unbiassed reason the exposition I am about to make.

We are going to consider what is the best food for man. By that phrase we mean the kind of diet upon which the human being will be enabled to develop himself most fully and evenly in his physical, intellectual, moral and spiritual attributes.

Man is a twofold being. He has a physical nature related to the world and to the necessities of social and political life, and he has a spiritual or moral nature related to the Ideal and to the necessities of intellectual and religious life. That mode of living which is best for man must therefore be best for him on both planes, and must prove its claims by the triple appeal to Science, Social Economy and Morals.

In presenting the substance of the requirements exacted by these three factors of human development, I shall have to go over ground that is very trite and familiar to students of dietetics, and if there be any such among the readers they must pardon me the lack of originality inevitable to my subject.

To begin with the lower and physical characteristics of mankind, we must first enquire what the natural anatomy or structure of the human being is, and what kind of food is indicated by the formation of his organs,

as the most proper and suitable. In order to arrive at a conclusion in this matter, we must compare his bodily structure with that of other animals, and if we should find any of these resembling him in organisation, we must then enquire what kind of food is habitual to them. Now there is a whole class of animals so exactly like man in structure that scientific observers have all agreed in placing him, physically, on the same footing with them, and including him in the nomenclature given to their order. These animals are Apes, and in general all the monkey tribe. The teeth, intestines, stomach, brain and general conformation of this Order are like those of Man. For scientific men, therefore, man is simply a large, developed, and advanced Ape. No other kind of animal presents so typical and so great a similarity to our race. The internal organs and teeth of most other animals, and especially those of beasts of prey, differ widely from ours, both in form and in structure. The Ape alone has hands like ours, feet like ours, limbs and face like ours, brain, digestive organs and teeth like ours. I do not say this, only because I have been taught it, or have read it in books. I have myself cut up many bodies of dead men and have compared them with the dead bodies of apes. I have minutely examined, counted and measured the jaws of men and of various other animals, and have thus become convinced of the perfect resemblance existing between human beings and the monkey tribe on the one hand, and of the great dissimilarities which, on the other hand, separate him from all other orders of creatures. Now, what is the food of the Ape tribe,—of this order which includes man? It is vegetable food; the fruit and nuts of trees for the most part, sometimes grain and roots, tender herbs, and more rarely birds, eggs and honey. No monkey, except under very great pressure of hunger, will touch flesh. I have been told by an eminent physician and professor of comparative anatomy, that although he had often tried, he could never get a monkey to eat flesh-meat. Monkeys are often fierce and mischievous, and will kill small animals out of vindictiveness or wantonness, but not for food. At the Zoological Gardens of London, and in all menageries, monkeys are considered as vegetarians by nature, and are fed on such things as apples, rice, potatoes, nuts, salad, and so on. Flesh is never given to them. We must then consider that an anatomy, or structure, such as theirs is, is naturally suited to vegetarian habits. And yet, we, who have exactly the same anatomy, feed, as a rule, like dogs, wolves and tigers! How is this? Either the monkeys are in the wrong, or we. But the monkey acts by instinct and never transgresses the law of his being, because he is incapable of voluntary departure from that law. It is therefore we who have transgressed that law, and who are in the wrong. And it is our knowledge of the uses of fire as applied to cookery that has made this transgression possible. No man could eat and relish raw flesh and blood. Fire alone makes them palatable to him. Yet the art of

\* President of the "London Lodge" Theosophical Society.

cookery was probably the first step made by man towards a higher condition than that of the ape; and if with the acquisition of this art came that of adapting flesh to culinary purposes, it may be argued that the new mode of diet was an advance and not a retrogression. Now Professor Newman has handled this objection, and has done it so well that I cannot do better than quote what he has to say on the subject. He writes thus:

"The true test of anything being natural to man is his more mature, not his immature, era. He is a progressive being. Flesh-meat helped him through his less developed state; but to attempt to keep up in the latter and more developed stage, the habits of the earlier and ruder, is pernicious. . . . The diet of flesh-meat belongs to the time of barbarism,—the time of low cultivation and thin population; and it naturally decreases with higher cultivation."

The truth is, as Professor Newman seems here to indicate, that the systematic and immutable Law of Nature is one of *circles*, necessitating a descending and ascending arc. *Whenever there is to be a rise, there is a fall first.* It is an axiom with scientific writers on evolution, or the doctrine of development of forms,—that all transition or intermediary types are weak, unstable, and destined to pass away. Nature feels her way as it were, she proceeds by slow and imperfect growths, essays on which she 'tries her 'prentice hand'; before her new Idea is fully realised. Man in a state of barbarism, immediately after emerging from the purely natural condition controlled by unerring instinct;—man just beginning to grasp the mastery of mechanical forces,—is in some respects lower than the innocent animal whose natural brother he is. He is swayed by appetites which instinct has ceased to control, and as yet his higher reason is unawakened. He has broken the natural law, and has not yet apprehended the moral law. In such a condition he represents the descending curve of the Law of Development. He is in a transition state, he has passed into an intermediary stage of evolution, and is undergoing the fall preparatory to the rise. There are, in the divine order of things, three qualities or degrees of progress, three steps as it were, on the ladder reaching from earth to heaven. These degrees are, in order of development, the *physical*, the *intellectual*, and the *moral*. And the motive power of their evolution, or manifestation, is the *spiritual* force of the universe. Now the first of these degrees is developed in instinctive nature, in the races, whether vegetable or animal, which are governed by involuntary obedience, to spiritual impulse or Law, and whose consciousness is not reflective, or as it is commonly called,—reasoning. In this department of Life, Nature is supreme, and the development of races is conducted by natural processes to the highest point indicated by the spiritual force inherent in the universe. This highest point is that occupied by the order of Primates or Frugivora;—a word meaning eaters of fruit. These are the Ape family, which, as I have said, includes Man by physical structure and conformation. But, having reached this point, Nature has attained her *ultimatum* of objective development. As supreme arbitress she can go no further, for she has touched the bourne of the next degree—reasoning intellect—and this belongs to the domain of Self-consciousness and Free-will. The immediate product of this new quality is Man. At the outset, he too is a fruit-eater, but before long he discovers, by means of the newly evoked faculty of mind,—the uses of fire, and the possibility of satisfying his appetite with food, which his ancestors, taught by Nature, abhorred. Thereupon he departs from the natural law of his being, and enters on a course of artificial habit. Then there begins, on a new plane, to wit, the plane of human and interior evolution, a process closely resembling that which has already been worked out on the natural and exterior plane. Scientific writers of the Middle Ages had two expressive words, by which they designated and explained these two planes. They called the natural and objective plane, the *Macrocosm*, and the human and subjective plane, the *Microcosm*,

These words are compounded from Greek terms, and they mean respectively the Great and the Little World. Now you do not need to be told that it is the same Spiritual Force which works both in Nature, as seen in the Great World or Macrocosm, and in the Little World, or Microcosm, Man.

But whereas in the great world, this force works arbitrarily and by instinct, producing the best and highest by means of natural development, it works in the microcosm, or in Man, self-consciously and subjectively, and produces the best and highest by means of reasoning processes. In simpler language, the human being reasons his way to the distinction between good and evil,—the non-human beings attain to good by instinctive guidance.

Now, observe what takes place as soon as the self-conscious or intellectual plane is reached. The operation of the spiritual force, hitherto instinctive, becomes reasoning, and it has therefore to work its way by means of the new function. There is but *one law* throughout the universe, though there are diverse modes of its manifestations; because there is but *one Force*, and law is the condition of its being. The *Microcosm* starts, therefore, exactly as did the *Macrocosm*, and develops itself from low to high, from rudimentary to perfect, precisely in the same manner, only with this difference, that the law of evolution is transferred from the domain of the simple consciousness of Nature, to that of the complex or *self-consciousness* of Humanity. Under this new mode of conditions, spiritual force has to work its way anew on the higher human plane from the beginning, as it has already done on the lower natural plane. In nature it began with the manifestation of physical form, and ended with that of intelligence; in man it begins with the manifestation of intelligence, and will end with that of morality. Man has to *bring himself*, by free-will, that is, by intellectual and moral progress, to the self-same point to which Nature had brought him physically, by instinct. Thus you see what I meant when I said that the divine order is represented by a circle, and that before there is a rise, there must be a fall. But the height to which Man will ultimately attain by the exercise of his free-will and self-knowledge, is vastly greater than that from which he originally fell,—the condition of innocent perfection to which Nature had brought his ancestors the Primates; because the new circle upon which he entered by that fall is on a higher plane, and does not merely meet again at the starting point, like a serpent swallowing his tail.

It is a spiral circle, and the ascending curve of it will lift the human being above the mere Nature-taught animal.

The first state of man, then, after voluntary departure from the natural law, is a state of barbarism. His intelligence is awakened, but his moral functions are still latent and unevoked. The barbarian's conceptions of honor and of his neighbour's right are consequently almost *nil*. He is a marauder, a creature living by spoil, by depredation and by violence. Savages are hunters, not gardeners. They do not cultivate the soil, nor plant orchards; first, because they lack the wit and the skill necessary; secondly, because not being moralists, they would rob one another by violence, and so the property acquired by the labour of the weaker would pass into the hands of the stronger, to the injury of the former; thirdly, because most savage tribes are wanderers, moving about constantly from place to place; fourthly, because their numbers are not great, and game is plentiful in all wild countries, so that there is supply in excess of the need; and lastly, because savages are always idle and mischievous, and to kill game is easier and more exciting than to till the ground and raise corn-crops.

Such is the *transition* state of the human race, the intermediary unstable type between the mere animal and the perfected man. And wherever its traces

survive, there, in proportion to the degree in which they show themselves, survive the features and characteristics of the rudimentary man.

In enumerating the five causes of flesh-eating habits among barbarians, I have indicated by correlation some of the opposite advantages of a return to natural law in the matter of food.

The vegetarian dietary, for which alone we are anatomically designed, is one affording healthful and innocent occupation to both men and women. Tilling, ploughing, sowing, planting, reaping, threshing, stacking, pruning, gleaning, mowing, digging, and so on, are employments in themselves invigorating and strengthening to the body, while they supply the means of utilising a great number of labourers, and thus of supporting a far larger population of peasantry than can find remunerative work where land is uncultivated. It is therefore a pre-eminently civilised dietary, because the exercise of husbandry and the cultivation of edible crops assumes the existence of Peace and Order, a fatherland, and respect for personal rights of property. Nor is it only because land under tillage and fruitage affords occupation to a greater proportion of workers, that it is to be regarded as of more economical and political value than waste or pasture lands. Scientific calculations have proved that an area of land which under corn, root or fruit crops, is capable of affording food enough for a hundred persons, would, if devoted to rearing cattle, be capable of sustaining only thirty-three persons. In a paper entitled "Food-Thrift," contributed to literature by Dr. Richardson, he speaks at length of the intimate relation which exists between the nature of the national food supply and the numbers of the population and says :

"It is the fittest for work and for earning who leave our shores as emigrants; the unfittest for work and the least powerful remain. Thus the drain on the first processes of national permanent prosperity is that which is opened by emigration, and is that which is exhausting the heart of the Commonwealth. . . . We ought really to consider the question of utilising, on a large scale, all vegetables, which in nutrient value, stand above animal products. We have to learn, as a first truth, that the oftener we go to the vegetable world for our food, the oftener we go to the first, and therefore, to the cheapest source of supply. The commonly accepted notion that when we eat animal flesh we are eating food at its prime source, cannot be too speedily dissipated; or too soon replaced by the knowledge that there is no primitive form of food, albuminous, starchy, osseous, in the animal world itself, and that all the process of catching an animal, or of brooding it, rearing it, keeping it, dressing it and selling it, mean no more nor less than entirely an additional expenditure throughout, for being into what we have been taught to consider acceptable form of food, the veritable food which the animal itself found, without any such preparation, in the vegetable world."

Now, a vegetarian dietary is not only politically and nationally the most economical, but it is also enormously cheaper than a diet composed of or including flesh-Butcher's meat, poultry and game are the most expensive and wasteful forms of food known. It is chiefly due to the fact that our lower, or labouring classes, spend a great deal of their hard-earned wages in buying flesh-food, that they are so much less prosperous and well to do as a rule, than the French peasantry. I have passed a good deal of time in hospitals both in England and in France, and have often questioned the poor patients who came for out-door advice, about their mode of living. I find that in towns at home very often the bulk of the week's housekeeping money goes to pay for the Sunday's joint, and all the other six days' meals are eked out of poor and unwholesome materials in order that this extravagance may be met. Sometimes on week days tripe is eaten, or a sheep's head, or liver, or black puddings, or some other horrible offal, the little children of the family partaking with the elders. Not only is such food, in itself, most indigestible and unfit for human beings, but it is extremely liable to be infested with worms and fluke. All animals which are artificially bred and stall-fed are peculiarly liable to diseases. The diseases are chiefly parasitical or worm-diseases, of which there are many kinds; tubercle, or pearl-disease, analogous to consumption in human

beings, splenic fever, or anthrax, and other epidemics. And the animals which chiefly suffer from these maladies are the pig, the sheep, the ox and cow, and the domestic rabbit. Now, although all the flesh of such diseased animals is dangerous, their internal organs and intestines are by far the *most* dangerous. An enormous percentage of sheep killed for the market have fluke in the liver, though not elsewhere, and the greater number of old worn out milch cows, slaughtered for economy's sake, have tuberculous lungs, and, consequently, disease throughout all their bodies.

Dr. Creighton, speaking before the Medical Congress of 1831, said ;... 'I sent a trustworthy person to some slaughter-houses in London, one day, with instructions to bring me specimens of pearl nodules, (tubercular deposits). He brought specimens from four old cows which were slaughtered in his presence. The lungs were riddled with purulent cavities; the flesh would be sold at about four pence a pound to be made into sausages and savelys. . . The inferior parts of the carcase, such as the diaphragm or 'skirt,' are especially liable to have the actual tubercular nodules adhering to them, and more or less intimately blended with the meat. These parts are sold at a cheap rate to the poor.' In the discussion which followed Dr. Creighton's paper, Dr. A. Carpenter observed that 'it had been shewn by evidence given in a Court of law, that ninety per cent. of the animals which were slaughtered for the Metropolitan Meat Market, were more or less affected with tubercule. It was shewn too that this was almost universally the case with cows which had become barren.'

Dr. Trall of New York, writing on the same subject, says:—'All fattened animals are diseased, nearly all have measly livers, many have measly lungs, and some are measly all through. And what are these 'measles'? Insects, worms, and parasitic animals, and nothing else. These creatures and their eggs may pervade all the tissues, and burrow in any of the organs. Frequently they work their way into the brain and spinal marrow of sheep, inducing the disease known as staggers. When they take up their abode in the cells and canals and cavities of the body, they develop in size or shape according to their dwelling-places. In the intestine, they elongate into various species of worms. They are very hard indeed to destroy, and are transferred alone from the carcase of the dead animal affected, to the person who eats of it. (Sometimes the eggs only are so transferred, and these hatch and develop in the human intestine, and become worms of five or seven feet long. This is the origin of the tape-worm.) The ordinary process of salting does not kill them, nor does cooking destroy them, except at a very high degree of heat.' The many horrible and contagious maladies to which cattle artificially reared, are liable, and the shocking disasters to human life and health which the habit of flesh-eating has engendered are so numerous, that in order to tell you all about them, it would be necessary to write a book on the subject. As my time is very limited now, I will content myself with quoting only one more authority on the question,—a very important authority,—Mr. Bruce, who at the time of the Parliamentary discussion of the 'Cattle Diseases Prevention Bill' (1864) was Under-Secretary for the Home Department.

'The aggregate annual value of the cattle lost by diseases in the United Kingdom, was,' he said, 'about £6,120,000. The most fatal of these diseases was pleuropneumonia (inflammation of the lungs and lung cavity) from which at least half the cattle died. . . . With respect to the cause of this disease, doctors differed among themselves, some said it was contagious, others, that it was epidemic. . . . It was, however, undoubtedly propagated by transmission of cattle by ship from foreign countries. They were often driven a considerable way to the port of embarkation, huddled into ships, taken across the seas, exposed to great heat, thirst, and suf-

ferings on board ship; taken ashore, put into trucks in which infected cattle had recently travelled, and thus, on ship-board, in the trucks, at fairs and other places of sale, disease was necessarily propagated. Other diseases,—the foot and mouth disease, the scab in sheep, and measles in pigs, must also be considered. . . . In London, the seizures of diseased meat were very large, representing probably but a small part of the animals killed in a diseased state.' He would read to the House an extract from Prof. Gamgee's report. He says,—'In London, I have seen butchers dress extremely diseased carcasses, and 'polish' the meat. This filthy practice consists in killing a fat ox at the same time that a diseased animal is killed. Boiling water is at hand, and when the diseased animals have been skinned, their flesh is rubbed over with fat from the healthy ox, and hot cloths are used to keep the fat warm and to distribute it over the carcase, that it may acquire an artificial gloss, and an appearance of not being deprived of fat. In Edinburgh, I have seen sickly lambs, without a particle of fat upon them, dressed up with the fat of healthy sheep in much the same way. From the private slaughter-houses in London I have known the diseased organs themselves sent to the sausage maker. In company with another member of my profession, I have seen a carcase dressed, and portions of it prepared for sale as sausage meat and otherwise, although thoracic disease had gone to such an extent that gallons of fetid fluid were removed from the pleural sacs (the chest), and that large abscesses existed in the lungs.

And this is the kind of food to buy which, the poor and labouring classes of England frequently stint themselves both in nourishment and in clothing, and sacrifice their health and their lives! Is it any wonder, that feeding on such diseased and loathsome offal as this, they and, still more often, their babies, are scrofulous, rickety, consumptive, feeble, often afflicted with horrible skin eruptions and disfiguring sores? And is it not startling to think that for about a third of the money they spend on this vile stuff, they might buy meal and peas and lentils and potatoes and onions enough to keep the whole household well and deliciously fed every day of the week?

(To be continued.)

#### PREMATURE AND PHENOMENAL GROWTHS.

A RUSSIAN Theosophist in a letter dated November 1883, writes as follows:—

The Petersburg and Moscow papers are greatly concerned with the miraculous growth of a child, which has been scientifically recorded by Medical papers. On the outskirts of Siberia, in a small village in the family of a peasant named Savelieff, a daughter was born in October 1881. The child, though very large at its birth, began exhibiting a phenomenal development only at the age of three months when she began teething. At five months she had all her teeth; at seven she began to walk, and at eight walked as well as any of us, pronounced words as might only a child two years old, and measured—nearly a yard in her height! When eighteen months old she spoke fluently, stood one arshene and a half (over four feet) in her stockings, was proportionately large; and with her very dark face, and long hair streaming down her back, talking as only a child 12 years old could talk, she exhibited moreover a bust and bosom as developed as those of a girl of seventeen! She is a marvel to all who know her from her birth. The local board of physicians from the neighbouring town took charge of her for scientific purposes."

We find the fact corroborated in the *Moscow Gazette*, the paper giving us, moreover, a second instance just come under the notice of science, of another such phenomenal growth.

A Herr Schromeyer of Hamburg, has a son, born in 1869—now a boy of 13, and his tenth child. From his birth he arrested every one's attention by his *supernaturally* rapid development. Instead of damaging, it seemed but to improve his health, which has been always excellent. A few months after his birth his muscular system increased so much, that when one year old voice began to lose its childish tones and changed. Its deep basso attracted very soon the attention of some physicians. Soon after, his beard grew, and it became so thick as to compel his

parents to shave it every two or three days. His infantine features, *very dark*, were gradually replaced by the face of an adult, and at five he was mistaken by every stranger for a young man of twenty. His limbs are normal, strictly proportionate and very fine. At six he was a full grown and perfectly developed young man. Professor Virchoff, the celebrated physiologist, accompanied by several learned authorities, examined the boy several times, and is reported, when doubt as to the age of the boy had become no longer possible—to have given his certificate to the effect that the young boy was entirely and fully developed."

A similar case took place in a Georgian family of Asiatics, at Tiflis in the year 1865. A boy of four was found to have become a full adult. He was taken to the hospital and lived there under the eye of the Government physicians, who subjected him to the most extraordinary experiments,—of which, most likely, he died at the age of seven. His parents—superstitious and ignorant people—had made several attempts to kill him, under the impression he was the devil incarnate. There remains to this day a photograph of this bearded baby in the writer's family. Two other cases—nearly similar—the consequences of which were that two cousins in a village of Southern France, became respectively father and mother at the age of eight and seven, are on record in the *Annals of Medicine*. Such cases are rare; yet we know of more than a dozen well authenticated instances of the same from the beginning of this century alone.

We are asked to explain and give thereupon our "occult views." We will try an explanation. We ask no one to believe; we simply give our personal opinion identical with that of other occultists. The latter statement, however, necessitates a small preface.

Every race and people has its old legends and prophecies concerning an unavoidable "End of the world," the pious portions of civilized Christian nations having, moreover, evolved in advance a whole programme for the destruction of our planet. Thus the Millenarians of America and Europe expect an instantaneous disintegration of our earth, followed by a sudden disappearance of the wicked and the survival of the few elect. After this catastrophe, we are assured, the latter will remain in the service of "Christ, who upon his new advent will personally reign on earth a thousand years"—(on its *astral* skeleton, of course, since its physical body will have disappeared.) The Mohamedans give out another tale. The world's destruction will be preceded by the advent of an *Imam*, whose presence alone will cause the sudden death of the whole unclean brood of *Kaffirs*; the promised "Heaven" of Mohamed will then shift down its head quarters, and the paradisaical *Houris* will roam about at the service of every faithful son of the Prophet. Hindus and Buddhists have again a different version; the former believe in the *Kalki* Avatar and the latter in the advent of Maitreya Buddha. The *true* Occultist however—whether Asiatic or European (the latter still to be found, *rara avis* though he be) has a doctrine to this effect, which he has hitherto kept to himself. It is a theory, based on the correct knowledge of the *Past* and the never failing analogy in Nature to guide the Initiate in his prevision of future events—were even his psychic gifts to be denied and refused to be taken into account.

Now, what the Occultists say, is this: humanity is on the descending pathway of its cycle. The rear-guard of the 5th race is crossing slowly the apex of its evolution and will soon find itself having passed the turning point. And, as the descent is always more rapid than the ascent, men of the new coming (the 6th) race are beginning to drop in occasionally. Such children regarded in our days by official science as exceptional monstrosities, are simply the pioneers of that race. There is a prophesy in certain Asiatic old books couched in the following terms, the sense of which we may make clearer by adding to it a few words in brackets.

And as the fourth (race) was composed of Red-yellow which faded into Brown-white (bodies), so the fifth will fade out into white-brown (the white races becoming gradually darker). The sixth and seventh *Manushi* (men?) will be born adults; and will know of no old age, though their years will be many. As the

Krita, Treta, Dvapara and Kali (ages) have been each decreasing in excellence (physical as well as moral) so the ascending—Dvapara, Treta, and Krita will be increasing in every excellence. As the life of man last 400 (years in the first, or Krita Yuga), 300 (years in Treta), 200 (years in Dvapara) and 100 (in the present Kali age); so in the next (the 6th Race) (the natural age of man) will be (gradually increased) 200, then 300 and 400 (in the two last yugas.)

Thus we find\* from the above that the characteristics of the race that will follow ours are—a darker skin, shortened period of infancy and old age, or in other words a growth and development that in the present age (to the profane) appear quite miraculous.

It is not the sacred legends of the East alone that throw out hints on the future physiology of man. The Jewish Bible (See Genesis, Chap. vi. verse 4) implies as much, when speaking of antediluvian races (the 3rd race) it tells us, "There were giants in the earth, in those days," and makes a distinct difference between "the sons of God," and "the daughters of man." Therefore, to us, Occultists, believers in the knowledge of old, such isolated instances of premature development, are but so many more proofs of the end of one cycle and—the beginning of another.

### A GREAT RIDDLE SOLVED.

By DAMODAR K. MAVALANKAR, F. T. S., CHELA.

ON my return to the Head-quarters from the North, where I had accompanied Col. Olcott on his Presidential Tour, I learnt with regret and sorrow of further and still more malignant strictures by certain Spiritualists on the claims of the Founders of the Theosophical Society to be in personal relations with the Mahatmas of the sacred Himavat. For me, personally, the problem is of course now solved. It being impossible, I shall not even undertake to prove my case to those who, owing to prejudice and misconception, have determined to shut their eyes before the most glaring facts, for none are so blind as those who will not see, as the saying has it. I should at the same time consider to have ill-performed my duty were I not to put my facts before those earnest seekers after truth, who by sincere aspiration and devoted study, have been bringing themselves closer and closer to the Occult World. The best way, I believe, to carry conviction to an intelligent mind is to narrate the facts in as plain and simple a way as possible, leaving speculations entirely out of consideration.

At the outset I must state what is known to many of my friends and brothers of the Theosophical Society, viz., that for the last four years I have been the CHELA of Mr. Sinnett's correspondent. Now and then I have had occasion to refer publicly to this fact, and to the other one of my having seen some of the other VENERATED MAHATMAS OF THE HIMALAYAS, both in their astral and physical bodies. However all that I could urge in favour of my point, viz., that these GREAT MASTERS are not disembodied spirits but living men—would fail to carry conviction to a Spiritualistic mind blinded by its prejudices and preconceptions. It has been suggested that either or both of the Founders may be mediums in whose presence forms could be seen, which are by them mistaken for real living entities. And when I asserted that I had these appearances even when alone, it was argued that I too was developing into a medium.

In this connection a certain remark by Mr. C. C. Massey in a letter to *Light* of November 17, is very suggestive, inasmuch as that gentleman is not only far from being inimical to us but is a Theosophist of long standing, bent solely on discovering truth and—nothing but the truth. The following extract from the said letter will show how great are the misconceptions even of some of our own fellow-members:—

"Nevertheless, were it an open question, free from authoritative statement, so that such a suggestion could be made without offence by one who would, if possible, avoid offence, I should

\* The seven Rounds decrease and increase in their respective durations, as well as the seven races in each. Thus the 4th Round as well as every 4th race are the shortest, while the 1st and 7th Round as the 1st and 7th root races are the longest.

avow the opinion that these letters, whether they are or are not the *ipsissima verba* of any adept, were at all events penned by Madame Blavatsky, or by other accepted *chelas*. At least I should think that she was a medium for their production, and not merely for their transmission. The fact that through the kindness of Mr. Sinnett I have been made familiar with the handwriting of the letters, and that it bears not the remotest resemblance to Madame Blavatsky's, would not influence me against that opinion, for reasons which every one acquainted with the phenomena of writing under psychical conditions will appreciate. But I am bound to admit that there are circumstances connected with the receipt by Mr. Sinnett of other letters signed, 'K. H.' which are as regards those, apparently inconsistent with any instrumentality of Madame Blavatsky herself, whether as medium or otherwise and the handwriting is in both cases the same."

Bearing well in mind the italicized portion in the above quotation, I would respectfully invite the Spiritualists to explain the fact of not only myself, but Col. Olcott, Mr. Brown, and other gentlemen having on this tour received severally and on various occasions letters in reply to conversations and questions on the same day or the same hour, sometimes when alone and sometimes in company with others, when Mme. Blavatsky was thousands of miles away; the handwriting in all cases being the same and identical with that of the communications in Mr. Sinnett's possession.

While on my tour with Col. Olcott, several phenomena occurred,—in his presence as well as in his absence—such as immediate answers to questions in my Master's handwriting and over his signature, put by a number of our Fellows, and some of which are referred to in the last number of the *Theosophist*, while others need not be mentioned in a document going into the hands of the profane reader. These occurrences took place before we reached Lahore, where we expected to meet in body my much doubted MASTER. There I was visited by him in body, for three nights consecutively for about three hours every time while I myself retained full consciousness, and in one case, even went to meet him outside the house. To my knowledge there is no case on the Spiritualistic records of a medium remaining perfectly conscious, and meeting, by previous arrangement, his Spirit-visitor in the compound, re-entering the house with him, offering him a seat and then holding a long converse with the "disembodied spirit" in a way to give him the impression that he is in personal contact with an embodied entity! Moreover HIM whom I saw in person at Lahore was the same I had seen in astral form at the Head-quarters of the Theosophical Society, and the same again whom I, in my visions and trances, had seen at His house, thousands of miles off, to reach which in my astral *ego* I was permitted, owing, of course, to His direct help and protection. In those instances with my psychic powers hardly developed yet, I had always seen Him as a rather hazy form, although His features were perfectly distinct and their remembrance was profoundly graven on my soul's eye and memory; while now at Lahore, Jummoo, and elsewhere, the impression was utterly different. In the former cases, when making *Pranám* (salutation) my hands passed through his form, while on the latter occasions they met solid garments and flesh. Here I saw a living man before me, the same in features, though far more imposing in His general appearance and bearing than Him I had so often looked upon in the portrait in Mme. Blavatsky's possession and in the one with Mr. Sinnett. I shall not here dwell upon the fact of His having been corporeally seen by both Col. Olcott and Mr. Brown separately, for two nights at Lahore, as they can do so better, each for himself, if they so choose. At Jummoo again, where we proceeded from Lahore, Mr. Brown saw Him on the evening of the third day of our arrival there, and from Him received a letter in His familiar handwriting, not to speak of His visits to me almost every day. And what happened the next morning almost every one in Jummoo is aware of. The fact is, that I had the good fortune of being sent for, and permitted to visit a Sacred *Ashrum* where I remained for a few days in the blessed company of several

of the much doubted MAHATMAS of Himavnt and Their disciples. There I met not only my beloved Gurudeva and Col. Olcott's Master, but several others of the Fraternity, including One of the Highest. I regret the extremely personal nature of my visit to those thrice blessed regions prevents my saying more of it. Suffice it that the place I was permitted to visit is in the HIMALAYAS, not in any fanciful Summer Land and that I saw Him in my own *sthulasarira* (physical body) and found my Master identical with the form I had seen in the earlier days of my Chelaship. Thus, I saw my beloved Gura not only as a *living* man, but actually as a young one in comparison with some other Sadhus of the blessed company, only far kinder, and not above a merry remark and conversation at times. Thus on the second day of my arrival, after the meal hour I was permitted to hold an intercourse for over an hour with my Master. Asked by Him smilingly, what it was that made me look at Him so perplexed, I asked in my turn:—"How is it MASTER that some of the members of our Society have taken into their heads a notion that you were 'an elderly man,' and that they have even seen you clairvoyantly looking an old man passed sixty?" To which he pleasantly smiled and said, that this latest misconception was due to the reports of a certain Brahmachari, a pupil of a Vedantic Swami in the N. W. P.\*—who had met last year in Tibet the chief of a sect, an elderly Lama, who was his (my Master's) travelling companion at that time. The said Brahmachari having spoken of the encounter in India, had led several persons to mistake the Lama for himself. As to his being perceived clairvoyantly as an "elderly man," that could never be, he added, as *real* clairvoyance could lead no one into such mistaken notions; and then he kindly reprimanded me for giving any importance to the age of a Guru, adding that appearances were often false, &c. and explaining other points.

These are all stern facts and no third course is open to the reader. What I assert is either true or false. In the former case, no Spiritualistic hypothesis can hold good, and it will have to be admitted that the Himalayan Brothers are living men and neither disembodied spirits nor the creatures of the over-heated imagination of fanatics. Of course I am fully aware that many will discredit my account, but I write only for the benefit of those few who know me well enough to see in me neither a hallucinated medium nor attribute to me any bad motive, and who have ever been true and loyal to their convictions and to the cause they have so nobly espoused. As for the majority who laugh at, and ridicule, what they have neither the inclination nor the capacity to understand, I hold them in very small account. If these few lines will help to stimulate even one of my brother-Fellows in the Society or one right thinking man outside of it to promote the cause the GREAT MASTERS have imposed upon the devoted heads of the Founders of the Theosophical Society, I shall consider that I have properly performed my duty.

ADYAR (MADRAS) }  
7th December, 1883. }

### MISTAKEN JUDGMENTS.

BY WILLIAM HITCHMAN, M. D.

IN dealing with science, as revised by philosophy, it may sometimes be well to remember the Kantian theory of universal truths so largely, if not completely, accepted in the past, and scarcely less at present. The chief, real and important question proposed by the Critical Philosophy is this: "Are there any properties of objects in general which are really due to me, and to the way in which I perceive them and *which do not belong to the things themselves?*" Judgments of this kind may very

often be mistaken. If a man, for example, had a pair of green spectacles on, he would see everything green—that is to say, all objects of sight to him are thus represented. Indeed, if the colour should vary somewhat for different things, there would always be greenness in it. Assuredly, he might be mistaken in positively declaring that he "*knew*" that everything and everybody was green. If, in the subjective method of philosophical inquiry, we are convinced of universality and necessity, we must equally weigh the facts of chemistry and physics, as in the physiological method, we must study the phenomena that accompany sensation, in obedience to the molecular properties of the brain and nervous system. Of course, the proper thing to do, either in the case of the Bishop of Madras, or religious mythologists of other denominations, would be to take him to a mirror in the Temple of Truth, and show him, demonstrably, that the green spectacles are only upon his *own* nose. He has accepted a deduction, as if it were a verification, his eyes being only affected by light which lies within the verdant sphere of an immature, raw, unseasoned grassy plain, a veritable plot of weeds, not emeralds—the range of the visible, or *individual* spectrum, and as a matter of observation and experience, it is universally found that religious mythologists are all actually wearing the same green spectacles from age to age. And what is worse still, perhaps, in despite of Theosophy and Theosophists, omitting out this property of the spectacles, the Bishop of Madras and others are absolutely "*certain*" that whether the spectacles mislead or not, everything they see, without exception, beyond or outside their own exclusive green house, partakes inexorably, and for ever, of rawness or unripeness, ill fitted, withal, for the nature of body and soul, or poisonous alike for spiritual and material substance. The Rev. Dr. Brown, for instance, in protesting that his dark colour is *not* a mixture of red, black, and yellow, admirably represents the Bishops of London, Oxford, Manchester, Liverpool, Durham and Carlisle in their sophistical, time-serving addresses at the British Association for the Advancement of Science, as well as those at the recent Church Congress, when they declared *ex-cathedra*, like the Lord ecclesiastical, or mythological of Madras, in effect, "We shall get over the scare of Biology and Anthropology, as easily as we did the craze of Geology and Astronomy." It is the most facile of processes. Before teaching any doctrine in Theology, you must not wait until the nature of the evidence for it can be *understood*. Bishops, priests, and deacons, of a Church of Mythology, as by law of man established, do not care so much as the ninth letter of the Greek alphabet whether the Evolution theory be true or false. Besides the nebular hypothesis, there are other and more theological doctrines, about the origin of the universe, which it is still desirable for kingcraft and priestcraft to have taught to *all* children.

Fiction is truth, truth fiction, that is all

We know, as priests, and all ye need to know.

It matters not in religious mythology, now, as formerly, that *clerical stories are quite different and absolutely contradictory*. It is a known "*fact*" in dogmatic theology, that the evidence which connects the stories with Moses, and which proves conclusively that the son of Amram and Yochebed, of the Tribe of Levi, could *not* have known anything about the origin of earth, plants, animals and men, are both of them invincible not only in a maritime city of British India, on territorial acquisitions in the East, of questionable equity, but for chaplains, churches, and creeds, *ubivisat ubique*. Deukalion, Pyrrha, the Chaldee God Bel, and the rest, are further eclipsed by a new revision of the Old Testament, which sets forth that man was really made from the dust of the ground by a deity, like unto himself, who walked and talked, and had diabolical associates, jealous of the new creature for sharing his privilege of knowing, right from wrong, and fearful exceedingly lest, perad-

\* The narrative of this Brahmachari is given and repeated twice over in our last number. See pp. 83-6, and 98-9 *Theosophist* for Dec.—Jany.

venture, he should gain that of immortality, also. This deity, however, we are now assured, did not take a "rib" out of the man, and make a woman of it; on the contrary, the part selected, we are at present asked to believe, was a long, flexible, terminal appendage, which formerly terminated the body of the human animal, behind. Let it not be supposed, for a moment, that herein is exhibited by the writer an undue amount of levity in regard to "Mistaken Judgments," or the use of spectacles. Daily newspapers in Britain, from John o' Groats to Laud's End, have been informing Mr. Public, of late, that the old traditional fashion of church-going is not only very decisively unfashionable, but that there is a still further probability of "an increasing diminution" (the latter in Ireland, presumably) in the number and quality of believers. It is not expedient to use an optical instrument, in churches, to assist or correct defects of vision. Plutus is *not* winged. Are the books of the Bible once deemed infallible now erroneous? Certainly *not*, by those money-making casuists, of different theological sects, but having the same strong feelings of class interests, and loving one another in green spectacles, privately, though in a position of most hostile demonstration, publicly. Those religious mythologists who hold by the doctrine of the verbal inspiration of Scripture, mean precisely the same thing when they speak in Coward's Castle of the unbroken tradition of the church, or theology, Judaism, and Christianity, as those who consider that the Religion of Humanity is naturally evolved, and spiritually progressive in the whole history of mankind. The new Vice-Chancellor of the University of Oxford, for instance, in a recent sermon preached before the dons at St. Mary's there, spoke favourably of what is called Darwinism, popularly, but scientifically, the theory of origin of species by natural selection, and so far as Hebrew or Christian mythology is concerned, therein, he might, with equal regard for the principles of Biology, curious novel facts, new and astonishing views of the origin, or continuity of life, excellent reasoning, acute criticisms, and scientific researches, have spoken justly of the nameless antiquity of man's remains in the Delta of the Mississippi, or elsewhere, amid the bold cypress of the Southern States, buried forests, in fact, one over the other, with interspaces of sand, ten distinct growths, for a distance of 300 miles, of this deposit, some of the trees being more than twenty-five feet in diameter, and containing 5,700 annual rings. Not more adverse could Professor Jowett be to Hebrew and Christian myths, were we to conclude his *next* University Oration, thus: "There is, dearly beloved brethren, Knights Theological, of the Holy Order of "Loaves and Fishes," one other essential point, to which I wish to draw your serious attention, namely, the experimental demonstration—again and again proved that now, as "in the beginning," living organisms *are* evolved from non-living matter, after being subject to temperature of over 300° Fahr., a heat so destructive of all known plants and animals, that even Pasteur himself must fully admit that life *is* born of death in the laboratory of nature, whether called vegetable, animal, human, or angelic, and as science has shown from inorganic chemical forces, or physical combinations, alone, in the case of those minute moving organisms, or mere specks of naked protoplasm, developed as Bacteria, without a passing atmospheric bubble, to indicate the presence of air, or prior germs, in the more than boiling water of flasks hermetically sealed. As for Science and Theology, it is absolutely out of the question in this our day, that any agreement shall ever be arrived at between them, since the dispute amongst competent scholars is no longer, as it once was, about the orthodox interpretation of the dogmatic tenets of religious mythology, but about the very nature of religion itself, as virtue in daily life, founded upon reverence of Wisdom and Goodness, rather than a system of ancient faith, and blind worship of men-like Gods or expectation of future re-

wards and punishments. The plain truth is that men do *not* use the same words, God, Christ, Heaven, Hell, Church, or Christianity, in the same sense. And what is more, the *profanum vulgus* in the year 1884, will hardly be immersed in the SLOUGH OF STOLIDITY to so great a depth, as not to perceive that the new and revised text of the Bible, as it is again changed thousands of times by fresh theologians, or a recent batch of translators, is the precise word of command which Omnipotence first signified. In the last University Sermon of the Master of Balliol College, it was enunciated clearly, that "We Doctors of the Broad Church in England (whatever one of the head order of Indian Clergy may say) use the current terms of theology in an esoteric sense, as designed for and understood by the initiated, alone." Esoterics is virtually the synonym of Theosophy, or that divine wisdom of occult and mysterious knowledge taught by Eastern philosophers long anterior to Moses and Christ; in fact, before the birth of Jesus of Nazareth, there were Buddhist missionaries teaching Theosophy to their disciples, but concealing it from the people of Palestine generally. Human progress has not been forced on by such ethical teaching as passive obedience to the *maximum* of physical distress, and mental or social disturbance, unpleasantly akin to mere dead formalism, and narrow sectarian particularism. Withal, dogma upon dogma, contradictions unintelligible and doctrines incomprehensible, heterogeneous, and absurd—even a dying God atone for the sins of Adam, ostensibly; but *de facto* to satisfy the supposed demand of the Jewish law. Long ages prior to Christ's borrowing from Eastern mysteries, or Egyptian symbols, and articles of religious faith, such as the doctrines of Theosophy and the Theosophists comprise, namely, Love, Forgiveness, Humility, Self-Sacrifice and common Brotherhood of Humanity of every colour and every clime, the Spirit of Holiness *had* come as a beautiful ideal conception of true Divinity, if not as a natural sequence of man's history, growth, and progressive moral development. In short, when Christianity became the ruling faith of the Roman Empire, it had no Christ-like individuality at all, being made up mainly of the Father's commentaries on the alleged teachings of Jesus, Paul, John, and others, interspersed with forgeries, or the writings of Greek philosophers. Our duty, here and now, is to apprehend facts, correctly study the sequences of the Universal Order, as observation and experiment may reveal spiritual and material phenomena to us. Surely, the *life* of Christ may have been truly divine, without his being acknowledged as Deity or a Personal God. Even so, may we, let us hope and work, bind ourselves together in a common bond or spiritual centre of religious sweetness, light and culture, against all attacks of Christian despots, the Bishop of Madras, notwithstanding. Who *is* God, and what *is* Nature? If the only instruments to be employed by the Theologians in the attainment of divine wisdom be the Church, Christianity, and the Bible, then I, for one, see *no* reign amongst mankind of God, Christ, or the Holy Ghost, *no* "supernatural" rising from bondage and transience with the lower life of mortals, to victory and permanence with the higher life of angels. Quite the contrary, alas! Judged of by any theosophic standard, either God is Nature, or Nature is God. (*Qui facit per alium, aliam, aut aliud, facit per se.*) Falsehood and Wrong, are absolutely opposed to Human Happiness, and to Truth and Right is for ever linked the very possibility or potentiality of the blessed life! If Nature be God, as Spinoza affirms, then Deity is simply a monster that deserves neither reverence nor praise. There is no crime that good men abhor, or bad men perpetrate, that God has *not* committed in the past, and still commits at present. He knows no sense of Justice or Mercy, and unless the test of Happiness is to retain Immorality, how can it be a holy, a noble, or moral act, to study the ways, emulate the conduct of Yahveh? Or, shall Theosophists forsake their Theosophy at the *bidding* of

the Bishop of Madras, and lay it down as an axiom, irrefragable, that personal intimacy with a personal criminal yclept Jehovah of the Jews, will make all mortals the happiest of eternal angels? For myself, I believe that Truth and Right are the most sacred and hallowed of things on earth or in heaven, and that their sure possession will never militate against the highest happiness of which soul, body, or spirit is capable.

Live like the rose. So bud, so bloom,  
In growing beauty live;  
So sweeten life with the perfume  
That gentle actions give.  
Die like the rose, that when thou'rt gone  
Sweet happy thoughts of thee  
Like fragrant rose leaves, may be strewn upon thy memory.

### “PRECIPITATION.”

Of all phenomena produced by occult agency in connection with our Society, none have been witnessed by a more extended circle of spectators or more widely known and commented on through recent Theosophical publications than the mysterious production of letters. The phenomenon itself has been so well described in the *Occult World* and elsewhere, that it would be useless to repeat the description here. Our present purpose is more connected with the process than the phenomenon of the mysterious formation of letters. Mr. Sinnett sought for an explanation of the process and elicited the following reply from the revered Mahatma, who corresponds with him:—

“ . . . . Bear in mind these letters are not written but impressed, or precipitated, and then all mistakes corrected. . . . . I have to think it over, to photograph every word and sentence carefully in my brain before it can be repeated by precipitation. As the fixing on chemically prepared surfaces of the images formed by the camera requires a previous arrangement within the focus of the object to be represented, for, otherwise—as often found in bad photographs—the legs of the sitter might appear out of all proportion with the head, and so on—some have to first arrange our sentences and impress every letter to appear on paper in our minds before it becomes fit to be read. For the present, it is all I can tell you.”

Since the above was written, the Masters have been pleased to permit the veil to be drawn aside a little more, and the *modus operandi* can thus be explained now more fully to the outsider.

Those having even a superficial knowledge of the science of mesmerism know how the thoughts of the mesmeriser, though silently formulated in his mind are instantly transferred to that of the subject. It is not necessary for the operator, if he is sufficiently powerful, to be present near the subject to produce the above result. Some celebrated practitioners in this Science are known to have been able to put their subjects to sleep even from a distance of several days' journey. This known fact will serve us as a guide in comprehending the comparatively unknown subject now under discussion. The work of writing the letters in question is carried on by a sort of psychological telegraphy; the Mahatmas very rarely write their letters in the ordinary way. An electro-magnetic connection, so to say, exists on the psychological plane between a Mahatma and his chelas, one of whom acts as his amanuensis. When the Master wants a letter to be written in this way, he draws the attention of the chela, whom he selects for the task, by causing an astral bell (heard by so many of our Fellows and others) to be rung near him, just as the despatching telegraph office signals to the receiving office before wiring the message. The thoughts arising in the mind of the Mahatma are then clothed in word, pronounced mentally, and forced along the astral currents he sends towards the pupil to impinge on the brain of the latter. Thence they are borne by

the nerve-currents to the palms of his hand and the tips of his finger, which rest on a piece of magnetically prepared paper. As the thought-waves are thus impressed on the tissue, materials are drawn to it from the ocean of *ákas*, (permeating every atom of the sensuous universe) by an occult process, out of place here to describe, and permanent marks are left. . .

From this it is abundantly clear that the success of such writing as above described depends chiefly upon these things:—(1) The force and the clearness with which the thoughts are propelled and (2) the freedom of the receiving brain from disturbance of every description. The case with the ordinary electric telegraph is exactly the same. If, for some reason or other the battery supplying the electric power falls below the requisite strength on any telegraph line or there is some derangement in the receiving apparatus, the message transmitted becomes either mutilated or otherwise imperfectly legible. The telegram sent to England by Reuter's agent at Simla on the classification of the opinions of Local Governments on the Criminal Procedure Amendment Bill, which excited so much discussion, gives us a hint as to how inaccuracies might arise in the process of precipitation. Such inaccuracies, in fact do very often arise as may be gathered from what the Mahatma says in the above extract. “Bear in mind,” says He, “that these letters are not written, but *impressed*, or precipitated, and then all mistakes corrected.” To turn to the sources of error in the precipitation. Remembering the circumstances under which blunders arise in telegrams, we see that if a Mahatma somehow becomes exhausted or allows his thoughts to wander off during the process, or fails to command the requisite intensity in the astral currents along which his thoughts are projected, or the distracted attention of the pupil produces disturbances in his brain and nerve-centres, the success of the process is very much interfered with.

It is to be very much regretted that the illustrations of the above general principles are not permitted to be published. Otherwise, the present writer is confident that facts in his possession alone would have made this paper far more interesting and instructive. Enough, however, has been disclosed above to give the public a clue as to many apparent mysteries in regard to precipitated letters. It ought to satisfy all earnest and sincere inquirers and draw them most strongly to the path of Spiritual progress, which alone can lead to the knowledge of occult phenomena, but it is to be feared that the craving for gross material life is so strong in the western Society of the present day that nothing will come to them amiss so long as it will shade off their eyes from unwelcome truth. They are like Circe's swine

Who not once their foul deformity perceive,  
but would trample down Ulysses for seeking to restore  
them their lost manhood.

### POSTHUMOUS VISITOR.

(A Story of Second Sight.)

By GUSTAVE ZORN, F. T. S.

HAVING read in the *Theosophist* for September last, “A story of thirty years ago,” I am tempted to lay before the reader the account of a somewhat strange occurrence. It was related to me sometime ago by the daughter of the lady who witnessed the facts when fifteen years of age, and whom for the purpose of this narrative I shall call Mrs. A—. Second sight and other psychological peculiarities seem to be running in the family, but, I must abstain from giving real names, as the near relatives of the parties concerned are still alive and in high social standing.

Mrs. A—, then a girl of fifteen, had just come home during a vacation of her school. Opposite her parents' house was the mansion of her mother's relatives, an old historical family, then represented in the direct line by two unmarried brothers, the elder past forty and the

younger about twenty years of age. For sometime previous to the events about to be narrated, the elder brother had noticed that considerable sums of money frequently disappeared from his cash-box in a mysterious way, which led to his successively dismissing several of his servants on suspicion and without telling any one of his losses. These measures, however, proved of no avail, and the money kept on disappearing just as before. The younger of the two brothers led a rather dissipated life, sowing his wild oats, as the saying goes, as fast as he could; but as his senior furnished him with all the money he asked for or needed, there was no reason to suspect the young man of spending more than he acknowledged to, least of all, of resorting to dishonorable means to meet his extravagance.

The parents of Mrs. A—, leading a quiet, patriarchal life, were either completely ignorant of the dissipations of their young relative or unwilling to comment upon them. During Mrs. A.'s stay at home, it so happened that the younger brother was killed in a duel and was for several days laid out according to custom, in the family state-room, covered for the mournful occasion from ceiling to floor with sable hangings. As Mrs. A.—'s mother was the only female relative of the two brothers then resident in the town, it fell to her duty to visit daily the house of mourning. Mrs. A.—having expressed the desire to bid a last farewell to her deceased cousin, was taken there on the day previous to the funeral ceremony. The mother having had to speak to the surviving brother about some arrangements for the following day, the girl was left for a short time alone in the mortuary chamber. Standing at the head of the dead man, she was soon lost in a train of melancholy thoughts.

All of a sudden she saw the drapery hanging over the door, opening into the private room of the deceased, lifted up and an old gentleman whom, she met for the first time, emerge out of it with a book under his arm. Moving about in a deliberate and steady manner, as if he was the master of the house, the figure went straight to the catafalque and stood at the foot of the coffin. He gazed earnestly at the dead man, and casting on him a long look of mingled reproach and contempt, said in a calm and loud voice: "May thy offence be forgiven thee for the sake of thy mother!" Then moving round the head of the bier—just opposite the girl,—a mute witness of all his doings, the old gentleman bent down and kissed the forehead of the deceased. After this—and taking all the while as little notice of the bewildered spectator as if she were not there, he brushed her past, and crossing over the room to the opposite wall—the lower half of which (as it is still the custom in many a mansion of the German aristocracy) was wainscotted—he pressed a knob hidden among the carved wood-work and two panels sliding audibly apart in the wainscot discovered a recess full of books and documents. Taking a pencil, the old gentleman wrote for sometime on a page, torn out of the book he had brought with him, holding it with his left hand under the paper while writing with the right; then placed both book and paper in the recess and pressed the knob again which made the two panels slide back into their previous position, leaving no trace behind them of the existence of any such hidden recess in the wall. After this, he went out as firmly as he had entered, by the same door through which he had made his appearance, lifting up and letting down the drapery again.

During the whole scene the young girl stood spell-bound, unable to move or utter a single cry. After the old man had left the room, she rushed out of it into the arms of her frightened mother, who had just returned to see why her daughter was lingering so long in the mortuary chamber. Unable to speak and explain what had happened, she was carried home. Where, at last, her parents having succeeded in quieting her, she de-

scribed minutely the old gentleman, repeated the words pronounced by him, and related all that he had done.

"Good Heavens! that is Theodore," exclaimed her astonished father; but quickly checking himself for fear of disturbing his frightened daughter still more, he tried to soothe her into the belief that it was all a dream or a hallucination, nor did he ever speak to her after that of the occurrence. It was not until several years later, after she had been married, that her mother could be induced to relate to her the event that had followed her vision. "Theodore" was the father of the two brothers, long dead, and whom the girl had never known. The old gentleman, an old friend, had been instantly recognized from her description by her father, who at once proceeded to the surviving brother and told him what had happened. Neither of them had any knowledge of any secret recess hidden in the wainscot of that room, but guided by the young girl's faithful description, they succeeded in finding the knob concealed among the carving. In the recess, they found the book as well as the paper on which the father, so long dead, had penned some lines on that memorable day.

The memorandum contained the startling discovery that the real thief of the abstracted sums was the deceased brother himself; that he had moreover given letters of exchange for a large sum to a person in another town, whose exact address was given as well as the amount of the debt and the due time for the payment thereof. The whole ending with an earnest injunction that the surviving brother should pay the bill and thus save the honour of their ancient and hitherto unsullied name.

The book which the old gentleman had brought under his arm, proved to be the private account book of the young man killed, containing proofs of the statements made in the note by the apparition. The address of the holder of the bills proved to be quite correct as well as the amount and date of which nobody had the remotest suspicion. In the same recess were found several family documents which had been considered as lost since the death of the old master of the mansion. The elder brother married sometime after this occurrence. The above-mentioned posthumous letter in the old gentleman's hand-writing is still in the possession of his daughter, now married in her turn to a man of very high social standing. The name of the lady who told me the above facts as well as those of the two brothers, and the married name of the daughter of the elder, are given to the respected editor of this journal.

EDITOR'S NOTE.—We have the pleasure of personal correspondence with the husband of the "young lady's" daughter, a gentleman of Odessa, personally known to, and highly respected by, the writer's friends and near relatives. The facts, as above given, and coming, as they do, from a thoroughly trustworthy source, would seem to checkmate the king on the Theosophical side, and put the doctrines of the Theosophists in an awkward predicament. Nothing of the kind, however, need be confessed to by one capable of looking beneath the surface, although the facts disclosed in the above narrative are not quite sufficient to allow us to come to a definite conclusion. This plea of insufficient data may appear rather strange at first sight, but the strangeness on closer examination will disappear entirely. No information is given above as to the age of the younger brother at the time of the father's death; nor as to the latter's feelings and anxieties at the time of death with regard to his motherless boy. We are, in consequence, obliged to make some assumptions, which all the surrounding circumstances most clearly suggest; if, however, they are unwarranted by facts, we beg further particulars will be forwarded to us. It is but natural that the father should have felt unusually strong solicitude for the future of his young son, deprived, at a tender age, of both his parents; and the more so if his apprehensions for the continued honour of the family, of which, like all German aristocrats, he must have been extremely jealous, were roused, by early indications of the vicious habits which subsequently developed in his son so strongly. After this, the explanation becomes easy enough. The dying thought of the father, worked up to its highest pitch, under the circumstances described, established a magnetic link between the son and the astral shell of the father in *Kamaloka*. It is a well known fact that fear or great anxiety for every thing left behind on earth is capable of retaining a shell, which must have otherwise dissolved for a longer period in the earth's atmosphere than it would the event of a quiet death. Although the shell when left to itself is incapable of acquiring any fresh impression, yet, when galvanised, so to say, by rapport with a medium, it is quite capable of living for years a vicari-

ons life and receiving all the impressions of the medium. Another fact must always be borne in mind in seeking for an explanation of the phenomena of mediumship—namely, that the average stay of shells in *Kamaloka* before final disintegration is sometimes of very long duration. 25 to 30 years would not be too long, with a medium to preserve its vitality. With these preliminary observations, the present problem becomes easy of solution. The young man who met with such a tragic end was probably a medium to his father's shell, and thereby gave it a knowledge of all the incidents of his wild and sinful career. The mute witness of the shell's materialisation in the mortuary chamber must also have been a medium herself, and thus helped that phenomenon to take place. The dying young man's contrition for his vicious life and anxiety to save the honour of the family, were reflected upon the father's astral shell with all the intensity of dying energy, and gave rise to all that followed.

### THE MIRACULOUS BEARD

AND

### THE MONKS OF ST. STEPHANO OF VIENNA:

BY VERA DE JELIMOVSKY.

...THE Church of St. Stephano in Vienna is more striking externally than in its interior arrangement. Its style of architecture is very similar to that of the great Strasbourg Cathedral. All is carved and chiselled out on it. Its sharp-pointed cupolas seem to be bordered with finely worked lace; the walls are covered with fine stone-carving representing sacred pictures, statues of saints, images *en relief* of animals, reptiles and monsters. One is positively oppressed upon entering it, with its height and size. Numberless details disappear in the general impression of its grandeur. Gigantic stained and painted glass-panes in inaccessible Gothic windows representing Biblical pictures, lend an additional mystery to those deep, and at the same time, graceful vaults, to those old walls, darkened with age, whence one is stared at, from everywhere, by huge figures of knights in full armour, by mitred divines in canonicals, priests with bare and tonsured heads, in humble postures, prayerful attitudes and hanging beads; by the huge frame of bearded barons and shaven magnates with their ladies in mediæval costumes—according to, who sleeps his last dreamless sleep under one or the other slab, and whose decaying bones are hidden under the marble representation over them,—monuments destined to survive all these crowds of praying pilgrims around us, and in all probability many, many generations of their unborn posterity... On the chief altar, over the throne, soars a gigantic group of angels, figures of pure silver; on each side a smaller chantry. In the right one, the tumular monument to Frederic III, made of dark marble, covered with the statuary of skulls, snakes, dragons, toads and every kind of unclean creatures. Of such, however, there is great variety; in the centre of the Church, on one of the pillars, stands the pulpit, the bannisters of whose stairs are completely covered with carved frogs, turtles and lizards, creeping upwards—as though their object were the *padri* poised upon it, and who, with furious gestures and inspired with his own eloquence shouts unmercifully his sermon downward... walls portals, pillars, and columns are all covered with wooden stone and stucco carving. At present, the St. Stephano is all encumbered with interior scaffolding. The superb work of the masonic fraternity who built this temple-work venerable and darkened with age, is now being covered—or rather disfigured, with something looking suspiciously like lime, chalk... Is it possible that these fanatics—those double vandals—who raise their hand against the sanctity of the old building and against art, should have imagined to whitewash these venerable walls?... The bare idea of it is dreadful! We were re-assured, however, that it was not so. That the white colour was only *temporary*, and simply intended to clear the vaults and walls from soot and mould, and that an hour after the operation the wood, stone, alabaster and mosaic work would reassume the dark hue imparted to them by age. Let us hope it may be so; otherwise it would be simply an unheard of profanation. All depends, however, on personal opinion and views,

How many worship at the altar of that which seems to other persons horrid and fills them with indignation.

We were already preparing to leave the place, when we were invited by our guide to visit the two side chantries that are facing the altar. We entered the one on our left, and for a few seconds found ourselves in relative darkness. It took us a few minutes before we could discern a numerous crowd of people on their knees worshipping in silence before something that we mistook at the first sight for a gigantic silver jug. It was only when two pious ladies had lighted two thick tapers at the foot of the something that we perceived was neither more nor less than the statue of the Virgin, placed upon a pedestal in a corner, and clad in an enormous *crinoline* of silver cloth. Truly, every Baron is sure to have his own fancy!... Leaving the chapel, we crossed into the next one—the one to our right. There it was lighter. And there, as elsewhere, we found a dense crowd of devotees comfortably seated in their pews and reading out of their prayer books\* opposite a huge stone crucifix with a life-size Christ hanging on it. The sermon of the *padri* had evidently produced its effect and driven them all to seek refuge in this cool little corner. Weary and tired, we followed their example and placed ourselves in their neighbourhood, to rest, trying to collect our scattered thoughts, perplexed and dazzled as we were by such a variety of impressions... While sitting in the parish pews, involuntarily some of us lifted their heads and gazed at the stone figure of the Crucified before us... "But what is this?!" With this exclamation some of us started from our seats and approached the figure closer, while the rest rubbed their eyes in mute astonishment hardly believing that their senses, were not deceiving them in what they saw... The figure of the Saviour, His face, how beautiful! The head surrounded with the thorny crown reclines on His right shoulder, and a dark shadow—*too dense and dark*—seems to fall from it... Good God! it is no shadow at all, but a bushy black beard!... A beard?... A white marble statue of the crucified with a beard?... Yes; a *real beard of hair*?... What can be the meaning of this blasphemous joke?.. Why was it done?.. we kept enquiring—"No one has done it" was the cool and decided reply of the monk who served us as a guide. "The hairs of the beard have grown themselves, during the last hour and while every one was praying... The miracle is of a daily occurrence, and every one knows it."

What could we say to this?

Verily: glory, to Thy long suffering, Oh Lord Jesus Christ!...

EDITOR'S NOTE.—The above is only a short extract from a very interesting narrative, written by a near relative and lately published in a Russian periodical, *Mea culpa!* We have translated it with two objects: (a) to show the disgraceful tricks resorted to, even in our own century by the priestcraft to secure income to their churches and keep faith alive in the hearts of the too credulous and fanatical; and (b) to remind our readers that it is precisely this class of men who grow beards of hair on the chin of marble Jesuses, make the blood of their saints, dead centuries ago, boil in crystal flasks, and produce the materialized form of the Virgin Mary in miraculous grottos—who pose as our bitterest enemies, and denounce the Theosophists and Occultists right and left as "impostors," "frauds" and "charlatans." As now appears, the cap would fit our tonsured traducers far better than the head of any occultist living or dead. For, the narrative is no anecdote gotten up for the occasion, but the sober statement of a fact witnessed, to their great disgust, by a party of Christian ladies and gentlemen in full daylight, and no farther back than in September last. It may be uncharitable, no doubt; yet, it is not unjust that we should expose in our turn before our readers, and with a far better reason this class of men who trade in, and profane the most sacred feelings of the believing multitudes. They have done so for long centuries; begging, and living and prospering upon the hard-earned coppers of the poor they so shamelessly deceive, and yet they will lose no opportunity of denouncing their opponents as the greatest infidels and blasphemers living, believing with some good reason perhaps, that he who cries "thief" while in the act of robbing, has more chances of escape than the innocent man who goes out of their way and keeps silent.

\*The Russians of the Greek Church have neither prayer books, nor are they allowed to sit during service, nor at any time inside a Church: hence the remark.—Ed.

ACKNOWLEDGMENT.

We beg to acknowledge, with thanks, receipt of a copy of the "Natural Genesis," by Mr. Gerald Massey. The book is indeed very valuable; but the issues raised in it being of grave importance, and the opinions expressed in direct conflict with those of the Aryanists, we have handed over the work to a competent Aryan scholar for a review, which will appear in a subsequent issue.

Reviews.

THEOSOPHICAL MISCELLANIES—No. 2, *Unpublished writings of Eliphas Levi. The Paradoxes of the Highest Science Translated from the French M.S.S. by a Student of Occultism. Calcutta, 1883.*

The translator of the above work deserves the best thanks of many of his fellow students for having rendered writings of such merit and importance, more accessible to them through the medium of his translation. Abbe Constant, more widely known under the pseudonym of Eliphas Levi, was a French Occultist of no mean rank as a theoretical student of the sacred science. The translator in his able preface judges him very correctly. Fully agreeing with him in his estimate of the value of Eliphas Levi's writings, I quote from the preface:—

"Eliphas Levi was a theorist, and if we may judge from the nonsense given in great detail in his *Rituel de la Haute Magie*, profoundly ignorant of its practice. Of the physics of occultism nothing of any great value can be gathered by the uninitiated from his pages, though reproducing, without by any means fully comprehending them, phrases and ideas from the older Hermetic works, secrets even pertaining to this branch, lie buried like mutilated torsos, in his writings. But where the metaphysics of Occultism are concerned, his works are often encrusted with jewels that would shine out far more clearly into the soul of the uninitiated, but for his persistent habit of laying on everywhere coats of Roman Catholic and orthodox whitewash, partly in his earlier days to avert the antagonism of the Church, partly to avoid shocking the religious prejudices of his readers, and partly, I suspect, because to the last some flavour of those prejudices clung even to his own mind.

To those then who desire to acquire proficiency in Practical Occultism, who crave long life, gift and powers, and a knowledge of the hidden things and laws of the universe, a study of Eliphas Levi's books would be almost time wasted. Let them seek elsewhere for what they want, and if they seek in earnest they will surely find it."

The value of this little work is enhanced by some notes appended to it by an august personage, whom the translator indicates as "E. O." These, the translator says, "merit the most careful attention," but he modestly adds, "I do not always agree with "E. O.;" and though perfectly aware that my opinions are as nothing when opposed to his, I did not think it honest to reproduce remarks, which I could not concur in, without recording dissent." The able translator's conscientiousness does him infinite honour, but of his modesty I shall have occasion to speak hereafter. The principal point upon which the "Student of Occultism" differs with the eminent occultist, whom he calls "E. O." is the existence of a personal extra-cosmic deity.

In a note given on page 6, "E. O." remarks:—"Woman taken collectively was the mother of God-Humanity, but has Eliphas no other God? No . . . ."

To this the translator demurs as follows:—

"It is very questionable whether "E. O." was an atheist: indeed it seems to me certain that he was not. His position was not, that there was no God, (an assertion involving an assumption of omniscience,) but simply that to the narrow and dim cognizance of man and even to that of far higher but still conditioned intelligences, God only manifests himself in Nature and Humanity. To say that the Infinite and Absolute is entirely outside the highest plane to which any limited and conditioned intellect can attain, and that hence we must content ourselves with dealing with the laws and manifestations of the conditioned Universe, which are more or less within our grasp or that of our perfected predecessors, is one thing, to assert that there is no power and intelligence outside the sphere of our possible cognizance, the source of these laws and manifestations, no God in fact, another."

Whether Eliphas Levi was an atheist or not cannot be decided until a successful attempt has been made to bind that Protean word to some definite shape and form, but one's notions of modesty are certainly not soothed when the "Stu-

dent of Occultism" makes bold to oppose the statement of a fact within the knowledge of the "Eminent Occultist" with his own inferences derived from a study, however careful, of writings admittedly obscure and oracular. To my mind such an act seems to indicate an utter ignorance of occult physics, which he talks of glibly enough, and finds wanting in the French author, or of the character of him against whom he raises his puny hand. A third supposition indeed suggests itself, which will not, perhaps, act quite as an anodyne on the feelings of the translator—self-sufficiency and self-conceit. The "Student of Occultism" undertakes to enlighten us as to what seems to him certain to have been the position of Eliphas Levi with regard to the question. But we appeal from the counsel to the client. The latter says:—

"Develop science (by which, as will appear from the context, occult science is certainly not meant) as you will, mark its first step with Alpha and its last with Omega, and you will still always have before you the unknown, which you must recognize, . . . . all that we learn is wound off that unknown, which is never wholly unwound, it is this which produces all things; not knowing what it is, we personify it and call it God."

If words have any meaning, it is perfectly plain that the God spoken of here, unknown and unknowable by the so-called exact sciences, is quite different from the God, to whom our critic bends the knee, "conscious, intelligent will, the source of those (cosmic) laws" (p. 87). The translator, it would seem, in the persistence of his claim of fellowship with the wily Eliphas, after the latter's positive refusal to worship at the same temple, may be extremely sincere, but is at the same time a little ridiculous, perhaps.

I am infinitely grateful to the translator for having allowed me a glimpse into what he calls his "transcendental occultism." The subject is important, and I make no apology for making rather long extracts from his notes:—

"There is no extra-cosmic Deity"—says "E. O." On which the translator remarks:—

"This seems to me begging the question. Has any one been outside the cosmos to look?" "E. O." may reply cosmos is infinite, there can be nothing outside what is infinite, forgetting, it seems to me, that what may be infinite to all conditioned in it, may yet leave room for a beyond to the unconditioned. He admits a fourth dimension of space, asserts further, on, and as will be seen, and I believe, with good reason, that there are yet fifth, sixth and seventh dimensions of space to be discovered, yet\* he desires to insist that the conceptions of intelligences (I give him in the planetary spirits and all) conditioned in the cosmos, which we can only think of as infinite, are absolute; whereas I submit, that they are necessarily relative, and that the fact that the highest intelligences conditioned in the universe believe it to be infinite and can trace in it nothing but laws, by no means proves that a still higher and unconditioned intelligence, there may not be something outside the infinity, and in that something the intelligence whose will the discoverable laws represent. Nay, further I submit, that intelligence may be inside and pervading the cosmos, and yet be incognizable for its own good reasons by all its emanated intelligences."—*Trans.*

But let us see how he develops his ideas further on:—

"Occultism only deals with the conditioned universe, which to all conditioned in it is infinite. Admittedly, in that universe only Laws and no God, i. e., no conscious, intelligent will, the source of those laws, can be traced. So the Mage may justifiably say I content myself with the manifested and conditioned universe and believe in no God who, whether he exists somewhere in *abcondito* or not, has not seen fit to indicate himself any where in manifestation, and cannot therefore, (if such a being exists) want men to believe in Him.

But there are Mages and Mages, and there are some who say granting all this, we yet know by a higher intuition, that the infinite to all conditioned existences is yet not ALL, and that there is a conscious and intelligent will, the origin of those manifested lands which alone we creatures of manifestation can cognize. But this of course is a matter of faith and pertains not to Occultism proper, which is either atheistic or agnostic, but to transcendental Occultism."—*Trans.*

It does not concern us at present to inquire if the position of the Occultist has been fairly represented in the above extracts, except in so far as such inquiry may be necessary

\* There seems to be an astounding misconception here. If the translator means to convey that "E. O." admits the Adepts of Occultism have yet to discover the fifth and other higher states of matter, then I shall take the liberty of pointing out that the said discoveries were made by Occultists at a much remoter period than the translator's history can darken with her wings. The force of the adverb I have italicised above will entirely disappear if the statements of "E. O." are construed in the only legitimate way they admit of, namely, by connecting them with the discoveries of modern European science.

for a proper examination of the views set forth by the spokesman of "Transcendental Occultism." The translator admits that in the universe with which Occultism is concerned, there is no God, what then are we to think of the supposition interjected at page 42, that the Supreme Intelligence (by which term we are to understand God) may be in the universe? But this point need not be pressed far. The "Student of Occultism," and his professors have, by a "higher intuition," not only acquired a belief in an intelligent conscious God, but also a knowledge of his Being—his infinitude though *outside* the cosmos. This is proclaimed to be the highest truth which must *ex hypothesi* include all lower truths! Let us examine how it includes the truth of reason. Whatever the translator might say regarding the fallibility of *reasoning*, he is too philosophical, I take it, to deny to *reason* the attribute of being the only test of truth. I shall endeavour to apply that test to the statements which the translator seeks to place on the pedestal of eternal verities. Now, we are told from the stand point of "Transcendental Occultism," the universe of "occultism proper," as he calls the sacred *Brahma-vidya*, is finite and conditioned, God is *beyond* it; but he entirely fails to see that *therefore God must be conditioned and finite*. But his view has at least the merit of novelty, and the translator shines out glorious in his solitary grandeur. I must frankly confess as a humble Brahman, that I have nowhere met with such a teaching; not, at any rate, in any of our writings with which I am familiar, nor among any school of theism that I know of. But this grandeur of novelty is marred, perhaps, by a spot of inconsistency when he raises pealing anthems to God the Infinite and Absolute,—beyond our universe, the Finite and Conditioned. In the witch's cauldron of his brain it seems the Finite and the Infinite, the Absolute and the Conditioned are seething in a heterogeneous mass; or, perchance, God Himself suffers from the reflected *Avidya* of His devotee. And now we will see whether God called "conscious" and "intelligent" can stand the fiery ordeal of reason, as the translator very freely ornaments the Deity with these attributes. All to whom these terms can be applied must necessarily have this one attribute, namely, the power or capacity of adapting means to an end. This power, again, it will be seen, can only co-exist with deliberation and choice, which must necessarily accompany the possibility of doubt and uncertainty. To say that God is intelligent, is merely to say that there were at his command a variety of means wherewith to work out creation, and that he adopted that which he considered the best. But the translator at the same time believes that out of this God sprang into existence the universe, by which the observation and investigations of Occultists are bounded, and admits the truth of the experimental philosophy of our Adepts (p. 90). Now occultists know and say that one of the states in which that universe exists is such that the so-called creation springs from it by virtue of an immutable law, of which the universe itself is the embodiment; there is no deliberation, no picking and choosing. Only the best possible means has existence in it, and nothing else has. In other words, the universe in this particular state is Intelligence itself. Of this, I believe, the translator is not ignorant. How can he then maintain that superior intelligence can emanate from an inferior one? Does it not strike him as a PALPABLE ABSURDITY and the "higher intuition" at best but higher folly. Now, consciousness itself supposes duality, and as the translator believes in creation, he must also hold that there was a point of time when there was no universe, but God existed in his lonely splendour, so that here could not have been any consciousness in God of the only thing that can supply the required duality. But perhaps he will here contend that God before creation was conscious of the universe as existent in his own mind. If so, I will ask him, whence came the motive which led to the projection of the universe into a separate objectivity? God, if he is perfect, can have no want himself, nor was there any other thing in existence whose want cried out for removal and thereby supplied God with a motive. Another question most irrepressibly raises its head here. Did the thoughts of God, which represented the universe before evolution began, exist in his mind through eternity, or were they called forth by an effort of His will? On the former supposition, He can scarcely be called the Creator, for the universe, if taken as a part of His being, can never owe its origin to his Will. If the latter branch of the proposition be adopted, there arises another complicated question of motives. The translator tries to frighten the occultist, of the only school I know of,

by the Frankenstein sought to be evoked by the word Omniscience. But it will be found that this monster, which like its brethren of Norse fables, goes to slay and devour by night, will melt into thin air when subjected to a ray of day light and leave not a wreck behind. The translator himself admits that the HIGHEST ADEPT in what he seeks to depreciate by calling "Occultism proper" knows all about the universe, which we assert is the only reality; how then does he expect to sink his opponent under the weight of a word while conceding the thing itself, and how can he convict the Occultist of presumption unless the latter's error is demonstrated?

Before I close my analysis, I shall notice another point which shows the value of the reasoning powers the translator has carried to his task. Eliphaz says (p. 31):—

"We are in the world to serve Humanity which is serving God by consecrating to it our free activity."

On this "E. O." remarks:—

"What a ridiculous supernumerary, such a God before the jury of sense and logic. Nevertheless some of the most sensible men loathe the idea of parting with this fiction."

The translator thus comments on the above:—

"Amongst our Fiji fellow subjects, the ships, the judges, the governors and other manifestations of our good Queen are received with respect and love; in her name justice is done between man and man, her name protects all from the assaults of foreign nations, she is only known to them by pictures (more or less fancy portraits) or the effects accomplished by and in her name, and these Fijians can only serve her by good citizenship, dealing fairly and uprightly with their fellow subjects. Truly a ridiculous supernumerary is the actual Queen Victoria! and yet some of the most sensible Fijians will loathe to part with this fiction, nay—would think a man over hasty who denounces her as a myth."

It does not require logical faculties of a very high order to find that the attempt made here to bolster up a false analogy is but clumsy at best. The "judges, governors," and all proclaim the Queen, but admittedly none of the natural laws show any trace of their origin from a God. Queen Victoria may be appealed to against her governors and judges, but what Court of appeal is there against the operation of the natural laws. In fact every link of the chain of argument advanced is vitiated by the fallacy, which, a logician would, perhaps, call a *petitio principii*.

Again, the little mathematical problem proposed by "E. O." in a note printed on pp. 82 *et seq.*, furnishes the translator with grounds for scornful laughter. But the loss is certainly not ours that he fails to perceive the higher character of the problem, and simply degrades it to the level of a geometrical puzzle, which even Macaulay's school boy will be ashamed not to know. The question is not how to solve it from the known properties of the circle of Euclid, but it involves the metaphysics of the circle itself. Let the "Student" deeply ponder over the mystic character of the symbol, and not rest with complacency on the generalisations of ordinary mathematics; he ought to proceed to the very root of things and be a true *mathematician*, in the etymological sense of the word.

The sneer with which the problem has been handled by the translator, evidently a highly intelligent person, gives rise to a suspicion that all the smoke of false criticism with which he wraps up the remarks of "E. O." is not without fire, however cleverly it might have been concealed. But for my belief in the translator's honesty of intention, I could scarcely have resisted the conviction that he is moved by some secret *animus* against "E. O.?"

Apart from this unpleasant wrangling over notes that have probably found their way into Eliphaz Levi's M. S. S. at the request of the translator himself, I must say that the able translation of the pamphlet itself and "E. O.'s" notes—may be studied with advantage by all interested in the science of Occultism, and I have no hesitation in commending it to their favorable notice.

THERE IS NO RELIGION HIGHER THAN TRUTH.

[Family motto of the Maharajahs of Benares.]

## ALLEGED DEATH OF M. De BOURBON, F. T. S.

FROM the London *Standard* we learn of the decease at Breda, in Holland, of M. Adelberth de Bourbon, the esteemed and zealous Secretary of the *Post Nubila Lux Theosophical Society*, whose seat is at the Hague. As no confirmatory intelligence has as yet reached the Head-quarters from Mr. Pomm, the branch President, we cling to the hope that it may be a false report. M. de Bourbon, whose late father is described as "Duke of Normandy, son of his late Majesty Louis XVI, King of France, and of her Imperial and Royal Highness Marie Antoinette, Archduchess of Austria, Queen of France," was one of our most zealous European colleagues. His active interest in our movement resulted in the formation of the Holland Branch. He was an officer in the Body-guard of H. M. the King of Holland. His father is believed to have been the young Dauphin, whom the official records of the Bastille affirm to have died in that grim state-prison, but whose escape by the help of the Count de Frotte, is most probable. If any weight is to be attached to family resemblances, then assuredly our deeply lamented, if indeed deceased—Brother must have been a true scion of the French blood-royal, for his resemblance to the Bourbons is undistakably noticeable in the portrait he kindly sent us a few months ago. Nothing seems better established than the fact that the son of the unfortunate Louis XVI and Marie Antoinette did not die in the Bastille. We still hope against hope and, in case the sad news be verified, would feel thankful to the President of the *Post Nubila Lux T. S.*, to put an end to our perplexity.

## INTRO-VERSION OF MENTAL VISION.

SOME interesting experiments have recently been tried by Mr. F. W. H. Myers and his colleagues of the Psychic Research Society of London, which, if properly examined, are capable of yielding highly important results. The experiments referred to were on their publication widely commented upon by the newspaper Press. With the details of these we are not at present concerned; it will suffice for our purpose to state for the benefit of readers unacquainted with the experiments, that in a very large majority of cases, too numerous to be the result of mere chance, it was found that the thought-reading sensitive obtained but an inverted mental picture of the object given him to read. A piece of paper, containing the representation of an arrow, was held before a carefully blind-folded thought-reader and its position constantly changed, the thought-reader being requested to mentally see the arrow at

each turn. In these circumstances it was found that when the arrow-head pointed to the right, it was read off as pointing to the left, and so on. This led some sapient journalists to imagine that there was a mirage in the inner as well as on the outer plane of optical sensation. But the real explanation of the phenomenon lies deeper.

It is well known that an object as seen by us and its image on the retina of the eye, are not exactly the same in position, but quite the reverse. How the image of an object on the retina is inverted in sensation, is a mystery which physical science is admittedly incapable of solving. Western metaphysics too, without regard to this point, hardly fares any better; there are as many theories as there are metaphysicians. Reid, Hamilton and others of that school but flounder in a bog of speculation. The only philosopher who has obtained a glimpse of the truth is the idealist Berkeley, who, to the extreme regret of all students of the true philosophy, could not get beyond theological Christianity, in spite of all his brilliant intuitions. A child, says Berkeley, does really see a thing inverted from our stand-point; to touch its head it stretches out its hands in the same direction of its body as we do of ours to reach our feet. Repeated failures in this direction give experience and lead to the correction of the notions born of one sense by those derived through another; the sensations of distance and solidity are produced in the same way.

The application of this knowledge to the above mentioned experiments of the Psychic Research Society will lead to very striking results. If the trained adept is a person who has developed all his interior faculties, and is on the psychic plane in the full possession of his senses, the individual, who accidentally, that is without occult training, gains the inner sight, is in the position of a helpless child—a sport of the freaks of one isolated inner sense. This will throw a flood of light on the untrustworthy character of the ordinary untrained seer. Such was the case with the sensitives with whom Mr. Myers and his colleagues experimented. There are instances, however, when the correction of one sense by another takes place involuntarily and accurate results are brought out. When the sensitive reads the thoughts in a man's mind, this correction is not required, for the will of the thinker shoots the thoughts, as it were, straight into the mind of the sensitive. The introversion under notice will, moreover, be found to take place only in the instance of such images which cannot be affected by the ordinary sense-experience of the sensitive. To take the image of a dog for instance; when the sensitive perceives it as existing in the mind of a person or on a piece of paper, it may appear distorted to the inner perception of the sensitive, but his physical experience would always correct it. But this introversion is sure to take place when the direction faced by the dog is the subject of investigation. A difficulty may here suggest itself with regard to the names of persons or the words, thought of for the sensitive's reading. But allowance must in such cases be made for the operation of

the thinker's will, which forces the thought into the sensitive's mind, and thereby renders the process of introversion unnecessary. It is abundantly clear from this that the best way of studying these phenomena is when only one set of will-power, that of the sensitive, is in play. This takes place always when the object the sensitive is to read, is independent of the will of any other person, as in the case of its being represented on paper or any other thing of the kind.

Applying the same law to dreams, we can find the rationale of the popular superstition that facts are generally inverted in dreams. To dream of something good is generally taken to be the precursor of something evil. In the exceptional cases in which dreams have been found to be prophetic, the dreamer was either affected by another's will or under the operation of some disturbing forces, which cannot be calculated except for each particular case.

In this connection another very important psychic phenomenon may be noticed. Instances are too numerous and too well-authenticated to be amenable to dispute, in which an occurrence at a distance, for instance the death of a person, has pictured itself to the mental vision of one interested in the occurrence. In such cases the double of the dying man appears even at a great distance and becomes visible usually to his friend only, but instances are not rare when the double is seen by a number of persons. The former case comes within the class of cases under consideration, as the concentrated thought of the dying man is clairvoyantly seen by the friend and the erect image is produced by the operation of the dying man's will-energy, while the latter is the appearance of the genuine *mâyavirupa*, and therefore not governed by the law under discussion.

(Continued from the last Number.)

### THE BEST FOOD FOR MAN.

BY MRS. KINGSFORD, M. D., F. T. S.,

President of the "London Lodge," Theosophical Society.

I HAVE said that the French peasantry live much more in accordance with the dictates of Nature than do the English, and that consequently they are, as a rule, far more prosperous and well off. It is a very rare thing indeed for a French peasant to be destitute in his old age, because although his wages are not nearly so high as in this country, they are much more economically spent, and thrift is looked upon as a cardinal virtue. Hence there is no necessity in France for the unhappy Poor-law system which is the bane of this country, and industrious and frugal householders are not compelled to pay exorbitant taxes for the support of persons who have laid by nothing for themselves. Many of the French peasants have told me how they live. Flesh-meat is so rare on their tables, that, as a rule, it is only eaten two or three times a year, but they take plenty of cheese, coarse bread, vegetable soups and savoury omelettes. On diet like this, with cider to drink, they manage to bring up families of robust healthy children, to make their homes comfortable, and to lay by savings, sufficient to provide for the old folks when past work. Nor is this the case only in France. It is general all over the greater part of the civilized world. The diet of the Swiss, of the Belgian, the Prussian, the Bavarian, Saxon, Russian, Spanish, Italian, Pomeranian, Norwegian and Swedish agricultural labourers is almost entirely devoid of flesh-meat. And, as a rule, other things being equal, their vital force and constitution are superior to those of their English brethren, their unstimulating and wholesome food enabling them to work with ease to an advanced age. And here I should like to call attention to a matter of much importance in gauging the extent and quality of vital strength. It should be borne in mind that the proper test of strength is its capacity for endurance. Mere feats of strength are valueless as tests

of vital power. The question at issue is not—'How much can a man do in a day?' but 'How much can he do in a life-time?' It is sometimes said by superficial people,—'Beef and beer will enable you to get through a better day's work than oatmeal or peas pudding.' This may be true, generally speaking, because flesh meat and fermented drinks are both stimulants of the nerves, and under their influence the machinery of the body runs at a faster and more violent rate. But the beef-eater and beer-drinker will probably break down at fifty-five or sixty years of age, because his vitality has been exhausted by forced work in excess of its natural and normal capacity, while the abstainer from these exciting aliments will be a hale man with work in him yet at eighty. It is the old story of the hare and the tortoise.

So then there are three distinct claims established for economy, on the part of the diet without flesh-food:—First, it is the most economical as regards the relation between the Land and the People, viz.:—cultivated land yielding corn, roots and vegetables will support a population at least three or four times larger than the same extent of soil laid down in pasture; and this for a two-fold reason, because land under cultivation affords work and wages to a large number of hands,—which must otherwise get employment across the seas,—and because also its produce trebles or quadruples that of land devoted to cattle-grazing.

Secondly, a non-flesh diet is the most economical, as regards housekeeping. A shilling's worth of oatmeal with fruit and good vegetables will yield as much nourishment and satisfy the appetite better than five shillings' worth of flesh; and if we assume that, on the average, the population of the United Kingdom were to reduce their consumption of animal food by only £1 a week per head, it would give a saving of 10 or 12 million pounds sterling a year. A vegetable dietary, to which we may add cheese, milk, butter and eggs, costs three times less than a mixed dietary of flesh and vegetables.

Thirdly, the reformed diet is more economical as regards human life and strength. Even if you are fortunate enough to escape suffering and disease from some of the horrible disorders to which we have seen flesh-eaters, especially among the poorer classes, are liable, you will probably have to pay with premature infirmity and shortened life the penalty exacted for indulgence in unnatural food. If you burn your candle at both ends, you must not expect the material to last so long as it otherwise would.

I may add to these three important economies, a fourth, which is worth your serious consideration.

The costliest and the commonest vice in the United Kingdom, especially among the poorer classes, is the vice of drink. And it is the invariable accompaniment of flesh-eating. Strong meats and strong drinks always go together. There is in flesh-food, a principle, variously named by medical authorities, which causes a certain irritable condition of the interior coats of the stomach and intestines, and provokes a desire for stimulating drink. This fact is so well known in institutions for the cure of dipsomania, or drunkenness, that in most bad cases, abstinence from flesh-foods is enjoined, and in one establishment, unusually successful in its treatment (Dansville, U. S.) no patient entering the hospital is allowed, on any account, during the whole of his residence there, to eat flesh-meat. In fact, we have only to walk down a street in the poorer quarters of a town, to see how public-houses or gin palaces abound; and it has many times been pointed out by able observers that the proximity of slaughter-houses, placed as they invariably are, in the low quarters of a town, incites the inhabitants around to drink to an unusual extent. The frequency of crime as the immediate or proximate result of drinking habits, seems to indicate that could we but reach the mainspring of this national curse and arrest its action, we should go far towards arresting

altogether the more serious crimes of the country. Any one who will collect for a week or more the instances appearing at the Police Courts, of what are known as crimes of violence, wife and baby murder, savage assaults and suicide, will see that almost all of them are due to drink. This is an admitted fact; but it is not so generally admitted that the way to the gin palace is through the butcher's shop. Vegetarians never drink to excess. Not all are abstainers on principle from alcohol, many take an occasional glass of wine or beer, but none drink to excess, because their food, being succulent and unstimulating, does not give rise to thirst. What an economy would the adoption of such a diet prove in houses where half the week's earnings now go to buy liquor! Sometime ago a working-man at Manchester made an effective temperance address in the public street. In his hands he held a loaf of bread and a knife. The loaf represented the wages of the working-man. First he cut off a moderate slice. 'This,' said he, 'is what you give to the city government.' He then cut off a more generous slice,—'and this,' he went on, 'is what you give to the general government.' Then, with a vigorous flourish of his carving knife, he cut off three-quarters of the whole loaf.

'This,' he said, 'you give to the brewer and to the public house.' 'And this,' he concluded, shewing the thin slice which remained, 'you keep to support yourselves, your families, and to pay the rent.'

Now, perhaps some of you, who are not used to vegetarian ways, may be wondering what non-flesh eaters have for dinner. Well, they have a much larger variety of dishes than eaters of beef, mutton and pork. But the diet of the vegetarian is a scientific diet, and either knowledge or experience must teach him the nutritive values of food stuffs, before he can make a wholesome and frugal use of them. All foods contain certain elements necessary to the building up of the material and the renewal of the force of the body, but these elements are contained in very different proportions in various foods. Scientific men have divided the nutritive properties of food into two categories which include respectively,—Tissue-forming substances, and Force or Heat-forming substances. They call the first Nitrogenous, and the second, Carbonaceous. Now both these necessary kinds of food are abundant in the vegetable kingdom, and proportionately to the weight, there is a great deal more of them to be got out of farinaceous and leguminous matter than out of dead flesh. An adult man in good health, says Dr. Lyon Playfair, requires every day four ounces of nitrogenous or flesh-forming substance, and ten or eleven of carbonaceous or heat-and force-giving substance. He can get these elements of nutrition out of bread, oatmeal, pease, cheese, and vegetables at a cost more than less by half that of the butcher's meat necessary to furnish the same amount of nourishment. It is chemically and physiologically demonstrated that no property whatever, beyond that of stimulation, exists in flesh-meat that is not to be found in vegetable food, and that, therefore, it is a terrible error to suppose flesh-meat to be more strengthening than other aliments. It is, in fact, the reverse which is the case, for the quantity of nutriment contained in corn-meal is, for every hundred parts, more than double, sometimes treble—that contained in the same quantity of butcher's meat. The most nutritious and strengthening of all foods are the grains,—the fruit of the cereals,—wheat, oats, barley, rye, rice, maize, and such mealy vegetables as beans, haricots, pease, lentils, and their kind. All sorts of fruit are rich in carbo-hydrates, or sugary food, which, according to many medical authorities, is the most necessary of all to the human system. Dr. Playfair puts down the daily proportion of sugary food necessary to an adult man at 18 ounces, that is more than four times the amount of nitrogenous food requisite. This indispensable item cannot be got out of flesh-meat at all, but it is plentiful in table vegetables,

such as potatoes, beet root, tomato, cauliflower, turnips, carrots, parsnips, and so on. The Vegetarian Society has issued a series of excellent little Cookery books, varying in price from half a crown to a penny, giving *recipés* for any number of good cheap meals, without fish, flesh or fowl. You cannot do better than study these, if you wish to live economically, and purely, and to bring healthy children into the world.

Most of the diseases which fill our hospitals are self-induced, having their cause in debauched habits, sometimes aggravated by hereditary malady. Children are born blind, or rickety, or scrofulous, or tuberculous or idiotic, on account of the feeding and drinking habits of their parents. They are bred up under circumstances of incessant vice and misery, and they suck gin with their mother's milk. Hardly weaned, they are given pork and offal for food; their bones give way, their flesh ulcerates, the mothers and the parish doctor together make matters worse by the administration of drugs, and at length the wretched little sufferers, masses of disease and uncleanness, are brought to the hospital. Or, already vitiated in childhood, the average man or woman of the poorer class, ignorant of the laws of health, and of the construction of the human body, continues in the way in which his or her early years were bent, and accumulates disease by constant recourse to that which originally caused it, until, at forty or fifty years of age, the pauper ward or the hospital bed receives the unhappy patient, incurably afflicted with some organic complaint. It is simply frightful to the educated mind to hear the confessions of some of these poor bed-ridden creatures. When a student in the hospitals, I was often unable to credit their accounts of the quantities and kinds of strong drinks they had swallowed on a daily average, while in work. The question of diet,—what we ought to eat and drink—is the question which underlies everything else and affords the key to the cause of all the accumulation of suffering and moral evil which we meet in poor districts, and especially in cities. Hygiene and morals go hand in hand and are inseparable, just as body and mind make one person, so intimately welded together, that neither good nor harm can be done to the one without affecting the other. This consideration brings me to the most important of all the aspects of flesh-eating, viz., its immoral tendency. We have seen one of its indirectly immoral results in the fondness it sets up for strong drink, but I am now about to speak of the degrading and barbarous nature of the habit itself, as it affects the national customs, manners and tone of thought.

It needs no very great penetration to see what harm the proximity of slaughter-houses, and the loathsome surroundings of the trade must do in the poorer quarters of towns,—the only parts in which these places are to be found. The rich and refined classes shut these things out of sight and hearing, but they are forced upon the poor, and their results are potent for evil. How is it possible to teach poor children the duties of humane treatment of dumb creatures and of tenderness to beasts of burden, when their infancy and youth are spent in familiarity with the scenes which surround the slaughter house, and while they are taught to look upon these institutions and on all they involve, as lawful right, and necessary to man? It is heart-rending to be in the vicinity of the shambles of a large town, when its victims are being driven in. Bewildered oxen, foot-sore, galled and bruised, sheep with frightened faces, scared at the baying of dogs and the sticks and goads so freely wielded by the roughs who drive them,—little brown-eyed calves, for whose loss the patient mother cows are lowing in the homestead;—all the sad terrible procession of sacrifice that enters every city at dawn to feed the human multitude that calls itself civilized,—these are the sights upon which the early-rising children of the poor are educated. And a little later in the morning may be heard from within the slaughter-house the cries of the dying, and the thud of

the pole axe upon the brow of some innocent miserable beast, and the gutters begin to run with blood; and presently the gates of the slaughter yard open, and out comes a cart or two laden with pailfuls of blood and brains, and fresh skins, reeking with the horrible odour of violent death. Are spectacles and sounds like these fit for the eyes and ears of little children, or indeed for any human creature young or old? It is useless to urge that the Bible justifies the slaughter of animals for food. The Bible seems to sanction a great many practices which modern civilisation and philosophy have unanimously condemned, and which have been made penal offences in all western codes of law. Such, for instance, are the practices of polygamy and of slavery, which are not only sanctioned in the Bible, but are in some cases, positively enjoined. Even murder itself appears to be vindicated in some parts of the old Testament, as are also many revengeful and cruel acts. No civilised general in these days would dream of conducting warfare as Joshua, as Deborah, as Samual, or as David conducted it—such deeds as theirs would be justly held to sully the brightest valour; no minister of religion in our times could endure to redden his hands daily with the blood of scores of lambs, doves and oxen; no average man, woman or child, could be induced to assist in stoning to death an unfortunate 'fallen woman,' or a lad who had disobeyed his parents or used strong language. Yet these are some of the practices, commended and inculcated in the Bible, and justifiable on the same grounds as the practice of flesh-eating.

But the Hebrew Bible is not the only sacred Book in the World. Other 'holy Scriptures,' known as the Vedas, the Puranas, the Tripitaka, and the Dhammapada, which form the Canon of the religions professed by the largest part of mankind, enjoin abstinence from flesh-food upon all religious persons and extend the command, 'Thou shalt not kill' to all creatures, human and animal, which are not noxious and dangerous to the interests of peace and order. In regard to this subject, the Archbishop of Canterbury, at the annual meeting of the Church Missionary Society on May 1st of the present year (1883), said:—

'There are beautiful fruits belonging to the ancient civilisations of the East which we shall work into our Gospel, and our children, ages and generations hence, will wonder how we found the Gospel quite complete without them. Take such a noble thought as the Buddhist thought of the perfect sacredness of Life, how everything that lives, down to the more animated dust, is a sacred thing. The Buddhist sees the difference between life and everything else that God has made, and it gives to him a tenderness and a sweetness, and a power of union with the creation, which when we have apprehended it will enable us to see better and deeper and nobler meanings in St. Paul's eighth chapter to the Romans.'

These are good words of the Archbishop's, and worthy of our serious thoughtfulness. It is not the letter, but the spirit of the Bible which is our true guide. The letter is subject to error, it belongs to the things of time, and has become the stumbling-block of the critics; but the spirit is the true Word of God; it is catholic, vital, and progressive. It is always *with us*, leading us into all truth, as we are able to bear it; but the letter is behind us and behind the age, it is dead, and killeth all who make an idol of it.

(To be continued.)

#### WHAT SCIENTIFIC RUSSIA KNOWS OF CEYLON.

At various times, already, we had an opportunity of learning from the reports of the Moscow "Society of the Lovers of Natural Sciences," how careless are its members, when receiving information from various travellers, to verify their statements. These statements are often of the most grotesque character, and based upon no better evidence than hearsay. Thus, several papers were read, of late, in the Ethnological Department of the Society about Ceylon, based upon no securer data than the foolish

gossip of the religious opponents of Buddhism.. We found recently in one of such reports, generally published by the *Moscow Gazette*, the curious statement that *the two-thirds* of the Singhalese were Roman Catholics, an error obviously based on the fact that they, our friends of Gallo and Colombo, are mostly known as "Dons," "Silvas," "Pereiras" and "Fernandezes." Then we were told that they were divided into several *sects*, the two most prominent of which were the Singhalese proper or the *Tchinkal* (?) and the *Tombis* (!!!)—the latter appellation being a nickname among Mussulmans, we believe. And now, owing to the learned efforts of an eminent physician, V. N. Bensenger, of Moscow, we receive another startling information. "The Singhalese," we are assured, "so minutely described by Ernst Hæckel, the German naturalist, offer an interesting feature of polyandry: the marriage of several brothers to one woman being of the most common and every day occurrence." (*Report of the "Society of the Lovers of Natural Sciences" of Novr. 21. See Moscow Gazette, No. 326.*)

We are not taken any further into the learned doctor's confidence, and thus feel unable to decide to whom we shall offer the palm for this *historical* information: is it to Dr. Ernst Hæckel, or the great Dr. Bensenger himself? Moscow must be a queer place for dreaming ethno-ethnological dreams.

(Continued from the double December-January Number.)  
POST-MORTEM RISE OF TEMPERATURE.

BY LEOPOLD SALZER, M.D., F. T. S.

LET US study for a moment the life and death of a muscle. When a living muscle is made to contract, oxygen is absorbed and carbonic acid is set free; muscular contraction, as a consequence, is invariably accompanied by heat production; and there can hardly be any doubt that the heat thus set free is the product of chemical changes within the muscle. In fact a muscle may be likened to a steam-engine in which combustion of a certain amount of material gives rise to the development of energy in two forms: as heat and as movement. A similar process of combustion is however carried on in every living muscle, even when at rest; so that a living muscle is looked upon, and rightly so, as a constant heat producer, the heat-production being only less in degree when at rest, than when at work. And what becomes of a muscle in the case its supply of oxygen be withdrawn, the blood circulating within its tissue being rendered venous? In that case, experience teaches, that the venous blood acts in a measure as a foreign body, stimulating, for a time, the muscle to contraction; and when that contraction has ceased, then the irritability of the muscle is lost; it ceases to respond to stimulation of any kind. Production of heat is then a necessary companion both of muscular contraction and muscular contractility.

Since there is then no muscular irritability without simultaneous heat-production, we are fairly entitled to say that the former depends upon the latter. On the other hand it may be fairly said that muscular irritability depends upon a certain molecular state, and that with the departure of irritability the molecular state of the muscle is changed. There can then be no further doubt that the molecular state upon which the irritability of the muscle depends, is the result of work done by heat. In the case of a muscle in contraction we have seen before, that the heat produced gives rise to a development of energy in two forms: as heat and as movement. In the case of a muscle at rest, the heat developed gives no less rise to two forms of energy: to heat and to molecular work.

Elasticity and extensibility of muscular substance are two other vital properties, the maintenance of which, like that of irritability, depends upon molecular work, performed by heat.

Now all these properties gradually cease with the approach of, and shortly after, death. Muscular irritability diminishes with the setting in of *rigor mortis*, and when the same is complete, irritability has ceased to exist. Something similar occurs with regard to elasticity and extensibility. The dead muscle, for instance, when extended, does not return to its previous length. There was then a certain amount of energy latent during life, in the shape of molecular work, which is gradually set free by death, and, in obedience to the law of Conservation of Forces, makes its appearance in another form of energy—in the form of heat.

What has been said with regard to muscles, might, by a somewhat analogous reasoning, be applied to all the other tissues of the body; for irritability is common to all living tissue, although the mode of its manifestation differs with every organ. Then there are the centres of automatic activity seated within the spinal column; there is further a constant activity of unconscious cerebration going on during life; all this represents a certain amount of potential energy, which is liberated in consequence of death in the form of heat. The *post-mortem* rise in temperature is as little perplexing a phenomenon to me, as the phenomenon of a liquid body giving out heat during the process of solidification would be to any one acquainted with the laws of physics.

Of course what I have said in explanation of the *post-mortem* rise in temperature, refers to the period preceding the setting in of *rigor mortis*; for with the same, there is ample ground for increase of heat, as muscular contraction, or, as Carpenter correctly states it, the passage of a muscle into the state of contraction, is under all circumstances connected with heat-production.

All this may yet be far from explaining the extraordinary *post-mortem* rise of temperature in cholera, yellow fever,—and tetanus-subjects. But unless we learn first to understand the nature of the ordinary phenomenon, it would be a hopeless task to speculate upon some of its exceptional phases.

As to the extraordinary amount of heat evolved in the case of cholera victims, I must say the difficulty with me is not so much to understand, why there is a *post-mortem* rise in temperature, but why there should be a considerable fall of temperature during the whole course of the disease, seeing that the same is generally accompanied by spasmodic muscular contraction, and knowing as we do that such contractions are always attended by evolution of heat, in fact are looked upon as the chief caloric source of the living body.

Tetanus is associated with a temperature as high as 3° to 4° above the normal standard, owing to this very state of muscular contraction; why should then cholera be characterised by a temperature below the normal standard? The only explanation I am able to suggest consists in the following considerations.

True as it is that a muscle may be likened to steam engine, in which the combustion of a certain amount of material gives rise to the development of energy in two forms: as heat and as movement; the relation between the amount of energy set free as heat and that set free as mechanical work, is in the case of a muscle, not under all circumstances the same. The proportion between heat and work varies moreover to such an extent that the work amounts in some cases to one-fourth and in other cases to one twenty-fourth of the total energy set free by the chemical process of oxydation within the muscle.\* Muscular contraction can then, under certain circumstances, be carried on more or less economically, that is to say, a comparatively small amount of chemical change, in other words a comparatively small quantity of liberated energy, may be made to effect a considerable amount of muscular contraction, provided the energy liberated be mostly utilised in the form of movement (contraction), and that as little as possible be allowed to come out in the form of heat.

Now it appears to me that in this fact lies an unthought of explanation, at least a partial, or if you like, additional explanation of the phenomenon known as the maintenance of the mean temperature in warm-blooded animals. As you are aware, gentlemen, warm-blooded animals maintain, under all varieties of atmospheric temperature, the same degree of body-heat; and there are various contrivances within the organism which contribute to the keeping up of an equable temperature within certain limits. Foremost of them are such arrangements as regulate the *elimination* of heat. Increased temperature causes dilatation of the small arteries of the skin, whereby more blood is made to circulate at the surface of the body, which leads to an increased loss of heat by conduction and radiation. The secretion of sweat is, moreover, either occasioned or increased in quantity by an increased fulness of the vessels of the skin, and the rapidly evaporated sweat consumes an extraordinary amount of heat. Then there are such arrangements as exert their action in regulating the *production* of heat. Cold increases the feeling of hunger, and increased consumption of food augments the production of heat. Then again when the body is exposed to cold the need for muscular exertion is felt, and this raises the temperature.

Now the very fact that increased muscular action—voluntary or involuntary—augments the body temperature, necessarily implies that during the act of muscular contraction more heat is produced than is consumed by its being converted into mechanical work. The proportion between the two, between the energy liberated as heat and the energy liberated as work, depends, as we have seen before, on various circumstances. Is it then not natural to expect that the maintenance of the mean temperature in warm-blooded animals should, at least partly, be owing to a certain adjustment of the before-mentioned proportions. There evidently exists some regulating agency within the living body of warm-blooded animals, by which production and elimination of heat is constantly balanced; and although the exact seat of that agency may not have been as yet clearly pointed out, there is perfect unanimity between physiologists that such a regulating centre does exist. Such being the case, it would be strange, should the proportions between muscular energy liberated in form of heat, and muscular energy liberated in form of work, not fall under the regulating administration of the caloric centre.

(To be continued.)

#### SPIRIT GUARDIANSHIP, OR WHAT?

UNDER this heading Dr. Rohner of Benalla writes in the *Harbinger of Light* the following:—

In the issue of the 18th August, 1883, *Religio-Philosophical Journal*, I read the following:—"Recently, a party from Texas, consisting of father, mother, and four children, took passage with Conductor Minor at St. Louis, bound for Indianapolis. A short distance the other side of Pana, Illinois, one of the children walked out on the rear platform while asleep, the other occupants of the car paying no attention to the child's movements. The train was running at the rate of forty miles an hour, and when the attention of the Conductor was called to the fact that the child had gone out on the platform, he instituted search and found it missing. The parents were frantic when notified of the child's disappearance, and at Pana a party of section hands were sent back on a hand-car to search for traces of the missing child. About three miles from the city they found the little one lying beside the track, and picked it up for dead, but on being spoken to and shaken a little it awoke, and the discovery was made that it had been asleep all the time, and was entirely unconscious of what had happened. The youngster was not even badly bruised, and was returned to its parents in good order. Conductor Minor is positive that the train was going at the rate of forty miles an hour when the sleeping child fell off, and its escape is most *miraculous*."

Here ends the story as reported by the *Indianapolis Journal*, and its conclusion is truly *miraculous*! I thought the

\* See M. Forster's *Text Book of Physiology*, London, Macmillan & Co., 1883. P. 67.

age of miracles was past, but I am evidently mistaken, so easy does it seem to people to explain extraordinary occurrences on the principle of miracle.

Well, I met professionally with similar miracles in my life; one of which took place in 1861, in a place called Wallace's Gully, near Chiltern, where a miner had fallen down a shaft about one hundred feet deep. The messenger who fetched me to the scene of the catastrophe never expected to see his mate alive again in this world, but his astonishment as well as mine may be more easily imagined than described when on our arrival at the spot we found the man walking about none the worse for his too *facilis descensus averni*. What saved the man's life, answer, a miracle!

Not many months ago a child, about four years old, fell out of one of the cars running on the Shepparton line, Victoria. The child had been leaning with its back against the door of the carriage, which was not properly shut, and consequently fell out. The train was running at the rate of about twenty-five miles an hour at the time of the accident; but when the train had been brought to a standstill in order to recover the child, the poor little thing had not even received a scratch. This, I suppose, was another miracle? Be it so.

Let me relate now two *miraculous* escapes from death by railway accidents which I experienced personally in the years 1853 and 1854, when I was still a medical student. On my journey home from Vienna to the shores of Lake Constance I had entered one of the last three carriages of a train on the point of leaving Munich, the capital of Bavaria. As I sat at the window looking out, two of my companions came along and asked me why I was sitting by myself when several of my fellow students were going by the same train in a car a little farther on towards the locomotive. I immediately got out and joined my mates. Shortly after starting, in crossing the River Lech, the railway bridge broke down, and the last three cars of the train were violently torn off and precipitated into the swollen river, all passengers on board perishing in the flood. What a lucky coincidence my leaving the seat I originally occupied! Truly, a miracle! I think differently; and what made me think differently afterwards was a similar narrow and *miraculous* escape on the same line during my vacation trip home in the following year,—1854. I had taken my ticket by the midday train to the same destination as above, from Munich, but having been unavoidably detained, the train left without me in spite of my demonstrative signalling to driver and other officials. Three t's wait for no man: time, tide, and train. Well, I was extremely sorry for losing my passage, as I was not overburdened with cash at the time. But my sorrow was changed into a different mood when a telegram reached Munich, about three o'clock p.m., to the effect that the train I intended to travel by had gone off the line in the Bavarian Alps near a little mountain lake, round which the line formed a somewhat sharp curve, and that the engine and all the carriages had run into the lake, drowning every man on board. I naturally complained no longer about the loss of my ticket, but it set me thinking about my two *miraculous* escapes of the current and the past years. I did not, however, succeed in explaining them, and in my then ignorance I attributed the saving of my life on these two occasions to chance, coincidence, good luck, but not to miracles; for at that time I had already given up all belief in miracles in the ordinary Christian sense of the term. Now, of course, I know better, but I leave my readers at liberty to settle the matter themselves to their own satisfaction.

C. W. ROHNER.

BANALLA, 11th Oct. 1883.

*Ed. Note.*—Let us, for a moment, grant that the facts given above by the estimable doctor point to something that is neither blind chance nor miracle: what are the other explanations that could be suggested? No other possible but the following: it is either "Spirit Guardianship," or—*Divine Providence*. This—to the Spiritualists and believers in a personal God—sets the problem at rest. But how about the dissatisfaction of those who cannot be brought to believe in either the spirits of the dead as concerned with our earthly events, nor in a conscious,

personal deity, a telescopic enlargement—true, magnifying millions of times—still but an enlargement of the human *infinitesimal infusoria*? Truth to be heard and get itself recognized as one, must be a self-evident truth to all, not merely to a fraction of humanity. It must satisfy one and all, answer and cover every objection, explain and make away with every hazy spot on its face, destroy every objection placed on its path. And if events of the nature of those given by Dr. Rohner are to be attributed to the protection and guardianship of "Spirits," why is it, that to every such *one* case of *miraculous* escape, there are 10,000 cases where human beings are left to perish brutally and stupidly without any seeming fault on their part, their death being often the starting point of the most disastrous subsequent results, and this with no providence, no spirit interfering to stop the merciless hand of blind fate? Are we to believe that "the sleeping child" and the "miner" were two very important units in humanity, while the many hundreds of unfortunate children who perished a few months ago at Sunderland during the terrible catastrophe in the theatre, and the *hundreds of thousands of human beings*—victims of last year's earthquakes—were useless dross, with no "spirit hand" to protect them? It is pure sentimentality alone, with selfish pride and human conceit to help it, that can evolve such theories to account for every exceptional occurrence.

*Karma*, and our inner, unconscious (so far as our physical senses go) prevision can alone explain such cases of unexpected escapes. If Dr. Rohner knows of children who fell out of trains and cars running "at the rate of forty miles an hour," who were neither killed nor hurt, the writer knows of two hip dogs who madly chasing each other fell from the terrace of a house over sixty feet high and, with the exception of a stiffness of a few hours' duration in their limbs, came to no other grief. And, we have seen but the other day, a young squirrel falling out of its nest, a voracious crow pouncing upon it and actually seizing it, when suddenly as though struck with some thought the hungry carrion-eater dropped it out of its mouth, flew lazily away, and perching upon a neighbouring branch, gave the mother-squirrel the time to rescue her little one. Had these dogs and squirrel also "guardian-spirits" to protect them, or was it due to *chance*,—a word by the bye, pronounced by many, understood by very very few.

#### CONTEMPLATION.

BY DAMODAR K. MAVALANKAR, F. T. S.

A GENERAL misunderstanding of this term seems to prevail. The popular idea appears to be to confine oneself for half an hour—or at the utmost two hours—in a private room, and passively gaze at one's nose, a spot on the wall, or, perhaps, a crystal. This is supposed to be the true form of contemplation enjoined by *Raj Yoga*. It fails to realize that true occultism requires "physical, mental, moral and spiritual" development to run on parallel lines. Were the narrow conception extended to all these lines, the necessity for the present article would not have been so urgently felt. This paper is specially meant for the benefit of those who seem to have failed to grasp the real meaning of *Dhyan*, and by their erroneous practices to have brought, and to be bringing, pain and misery upon themselves. A few instances may be mentioned here with advantage, as a warning to our too zealous students.

At Bareilly the writer met a certain Theosophist from Farrukhabad, who narrated his experiences and shed bitter tears of repentance for his past follies—as he termed them. It would appear from his account that the gentleman, having read *Bhagavat-Gita* about fifteen or twenty years ago and not comprehending the esoteric meaning of the contemplation therein enjoined, undertook nevertheless the practice and carried it on for several years. At first he experienced a sense of pleasure, but simul-

taneously he found he was gradually losing self-control; until after a few years he discovered, to his great bewilderment and sorrow, that *he was no longer his own master*. He felt his heart actually growing heavy, as though a load had been placed on it. He had no control over his sensations; in fact the communication between the brain and the heart had become as though interrupted. As matters grew worse, in disgust he discontinued his "contemplation." This happened as long as seven years ago; and, although since then he has not felt worse, yet he could never regain his original normal and healthy state of mind and body.

Another case came under the writer's observation at Jubbulpore. The gentleman concerned, after reading Patanjali and such other works, began to sit for "contemplation." After a short time he commenced seeing abnormal sights and hearing musical bells, but neither over these phenomena nor over his own sensations could he exercise any control. He could not produce these results at will, nor could he stop them when they were occurring. Numerous such examples may be multiplied. While penning these lines, the writer has on his table two letters upon this subject, one from Moradabad and the other from Trichinopoly. In short, all this mischief is due to a misunderstanding of the significance of contemplation as enjoined upon students by all the schools of Occult Philosophy. With a view to afford a glimpse of the Reality through the dense veil that enshrouds the mysteries of this Science of Sciences, an article, the "Elixir of Life," was written. Unfortunately, in too many instances, the seed seems to have fallen upon barren ground. Some of its readers only catch hold of the following clause in the said paper:—

Reasoning from the known to the unknown meditation must be practised and encouraged.

But, alas! their preconceptions have prevented them from comprehending what is meant by meditation. They forget that it "is the inexpressible yearning of the inner Man to 'go out towards the infinite,' which in the olden time was the real meaning of 'adoration'—as the next sentence shows. A good deal of light will be thrown upon this subject if the reader were to turn to the preceding portion of the same paper, and peruse attentively the following paras. on page 141 of the *Theosophist* for March, 1883 (Vol. III, No. 6):—

So, then, we have arrived at the point where we have determined,—literally, *not* metaphorically—to crack the outer shell known as the mortal coil, or body, and hatch out of it, clothed in our next. This 'next' is not a spiritual, but only a more ethereal form. Having by a long training and preparation adapted it for a life in this atmosphere, during which time we have gradually made the outward shell to die off through a certain process.....we have to prepare for this physiological transformation.

How are we to do it? In the first place we have the actual, visible, material body—man, so called, though, in fact, but his outer shell—to deal with. Let us bear in mind that science teaches us that in about every seven years we *change skin* as effectually as any serpent; and this so gradually and imperceptibly that, had not science after years of unremitting study and observation assured us of it, no one would have had the slightest suspicion of the fact.....Hence, if a man partially flayed alive, may sometimes survive and be covered with a new skin,—so our astral, vital body.....may be made to harden its particles to the atmospheric changes. The whole secret is to succeed in evolving it out, and separating it from the visible; and while its generally invisible atoms proceed to concrete themselves into a compact mass, to gradually get rid of the old particles of our visible frame so as to make them die and disappear before the new set has had time to evolve and replace them... We can say no more.

A correct comprehension of the above scientific process will give a clue to the esoteric meaning of meditation or contemplation. Science teaches us that man changes his physical body continually, and this change is so gradual that it is almost imperceptible. Why then should the case be otherwise with the *inner man*? The latter too is constantly developing and changing atoms

at every moment. And the attraction of these new sets of atoms depends upon the Law of Affinity—the desires of the man drawing to their bodily tenement only such particles as are *en rapport* with them or rather giving them their own tendency and colouring.

For science shows that thought is dynamic, and the thought-force evolved by nervous action expanding itself outwardly, must affect the molecular relations of the physical man. The *inner men*, however sublimated their organism may be, are still composed of actual, *not hypothetical*, particles, and are still subject to the law that an 'action' has a tendency to repeat itself; a tendency to set up analogous action in the grosser 'shell' they are in contact with and concealed within." (*The Elixir of Life*).

What is it the aspirant of *Yog Vidya* strives after if not to gain *Mukti* by transferring himself gradually from the grosser to the next more ethereal body, until all the veils of *Maya* being successively removed his *Atma* becomes one with *Paramatma*? Does he suppose that this grand result can be achieved by a two or four hours' contemplation? For the remaining twenty or twenty-two hours that the devotee does not shut himself up in his room for meditation—is the process of the emission of atoms and their replacement by others stopped? If not, then how does he mean to attract all this time,—only those suited to his end? From the above remarks it is evident that just as the physical body requires incessant attention to prevent the entrance of a disease, so also the *inner man* requires an unremitting watch, so that no conscious or unconscious thought may attract atoms unsuited to its progress. This is the real meaning of contemplation. The prime factor in the guidance of the thought is *WILL*.

Without that, all else is useless. And, to be efficient for the purpose, it must be, not only a passing resolution of the moment, a single fierce desire of short duration, but a *settled and continued strain, as nearly as can be continued and concentrated without one single moment's remission*.

The student would do well to take note of the italicized clause in the above quotation. He should also have it indelibly impressed upon his mind that

It is no use to fast *as long as one requires food*...To get rid of the inward desire is the essential thing, and to mimic the real thing without it is barefaced hypocrisy and useless slavery.

Without realizing the significance of this most important fact, any one who for a moment finds cause of disagreement with any one of his family, or has his vanity wounded, or for a sentimental flash of the moment, or for a selfish desire to utilize the divine power for gross purposes—at once rushes in for contemplation and dashes himself to pieces on the rock dividing the known from the unknown. Wallowing in the mire of exotericism, he knows not what it is to live in the world and yet be not of the world; in other words to guard *self* against *self* is an incomprehensible axiom for nearly every profane. The Hindu ought at least to realize it by remembering the life of Janaka, who, although a reigning monarch, was yet styled *Rajarshi* and is said to have attained *Nirvana*. Hearing of his widespread fame, a few sectarian bigots went to his Court to test his *Yoga*-power. As soon as they entered the court-room, the king having read their thought—a power which every *chela* attains at a certain stage—gave secret instructions to his officials to have a particular street in the city lined on both sides by dancing girls who were ordered to sing the most voluptuous songs. He then had some *gharas* (pots) filled with water up to the brim so that the least shake would be likely to spill their contents. The wiseacres, each with a full *ghara* (pot) on his head, were ordered to pass along the street, surrounded by soldiers with drawn swords to be used against them if even so much as a drop of water were allowed to run over. The poor fellows having returned to the palace after successfully passing the test, were asked by the King-Adept what they had met with in the street they were made to go through. With great indignation they replied that the threat of being cut to

pieces had so much worked upon their minds that they thought of nothing but the water on their heads, and the intensity of their attention did not permit them to take cognizance of what was going on around them. Then Janaka told them that on the same principle they could easily understand that, although being outwardly engaged in managing the affairs of his state, he could at the same time be an Occultist. He too, while in the world, was not of the world. In other words, his inward aspirations had been leading him on continually to the goal in which his whole inner self was concentrated.

*Raj Yoga* encourages no sham, requires no physical postures. It has to deal with the inner man whose sphere lies in the world of thought. To have the highest ideal placed before oneself and strive incessantly to rise up to it, is the only true concentration recognized by Esoteric Philosophy which deals with the inner world of *noumena*, not the outer shell of *phenomena*.

The first requisite for it is thorough purity of heart. Well might the student of Occultism say, with Zoroaster, that purity of thought, purity of word, and purity of deed,—these are the essentials of one who would rise above the ordinary level and join the "gods." A cultivation of the feeling of unselfish philanthropy is the path which has to be traversed for that purpose. For it is that alone which will lead to Universal Love, the realization of which constitutes the progress towards deliverance from the chains forged by Maya around the Ego. No student will attain this at once, but as our VENERATED MAHATMA says in the *Occult World*:—

The greater the progress towards deliverance, the less this will be the case, until, to crown all, human and purely individual personal feelings, blood-ties and friendship, patriotism and race predilection, will all give way to become blended into one universal feeling, the only true and holy, the only unselfish and eternal one, Love, an Immense Love for Humanity as a whole.

In short, the individual is blended with the ALL.

Of course, contemplation, as usually understood, is not without its minor advantages. It develops one set of physical faculties as gymnastics does the muscles. For the purposes of physical mesmerism, it is good enough; but it can in no way help the development of the psychological faculties as the thoughtful reader will perceive. At the same time, even for ordinary purposes, the practice can never be too well guarded. If, as some suppose, they have to be entirely passive and lose themselves in the object before them, they should remember that by thus encouraging passivity, they, in fact, allow the development of mediumistic faculties in themselves. As was repeatedly stated—the Adept and the Medium are the two poles: while the former is intensely active and thus able to control the elemental forces, the latter is intensely passive, and thus incurs the risk of falling a prey to the caprice and malice of mischievous embryos of human beings, and—the Elementaries.

#### AN AUTUMN REVERIE.

Noble tree! 'tis autumn now,  
Cold and chill thy branches bow:  
Bow beneath the waning moon,  
Now no more my shade at noon.  
'Neath my feet thy dead leaves play;  
Round thy ancient trunk, so gray,  
Murmurs now the sweet wind's breath,  
"Death is life, and life is death."

All thy glory gone from thee,  
All,—but still a noble tree!  
Born to breathe to life anew,  
Soon as spring thy buds imbue.  
While I watch thy leaflets creep,  
Creep to nourish thee to sleep,  
Murmurs still the sweet wind's breath,  
"Death is life, and life is death."

All the bloom thou gav'st in spring,  
Gone!—but where?—doth spirit wing,  
Wing its flight thro' mystic spheres  
Till it's clothed again and rears?  
Nothing dies!—if aught were lost,  
Nature would herself exhaust;  
Murmurs now the sweet wind's breath,  
"As death is life, so life is death."

Shall the force, that lives thro' all,  
Lose that power, thro' Nature's fall?  
Ages lapse, and still we see  
Matter lives eternally.  
Shall the atoms move the sphere  
Till the Ego's perfect here?  
Murmurs now the sweet wind's breath,  
"Earth is purified thro' death."

Shall the soul that moves this clay  
Pass—and live another day:  
Live to wake, and live to sleep,  
Still thro' other channels keep?  
Errant, guarded, 'mid the strife,—  
Wander back again to life?  
Murmurs now the sweet wind's breath,  
"Death leads to life, and life to death."

Man with Reason, Soul, and Will  
Sought for God, is seeking still:  
Peers the mystic spheres at night,  
Waits in vain to grasp the Light;  
Till's evolved, thro' Nature's plan,  
Her Son—the sixth-sense perfect man!  
Murmurs now the sweet wind's breath,  
"Wait for wisdom after death!"

Home I wander, as the leaves  
Rustle round my feet in sheaves,  
Comes a whisper to mine ear,  
Gentle notes so soft and clear:  
Is not life the spirit's tomb?  
Is not death the spirit's bloom?  
Dead thro' re-incarnate laws,  
Dead for expiation's cause!  
Murmurs now the sweet wind's breath,  
"Spirit lives thro' life and death."

HENRY GEORGE HELLON, (F. T. S.)

#### ORIENTAL JUGGLING IN SIAM.

(Transcribed from an American Newspaper, April 11, 1874, for "THE THEOSOPHIST," by P. DAVIDSON, F. T. S.)

The far East must ever lead the world in the practice of Necromancy.\* All the skill and mechanical ingenuity of the most expert prestidigitateurs of Europe or America cannot produce a single exhibition which will compare with the feats of the commonest Indian juggler. The Japanese have taught us the greater part of the sleight-of-hand illusion which is now paraded before staring audiences in this country and in Europe; but the necromancy of Japan is as boy's play compared with the mysterious jugglery of the nether and farther Indies, and specially of Siam. In the latter country there is a royal troupe of jugglers, who perform only at the funerals and coronations of the kings, and then only in the presence of the nobles of Siam, or those initiated into the mysteries of the religion of the country. These necromancers do not perform for money, are of noble blood, and it is seldom that a European sees even their faces. Last year, however, an English surgeon, who was in the country, performed a somewhat remarkable cure upon a princess, who had been treated in vain by all the physicians of the country. Great was the gratitude of the Siamese Court at the doctor's performance; and, as a reward commensurate with his great service, he was permitted to witness the performance of Tepada's royal troupe of jugglers. This exhibition was given in the sacred temple of Juthia, on the 16th of November, the occasion being the coronation of the young

\* The word "necromancy" and "necromancers" applied to the Secret Initiates of Science is very wrong and misleading. They may be called magicians, but certainly the term *necromancy* is a misnomer when applied to people who have a horror of meddling with the "spirits" of the dead.—Ed.

king. The surgeon's narrative, stripped of a large amount of description, and materially condensed, is given below :—

Woun-Tajac called me very early, and he and his father's cousin, a jolly fat old gentleman, called Soondatch-Tam-Bondon, set to work to prepare me for witnessing the performance in the grand Pagoda. A white turban was wound around my head; my skin was stained the colour of new bronze; my moustache ruthlessly trimmed down, blackened, and waxed till it had the proper Malayan dejected droop and penury; my eyebrows blacked, and native garments furnished me, over which I wore the long white robes which, I was told, were peculiar to the initiated. The Pagoda is more celebrated for its sacredness than its size, or the splendour of its architecture. It is, nevertheless, a building of some very striking features. It is situated without the city, upon a broad and commanding terrace elevated considerably above the level of the river plains. It is approached from the city by a long brick paved avenue, wide, straight and imposing.

Soondatch and Woun-Tajac, each holding me by an arm, now directed me towards one of the doorways of the temple. It was guarded by two men, with drawn swords, and very fierce aspect, who stood in front of a heavy drape of red cloth, that concealed the interior of the temple from outside eyes. At a triple pass-word these (men) admitted my companions, but crossed their swords before my breast. Soondatch whispered in the ear of the elder of the two; he started, gazed at me intently, but did not withdraw his barrier. Woun showed him a signet. He took it, and reverently placed it upon his forehead; yet still he refused to admit me. There was a controversy between the door-keeper and my companion; and, at last, the elder guardian whistled shrilly upon a bone pipe tied about his neck with a strand of silk. A tall man suddenly appeared, I could not see from whence. He was middle-aged, athletic, and had a most peculiar cunning, self-possessed look of person and intelligence.

"Tepada," exclaimed both of my companions at once; but the man who was naked except for a breech-elout, took no notice of them. He put his hand heavily, but not unkindly, upon my breast, gave me a piercing, long look, and said in excellent French, "Are you a brave man?" "Try me," I said. Instantly, without another word, he bandaged my eyes with a part of the long white robe I wore; he snapped his fingers suddenly, whispering in my ears, 'Not a word for your life;' and the next moment I found myself seized in the hands of several strong men, and borne some distance along a devious way, ascending and descending several times. At last I was put down; the bandage was quietly removed; and I found myself squatted on a stonefloor, between Soondatch and Woun-Tajac, who, with bowed heads, and faces partly shrouded in their white robes, squatted like statues of Buddha, their knees and shins close to the ground, their haunches resting upon their heels, their hands spread, palms downwards upon their knees, their eyes deflected, and a look of devout reverence and abstracted meditation on their countenance. The light was dim to my unaccustomed eyes, but all around, as far as I could see, were white-robed worshippers couched in the same attitude of silent reverence.

By degrees as my eyes grew used to the dim gloom, I began to look about me. The place was a square vault, so lofty that I could not see the ceiling, and I should say not less than a hundred paces long and wide. All around the sides rose gigantic columns, carved into images of Buddha always, yet with a thousand variations from the central plan, a thousand freaks of fancy, a thousand grotesqueries, through which shone, the more effectively for the departures, the eternal, the calm, the stagnant, the imperturbed ecstacy of apathy of Buddha's remarkable face, with the great pendant ears, and the eyes looking out beyond you into the supreme wistfulness of Nieban—a face that once seen can never be forgotten. By degrees I came to see the plan of this evidently subterranean vault, and to look with wonder upon the simple grandeur of its massive architecture, which was severely plain, except so far as the carving of the great column went. At the farthest end of the wall, resting against the columns, was a raised dais or platform covered with red cloth. This stage was raised between three and four feet above the floor of the vault, and was about 35 or 40 feet deep, and one hundred and fifty broad. Behind it a curtain of red cloth

hung down from the capitals of the towering columns. In front of the stage, just about the spot where the pulpit of the orchestra in a Greek theatre would be, was a tripod shaped altar, with a broad censer upon it, in which was burning a scented oil, mixed with gums and aromatic woods, that diffused through the whole vault a pungent, sacramental odour.

Suddenly there was a wild and startling crash of barbaric music from under the stage—gongs, drums, cymbals, and horns, and with wonderful alertness, and a really indescribable effect, a band of naked men came out from behind the curtains, bearing each a scented torch in his hand, climbed the columns with the agility of monkeys, and lighted each a hundred lamps, strung from the base almost of the columns sheer up to the apex of the vault, which, I could now see, rose in a lofty dome, that doubtless pierced far up into the interior of the Pagoda proper. The illumination from these multitudinous lamps was very brilliant; too soft to be dazzling or overpowering, yet so penetrating and pervasive that one missed nothing of the perfect light of the day. The din of the horrible orchestra increased, and a band of old women came out from under the stage, singing (or rather shrieking out) the most diabolical chant that I ever heard. The red curtain fluttered a little, there was a dull thud, and then, right before us, alongside the censer, stood a very old man, but wrinkled, with long hair and beard, white as cotton fleeco. His finger-nails were several inches long, and his sunken jaws were horribly diversified with two long teeth, yellow and ogreish. He was naked except for a breech-cloth, and his shrunken muscles shone with oil. He took the censer in his hands, and blew his breath into it until the flame rose twenty feet high, red and furious; then, with a sudden, jerking motion, he tossed the burning oil toward the crowd of squatting spectators. It shot toward them a livid sheet of terrible flame; it descended upon them a shower of roses and japonicas, more than could have been gathered in a cart. Turning the censer bottom upward, he spun it for a minute upon the point of his long thumb-nail, then flung it disdainfully away toward the audience. It struck the pavement with a metallic clang, bounced, and rose with sudden expanse of wings, a shrieking eagle, frightened horribly, and seeking flight towards the summit of the dome. The old man gazed a moment upward; then seeing the tripod upon which the censer had stood, he rent its legs apart, with a nervous hand, straightened them against his knee, and hurled them, dartlike, toward the eagle. They glanced upward with a gilded flash, and instantly the eagle came fluttering down to the pavement in our midst, dead, and three horrible cobras coiled about him, and lifted their hooded heads defiantly, and flashing anger out of their glittering eyes. The music shrieked still wilder, the snakes coiled and plaited themselves together in a rhythmic dance, lifting the dead eagle upon their heads, and, presto! right in our midst there stood the tripod again, with its flickering flame, and its incense-savoured breath. A more perfect illusion never was seen.

"That is Norodom," whispered Woun-Tajac in my ear. Another actor now came upon the scene, whom I recognised to be the tall athlete, Tepada. Behind him came a smaller man, whose name, Woun-Tajac informed me, was Minhman, and a boy whose name was Tsin-Ki, probably twelve years old. These four began some of the most wonderful athletic exhibitions that can be conceived. It is impossible to believe unless you saw it, what work these men put human muscles to. I am not going to provoke the incredulity of your readers by attempting to describe the majority of them. In one feat Tepada seized Norodom by his long white beard, held him off at arm's length, and spun round with him until the old man's legs were horizontal to the athlete's shoulders. Then, while they still spun with the fury of dervishes, Minhman sprang up, seized upon Norodom's feet, and spun out a horizontal continuation of the ancient; and when Minhman was fairly established, the boy Tsin-Ki caught hold of his feet in like manner, and the tall athlete, every muscle in him straining, continued to whirl the human jointless lever around. At last, slowing slightly, Tepada drew in his arms till the old man's white beard touched his body; there was a sudden strain, and the arm of men from being horizontal became perpendicular. Norodom's head resting atop of Tepada's, Minhman's head upon Norodom's feet, and Tsin-Ki's head on Minhman's

feet. A pause for breath, then the column of men was propelled into the air and, presto! Tepada's head was on the ground, Norodom's feet to his, Minhman's feet upon Norodom's head, Tsin-Ki's feet on Minhman's head. Each had turned a summersault, and the column was unbroken!

One trick which Minhman performed was a superior version of the mango tree feat of the Indian jugglers. He took an orange, cut it open, and produced a serpent. This he took down into the audience, and, borrowing a robe from one, cut the snake's head off and covered it with the robe. When the robe was lifted again, a fox was in the place of the snake. The fox's head was cut off, two robes borrowed, and when they were raised there was a wolf, which was killed with a sword. Three robes, and a leopard appeared, it was slain with a javelin. Four robes covered a most savage looking buffalo, that was killed with an axe. Five robes covered in part, but not altogether, a lordly elephant, who, when the sword was pointed against him, seized Minhman by the neck and tossed him violently up. He mounted feet foremost, and finally clung by his toes to the capital of one of the columns. Tepada now leaped from the stage and alighted upon the elephant's shoulders. With a sword he goaded the beast on the head until, shrieking, the unwieldy animal reared upon its hind feet, twined its trunk about one of the great columns, and seemed trying to lift itself from the ground and wrap its body around the great pillar. The music clashed out barbarously. Norodom flashed forth a dazzling firework of some sort, and the elephant had disappeared, and Tepada lay upon the stage writhing in the folds of a great boa constrictor and holding up Minhman upon his feet.

During the three hours the exhibition continued, feats of the sort I have described, each more wonderful than the one that preceded it, following one another in rapid succession. I shall content myself with the last and culminating wonder of the startling entertainment.

A perfectly formed and most lovely nautch-girl sprang out upon the stage, and was hailed with universal exclamations of delight, every body calling out her name, Luan Prabana, as if it were a word of good omen. The only dress was a short petticoat of variegated feather work. A wreath of rosebuds crowned her soft, short, black hair, and she wore a pearl necklace, as well as broad gold armlets and anklets. With a brilliant smile she danced exquisitely for some minutes to the accompaniment of a single pipe, then she knelt and laid her head on old Norodom's knee. The boy fanned her with a fan made of sweet fern leaves. Minhman fetched a lotus-shaped golden goblet, and Tepada poured into it from a quaint looking flask a fluid of a greenish hue. The old Yogi-like Norodom took the goblet, and blew his breath upon the contents, till they broke into a pale blue flame. This Tepada extinguished with his breath, when Norodom held the goblet to Luan Prabana's lips, and she drained the contents with a sigh. As if transfigured she suddenly sprang to her feet, her face strangely radiant, and began to spin giddily around in one spot. First the boy, then Minhman, then Tepada tried to arrest her, but they no sooner touched her than she repelled them with a shock that thrilled them as if she had imparted an electric spark to them. Spinning constantly with a bewildering rapid motion, the girl now sprang off the stage and down the hall, along by the foot of the columns, Tsin-Ki, Minhman and Tepada in active pursuit. In and out among the crowd they spun, the three chasing. Tepada seized hold of the chaplet that crowned her; it broke, and as she was whirled along, a spray of rosebuds was scattered from her brow in every direction. Anything more graceful never was seen. And now a greater wonder. At the extremity of the hall the three surrounded and would have seized her, when, still revolving, she rose slowly into the air and floated gently over our heads towards the stage, scattering roses as she went. At the back of the stage she paused in mid-air; then with a slight, wing-like motion of her arms, mounted up, up towards the loftiest arch of the vault overhead. Suddenly old Norodom seized bow and arrow, and shot towards her. Then was a wild shriek, a rushing sound, and the dancer fell with a crash on the flags of the floor. The music burst forth with a wild wail, and the chorus of old hags came tumultuously forth and bore her off in their arms.

Now, from behind the red curtains came a dozen strong men, bearing on their shoulders a great leaden box, which

they laid upon the front part of the stage. As they retired the old women came out bringing a low couch, decorated with flowers and gold-embroidered drapery, upon which lay Luan Prabana, decked forth in bridal garments, and sweetly sleeping. The couch with its sleeper was put quietly down upon the front of the stage, and left there, while Norodom and Tepada went to the leaden box, and with hot irons attempted to unseal it. 'That is Hung-Tiong's coffin,' whispered Wonn to me; 'the old saint has been dead more than half a millenium.'

Quickly, eagerly it seemed to me, the two men broke open the fastenings of the coffin, until the side next the audience falling out at last, a teak-box was discovered. This was forced open with a small crowbar, and what seemed a great bundle of Nankeen came out. Tepada and Norodom commenced to unwind this wrapping, which was very light: Yard after yard was unwound and folded away by Minhman, and at last, after at least one hundred yards of wrapping had been taken off, the dry, shrivelled mummy of a small old man, was visible, eyes closed, flesh dry and hard,—dead and dry as a smoked herring. Norodom tapped the corpse with the crowbar, and it gave a dull, wooden sound, Tepada tossed it up and caught it—it was still as a log. Then he placed the mummy upon Norodom's knees, and fetched a flask of oil, a flask of wine, and a censer burning with some pungent essence. Norodom took from his hair a little box of inguent, and forcing open the mouth of the mummy with a cold-chisel, shewed that the dry tongue could rattle like a chip against the dry fauces. He filled the mouth with unguent and closed it, and anointed the eyelids, nostrils, and ears. Then he and Tepada mixed the wine and oil, and carefully rubbed every part of the body with it. Then laying it down in a reclining position, they put the burning censer upon the chest and withdrew a space, while the drums and gongs and cymbals clashed, and clattered, and the shrill, cackling treble of the chorus of old women rose hideously.

A breathless pause ensued—one, two, three minutes—and the mummy sneezed, sneezed thrice, so violently as to extinguish the flame of the censer. A moment later the thing sat up, and stared, blinking and vacant, out around the vault—an old wrinkled man, with mumbling chops, a shrivelled breast and belly, and little tufts of hair upon his chin and forehead. Tepada approached him reverently upon his knees, bringing a salver, with wine and a wafer-cake. The old man did not notice him, but, ate, drank, and tottered to his feet, the feeblest decrepid old dotard that ever walked. In another moment he saw the nautch-girl slumbering upon her couch; he scuffled feebly to her, and numbling, stooped as if to help his dim eyes to see her better. With a glad cry the maiden waked, clasped him in her arms, and to her breast and kissed him. Incomprehensible magic! He was no longer a nonnagenarian dotard, but a full-veined fiery youth, who gave her kiss for kiss. How the transformation was wrought I have no idea, but there it was before our very eyes. The music grew soft and passionate, the chorus of the old women came out, and with strange Phallic songs and dances bore the two away—a bridal pair. I never expect again to behold a sight so wonderful as that whole transformation; which I may mention, my learned Jesuit friend, to whom I described it, regards as a piece of pure symbolism. His explanation is too long, and too-learned to quote, but he connects the ceremony with the world-old myth of Venus and Adonis, and claims that it is all a form of Sun-worship.

The show went on for some time longer with many curious feats. At the end of an hour the Phallic procession returned, but this time the Bayadere led it, a strange triumph in her eyes, while the youth lay upon the couch sleeping. The Phallic chorus sank into a dirge, the youth faded visibly; he was again the shrivelled dotard; he sighed, then breathed no more. Luan Prabana retired sorrowfully; Norodom and Tepada wrapped the corpse again in its interminable shrouds, restored it to the coffin, and it was borne away again. The attendants climbed up to, and extinguished the lights. I was blindfolded and borne away again. I found myself once more at the doorway of the temple in the broad sunshine with my friends—as the mystic ceremonies of the great temple of Juthia were over; it may be for many years."

The late R. B. Randolph, who quotes the above story in his "Eulis," adds the following remarks:—

"With strange Phallic songs and dances bore the two away—a bridal pair." "Venus and Adonis—a form of Sun-worship." "The Phallic chorus sank into a dirge." Can any-

thing be plainer, or more direct in confirmation of what I have written \* \* \*. There is no need to go to Siam to witness such marvels, or to learn their strange Principia, for I have not only witnessed displays of High Magic in this country (America) quite as marvellous, but different from the above, but have myself performed the feat of Fire-drawing, and came very near destroying the life of a woman who assisted at the rite, and but for the quick, brave, self-sacrificing action of Dr. Charles Main of Boston, that woman would have been slain with fire drawn down from the aerial spaces by principles known to me. For fifteen years I sought a female of the right organisation—an European or American Luan Prabana (the Fair and Virgin invocatrix)—and not till March 1874 did I find her. Her Self-Will, and brother-in-law's lack of decision, and his weighing of less than three dollar's expense against the possession of the loftiest Magic earth ever saw, determined me to seek elsewhere for the true material, and which it is needless to say, I have found again in my own personal circle. The mysteries are all wrought through Phallic principles in unsullied purity, and the highest, noblest worship known to man. *The great trouble with all whom I have partly taught in this land is that they—not one of them—saw anything nobler than the brilliant chance of sure gain, or opportunities to gratify Passion, therefore, of course, I dropped them all.*"

### VICTIMS OF WORDS.

THE saying has become trite that we are oftener victims of words than of facts. The Theosophical Society has been credited with atheism and materialism, because the philosophical system, to which the Founders of the Society and many of their fellow-students owe allegiance, refuses to recognise what is popularly called a "Personal God." We have maintained and shall continue to maintain until our dying day that a being possessing the range of associations, or to speak more learnedly, the connotations of the word "God" does not exist anywhere in the Universe or beyond it—if a beyond were possible. This is the negative side of our knowledge. The positive side of it may be formulated in the words of the Upanishad:—"That from which all forms of existence emanate, in which they endure and into which they return and enter, is Brahmā." This Brahmā when viewed as the *fons et origo* of the Substance of the Universe is, as has been repeatedly said in these columns, *Mulaprakriti*—a term which, in the poverty of English metaphysical vocabulary, has been translated as "undifferentiated cosmic matter." It has also been said that the *differentiation* of *Mulaprakriti* produces infinite forms of being. The utter absence of God-Idea from our philosophical creeds with which we are charged, is due entirely to the misconception of the single word "differentiation." It is this which has given rise to a perfect deluge of controversy. "Brahma"—our opponents argue,—"the *Mulaprakriti*, is made to undergo a differentiation, like matter, of which we have a physical conception, to form the visible universe. Therefore, Brahma is subject to change and exists only in a state of latency during the period of Cosmic activity. Therefore their (our) philosophy is merely the gospel of the apotheosis of dead brute matter and they are refined materialists." But would our critics remember that *Mulaprakriti* or Brahma is *absolutely subjective*, and, therefore, the word "differentiation" is to be transferred to the purely subjective, or as it is more commonly called, spiritual, plane before its significance can be properly comprehended. It must not for a single moment be supposed that *Mulaprakriti* or Brahma (*Parabrahm*) can ever undergo change of substance (*Parinama*). It is the Absolute Wisdom, the Only Reality, the Eternal Deity—to dissociate the word from its vulgar surroundings. What is meant by the differentiation of *Mulaprakriti* is that the primordial essence of all forms of existence (*Asat*) is radiated by it, and when radiated by it becomes the centre of energy from which by gradual and systematic processes of emanation or differentiation the universe, as perceived, springs into existence. It is from our opponent's incapacity to grasp this highly metaphysical conception that all the evil flows,

Brahmā is the Holy of Holies, and we cannot blaspheme against it by limiting it by our finite conceptions. It is, as the Vedic Rishis sang, *Suddham apapavidham*, the stainless ONE ELEMENT, untouched by any change of conditions. We feel the majesty of the idea so strongly, and it is

so far above the highest flight of intellect, that we are too awe-struck to make it the foot-ball of discussion. Well have the *Brahmavadis* of yore chaunted:

*Yatō vāchō nivartantē  
Aprapya manasū saha.*

"From which words rebound with the mind not finding it."

*Ya schandra tārake tishan  
Ya schandra tārakūda'n tarah.*

"It permeates the Moon and Stars, and is yet different from the Moon and Stars."

It is no such absurdity as an extra-Cosmic Deity. It is like the space in which a visible object lies. The space is in the object and is yet different from it, though the spirit of the object is nothing but the space.

It is manifest from this that "*Mulaprakriti*" never differentiates but only emanates or radiates its first born Mahattatva, the Sephira of the Kabalists. If one would carefully consider the meaning of the Sanskrit word *Srishti*; the point would become perfectly clear. This word is usually translated "creation," but as all Sanskritists know the root *Srij*, from which the word is derived, means 'to throw off' and not 'to create.'

This is our Deity of the Ineffable and of *no*—name. If our brothers after this explanation seek admission into the grand old temple in which we worship, they are welcome. But to those, who after this will still misunderstand us and mistake our views—we have nothing more to say.

### THE SIBYL, ANCIENT AND MODERN.

BY DR. FORTIN, F. T. S.

(President of the "Société Scientifique des Occultistes de France.")

THE Sibyl differs essentially from all other subjects (mediums), inasmuch as her gift enables her to receive inspirations of the highest order accessible to the conception of the human spirit.

It is not our purpose to write a detailed history of the Sibyls throughout the ages in a magazine article, but only to indicate their origin and the most prominent features that characterized them. The Sibyl was connected with the greatest historical facts, and was held in honour and consulted by the most civilized nations. Her history begins with that of the world. The first of the Weird Sisterhood, whose name has come down to posterity, was—

SAMBETH, the alleged daughter of the Patriarch Noah. She predicted the succession and revolution of the Empires from the Flood up to the Christian era.

CASSANDRA, daughter of Priam, who predicted the fall of Troy and was murdered in Greece.

ELISSA, the Sybil of Libya, born of Jupiter\*, and of the nymph Lamia, the daughter of Neptune.

ARTEMIS, who lived 400 years before the war of Troy.

MANTO, whose father was Tiresias, the celebrated augur mentioned by Homer.

SABBIS, the Phrygian.

AMALTHEA, contemporary of King Cræsus.

HYPATIA of Alexandria, who paid with her life her seership and learning.

HEROPHILE, The Cæmean Sibyl. Roman history preserved the narrative of her interview with Tarquin, the seventh and last king of Rome. Arrived from Thebes she offered him for sale nine rolls of papyrus containing Greek verses in which was contained the whole destiny of Rome; as Tarquin hesitated and tried to reduce the price, the Sibyl burnt six of the rolls. Then the king, after consulting the College of Pontiffs, purchased the remaining three for Rome. Then the Sibylline books, as is well known, were kept in the capital and destroyed during a fire. It was fated they should be burnt.

History affirms that the Senate had passed a solemn decree that the Sibyl line texts should be consulted at every national crisis and danger. The Roman republic owed its safety

\* *Esoteric* interpretation:—issued of Jupiter, the representative of the Jupiterian race, gifted with the highest seership.

(2.) Daughter of Neptune—the planet's influence—upon the entranced subject.

† *The Method of Nostradamus; Centuries and Quatrain.*

more than once to the precious prophecies contained in the books of the Sibyl of Cumæa.\*

In opposition to occult practice the Emperor Tiberius instituted Pythonism—the lower (or left hand) magic. He practises malefices, and after an infamous life dies a miserable death; while the Emperor Augustus consults and is guided by the advices of higher Seership. Tiburtine, the Sibyl of Mount Galatin, is the inspirer of his actions. Hence his reign so glorious and prosperous. Moreover, this Emperor had his horoscope, to guide him drawn by Theogenes the astrologer.

Locke and Doctor Büchner, high priests of the Materialistic School, refuse to admit in the savage tribes the inherent idea of a creative Principle, and conclude that such must have been always the case. I hope to shew the contrary. If this principle were not in nature, how could man have any notion of it? If soul is perishable, how explain our belief in its immortality? These two are the eternal stimulus of human thought.

There exists in a latent state in the physiological constitution of some few persons, a faculty that leads them to the first demonstration of the existence of a future life, and gives rise to religious feelings. Later on, it causes them to worship the highest ideal that their faculties can comprehend, and thereby guide their future life on this earth and out of it. Now, among the savage tribes that represent for modern science, primitive man, some individuals are born, who, by their physiological peculiarities, acquire the power of seeing the human phantom (or astral man.) By such a demonstration they are enabled to shadow forth before the masses those essential truths that warrant them to believe in the (*post-mortem*) evolution of man. The following experiments will serve as a practical illustration of the position.

Doctor Morel hunting one day in the vicinity of Botany Bay, found a little girl from 8 to 9 years old, who had been left behind in the precipitate flight of her parents. Was she a human being, or an ape? The distinction seemed very difficult. She was adopted by the Doctor, who seized this opportunity to verify whether education would modify the type of that strange creature. Upon his return to Paris he had the child brought up with his own nieces of the same age. The children studied under the tuition of the parents of the latter, who lived alternately at Paris and Bourg-la Reine. Two physicians—Messrs. Lemarchand and Deguerre, who narrated to me the fact, had seen this girl when eighteen years old: she had preserved in her attitude an extreme stiffness and timidity. Her eye was round and prominent, her gaze brilliant but unsteady, the eye after resting upon a person always turning itself upwards. The ball seemed convulsed and kept disappearing under the upper lid in a way that is remarked in somnambules and sensitives. Her education and learning differed little from those of her two companions. Dr. Morel having observed that she was a noctambulist determined upon mesmerising her. It is then that my two friends gathered facts of the highest interest. The young girl gave a very detailed account of the habits and customs of her parents and family; but while somewhat confused in her narrative, she succeeded very well in separating from it the phenomena that were due to her own physiological peculiarities. She said that she used to fall into a peculiar state, and then her family and the chiefs of the tribe consulted through her the dead persons she saw around her, and she transmitted to the living the messages she received from the shadows. Is this not a proof of the existence of a physiological law, of the source of every hyper-terrestrial revelation. Doctor Morel sent in a paper upon this subject to the Academy of Medicine. Unfortunately the young Australian died soon after of a fall from a carriage.

Let us now follow the same phenomenon throughout the ages down to our own times. Who of us has not heard of

\* The Sibyl of Cumæa wore on her head a wreath of verbena. We have verified the influence of that plant upon sensitives. Wild verbena excites and intensifies seership, as to the action of the cultivated plant it is wholly a mystery. Let any woman, who can isolate herself, place upon her head a wreath of wild verbena when, writing or doing any other mental work, and she will find herself safe from all bad influences and her faculties will reach their *maximum* of activity. This practice was followed in every Occult sanctuary. In order to test the origin and the intrinsic value of a communication, one must test its justice. The divine is divine only in so far as it is just—said Socrates.

individuals who had personally seen the apparition or the ghost of a person just dead, even though at a distance, and had the genuineness of their vision irrefutably established by subsequent confirmation? Dr. Veillard, well known in the world of science, has often told me of such facts. One of his aunts used to see, during a period of 50 years, the ghost of every person that died in her family—whether in France or abroad; this phenomenon invariably occurred thirty-two times within her personal experience. Therefore, I formulate my demonstration thus:—There are, were and will be born in the human family individuals gifted with a faculty outside of general physiology, to whom the proof necessary for the demonstration of the subject under discussion will be given. "Our men of genius are but so many revelators, seers of the highest order, for genius does not consist so much in explaining that which is, as in discovering that which has to be;" and often identical discoveries occur among people, between whom there is no communication whatever. Genius has no motherland, it is a power which belongs to Humanity. In our age we have to search for Sibyls amidst our social movement. This variety exists always.\* I may cite an example.

George Sand, one of the most extraordinary women of our age—belonged to that variety of sensitives which we shall class under the denomination of "Racial Sibyls." Her life has to be studied and divided into two portions. In the first, every thing is correct and normal: she is a being in the highest state of physiological splendour; as a young girl—she was an adorable creature; as a young woman she became radiant with maternal feelings. But soon her mind and her surroundings became troubled with malefic influences, which led her speedily into a path where she was protected no longer. Her two states, her two selves—her two consciences—soon lose their balance; her gift of seership is no longer prompted into activity by meditation and moral purity, but needs physical and material stimuli which develop in the sensitive unhealthy passions. The powerful energy of her marvellous constitution adapts fatally for her a side-path; her genius soars and is inspired with the purely human, unable any longer to reach the spheres within which lies the Divine. Henceforward, everything in her actions, private or public, becomes eccentric, whimsical, abnormal.† In her literary conceptions the ideal domineers, defying every science of observation.

It not being my task to write Madame George Sand's biography, but rather to throw light upon a certain peculiarity in her life that points her out unerringly as a "Racial Sibyl" (*une Sibylle de race*) I will only add one more proof of it. George Sand could never write her novels during the day nor as soon as the evening had closed. After midnight, she used to retire alone into a dark apartment, where she began to smoke in order to awaken her faculties of seership. Her whole being was then seized with a sensation that led her very soon into a state of complete exteriority (*exteriorisation*).‡ During those silent hours, her hand wrote with wonderful rapidity, and page after page was covered without the least interruption with writing until daybreak. Unconscious of the work done by her she went to bed, to find upon arising, her nocturnal productions which were ever a matter of surprise to her, when she read them. Is not this one of those strange features that characterise the seers of a high order, and—in another and a lower order—the modern psychographic medium? And yet, her genius

\* It is the entire absence of any method which would indicate by scientific classification the differentiated characters of the sensitives, able to furnish us with phenomena of the mesmeric and psychic order, etc., that has ever proved an impediment and obstacle against which every tentative effort has been broken. Will the Society for Psychic Researches of London, represented by Messrs. Balfour Stewart, Sidgwick and Frederick W. H. Myers, be any luckier than its predecessors? A near future will tell.—*Doctor Fortin.*

† An observation justly made by Doctor Azam (*Scientific Essay? in "Folia."*)—*Dr. Fortin.*

‡ Thus on May 15th, 1848, on the day of the invasion by the crowd of the Chamber of Deputies, Madame George Sand, in male attire (a loose coat, *patelot*) and with a cigar in her mouth, mounting upon a barrel in the Rue de Bourgogne, addressed the mob in a long harangue.—*Dr. Fortin.*

§ As the translator understands the unusual term, it must mean with the French author an entire isolation from the divine, and the spiritual, and a complete merging into the psycho-physiological world of inner senses or sensuous perceptions which, unless entirely paralyzed, will always stand in the way of the true spiritual Seer. The first state may be induced through opium, morphia, etc.; the second is entirely due to natural idiosyncracies.

notwithstanding, nothing could be more startling or more sad than the last words of George Sand when dying; "My God I have too much drunk of life!" (*Mon Dieu j'ai trop bu de la vie!*).

I may add that the correspondence of George Sand, lately published, affords us still greater proof of her duality,—her two states, and her *two Egos*. Indeed, who can recognize the author of so many works of genius, in the style, the form and the sentiments of her *letters*, wherein all is so positive, material and lacking method. Women, in general, owing to their organic delicacy and the special physiological functions of their sex, are particularly predisposed to the disturbance and prostration of their nervous system—every manifestation of which is found classed among the neurosis in a confused terminology, which varies in accordance with the age.\* Much suffering is caused by all such disorders, the nature of which is very little, if at all, understood by science but which are due to a surfeited life, infractions of physiological rules and the immorality of our modern society. In the opinion of official science, every individual who accomplishes an action outside the "classical" methods that rule modern society—is an hysterical subject. Note what Doctor Legrand Dussaulle, Medical Jurist attached to the Hospital de la Salpetriere says upon this subject:—

"Hysteria is met with in every class of modern society. Every out of the way action when performed by an hysteric is not necessarily an eccentric one. Those women who are subject to hysteria, are often full of an ostentatious benevolence; they feel the need of notoriety, of calling attention to their charities, and will display a feverish and rather noisy activity. These women come and go and one meets them everywhere; their minds being essentially inconstant and spasmodical. There is the philanthropic hysteric, who belongs to all the charitable associations, to every society of social reforms: such interest themselves in everything, save their children and their homes. After performing a deed of veritable heroism, they will answer candidly to the compliments proffered: "I am not aware of having done any thing unusual, I was not conscious of any danger."† They act pathologically the *role* of virtue and every one is taken in. In short, the hysterical woman is a double edged instrument, that can be excited and fired up for good as well as for evil, but she is bound to abandon the ordinary trodden paths and the monotonous straight line that every one endeavours more or less to follow during life.... Hysteria is a brand and a crushing mark of inferiority."‡

When one thinks that the reputation and freedom of a woman depend on the medical certificate of an official physician, who teaches such doctrines, one is seized with sadness and pity. But in our days woman has lost her exclusive privilege to hysteria. Science, moved, no doubt by the spirit of impartiality, has endowed man also with this disease. We have now-a-days—*hysterical men!* The pseudo-scientific masquerade becomes complete when the false denomination is thus flung at the face of our modern society. It is an insult of revolting brutality, for it includes in the same physiological category the quiet mother of a family, the seeress, *i. e.*, the modern Sibyl, and the courtesan, alike. But hysteria, deserting the nosological frame where science nailed it with the hysterical nail§, now takes refuge in the fishmonger's vocabulary. To conclude: every individual of whatever sex who deserts the classical social programme by some act of eccentricity, whether private or public, is forthwith pronounced an hysteric. Nevertheless, let science and her authorized representatives do whatever they may, that which is now considered by them as a real disease, was utilized by antiquity and regarded as a power—a social potency for good.

Woman transmits and realizes nothing through herself. She gives herself up entirely, Man—never. But woman, owing to her peculiar organisation, gives to humanity the highest mediator between our world and the world of ideas. The Seer, the Sibyl, gives to man a proof of his future life in evoking the human phantom. As virgin, her physiological state will be her tripod, and everything in her acts will be but the evocation of the unknown. In her powerful synergy

\* Thus it has been variously termed "demonolatriy, demonopathia, hystero-epilepsia, hystero-catalepsia down to simple hysteria and the vulgar nervous fit —Dr. Fortin.

† These are certainly the characteristics of a troubled and unconscious gear.

‡ A whole volume has been just published upon this subject by Baillero et fils (*Les Hysteri* by D. Legrand Dussaulle, 1883.)

§ *Hysterical nail* is a modern scientific term.—Dr. Fortin.

she awaits for that which will possess her? Is it social life with its seductions, its passions and abysses? In the depths of the temple this creature, obsessed by every earthly craving, will give herself up to the occult, hoping to find in the mysteries of the revealed science the solution of the most dreaded problems. She will forget the ingratitude, the cruelty of man amidst the crises and the agony of Sibilism. She has been *the* mother in all ages; she is the seeress, and woman in her entirety. Ever dreading for the destiny of the child of her body, she will save him! Enlightened, inspired by her seership, or by her physiological intuition, this creature obsessed by heroism, whether occult, social or maternal, will not hesitate to interrogate death itself in the echoes of the tomb. A revelation, the greatest of all, will be the price of her courageous and sublime audacity. Through the agency of the apparition of the human phantom, the highway to future life will be discovered. Triumphant over the misfortunes of her age: defying persecution and ungratefulness, woman will ever be an obsessed creature, an evocator whose sublimity will be lost in—MYSTERY.

To-day, proceeding from the occult sanctuaries of the East resounds a voice, but Europe in her mad course toward the abyss—heeds it not. Withal, everything gets ready for the great struggle between these two races: the haughty science of the West has denied her direct sire—Eastern Occultism! The current is just becoming irresistible. For the villager, the factory girl, the workmen at the mill, the fatal day is fast approaching when the gigantic machine exhausted and tired of work will stop its wheels, leaving a formidable industrial army, thirsting for life. What answer modern science is prepared to give it, aye, that science always so preoccupied with the discovery of new means to destroy one's neighbours? It is then that will appear in all their majesty the Sibyls of our Race, who will teach through the *revealed* science and the sacred oracles the elements necessary for the restoration of humanity to its proper groove.

#### THE TRANSLATION OF BABU KESHUB CHUNDER SEN.

AMID the galaxy of intellectual stars in the modern Indian sky of thought, the two brightest have, alas! been recently extinguished. It must be many years before such luminaries as Dayanand Sarasvati and Keshub Chunder Sen can again arise. Both Hindus, orators, patriots, scholars; engaged equally in the work of moral reform, though by different methods; loving India with fervency, and hopeful of moulding her moral and spiritual future; they have prematurely dropped their mantles of power and none are able to pick them up and wear them. Alike in so many things, they were as opposed as the magnetic poles in personality, motive and sympathies, Dayanand was an Aryan to the core, and a stern and unyielding advocate of the Holy Veda; Keshub an Indian mirror, reflecting Western ideas, the dreamer of the visions of a New Dispensation, divinely ordered, a new Hierarchy and Apostolic Succession, the key-stone of the arch whose abutments were laid alike by the Jordan and the Ganges. He was a speaker, they say—unhappily the chance never offered for us to hear him—of the rarest gifts. His pure life and brotherly yearning towards his fellow-men, together with that potent factor "personal magnetism," made him loved for himself after the charm of his oratory had died away. Habitual intimacy with Europeans and the refined manners of a true gentleman gave him a reputation throughout the Western circle of thought perhaps much greater than among his fellow-countrymen. In America, no less than in Europe, he is erroneously believed to be the chief of the whole Brahmic Church, and the leader of a vast body of registered adherents. To such, the facts of the most recent Census of India about the numerical strength of the Brahmo Samaj, now being circulated in connection with notices of his lamentable death—will be a stunning surprise. They have not an idea that after a half-century of Brahmic agitation less than 1,500 registered members of the three Samajes, Babu Keshub's, the Adi, and the Sadharan—can be

counted. But the effect of Keshub Babu's eloquence and that of his colleagues and other Brahmic-speakers cannot be measured by the lean figures of the rosters. The current of a new thought is apt to run long and strongly, though silently, beneath the adamant surface of conservative Hinduism before it breaks out into a broad and impetuous flood of reform. Such an inducement there is, not only in Bengali thought but all throughout India. In Bengal it has come nearer the surface than elsewhere, and its murmuring tide can be more easily heard. Brahmoism has done much of this, but not all. Western education, the close contact of the sharp and imitative native with the paramount race, and successful co-operation with it in the administration of public business, have given an enormous stimulus in the direction of a new social evolution. We do not find modern Bengal so spiritual as intellectual, and years must be suffered to elapse before any fair estimate can be made of the lasting effect of the Brahmo agitation upon native religious feeling. From its European flavour, so to say, it seems to have nicked in with Western rather than with Indian social tendencies, and to this extent tended to weaken rather than stimulate the national yearning after spiritual light. Strange that the gifted Founder of the heterodox New Dispensation should have been so soon called away, while his quondam religious teacher and guide, Debendra Nath Tagore, survives him—to serve, let us hope, for many more years as the exemplar of the noblest type of Hindu moral and spiritual character! Truly, the snowy mountain stands and the flowering almond of the plain is cut off in its prime. The death of Keshub Babu does not leave his Society, in so disastrous a plight as that of the great Dayanand has the Arya Samaj. For his cousin and chief Apostle, Babu Protap Chunder Mozumdar, an eloquent, earnest, and indefatigable worker, will now take up his work and do as well as any one after the Founder could have done. But in losing the Swami the Arya Samaj, we fear, has lost all—save the memory of his greatness, his patriotic enthusiasm, his eloquence, and his grand example. Here are two fresh tombs: let every one who believes that for India's best interests agitation means life, and stagnation death, lay garlands upon both. We, contemporaries, cannot fairly write their epitaphs for posterity, for the din and smoke of the present conflict confuses our judgment, and as we chance to be their friends or opponents, we unreasonably become their panegyrists or depreciators. Time alone will decide everything; for as Mackay tritely observes, in one's own generation:—

"The man is thought a knave or fool,  
Or atheist plotting crime,  
Who, for the advancement of his kind,  
Is wiser than his time."

—and this sentiment is again affirmed by the beloved American poet Whittier, who says that—

"Every age on him who strays,  
From its broad and beaten ways,  
Pours its sevenfold vial."

What reformer or philanthropist but has had to learn this truth by bitter experience!

H. S. OLCOTT.

## Letters to the Editor.

### A CONVICT REFORMED.

It may be interesting for the readers of the *Theosophist* to know some particulars of a marvellous case of the reformation of a convict in Ceylon through the instrumentality of Col. Olcott. Peris Sinno was a notorious thief, a house-breaker, cattle stealer, desperado, and a moral wreck. For a long time he eluded the grasp of the Police, and it was only after a great deal of trouble that they succeeded in entrapping and getting him into the clutches of the Law. Even in prison his conduct was so outrageous and violent that he murderously assaulted the keepers, and from time to time the authorities were obliged to increase his term of imprisonment. His persistent misbehaviour was a source of continual annoyance not only to the prison superintendent, jailor, and keepers, but also to the other prisoners. During Col. Olcott's last tour in the Western District of Ceylon, he was earnestly requested by the Theosophists of the Island to preach Buddhism to the prisoners. The convicts having also expressed a great longing to hear him, the President-Founder consented, and the Colombo Branch obtained the required permission of the local authorities. When he went to the Slave Island Jail he was informed as to the character of some of the worst prisoners, and of the reckless audacity of the notorious desperado in question. Col. Olcott had him also brought with the others before him, and began to preach in a most impressive and fervent manner the sublime doctrines of our Blessed Lord Gautama Buddha. He explained in an easy and most forcible way the beauty and importance of the Law of Karma—the keystone of our Religion, as of the Hindus. He also showed most graphically how this Law controlled our future existence. We shall be exactly what we make ourselves, and the Laws of Nature being immutable, every cause must work out its effect. Justice knows no such thing as mercy, and no bribe nor vicarious atonement can efface the bad results of our evil deeds. In the prison-yard near the open window stood a large pair of wooden scales. Pointing to these he showed his auditors how like they were to Karma, and how if we would achieve happiness hereafter we must put an excess of good deeds into the right pan of the balance. While the Law of Karma promised no exemption from the punishment of wrong acts, it gave, on the other hand, the promise of a better state of existence if the course of life were turned to a beneficent channel. He then instanced the case of Angulimala, a notorious outlaw whose story is given in one of the histories of the life of our Lord Buddha. This man had, in the time of King Kosala, grown so powerful in his evil ways that the whole country was in mortal terror of him, and he would even commit his robberies up to the very walls of the royal palace, and defy the king to come out and fight him. Our Blessed Lord, hearing of this, went alone to the offender against the earnest remonstrances of many, and preached to him the Perfect Law so efficaciously that from that time Angulimala became a changed man. And so thoroughly did he change his bad and foolish course of life that eventually he died in the odour of sanctity.

The exhortations of Col. Olcott were listened to by the prisoners with such eager attention that you might have heard a pin drop. The outlaw Peris Sinno seemed to be drinking in every word, and he fixed his eyes upon the speaker with an earnestness which our President remarked, and was deeply affected by. "There is a man here," said he, "like that poor wretch Angulimala; an unhappy man who has suffered enormously through ignorance of this stern Moral Law; one who is the dread of all whom he comes into contact with. Yet he, too, has a heart to be touched and a nature to be melted by kindness. If he were once more in the jungle and armed, I should not fear to go to him and show him his folly and how to regain the path of happiness. The path may be found even by him." When the lecture was finished and the Colonel was preparing to leave, the prisoners prostrated themselves before him with their foreheads to the ground and blessed him. From that day the outlaw was a changed man. He showed such marked signs of reformation that the Government being pleased with his constantly blameless behaviour at last remitted eight years of his period of imprisonment. He is now a free man, and a more honest and truth-loving person than he can hardly

be found in the ordinary world. I met him a short time ago, and was told that Col. Olcott's advice has made a deep impression on his mind, which nothing can efface. His hopelessness of any chance for redemption in this life or of any happiness in a future existence, had made him more and more reckless, but since the time he realised what possibilities were held out by the Law of Karma, he saw that his was not an entirely helpless state, and that his future depended solely upon him. Nothing could now turn him from the path of rectitude, which he finds to be indeed that of happiness. This case is but one example of the good done by our President in Ceylon.

W. D. ABREW, F. T. S.

#### ARCHÆOLOGICAL DIFFICULTIES.

MAY I be permitted to ask what Sanskrit and Buddhist books, printed or manuscript, are of use to an archæological student, in conveying an exhaustive idea of the history, ethnology, and archæology of India, from the earliest times down to the Mahomedan invasion in 1203 A. D. By archæology I mean not only architecture, but the ancient state of civilized life in every respect, such as religion, mode of warfare, style of coins, dress, geography, philology, industrial arts, &c.

What was the alphabet in use in ancient India generally, as also the languages? How many of them are still surviving and how many lost in our national shipwreck? Our Reverend Buddha is said to have learnt sixty-four kinds of letters. Is there no means of learning and reviving them, and is it not possible to lithograph them for the *Theosophist*? In some former articles, mention was made of certain undeciphered inscriptions at Benares, &c. Would it not be good if some body were to copy and publish them in the *Theosophist*, for the cause of historical truth? I shall be the first person to do so if a little light be given to guide me. I have enough of archæological gropings in the dark. No unerring data have I found yet to aid me in my researches.

I beg to be excused for thus putting these important questions, which, I know, cannot be solved in a day. But I want to direct public attention to a subject, which is dear to me and ought to be dear to every patriot. From my very school-days, I have almost intuitively felt, while perusing works on India, that the true history has not yet been written. At least exoteric India is not aware of such a work. What we find is generally one-sided, fragmentary, and otherwise full of guess-work, fair or foul, mostly the latter.

Under these circumstances, I cannot describe what my mind feels when perusing books, that profess to treat on ancient India; a gush of hot breath, whose outer expression is a deep sigh, reverberates my inner system. And shall we continue in this miserable helpless state, when we have guiding angels in the back ground?

Yours obediently,

P. C. M., F. T. S.

*Note.*—Our Brother should not lose sight of the fact that the "guiding angels in the background" cannot work miracles. Admittedly, blind superstition, dogmatic scepticism and ignorant fanaticism reign supreme every where. Can these be dispelled in a few short years, when they are the outgrowth of numberless ages? The "Masters" have taken advantage of every possible opportunity to bring people to do their duty, by bringing the truth to light for them.

Let our brother read some articles in direct reference to his questions in the September, October and November Numbers of the *Theosophist*, headed "Replies to an 'English F. T. S.'". There all that could be said with safety is given out.

They, who can look beneath the surface know that action and reaction being equal, no violent changes can be safely introduced, however beneficial they may appear to be. The utmost that can be done under these circumstances is to give now and then side glimpses, so that those who are capable of rising above the ordinary level and have developed their penetrating faculty may profit by them and thus become more useful to their fellowmen. It is now for such readers to judge whether in the articles already published in the *Theosophist*, they do not find sufficient data to work upon and thus ultimately arrive at a correct knowledge of archæological facts? If the correspondent will do his share of the work, the "guardian angels" may be counted upon

to do theirs. But unfortunately too many people sit in silent expectation of a miracle or vainly talk a good deal but—do nothing.

#### THEOSOPHY AND CHRISTIANITY.

I BEG you will be pleased to publish the following correspondence between me and the Rev. Mr. Miller, the eminent educationist, with such notes as you may think proper. I trust the Anglican and Roman Catholic Bishops will express themselves hereafter as the friends and subordinates of the Theosophical Society.\*

A. SANKARIAH, F. T. S.

President-Founder, Hindu Sabha.

TRICHOOR, 3rd Jan'y. 1884.

M. R. Ry. A. Sankariah to the Rev. Mr. Miller:—

"Theosophy for the purposes of our correspondence may be defined as a description of the soul or Invisible man, who survives the death, burning or burial of his visible body:—*Invisible* means that it is not seen by the bodily senses. You do not maintain that there is no Theosophy in the old Testament of the Jews or the new Testament of the Christians. Every religious book and every churchman has some Theosophy, and the Christian feels himself bound and is largely paid to preach his Theosophy. The Theosophy of one book or church or individual may not be the same as that of another, and the object of the Theosophical movement is to study and weigh all Theosophical notions and expositions. Why should the Christians and the Christian priests, particularly, shrink from hearing and speaking as members of the Society, so that they may have at least sufficient knowledge of what they say outside it or behind its back? In considering all that has been said or can be said of the Origin, Constitution, and Destiny of the Invisible man, we may approve or reject any views logically and honestly, but not abuse the Rev. Mr. Miller, A. Sankariah, or Col. Olcott for stating his views. Christians, and for the matter of that, Hindus and Mahomedans, simply expose their moral and spiritual degradation by abusing a Society founded for study and enquiry, and individuals for having views of their own. Sober and cordial exchanges of views and references to books may serve to remove errors and confirm truths, and I am recommending my countrymen to read also, the Theosophical literature of the Jews and Christians. But if you deny and ridicule Theosophy as Theosophy, you have no religion at all to boast of. I hope and trust that the followers of Jesus Christ will not desert their Master, but declare Him with *peace* and *good-will* in every Society and to every man who invites them."

The Rev. Mr. Miller's reply to Sankariah:—

"I welcome inquiry of every sort, and I hope your Society may have a powerful effect in stirring men up to inquire. I entirely sympathize with your endeavours to break through the mere worldliness, selfishness, and indifference, which are so common among all men—among the professors of Christianity as well as the professors of other faiths, you have all my good wishes in your attacks upon so-called Christians, who are either indifferent to all religion—or intolerant—or self-sufficient—as too many are. I cannot find time to discuss these subjects with you, but one point is worth notice. The aims of Theosophy and Christianity are avowedly different, but not necessarily on that account antagonistic. Theosophy is a thing of Theory—it aims at *knowledge*. Christianity is a thing of practice—it aims at a *Moral change*. I welcome all thought about what is invisible and rejoice in any knowledge of the invisible that any one gains; and I rejoice that you seem to be succeeding in turning the thoughts of many towards such subjects. Christianity of the true type does not oppose any seeking after any truth. But it was not so much to impart knowledge as to change character that Christ lived and died; and it is to effect a moral change in the character of *men* that His followers ought to labour. With all good wishes."—*etc.*

Mr. Sankariah to the Rev. Mr. Miller:—

"The first condition of admission into the Theosophical Society is good character, and knowledge is sought to raise

\* Far be it from us of ever contemplating the latter honour; let their reverences be but friendly and we shall feel highly obliged.—*Ed.*

oneself morally and spiritually. That a man could change character without *knowing* what is character, how to change it and what help Jesus can render, is surely not the motto of the Christian Church. Without knowing the nature of the body, its diseases and their remedies, a man may as well cure the sick! The protest of Theosophists is against such dangerous and ignorant conceit and bigotry. It is a pity also that Christian churchmen and laymen degrade their Master and the Sacred Scriptures by laying no emphasis on the salvation of souls, for there are plenty of educational works on character and morality and justice and truth, ignoring man's Divine Principle. The existence and nature of the soul, the rationale of its sinful contamination and salvation, and the necessity and value of Jesus Christ, are the elements of the Christian Religion which the clergy ought to know and prove on the Theosophical platform. Missions and their patrons should take notice that their Rev. *employes* have no time to do this, but plenty of time to devote to secular teaching and ruin the ignorant with quack prescriptions."

#### CHRISTIANITY IN CHOTA NAGPORE.

THE hopelessness of christianizing the people of India has long made itself patent to thoughtful Europeans. The fate of Missions in India has long been foretold by Sir William Jones. Schopenhauer emphatically declares:—"In India our religion will now and never strike root; the primitive wisdom of the human race will never be pushed aside there by the events of Galilee."

The endeavours of Christian missionaries are infinitely stronger and better planned than were the efforts of the iconoclasts of Ghazni; but their success has not been a whit greater. Of late years in Bengal, a fact has been brought to light which is far from creditable to all Christians concerned. It has been found that the only quarter in which there is any increase in the number of converts, is the western part of the Lieutenant-Governorship of Bengal—Chota Nagpore and Santhalia, inhabited by the wild Kolarian races. In fact, Chota Nagpore has been the Promised Land to Christian missionaries. This is an extremely significant fact—a fact which has just been officially admitted in the Resolution of the Government of Bengal on the Census Reports of 1881, where the Lieutenant-Governor, Mr. Rivers Thompson (notwithstanding his pronounced *pro-patri* proclivities), states that it is "very doubtful whether the apparent increase in the number of native Christians from 36,617 in 1872 to 707,446 in 1881 represents any important increase in the number of conversions. It is only in the Santhal Pergunnas (2,718 against 180) and Chota Nagpore (39,832 against 14,226) that there is undoubted evidence of the spread of Christianity" (*Calcutta Gazette*, Nov. 21, 1883). Now, it cannot for a moment be contended that these 42,550 savages were made to embrace Christianity by the force of conviction. It may be safely asserted, after making due allowance for the number (not inconsiderable) of converts made from among the indigent and the imbecile, that the missionaries raise the great mass of their recruits from among a class of men—peasant-proprietors—who are constantly at war with the great land-holders, and are led by their ignorance to believe that if they embrace the faith of the ruling race, they will have it all their own way in the Courts of Law. It is no fanciful theory that I advance. The fact has been officially acknowledged. A Resolution of the Government of Bengal, dated Calcutta, the 25th November, 1880, declared it to be "an unquestioned fact that many of the latter (the heathen Kols) embraced Christianity merely in the hope of obtaining possession of the lands to which they rightly or wrongly laid claims."

#### THE BAGAVAD-GITA AND "ESOTERIC BUDDHISM."

THE only fault I have to find with Mr. Sinnett's book is that he too often says that: "this knowledge is now being given out for the first time." He does not do this because he wants glory for himself, but because he makes a mistake.

Nearly all the leading portions of the doctrine are to be found broadly stated in the Bagavad-Gita.

The obscuration periods are most clearly spoken of

(chap. VIII, p. 42): "Those men who know the day of Brahma, which ends after a thousand ages, and the night which comes on at the end of those thousand ages, know day and night indeed. . . . xxx. This collective mass itself of existing things, thus existing again and again, is dissolved at the approach of that night. At the approach of that day it emanates spontaneously."

And in (chap. IX, p. 44): "At the conclusion of a Kalpa all existing things re-enter nature which is cognate with me. But I cause them to come forth again at the beginning of a Kalpa."

Dhyan-Chohan state is given in the same chapter. "This they call the highest walk. Those who obtain this never return. This is my supreme abode."

Re-incarnation is stated at (chap. IV, p. 24): "I and thou have passed through many transmigrations." And the return of Buddha in the same. "For whenever there is a relaxation of duty, I then reproduce myself for the protection of the good, and the destruction of evil doers."

Devachan is to be found in (chap. IX, p. 45): "These, obtaining their reward. xxx. Having enjoyed this great world of heaven, they re-enter the world of mortals, when the reward is exhausted. . . . they indulge in their desires, and obtain a happiness which comes and goes."

That knowledge is more important than mere religious devotion, see chap. 4, p. 26, "If thou wert even the most sinful of all sinners, thou wouldst cross over all sin in the bark of spiritual knowledge."

For those who will see, it is all in this wonderful book.

WM. Q. JUDGE, F. T. S.

EDITOR'S NOTE.—We do not believe our American brother is justified in his remarks. The knowledge given out in *Esoteric Buddhism* is, most decidedly, "given out for the first time," inasmuch as the allegories that lie scattered in the Hindu sacred literature are now for the first time clearly explained to the world of the profane. Since the birth of the Theosophical Society and the publication of *Isis*, it is being repeated daily that all the Esoteric Wisdom of the ages lies concealed in the Vedas, the Upanishads and Bagavad Gita. Yet, unto the day of the first appearance of *Esoteric Buddhism*, and for long centuries back, these doctrines remained a sealed letter to all but a few initiated Brahmans who had always kept the spirit of it to themselves. The allegorical text was taken literally by the educated and the uneducated, the first laughing secretly at the fables and the latter falling into superstitious worship, and owing to the variety of the interpretations—splitting into numerous sects. Nor would W. Q. Judge have ever had the opportunity of comparing notes so easily and, perhaps, even of understanding many a mystery, as he now evidently shows he does by citing relevant passages from the Bagavad Gita, had it not been for Mr. Sinnett's work and plain explanations. Most undeniably, not "nearly all"—but positively all the doctrines given in *Esoteric Buddhism* and far more yet untouched, are to be found in the Gita, and not only there but in a thousand more known or unknown MSS. of Hindu sacred writings. But what of that? Of what good to W. Q. Judge or any other is the diamond that lies concealed deep underground? Of course every one knows that there is not a gem, now sparkling in a jeweller's shop but pre-existed and lay concealed since its formation for ages within the bowels of the earth. Yet, surely, he who got it first from its finder and cut and polished it, may be permitted to say that this particular diamond is "given out for the first time" to the world, since its rays and lustre are now shining for the first in broad day-light.

#### TIGER-CHARMING.

I HAVE heard from a good source that there is a Brahman belonging to a family of *Tantrika Siddhas* (adepts) well known in this part of Bengal as the *Siddha-Vidyá* family of *Nahár*, a village in the District of Comillah, not very far off from this place, who can attract tigers from a distance by occult influence, within the boundaries of a circle described by him for the purpose, with earth collected from mouse-holes. (Dried earth from mouse-holes is used extensively in many other practices of occultism. Has it any peculiar magnetic properties?) It is only necessary for him to hear the voice of the tiger as it roars, and by working through this subtle link he will attract the ferocious beast from any distance, and compel it to appear within his magic circle. Does any of your readers know of instances of this peculiar phase of the activity of the *will-power*? For will-power alone must be the active agent in this drawing affair, at least, such is my belief; until persons better acquainted offer me a more complete explanation.

KUNJA V. BHATTACHARYA, F. T. S.

DACCA, 14th Oct. 1883.

## A BISHOP ON THE CHURCH.

THE Bishop of Liverpool opened his Diocesan Conference, yesterday, at St. George's Hall, Liverpool. Having referred in feeling terms to the late Primate, he said that, with the exception of Parker, no Archbishop had ever entered Lambeth Palace at a more critical period and under heavier responsibility than Archbishop Benson. Reviewing the state of his diocese, he said candidates for confirmation have increased from 4,700, in 1881 to 6,200 in 1883, while nine permanent and seven temporary churches had been opened for service, and six would shortly be added. He drew a gloomy picture of the diocesan finances and of the spiritual destitutions of the diocese, and declared his determination to appoint a committee to take active steps to mend matters. Speaking of the Church at large, he expressed his fear that there was no likelihood of the different schools in the church giving way to or tolerating each other, and that unless the God of Mercy interposed the Church could not live much longer, but must go to pieces and perish. He could not see the approaching death of such a grand old institution as the Reformed Church of England without deep sorrow.

His Lordship referring to the Episcopate, said there was no order of men criticised so severely and savagely, and vilified, sneered at, ridiculed, abused and condemned so unceasingly as English Bishops. Unless they were treated with more consideration and fairness, he predicted a day would come when no right-minded man who loved direct spiritual work and hated wasting precious time in strife and wrangling would consent to be a bishop at all.—*Daily Telegraph*.

No doubt it is coming to this: our astonishment is, that any man of a spiritual mind could consent to become a Bishop. Chas. Bright, the great Free-thought lecturer, in addressing a certain Bishop, and upbraiding him for certain Prelatical enunciations, declared that no honest man could be a Bishop. So it really comes to this, that a Bishop and a Free-thought lecturer are of one mind. The gloomy view taken of the Church by the Bishop of Liverpool is simply an echo of the prevalence of public opinion on this head, and we fear our Bishop is trusting to a fallacious idea when his only hope of the vitality of the Church being prolonged is in a God of Mercy. Does the Bishop suppose that a Church that has so departed from the Christ-principle can stand? The Reformed Church of England itself requires reformation, before its vitality can be secured. History repeats itself, and a Church falling to pieces through its own corruption, is no new thing. If Buddha came to reform the Religion of the Brahman, if Luther reformed the Roman Catholic Religion, if the Priesthood of Egypt fell through their own depravity, is it any wonder that the Church of England should collapse, unless she marches with the times? Imagining herself secure in her supremacy, she has failed to advance with the new ideas now prevalent, and instead of resorting to reason and greater liberality of opinion, her leaders have contended themselves with denunciations of those who differ from them, have resorted to bigoted and narrow-minded arguments to defeat their opponents, and have not shrunk from using the auxiliaries of calumny and false statements; nay, they have even put illegal pressure on their opponents, and altogether have exhibited a want of tactics very different to the front shown by the Church of Rome. Now let us take our Bishop as an example. Does he become a Theosophist? No, far from it. He bands together with his bicolored clergy to take "special measures" against Theosophists instead of joining them. Instead of seeking Divine Wisdom he tries to prevent others from doing so. Such are the tactics of the Church of England; is it any wonder we ask if the Church should tumble to pieces from its own inherent weakness? If such are its actions, truly we may say "Quem Deus vult perdere, prius dementat."

REFORMER, F. T. S.

## DEATH OF THE SWAMI OF ALMORA.

[WE read with concern the following communication from Babu Kumud Chunder Mookerji, Secretary to the Himalayan Esoteric Theosophical Society of Simla. The Paramahansa Swami of Almora, whose death is now reported, was the author of those learned articles on Adwaitism in the *Theosophist*, which were opposed by our respected colleague, Mr. T. Subba Row. It is certainly an untimely death. The past two months have made a sad havoc in the ranks of the Hindu religious teachers. From October 30 (1883) to January 4, 1884—some 65 days—died successively Swami Dayanand, the Swami of Almora, and—Keshub Chunder Sen.—Ed.]

I have just received the sad news that the Swami of Almora has left his "mortal coil." He was attacked with fever which lasted for 7 days. He left this for the higher sphere on Monday the 31st December 1883—at 9 p. m. His burial was attended by all the people of Almora and subscriptions are now being raised for a tablet to be placed over his grave. He was loved and revered by all who had the good fortune to come in contact with him.

SIMLA, 5th January, 1884.

K. C. MOOKERJI,

## Requies.

DIE WELTSTELLUNG DES MENSCHEN "THE COSMIC POSITION OF MAN." By Baron Karl du Prel.

DAS JANUS-GESICHT DES MENSCHEN "THE JANUS-FACEDNESS OF MAN." By the same author.

THESE are two short papers, written by Herr Karl du Prel in two out-of-the-way German periodicals. The tendency of the author is to show, what has been so often shown and felt before, that the teachings of science far from leading to Materialism, supply the best proof against it. The reader need hardly be reminded that the materialist denies altogether that man has, or can ever have; either a position, or a relation, reaching beyond the limits of the earth. Now the materialist could have all his own way, so long as philosophers alone told us that our knowledge of nature, in other words, that which constitutes science, is merely the outcome of our subjective impressions and observation; but with the progress of time, science itself has been brought to acknowledge that this is the case. Every man of culture knows now-a-days that the so-called qualities of matter, are nothing more than qualitative expressions of our own organization; that, consequently, all our knowledge is subjective, and unfit as such to enlighten us about the true nature of things. The materialist has, by his own researches, dug his own grave, however much he may refuse to assist at his own funeral.

Our senses do not give us an exact report of what is going on around us, but of what is going on in us. The sound that strikes our ear, does not make us aware that the air around us vibrates; such being, nevertheless, the case, we (materialists or non-materialists) are driven to admit that the auditory nerve transforms for us, a certain fact into a certain other—vibration of air strikes us, not as vibration of air, but as sound. Something similar may be said with regard to the rest of our five senses.

There are two modes of motion, to which none of our senses responds, namely, magnetism and electricity. There are then after all more things in heaven and on earth, than our senses could ever have dreamt of.

Suppose our senses could be made to undergo some change, while the universe remained all along the same, it is evident quite a new world would arise before us, though objectively and materially the world would be exactly the same as it was before.\* Let us suppose that we were endowed with some new sense, say with a sixth sense; how much the more manifold would our very same universe appear to us. Suppose again we were deprived of one of our senses, say of the sense of sight—there would at once be a great and rich portion of Nature disappear to us. So we are after all, with all our boasted knowledge, merely the creatures of our own senses. All our knowledge, far from being positive, is, so to say, a sort of reflex knowledge.

Spectral analysis teaches us that the chemical substances composing the various celestial bodies differ from each other; consequently we can hardly help coming to the conclusion that their respective inhabitants differ from each other with regard to their organisation. Suppose now the school of Materialism to be represented

\* And this is precisely the change claimed by the initiated adepts of Occultism; and that alone is sufficient to account for their great opposition to many a scientific action of modern science and the greater trustworthiness of the teachings of the former. Once that we admit the possibility of such a "change," and as a result therefrom, the greater acuteness and perfection of all their senses—granting even that the 6th and 7th sense do not exist for any one outside those who claim either of them or both, and thus cannot be proved scientifically—we have to admit at any rate that they see, hear, taste, feel, and smell more acutely than the rest of humanity, untrained and uninitiated, how can we then avoid trusting more in their than in our senses? And yet the same traveller who will unhesitatingly trust to the acuteness of the eye or ear of his red-Indian guide in preference to his own—will deny the existence and even the possibility of a series of such faculties being developed in an Asiatic adept!—Ed.

at each inhabited star and planet; suppose there had been a cosmic congress of materialists; suppose the members of the congress had found the means of a mutual exchange of thoughts. Each of them would then give his own cosmic experience according to his own perceptions according to his own organisation; and as his own mode of perception could hardly coincide with that of the others each member being supposed organised differently from all the others, the result would be a cosmic Babel. Every one would leave the congress with the firm conviction that all the rest must be possessed with some sort of hallucination. *Hallucination* is the magic word in the mouth of every Materialist whenever one man professes to have perceived a phenomenon which he, the materialist, in consequence of some modified organisation, cannot perceive. He will not understand that one and the same objective world, may and must appear subjectively different to different organisations.\*

That the individual existence of man on earth is of a far reaching influence upon mankind at large, the materialist freely acknowledges. The theory of evolution teaches that every individual is a link in the progressive chain of future existences. But then, life on earth is after all destined to come sooner or later to an end; the earth itself cannot ultimately escape a similar destiny. Is it compatible with the law of evolution, that the whole life and culture of the human race, and all the forces evolved out of that life and culture should be ultimately lost in the economy of the universe?

Materially speaking we know that our terrestrial globe is by far not so isolated from the grand Cosmos as it would appear to the superficial observer. We are tied by gravitation to the solar system (if only by that!) and we receive light and heat from the sun and the stars. It is therefore not quite impertinent to ask ourselves if it is beyond the range of possibility to utilise those connecting forces as a means of communication between our globe and some celestial body. By means of spectrum analysis we have already arrived at a certain mode of information of what is going on in distant worlds. The idea of a possible existence of some sort of telegraphic communication is, therefore, not so preposterous as it might look at the first blush. We are besides ignorant of many natural forces which might lend themselves to the establishment of such an eventual communication.

Astronomically, our earth and all that belongs to it, form a part of the whole. And should not also the forces active on this earth form a part of the whole? If so, is it admissible, that the highest of all those forces, dwelling in man, should be shut out from the great concert of the universe?

Our conjectures do not end here as yet. For if man's labour and culture are not to be restricted to the globe upon which he temporarily lives; if he is, moreover, to emit forces which work their way throughout the universe; then we must expect some sort of action and re-action between man and the cosmos at large. There is no knowing them, in how far we may really here be influenced by such cosmic intellects, or intellectual beings, who dwell in some other planet. This would apparently land us at the border lands of spiritualism; but we shall soon see that our considerations lead us into some other regions altogether.

\* Apart and quite distinct from the variety in the subjective perceptions of the one and same object—by mankind in general,—stands the *unvarying* perception of the trained Occultist. Perceiving the *actuality*, for him the modes of the presentation of an object cannot vary; for the initiated adept perceives and discerns the ultimate and actual state of things in nature by means of his spiritual perception, trammelled by none of his physical senses, and only when the former have been called forth from their latent into their active state and developed sufficiently to stand the final tests of initiation. Therefore, this abnormal (in our present race only) faculty has nought to do with the common perceptions and their various modes, and if the materialist is sceptical as to the latter, how can he be made to believe in the existence of the former—a faculty of which he knows less than of the man in the moon!—Ed.

There are two ways by which relation between man and the cosmos may be established; either by means of some extraneous forces yet unknown to man or by some forces dwelling in man himself. Darwin's theory of evolution gives us a clue in this respect which is worth pursuing. For it is hardly fair to suppose that the tendency towards higher development has been brought to a stand still in our days. Let us look at the past. We find that the oldest geological layers contain the simplest forms of life, the recent ones the more highly developed forms. This is one fact pointing to the theory of evolution. There is, however, yet another fact connected therewith of no less importance to the theory of Darwin. It is namely this, that in each such conformation of the past, we can detect certain traces pointing to its immediate predecessor, and certain other marks pre-figuring that higher conformation into which it is destined to develop. Any member of the chain of animal forms looks, then, so to say, half to its past, and half to its future. An example of what has been said we have before us, in the conformation of the foetus; there we see an organism provided with all what is necessary for its foetal existence, *plus* such other organs, or indications of organs as shall be necessary at the successive stages of its future development.

The conception of a transcendental world lies then actually within the conception of evolution. For what appears now to be real to us, is actually a sort of world that could not have been real to man in a stage of earlier and lower development. To him with his deficient organization a world, as we perceive it now, could only have been conceived by a great effort of imagination, in other words, what has been transcendental to him, has become a reality to us, in our higher state of development. Unless then the materialist is prepared to maintain, that man has come to a total stand still in his development, he has no right to say, that all our knowledge of the universe begins and ends with the range of our five senses as they are now constituted. If the materialist can ever make up his mind to be sincere and consistent with himself, he must humbly acknowledge that he is a most obstinate philosopher, who will not see that he is destined to see more and to know more than he actually knows, in the measure as he is carried on by the stream of progressive evolution.

But there is not only progressive evolution awaiting us with regard to our five senses, which are after all but the out-posts of inner life, but no less with regard to that inner life itself. No materialist can deny the existence of a consciousness—a faculty which, in the order of things, must no less be capable of further evolution. Already we perceive, in some exceptional cases, the signs of what is to come. Somnambulism, mesmerism, presentiments, show us, in which way the higher faculties of man are destined to develop. They show a disposition in man to a mode of cognition which stand half way between reality and transcendentalism. What has the materialist to say to the following fact, as recorded in the judicial proceedings of the Courts of Vienna? The *Neue Wiener Tageblatt* (January 13, 1881,) informs us, that in a case of murder, where the police could find no clue, the same was given by a man who dreamt a dream—a dream, which turned out to be the truth, and gave rise to the discovery of the murderer. Goethe tells us, in his "Truth and Fiction," that he has seen his own double self, riding on horseback, in his grey coat. Heinrich Tschocke could sometime before his death, tell any man the history of the life he lived from his youth. And Goethe and Tschocke have been as wise and as good men as any of our materialists living.

Of whatever nature the chain of forces may be, by which our earthly existence is connected with the cosmos; there is, therefore, good reason to believe, that one, and perhaps the chief link in that mysterious chain, is to be found in our INNER SELF.

ED. NOTE.—These extracts from the two German pamphlets have been kindly made for us, by our brother Dr. L. Saltzer of the Calcutta Theosophical Society. They are profoundly suggestive *per se* and go far to prove the theory of the simultaneous evolution and growth of the same ideas on various and widely separated points of the globe. In our next we hope to give the summary of an article "DIE PLANETEN BEWOHNER," by the same author, the latter having kindly sent us his valuable publications for review. As remarked by our Brother, Mr. Gustave Zorn, of Odessa, after reading these works, one is tempted to ask himself in wonder: "Is Baron du Prel, a disciple—a European *chela* of our Himalayan sages that his thoughts should seem, so to say, photographed from *their* (and our) doctrines!" Truly the author of the work reviewed is a born Theosophist,—or shall we say OCCULTIST? At any rate, here we have one more profound and unprejudiced thinker. May our present race evolve many more such philosophers for the greater glory of TRUTH!

REMARKS AND THOUGHTS ON BUDDHA AND EARLY BUDDHISM,

by Arthur Lillie, (Late Regiment of Lucknow).

By DHARANI DHAR KAUTHUMI, F. T. S.

OPINION seems to be divided in this country as to the value of the Oriental research and scholarship of the West. A class of Hindus there are who overflow with gratitude to the indefatigable scholars and mousing antiquarians of Germany and other European countries, for rescuing the intellectual wealth of our country from the waves of oblivion. There are others again who as vehemently maintain that the study of our ancient literature by foreigners is an unmitigated evil; that it perverts the minds of a large and influential section of our countrymen by a chronology made to fit Western prejudices, by false and fanciful interpretations of our sacred writings, which unfortunately for us we have very few means of correcting. Without committing himself to the extreme views of either party, an impartial critic is bound to admit that there is truth on both sides. It cannot be denied that the violence done to our most deeply cherished traditional beliefs by the gross misinterpretations put on our Scriptures by European Orientalists will have, and has already had, a healthy and beneficial effect on our minds in stimulating inquiry and leading us to a more enlightened and extensive study of the Sanskrit language and of the works of the wise men of ancient India. But so long as the effects of revived indigenuous scholarship do not begin to be more pronounced, the results produced are more often deplorable than otherwise. The learned pundits of our country, to whom Sanskrit is hardly a dead language, have no opportunity of being heard, in their ignorance of Mlechha tongues; and the learned men of the West by the clever stratagem of denying to our pundits and priests any knowledge of our religion and literature, have succeeded in heightening the enjoyment of that fool's paradise, with which they have surrounded themselves.

These observations receive a peculiar force from the publication of the work under notice, and its reception by a certain class of English readers. Startled at first by the unusually large amount of mistranslations of Sanskrit words, of false notions and arbitrary interpretation, the editors of this magazine mistrusting their own knowledge, sent the work to persons more competent than themselves to pronounce an opinion upon it—namely, to excellent Sanskrit and Pali scholars, certain Southern and Northern Buddhists. The answer came, that to point out and explain conscientiously the numberless mistakes in the little 8vo. volume would necessitate three like volumes, at the least! Therefore the work was put aside and never reviewed at all. But, since Mr. Lillie comes forward in *Light* with an assault upon Theosophy, the Theosophists and their Masters, it is time that some one should raise the voice and show the Spiritualists along with the general public what Mr. Lillie's work is worth.

I propose, therefore, to examine carefully "Buddha and Early Buddhism." The first two chapters alone, re-

viewed *seriatim*, will, I feel sure, show very good reasons why, we Theosophists call Mr. Lillie's "Exposition of Buddhism" not only "exoteric" but decidedly *fantastic*. The author's pretensions, coupled as they are with a very indifferent knowledge of Buddhism and Brahmanism, and a complete ignorance, as it seems, of the value of Sanskrit terms, appear even to the average Shastri and Pundit certainly somewhat amusing, if, perhaps, also a little mischievous, inasmuch as they pervert and darken finally the general notions of the Western profane. As said above, anything like a complete exposure of the grotesque fantasies of Mr. Lillie being utterly impossible, and an elaborate review of all his fallacies requiring more time than I can command and greater space than the editor would be willing to allow, I shall content myself by bringing to public notice only some of his most glaring inaccuracies. My comments shall be necessarily brief.

In the second paragraph of the initial page of his book bent upon proving Buddhism—against all Buddhists and Pali scholars—a theistic system, Mr. Lillie observes:—

"In the Vedic hymns two distinct forms of religion are traceable—the religion of the prophet (Rishi) and the religion of the priest."

I would not presume to fathom the depth of Mr. Lillie's Vedic scholarship: but this much might be safely asserted, that the idea of a prophet will be found nowhere in the Vedas, the real division being between lay priests and the devotees called *Brahmavadis*—the only exponents of the esoteric doctrine. On the next page we are told:—

"In Vedic days the number of the heavens was seven."

And again mention is made of "God" and his seven "eternal heavens."

We answer: the Vedic writers never spoke of "eternal heavens," but of seven eternal states beyond all the heavens of which there are not *seven* but *fourteen*, beginning with Swarga and ending with Brahmaloaka. None of the latter is *eternal*, even their presiding powers being subject to dissolution at the end of the Mauvantara. The further mention of "God's seven eternal heavens" in the Bagavat-gita, shows at all events that the idea of the seven permanent states is not confined to the "Vedic days alone." Says the author on the next page:—

"In the Bagavat-gita the great spiritual enlightenment, which it is the object of all devout Asiatics to obtain, is called knowledge of the *eyubol umbrella*."

Hindu pundits would feel seriously obliged to the author, were he to show where it is so stated? We can only wonder deeply at the cool assumption. On page 3 we read:—

"Chaitya and Chattra were perhaps once the same word."(!?)

It is very unfortunate that the author should not have disclosed the grounds of such an original belief, as they would certainly have set the teeth of old Panini on edge!

Turning the page over we find there some other most curious statements. For instance:—

"1. God is imaged as a man sitting under an umbrella.  
2. The living Saint on acquiring the *Bothi* or knowledge of umbrella has an umbrella presented to him."\*

First of all it becomes necessary to ascertain *which* God of the many is here referred to? It is true that Rama and Krishna and other god-men, believed to be Avatars of Vishnu, are represented with an umbrella spread over their heads. But it must not be forgotten that while gods they are also earthly kings, or rather that they are crowned heads and as such entitled to the honour. A flood of light may be thrown on the subject, if we consider carefully the meaning of the Sanskrit word *Ehachhatra* (one umbrella). It is only when a king had subdued every one of the neighbouring princes that he could force them to sit in

\* Not in Hinduism surely.—D. D. K.

his presence without an umbrella, he alone enjoying the privilege, a mark of his supremacy. Mr. Lillie has disdained to cite his authorities for this, as for all other assumptions made by him. Perchance, he imagined the fact too well known to require corroboration. But for all I know—and I have consulted many a learned pundit in the present case—such assertion is nowhere warranted by any Brahmanical or Pali Buddhist work, for the matter of that. Next we are told that:—

“In the Indian religion God is imaged as a man sitting under a tree.”

Not generally so. Maheswara (great God) or Siva is usually conceived as sitting at the foot of a large Banyan tree. But here, as every Brahman initiate knows, Siva is the germ from which springs the sacred *Vata* tree (the Banyan) the tree of true knowledge. So far even a part of the esoteric meaning implied has remained concealed for the European Sanskritist.

The Brahman priest of the Vedic period is spoken of as “a politician.” Considering the apotheosis that our native statesmen, experts in state-craft, are receiving daily at the hands of western people, this is, no doubt, a great *post-mortem* honour conferred on the humble son of Brahmá. His descendants, however, are too honest to appropriate for him titles that do not legitimately belong to him, since the Vedic priest was never a politician. On page 5, we read:—

“The feminine principle, matter, the earth, the universal mother. She is the Sophia of Gnostics,\* Cabalists, etc., and was represented as feminine in the Catacombs by the early Christians. In Buddhism (?) she is called Prajñá, an exact verbal equivalent for Sophia.”

Here, the ground is more secure for us. If anything is not cosmic matter, or *Prakriti*, it is *Pragná*. We do not know on what authority Mr. Lillie seeks to deny the possession of the word *Pragná* to the Brahminical system, to confine it entirely to “Buddhism.” As with the latter, *Pragná* is simply the “manifested wisdom,” so, if he refers to *Mundukyopanishad* he will find at the very opening the following:—

“This *atma* (*jivatma*) has four aspects... On the plane of sensuous perception it is known as *BAHUPRAGNA* (the capacity of objective perception or consciousness).” From this it is perfectly plain that if any distinction is to be drawn between the numerous aspects of the One Element of Hindu philosophy, *Pragná* is no more matter than white is black. Nor has the word any other meaning in Buddhist philosophy as will appear from a passage from “*Nama Sangiti*,” which Mr. Lillie has with suicidal imprudence extracted further on (p. 15). The passage runs thus:—“He (Adi Buddha) is the creator of *Prajna* and of the world, (or he made the world with the assistance of *Prajna*).” Whatever may be the correct rendering of the passage, one thing is perfectly plain: *Pragná* is not the Earth, nor is it matter.

The author represents the Vedic triad to consist of Daksha, (which he spells Daxa) the father, Aditi the mother, and what he calls the solar god-man (p. 6). The most learned Vedic Pundit would despair of finding authority for such a grotesque combination. Daksha is never the husband of Aditi who was the wife of Kasyapa. This word has esoterically a very mysterious and suggestive meaning: Read backward this word becomes *Pasyakat*—witness and stands for “witness-spirit” or *Puru-sha*. His attempt to identify the third member of this triad (the solar God-man) with Yama is very unfortunate and perhaps slightly ridiculous. Yama was never considered in Hinduism a man and is the deity presiding

over Death. Even Max Müller says in *India, what it can teach us*—

“His (Yama’s) Deva-like nature is never completely lost, and as the god of the setting sun he is indeed the leader of the Fathers but never one of the Fathers himself.”

The Yama of Zenlavosta, dragged down to the level of terrestrial man, Adam, was simply the weapon of one who tried to show his enmity to the Brahmaical system, from which he had seceded, by converting all the Hindu gods into evil spirits.

One of the greatest escapades possible is committed on page 7:—

“No wonder that the symbol of god and the situation of paradise got to be associated with this (pole) star.”

Read in the light of what the author says on page 10 about “the Nandana paradise at the pole,” it is plain to what paradise he alludes. But Nandana is unfortunately *only the paradise of Indra*, who was certainly a long way off from God!

On page 10 we are told that:—

“The solar God-man is the son of God but also the son of earth (Aditya).”

To begin with, Aditya never means “the son of earth”—not in Sanskrit at all events. It simply means the son of Aditi, the primeval Father and Mother, the bisexual principle in nature. Does the author force this parentage upon the “God-man” because Aditi is represented in the Rig-Veda as dividing into Nara and Nari, the male and the female principle, and that unluckily for Mr. Lillie the word “Nara” also means a “Man”?\* Then he speaks of the Adityas being seven in number (page, 11); a grievous mistake, as every man woman and child in India know; for these Adityas are twelve.

Again on page 12 we receive the startling news that Kapila, the philosopher, “is one of the seven Rishis.” These Rishis’ respective names being—Marichi, Atri, Angiras, Pulasta, Pulaha, Bhrigu and Vasishtha, we beg to ask which of these is Kapila.

“*Padmapani*” is translated by the author as “Lotus-bearer,” when its correct translation would be “the Lotus-handed” or “having a lotus in the hand,” the image showing that it is the creative power of the universe, which is always symbolized by the Lotus. Aditya is not “Vach” or vice, however much the latter may be in Aditya. It amounts to saying that the key-notes of nature and space, are one and the same thing because that key-note is in space. We may take leave of Chap. I, with the remark that all the septenaries given on its last page prove but too conclusively that the author had never the slightest acquaintance with the real esoteric meaning of any of the septenaries of the true doctrine.

In Chapter II, Mr. Rhys Davids is criticized and taken to task for teaching that the “Nepalese idea of Adi Buddha is not earlier than the 10 cent. A. D., and is due to the influence of the Gnosticism of some Persian Christian.” Mr. Lillie has certainly the better of Mr. Rhys Davids here; for the ancient Rishis spoke of “Adi Buddha” thousand of years ago; and Gaudapada (begging the European archaeologist’s and chronologist’s pardon) who lived before Gautama Buddha—speaks of Adi Buddha in his celebrated *Karika* on *Mundukyopanishad*; but at the same time the attempt made by the author to prove the theistic basis of Buddhism from the answer made by Mahagodda Oenase, the chief priest of Ceylon, to some questions put to him by one of the Dutch Governors of the island—is no less fallacious. If the author had taken the trouble to make inquiries in Ceylon as Colonel Olcott has done, he would have easily found that during the time of the Dutch there were no learned priests in their dominions, as they were perscoted and had to seek

\* *Sophia* of the Gnostics—“matter, the earth”!! What Gnostic, or Kabalist would ever concur in this wild notion? This is materialism with a vengeance. *Pragna* or wisdom is certainly the *Sophia* of the Greeks, but both are the sum total of universal spiritual wisdom—Ed.

† This word is sometimes used to denote the Sun.—D. D. K.

\* For clearer comprehension we offer for comparison the counterpart of this mythos, in the Jewish Bible and the Kabala. See Chapter I of Genesis “male and female created he them,” and ponder over what is given of Adam Kadmon, the ancient of days, &c.—Ed.

refuge at Kandy and Matara. The "Supreme God" spoken of by the ignorant Mahagodda is the Hindu Brahmá, introduced in Ceylon by the Tamil kings. It is simply preposterous to set up the authority of any priest or layman against what is admitted to have been said by Lord Buddha himself in an authoritative ancient Sutra, namely, the *Brahmajala Sutra*, to the effect that there is no such being as the "God" (of Mr. Lillie.) In spite of this the author says in his innocence (p. 122) that the priest who declared a belief in a "God" was evidently well-versed in the old Buddhist scriptures. The statement in the "Lalita Vistara" to the effect that Buddha prays to Brahma and invokes his aid in his great battle with the "wicked one," is made to do the duty of a fresh proof of the existence of a "God" in early Buddhism, utterly regardless of the real meaning attaching to the name Brahma.

Quite true, Buddha prayed to (more correctly meditated upon)\* Parabrahma, not Brahmá the Creator, who, again, in the Esoteric Doctrine is but the *Universal* or Demiurgic Mind, as called by some Western philosophers. On page 19 the sacred formula of the Buddhists is given thus:—

O'm mani padme hom (*sic*)

—And is translated as meaning, "oh holy triad; oh pearl in the lotus!" One does not really know whether to feel perplexed at the spectacle of such

"Pompous ignorance,  
Armed with impudence,  
As with triple steel,"...

or to give vent to a hearty laugh at the Ossa upon Pelion of absurdity exhibited in the work! Though it may look like an insult to the general reader to translate for him the too well known formula of faith, yet we feel bound to seriously attempt to set Mr. Lillie right. Literally translated it means "oh the jewel in the lotus," but what have the "holy triad" or "pearl" to do with it? In esoteric phraseology the jewel stands for the pure enlightened spirit, while the lotus is the symbol of creation or cosmic evolution. The true significance of the mysterious formula is that there is no *extra cosmic God*, no *individual* divine Spirit, save the *Universal* Divine mind in Cosmos descending from the Dhyan-<sup>ic</sup> hohanic host upon mankind in its collectivity, and culminating therefrom in its cyclic progress back to Adi-Buddha—its primeval source. This one thing when rightly understood will knock down all the aerial castles built on the theistic basis of Buddhism. Lower down on the same page Mr. Lillie says:—"the fatherly procreative principle" is also called *kshetra*," whereas *kshetra* is always the female and *never* the male procreative principle.†

Not less clumsy is the author's attempt to connect the name of Gautama with "god" and make it identical with Amitabha (p. 18.) Is he aware of the fact that "Gautama" was never the personal name of Siddhartha, but, only of his *gotra* or clan, which has thus to become divine *in toto* on the principle of Mr. Lillie's speculations?

After some more fantastic speculation with regard to the symbols,—MAKARA, KURMA, SESA, &c., Mr. Lillie identifies the Solar God-man with Vishnu (p. 20.) Thus it is no wonder that losing his way in such a tangled jungle of identities he should mistake for a tortoise the Devas and Asuras, who churned the Ocean with the serpent's body for their churning rope, and Mount Mandara as the churning-stick. Upon the authority of Sir W.

\* If the original word is derived from the root *sad* with the prefix *upa*, it is quite wrong to translate it 'pray,' as even Max Müller now maintains. See his translation of *Chhandogya Upanishad* (Sacred Books of the East, Vol. 1.)

† Mr. Lillie is evidently ignorant of the meaning of the term "Kshetra." Exoterically it means simply—"field," while esoterically it represents "the great abyss" of the Kabalists, the chaos and the plane, (*cteis* or *yoni*) in which the Creative energy implants the germ of the manifested universe. In other words they are the Purusha and Prakriti of Kapila, the blind and the cripple producing motion by their union, Purusha supplying the head and Prakriti the limbs.—Ed.

Jones, the female principle in nature is called the "Spirit of God:" the word used by Manu being, however, *apah*, i. e., the boundless ocean of undifferentiated cosmic Matter, which is quite a different thing.

The author's cool assertion that, "the word 'Buddha' in esoteric Buddhism always means God"—must be classed with the same arbitrary speculations as all others given to us by him. "Buddha" in esoteric Buddhism and Brahmanism means "*possessed of divine wisdom, or enlightenment*"—and nothing more, the attribute and the entity in its possession being two distinct things.

In connection with the word "Buddhamatra," Mr. Lillie informs us in addition that "*Matra*" means "mother," and "matter" in "Sanskrit" (!) I am strongly tempted to think that "Sanskrit" is here a misprint for the language of Gulliver's Yahoos. "*Matra*" is a very common Sanskrit word, meaning the adverb "only;" the phrase "Buddha-Matra" like "*Chinmatra*," &c., means pure or nothing but, Buddha. Sankaracharya says our Atma is *Bodhamatra*, meaning thereby that it is nothing but pure wisdom. But an acquaintance with the value of Sanskrit terms is not evidently a strong point with Mr. Lillie. Groping in the dark he stumbles (p. 22) on the word "Upay," and proclaims it as also meaning "God." Now even a tyro knows it simply signifies "means," or "expedient." A little below the author states that "Buddha... was born on the 25th December, like all Sun-gods." What Sun-gods are here alluded to? Krishna was born when the Sun was in Leo and Rama when in Cancer; but in the Esoteric Doctrine both Rama and Krishna represent the Sun—the golden germ, Narayana. The elephant no doubt supplies more than one simile to the Vedic Rishis; but certainly the Solar God-man is never symbolized by that animal. In point of fact, it is the lion that supplies the symbol in question. On pages 23-4 Mr. Lillie enshrouds again the "word" *Marttanda* with the playful shadow of his fantasy; the word under discussion, in Sanskrit at any rate, having always meant the Sun. In the esoteric doctrine *Marttanda* means the "central Sun," whose rays infuse life into the lifeless egg representing the universe. Our author, however, quietly takes it to mean "the egg of death!" Still further down he thinks that the word *Karma* in the expression *Chula Karma*, (signifying the ceremony of tonsure of the Buddhist Bikkhus)—is the same as *kurma*, a tortoise (!) It does not require even an inkling of Sanskrit, but simply some knowledge of Hindu rites and customs of the present day to know perfectly well that *Karma* means a "ceremony."

On the strength of an invocation (p. 29) to "those bosom-reared sons of Sugato (Buddha) who overcame the dominion of death," (Maro), Mr. Lillie comes to the happy conclusion that "Plainly in his (Buddha Ghosha's) days there were *dead saints*." Plainly, whatever the newly coined expression may mean, it does not mean "dead saints" at all, the passage, in truth, referring only to those who attained Nirvana through Buddha, or *Bodhi*. Nor would Mr. Lillie,—were he acquainted with esotericism, have ever accepted the word *Sangha*, as meaning "congregation." It is a later coined word mis-spelled and mispronounced. *Sangha*,—is a modification of *Sanga*—the mystic union of the bisexual Father and Mother principles.

It is perfectly ungracious to lengthen the list of mistakes although it admits of prolongation almost indefinitely—the book from page 1 to page 251 being a long series of blunders. But I think sufficient has already been given to allow the reader to have a foretaste of what he is to expect. Useless to remind that on such very erroneous and misconceived premisses no conclusions can possibly be correct. We invite "M. A. (Oxon)" to meditate upon this.

Now to pass to the main issues raised by Mr. Lillie. His theses are (1) that early Buddhism was not agnostic; (2) that it was theistic. We must do the author the justice to say that he maintains the first thesis success-

fully against the Orientalists, who would limit their investigations to the Southern Church of Ceylon, Siam, and Burmah. But with regard to Buddhist theism, Mr. Lillie will be surprised to find he has proved more than he had bargained for. Instead of one "God" that Mr. Rhys Davids and his school deny to Buddhism, early or late, Mr. Lillie has invested the followers of Sakya Sinha with an abundance of gods.

First of all the author seeks to establish the theistic basis of Buddhism from the inscriptions of Asoka. The word "God" no doubt occurs in the translation of the inscriptions made by Prinsep and others; but we may be excused if we have the temerity to doubt the accuracy of the translations. This is not merely a piece of wild supposition on our part as we proceed to show. The first inscription cited by Mr. Lillie contains an exhortation "to confess and believe in God who is the worthy object of obedience." This is apparently a strong point in support of Mr. Lillie's views; but when the translation is checked by the original as given by Prinsep in parenthesis after the words I have quoted above "*Isānimeva Mānyatā Māmani*"—one would look for the word "God" in vain in the original, which speaks only of the "Lords." The word "*Devauampiya*" again, means the "Beloved of the gods"—not of "God." In another inscription given on page 62 we read:—"Those gods who during this time were considered true gods in Jambadvīpa have now been abjured." These and numerous other passages of the same import that might be pointed out, may as well be taken to prove that Buddhism was essentially polytheistic. Now we shall show from some of the extracts made by Mr. Lillie himself what kind of a god the Buddhists believed in. "He (Buddha) remembered that before his birth the gods had always saluted him as the chief of gods." This Buddha again is represented in a doctrine which Mr. Lillie takes to be the corner-stone of the Buddhist faith as follows:—"Tathagatas (Buddhas) are only preachers. You yourself must make an effort." The Buddhas, then, being "*only preachers*," or wise mortal men, and at the same time superior to all gods and receiving their salutations, we only ask if such a being as a mortal preacher can be burdened with all the connotations of the English word "God?" Of Mr. Lillie's threat in *Light* to "turn the tables against the Theosophists," no more need be said than that he is likely only to overturn himself in attempting that feat. Indeed he says:—

Buddha's movement was not Quietism but a protest against the Quietism that he found in India. His "beggars" in rags were ordered to preach Dharma to every nation under Heaven. A second school of Buddhism arose which restored the ancient Quietism and Occultism. If the 'Brothers' of Tibet are due, as claimed, to the movement of Tsonghapa, they must belong to this school. I know that my exposition of Buddhism is called "exoteric" by the Theosophist. I might turn the tables and show Tibetan books which lay down the mystification which the tyro is to be the first of all amused with, before he is told much. I will, however, content myself with pointing out that my "exoteric" Buddhism won India and the "esoteric" Buddhism lost it (*Light*, Dec. 15, 1883.)

Note well this. As many self-contradictions as there are lines. Had the learned Orientalist told us that Buddha's movement was a protest *against the exclusive Quietism and Occultism of the initiated Temple Brahmans*, and that his "beggars" were sent to preach the good law showing that every man of whatever caste, race, or nationality had in him the possibility of becoming a *Dikshita*, (initiate) a Brahman and a 'son of god' and "develop the so-called god-like" powers then he would have uttered a well-known truth. As his assertion now stands, however, he is giving a flat contradiction to his own words and the numerous assertions scattered throughout his "*Buddha and Early Buddhism*."

On page VIII. of his *Introductory*, for instance, the Buddhism of the south, the Ceylon church, is called "an agnostic school," and is admitted by the author to be "plain atheism;" while the Buddhism of the north which developed centuries later, is spoken of as the "gnostic

school." This, the author on the authority of his "nine years' study of Buddhism," proclaims an erroneous conclusion (of Mr. Rhys Davids and his school, apparently), adding that his own conviction is "that the agnostic school of Buddhism (to wit, the goddess, *anti-Quietist* School, not Quietism but a protest "against" it, as he expresses now in *Light*) is the later development. Can anything be more completely self-contradictory in the face of the following? On page 131 *et seq.* we are told by Mr. Lillie that:—

"The weapon of Buddha was a much more formidable one, SECRECY. We learn from the Asoka columns and from the Buddhist narration that *rites of initiation* had to be gone through among his disciples.... There is no trace of any organised martyrdom of the Buddhists, on the other hand there are frequent allusions to "mysteries," "initiation," &c.

Then comes (page 133) Mr. King's account that "in the Western world" Buddhism emerged in the form of a number of mystic Societies, Mithraism, Essenism, Therapeutism..... Templars, Rosicrucians and modern Freemasonry..... a secret Society established in China from the earliest times..... a Society of "Brothers," the rites of initiation taking place in caves, and so on. —(*Buddha and Early Buddhism*.)

Does all this tally with his declaration in *Light* that early Buddhism was "a protest against the Quietism" and "Occultism of the Brahmans?" and that "if the Brothers' of Tibet are due to the movement of Tson-ka-pa, they must belong to this (*i. e.*, the later) school?" To this flagrant contradiction we have little more to say. We, of the inner ring, declare, and are ready to prove that Buddha's movement was a protest, only against their exclusive system of initiation into universal truths permitted but to one caste and shutting out all others. The "second school of Buddhism... which restored Quietism and Occultism"—so far as Tibet is concerned, is certainly due to Tson-ka-pa. But he restored merely the original Buddhism, or "Enlightenment," of Gautama Buddha, the study of the Occult Sciences or *Brahmavidya* in all its primitive purity. It was he who combined and welded into one Brotherhood, that which became from that day the visible objective body with its invisible but ever manifesting soul—the *exoteric* gelukpa lamas, and the *esoteric* group of adepts and Mahatmas. The latter since the death of the One Great Master had gone to live in strict seclusion among the "Great Masters of the Snowy Range," the ancient pre-Buddhistic Brahmagnanis, who, for the same reason as the one which inspired Sankaracharya to correct the mistakes made by Gautama Buddha, did not choose to become Brahmavadis.\* This, which is plain to every Brahman, will probably remain very vague to Mr. Lillie. At all events, did not space forbid any further dissection of "*Buddha and Early Buddhism*," we might have with the greatest ease not only "turned the tables" against Mr. Lillie, but simply placed an extinguisher on the uncertain flickering flame of the penny rush candle he so innocently offers as a "light," and thereby snuff it out of existence for ever. Surely no one would deny that besides his few "Tibetan books which lay down the mystifications, &c.," and which by the bye have succeeded in mystifying but Western Buddhist scholars,—there are innumerable other books—a wealth of *secret* works which no European eye has ever been permitted to behold—in the libraries attached to every Gonpa or Lamasery? Before pretending to overturn the little that was hitherto learned of real Buddhism by his Western colleagues, Mr. Lillie might do worse than study the true meaning of Sanskrit terms even in their *exoteric* application. As to the Theosophists they are content to abide by the teachings of those who are now the sole representatives of those

\* In the *Adi Parva* of the "Mahabharata," Pandu is told by the Rishis in whose company he was travelling, that "no man living a worldly life could go beyond a certain limit into the country lying to the north of the Himalayas (Uttarakuru, or Tibet). The age then of the Mystic Brotherhood of Tibet does not date from the time of Tson-ka-pa, who but brought about a reconciliation between the old pre-Buddhistic Brahmacharyas and the more modern *Bauddhacharyas*."

Bodhisatwas who rescued Buddhism, neither "exoteric" nor "esoteric," but the one real and true Buddhism of Siddhartha Buddha—the LIGHT of ASIA and of that portion of humanity, we might add, that has the capacity of comprehending his lofty and sublime philosophy.

#### THE THEOSOPHISTS AND IRENÆUS.

THE Rev. Editor of the *Christian College Magazine* comes down short and heavy upon Col. Olcott. He speaks of somebody's "invincible ignorance" and remarks that "on the same footing may be placed Colonel Olcott's great discovery that Irenæus wrote John's Gospel."

Now the *Magazine* in question is a most excellent periodical, and its editor no doubt a most excellent and estimable gentleman. Why then should he become guilty of such a—begging his pardon—gross *misstatement*? Colonel Olcott has never meant to convey that Irenæus—the hypothetical Bishop of Gaul, (whoever he was) whose singularly uncritical and credulous character is noticed and admitted on all hands even by Christian Apologists—could have ever written the ideal composition so full of beauty and poetry that passes current as the fourth Gospel; but simply that the too zealous father of that name, caused it to be written and to appear in order to gain his point over the gnostics and heretics of his day. Again, that these "heretics" rejected the fourth Gospel when it appeared, as they had denied before its very existence, is told to us by Irenæus himself (*Adv. Her.* iii. 2, 9.)

It is a dangerous discussion to rush into for theologians. It is too late in the day to deny that which has been so generally admitted by nearly every Bible critic as well as by some Apologists themselves; namely that the fourth Gospel is the production of a totally unknown, most probably a Greek author, and most undeniably a Platonist. Dr. Ewald's attempt to attribute the fact of the Gospel bearing no signature to the "incomparable modesty" of its author, the apostle John, has been too ably and too frequently upset and shown frivolous to justify any lengthy controversy upon this point. But we may as well remind the learned editor of the *C. C. Magazine*, who so generously bestows epithets of ignorance on his opponents whenever unable to answer their arguments—of a few facts too well known to be easily refuted. Can he deny that for over a century and a half after the death of Jesus there was not one tittle of evidence, to connect the author of the fourth gospel with the "disciple whom Jesus loved" him who is held identical with the author of *Revelation*? Nay, more: that there was no certain trace even unto the days of Irenæus that such a Gospel had ever been written? Both internal and external evidence are against the assumption that the said Gospel could have been ever the work of the author of the Apocalypse, the hermit of Patmos. The difference of the style of writing, of language, and the great contrast of thought between the two are too glaring to be denied. The harsh Hebraistic Greek of the Apocalypse confronted with the polished elegance of the language used by the author of the fourth gospel cannot stand one moment's serious criticism. Then the details of the latter disagree in most cases with those of the three Synoptics. Shall Canon Wescott be also charged with "invincible ignorance" when saying (*Introd. to Study of the Gospels.*) "It is impossible to pass from the Synoptic Gospels to that of St. John, without feeling that the transition involves the passage from one world of thought to another." ..... Nothing "can destroy the contrast which exists in form and spirit between the earlier and later narratives. The difference between the fourth gospel and the Synoptics, not only as regards the teaching of Jesus but also the facts of the narrative, is so great that it is impossible to harmonize them... both cannot be accepted as correct. If we believe that the Synoptics give a truthful representation of the life and teaching of Jesus, it follows of necessity that, in whatever category we... place the fourth gospel it must be rejected as a historical work (p. 249).

In the Synoptics Jesus is crucified on the 15 Nisan, whereas the fourth gospel puts him to death on the 14th—a point with reference to the Paschal lamb having to be gained; and the general inaccuracy of *all* the gospels is shown in that no two of them agree even about so simple a matter as the inscription on the cross. The Synoptics are utterly ignorant of the raising of Lazarus, "a mere imaginary scene," says the author of *Supernatural Religion*, "illustrative of the dogma: I am the resurrection and the life, upon which it is based"... The fourth gospel... has no real historical value. The absolute difference between the teachings becomes intelligible only when we recognize in the last gospel the style of Alexandrian Philosophy the mysticism of the Christian Platonists "artistically interwoven with developed Pauline Christianity, and put into the mouth of Jesus" (p. 76).

In connection with the subject one cannot do better than give an extract of "an eloquent passage from an unpublished Essay by a distinguished living Greek scholar" in the words of Mr. Wordsworth, the learned Principal of Elphinstone College (Bombay), who quotes it in a Lecture delivered by him on "The Church of Thibet, and the Historical Analogies of Buddhism and Christianity."

"What more contrasted in style and manner than Paul with John, and both or either with Matthew, Mark, and Luke? and yet the Epistles and the fourth Gospel are as thoroughly permeated with the best spirit of the three first Gospels, as with phrases and forms and associations that pertain to the very core of the Schools, when Mythos newborn in Judea could thus coalesce with the primeval imaginations of the Greek, we need not wonder that philosophical theology from either side soon found itself a common ground. The Stoicism of Seneca repeats St. Paul in every other page, and the Fourth Gospel is only becoming really legible in the light of the Platonism of Alexandria."

We invite the reverend editor to read the two volumes written by that king of scholars, the author of *Supernatural Religion*, the anonymous writer being at one time closely connected in London gossip with a certain Bishop. Our critic seems to forget, or never knew, perhaps—that this work passed through twenty-two editions in less than three or four years; and that £ 40,000 were unsuccessfully offered by the Roman Catholic Church to whosoever could refute its arguments and proofs, the money being still there, we believe. We are quite aware that,—as the same learned Prof. Wordsworth expresses it—"a certain precipitancy in negative demonstration has, perhaps, partly compromised the effect which so able a book as 'Supernatural Religion' was fitted to produce." Yet, if Mr. Arnold thinks with his admirers—too prejudiced to be in this case trusted—that he has demonstrated the "authenticity" of the fourth Gospel, others more impartial and far more scholarly maintain that he has done nothing of the kind. At any rate, no one can deny that such eminent theological scholars as Bauer, Locke, Davidson, Hilgenfeld, Schenkel, Volkmar, Nicolas, Bretschneider and a good many others we could name,\* have proved the following points: (a) the fourth Gospel, by whosoever written—was never written by a Jew, not even a native of Palestine, the numerous geographical, and topographical mistakes and blunders in names and explanations given precluding entirely such possibility; (b) that the gospel could have never been written before the end of the II century, *i. e.*, the date assigned to Irenæus; and (c) that it was most probably written at the command of that personage. The first writer whom we find quoting a passage of this gospel with the mention of his author is Theophilus of Antioch, (in *Ad autolye* 11, 22,) a work dated by Tischendorf about A. D. 180—90; and it was precisely about that time that Irenæus became presbyter in Gaul, and had his controversy with the "heretics." It

\* See Locke's *Einl. offenb. Johannes*, ii. p. 504.

is, however, useless to devote much time to a personage who, if not altogether himself mythical, presents in his life another blank, as the moot question about his martyrdom is able to show. But that which is known of him and on the strength of his own writings is, that he is the *first writer* who distinctly numbers the four gospels, claiming for their existence and number most interesting if not altogether convincing reasons. "Neither can the gospels be more in number than they are," says he, "nor, . . . can they be fewer. For, as there are four quarters of the world in which we are, and four general winds, and the gospel is the pillar and prop of the church. . . it is right that she should have four pillars." Having delivered himself of this highly logical and quite unanswerable argument, Irenæus adds that: "as the cherubim also are four-faced" and "quadriform are the living creatures, quadriform is the gospel, and quadriform the course of the Lord; therefore—vain and ignorant, and moreover, audacious are those who set aside the form of the gospel and declare its aspects as either more or less than has been said." (*Adv. Haer.* III, 11, 55, 89.) We love to think that it is not to follow in the steps of this intellectual and logical Father, that the editor of the *C. C. Magazine* thought it his sacred duty to bestow upon Col. Olcott and all who believe that the fourth gospel is simply a theological afterthought,—the epithet of "ignorant"? We are perfectly alive to the dire necessity of clinging to the fourth gospel for all those who would prolong the agony of Christian ecclesiasticism. There are several important reasons for this. For example:—The authors of the three Synoptics are pure Jews with no prejudice toward their unbelieving race, and they know not of Jesus "the son of David;" while the fourth gospel shows decided contempt for the non-Christian Jews, and its Jesus is no longer of the race of David *but the son of God and the very God himself.* The first three teach pure morality and no theology; on the contrary, priesthood and pharisaism are strongly denounced in them. The fourth gospel teaches a distinct theology and quite another religion. Hence the just suspicion created in the minds of most Biblical scholars that the so-called "Gospel according to St. John," was simply written to meet the *logical* conclusions of Irenæus—as quoted above.

But whether due to him or born independently—it is as artificial as any other work of art, howsoever great the intrinsic value of its outward form. Realism may be less attractive than Idealism; for all that, the first is sober fact and as such preferable to pure fiction—however beautiful. And this statement is amply corroborated by the author of *Supernatural Religion*, who has devoted one-fourth of his two volumes to the discussion of this subject. In the concluding words of his chapter 2, Vol. II. "Enough has been said to show that the testimony of the fourth gospel *is of no value towards establishing the truth of miracles and the reality of divine revelation.*" This, we believe, added to the damaging testimony of Canon Westcott,—settles the matter at rest.

Copies of the Eighth Anniversary Report of the Theosophical Society, at which were present delegates from America, England, Ceylon, and all parts of India—are now available at four annas per copy. Packing and Postage charges:—India one anna; Ceylon, three annas; all other Foreign Countries, four annas. Apply to the Manager of the *Theosophist*.

#### PUBLISHER'S NOTICE: PREMIUMS.

With a view to enabling many who cannot afford to take in the *THEOSOPHIST* at the present cost, the following offer is made: To any one who will send us the names of five annual subscribers, together with Rs. 40 in one sum, an extra copy of the Magazine will be sent free of all charge, postage included, for one year. Address PUBLISHER, *THEOSOPHIST* Office, Adyar, with the money.

#### SPECIAL NOTICES.

It is now evident that the *THEOSOPHIST* offers to advertisers unusual advantages in circulation. We have already subscribers in every part of India, in Ceylon, Burmah, China and on the Persian Gulf. Our paper also goes to Great Britain and Ireland, France, Spain, Holland, Germany, Norway, Hungary, Greece, Russia, Australasia, South Africa, the West Indies, and North and South America. The following very moderate rates have been adopted:—

##### ADVERTISING RATES.

First insertion . . . . . 16 lines and under . . . . . 1 Rupee.  
For each additional line . . . . . 1 Anna.

Space is charged for at the rate of 12 lines to the inch. Special arrangements can be made for large advertisements, and for longer and fixed periods. For further information and contracts for advertising, apply to

MANAGER, *THEOSOPHIST*, ADYAR, MADRAS.

MESSRS. GRAVES, COOKSON AND Co., MADRAS.

PROPRIETOR, *INDUSTRIAL PRESS*, 3, HUMMUM STREET, FORT, BOMBAY.

MESSRS. COOPER & Co., MEADOW STREET, FORT, BOMBAY;  
TO SUBSCRIBERS.

The Subscription price at which the *THEOSOPHIST* is published barely covers cost—the design in establishing the journal having been rather to reach a very wide circle of readers, than to make a profit. We cannot afford, therefore, to send specimen copies free, nor to supply libraries, societies, or individuals gratuitously. For the same reason we are obliged to adopt the plan, now universal in America, of requiring subscribers to pay in advance, and of stopping the paper at the end of the term paid for. Many years of practical experience have convinced Western publishers that this system of cash payment is the best and most satisfactory to both parties; and all respectable journals are now conducted on this plan.

The *THEOSOPHIST* will appear each month. The rates, for twelve numbers of not less than 48 columns Royal 4to. each of reading matter, or 576 columns in all, are as follows:—To Subscribers in any part of India, Ceylon, Straits Settlements, China, Japan, and Australia, Rs. 8; in Africa, Europe, and the United States, £ 1. Half-year (India, &c.) Rs. 5; Single copies Rupee 1. Remittances in postal stamps must be at the rate of annas 17 to the Rupee to cover discount. The above rates include postage. *No name will be entered in the books or paper sent until the money is remitted; and invariably the paper will be discontinued at the expiration of the term subscribed for.* Remittances should be made in Money-orders, Hundi, Bill, Cheques, (or Treasury bills if in registered letters), and made payable only to the PROPRIETORS OF THE *THEOSOPHIST*, ADYAR, P. O., (MADRAS,) INDIA.

Subscribers wishing a printed receipt for their remittances must send stamps for return postage.

ONLY ONE NUMBER OF VOL. I BEING AVAILABLE, THE CHARGE FOR ~~THE~~ Subscribers for the Second Volume (October 1880 to September 1881) pay Rs. 6 only in India; Rs. 7 in Ceylon; Rs. 8 in the Straits Settlements, China, Japan, and Australia; and £ 1 in Africa, Europe and the United States.

AGENTS: London, Eng., Messrs. Trübner and Company, 57 and 59 Ludgate Hill; Bernard Quaritch, 15 Piccadilly, W.; Paris, France, P. G. Leymarie, 5, Rue Neuve des Petits Champs; New York, Fowler and Wells, 753, Broadway; Boston, Mass., Colby and Rich, 9, Montgomery Place; Chicago, Ill., J. C. Bundy, La Salle St. American subscribers may also order their papers through W. Q. Judge, Esq., Box 8, P. O. Brooklyn, New York; Melbourne, Australia, W. H. Terry, Pub. *Harbinger of Light*; St. Thomas, West Indies, C. E. Taylor; Calcutta, India: Thacker Spink and Company, Booksellers; Babu Norendro Nath, Sen, *Indian Mirror* Office, 24, Mott's Lane, Dhurrnmtollah Street; Madras, Messrs. Kailasam Brothers, Pophan's Broadway, L. Venkata Varadarajulu Naidu Garu, Royapetta: High Road; Colombo, Ceylon: John Robert de Silva, Surveyor General's Office; Kandy, Don Timothy Karunaratne; Shanghai, China: Kelly and Walsh.

Printed at the *Scottish Press*, by GRAVES, COOKSON AND Co.; and published by the THEOSOPHICAL SOCIETY AT ADYAR (MADRAS), INDIA.

(Price, Single Number, Eight Annas.)

## (EXTRACTS.)

FROM A LETTER OF AN OLD FRIEND  
AND THEOSOPHIST.

...WELL, my dear friends, I read with boundless satisfaction of your triumphal march, for it seems like a continual triumph in all your walks and ways. Who but yourselves could have established such a paper as the "*Theosophist*?" Probably no other two people in the world! And what is very gratifying is, that you are receiving recognitions as you go along (not common) of your valuable services. People, who have been illustrious in life, have had monuments raised to them after their departure, but you are greeted everywhere as veritable gods who have come down from heaven to save the nation. *Your work is noble indeed, and your names will live in the annals of the Orient, yet to adorn the ages, as few others, less than that of Buddha himself.*

As I said in a former letter, I believe, tears have more than once come into my eyes when reading of your splendid receptions; I have as often wished that I could have been present to add my humble congratulations.

I have seen in the *Theosophist* lately, some of the Occultist ideas about the Sun. Would it sound egotistical for me to say that for many years, I have had similar ideas. I say similar, for I do not recall all the views expressed in your paper. I will state my own views which, I think in respect of heat, is not Buddhistic or of the Brothers. I believe the sun to be only a focus of the Supreme Light and has no heat; that the heat we get is from the friction of the rays of light, making more warmth as it approaches the earth (the air becoming denser,) for as we ascend toward the sun the colder it grows. If self-producing, then it is simply the expression of its magnetic forces, evolved from its vast evolutions, or from reverse currents of magnetism surrounding it.

...I have been reading your "Reply to an English F. T. S.," and find in its first column and a quarter exactly what is generally, I think, wanted by European Theosophists, and which Mr. Sinnett has failed to afford. Indeed here it is clearly shewn why he could not fulfil the promises some of his statements led us to expect. I have always felt, and I may say, known, from my own experience, that it was not 'selfishness' on your part, nor that a "Chinese wall" had been erected around esoteric Buddhism, that its great truths were not imparted to all. The many merely "curious" and even the "earnest seekers" are not always prepared, by courage, self-denial and perseverance, to swim the dark stream that could land them on the bright shore of sublime spiritual knowledge. They look earnestly, think earnestly, but dare not make the plunge. Mr. Sinnett could not convey what is implied in your 2nd paragraph. "The inability to reach them lies entirely with the seekers;" for, as you further say, "It rests entirely on the impossibility of imparting that, the nature of which is beyond the comprehension of the 'would-be learners,'" &c. &c. Exactly so. And this is the reason why I wrote a couple of articles for *Light* (of London). Not, as I think you will see, that I distrusted the powers of the Brothers, nor that I disbelieved in the possibilities lying behind what they were enabled to convey to the outer world—if I may so name it....

G. L. DITSON, F. T. S.

[We are sincerely glad to find our old and true friend, Dr. G. L. Ditson, addressing us the above explanatory remarks in respect of his two letters to *Light*. Knowing him so long, and so well, we have never believed he had written his objections to *Esoteric Buddhism* in any other spirit but that of frankness and kindness. We were pained beyond measure to find him, as it were, siding with our enemies; but now, we are glad to see, it was a mistake; having given his own peculiar views upon the subject he now explains his position. Only why should our old and trusted American friend address us as though we were the author of the "Replies to an English F. T. S.?" It was explained, we believe, and made very clear that the letter of the English F. T. S. being addressed to the Mahatmas, it was not our province to answer the scientific queries contained in it, even if we had the ability to do so,

something we never laid a claim to. In point of fact, however, there is not one word in the "Replies" that we could call our own. We have preserved packs of M.S.S. in the hand-writing of our Masters and their Chelas; and if we got them sometimes copied in the office, it was simply to avoid debarcation at the hands of the printer's devil. Nor is it right to say that Mr. Sinnett has failed to convey the Esoteric doctrines; for their broad features have been outlined by him with an accuracy unapproachable by others. By this time, we hope, it is abundantly clear that the Mahatmas are willing to allow the doctrines of *Esoteric Buddhism* in their general outline to rest upon their authority, as in the course of their long replies to the questions arising out of those teachings, they have been nowhere disclaimed. No doubt there are more than one mistaken, notion here and there, throughout the volume, and a few false inferences, more than warranted by the meagre details received; but the misconceptions, false rendering and the fallacious conclusions arrived at by his many critics—are far greater still. This, we hope, will be amply proved in a pamphlet now in preparation. We hope our friend and brother will understand the teachings better some day and retract much of what he had said in his two articles to *Light*.—EDITOR.

## A LAPSUS CALAMI.

Says the Editor of the *Indian Churchman*, in his issue of January 5, under the head "*Resumé of the year 1883*:"—

... Theosophy, the cult of the followers of Colonel Olcott and Madame Blavatsky, is another movement which is creating some (?) interest in India; in our opinion it seems a reaction against extreme Materialism in favour of pure Spiritualism. The Bishop of Madras has directed his attention to it, and has issued a not ill-timed caution against its subtleties."

A "caution" to whom? To the Hindus—who care little for the *dicta* of all the Christian Bishops the world over, or to the followers of the orthodox Church-going Christians, who—unless they are prepared to give up their one-sided prejudices and bigotry—could never be accepted in our Society? We are afraid, our esteemed contemporary has used an ill-fitting adverb before his noun. No caution is necessary against that wherein lurks no danger. In the case of the Bishop of Madras, it was simply a bit of vain boasting, a display of would-be authority, harmless as to Hindus, and useless in the case of Christians—since the best ally of the Bishop is Article VI of our *Rules*. Evidently our "subtleties" are not very formidable, since there are highly educated, sincere and in every way honourable Christians who would have gladly joined our Society had they not been warned of the danger, and prevented from doing so by the uncompromising honesty of Col. Olcott himself, our President.

## MR. MONCURE CONWAY.

UNDER this heading our old well-wisher, a pious Baptist editor in Ceylon, takes an opportunity of snapping at us. As usual, he goes out of his way to perform the pleasant duty. He had a call he tells his readers from the eminent ontologist, Mr. Moncure Conway, of London, then on his way to India. At the first reading the editorial compliments to the address of this "man of transcendent abilities," as the gentleman is correctly referred to by the editor, may appear to an innocent reader as genuine coin. Nothing of the kind, however. The wily Baptist never lauds but to abuse. The tom-cat is never more dangerous in his perfidiousness than when purring the loudest; and a pious dissenter will go back on his principle of intolerance but to make a better leap

at his antagonist. Says that dear old literary *choeta* of the "Spicy Island" :—

... Mr. Conway ... is willing to recognize Him (Christ) as *divine*. Except in the last particular, we have the reverse of sympathy for Mr. Conway's views; but a man of scholarship and genius like his is not to be confounded with the herd of Olcotts, Blavatskys and Sinnetts (oh poor ex-editor of the *Pioneer*!) with their humbug about "Esoteric Buddhism," "Occult Revelations," and an imaginary prophet in Thibet ... he is not the man to fraternize with the high sillinesses (*sic*) of the Olcott-Blavatsky superstitions

Evidently the "Spirit of God" has but half descended upon the writer, for one fails to recognize in him a prophet or even a medium. Mr. Moncure Conway has "fraternized" with the Theosophists; and a more charming, intellectual and pleasant afternoon and evening has been rarely passed than in the company of this remarkably rare man. As soon as landed in Madras (Jan: 10th), the said gentleman paid a visit to the Head-quarters of the Society, at Adyar, bearing a letter of introduction from Mr. P. de Jersey Grut, F. T. S., of Australia, whose visit we had enjoyed nearly two years ago at Bombay. The Ceylon Christian editor was right in saying that Mr. M. Conway is ... willing to recognize Christ as "divine." The said gentleman has corroborated the statement, adding that what he admired and loved the most in the ideal Jesus of the Gospels was that—"Christ was not a Christian," thus showing himself at one with our Theosophical ideas about that exalted and perfect MAN.

But where could that Colombo sinner "verily baptized with(out) the baptism of repentance" have learned so much about "scholarship," we wonder, and acquired the art of discerning so well between the "humbug of esoteric Buddhism" and that of theological Christianity, between "imaginary prophets in Tibet," and the non-imaginary prophets of the Jewish Bible—such as Balaam and his she-ass for instance? Let him remember that his paper, the oldest, if not the wisest in the Island, has obtained for him a settled reputation years ago. That with most of its readers it is no longer a question whether its editor has graduated in a university or a butler's pantry, but rather how much of gall must have entered into the composition of the waters of salvation in which he was baptized. Surely "the great star called worn wood" spoken of in *Revelation* must have already fallen into the Jordan of the Christian Baptists of his stamp. How can one wonder then that waters made so bitter are eschewed and rejected by both heathen and good *unsectarian* Christians!

#### DIVINATION BY THE LAUREL CUBES.

FROM a private letter, written by perfectly reliable and very learned Theosophist in Europe, we copy the following, omitting however the names of the parties :—

"I do not know whether you are acquainted with a certain practice of divination by means of little blocks made of the sacred laurel wood, on which the letters of the alphabet are written. After the question which you desire to ask is composed, the blocks are thrown by the questioner into a silver-vase which is consecrated to Isis. Mad. F... then takes one after the other of these blocks, and arranges them in a circle upon a metallic disk, and the answer appears written upon the same blocks which were used to ask the question.

Miss B., a lady of high position, who has become well known through her self-sacrificing and humanitarian labours during the war, and Mad. F... were about to make the experiment with those blocks of wood, when their attention was attracted by a series of raps on the metallic-disk sounding like little electric detonations. Then a sustained rush of air was heard ending in a loud ring such as is made with a silver bell.

Miss B. had been reading Mr. Sinnett's book, and had put the question, whether it would be possible for her to communicate with the Brothers of the Himalaya. What was her surprise, when she received the written answer: "Yes, if you merit us. *Koot Hoomi*."

Whether or not the response came from the Master named, it bears at least the one great mark of genuineness that it affirms the very first, most cardinal condition of personal intercourse with our teachers. "First DESERVE, then desire" is the key-note always. Moreover, as every Chela knows, nearly every communication from the Masters is preceded by a very peculiar sound—that of a silvery bell.

#### THE OXONIANS AND THEOSOPHY AGAIN.

BARRING an occasional drop of gall in the cup of Hippocras, our esteemed antagonists of the Oxford Mission are very kind towards us. In fact, being both gentlemen and scholars, they go far to make us forget the priest and see only the friendly critic. If all Asiatic missionaries had been such Christ-like Christians, the page of our history would have been unsoiled by one savage retort. They seem to treat all in the same kindly, self-respectful tone. We scarcely recall a more tender, genial narrative than the *Epiphany's* account of the cremation of our gifted foe, the late Babu Keshub Chunder Sen, whom they nevertheless were obliged to regard as a serious opponent to their evangelising work. The issue of their journal for January 12th contains the following significant article upon Theosophy :—

#### THEOSOPHY AGAIN.

We are sometimes asked why, in a Missionary paper, we speak so much of Theosophy. Our answer is twofold.

First, every Theosophist professes to be aiming at a life higher than he now lives, and we naturally wish to offer to him the Christian solution of the problem which he has, in common with us, to solve.

Secondly, we recognize in Theosophy, or in the 'Theosophist' Magazine, or in Theosophists, (choose your own expression) the most formidable foe of Christianity in India amongst educated natives.

The revival of Aryan thought commends it to them; the subtle philosophy which avoids the stigma of Materialism, while soaring far above the confessed humility and helplessness of the Christian and the Theist, fascinates them; it gives a grand thirst for knowledge, a sense of power. But above all the unmistakable depth of the intellect enlisted in its service, both among Europeans and Natives, makes it worthy of our attention. Some people speak of Theosophy as a mere juggle; but those who read Theosophical publications know that it is a profound theory of the Universe, the nearest perhaps to the revealed truth of any, as far as it goes, while the farthest from the revealed truth, when it stops short and denies all beyond its arbitrary limit. Often do we feel how almost hopeless it is for the Editors of the *Epiphany*, immersed in other work, to deal fairly with the mass of clear thought and clever speculation monthly poured out in the pages of the *Theosophist*, not to speak of the various other publications of the Theosophical Society. We wish that we could obtain for the *Epiphany* so ardent and laborious a band of contributors.

But our very appreciation of the *Theosophist* makes us very sorry to see it using hostile language. Two articles in the last issue of it (Number 51) have seemed to us unworthy of its general tone. Both occur in the Supplement. One is called "The Saracens of Theosophy and the Madras Crusaders," which we will call A. It is without signature, and appears to us to be an editorial. The other is called "an Anglo-Indian Theosophist on the Bishop of Madras," and is signed H. R. M. (F.T.S.) Let us call it B.

We are of course ignorant of the provocation given by the Madras press, and by individual clergy or Missionaries, but we are sorry to see bitter personal insinuations replied to and retorted as regards the press, and we should have thought the bad clergy or Missionaries best left in contemptuous silence.

It is very painful to a Churchman to read in the letter of H. R. M., remembering that he is "a high military officer and an Englishman," so complete a misconception of the Church in India and its position. The Bishop of Madras is described as "a paid servant of Government," paid "only for looking after his twenty-four chaplains," and he is blamed for "taking upon himself the office of a Missionary." In so doing he is said to "overstep his official position," to be guilty of "direct violation of the orders of Government" (religious neutrality), and to "contravene the spirit of Government orders quite as much as when a civil servant takes to trading." The Bishop is "patron of some half a dozen religious Societies connected with the conversion of the Heathen," and when he talks of "special measures" against Col. Olcott he is said to intend to "use his official position."

Let us be clear. The Bishop will not say "I advise you to oppose the Colonel because I am officially recognized as a Bishop by the Government," but "because I am a Bishop."

Official recognition must carry weight, but it does not make every act of the officially recognized Bishop an act of Government. The Bishop is solemnly warned by the high military officer, who is perhaps according to this method of argument, paid by Government to convey this warning, that a petition will be sent home to the Secretary of State, if he does not amend his Episcopal ways, and the "Ecclesiastical Sedan" of the "Open Letter" is again threatened by our warlike critic.

Now what are we to say to the charge of unduly using official position, and to the threat of disestablishment? We can only say that Christianity is certainly not spread by force or by fraud, but by personal influence. If Christianity were really the religion of love which it

theoretically is, we can imagine even bigoted Hindus looking quietly on while Viceroy or Judges abused their official position to spread it. They would say—"They love us, let them convert us by love if they can." But alas! the unhappy Christmas-tide of 1883 is still re-echoing with the war-cries of un-Christian Christians and irritated non-Christians.

The spread of Christianity is looked on with a jealous eye, and the Government policy of religious neutrality carefully claimed as bare justice.

*That policy is in no wise infringed by the Bishop of Madras.*

The Bishops and the Chaplains are paid by a Government which favours all religious sects in some degree, to teach Christianity to its Christian officials and their children. But Government is perfectly aware that Mission work is an essential part of Christianity. Quite apart from the right of every Government official to use his spare time in propagating either Theosophy or Christianity,—the established clergy are bound as Priests to do some Mission work, the religious life of their congregations would be dwarfed and distorted without that Missionary zeal which every parish Priest at home in England tries to evoke. The established Bishop is bound to take care of that part of the Chaplains' work; and he must also remember that he is quite as much the Bishop of the Missionaries whom he is *not* paid to take care of, as of the Chaplains whom he is paid to take care of. He is a Bishop of the Church, there is an "*imperium in imperio*," and the commission of God over-rides the commission of the State. If they clash, the state must expect to see her commission disowned, and must and will withdraw it. Nothing is more entirely legitimate than the campaign for disestablishment on the part of those who do not wish the religion of Christ to have the position of the state religion, and the aggressive impetus of such a position.

Any Bishop or Chaplain who neglected Mission work would neglect an important factor in his "official" work, as well as an important command of Christ. He would be false to the Christian tradition of love. Every Bishop or Chaplain who feared the threat of Disestablishment or Disendowment in the prosecution of his work would be false to his Master; and to the Christian traditions of suffering and of martyrdom.

When will Statesmen and Theosophists recognize the supreme carelessness with which the Church of Christ regards these things, except in so far as she desires that national recognition should be given to the truth of her Mission, so long as the English nation honestly accepts that truth? How glorious is the sense of the Divine Mission which precedes and survives all earthly recognition, the Mission, so shamefully fulfilled, to suffer and to love.

Let us call our respected adversary's attention to the following points, suggested by the above:—

1. If Theosophy is "the most formidable foe of Christianity in India amongst educated natives," it must be because exoteric Christianity does not win their approbation, while the vital essence of Esoteric Christianity, or its Theosophy, has never been preached to them. Certainly, we Founders have never handled the former with clutch and claw, after the methods of Western Freethinkers and Secularists, though we have uniformly affirmed that the "Secret Doctrine" underlies external Christianity equally with every other form of theology.

2. We confess with pain that we have at various times been goaded into reprisals, when we have seen the majority of so-called Christian clergy and laity as if conspiring to traduce our characters and malign our motives. The loathing felt by the Oxonian Brothers for such a tone as that adopted by the Rev. Mr. Hastie towards the whole Hindu nation, was no more righteous than that which we feel for others bearing the ear-mark of Christianity in view of their treatment of Theosophy.

3. In saying that the Rt. Rev. the Bishop of Madras is justified in doing what he can, while a paid official of a professedly neutral Government, to promote religious apostacy, and adopt any "special measures" to check the Theosophical movement because he is a Bishop and "there is an '*imperium in imperio*,'" is simply the setting up of the old Papist claim of theocratic supremacy. "The commission of God over-rides the commission of the State." Does it? By all means let that be officially promulgated as an Appendix to the Queen's Proclamation of religious neutrality to her non-Christian subjects. Or if this be not so, then it would surprise nobody to see the law-making authorities taking the *Epiphany* party at its word, and, to avoid the "clash of commissions," seeing the State's "commission disowned, . . . withdraw it." There is nothing like honesty. If the guaranteed religious neutrality were a bait and a sham, as it most assuredly would be, under such a partisan view of a Bishop's duties, the gravest consequences would inevitably ensue. The peace of Asia is maintained because the good faith of the above Proclamation is thoroughly believed in. As Dr. Gell, the private gentleman and sectarian, his Lordship of Madras might do his best to break

down Idolatry and stamp out "Heathenism." But in his episcopal capacity he has—as our eminent correspondent H. R. M. pointed out—no more right to sink his public prerogative in his private personality and break the religious peace, than the civilian has the right to embark in trade. The world's mind is large enough to house all sects and schools—provided they do as they would be done by.—*Ed.*

## Phenomenal.

### I.

In these days of scepticism and unbelief, the following testimony to a phenomenon, not capable of being explained on any theory of trick or fraud, will not be without use in exciting at least a spirit of calm inquiry in reasonable minds.

On the 24th of November Mr. S. Ramaswami and myself, both went to the Adyar Head-quarters at about 9 P. M. We found Madame Blavatsky seated in the verandah in front of the main building conversing with General and Mrs. Morgan and Miss Flynn, then on a visit to the Head quarters, and a number of Chelas and officers of the Theosophical Society. After about an hour's conversation there, Mme. B. wished good night to our European brethren and went upstairs to her own room, asking us to follow her thither. Accordingly we went up. There were seven in all in the room, which was lighted. Madame B. seated herself facing west on a chair near a window in the north-eastern corner of the room, S. R. and myself sat on the floor, one behind the other, right in front of and facing Mme. B., close by an open shelf in the wall on our left. Babu Mohini Mohun Chatterji, M. A., B. L., (Solicitor, Calcutta,) Messrs. Bawajee, Ananda, and Balai Chand Mallik, also seated on the floor near us, opposite the wall-shelf and facing it. What had originally been a window was closed with a thick wooden plank, which on careful examination I found was immovably fixed to the window frame and thus converted into a wall-shelf with two cross boards. The plank behind was hung and the boards were covered and ornamented with black oil cloth and fringe. About half an hour after conversation began, while S. R. was talking about certain important matters concerning himself and the others were listening, a slight rustle of the oil cloth, hanging in the back of the middle compartment of the wall shelf, was observed by the four gentlemen seated opposite the same. From it, immediately after, was extruded a large hand more brown in complexion than white, dressed in a close fitting white sleeve, holding an envelope between the thumb and the forefinger. The hand came just opposite my face and over the back of S. R.'s head, a distance of about two yards from the wall, and at a jerk dropped the letter which fell close by my side. All, except S. R., saw the phantom hand drop the letter. It was visible for a few seconds, and then vanished into air right before our eyes. I picked up the envelope which was made of Chinese paper evidently, and inscribed with some characters which I was told were Tibetan. I had seen the like before with S. R. Finding the envelope was addressed in English to 'Ramasawmy Iyer,' I handed it over to him. He opened the envelope and drew out a letter. Of the contents thereof I am not permitted to say more than that *they had immediate reference to what S. R. was speaking to us rather warmly about, and that it was intended by his Guru as a check on his vehemence in the matter.* As regards the handwriting of the letter, it was shown to me, and I readily recognized it as the same that I had seen in other letters shown me long before by S. R. as having been received from his Guru (also Mad. B.'s master). I need hardly add that immediately after I witnessed the above phenomenon, I examined the shelf wall, plank, boards and all inside and outside with the help of a light, and was thoroughly satisfied that there was nothing in any of them to suggest the possibility of the existence of any wire, spring, or any other mechanical contrivance by means of which the phenomenon could have been produced.

V. COOPOOSWAMY IYER, M. A., F. T. S.

*Pleader, Madura.*

27th November 1883.

## II.

I attended the eighth anniversary of the Theosophical Society held last December, in Madras. I was at the Adyar Head-Quarters several times on the occasion. I was also in the occult room. I witnessed certain phenomena when in the room on the 26th and the 28th of December last. Having been asked to testify to them, I hereby do so:—

2. The room in question is situated upstairs. In the room is the shrine—a wooden cupboard put up against a wall. It is not fixed to the wall but only touches it. I have carefully examined the shrine inside and outside and also the wall against which it is put. I found nothing to suspect the existence of any contrivances which could account for what I saw. Inside the cupboard are two framed likenesses of two of the Mahatmas overhung with pieces of yellow silk, a silver bowl, and some images.

3. On the 26th, it was at about 7 p. m. that I went up to the shrine. There were 14 other Theosophists present. We were all quite close to the shrine. Madam Blavatsky opened the shrine with a key which she had and took out the silver bowl. It was shown to the gentlemen present. There was nothing in it. Mr. Venkata Jagga Row, C. S., then dropped into it a letter addressed by him to one of the Reverend Mahatmas. The bowl was then placed inside the shrine which was locked by Madam Blavatsky. In about 5 minutes the shrine was opened and the silver bowl taken out and shown. The letter put in by Mr. Venkata Jagga Row had disappeared and in its place there were 5 letters in the bowl. Four of them were addressed to particular persons present and the other to all the delegates from the different Branches of the Theosophical Society. This last I saw. It was in the handwriting known to or recognized by the Theosophists as that of Mahatma K. H. I had seen the same handwriting before in letters in the possession of my friend Mr. S. Ramaswamier at Madura.

4. On the 28th, I went to the shrine at about 10-30 a. m. Seven persons were present. The windows were open and it was broad day light. Madam Blavatsky gave the key of the shrine to Mr. P. Srinivasa Row, Small Cause Judge, Madras, and stood aside amongst us. Mr. Srinivasa Row opened the shrine, took out the silver bowl and showed it to all present. There was nothing in it. He put it into the shrine, locked it and kept the key. About 5 minutes after he was told by Madam Blavatsky to open the shrine which he did. He then took out the selfsame silver bowl and in it was an envelope well gummed, addressed to Mr. Srinivasa Row. I saw him open the envelope and found it to contain a letter in the handwriting of Mahatma K. H. and currency notes for Rs. 500\*.

5. I saw no room for deception, no wires, no springs inside or outside the shrine. I requested permission to examine the shrine and was allowed to do so. Not only did I not see any wire or spring or any contrivance, but I felt none when I put my hand into the shrine and examined it.

6. What I may here say may not carry conviction where the overwhelming testimony already recorded by Mr. Sinnett and others has failed to produce any. Yet I may be allowed to subjoin my testimony, however slight, in the hope that it may not be altogether useless.

7. I know a very acute and able man, a friend of mine, also jeered at me on finding my name appear in the Theosophist as a member of the society, but who in less than two months from that time became a Theosophist himself and the Vice-President of his Branch.

S. SUBRAMANIA IYER, B. L.,  
High Court Vakil, Madura.

MADURA, 10th January 1884.

## Official Reports.

### THE ARYAN THEOSOPHISTS OF NEW YORK.

(President's address, P. O. Box 8, Brooklyn, N. Y.)

Companions:—

The New York Branch of the Theosophical Society has been formed with the above title. The officers are:—

President.....WILLIAM Q. JUDGE.

Secretary.....MORTIMER MARBLE.

Treasurer.....GEORGE W. WHEAT.

\* This sum was to indemnify a Theosophist, who had to bear an unjust expense.—MANAGER.

The next business meeting will be held, December 10th inst., at Mr. Wheat's house, 355 West, 28th St. N. Y. City—at 8 p. m. sharp. If you are in sympathy, and desire to join us; you are requested to come.

Fraternally yours,  
WILLIAM Q. JUDGE,  
President.  
MORTIMER MARBLE,  
Secretary.

December 4th, 1883.

The Society's objects are—

To promote the study of Aryan and other Eastern religions and sciences, and vindicate its importance; to investigate the hidden mysteries of Nature, and the psychological powers latent in man; and to co-operate in the general work of the *Theosophical Society*.

Concerning the above the *New York Herald* of December 4 has the following somewhat too coloured account, we are afraid.

### THEOSOPHISTS REORGANIZING.

THE PEOPLE WHO SET NEW YORK TALKING SEVEN YEARS AGO.

A most extraordinary meeting was held in a private residence up town last night, at which a small group of gentlemen gathered together for the purpose of reviving the work of the Theosophical Society, started in New York nearly a decade ago, by Madame Blavatsky.

Since her departure for India in company with three of the leading members of the Society (Colonel H. S. Olcott and two others), some half a dozen years ago, no active work has been done by the society, but the nucleus has been preserved, and some ten days ago word was received by several of the initiates that a certain priest would be in New York, yesterday, and would expect to meet a select few at the place mentioned last evening.

Accordingly at eight o'clock were gathered some well known men. General Abner A. Doubleday, the author of certain well known historical works and the originator of the grip and cable system, was there and presided. Mr. William Q. Judge, a Brooklyn lawyer of some note, was Secretary. There were a boss printer, a somewhat noted journalist, a professional accountant, a retired merchant, a student or two and others of less note, present.

General Doubleday introduced the Hindoo, not by name, but as the messenger of the Society. Some of those present recognized him as the man who was present at the cremation of the Baron de Palm and at the later ceremony of casting the Baron's ashes into the sea. He was attired with Oriental magnificence, strangely contrasting with the business suits of the others. On his breast gleamed a jewel wrought with the mystic word, "OM." He spoke very little, but after announcing that the time had come for the active work of the New York Branch of the Theosophists, he read in Hindoostance a short passage from the Mahabharat and gave to the acting President (General Doubleday) a copy of the Bhagavad-Gita.

What he read was, being translated:—

"I delivered this imperishable doctrine of Yoga to Vivasvat; Vivasvat declared it to Manu; Manu told it to Ikshwaku. Thus the Rajarshis learned it, handed down from one to another. During a considerable period of time this doctrine has been lost in the world. Oh, harasser of thy foes! I have now explained to thee this same ancient doctrine, as I considered thee both my worshipper and my friend. For this mystery is very important."

The Bhagavad-Gita is a discourse between Krishna and Arjuna on divine matters, taken from the Upanishads of the Mahabharat, and has been translated into English by the political agent of His Highness, Guycowar Mulhar Rao, Maharajah of Baroda.

After delivering his message and the book, the Hindoo disappeared. No one followed him or asked a question. His errand was accomplished. The Society immediately organized under the rules of the Theosophical Society, now of Madras, elected officers and appointed a meeting for next Monday night. Secret branches are already in active operation in three other American cities, and the Newport branch is thought to be likely to grow rapidly.

### THE KAPURTHALA THEOSOPHICAL SOCIETY.

At a meeting of members of the Theosophical Society held at Kapurthala on the 3rd day of December 1883, the President-Founder in the chair—it was unanimously resolved that a Branch be formed at this place under the name of "The Kapurthala Theosophical Society." Upon motion the Bye-laws of the Parent Society were temporarily adopted, and the Chair appointed H. E. Dewan Mathura Das and Babu Hari Chand a committee to prepare Bye-laws.

The choice of office-bearers being next in order, the Chair made the following appointments for the ensuing year:—

*President*:—H. E. Dewan Ramjas, C. S. I.

*Vice-President*:—H. E. Dewan Mathura Das.

*Secretary*:—Babu Hari Chand.

The President-Founder then declared the Branch duly formed and the meeting adjourned.

W. T. BROWN, F. T. S.,  
*Acting Secretary,*  
*pro. tem.*

Approved. Let Charter issue.

H. S. OLCOTT, P. T. S.

### THE TIRUPPATTUR THEOSOPHICAL SOCIETY.

Our indefatigable brother, M. R. Ry. S. Ramaswamiyer Avergal, organised a Branch Theosophical Society at Tirupattur in Madura District. This is the 79th Branch in India.

The office bearers for the current year are:—

M. R. RY. P. VENKATESWARAIAH AVERGAL, *President.*

" N. SREENIVASIER AVERGAL, *Secretary & Treasurer.*

### THE GHAZIPUR THEOSOPHICAL SOCIETY.

The following office-bearers were elected for the Ghazipur Theosophical Society:—

BABU SHANKAR DAYAL PANDAY, *President.*

" KEDAR NATH CHATTERJEE, B.A., *Secretary.*

" BENODI LAL MUKERJEE, M.A., *Asst. Secretary.*

LALA RAM SARAN LAL, *Treasurer.*

### THE PRAYAG PSYCHIC THEOSOPHICAL SOCIETY.

The following office-bearers were elected for the "Prayag Psychic Theosophical Society," Allahabad, for the year 1883-84:—

H. C. NIBLETT, ESQ., *President.*

BABU OPROKAS CHANDER MUKERJEE, *Vice-President.*

DR. AVINAS CHANDRA BANERJEE, } *Joint Secretaries.*

" BROJENDRO NATH BANERJEE }

### THE VASISHTHA THEOSOPHICAL SOCIETY (VIZIANAGRAM.)

At a meeting of Theosophists held at Vizianagram on the 10th January 1884, the President-Founder in the chair, it was resolved:—

That a Branch Society, called the "Vasishtha Theosophical Society," be organised at Vizianagram.

That the Rules of the Parent Theosophical Society be temporarily adopted;

That a Committee be appointed for framing Bye-laws, composed of Messrs. Chandrasekhara Sastriar, K. Subbarayadu, C. Venkatarao Sahib, V. Venkata Rayudu, and K. Vijayaraghavachariar;

And that the following officers be elected for a term of one year:—

MR. C. CHANDRASEKHARA SASTRIAR, B. A., *President*; MR. C. VENKATA RAO SAHIB, *Vice-President*; MR. V. MADHAVA RAO, M. A., *Secretary and Treasurer*; MESSRS. K. SUBBARAYUDU, C. RAGHUNAYAKULU NAIDU AND G. THAMMAIAH NAIDU, *Councillors.*

C. CHANDRASEKHARAM, *President.*

### THEOSOPHICAL SANSKRIT SCHOOLS.

We have been informed from Cawnpore that the Branch of our Society at that station has raised a monthly subscription of one hundred rupees for the establishment of a Sanskrit school proposed to be started in the month of January. It is a pleasure to see that the number of Sanskrit schools is steadily increasing. And we shall consider our duty to have been rightly performed when we find the whole Indian Peninsula dotted over with such Institutions. If we are to judge of the future from the success which has attended our past efforts, we feel confident that the day is not very far off when our hopes will be fully realized; for as the saying has it, "Nothing succeeds like success."

### THE PRESIDENT-FOUNDER IN THE NORTHERN CIRCARS.

At the invitation of His Highness the Maharajah Saheb of Vizianagram, Colonel Olcott left Madras on the 4th January by S. S. "Malda" and landing at Bimlipatam on the evening of the 7th, arrived at Vizianagram at 7 p. m.; after a drive of two hours. During the President-Founder's stay at the capital of the most important native state of the Northern Circars, the hospitality shown to him, the intelligent interest that his Highness took in the discourses of the Colonel on Theosophy and Occult Sciences, and the best possible use made by the Maharajah of this visit, attest the eminent culture of one of the most enlightened Princes of India. At the request of His Highness, Colonel Olcott delivered an extempore lecture, highly interesting and impressive, before an audience composed of the educated residents of the place, at the Daba Gardens at 4-30 p. m. on the 8th. He showed that Theosophy is identical with the essence of all ancient religions; explained at length the aims and objects of the Society; dwelt on its achievements; maintained that the Materialistic theory can be pulled down and the survival of man after death established, by scientific experiments, &c.; pointed out the superiority of the ancient Aryan philosophy over all the Modern systems in its having an experimental basis, and concluded by exhorting the audience to foster Sanskrit Literature in which are embalmed inestimable treasures, the teachings of our Rishis, whose resuscitation and comprehension would revive the ancient spiritual glories of Aryavarta.

The speech made such a sensation among the people that a Branch Society called Vasishtha T. S. in honour of the Maharajah's *gotra* or "clan" was organised on the morning of the 10th, consisting of almost all the leading gentlemen of the place. In the four Telugu Districts of the Northern Circars, Theosophy was hitherto so little known—by reason of their Geographical isolation from the rest of India—that the benefits of the formation of the Vasishtha Theosophical Society cannot be overrated; and there is every reason to believe that splendid results will accrue for the cause. On board the steamer, the all-absorbing topic of conversation among the native passengers was Theosophy. To the furthest limits of Ganjam and Vizagapatam, to Chatrapur, and Chicacole, and to many an important station, the principles of Theosophy are now being diffused with unusual interest.

The kindly sympathy shown by His Highness for the Theosophical movement has already begun to exert no small influence on the public at large. The President-Founder seems to have secured the friendship of a Prince already engaged in right earnest in the moral regeneration of India.

Leaving Vizianagram early on the morning of the 11th, Colonel Olcott reached Bimlipatam at about 9 a.m. A committee of the Hindu Debating Union interrupted his carriage on the road, and persuaded him to give them a short lecture before embarking on the steamer *Kangra*, which lay at anchor in the harbour. As he had no time for doing anything more, being in a hurry to reach Head-Quarters and prepare for his European tour, he contented himself with kindling in the hearts of the leading men a desire to study Theosophy, and paving the way for the formation of a Branch.

When the *Kangra* arrived at Vizagapatam a number of gentlemen who had already invited the Colonel by telegrams, came aboard and earnestly requested him to go on shore and lecture on Theosophy and form a Branch Society. But to his great regret this was impracticable as no other steamer for Madras would serve before one week and his foreign engagements forbade delay. He was obliged to dispose similarly of an invitation from Cocanada. If, however, the gentlemen interested in the matter would report to Head-Quarters when the Branches in these places are actually ready to be organised, the President-Founder promised to spare the valuable services of Mr. W. T. Brown, B. L., whose heart is in warm and entire sympathy with the educated gentlemen

of India, for a tour along this coast. Friends at the chief points throughout the Northern Circars will kindly communicate with Mr. D. K. Mavalankar, Recording Secretary, as soon as practicable, so that Mr. Brown's dates may be arranged and the necessary preliminaries be agreed upon.

An official tour by the President-Founder through Europe has been long needed because of the recent growth of our Society in that part of the world, attested by the formation of several Branches and the surprising interest awakened in Asiatic Philosophy by Mr. Sinnett's books and other agencies. It is now five years since the Founders passed that way *en route* for India. At that time we could count but two Branches from Cape Fear to the Volga—the one at London and the other at Corfu in Greece. Yet, despite their subsequent absorption by their work in India and their consequent inability to second the efforts of our Brothers in those countries, a number of Branches have sprung up, and the indications are most cheering. Our British Branch has always been able to boast among its members a number of the best thinkers and writers of the day; but since Mr. Sinnett's return to England the accessions have been both numerous and important. According to late advices it appears that Theosophy is quite a topic of discussion in cultured Society, and Theosophical "At Homes," "conversations," and other social meetings at which it is the chosen subject of talk are getting to be quite common. The presence of the President-Founder, therefore, at the several intellectual capitals of Europe, will be opportune and we hope for good results from his tour. The immediate cause is however, a special and earnest appeal from his co-religionists, the Buddhists of Ceylon, to try and remove their present religious disabilities. As was justly remarked by Mr. Abrew, one of the Delegates from the Colombo Branch, to the late convention of the General Council, our Society, (*at first suspected of a design to supplant Buddhism by Hinduism in Ceylon*) is now respected, and when there was a failure of justice after the recent Catholic Riot, "the eyes of all Ceylon were turned to Colonel Olcott as the only person who could have their grievances redressed." Our colleague never "does things by halves" and so he hopes to finish at London the "immensely beneficial" work he began in their behalf at Colombo. He is now in Ceylon, and after a short visit to Kathiwar will sail from Bombay for Europe by the middle of February,—probably reaching Paris and London about the middle of March. At London he may be addressed c/o A. P. Sinnett, Esq., 7, Ladbroke Garden's Kensington Park W. He expects to be back at Calcutta in July or August to hold the Provincial Convention of the General Council recently decided upon. The rest of the year will be spent in another foreign country; about which block of work full particulars will be given in due course of time. His correspondence (unless sent direct to London) should always be addressed to the Adyar Head-Quarters. But no letters of trivial importance will be forwarded to him, nor any which can be as well attended to here.

#### THE NEUTRALITY OF THE SENATE HOUSE.

With reference to a correspondence on the subject of this heading that is now taking place in the *Madras Mail* a few remarks will be perhaps timely. At the time of our "Eighth Anniversary" the Council of the Theosophical Society applied to Mr. Duncan, Registrar of the University of Madras, for the use of the Senate Hall for a few hours, wherein our numerous Delegates and members could meet. We were refused—as might have been anticipated—and no reasons given for the refusal. The request was not made in the way as the *Madras Mail* puts it, *i. e.*, by "the disciples of Mad. Blavatsky," but by the Council of a Society which counts, besides many thousands of native members in India, some of the most distinguished and scientific men of England—even *Fellows of the Royal Society*—and of Europe generally. It was neither a religious nor a scientific meeting, but simply a social gather-

ing of men from all the quarters of the globe, who, putting away, for the time, all their political and religious strifes, social distinctions and every race feeling—were to meet on one common platform of UNIVERSAL BROTHERHOOD, and mutual good will, something orthodox Christianity speaks much about but fails to carry out practically, and which the Theosophical Society alone puts in practice according to its programme. On January 17th, a letter, probably from one of our Anglo-Indian Fellows who felt indignant—as well he might—at the unmerited outrage, appeared in the *Madras Mail*, preceded by an editorial that does the paper credit. I quote a few sentences from it to show the grievance the more clearly:—

"In your issue of the 9th, there is a little paragraph to the effect that a fancy sale of Burmese curiosities was held in the Senate House at 4 p. m., on the 8th instant, on behalf of the S. P. G. Ladies' Association, and the following ladies presided at the stalls:—Miss Gell, Mrs. Handley, &c. You are, perhaps, not aware, that last month certain members of the Theosophical Society, applied for the use of the Senate House for their annual gathering, and were refused. Now, as the Senate House was built with the money of the natives, it seems strange that they should be denied the use of their Hall for one of the noblest objects ever contemplated for the regeneration of the people of India, and that the Senate House should be granted to ladies, one being the sister of the Bishop, to raise funds for the purpose of the conversion of Natives to Christianity. . . .

Now, Sir, do you consider for one moment that the natives will be at peace when they find their Senate House denied to them, though required for a noble purpose, and that it is but to the sister of the Bishop (a high Government official) for the purpose of raising funds for the conversion of natives to Christianity which is abhorrent to them? Will not their indignation be excited, and will they not consider that the Government has lent itself to their being converted to Christianity, and their own high aims, the seeking of Divine knowledge, ruthlessly crushed out. . . .

Here we see the natives of Madras absolutely refused the use of their own Senate Houses and the same quietly handed over to the sister of the Bishop Gell for the furtherance of the Bishops' Missionary work. . . .

It will be edifying to know, why the Chief Justice, a Vice-Chancellor of the Senate, should have refused the use of the Senate House to the Theosophical Society, and yet granted it to the Society for the Propagation of the Gospel?

To this, Mr. Duncan replying in the same paper, on the 18th to the effect that "The refusal of the Senate House to the Theosophical Society was the decision of the Syndicate as a body"—adds the following characteristic explanation:—

" . . . It is a mistake to suppose that the question of religious neutrality was the only reason. Many of the Fellows would have objected on scientific, rather than on religious ground, to the Senate House, being given to a Society, whose methods of investigation cannot be regarded as in harmony with the recognized method of modern Scientific enquiry, as the columns of the *Madras Mail* have frequently shown."

I will not stop to notice the rather curious reference to the columns of the *Madras Mail* thus suddenly raised to the eminence of a public arbiter in questions of science. But I would respectfully remind the honorable gentleman, who appeals to its decision that the *dailies* are not generally regarded as very impartial judges. That they often talk of things (theosophy for one) of which they have not the remotest conception; enlivening their leaders with what they are pleased to regard as "chaff" and *fun*, while they are no better than most slanderous and unmerited attacks upon those they do not sympathize with. The *Madras Mail* is no scientific, but a political newspaper; therefore, in this connection, at any rate, we have the right to rule its evidence out of Court, as being irrelevant to the subject under consideration. But what I would like to ascertain is, how much more "scientific" than our methods of investigation, are those of the lady patronesses or the so-called "Ladies' Association of the Society for the Propagation of the Gospel?" Has the object *they* work for, and the subject *they* would propagate, ever been found more "in harmony" with recognized science than our "methods of investigation?" Can the learned Registrar of the Madras University inform us upon this question or answer satisfactorily this other one;—How much, and what is precisely known to the honourable Syndicate of our "methods of investigation" beyond what it thinks it has learned from the course, silly and ever undeserved attacks on our Society by the daily papers, and the positively libellous, wicked, *unchristian* gossip of the "Christian" Society of Madras and Anglo-Indian Society in general, whose malice against the Theosophists can only be equalled by its ignorance of their objects and doings. For five years we have invited investigation; but with the exception of those English born Theosophists who have joined our Society to become its staunchest advocates and defenders, the Christian Society in general

refused to inquire into the unpopular subject, answering like Nathanael of old: "Can there any good thing come out of Nazareth."

Nevertheless, one feature, at any rate, we have in common with the scientific method of investigation. We take nothing on faith, and we go *beyond* and *higher* than any dogmatic religion or materialistic physical science, since our motto—"There is no religion higher than truth" is followed by the principle enunciated by Arago "outside of pure mathematics never pronounce the word *impossible*."

H. P. BLAVATSKY,  
Corresponding Secretary,  
Theosophical Society.

### [SPECIAL CIRCULAR.]

#### ANNUAL PROVINCIAL CONVENTIONS OF THE GENERAL COUNCIL.

AFTER the Convention was adjourned, the Founders were advised to hold every year, either in May, June or July, a Provincial Conference for the benefit of local Branches, in other parts of India than the Madras Presidency. The place of Convocation to be selected by vote of a majority of the Branches or in the Presidency designated by the President-Founder in any given year.

The celebration of the Anniversary of the Parent Society on the 27th and the 28th of December will invariably be at the Head-quarters in Madras. The President-Founder accordingly decides that the Provincial convention of the year 1884, shall, unless the Bengal and Behar Branches object, be held at Calcutta. The exact date,—which will depend upon the state of Theosophical affairs in Europe—will, when fixed, be notified, in time by Babu Norendro Nath Sen, President of the Bengal Theosophical Society, and Editor and Proprietor of the *Indian Mirror*, Calcutta. Many of the Branches in the North could not be represented properly at Adyar on account of distance. It is therefore considered desirable that they should take advantage of this semi-annual Conference to meet together and consider proposals for improving the efficiency of the Parent Society's work and bring about more harmonious and practical working of the Branches than heretofore. While, therefore, the Northern Societies and especially those in Bengal and Behar are strongly urged to attend the Conference, it will be understood that the meeting is open to qualified representatives of every Branch throughout the world. Various cities and towns are in the habit of competing with each other, one in a friendly rivalry to secure the Annual Meetings of the British Association for the advancement of Science and other learned bodies, by offering special inducements in the way of hospitalities to Delegates and facilities of one kind or another to the executive officer of those Associations. Similarly, it is competent for various places in India to compete for the holding of the mid-year Provincial conventions of our Society, and the matter is left entirely to the choice of the Branches.

By order of the President-Founder in Council.

DAMODAR K. MAVALANKAR,  
Joint Recording Secretary.

HEAD-QUARTERS, ADYAR (MADRAS), }  
1st January 1884. }

[We are requested to republish the following discussion, which we do—without comments—*Ed.*]

(TO THE EDITOR OF *The Epiphany*.)

SIR,

I do not know why you have sent me two copies of your issue of 22nd September last, which reached me this morning.

Perhaps you wish to draw my attention to the article headed "Theosophy and Christianity." But since my views are so different from yours,—I hold God, religious beliefs and persuasions to be one's own private and sacred convictions that I would not wound any brotherman's feelings in this respect; while you on the contrary would gladly join our Society if you "might urge the claims of Christianity as the true key to the development of our latent powers." We must therefore remain apart in our views.

Your remark that "we (you) perform certain physical acts, as you (the Theosophists) go through certain processes of Yogi, simply as a means to attaining the development of certain latent powers of human nature, such as humility, love, communion with the personal All-Father, holiness, immortality, and, if God wills, even in this life dominion over

physical nature, . . ." is certainly misleading, since it would lead the readers of the *Epiphany* to believe that all Fellows of the Theosophical Society are believers in a personal God, whereas the contrary is the case. Those following the Esoteric doctrine, whether they be Adwaita Brahmins, or Buddhists, do not believe in a personal God, or as you term it "personal All-Father."

You are not right in saying "that only by the faith of Christ can active love and sustained purity be maintained in our crowded cities." Such statements require clear proof.

If you, as Christian Ministers, "do not very carefully enquire into the evidence for the existence of Christ, because we (you) find it as a rule admitted as fully by the most learned (?) enemies as by the friends of Christian Theology." What do you think the Christian laity should do? Accept a religion in blind faith, to be thrown aside on mature consideration?

I for one, although once a blind believer in Christianity have come to different views after mature consideration and some study of the Christian history and evidence. I have now accepted for my guidance the following words of Buddha:—

"Do not believe in anything because it is rumoured and spoken by many, do not think that is proof of its truth.

"Do not believe merely because the written statement of some old sage is produced; do not be sure that the writing has ever been revised by the said sage, or can be relied on. Do not believe in what you have fancied, thinking that *because an idea is extraordinary*, it must have been implanted by a Deva, or some wonderful being.

"Do not believe in guesses, that is, assuming something at hap-hazard as the starting point, and then drawing conclusions from it—reckoning your two and your three and your four *before you have fixed your number one*.

"Do not believe merely on the authority of your teachers and masters, or believe and practice merely because they believe and practice."

"I (Buddha) tell you all, you must of yourselves know that this is evil, this is punishable, this is censured by wise men; belief in this will bring no advantage to any one, but will cause sorrow; and when you know this, then eschew it."

I am altogether with you in saying that no right-minded man for the purpose of hurting the religious feeling of his brother-man, would use such words as that quoted by you from the *Anti-Christian* for January 1883.

Yours truly,

H. C. NIBLETT,  
President, Prayag Psychic Theosophical Society.

[May we ask you whether "we must remain apart in our views," is a principle of Theosophy? You regard Christianity as an antiquated and superstitious creed, and we regard the practical side of Theosophy the side apart from what the term obviously presents, as pernicious. If Theosophists say that this gap must remain as wide as ever, they point to a most woeful state of affairs. Surely they do not aim at that complete 'equality, fraternity and liberty' which is aimed at by Christianity.\*

We are sorry that one of our remarks, pointed out by you in your 3rd para. could be misunderstood. All that we meant was that we perform certain physical acts simply "as a means to attaining the development, &c.," just as you go through certain processes, like *Yogis*. We did not pretend to determine your objects in going through certain processes, all that we did was to tell you about our own objects. We have indeed too bitter an experience, that you do not believe in the quality of existence, nor, like Berkeley, in the difference between the Divine and the human souls; but that you are Advaitabadis, believing that what are 'popularly' distinguished as good and evil are but manifestations of one eternal soul.

We did not mean our article on Theosophy and Christianity as an exhaustive treatise on Christian evidence. If we did we ought certainly to have dealt with the subject of Faith in Christ as a source of perpetual strength to believers, very prominently. We cannot expect to prove the point very clearly in this short reply. All we can do here is to indicate one source of strength and life, viz., the Sacrament of our Lord's Body and Blood. This Sacrament is not merely a propitiatory sacrifice in which we get renewed assurance of our reconciliation with our Heavenly Father, whom we have offended by our sins, but also a commemorative rite leading us at once to the very source of life and strength. Isn't this very rational that the remembrance of an act of perfect obedience to duty, an act of utter unselfishness, an act of perfect love for sinners, an act of patient sacrifice which was purely voluntary, isn't it quite rational that such remembrance itself is a source of very great spiritual strength? Take our testimony, take the testimony of every believer to the fact that the death and passion of our Lord is the chief source of our spiritual life and comfort. The love and sympathy of our Lord for us and for our nature draws us by the unfulfilling attraction of friendship towards His own self, towards His own purity, His own devotion to duty. In vain will you search, in the pages either of history or even of mythology, for one who equals Jesus Christ either, in His attractiveness, or in His perfection. Have we then no reason in saying, "that only by the faith of Christ can active love and sustained purity be maintained in our crowded cities?"

\* Most assuredly we do, and much more effectively than "Christianity," since with us the last word "liberty" means what it conveys, i. e., a full and unconditional liberty of conscience in all matters of faith, while in Christianity on the other hand, it becomes a paradox. No one outside of the pale of the Christian church—or even a Christian of a rival denomination, for the matter of that, will ever be regarded as a "Brother" by another orthodox Christian. Setting the laity aside, when we shall be shown the Roman Catholic clergy *fraternising* and on perfectly equal terms with the Protestants, then will there be time for us to confess—Verily—"See, how these Christians love each other!" Until then, the less said of "equality, fraternity and liberty" in Christianity—the better.—*Ed., Theosophist.*

In the 5th para. of your letter you mean to suggest that some very learned men have doubted about the existence of Christ. The question of existence or non-existence of a person is a historical question. A learned man is not in a position to deny the existence of Christ, it his learning consists simply of a knowledge of the Vedas, the Vedangas, the Darshanas, the works of Auguste Comte and Herbert Spencer, and the whole range of physical and mathematical science. The denial of the existence of Christ by a learned man, who is not learned in history, amounts to a denial by an ignorant man. Now, can you name some "most learned" men, their learning embracing a thorough knowledge of history, who have denied the existence of Christ?

We quite see how your faith in Christ was a blind faith; how you were accustomed to say that you were Christian, although you never saw that Christianity really was, what it professed to be. But you are not to suppose that the faith of the laity, who have no time or opportunity of going through the historical evidences and establishing for themselves the truth of the Christian religion, is a blind faith in every case. The laity are like soldiers who place implicit confidence in their captain in the battle field. They believe that the war they are engaged in is a justifiable war, because the Parliament have found it so after mature deliberations. But, whenever a soldier doubts about the justice of a war, his hands are weakened. He may even desert his ranks on conscientious grounds, if he takes it into his head to think, that his fellow-soldiers, his captains and generals and the Parliament have all erred, and that he himself must be right. But before deserting the ranks should not he regard it as a peremptory duty to lay open his doubts before his Captains and Generals? If any layman ever entertains any doubt, rational or historical, regarding the truth of his faith, instead of proudly proclaiming himself as an infidel or heretic, disregarding the learning and piety of 1800 years and more, he ought to lay open his doubts to Priests and Bishops, such as have devoted their life to the maintaining of the faith.

You seem to think that certain words of Buddha that you quote being your watch-words you cannot accept Christianity. Christianity you seem to think, is something "which is merely rumoured and spoken of by many," which is the "written statement of some old sage." We pity your simplicity. Any Christian can take these words of Buddha as his watch-words without in the least compromising his faith. One of your quotations, viz., the fourth, seems, at first sight, to be in opposition with the authority of Christian priests. Laymen do not believe in Christianity merely on this ground, that some of the priests, whom they love and venerate, and whose honesty they never doubt, have proved Christianity to be true, and that they themselves simply receive the benefit of their findings and share in their beliefs without going through the laborious task of establishing these for themselves. It is not merely this: the layman does not "believe merely on the authority" of his teachers. He finds the practical utility of these beliefs; in other words, he sees, that if he believes in certain facts and doctrines as true, and faithfully receives the sacraments in connection with these facts and doctrines, he actually feels himself more and more edified and ennobled. Then, as to the historical truth of those facts and doctrines, he may have recourse either to authority, or, which is almost impossible for a layman, to personal examination of the vast tomes of history and historical records in their original language which you don't seem to know anything about. It is a grievous error to think that Christianity is one of the many antiquated religions which began in some mythical period, the truth or falsity of which depends hopelessly upon our own opinions regarding it. Christianity claims to be the very only revealed religion which has had *historical surroundings* from its commencement, and truth of which may be established by certain history.—[Editor Epiphany.]

#### CREDAT JUDÆUS APELLA.

HISTORY repeats itself. That which was once said by grateful posterity of the Emperor Titus *delicæ humani generis*—is now declared, we are told by the not less grateful Bengal graduates of their vanishing principal, the much wronged Mr. Hastie. No doubt, could the public believe that the sentimental address—extracts from which are given below—has been really presented to him by our Calcutta students of the General Assembly's Institution, and that it is the correct echo of their genuine feelings—the name of the reverend "victim of a foul conspiracy" becomes entitled at once to a most conspicuous place in the annals of Martyrology. He would, indeed, be a truly good man; one, who "after a distinguished Indian career of fame and splendour" (the latter shining with too increased lustre, perhaps, during the Pigott-Hastie case) was, nevertheless, "loved so warmly," and so truly by his pupils that their (the students) "hearts would be better performers than their words." Thus they are made to say,—

"Indeed to bid a farewell to a friend like you whom we have revered so much, and loved so warmly, is in itself a sad business (it is, it is!), and the sad character of it is heightened by the peculiarly sad circumstances in the midst of which we are addressing ourselves to it. It must be admitted to be a great misfortune to Indian youths, of whom so many have been educated under your kind care and fatherly watchfulness, that a person of your extraordinary intellectual attainments, (chiefly in the art of back-biting,) of your rare aptitude for the difficult business of training young minds, is going to be removed from their midst, so soon. The students of the General

Assembly's Institution whom you see assembled around you, to show their heart-felt gratitude for the acts of kindness which they have so often enjoyed at your hands, ... express their unqualified sorrow that so great a friend and so renowned a scholar is going to be torn away from them so unexpectedly."

Powers of the implacable Scottish Mission—this is your work! And if, after reading the above, your cruel hearts bleed not, and your cheeks fail to become wet with the hot tears of shame and repentance for snatching away from so many henceforward orphaned goslings, the father Pelican who tore open his breast for years to feed them with his own blood, it is only that every human feeling, as we know, has long departed from Puritan hearts. It is useless to argue and say to these poor bereaved youths that the "kindness" they have "enjoyed" at the hands of their principal expanded chiefly its energy in turning away their Hindu hearts from their ancestral religion, their homes and sires; that the "renowned scholarship" of your victim shone brightly in his translation of Dr. Christlieb's Protestant Mission; his "rare aptitude" in disfiguring and perverting the figures given in the numbers of Christian converts; and that while his "extraordinary intellectual attainments" are undoubtedly shown in the clever way he watched the movements of, and dug pit-falls for, all who stood in the way of his personal ambition—Christians and heathens alike—and in destroying the arduous work of long decades of Missionary work. It is useless, you see. For, to all this, the grateful youths will only gush the more, and turning, to their principal will be made to say:—

"We pray to you to retain for us, in the midst of the hills of your native Scotland, a soft place in your heart, and to exercise your rare powers for the good of our race in this remote region. We do most sincerely hope that even when our faces would cease to be before your eyes, you would remember us, and direct your energies towards the redemption of the evils which are eating into the vitals of our society, and which you have witnessed with a painful heart, and with a singleness of eye striven to remove. We admire the boldness and justice with which you have lashed these evils, and the sincere motive for doing good which has inspired all your actions.

We also tender to you our heartfelt thanks for the many lessons on morality and piety which we have received at your feet, and which, we hope, we shall be able follow in the struggle of life which awaits us."

We, of the Calcutta University and Colleges have, also, greatly "admired" the "boldness," and recognized the "sincere motive" that prompted Mr. Hastie, when he "lashed these evils" in various slanderous pamphlets. That the said "evils" were mostly due to his own perverse imagination is a trifle, disregarded by the clerical historian; that the "disgusting immorality," which "idolatry entails," and of which he publicly accused our mothers and sisters, was far outshone by the revelations we had in the Pigot-Hastie trial of the far greater immoralities that are eating into the core of certain Christian and Zenana Missions of Calcutta—is another. His calumnies on our religion and country in his disgusting libel "On Hindu Idolatry," have brought with them their own reward. Among "the many lessons on morality and piety" which were received at his feet, we shall have to include, of course, the lesson on the sanctity and meritoriousness that lie hidden in the act of opening other people's private letters—in Mr. Hastie's *code of honour*.

It is reported that the mournful choir of Hindu students closed their famous address by thanking their pious principal for helping them "to a correct and high appreciation of Jesus Christ and his teachings." The said grateful young gentlemen remaining, however, with the exception of an infinitesimal number, as unregenerate idolators as they ever were, we have to regard the sentence as an additional figure of speech. The said appreciation must have been drawn from the feverish imagination of the friend who concocted the address, rather than found in the saddened hearts of the *heathen* collegians. One thing, I for one, find wanting in the famous address: no thanks are rendered to the Rev. Mr. Hastie by his Hindu wards for having lashed their mothers, sisters and wives, dragged them through the mire and traduced and dishonoured them before the reading world. This

looks like ingratitude. It ought to have been mentioned along with other items while thanking him for directing his energies "towards the redemption of the evils which are eating into the vitals of our (Hindu) Society." To conclude.

"The Rev. M. Gillon then followed, expressing astonishment at Mr. Hastie's dismissal, the news of which came to him like a thunderbolt."

The thin veil under which the Rev. W. Hastie seeks to cover his ignominious retreat from the scene of action is of course too transparent to deceive anybody. The only wonder was that in the rising generation of Bengal even five boys could be found to lend themselves to such a disgraceful sham. But perhaps the youthful wags having a keen sense of the ridiculous in them, took the whole thing as an excellent joke and enjoyed themselves to their hearts' content at the keen irony with which the whole address is pervaded. The wording of the latter would have left many in a glorious maze of admiration for the dramatic capacities of both master and pupils, had not a brutally sincere remark of the *Statesman* opened the eyes of the public at once to the truth of the whole incident. Says your frank contemporary:—

"THAT THIS ADDRESS WAS NEVER WRITTEN BY THE STUDENTS OR ANY ONE OF THEM GOES WITHOUT SAYING. Mr. Gillon's astonishment at Mr. Hastie's dismissal must arise from the fact that he is not in possession of the true history of the matter."

The cat is out of the bag. It becomes evident that Mr. Hastie's "intellectual attainments" and "rare aptitude" for dramatizing every situation, however great, are not yet fully developed and need final polish. Not being born for penitence and a *cilicium*, our ex-Principal may consider himself strong for the Scottish Mission and in the eyes of his converts—if any; but he is much too weak for the present emergency. Having been floored by an old woman, Miss Pigot, he is now check-mated by the wicked *Statesman*.

We are glad to learn that the "address" was not the production of the students. After the slur and opprobrium cast by the Scotch Patriarch upon the whole Hindu nation, to find even a few of our boys licking the hand of the traducer of their household gods and religion, would have cast an ugly spot, indeed, on the character of the rising generation of Bengal!

AN OLD COLLEGIAN, F. T. S.

CALCUTTA, January.

## NOTES ON MODERN EGYPTIAN THEOSOPHY.

Read at a Meeting of the British Theosophical Society, April 2, 1882.

BY W. F. KIRBY, F. T. S.

MR. E. W. LANE, in his "Modern Egyptians" and his notes to the "Thousand and one Nights" is admitted to have given the best account extant of Egypt as it was before it had been interpenetrated with European influences. Three chapters of the former work are devoted to what he calls their "superstitions," of which he has given a faithful account, though without apparently having any belief in them himself. I propose to select from these chapters and other sources any passages that may be of special interest to Theosophists, and add brief comments of my own.

The beings which play the most important part in Arab romances are the *finn*, or *Genii*, which appear to correspond very closely to the beings known to us as the Elementals. They are said to be created of fire; to have existed before Adam; and to pervade the solid matter of the earth, as well as the firmament, "and to inhabit rivers, ruined houses, wells, baths, ovens, and even the latrine."\* They "are believed often to

\* They are the *Preta*, *Yaksha*, *Dakini*—the lowest of the Hindu elementals, while the *Gandharvas*, *Vidyadharas* and even the *Apsaras* belong to the highest. Some of them—the former are dangerously mischievous, while the latter are benevolent, and, if properly approached willing to impart to men useful knowledge of arts and sciences.—*Ed.*

assume or perpetually to wear the shapes of cats, dogs, and other brute animals." "It is commonly affirmed that malicious or disturbed *finn* very often station themselves on the roofs or at the windows of houses in Cairo and other towns of Egypt, and throw bricks and stones down into the streets and courts. . . . I found no one who denied the throwing down of the bricks, or doubted that it was the work of *finn*."\* It is believed that each quarter in Cairo has its peculiar guardian genius, or *Agathodaimon*, which has the form of a serpent.† In the Thousand and one Nights the *finn* appear either wholly as human beings, like the fairies of Spenser; or more or less in the human form (often winged), and possessed of various superhuman powers, frequently plunging through the earth, as well as flying through the air; or else they appear in the forms of animals, especially apes or serpents. They are frequently summoned by casting incense on a fire, with or without an invocation. They are thus described in the Thousand and one Nights. "Among us are heads without bodies, and among us are bodies without heads, and among us are some like the wild beasts, and among us are some like animals of prey." "O my master, the *finn* are of very different form; some resemble quadrupeds, some birds, and some men."

All this is of extreme interest. The frequent appearance of *finn* as animals suggests that some classes at least of Elementals may be the temporarily disembodied spirits (or shells) of animals. Those of domesticated animals are occasionally seen by clairvoyants (that of a pet dog for instance is mentioned among Lord Adair's experiences with a medium). But I don't see why we should expect to meet with such spirits, except those of domesticated animals, in civilised and highly cultivated countries; for it stands to reason that they, like the animals to which they correspond, should fly from the neighbourhood of men. The "heads without bodies" may well represent the flying globe of the ancient Egyptians, or the cherubs of the mediæval painters; and Mr. Felt tells us that some of the figures on the Egyptian monuments represent Elementals, which he professed to be able to make visible to the eye, though I have not heard that he was successful in the attempt. Elementals being inferior to men, would naturally have preceded him in the order of Creation. The strange localities which the *finn* are said to inhabit, remind us of certain passages in Swedenborg concerning the state of evil spirits of Heaven and Hell (§§ 481, 488, &c.). The burning incense to *finn* shows how idolatry may have originated, either in divine worship being offered to beings which are usually invisible, or in fumigations being found useful to induce or to compel them to become visible. Iron is said to act as a charm against them,‡ perhaps on account of its magnetic properties.

The spirits of dead men rarely appear in the Thousand and one Nights; but possession, haunting, stone-throwing, and other phenomena ascribed to human spirits in Europe, are here ascribed to the *finn*. But it is curious that a house where a bad case of stone-throwing

\* Spiritualists regard them indiscriminately as the "spirit" of the dead. There is a like superstition among the uneducated in India who think that no sooner a person dies than he (or she) stations himself on the roof of his house and sit there for nine days. But if, at the expiration of that time he renders himself visible, he is considered as an *unclean spirit*, a "blu" whose sins prevent him to attain *Mukti* and get out of *Kama-loka*—the abode of "shells."—*Ed.*

† In every Bengal village, and we think every where else in India, a serpent couple is always considered the guardian spirits of a house. These serpents are the deadliest cobras. Still they are so much venerated that no one would ever throw a stone at them. Killing any of these serpents is believed to be followed invariably by the death of the impious slayer, whom the bereaved mate is sure to track out even at a great distance and kill in his turn. Instances are numerous in which such serpents have been in houses from generation to generation unmolested and unmolested. Their departure from a house is considered the sure precursor of the utter ruin of the family. This shows a great similarity between the Egyptian and Hindu myths, which preceded them.—*Ed.*

‡ The same as in India.—*Ed.*

occurred, in which Mr. Lane himself lived at Cairo, was haunted by the ghost of a Turkish soldier who was said to have been murdered there, and was occasionally seen by natives, though not, I believe, by any of the Europeans.

Several superhuman beings besides fiend of various orders, are believed to inhabit desert places, especially the cannibal monsters called *Ghools*. It seems to have been a creature very similar to the Arab *Ghool* that Apollonius of Tyana saw in the desert on his way to India, and which is spoken of as an *Empusa*.\*

A very singular account is given of the "Welees," or saints. These are said to be "persons wholly devoted to God, and possessed of extraordinary faith, and according to their degree of faith, endowed with the power of performing miracles." They are subject to one chief, called the "Kutb," or "axis," and he has various officers under him only known to himself, or perhaps to each other. The Kutb and his officers are often seen, but are not recognized by others. He is said to be frequently at Mekkah on the roof of the kaabah, and at various other places; but wanders through the world, dispensing evils and blessings. When he dies, he is immediately succeeded by another. The Kutb is also said to receive his authority from the immortal prophet, Elias. Of course this dignity is unattainable; but some persons become welees by retiring to the desert to fast and pray, whereby they acquire clairvoyance, and other abnormal powers. A devotee at Cairo, who chained himself to the wall of a room and remained there thirty years, was said sometimes to cover himself with a blanket, as if to sleep; but if the blanket was removed immediately, no one was found beneath it. All these accounts, though some details may be misunderstood or exaggerated, evidently refer to the great world-wide Society with which we believe ourselves to have some distant connection.

The pilgrims to El-Medeenah assert that a light is always seen over the cupola which covers the Prophet's tomb, which disappears when you approach very closely. Again, when about three days' journey distant, they always see a kind of flickering lightning in the direction of the city. These may be either optical or odic effects; but there can be no doubt that the sacred places of Arabia must be very strongly charged with odic emanations which are likely to affect all who are *en rapport* with them; and this is so powerful that some pilgrims are positively unable to enter the shrines, the effect being such as almost to throw them into a fit. It is hardly probable that the glare of any city appears the same to all eyes, on account of its odic emanations affecting persons differently.

As regards the feats of the darweeshe, Lane says that some of them "pretend to thrust iron spikes into their eyes and bodies without sustaining any injury; and in appearance they do this, in such a manner as to deceive any person who can believe it possible for a man to do such things in reality." They "are said to pass swords completely through their bodies, and packing needles through both cheeks, without suffering any pain, or leaving any wound; but such performances are now rarely witnessed." They are also apparently fire-proof; and on great occasions the Sheykh of one of the principal orders of Darweeshes rides over a number of his followers, and others who throw themselves before his horse, without their receiving any injury.

I pass over Lane's account of charms, divination, &c., and proceed to the subject of magic. Clairvoyance by the pool of ink is too well known to need description; I will only say here that some European travellers who have tried it have seen more or less in it; and that Miss Martineau who tried the experiment found herself affect-

ed as if by some mesmeric influence, which she thought it prudent to throw off.

One of the most sensible of Mr. Lane's Muslim friends assured him that he had visited a celebrated magician residing some distance from Cairo who, on request, served him with coffee and sherbet in cups, which he recognized as those of his father, who was then at Cairo. He then wrote a letter to his father, which the magician put behind a cushion, and in a few minutes it was replaced by another in his father's handwriting containing family intelligence which proved on his return home a few days afterwards, to be perfectly correct.

Another magician is said to have taken a friend out into the desert for a treat, where he conjured up a beautiful garden around him. Mr. Lane suggests that this was the effect of drugs; but I should suppose it was more probably due to glamour or electro-biology.

A magician suspected of causing the illness of a young man by enchantment was imprisoned; and in the middle of the night, one of the guards who happened to be awake, heard a strange murmuring noise, and looking through a crack in the door of the cell, saw the magician sitting in the middle of the floor, muttering charms. Presently, the candle before him went out, and four other candles appeared, one in each corner of the cell. The magician then rose, and standing on one side of the cell, knocked his forehead three times against the wall, and each time he did so, the wall opened, and a man appeared to come forth from it. After a short conversation the visitors and candles disappeared, and the original candle resumed its light. In the morning, the patient was convalescent, and rapidly recovered.

The terrible hyæna sorcery of Abyssinia which combines the worst features of possession, witchcraft and lycanthropy, is unknown in Egypt; but transformations of men into animals are believed in. This is effected by a spell pronounced over water, which begins to boil, after which it is sprinkled on the subject. Sand or dust is sometimes used; and sometimes it is necessary for the patient to have previously eaten charmed food. Sometimes it is necessary for the magic liquid to touch every part of the body for the charm to be effectual. Speaking of such reported transformations, I may say that in so far as the narratives may contain any truth, it seems to me that transformations may be explained on various hypotheses. Drugs, glamour, the action of one mind on a weaker one, or the obsession (perhaps compulsory) by an elemental, would explain a good deal; and if an adept can transfer his own spirit to another body, it is conceivable that he may be able to effect such a transfer in the case of another person; or again, if the life of a medium was permanently transferred to a materialised form, (a possibility which we can hardly deny) we should have a case of genuine metamorphosis in the ordinary sense of the word.

Many feats of Oriental Magic appear to be due simply to glamour, or an illusive mesmeric influence capable of affecting several persons simultaneously in the same manner. Such illusions as "fairy gold," and the like, I take to be produced in this manner; and a curious story in point is that of the Barber's Fourth Brother, in the Thousand and one Nights. The victim was a butcher, who was deceived by an enchanter with fairy gold, which turned to leaves; but when he charged the enchanter with his dishonesty, he retorted on him for selling human flesh; and caused the carcasses hanging up in his shop to appear human. "Only a fable" you will say; but to those who believe that it is out of human power to imagine anything which is not true in one sense or other, even a fable may contain the germ of some important truth which only needs to be sought for to be discovered.

\* The *ghools* are known under the same name in Bretagne (France) and called *Voordalaks* in Moldavia, Wallachia, Bulgaria, etc. They are the *Vampire* shells, the *Elementaries* who live a posthumous life at the expense of their living victims.—Ed.

THE VEIL OF THE TEMPLE RENT.  
LECTURES ON OCCULT SCIENCES.

BY ELIPHAS LEVI,

Professor of High Magic, the Kabala and so-called  
Hermetic Philosophy.\*

Part I.

LECTURE I.

*On the Unity and the Rationale of Dogmas, whose profundity is in exact proportion to their apparent absurdity.*

*On Universal Mythology.*

A young man, rather a child, of high birth, but of an intelligence more obtuse than his spirit, was brought up in the country and entrusted to the care of three nurses. One of these was white, the other yellow and the third black. The boy eschewing the hardships of study, delighted only in the recital of marvellous and amusing tales. While attempting to teach him history, it was found that he gave preference to fairy tales, which to him were far more interesting. Geography appeared to him dull and incomplete, because he could not find in his book the exact place, where the "Mountain of Mirrors," of which the "Blue Bird" speaks is located. However he, like all children, was a great questioner, but when ever a reasonable answer was given to his everlasting "why's" and "how's," he invariably imagined that people were making fun of him. Professors were secured for his education, but he forgot immediately what he was taught, and remembered well only the fairy tales of his three nurses.

The white nurse was a Jewess, the black one an Egyptian, and the yellow one was a native of India, where she still was said to possess some lands on the shores of the Ganges.

"Now then, nurses"—said the boy, one day when he was not inclined to play—"I want each of you to tell me a story to explain to me how the world came into the world, and how the first child could become a child without either father or mother? Tell me first of all what took place at the time when there was yet nothing at all. After you have told me this, I will ask you a good many more questions."

"I heard"—begin the Jewess—"that at the time, when there was nothing, not even time itself;—because there was neither sun nor moon, neither sun dials nor clocks, but only a great genius,—who lived shut up in night as in a black egg, who was doing nothing, as he had no time to do anything, since, as already said, there was no time at all; but as he finally felt a desire that there should be something, he lit a light and then there was the first day which came into existence before the world was born."

"Then the genius perceived that he was endowed with a singular power. He had but to pronounce the name of a thing that did not exist and presently the thing came into existence. Thus, he said, 'light,' and forthwith he could see by it, and this after such a long darkness gave him great satisfaction. He then said 'heavens,' 'earth,' 'sun,' 'moon,' 'stars,' 'plants,' 'fishes,' 'birds,' 'beasts,' etc. and all these things began to exist. The genius was very much pleased, and an idea suddenly struck him, which made him pause and reflect. He wanted to create some one like himself, but on a smaller scale, so as to give commandments to him, and to do good or evil to him according to his own will and pleasure. But, as his idea about this creation had not yet reached a definite form, instead of simply speaking the word, he took a little red clay and modelled out of it a body, such as he would himself have liked to possess; for he himself had neither body nor color, neither shape nor substance, but was only a spirit, that is to say, a breath. He breathes therefore into the face of that clay statue and says to it: 'Let us make man.' Presently the statue began to think, and the

genius assumed the appearance of the form of the statue, each of the two communicating to the other something of its own likeness.

"When the genius saw himself thus doubled, he felt frightened and began to devise means to destroy his dangerous handiwork; but he found one impediment, which was this: as man and himself had become the complement, the realisation and so to say, the likeness of each other—then if one would die, the other would have to die also, and the genius could not then come back to life, unless by again bringing to life man.

"The first thing which the jealous genius did to subdue his rival, was to weaken him by making two out of him, and in doing so, to give him a dangerous reflection and an image which would be jealous of him. He put him to sleep, opened his chest, took therefrom a rib and made out of it a woman; because after man was made, the genius found that it would be no longer possible for him to create something out of nothing, for man's reason was opposed to that.

The spirit-breath, whom the man and the woman addressed as their Lord, then showed himself to them under the form of a gardener. He had placed them along with some other animals in a fine beautiful garden, planted with trees, and as he well knew beforehand what they were going to do, he forbade them under the penalty of death to eat of the fruit of a tree which he showed to them. In those days the beasts were endowed with speech, and thus a serpent advised the woman to steal an apple from the wicked genius. She not only did so, but induced her husband also to take a bite at the forbidden fruit.

"The 'Lord' who was near by, lying in wait, then condemned both, and also all their future children to death for all time to come, and drove them out of the garden; after having fashioned with his own hands breeches of skin for them. But as they were leaving, the genius felt that his own figure was departing along with them, and that he would have again to become a formless breath, unless he consented to die to regain those which he had just condemned to death, so as to be able to bring them to life by bringing himself to life, for he could not very well remain dead for ever.

".....And this is precisely why Monsieur the priest is daily saying mass. As for myself, who am not a Christian"—added the Jewess—"I believe that the Lord 'Spirit' or 'Breath' has contrived very well to rid himself of the human figure, and was never under the necessity of dying in order to retain it. It is for this that the Christians have burned and killed my ancestors for over a thousand years, and that is all I have to say."

"This must have certainly so happened," thoughtfully said the child, "for this story is so absurd, that nobody in the world could have been stupid enough to invent it. Spiritual things only are invented and stupid things only come to pass in reality. My professor of history told me but the other day that nearly all the sublime characters in history have been invented. We dream of a reign of Germanicus and have that of Caligula; our ideal is Faust or Don Juan, and the reality is a clown.

"Your story, my good nurse, reminds me of a tale I have read when a very small boy. Instead of a garden, there was a beautiful castle, in it also a Lord with a sky-blue beard. He was not jealous of his apples, but he had a little key, which he entrusted to his wife, forbidding her to ever use it. His apple tree was I believe called the tree of knowledge, and the little key is the Way of science. The inquisitive woman uses it and is immediately condemned to death by her husband; but after this severe test she is finally saved, and Mr. Blue-beard himself has to die as he well deserves."

"I know"—said the white nurse—"yet of another tale, which is still more pretty than the first one. It is called

\* These lectures are translated from unpublished manuscripts, kindly furnished to the Theosophical Society by a disciple and pupil of Eliphas Levi, M. G.—F. T. S.

'The Beauty and the Beast.' In the plot the forbidden fruit is neither an apple nor a key, but a rose. The jealous proprietor, the Lord demands that the charming young girl for whom the rose was plucked from his garden, should be sacrificed to him. The maiden to save her father sacrifices herself and is shut up in a delightful palace alone with the horrid Beast, who heaps upon her so many proofs of his kindness and his ardent devotion, loving her so much as even to die for love of her, that the girl, listening only to the voice of her good heart, forgets the repugnance of her eyes, and consents to give the Beast her hand, upon which the Beast is suddenly transformed into a beautiful prince."

"This"—remarked the black nurse—"is an imitation of the tale of the great African Initiate Apulcius of Madura in his marvellous book called 'The Golden Ass.'

"He tells us of a young girl called Psyche, doomed to be devoured by a monster. Zephyr transports her into an enchanted palace, wherein she receives the attention of an unknown admirer. He makes her very happy, forbidding her only one thing, that of attempting to see him; but she disobeys and finds herself alone in a terrible wilderness, where she suffers a thousand tortures. Repulsed by every one she opens a box, which she was warned not to look into, her curiosity being quite incurable; the box contains poison and Psyche falls down and is about to die; but saved by Love, which is her unknown spouse, she becomes immortal. You see that this is always the same story, only arranged in a different manner and with characters changed."

"There is also"—said the child—"a fable in the Mythology of the Greeks concerning a beautiful woman called Pandora, herself a product of the joint powers of all the gods. She is entrusted with a box, which she must not open; but just as curious as Psyche, and disobedient as Eve and Mrs. Bluebeard, she opens the box and all the evils which afflict mankind fly out of it and spread over the world. Only one thing remains at the bottom of the box, namely, Hope."

"None of these stories"—said in her turn the yellow nurse,—“is the true one. In my country, where the most miraculous things are known, it is shown that men could not have sprung from one common parent; because their natures are so very different, and no genius could have made them from one clot of clay. To create men a woman is necessary, and this woman is Parvati. The eternally existing, supreme essence, had three sons, which are Gods, and which are called Brahma, Vishnu and Rudra, or as others call them, Siva, Iswar, or Ixora. Brahma concealed himself in an egg, which is the universe, and out of his head sprang the priests; the kings crept out of his right hand; the warriors out of his left hand; the laborers came out of his feet, and the pariahs from a place which I will not name. After such a difficult labor, Brahma felt tired and fell asleep, and while he slept, a monstrous giant came along, took the world which had just been peopled by Brahma and cast it into the sea, where he disappeared with it. When Brahma awoke and became aware of his loss, he gave a loud scream and called his brother Vishnu to his assistance. Vishnu formed himself into an immense fish, plunged into the sea, broke to pieces a big cave in which the giant was hidden, killed him and carried the still living world back to light. This story is at least just as likely to be true as that which my sister the Jewess told, and besides it has the superior advantage of explaining a great many things, which the Jewess cannot explain at all."

"I begin to suspect"—said the boy, who was of a rather credulous nature on account of his ignorance, but who loved to tease the people because he was full of pride and ambition;—"I begin to suspect, that all these stories are only so many lies; because the one which my Indian nurse told, is still more absurd than that of the Jewess; and especially I, being a Christian, can never admit that the Indians are right in their teachings."

"You are a Christian"—said the yellow nurse—"and you do not respect the Indians. Do you then not know, that your Christ, whom you believe to have been born in Bethlehem in Judea, was actually born in India of the beautiful virgin Devaki, and that his real name is Chrisna? Oh, if you had read the Bhagavadadharma, you would know, how he was adored by the shepherds, while he was lying in his cradle; how the king Kansasen wanted to kill him, and for that purpose killed a great many innocent children; how he went preaching innocence and peace to all and how all the hearts of the people flew towards him; how the people carried him in triumph into the city of Mathura, and sacrificed at his feet all their cloaks of purple and riches of every kind, and how he refused to accept any of them, and refused all; except one single flower which was offered to him by a poor gardener. If you were to read that, you would see how he died for the salvation of man on a thorny tree at the base of which his two feet, one resting upon the other, were nailed to the same by an arrow; and all this was written several centuries before the gospels of the Christians were written."

"Would you tell me"—said the child,—“that the gospels are so many lies? Fortunately the stories which you tell are not gospel truth. That alone what the gospels tell us, is true; and the fables of all non-Christian peoples are simply lies."

Just then a wise man who happened to have been near and overheard this conversation, approached and said: "My child, you are in error. These fables are neither lies, neither are they true accounts of things that have actually happened; but they are all more or less ingenious allegories, which, while they appear to contradict each other, are in reality in perfect harmony. They are purposely absurd, so that we may not believe them literally, but that we may be stimulated to a research for their hidden meaning."

The boy was very much pleased with this explanation, and asked for another story.

"With pleasure"—said the sage,—“I will tell you another story and even several others, but first I want you to understand the true meaning of those stories that have been told to you before; and above all you must not accept fables for history. All the fables of Lafontaine are true in a certain sense, because they signify things which are true; but a child of six years would not believe that the time ever was, when animals could talk like man."

"The fable which the Jewess told, is true;—not as being a historical fact, but as a symbolic representation. Evidently an immense genius is directing the forces of nature. It is a sure thing, that man is unable to comprehend this genius in any other way, than by investing him with his own image. Man has sprung from earth; because Geology indicates ages which existed prior to man. The genius of nature made them appear and disappear. He lives by breathing, and therefore is said to be animated by a breath."

"Science demonstrates that mankind has not descended from one single pair; but fable, whose poetry is more true than science, affirms such a unity, to make of the same a symbolical cradle for the entire human brotherhood."

"The tree of good and evil, whose roots are interwoven with those of the tree of life, is the tree of freedom. Woman prefers liberty to life; man prefers love to obedience, and their noble fall brings the gods down to earth, which means that humanity becomes godlike by becoming free."

"The law seems to prohibit progress. A step in advance breaks down a barrier; which means that disobedience is the law of death, and that by it the eternal life is perpetuated."

"Jesus said that he alone who is willing to lose his soul can save it. For this reason Eve, transfigured

under the halo and glory of Mary, becomes the mother of God; for this reason Lucifer becomes the redeemer of the angels, for this reason Prometheus will dethrone Jupiter; for this reason audacity escapes servitude, and for this reason at last, the genius of liberty and love always reaches victory through martyrdom.

"I know that I am talking to a child which will soon get tired of listening to lectures of this kind; but who is sufficiently intelligent to understand them. You are a child, but you are old; you are the strong child of Habbi, you are called 'the people,' and it is necessary that you should at least hear what you are able to understand. Let us return to our pretty stories. Did you notice that Psyche and the sweetheart of the Beast have each of them a bad and jealous sister? There is also another one, who has two such sisters; the meek and modest Cinderella. She alone is beautiful, and while the two others run after pleasures, she does all the housework and is despised by everybody. But she too has a good fairy for godmother. Cinderella, the Beauty and the Beast and Psyche represent intelligence. The two bad and rude sisters are the favored darlings of Doctor Büchner, they represent force and matter. Everything is transformed to adorn the charming Cinderella; a pumpkin is changed into a golden carriage, a mouse becomes a footman in livery, she goes to a ball in magnificent attire and her sisters cannot recognize her; but she is subject to a law; should she transgress that law, all her charms would be lost. Cinderella disobeys and disappears; but they seek for her and find her, she is recognized by the traces she left on her way, and she becomes the bride and spouse of the king. This again is another variation of the beautiful fable of Psyche.

"There is furthermore, another, very ancient legend which is entitled the 'Ass's Skin, in which the mysteries of the 'Golden Ass of Apuleus' are brought together with those of the fable of Psyche.

"It is known that the Syrians and the Samaritans represented the God of blind faith by the figure of a man with the head of an ass and called him Thartac. The Jews and the Romans accused the Christians of adoring that ass, and Apul, who for some time had been a Christian, submitted to expiate for what he regarded to be an apostasy from the lustrations of the grand mysteries, by telling that he was changed into an ass, and did not regain his previous form until after he had eaten roses, which were presented to him by the grand hierophant of Eleusis.

"I will now tell you the allegorical of the 'Ass's Skin.'

"A ravishing princess (human intelligence), to escape from a malicious king (human pride) who wanted to take advantage of her, hides herself under the skin of an ass. (The ancient science seems to disappear under the follies of the new faith). She travels in this guise through the country, humble and unknown, and becomes a servant at court; but a wonderful gold ring falls from her finger and comes into the possession of a prince. (The treasures of intelligence cannot always remain hidden). They hunt for the hand that is worthy of such a ring, and the truth is laid open by the casting off the clothes of Thartac; then the princess Azurine is permitted to clothe herself at pleasure either with a robe of silver like the moon or with a dress of gold like the sun; the son of the king marries her, she becomes a queen and still preserves the ass's skin, and so we ought to preserve the stories, fables and legends, of which we have spoken to-day.

"Intelligence and faith cannot be separated; because intelligence cannot doubt herself, and the spirit which feels its own immortality, believes in God. For this reason the impious try to suppress her by force, to entomb her in matter and to become absorbed by the same. They subject her to the torture of Prometheus, imprison her with Socrates, dismember her with Orpheus, crucify her with Jesus; and still she survives, is for ever young, smiling and full of hope. She is the bride of the future. Once in a while she seems to disappear from the world

and to sleep the sleep of Epimenides. At such times religion is in a state of lethargy, like that beautiful princess in the fable of the Sleeping Beauty. Parasitical plants encumber the gate of the garden; the castle itself can hardly be distinguished, because the surrounding trees have grown so high as to hide its towering spires from view; she sleeps, a victim of her own disobedience; because she was forewarned not to touch the key to the closet, in which the mysteries of life were hidden from the eyes of the vulgar and not to play with the distaff of intrigue. She wanted to spin, the distaff wounded her hand, and losing her senses, she fainted away.

"The wound is troublesome and difficult to heal, but the spirit returns, a new and truly young century appears, and man, the veritable prince of the future, approaches the enchanted castle. He finds the beauties of the past ages unsullied and awaking at his magic touch. Centuries of sleep are detracted from the age of old humanity, she awakes rejuvenated, beautiful as in the olden times of heroism, and is put into possession of all what progress has conquered. This at least has been the hope of all ages and the belief of all martyrs. This still is the dream of the poets and the object of all the serious thinkers."

"Some day I will be a man,"—said the boy—"and I won't care any more about such tales."

"I hope"—said the sage—"that you will be a man, but you will tell the same stories to your son, who will be a child as you now are. Mankind will never arrive at a perfect equality. There will always be children and old people; there will be deaths and births, joy and tears, good and bad; and all that we can hope for is, that evil will decrease and good increase in proportion."

"So be it," said the nurses and the child.

Yes; the ideal of intelligence and love will triumph over the brutalities of force and the impediments of matter. The Divine Unknown, hidden in the human soul, will break forth and revel in triumph through the sacrifice—not of fear, which bears the punishment of the law,—but of love, which overrides impediments, that are put in her way by the law under the penalty of death. This is the great arcanum of Occultism; this is the sacred fire which Prometheus stole, this is the deification of man, and this will be the subject of our next lecture.

NOTE:—This is only the first instalment of a series of translations of the unpublished M. S. S. of Eliphas Levi we mean to print monthly in the JOURNAL OF THE THEOSOPHICAL SOCIETY. Having received a large number of them—enough to cover several years of such publication—from one of his pupils, one for whom they were purposely written by her Professor, the above named French Occultist—we intend to give to our members the benefit of these writings by translating them for, and giving them only in the Supplement. This journal, which is published more for the benefit of the Fellows of our Society, will moreover contain from time to time other important articles on Occultism, which it is considered desirable should not find their way into the *Theosophist*—the latter being intended both for the public as for our members.—Ed.

#### THE DIVINE PERSONALITY.

My attention has just been drawn to an article on the above subject in the *Indian Messenger* of 18th November last. I am not at present concerned with examining the misconceptions of the Rev. Mr. Dall concerning the Hindu and the Buddhist idea of God—which have given rise to the present controversy, but with the *Messenger* who quotes the following passage from the *Theosophist* for his text:—

For all religions divested of their man-made theologies and superlatively human ecclesiasticism rest on one and the same foundation, converge towards one focus; an irradicable, congenital belief in an inner Nature reflected in the inner man, its microcosm; on this our earth we can know of but one Light—the one we see. The Divine Principle, the whole, can be manifested to our consciousness, but through nature and his highest tabernacle—man, in the words of Jesus, the only 'Temple of God.' Hence the true Theosophist, of whatever religion, rejecting acceptance of and belief in an extra-cosmic God, yet accepts this actual existence of a Logos, whether in the Buddhist, Adwaitic, Christian, Gnostic or Neo-Platonic Esoteric sense, but will bow to no ecclesiastical, orthodox and dogmatic interpretation.

The extravagant criticism of the Brahma Editor on the above extract is amusing to a student of the Adwai-

tee Philosophy which—be it said to his honour—the Editor admits is followed closely by the leaders of the Theosophical Society. The learned writer argues in the following wise :—

Now if our consciousness of the inner man as manifest in us, be the only testimony of this Divine Principle, what right have we to infer the existence of a 'Whole'? For it is only a part of which we are conscious, and that consciousness is the sum total of our knowledge on that head.

Reasoning on these lines the critic tries to prove further on, that, since the *inner Ego* has a sense of personality, the *whole* of which it is a part must also be personal; in other words, while denying the premiss *entirely* he accepts the conclusion which he forces upon the same. It is hard to understand the cause of this contradiction unless we take him at his own word when he admits :— "We have not any philosophical pretensions." The fact is that the whole extract from the *Theosophist* is entirely misconceived. And the chief cause of it lies in not trying to understand the sense in which the terms "*inner man*" and "*inner nature*" are used. While this journal refers thereby to the *Logos*, the *Divine Atma*, or the seventh principle as the occultist calls it, the erudite critic understands by it the gross ego or the fifth principle of the occultist, in which *Ahankara* is centred. It is only through *Atma* acting in its vehicle, the sixth principle—*Buddhi*—that the *whole* "can be manifested to our consciousness," for it is itself but a part of the whole. I should not be understood to imply that the all-pervading *Parabrahm* is divisible. What I mean is that when the individual has once risen above his gross tendencies and begins perceiving beyond his concrete conceptions, which pertain but to the physical and the astral man, the *inner man*, the *Atma*, feels like the *whole* or in other words, it attains its state of *absolute* consciousness. This has been the experience of every true *Raj Yogi* in his periods of temporary *Nirvana*, while no seer, save the artificially developed *Hatha Yogi*, has ever yet seen the limited and conditioned *Personal God* of the Theist. On the one hand every practical occultist has *realised* more or less the fact that his higher *inner man* (*Atma*) is but a part (I use this word for the want of a better one) of the *whole*—*Inner Nature*, or *Parabrahm*; on the other hand, all Theistic assertion to the contrary notwithstanding, has any ever yet *seen* his God. Nevertheless, with a strange inconsistency the gifted *Brahmo Editor* remarks :—

We too shun anthropomorphism as much as possible, but is not the belief in the evolution of the moral order in the universe equally instinctive? This means Intelligence, Love and Will—in other words, *personality*.

It is difficult to perceive the fine distinction between an anthropomorphic and a *Personal God*, the Greek and Latin adjectives being nearly synonymous. Man is admitted to *have* intelligence, love and will, but owing to these attributes—is finite. God too is endowed by man with the same attributes but—is proclaimed, infinite. But is not then God also an anthropomorphised being, represented under a human form, with human affections and attributes—simply a gigantically magnified man? Any other solution of this contradiction would be quite welcome to us. Surely the erudite critic in the *Indian Messenger* does not mean to deny to man intelligence, love and will though in a lesser degree, than possessed by his deity? For, if he does, then man becomes an automaton, irresponsible for his acts. No, for he himself postulates "the evolution of the moral order of the universe." It is too *tall* a phrase, however, for us to comprehend. What is meant by the "moral order of the universe" in the present case is difficult to perceive. Is the growth of trees, plants, &c., due to the "moral order of the universe"? Are, on the other hand, earthquakes, floods, fires and so on, the outcome of the same beautiful order? We want some stronger light on this point so that our mental horizon

may be entirely cleared of every misconception. Further on we read :—

Then again, who is conscious of the existence of this '*whole*'?—the part? Does this consciousness pervade the *whole* or is it in the part? If it be in the part, does not this doctrine mean that the self-conscious part discerns the existence of a '*whole*,' besides and beyond itself, that does not share its consciousness and is rather the object of that consciousness?

I am sorry to find that the writer of the above passage puts in his conclusion a word (to draw the inference from) which is not warranted by the premises of his syllogism. While talking of the consciousness of the part and of the whole, whence does he introduce the adjective "self" before consciousness? That makes the greatest difference, as will be seen by the reader who has grasped the difference between the *inner man*—the *Atma*—and the ego in which inheres *Ahankara*. Even then, the argument we are confronted with, comes to this in plain language. At the time the part feels conscious of the existence of the whole, the consciousness is not transferred from the part to the *whole*; therefore its vision is not true. Following the same logic, we can show that the article in the *Indian Messenger* is nonsense. At the time of penning his remarks, where was the consciousness of the writer? If *in him*, then there could be no sense in the article, for the sense was in him, inhering as it must in consciousness. If, on the other hand, the consciousness was transferred to the article, then at the time of writing it he was unconscious and could not know what he wrote. Another instance: when he looked at the inkstand to dip his pen in where was his consciousness—in him or in the inkstand? When he will solve this problem, he will find a solution to the mystery of the part being able to have consciousness of the existence of the whole. Further on we are told :—

"What we mean to show is that to discard belief in an intelligent Personality in and beyond Nature and yet to maintain a belief in the existence of a Divine Principle in Nature.....leads into hopeless metaphysical complications."

Every one who knows anything of logic finds it a "hopeless metaphysical complication" to understand what is meant by "extra cosmical" and "beyond Nature." If nature and the cosmos be infinite, it is difficult to conceive of an existence beyond Infinity. If they be finite, then we must know where are their limits? God being infinite, he must be in all Nature or cosmos, and since the latter includes also all evil, God must necessarily reside also in evil and it is he who leads man into temptation? It is useless to enter into further details. The whole article in the *Indian Messenger* is based upon misconceptions which being pointed out will make it easy for the thoughtful reader to understand the meaning of the para. quoted from the *Theosophist*. Before closing, however, I am tempted to make a few remarks on the concluding para. of the article under notice; for, it is extremely amusing. While the writer calls God "unknowable," he yet says :—"What is not within the range of experience as actuality may be conceived and intuitively believed as a possibility." Does the writer imply that the knowledge obtained by intuitive perception is not within the range of "actuality"? If he does, then surely he goes against the primary Aryan doctrine that the objective is all *Maya* and the subjective, the only reality. His Hinduism is then theological Christianity, pure and simple, hiding itself under an oriental garb. In the same para.; he again mentions the attributes of God, which are all human however, without any of the human weaknesses. And yet in the face of such assertions his God is still "unknowable" and "not anthropomorphic!"

AN ADWAITEE, F. T. S.

PRESIDENTIAL SPECIAL ORDER.  
HEAD-QUARTERS OF THE THEOSOPHICAL SOCIETY.

ADYAR, 21st January 1884.

THE undersigned, being called abroad upon official business, hereby designates the following members of the General Council as an Executive Committee to exercise during his absence in Europe, the supervisory and executive powers of the President, in all matters arising in the course

of business at Head-quarters, which are too pressing or not important enough to be sent forward to him personally for action:—

Messrs. R. Raghoonath Row, Diwan Bahadur ;  
 " G. Muttuswami Chetty, Garu ;  
 " P. Sreenivasa Row, Garu ;  
 " T. Subba Row, Garu.

Their jurisdiction to cover the financial, executive and supervisory affairs of the Society.

And no further requests, in case of any unforeseen contingency happening to himself, that the abovenamed gentlemen and Brothers, will, at the earliest practicable date, convene a General Council of the whole Society, to adopt such measures as shall seem best to promote the interests of the Society and of the sacred cause of which it is the exponent. Finally, he solemnly charges them and all his and their colleagues to ever feel the weight of responsibility for unflinching effort and self-forgetfulness which the sense of the highest duty imposes upon them as Aryan patriots, and lovers of their fellowmen of all races, creeds and conditions.

H. S. OLCOTT,

*President-Founder, Theos. Socy.*

By the President.

DAMODAR K. MAVALANKAR,

*Recording Secretary.*

The President-Founder left the Head-quarters for Ceylon, via Tuticorin, on Monday, the 21st ultimo. He hopes to finish his business there so as to take the Mail Steamer of February 6th, for Bombay, whence he intends sailing for Marseilles about the 20th instant. His London address will be 7, Ladbrooke Gardens, Kensington Park, W. Letters will be forwarded thence to him to any part of Europe which he may be visiting. He will return in July.

We are sorry the reply of the *Epiphany* to the letter of D. K. M., published in our last, came too late for being reprinted in this issue. It will appear in our next.

### WHITE AND BLACK MAGIC.

[A REPLY TO MIRZA MOORAD ALEE BEG, EX.-F. T. S.]

HAVING just had a little leisure I was going over Mirza Moorad Alee's letter in the *Philosophic Inquirer* of the 6th Instant. Col. Olcott's reply covers the whole ground in essentials, and I would have remained contented with it, especially that I may not be the cause, directly or indirectly, of any more exciting the nervous system of one upon whom I once looked with great respect and affection for his intellectual powers and what seemed to be unflinching devotion to Truth—had it not been for the fact that I apprehend the readers of the *Philosophic Inquirer* will not form correct ideas concerning white and black magic, were not the subject entered into a little deeper than Col. Olcott had the leisure to do.

The first time that Mirza Moorad Alee came to the Head-quarters of the Theosophical Society in Bombay to stop with us a few days, the very first thing he told me was:—"If you ever want to progress on the right path, beware of sensual appetites dragging you down; and above all take care of the *Brothers of the Shadow, the Sorcerers*, with some of whom I have had personal dealings, to which fact I trace all my present suffering, struggle, and misery." These are not his exact words, but this is the idea he conveyed to me, and confirmed in all his subsequent

conversations. I therefore stand aghast now at reading:—"The Theosophist leaders never 'discouraged' but rather encouraged me in such practices (of black magic)"—as Mirza Moorad Alee says in his letter under consideration. I cannot believe he is wilfully misrepresenting facts, but will fain attribute his present forgetfulness to mental aberration, caused by nervous exhaustion brought on by his futile struggle to get over the horrors of black magic and rise up to the spiritual glories of an Adept. When he joined us he had already opened the door and was gone too far to be able to shut it against the workings of the sorcerers with whom he had had "personal dealings." I only pity his fall and hope he will not have to share the fate of all black magicians. He is misrepresenting the meaning of *Nirvana* when he uses it as a synonym for *annihilation*. Yes: it is annihilation, not of the spiritual Ego, but of the lower principles in man, of the animal Soul, the personality which must perish. The powers of black magic are due to the will-power engendered by a concentrated form of selfishness. This is possible only when the *Manas*—the fifth principle of man, as the occultist calls it—resides very firmly in his lower principles. A careful study of the *Fragments of Occult Truth* and other literature on Esoteric Theosophy knows that these lower principles are destructible and must therefore be annihilated. Of course, the greater the powers of a black magician, the greater must be his selfishness. The energy of cohesion being thus very powerful, it must take a very long period before annihilation is complete. For aught we know, it (not his physical body which cannot live so long) may extend over thousands—nay a million—of years. The tendency for evil is there; the desire for mischief is strong: but there are no means for the gratification of sensual appetites: and the miserable being suffers the throes of dissolution for a very, very long period until he is totally annihilated. While, on the other hand, the white magician, by his training as described in the *Elixir of Life*, gradually kills his lower principles, without any suffering, thus extending over a long period their dissolution; and his *Manas* identifies itself with his higher—the sixth and seventh—principles. Every tyro in Occultism knows that the sixth principle being but the vehicle of the seventh—which is all-pervading, eternal essence—must be permanent. From the foregoing remarks it is evident that it is the black magician whose lot is annihilation; while the adept, the white magician, enjoys the blissful condition of absolute existence where there is no pain or pleasure, no sorrow or joy, since these are all relative terms, and the state is one of supreme bliss; in short the latter enjoys an immortality of life. It is therefore amusing to see how Mirza Moorad Alee Beg has endeavoured to represent black as white and *vice versa*. But his sophistry will be plain to every student of the Occult Philosophy.

DAMODAR K. MAVALANKAR, F. T. S.

ADYAR (MADRAS),  
 28th January 1884. }

## REPORT OF THE EIGHTH ANNIVERSARY OF THE THEOSOPHICAL SOCIETY.

At which were present Delegates from Branches in America, England, Ceylon and all parts of India from North to South and East to West.

Price four annas per copy; postage and packing charges:—India, one anna; Ceylon, three annas; all other Foreign countries, four annas.

Apply, with remittance, to the Manager of the THEOSOPHIST, Adyar (Madras).

### ESOTERIC BUDDHISM.

(CHEAP EDITION—PRICE RUPEES THREE.)

THE Manager of the *Theosophist* has received a supply of the paper-cover edition of Mr. Sinnett's *Esoteric Buddhism*. Like the *Occult World*, this work also, in its second edition, has been made cheap for the convenience of the Indian Subscribers.

### THE OCCULT WORLD.

THE Manager of the *Theosophist* gives notice that only twenty copies of the cheap edition of this work are now in stock. After that supply is exhausted, the book will be out of print in its cheap form. Only those will be able to procure copies, who can afford to pay high price.

### TELUGU AND TAMIL PRIMERS.

BY

DIWAN BAHADUR R. RAGHOONATH ROW.

DIWAN Bahadur R. Raghoonath Row, President of the Madras T. S., has prepared Tamil and Telugu primers for the use of the students of the Theosophical Sanskrit schools. They have been approved by the Sanskrit school committee of the Madras Theosophical Society and are used as Text Books by them for their schools. The primers will be found extremely useful for boys who have to begin a study of the Sanskrit and Vernacular languages simultaneously. Price, 6 pies per copy, exclusive of Postage. Apply to Kailasam Brothers, Pophani's Broadway, Madras, who always keep a stock of Theosophical Publications on sale.

MESSRS. NICOLAS AND Co., have made a splendid photograph of a group comprising eighty-three Delegates attending the Eighth Anniversary celebration of the Theosophical Society, together with a view of the portico of the Adyar Head-quarters Building. Every portrait is excellent. Copies may be had at Rs 2-8 (6s) each, inclusive of packing and postage. Fellows of the Theosophical Society may also obtain cabinet size photos of Madame Blavatsky, Colonel Olcott and a group consisting of Madame Blavatsky, Messrs. Subba Row and Dharbagiri Nath at Rs 1-12 (4s) per copy, inclusive of packing and postage.

APPLY TO THE MANAGER OF THE *Theosophist*.

FIFTH EDITION, WITH AN ENGRAVED  
PORTRAIT OF THE AUTHOR.

### ISIS UNVEILED.

A MASTER-KEY TO THE MYSTERIES OF ANCIENT SCIENCE AND THEOLOGY. By H. P. BLAVATSKY, Corresponding Secretary of the Theosophical Society. 2 vols., large royal 8vo., of about 1,400 pages, cloth extra, Rs. 25—reduced from Rs. 30.

*Opinions of Leading Journals.*

"This monumental work \*\*\*about everything relating to magic, mystery, witchcraft, religion, spiritualism, which would be valuable in an encyclopædia."—*North American Review*.

"It must be acknowledged that she is a remarkable woman, who has read more, seen more, and thought more, than most wise men. Her work abounds in quotations from a dozen different languages, not for the purpose of a vain display of erudition, but to substantiate her peculiar views, \*\*\* her pages are garnished with foot notes establishing as her authorities some of the profoundest writers of the past. To a large class of readers, this remarkable work will prove of absorbing interest. \*\*\* Demands the earnest attention of thinkers, and merits an analytic reading."—*Boston Evening Transcript*.

"The appearance of erudition is stupendous. Reference to and quotations from, the most unknown and obscure writers in all languages abound, interspersed with allusions to writers of the highest repute, which have evidently been more than skimmed through."—*N. Y. Independent*.

"An extremely readable and exhaustive essay upon the paramount importance of re-establishing the Hermetic Philosophy in a world which blindly believes that it has outgrown it."—*N. Y. World*.

"Most remarkable book of the season."—*Com. Advertiser*.

"To readers who have never made themselves acquainted with the literature of mysticism and alchemy, the volume will furnish the materials for an interesting study—a mine of curious information."—*Evening Post*.

"They give evidence of much and multifarious research on the part of the author, and contain a vast number of interesting stories. Persons fond of the marvellous will find in them an abundance of entertainment."—*N. Y. Sun*.

"A marvellous book both in matter and manner of treatment. Some idea may be formed of the rarity and extent of its contents when the index alone comprises fifty pages, and we venture nothing in saying that such an index of subjects was never before compiled by any human being. \* \* \* But the book is a curious one and will no doubt find its way into libraries because of the unique subject matter it contains, \* \* \* will certainly prove attractive to all who are interested in the history, theology and the mysteries of the ancient world."—*Daily Graphic*.

"The present work is the fruit of her remarkable course of education, and amply confirms her claims to the character of an adept in secret science, and even to the rank of a hierophant in the exposition of its mystic lore."—*N. Y. Tribune*.

"One who reads the book carefully throughout to know everything of the marvellous and mystical, except, perhaps, the passwords. 'Isis' will supplement the Anaclypsis. Whoever loves to read Godfrey Higgins will be delighted with Mme. Blavatsky. There is a great resemblance between their works. Both have tried hard to tell everything apocryphal and apocalyptic. It is easy to forecast the reception of this book. With its striking peculiarities, its audacity, its versatility, and the prodigious variety of subjects which it notices and handles, it is one of the remarkable productions of the century."—*N. Y. Herald*.

"In nothing does Madame Blavatsky show her wonderful ability in a more marked degree than in her use of the English language. Her style is singularly vigorous, perspicuous and piquant. Her scholarship is varied and comprehensive. In metaphysical keenness she shows a power that few writers of our day have attained to. We doubt if Mrs. Lewes (George Elliot), can be called her equal in this respect. Her critical insight is also most remarkable. It seems more like an intuition than the result of study, and yet that she has been a profound student the authorities referred to in her work abundantly show. From the specimens we have seen of its pages we can vouch for its absorbing interest, and for the strength and fascination of the style."—*Epes Sargeant*.

"We do not hesitate to express the opinion that she has made a gallant and measurably successful effort at elucidating the most absorbing and important problems life can furnish. If the veil of Isis has not indeed been swept away, at least so many of the folds have been removed that we are afforded a partial insight into the mysteries and splendors of the Goddess. If our author has not achieved an unquestioned triumph, where such a result would have been specially gratifying, she has at least the consolation of knowing that she has surpassed all her predecessors in a task, complete failure to achieve which would have involved no humiliation. She has produced a unique work, and it will become a classic."—*Sacramento Record-Union*.

### "MY VISIT TO STYRIA,"

HAVING proved such a success, it is Miss Caroline Corner's intention to publish another Volume of her late Visit to RHINELAND, the proceeds of which (expenses cleared) are to go towards giving a number of the poorest little Children of the East End of London a treat at Christmas, by way of a good Tea, Amusement, and a Christmas Tree, from which prizes of useful articles of warm clothing may be drawn.

Miss Caroline Corner earnestly requests the kind co-operation of friends and other sympathetic and benevolent persons, by means of Subscriptions for the book "*Rhineland*" (published at 1s. 6d. and 2s. 6d. per copy), or by Donations of Clothes for the little ones, or both. Address Miss Caroline Corner 3, St. Thoma's Square Hackney, London N. E., England.

# "THE SECRET DOCTRINE,"

A NEW VERSION OF "ISIS UNVEILED."

WITH A NEW ARRANGEMENT OF THE MATTER, LARGE AND IMPORTANT ADDITIONS, AND COPIOUS NOTES AND COMMENTARIES,

BY

H. P. BLAVATSKY,

*Corresponding Secretary of the Theosophical Society.*

ASSISTED BY

T. SUBBA ROW GARU, B. A., B. L., F. T. S.,

*Councillor of the Theosophical Society and Secretary of its Madras Branch.*

## PUBLISHER'S NOTICE.

NUMEROUS and urgent requests have come from all parts of India, to adopt some plan for bringing the matter contained in "Isis Unveiled," within the reach of those who could not afford to purchase so expensive a work at one time. On the other hand, many, finding the outlines of the doctrine given too hazy, clamoured for "more light," and necessarily misunderstanding the teaching, have erroneously supposed it to be contradictory to later revelations, which in not a few cases, have been entirely misconceived. The author, therefore, under the advice of friends, proposes to issue the work in a better and clearer form, in monthly parts. All, that is important in "Isis" for a thorough comprehension of the occult and other philosophical subjects treated of, will be retained, but with such a rearrangement of the text as to group together as closely as possible the materials relating to any given subject. Thus will be avoided needless repetitions, and the scattering of materials of a cognate character throughout the two volumes. Much additional information upon occult subjects, which it was not desirable to put before the public at the first appearance of the work, but for which the way has been prepared by the intervening eight years, and especially by the publication of "The Occult World" and "Esoteric Buddhism" and other Theosophical works, will now be given. Hints will also be found throwing light on many

of the hitherto misunderstood teachings found in the said works. A complete Index and a Table of Contents will be compiled. It is intended that each Part shall comprise seventy-seven pages in Royal 8vo. (or twenty-five pages more than every 24th part of the original work,) to be printed on good paper and in clear type, and be completed in about two years. The rates of subscription to be as follow :—

	Indian.	Foreign countries.	
		£	s.
If paid Monthly ... Rs.	1 4 0	0	3
„ „ Quarterly ... „	3 0 0	0	8
„ „ Half yearly ... „	6 0 0	0	16
„ „ Yearly ... „	10 0 0	1	7

Subscriptions payable invariably in advance, and no name entered on the list nor Part forwarded until the money is in hand. All applications to be made and sums remitted to the "Manager, Theosophist Office, Adyar (Madras), India;" at which office money orders must be made payable and always in his favour. In making remittances it should be noted that no other amount should on any account be included in the drafts or money orders, except that intended for this work. Should nothing unforeseen happen, and should a sufficient number of subscribers be registered, the first Part will be issued March 15th; otherwise on June 15th.

# THE THEOSOPHIST

A MONTHLY JOURNAL DEVOTED TO ORIENTAL PHILOSOPHY, ART, LITERATURE AND OCCULTISM:  
EMBRACING MESMERISM, SPIRITUALISM, AND OTHER SECRET SCIENCES.

VOL. 5. No. 6.

MADRAS, MARCH, 1884.

No. 54.

सत्यात् नास्ति परो धर्मः ।

THERE IS NO RELIGION HIGHER THAN TRUTH.

[Family motto of the Maharajahs of Benares.]

## THE HIGH WATER MARK OF MODERN PHILOSOPHY.

In last month's *Nineteenth Century*, the great English thinker and philosopher, Mr. Herbert Spencer, has contributed a remarkable article, "Religion—a Retrospect and Prospect." This contribution, which saps the very foundation of Christianity, breaks down the elaborate structure and sweeps away the *débris* of the ruin, is sure to be received by the intellectual portions of the so-called Christian Society admiringly, by the others—in guilty silence. As for its unintellectual and bigoted sections—since the statements given therein, do not admit of even an attempt at successful refutation—by such the iconoclastic article will be complained of and deplored. But even the criticism of the latter will be tempered with caution and respect. We subjoin a paragraph from the article to show its general tenor:—

The cruelty of a Fijian God, who, represented as devouring the souls of the dead, may be supposed to inflict torture during the process, is small compared with the cruelty of a God who condemns men to tortures which are eternal; and the ascription of this cruelty, though habitual in ecclesiastical formulas, occasionally occurring in sermons, and still sometimes pictorially illustrated, is becoming so intolerable to the better natured that, while some theologians distinctly deny it, others quietly drop it out of their teachings. Clearly this change cannot cease, until the beliefs in hell and damnation disappear. Disappearance of them will be aided by an increasing repugnance to injustice. The visiting on Adam's descendants through hundreds of generations dreadful penalties for a small transgression which they did not commit; the damning of all men who do not avail themselves of an alleged mode of obtaining forgiveness, which most men have never heard of; and the effecting a reconciliation by sacrificing a son, who was perfectly innocent, to satisfy the assumed necessity for a propitiatory victim, are modes of action, which, ascribed to a human ruler, would call forth expressions of abhorrence; and the ascription of them to the Ultimate Cause of things, even now felt to be full of difficulties, must become impossible. So, too, must die out the belief that a Power present in innumerable worlds throughout infinite space, and who, during millions of years of the earth's earlier existence, needed no honoring by its inhabitants, should be seized with a craving for praise, and, having created mankind, should be angry with them if they do not perpetually toll him how great he is. As fast as men escape from that glamour of early impressions, which prevents them from thinking, they will refuse to imply a trait of character which is the reverse of worshipful.

These and other difficulties, some of which are often discussed but never disposed of, must force men hereafter to drop the higher anthropomorphic character given to the First Cause, as they have long since dropped the lower. The conception which has been enlarging from the beginning, must go on enlarging, until, by disappearance of its limits, it becomes a consciousness which transcends the forms of distinct thought, though it for ever remains a consciousness.

It would be interesting to watch the indignation and the outcry of some of our readers had the same thoughts been found embodied in the *Theosophist* under the name of an *Eastern* thinker. Yet, what have we ever

allowed to appear in our magazine half so iconoclastic—“blasphemous” some may say,—as this wholesale denunciation of the religion of the civilized portions of Humanity? And this leads us naturally and sadly to think at once, of PUBLIC OPINION—that dreaming and docile “she ass” when whipped by the hand of a favourite, that pitiless and remorseless “hyena” when suddenly awakened and lashed into fury by the opposition of those who may, for some mysterious reason or another, be unpopular with her, because, no doubt, they have no inclination to pander to the dotage of old “Mrs. Grundy.”

It never rains but it pours. Elsewhere, and from another, though perhaps less elevated, platform, another celebrated opponent of the Christian scheme, Mr. F. Harrison, the Positivist, in an address to his fellow-thinkers at Newton Hall, recently sent a thunderbolt over the heads of the “Supernaturalists,” as he calls the Christians. He spoke of Christianity as eaten away to the core by superstition, as effete and worn out and destroyed root and branch by modern science, whilst the religion of Humanity was marching forward to replace it. As remarked by a paper:—

His ideal is lofty. His confidence as to what may be done for the welfare of men is inspiring. He puts the supernatural aside as untrue and unnecessary. It is not necessary to resort to other agencies, he assures us, than the resources of man's own nature. Let us only love and worship humanity, and all will be well.

Theosophy, too, advocates the development and the resources of MAN'S own nature as the grandest ideal we can strive for. There is another point in the extract from Mr. Herbert Spencer's paper, which must not be passed by in silence. With regard to the First Cause, he says, it is—“consciousness which transcends the forms of distinct thought, though it for ever remains a consciousness.” We may not adopt this language in its entirety, but it is perfectly plain to those who can read the signs of the times that a strong current has set in, in the Western world of thought, towards the much reviled Occult philosophy, which is, at present, largely incorporated only in the religions of the East—chiefly in the Adwaita and Buddhist religious systems. Further results—remain to be seen.

### OCCULT STUDY.

[The following Paper was read lately by a Theosophist and “Lay Chela” in London to an audience consisting chiefly, but not exclusively, of Theosophists.—Ed.]

THE practical bearing of occult teaching on ordinary life, is very variously interpreted by different students of the subject. For many Western readers of recent books on the esoteric doctrine, it even seems doubtful whether the teaching has any bearing on practical life at all. The proposal which it is supposed sometimes to convey that all earnest inquirers shall put themselves under the severe ascetic regimen, followed by its regular

Oriental disciples, is felt to embody a strain on the habits of modern civilisation which only a very few enthusiasts will be prepared to encounter. The mere intellectual charm of an intricate philosophy may indeed be enough to recommend the study to some minds, but a scheme of teaching that offers itself as a substitute for religious faith of the usual kind will be expected to yield some tangible results in regard to the future spiritual well-being of those who adopt it. Has occult philosophy nothing to give except to those who are in a position and willing to make a sacrifice in its behalf of all other objects in life? In that case it would indeed be useless to bring it out into the world. In reality the esoteric doctrine affords an almost infinite variety of opportunities for spiritual development, and no greater mistake could be made in connexion with the present movement than to suppose the teaching of the Adepts merely addressed to persons capable of heroic self-devotion. Assuredly it does not discourage efforts in the direction of the highest achievement of occult progress,—if any Western occultists may feel disposed to make them, but it is important for us all to keep clearly in view the lower range of possibilities connected with humbler aspirations.

I believe it to be absolutely true that even the slightest attention seriously paid to the instructions now emanating from the Indian Adepts will generate results within the spiritual principles of those who render it—causes capable of producing appreciable consequences in a future state of existence. Any one who has sufficiently examined the doctrine of Devachan will readily follow the idea, for the nature of the spiritual existence which in the ordinary course of things must succeed each physical life, provides for the very considerable expansion of any aspirations towards real knowledge that may be set going on earth. I will recur to this point directly when I have made clearer the general drift of the argument I am trying to unfold. At the one end of the scale of possibilities connected with occult study lies the supreme development of Adeptship; an achievement which means that the person reaching it has so violently stimulated his spiritual growth within a short period, as to have anticipated processes on which nature, in her own deliberate way, would have spent a great procession of ages. At the other end of the scale lies the small result to which I have just alluded,—a result which may rather be said to establish a tendency in the direction of spiritual achievement than to embody such achievement. But between these two widely different results there is no hard and fast line that can be drawn at any place to make a distinct separation in the character of the consequences ensuing from devotion to occult pursuits. As the darkness of blackest night gives way by imperceptible degrees to the illumination of the brightest sunrise, so the spiritual consequences of emerging from the apathy either of pure materialism or of dull acquiescence in unreasonable dogma, brighten by imperceptible degrees from the faintest traces of Devachanic improvement into the full blaze of the highest perfection human nature can attain. Without assuming that the course of nature which prescribes for each human ego successive physical lives and successive periods of spiritual refreshment—without supposing that this course is altered by such moderate devotion to occult study as is compatible with the ordinary conditions of European life, it will nevertheless be seen how vast the consequences may ultimately be of impressing on that career of evolution a distinct tendency in the direction of supreme enlightenment, of that result which is described as the union of the individual soul with universal spirit.

The explanations of the Esoteric doctrine which have been publicly given, have shown that humanity in the mass has now attained a stage in the great evolutionary cycle from which it has the opportunity of growing upward towards final perfection. In the mass it is, of course, unlikely that it will travel that road; final perfection is

not a gift to be bestowed upon all, but to be worked for by those who desire it. It may be put within the theoretical reach of all; there may be no human creature living at this moment, of whom it can be said that the highest possibilities of nature are impossible of attainment, but it does not follow by any means that every individual will attain the highest possibilities. Regarding each individual as one of the seeds of a great flower which throws out thousands of seeds, it is manifest that only a few, relatively to the great number, will become fully developed flowers in their turn. No unjust neglect awaits the majority. For each and every one the consequences of the remote future will be precisely proportioned to the aptitudes he develops, but only those can reach the goal who, with persistent effort carried out through a long series of lives, differentiate themselves in a marked degree from the general multitude. Now that persistent effort must have a beginning, and granted the beginning, the persistence is not improbable. Within our own observation of ordinary life, good habits, even though they may not be so readily formed as bad ones, are not difficult to maintain in proportion to the difficulty of their commencement. For a moment it may be asked how this may be applied to a succession of lives separate from each other by a total oblivion of their details, but it really applies as directly to the succession of lives as to the succession of days within one life, which are separated from each other by as many nights. The certain operation of those affinities in the individual Ego which are collectively described in the esoteric doctrine by the word Karma, must operate to pick up the old habits of character and thought as life after life comes round, with the same certainty that the thread of memory in a living brain recovers, day after day, the impressions of those that have gone before. Whether a moral habit is thus deliberately engendered by an occult student in order that it may propagate itself through future ages, or whether it merely arises from unintelligent aspirations towards good, which happily for mankind are more widely spread than occult study as yet, the way it works in each case is the same. The unintelligent aspiration towards goodness propagates itself and leads to good lives in the future; the intelligent aspiration propagates itself in the same way *plus* the propagation of intelligence; and this distinction shows the gulf of difference which may exist between the growth of a human soul, which merely drifts along the stream of time, and that of one which is consciously steered by an intelligent purpose throughout. The human Ego which acquires the habit of seeking for knowledge becomes invested life after life with the qualifications which ensure the success of such a search, until the final success achieved at some critical period of its existence carries it right up into the company of those perfected Egos, which are the fully developed flowers, only expected according to our first metaphor, from a few of the thousand seeds. Now it is clear that a slight impulse in a given direction, even on the plane of physical phenomena, does not produce the same effect—as a stronger one; so exactly in this matter of engendering habits required to persist in their operation through a succession of lives, it is quite obvious that the strong impulse of a very ardent aspiration toward knowledge will be more likely, than a weaker one, to triumph over the accidents of nature which, to a certain extent, in the cosmic process as in the experience of ordinary life, interfere with the intentions we set out to accomplish. It seems perfectly rational, as I began by saying, to assume that no effort in the direction of spiritual study, however slight, will be wholly thrown away; but it is equally reasonable to assume that a sustained and purposeful application to spiritual science, will be required to give such a momentum to the evolutionary process as will constitute a sure guarantee against the abandonment of the habit hereafter.

This consideration brings us to the question of those habits in life which are more immediately associated in

popular views of the matter with the pursuit of occult science. It will be quite plain that the generation within his own nature by an occult student of affinities in the direction of spiritual progress, is a matter which has little if anything to do with the outer circumstances of his daily life. It cannot be dissociated from what may be called the outer circumstances of his *moral* life, for an occult student, whose *moral* nature is consciously ignoble and who combines the pursuit of knowledge with the practice of wrong, becomes by that condition of things a student of sorcery rather than of true occultism,—a candidate for satanic evolution instead of perfection. But at the same time the physical habits of life may be quite the reverse of ascetic, while all the while the thinking processes of the intellectual life are developing affinities which cannot fail in the results just seen to produce large ulterior consequences. Some misconception is very apt to arise here from the way in which frequent reference is made to the ascetic habits of those who purpose to become the regular *chelas* of Oriental adepts. It is supposed that what is practised by the Master is necessarily recommended for all his pupils. Now this is far from being the case as regards the miscellaneous pupils who are gathering round the occult Teachers lately become known to public report. Certainly even in reference to their miscellaneous pupils the Adepts would not discountenance asceticism. As we saw just now there is no hard line drawn across the scale on which are defined the varying consequences of occult study in all its varying degrees of intensity, so with ascetic practice from the slightest habits of self-denial which may engender a preference for spiritual over material gratification up to the very largest developments of asceticism required as a passport to chelaship, no such practices can be quite without their consequences in the all-embracing records of Karma. But, broadly speaking, asceticism belongs to that species of effort which aims at personal chelaship, and that which contemplates the patient development of spiritual growth along the slow track of natural evolution claims no more, broadly speaking, than intellectual application. Even without this, we may, any of us, waste this, and a dozen other lives, with all their intervening periods of enjoyment or regret, and yet be in time to pick up a perception of our higher destinies at some maturer period of growth. The boy may neglect his school work, and yet, by a later effort, recover his position amongst his contemporaries. All that is asserted in regard to the opening now offered to those who have taken notice of the present opportunity, is, that they may now give their own evolution an impulse which they may not again have an opportunity of giving it with the same advantage to themselves if the present opportunity is thrown aside. True, it is most unlikely that any one advancing through nature, life after life, under the direction of a fairly creditable *Karma*, will go on always without meeting sooner or later with the ideas that occult study implants. So that the occultist does not threaten those who turn aside from his teaching with any consequences that must necessarily be disastrous. He only says that those who listen to them must necessarily derive advantage from so doing in exact proportion to the zeal with which they undertake the study and the purity of motive with which they promote it in others.

Nor must it be supposed that those which have here been described as the lower range of possibilities in connexion with occult study, are a mere fringe upon the higher possibilities, to be regarded as a relatively poor compensation accorded to those who do not feel equal to offering themselves for probation as regular *chelas*. It would be a grave misconception of the purpose with which the present stream of occult teaching has been poured into the world, if we were to think it a universal incitement to that course of action. It may be hazardous for any of us who are not initiates to speak with entire confidence of the intention of the Adepts, but all the external

facts concerned with the growth and development of the Theosophical Society, show its purpose to be more directly related to the cultivation of spiritual aspiration over a wide area, than to the excitement of these with supreme intensity in individuals. There are considerations, indeed, which may almost be said to debar the Adepts from ever doing anything to encourage persons in whom this supreme intensity of excitement is possible, to take the very serious step of offering themselves as *chelas*. Directly that by doing this a man renders himself a candidate for something more than the maximum advantages that can flow to him through the operation of natural laws,—directly that in this way he claims to anticipate the most favourable course of nature and to approach high perfection by a short cut, by violent and artificial processes,—he at once puts himself in presence of many dangers which would never beset him if he contented himself with a favourable natural growth. It appears to be always a matter of grave consideration with the Adepts whether they will take the responsibility of encouraging any person who may not have it in him to succeed, to expose himself to these dangers. For any one who is determined to face them and is permitted to do so, the considerations put forward above in regard to the optional character of personal physical training fall to the ground. Those ascetic practices which a candidate for nothing more than the best natural evolution may undertake if he chooses, almost as a work of supererogation, with the view of emphasising his spiritual Karma to the utmost, become a *sine qua non* in regard to the very first step of his progress. But with such progress the present explanation is not specially concerned. Its purpose has been to show the beneficial effects which may flow to ordinary people living ordinary lives, from even that moderate devotion to occult philosophy which is compatible with such ordinary lives, and to guard against the very erroneous belief that occult science is a pursuit in which it is not worth while to engage, unless Adeptship is held out to the student as its ultimate result.

#### A BRITISH THINKER ON THE 'THEOSOPHIST.'

ONE of the ablest philosophical students and writers of Great Britain writes in a private letter to a friend, who has kindly allowed us to quote a portion, as follows, about our magazine:—

"This monthly (the *Theosophist*) is a veritable mine of Truth and Right, on every form of knowledge that deserves the appellation *Sophos*, in the sense first occurring in Euripides or subsequently: but as to the term *Theos*, it belongs to the unknowable, and therefore I rejoiced in *Theos* (the feminine) as *Themis*, &c." (Here follows a far too complimentary estimate of our own imperfectly developed capacities to be quoted by us.) "I may say in all sincerity that I know of no Journal, British or Foreign, in which for all objects is so regularly displayed such love of wisdom \* \* \* \* It is cosmopolitan, in short. Philosophy, proper, is nowhere represented so ably, thoroughly, and exhaustively as in the *THEOSOPHIST*. Verily it is the magazine of the whole world of Wisdom in respect to the Science of Being, analysis and synthesis of primary causes, or primitive conditions of sentient and conscious EXISTENCE. Everywhere justice, moreover, is rendered to mythological, hypothetical or theological systems, old and new. And each class of material or set of spiritual phenomena has an abiding place accorded to them in the Temple of Theosophy only as they are built on Nature, and their principles are grounded on scientific experiments and historic facts, alike invincible and demonstrative \* \* \* \*"

We have in this instance departed from our usual rule of abstaining from the reprint of the complimentary and kind things said of our journal in and out of the press. Our excuse is that the eulogy in this case comes from a gentleman, whose "praise, like Sir Hubert's, is praise indeed." It has the greater weight, since, but for the obliging courtesy of his correspondent, we should have been quite unaware of his opinion of our efforts to instruct and interest the thinking public. The great Prof. Huxley it was, we think, who said in one of his works, that if about a certain dozen persons in Europe and an equal number in America were satisfied with it, he should consider his trouble amply rewarded. The same is the case with us. In the whole world are there more than

a handful—outside the circle of our secret schools of Occult Philosophy—who can *entirely* comprehend and assimilate the pure doctrine of Esotericism? We wish we might so believe.

(Concluded from the last Number.)

### THE BEST FOOD FOR MAN.

BY MRS. KINGSFORD, M. D., F. T. S.,

President of the "London Lodge," Theosophical Society.

It has always seemed to me a strange and horrible anomaly that everyone of the great Festivals of the present Christian Church is marked by some wholesale sacrifice of living creatures to our depraved appetites. Christmas, Shrove-tide, Easter, Michaelmas, all are made the occasions of special slaughter. And the season of 'peace and good will' is, above all others, selected by common consent as that of universal bloodshed and violence! So soon as 'the time draws near the birth of Christ,' the streets of city and hamlet everywhere run with blood, and the knife and the pole-axe make havoc among the patient-eyed beasts of the stall, in whose presence, tradition says, the holy Child made his advent on earth. What a basis is this for Christian civilisation! What associations are these with which to familiarise the minds of our children! How many among the tens of thousands of worshippers in church and chapel throughout the land on Christmas day, give so much as one minute's thought of regret to the incalculable suffering, and cruelty caused to our 'poor relations,' the domestic animals, in order to celebrate the reign of One who is called the 'Prince of Peace?' How many think with any shame or sorrow of the human ministers to all this gluttony and selfishness:—of the butchers and slaughter-men passing their lives in scenes of loathsome bloodshed and among unwholesome fumes of death,—of the demoralisation and deterioration of body and mind, of which the perpetration of so much cruelty and savagery must be the inevitable cause?

We trust,—we who live in the Future rather than in the Past or Present, that the dawn of a better day is about to rise upon our world. Year by year the Spirit of Christ grows mightier and its meaning clearer, as one by one the mists of superstition and misconception melt and drop away from the Holy Name, and we learn that the history of Man is the history of perpetual struggle after the Ideal, of perpetual aspiration after the 'more excellent way.' This Ideal, this Way, which is also the Truth and the Life, constitute the Christ in man, the ever-living, ever-risen Lord,—to follow whom is to follow 'all things lovely, just, pure and of good report.'

It will be seen that the view I take of this question,—'What is the Best Food for Man,' involves considerations far transcending the mere physical or economical plane. There is a Best Food for Man which implies a Best mode of Living, a Way into which all paths converge, leading to one celestial goal. This is the Way of Paradise, which is, equally, the Way of the Cross, because it is the will of God, and therefore, the law of the universe, that no perfection is possible in anything but by means of self-denial and self-conquest. The ordinary flesh-eater, if he be a man of any perception, is always fain to acknowledge, on being pressed, that there is something in the usual mode of feeding which clashes with his finer sense of what ought to be. He would rather not talk about the slaughter-house, he feels that the whole subject is, somehow, unavoury, and more or less frankly admits that he cannot associate the idea of slaughter with what are called 'Utopian' theories of existence. But, in most cases, he is not ready to sacrifice the least of his appetites to his conscience. He likes the taste of flesh-meat, he will tell you, and does not wish to deprive himself of the pleasure it gives him. It is the custom of Society to eat it, and he has no desire to make him-

self conspicuous by refusing to partake of the dishes set before him by his friends. Such an attitude of mind, of course, can only be dealt with effectually, by an effort of will on the part of the individual himself. The excuses thus formulated, are precisely those with which every transgressor of every moral law turns to bay on the man who seeks to reform or convict him. The reason of such a man may be amply convinced that flesh-eating is neither scientific nor civilised, and yet he lacks the courage to carry these convictions into practice. No logic is able to influence a person of this kind. His affair is with his Conscience rather than with his reason.

But sometimes we meet opponents who tell us that the plea for purer and more merciful living rests on mere 'sentiment.' Beasts kill one another, they say, therefore man may kill beasts. And if he did not so kill them, they would so increase in numbers that he himself would become their prey. Let us examine the value of these arguments. It is no shame or reproach to us that a large part of our doctrine rests upon the basis of the sentiments. It must necessarily be so if the doctrine be really a scientific and reasonable doctrine, because God and Nature are not at strife but in harmony, and that mode of living which is best fitted for our bodies and most helpful to the development of our minds, is, of course, most in harmony with our moral nature. Nature has not made the consumption of flesh necessary or suitable to the human organism, and the bodily needs of man are not therefore in continual antagonism to his reason and to his spiritual instincts. Were it otherwise, we should be forced to admit the tendencies of civilisation and of morality to be at war with the dictates imposed by natural law. And it is precisely the power to recognise and exercise the sentiments which makes man to differ from the beasts. The glory of humanity does not lie in its physical form, for, from time immemorial, the world has seen brutes in human shape, with whose ferocity, malignity and lust no lower animal could compare. Nor does it lie in sagacity, or perfection of method in mechanical contrivance,—the basis of all we call Intellect; for on this ground, the mere bee, the ant, the beaver, the bird, the fox, the dog, compete with and even surpass us, as may easily be ascertained by any observer of nature. Nor does man's superiority rest on his physical strength, for what is his muscular force compared with that of the elephant, the rhinoceros, or any of the terrible beasts of jungle, forest and plain? It is none of these things that makes man; but it is the possession of moral reason, the conception, practice, and veneration of Truth, Love, Mercy, Justice, Self-denial, Honour, Charity. And these are the sentiments. And our system of living is preeminently a sentimental system, founded in the nature of Humanity, and made for true Men.

The rule which applies therefore to the lower animals, our brethren in all but in the development of spiritual faculties,—is no rule for us, and cannot be twisted into a criterion for our conduct, or an apology for our cruelties. If we are to justify ourselves in killing and eating them, because some of the fiercer races among them kill and eat one another, we might by the same logic, descend to their plane in respect of all other practices attractive to low-minded and vicious men, and revert to polygamy, disregard of personal rights and still worse manners. For if certain animals see no harm in bloodshed, neither do they see harm in theft, rapine and seduction.

As for the objection that unless we ate our animal brethren, they would eat us, nothing can be more ill-considered or pointless. One would suppose the objector to be under the impression that cattle, sheep and other market animals grow wild like trees or grass, instead of being the objects of an elaborate system of forcing, breeding, rearing, buying and selling. It would be quite as logical to fear being devoured by our unused potatoes

and turnips, as to dread being eaten up by our herbivorous animals! For these creatures are exactly in the position of the edible crops we plant annually for our use, and if they were not artificially bred, they would rapidly diminish in numbers, change their character, and return to the orderly balance of Nature. The fact is that the force of our objector's argument is all the other way, and that it is precisely to the flesh-eating habits of our present population that we owe a very real danger of being eaten up by flocks and herds. For in order to meet the exorbitant demand for animal food and for field sports, thousands of English men and women are annually compelled to give place to cattle and to sheep runs; land which would support scores of families with corn and crops is laid waste for pasture, for cover, for warrens, for preserves, for deer-forests; and the peasantry and the agriculturists, eaten out of house and home by beasts, are forced to congregate in overstocked towns, whose streets are hideous with the plague of drink-shops, slaughter-yards and meat-markets; or else to quit their native shores, and seek a new world far off beyond the seas.

Under our present regimen the beasts of fold and of cover usurp the people's rights, and with this usurpation come the accompanying evils of poverty, dirt, squalor, drink, crime, the enforced exile of field labourers, and the consequent surplus of a helpless female population of a million souls, condemned thus, inevitably, to a loveless and lonely life, or to the alternative of misfortune and shame.

Is it too much to ask of the human race that it should consent to restore the world to the dominion of natural law and order;—that it should sacrifice the luxury and sensuality of the Few to the peace and joy of the Many, and that it should learn to be wise, clean, pure, thrifty and virtuous?

Is it too much to ask the suppression of an organized system of carnage, involving a foul and unhealthy traffic, disgusting occupations, depraving spectacles, and gross barbarity?—to plead for the restoration of Beauty in the morals of the people, in the surroundings of daily life, in the haunts and homes of the poor; in the sports and at the banquets of the rich? Surely not, for alike from the scientific, the hygienic, the æsthetic, and the spiritual point of view, the Best Food for Man is that which does no violence to his nature, physical or moral, and which involves none to other creatures at his hand. For this we are Men, that alone of all Nature's children, we should be able to understand the secret of her manifold transmutations, and the goal of her striving; for this we are Men, that we may be able to confirm her inspiration by our Reason, and that standing open-eyed and face to face with our nursing mother, we may know what the best of our younger brothers only dimly feel, and grasp with strong, mature, responsible sense knowledges that are with them but instincts, and virtues which their undeveloped minds reflect as inborn impulse merely.

Thus, may Man endorse the work of God, becoming its exponent and interpreter while others remain its objects, and realise upon a higher and spiritual plane the beautiful intentions of the Divine Mind in the world of natural forms and evolutions. And the more he himself becomes uplifted towards that Mind, the more also will he love and pity and long for harmony with all innocent incarnations of life in the great universe of Being.

'No Flocks that range the Valley free  
To slaughter I condemn,  
Taught by the Power that pities me  
I learn to pity them;  
But from the Mountain's grassy side  
A bloodless Feast I bring,  
A scrip with Fruit and Corn supplied,  
And Water from the spring.'

### EXOTERIC CHRISTIANITY IN AMERICA.

THE *North American Review* is the oldest and most influential periodical of its kind in the United States, and what it says is listened to with respectful attention. For this reason we transfer to these pages the following brief but pungent article upon the present state of religious thought in the Great Republic. For the optimistic missionary it will have little of comfort, and may make his task in India all the harder in giving to the educated Hindu material for controversial criticism. We do not copy it with this object, but only in the interests of truth, and to show the followers of the ancient Eastern faiths how weak a religion becomes when its vital strength dies out of it. What the *Review* says of the state of American Christianity, holds equally good as to the more ancient world-religions. The one essential thing to restore the vigor of one and all is an infusion of the spirit of theosophical enquiry. Men can no more be staunch Christians than staunch Hindus or anything else, without losing sight of the outer shadow and searching after and finding the inner substance. Theosophy is the life as well as key of all religions. What the *Review* laments in American nominal Christians, the Secretary of State for India, in his famous dispatch to the Viceroy, complained of in the Anglo-Indians for whom Government supplies churches they do not use, and chaplains whom they do not go to hear. But for the prevalence of this vice of social hypocrisy, Theosophy would never, despite its plain-speaking and denunciation of shame, have been maligned and persecuted as it has. Whoever has read the story of "Pygmalion and Galatea," has come to realise that the one unpardonable social sin is candour and a thorough devotion to the Truth. Says the *North American Review*:—

It is a generally admitted fact that in these days only a small proportion, even of intelligent and eminently respectable people, are regular attendants upon religious services on Sunday. It is believed, and frequently deplored, that the proportion is diminishing year by year. The increasing aversion of people who cannot be called bad or depraved to church attendance, is generally ascribed to the spread of unbelief; but this does not wholly account for it. It is useless to fight against the tendencies of the age, or to deplore them as evil, for they are in the line of human progress. Men are better and not worse than in the olden time, and yet they believe less in the supernatural and the unprovable. The majority of the people, whose purposes are good, whose aspirations are high, whose conduct is upright, do not and cannot believe what the churches teach, and they are weary of its reiteration. In fact, the keener their apprehension, the clearer their mental vision, the stronger their powers of thought, and the broader their intellectual culture, the less willing or able are they to stoop to the yoke of belief which the church imposes.

It is not the daring Atheist or the reckless evil-doer that is now found in the ranks of non-attendants at church, but the sober citizen and the father of a family, who is loyal to his convictions and faithful to his duty. Why does he not go? Why should he go? It is for the church to attract and it repels. It proscribes thought and free inquiry. It cramps the brains of its ministers until it is only the intellectual light-weights that seek its service. The mediocrities of the seminaries go to the pulpit. They offer nothing for the mental or moral digestion and nutrition of healthy men. They minister chiefly to the superstitious, the narrow and the morbid, and the masculine sex is disappearing from among their followers.

There is no doubt that people are repelled from the pews because the pulpit is behind the age. The notion can no longer be kept up that "unbelievers" are bad. It has to be admitted that they are, as a rule, intelligent, earnest, and altogether honest. They still cherish the hope, at least, of a future life, and they certainly have no enmity "toward God." They want to lead decent and well-ordered lives, and bring their children up with good principles and high ideas. They recognize the needs of their higher nature, and have no objections to its being called a spiritual nature. They recognize the value of appeals to the purer feelings and the loftier sentiments.

They know that through the eye and the ear the soul may be reached and benefited. They would be glad on their weekly day of rest to subject themselves to elevating influences, and bring their families within them. Having this want, and recognizing this need, they still keep away from the "Sanctuary," partly because it so inadequately provides for them. They do not find there satisfaction for the soul, and modern society, dominated

by an antiquated ecclesiasticism, is failing to provide for the spiritual wants of man. It is therefore failing to arrest the working of those forces in human nature that tend to moral degeneracy. Science is to-day doing far more for morals than the Church.

### POST-MORTEM VISITORS.

A STRANGE case of the apparition of the phantom of a deceased student of the Academy, at the time of his death, to his Holiness, the Metropolitan Platon, having been narrated by the latter exalted personage, in the *Moscow Gazette* and elsewhere, the confession seems to have loosened the tongues of several persons, who hitherto had avoided saying anything of their personal experiences. Thus we find Dr. Vakoulovsky, a sceptic, as there are many, breaking the ice, and by his own story adding to the weight of other people's testimony. The *Gazette* copies from the *Diocesan Gazette* of Mohileff the following narrative of that gentleman:—

My service compels me to keep night watches in the hospital. And as I have to remain on this official duty for 24 hours each time, the work becomes very often tedious and exhausting. No means are afforded of getting a good sleep, as one is likely to be disturbed at every moment, whether to attend an old inmate or to give immediate help to a new patient. Once, last winter, I had just disposed myself for a short nap when there comes a knock at the door. It was the assistant surgeon who had come to notify me of the agony of a patient. "All right," I said, "I am coming." As I was going up the stairs leading to the wards, I suddenly saw coming down the steps the identical man I had been told was dying. Clad in his long hospital attire, there was the man in flesh and bones, as it seemed, before me. "Why did you get out of bed?" I asked him—but lo! he had disappeared and was no more. I must say, I felt very queer. Hardly had I entered the ward, when the assistant met me with these words: "Gone to rest for ever." Approaching the dead man I laid my hand on his forehead and found it ice-cold; touched his pulse, it did not beat; his heart, it had ceased to act... The face, the same I had just met on the stairs! I have told no one of this strange event, but entered it carefully in my diary. Having returned to my room I could sleep no more that night, and sat therefore writing till dawn an article on the centenary of the birth of the poet V. A. Zoukofsky, published soon afterwards in the *Gazette Slovo*. It is evident that my brain was in no way predisposed on that night to anything very fantastic. Yet, had I told any one what I had seen, I would have been accused of having dreamt the whole thing. The article in question is a good proof that my seeing the just deceased patient was a fact and no hallucination of a distempered mind.

### THREE UNPUBLISHED ESSAYS.

BY ELIPHAS LEVI.

[THE three Essays—the first of which is now given—belong to the unpublished MSS. of the late French Occultist, a series of whose other Lectures on Secret Sciences is being published serially in the Journal of the Theosophical Society. These three papers were kindly copied and sent for this Magazine by our respected Brother, Baron Spedalieri, F. T. S., of Marseilles. We hope to give, in good time, the translation of every scrap ever written by this remarkable "Professor of High Transcendental Sciences and Occult Philosophy," whose only mistake was to pander rather conspicuously to the dogmas of the established church—the church that unfrocked him.—Ed.]

#### Essay I.

#### THE EGGREGORES.\*

One Spirit fills Immensity. It is the Spirit of God that nothing limits, nothing divides, which is all in all and everywhere; which pervades every atom, and that nothing can shut out.†

Created spirits‡ could not live without envelopes suited to their surroundings, permitting action while

limiting it, and preventing them from becoming absorbed into the infinity.

Throw a drop of sweet water into the sea, and unless protected by some impermeable envelope, it will get suddenly lost therein.

There can be no such thing as spirits, formless or without an envelope.\* Their forms correspond to the sphere they inhabit; and in our atmosphere, for example, no spirits can exist save those of men—with bodies as we see them here—and those of animals, of whose nature and destiny we are so far ignorant.†

Have stars souls, and the earth we inhabit—has it a consciousness and a thought proper to it? We may be ignorant on this subject, but no one has the right to charge with error those who believe and affirm it to be so.

Certain exceptional phenomena are thus explained as the spontaneous manifestations of the earth's soul; and, as a kind of antagonism is often observed in these manifestations, it was inferred therefrom that the said soul is plural, that it reveals itself in four elementary forces that may be resumed in two and made to equilibrate by three: one of the solutions of the grand enigma of the Sphinx.

According to some ancient Hierophants matter is but the *substratum* of created spirits.‡ Deity does not immediately create matter. Out of God emanate the powers, the Elohim, which constitute Heaven and Earth. According to this doctrine, the first sentence of *Genesis* ought to be interpreted in the following wise:—*Bereschith*, the head or first principle *Bara*, created (rather formed out of pre-existent material) the Elohim, the Powers || *Ath aschamain onath aoris*, which are, or which (virtually) constitute heaven and earth. We confess that this translation appears far more logical than the one that would allow to the verb *Bara* used in the singular, the plural nominative—*Elohim*.

These Elohim or Powers are regarded as the great souls of worlds, whose forms would thus become the specified substances in their elementary virtues. In order to create a world, the Deity, it is said, had to bind together four genii, who in the act of resisting and wrestling first produced chaos; and who, forced to take rest after the struggle, thus formed the harmony of Elements. In this way Earth imprisoned Fire and had to swell to escape the invasion of Water. Air escaping from its cavities surrounded the Earth and Water, but Fire struggles still within the former and gnaws its entrails; Water trespasses in its turn upon the Earth and escapes in clouds heavenward; Air gets irritated and to chase clouds it forms currents and tempests, the great law of equilibrium or harmony—called the will of God—preventing the ever-going struggle from destroying the worlds, before the time allotted to them for their transfiguration.¶

The worlds like the Elohim are bound together by magnetic chains which, in their everlasting mutiny, they try to break. Suns have other suns for rivals; planets other planets opposing the chains of attraction in equal energy of repulsion, to avoid being absorbed, and thus preserve each an individual existence.

These colossal powers have sometimes assumed a form

\* Again an incorrect term. A "spirit" is—*spirit* only so long as it is formless and *arupa*; and it loses its name as soon as it becomes entangled in matter or substance of any kind known to us. A "Spiritual Entity" would answer better.—Ed.

† So little was E. L. "ignorant" of the nature—and *ultimate* destiny—of animals that he devotes to this a number of pages in his *Dogme et Rituel de la Haute Magie*. No true Occultist can be in the dark upon this subject. The prudent author pandered, we are afraid, to public prejudice and superstition.—Ed.

‡ Or the highest *Dhyan Chohans* of Occultism. At the beginning of Manvantara, the *Fohat* which they radiate awakens and differentiates Mahattatva, itself the radiation of *Mulaprakriti*.—Ed.

|| Among the Hindus *Kasyapa* (Brahma) begets the *Adityas* (*Dhyan Chohans*).

¶ This is the doctrine of the Manvantaric and 1st Pralayaic periods plainly taught in *Esoteric Buddhism*.—Ed.

\* The giants of Enoch.—TRANS.

† In other words, it is the confession of Vedantic faith: "All this universe indeed is Brahm; from Brahm does it proceed; into Brahm it is dissolved; in Brahm it breathes."—Ed.

‡ The term "created" is a perfect misnomer when used by an Occultist, and always a blind in the works of Eliphas Levi, who is quite aware of the fallacy implied in the word "Creation," in the theistic sense, and shows this repeatedly in his writings. It is the last tribute, we hope, paid by our century to an unscientific dogma of the Past.—Ed.

and presented themselves under the appearance of giants: they are the *Eggregores* of the Book of Enoch: \* terrible creatures, in proportion with whom, we are what the infusoria—the microscopical insects that crowd the drop of water and breed under our epidermis—are when compared to man. The “*Eggregores*” crush us without pity, for they are not aware of our existence. They are too gigantic to perceive us and too dull to discover our existence.

It is thus that the planetary convulsions that often engulf whole populations are explained. We are but too well aware, that God does not save the innocent flies whose wings and feet are torn off by cruel mischievous boys; and that Providence never interferes in favour of the patient ant, whose buildings are ruined and destroyed by the feet of the passer-by.

Because the organism of the infinitely small insect escapes man's analysis, man forthwith assigns to himself the right to suppose that before the face of eternal nature his existence is far more precious than that of the tiny bug. Camoëns had certainly more genius than Adamastor, the *Eggregore*; yet that giant, crowned with clouds, having for a belt the waves, and for a cloak the hurricanes, could have never unriddled the poetry of Camoëns. We find the oyster good to eat; we suppose that it has no self-consciousness, hence cannot suffer, and in consequence of this we devour it alive without the slightest compunction.

We throw the craw-fish, the crab and lobster alive into the boiling water, in order that its flesh, cooked in this way, should be firmer and taste more delicious.

What is that terrible law in virtue of which God thus abandons the weaker to the stronger, the little to the big; the ogre being never made in the least aware of the tortures inflicted by him on the tiny creature he is devouring? And what warrants man to think that he will be protected in the future by any one or any thing against forthcoming creatures stronger and as gluttonous as we are ourselves?

The planets act and react on each other, equilibrium is achieved through bonds of love and impulses of hatred. At times the resistance of a star is broken, and it is attracted to a sun who swallows it; often a luminary feels its attractive power dying out, dead—and it is violently snatched out of its orbit by the revolution of the worlds. Sympathetic stars approach lovingly each other and engender other stars. Infinite space is the great metropolis of the suns, wherein they hold their councils and send reciprocally telegrams of light. There are sister-stars and rival-stars. The souls of the fixed stars chained by the law from their regular course can exercise their freedom of action by diversifying their effluvia. When the earth feels cruel, she makes men furious and causes scourges to appear on her surface. She then sends to the planets that are repellent to her a poisoned magnetism. Mars takes his reprisals by causing war to rage on Earth; Venus pours upon our planet her unhealthy venom of immorality; Jupiter excites the potentates to rise against and make war upon each other; Mercury lets loose against humanity the serpents of his caduceus; the Moon makes men mad and Saturn drives them to despair. It is the loves and hatreds of the planets and stars that are at the bottom of astrology—too much neglected in our days. Has not spectrum analysis proved that every star has its magnetisation determined by a special and particular metallic basis, and that there existed in heavens gradations of attraction as well as scales of colours?

It is then possible that there should exist—and there do exist—among the celestial globes magnetic influences obedient to the will of those globes, once the latter are

supposed to be endowed with intelligence or guided by genial gods known to the ancients as the “*Watchers*” of Heavens, or the “*Eggregores*.”

The study of nature enables us to observe contradictions that amaze us. We are detecting everywhere signs of intelligence, but as often we stumble upon, and have to recognize entirely blind forces\*. Scourges denote perturbations—a disorder that cannot be attributed to the principle of eternal order. Plagues, inundations, earthquakes, famines are not the work of God. To attribute them to the devil, *i. e.*, to an angel, damned, whose evil deeds are permitted by God, amounts to calling God a hypocrite hiding behind the back of a responsible but evil-famed manager.

Whence then such perturbations? From the errors of secondary causes? But if these causes are capable of erring, then they must be intelligent and autonomic, and thus we are directly landed into the doctrine of the “*Eggregores*.”

According to this doctrine the planets busy themselves but with their sympathies and antipathies. Your sun—whose spots you regard as a commencement of his cooling off†—is slowly and fatally drawn toward the constellation of Hercules. One day he will become short of heat and light—for planets get old and have to die as well as men—and become unable to repel the planets which in their furious impetus must break themselves against him and thus bring our universe to an end. But another and better universe will be formed out of the *débris* of the old one. A new creation will emerge out of chaos, and we shall be reborn as a new species better fitted to struggle against the stupid bulk of the *Eggregores*. Such changes will take place up to the time when the great Adam will be entirely reconstituted‡—Adam—that Spirit of spirits, that Form of forms, that collective giant who makes up the totality of creation; that Adam who, according to the Kabalists, hides the sun behind his heel, the stars in the hairs of his beard, and who, when starting on his journey, touches with one foot the Orient and with the other the Occident.

BARON SPEDALERI.

### A NEW TROY.

PRIVATE letters, corroborated by newspaper reports, give us enthusiastic descriptions of the new archaeological finds on the hills of Aphrosial, the site of ancient Marikund (modern Samarcand), containing, as alleged, unheard-of treasures. A telegram was received in Tashkund, on November the 7th, conveying the information that the work of excavating the ruins connected with the doubted though by no means mythical name of the Iranian King Aphrosial—had begun and various objects of the pre-Alexandrian era been found. This site, whose ruins are scattered over an area of 8 or 9 miles in length and 4 in width, belonged to the fire-worshippers, the Tadjik. Hitherto were found from time to time in the bazaar and with native silversmiths, tetradrachms, sold for their weight in silver, ancient coins belonging to the period of the Greco-Bactrian Kings, and

\* A “blind” action does not necessarily constitute an undeniable proof that the agent it emanates from is devoid of individual consciousness or “intelligence.” It may simply point out the superiority of one force over the other, domineering, and hence guiding forcibly the actions of the weakest. There are no “blind” forces in nature in the sense the author places on the adjective. Every atom of the universe is permeated with the Universal Intelligence, from the latent spark in the mineral up to the quasi-divine light in man's brain. It is all as E. L. says “action and reaction,” attraction or repulsion, two forces of equal potentiality being often brought to a dead stand, still only owing to a mutual neutralization of power.—TRANS.

† E. L. says “you regard;” for, he himself, as an Occultist, does not so regard them. The real occult doctrine upon solar physics is given out plainly enough in the September number of the *Theosophist* (1853), Art. *Replies to an English P. T. S.—Ed.*

‡ The seventh and the last race of the seventh Round.—Ed.

\* The “giants” of *Genesis* who loved the daughters of men: an allusion to the first prehuman (so to say) races of men evolved, not born—the Alpha and the Omega of Humanity in this our “Round.”—Ed.

various vessels and ornaments, such as beautiful vases and jewelry. Such articles, says the *Moscow Gazette*, were found generally in the spring after the winter rains, in the vicinity of the Sarteau tombs. During the building of the new road between the river Zarewshan and Samarcand, a great number of ancient coins and articles of gold and silver were found. For the purposes of the new transit, trenches were cut across certain parts of Aphrosial. How great the wealth that lies buried in the latter—a true archæological treasure—may be seen from what follows. In 1878, during the Djam campaign, the Colonel of the regiment, Prince Tronbetzkoy, while examining one of the hills, met with a few mardekars (coolies) and hired them for the price of one rouble “to dig a little, at random,” as he said. In less than half an hour he was rewarded by getting a small bronze statue of exquisite workmanship, which represented a man in a half reclining posture with his arm around a lion. Such private excavations were strictly forbidden, however, by the late General Governor K. P. Kaufman. A committee was soon appointed, and professional archæologists having been sent to the spot, regular excavations were begun from October 1st, under the direction of Colonel V. V. Krestovskoy. During the first week quite an unusual quantity of articles was dug out: gold ornaments, vessels of bronze, glass and clay, beautiful mosaics and coins. Traces of a series of successive kingdoms have already been found; and the more the work progresses, the more certain it becomes that Samarcand is built upon the tombs of the Arabian, the Greco-Bactrian, and the ancient Arabian civilizations. At the depth of 7 or 8 feet many ancient Chinese coins have been also unearthed. How long must it be before the Bombay Parsi millionaires will found a Zoroastrian Archæological Society after the best European models, and with an endowment commensurate with the magnificent field there is for research into the antiquities of their hoary civilisation and faith? Are they all incurably wedded to cotton and traffic?

(Concluded from our Last Number.)

#### POST-MORTEM RISE OF TEMPERATURE.

BY LEOPOLD SALZER, M.D., F. T. S.

WE may then fairly assume that one of the contrivances of the organism for maintaining its temperature within certain limits under considerable variations of temperature of the surrounding atmosphere, consists in this, that a hot atmosphere causes muscular combustion to be carried on in a proportionately economic way, that is to say, there is proportionately much work done while comparatively little energy is allowed to be liberated in the form of heat; while cold has just the opposite effect.

That some such economy is carried on within the organism in certain abnormal states, is to my mind out of question. In all cases of dyspnœa in consequence of deficient oxygen, we find the body temperature lowered; and when dyspnœa increases to such an extent as to cause chronic convulsions, the mercury column of the thermometer falls lower still, although under ordinary circumstances muscular contractions are invariably accompanied by increase of temperature. Even in tetanus caused by strychnine, where respiration is often impeded, in consequence of a tetanic state of the respiratory muscles; and where the blood is made at the same time unfit to absorb the usual amount of oxygen, in consequence of the direct toxic action of the poison—even in such a case we find a rise of temperature of 3 to 4° F. There must then be some particular arrangement which in a case of threatened asphyxia keeps the body temperature low in spite of the spasms. But once granted that there is such a heat-moderating agency in some abnormal state of the organism, we are driven to admit that a similar agency must necessarily exist in the healthy body, as a physiological institution, so to say; for Virchow has proved long ago

that pathological and physiological processes are the same in kind, varying only in degree and relativity according to varying conditions of life.

The difference between tetanus and asphyctic convulsions as far as caloric evolution is concerned, would then, as I understand it, consist in this, that in the former the proportion of energy liberated by muscular combustion, is largely in favor of heat production, while in the latter, almost the whole of the energy developed by muscular combustion, is employed in favor of the work of contraction, leaving hardly a balance for evolution of heat.

If we remember that the convulsions during asphyxia are set up in consequence of the extreme respiratory struggle, it would be strange, indeed, if those very convulsions should have no other result, than to increase by far the respiratory difficulties; such, however, would be the case, should they be accompanied by a large production of heat, for large production of heat means combustion carried on to a large extent—in other words, consumption of oxygen and disengagement of carbonic acid carried on to a large extent. Now the retention of the just mentioned gas is a great factor in asphyxia, and stands only second to the deprivation of oxygen. Any production of carbonic acid on a large scale within the organism, while, in consequence of deficient respiration, there is no outlet for it, would then only go to increase, instead of mitigating the evil resulting from deficient respiration. As it is, I hardly think that there can be any thing gained by those respiratory convulsions; they are moreover the outcome of one of those resources set up, as it were, by unreasoning nature, to allay one evil by setting up another, just as great, if not greater than the original one. Yet there is evidently provision made against any undue evolution of carbonic acid, for as a matter of fact, we find the asphyctic convulsions carried on in so economic a way that heat makes itself conspicuous by its absence.

I need not tell you that what has just been said with regard to asphyctic convulsions may be made applicable to the spasms—tonic or clonic—of cholera. This is especially the case in the spasmodic variety of cholera, where part of the spasms are really, as we have seen before, of asphyctic nature. In the non-spasmodic variety the origin of the spasms is different. They do not start from the medulla oblongata, but set in gradually in the measure as vomiting and purging is proceeding, partly in consequence of the increasing venosity of the blood, known as it is that the flow of venous blood through a muscle causes it to contract; and partly in consequence of irritation of the motor nerves brought on by their being deprived of water. That the spasms in the extremities are, to all appearance, primarily due to the venosity of the blood. They manifest themselves first in the parts most remote from the heart—in the fingers and toes—where the stagnation in the flow of blood is first felt. Later on there is the additional element of nervous irritation as already mentioned. The spasms on the other hand of the blood-vessels on the right side of the heart and of the vaso-motor nerves in general, appear to be of nervous origin from the very onset; they are due to the specific action of the cholera poison, and originate most likely within the vaso-motor centres. Of whatever nature and origin the spasms of the non-spasmodic variety of cholera may be, they have this in common with the asphyctic convulsions, that they are carried on, on the most economical principle with regard to expenditure of heat. As to the agency which presides over this economic process, I have already mentioned it to be, according to my opinion, a part of the function of the heat-regulating provision existing within our organism, and known by the name of caloric centre.

That the alleged existence of a caloric centre is more than hypothetical, can now, to a large extent, be proved. In order to do so, we have only to go back to the experiments of Ferrier. He defined on the surface of the

brain of cats, dogs, rabbits and monkeys, the different centres from which various movements of the limbs, face, mouth and tongue, eyes and ears, &c., could be definitely and distinctly excited. This gives us an idea in how far spasms may be cerebral in their origin. Since Ferrier's discovery it has been found by Hitzig, Eulemberg and Landois that the ablation or destruction of regions in close proximity to Ferrier's motor centres is followed by exaltation of temperature in the opposite hind legs; on the other hand electrical stimulation of the same region lowered the temperature of the limbs of the opposite side. M. Bochefontaine has further found that strong stimulation of the motor centres of the extremities causes increase of the blood pressure in the arteries and retardation of the beats of the heart.\*

Having then shown you, gentlemen, that there are caloric centres, and that they do exert themselves in order to prevent any waste of muscular combustion in the case of cholera spasms, we are now in a position to understand far better Wunderlich's suggestion to the effect, that the extraordinary rise in temperature of cholera-patients immediately before, or soon after death, is due to a paralysis of those centres. We have come to learn that the economy with which choleraic spasms are carried on is altogether exceptional; there must then have been a considerable amount of extraordinary energy spent on the part of the caloric centre, in order to effect the inhibitory regulation spoken of; and this energy must according to the law of Conservation of Forces, become converted, in the measure as the centre becomes paralyzed, into heat.

In how far the state of the nerve centres is concerned in the post-mortem rise of temperature, may best be seen from the following observation of Professor Taylor.

Cases, he says, where the post-mortem temperature has particularly risen are: Injuries to nerve centres, especially the brain; in cerebro-spinal meningitis the temperature has arisen after death from 104° to 111° F., and in fatal cases of small pox attended with much delirium, Simon observed that the temperature rose at death from 104° to 113° F.

It appears to me that these observations confirm in the main my views on the subject. As I have explained before, the post-mortem rise of temperature in general is, according to my opinion, due to a gradual transformation of potential energy in the form of molecular work into energy in the form of heat. Suppose then that this transformation, instead of being gradual, as is ordinarily the case, would, under some extraordinary circumstances, be sudden; what effect would this have upon the evolution of heat?—Why, there would be a sudden and considerable rise of temperature. Now this is just what happens when death occurs in consequence of injuries inflicted upon the nerve or upon the brain. The molecular work by which the nervous and cerebral irritability had been sustained, has suddenly been suspended, the potential energy, dwelling in those organs, can no more give rise to automatic action or to unconscious cerebration; and so it comes that this very potential energy is suddenly set free and explodes in the form of an extraordinary amount of heat. There is a sudden rise of high temperature.

Again, when there is during life-time an extraordinary amount of nervous or cerebral irritation, even gradual extinction of those latent activities involved in such an abnormal irritation, must necessarily give rise to an evolution of an amount of heat far higher in degree, than would have been the case, had there been a normal state of irritability at the approach of death. In cerebro-spinal meningitis, and most likely in yellow fever too, there is an extraordinary amount of nervous and cerebral irritability manifested during the course of the disease, and the consequence is, as we have seen, an extraordinary post-mortem rise in temperature.

\*Landois, Lehrbuch der Physiologie 1880. P. 754.

Post-mortem heat, as far as molecular labor is concerned, has been explained on the supposition that *molecular* life continues to a certain extent after *somatic* death has taken place. There is certainly a good deal of truth in this, known as it is, that tissue irritability subsists for some time after death. What I believe however to be just as true, and what I wish therefore to impress on your mind is this, that the post-mortem heat is not only owing to a temporary subsistence of molecular life, but in no less a measure, and perhaps to a far greater measure to the setting in of molecular death.

### MEDICAL MAGNETISM AND THE HEALER MAGNETIC.

BY SEETA NATH GHOSE.

Now, I think every one may feel curious enough to know whether I have actually cured and created any disease by means of my Magnetic Healer. To satisfy that curiosity I should say that the diseases which owe their origin to derangements or obstructions of organic functions, have been very successfully treated with the Magnetic Healer. The diseases I have up to this time treated most successfully with the said instrument are too numerous to be mentioned here at length. A simple reference to my Register\* lying on the table, and in which every case treated electrically by European instruments as well as by those of my own has been faithfully recorded, will show that fevers, both remittent and intermittent, simple and complicated, Dyspepsia, Diarrhœa, Dysentery, Ascitis, Enlargement and Disorders of the Liver and Spleen, Pneumonia, Bronchitis, Asthma, Head-aches of all varieties, Neuralgia, Anguinapectoris, Pericarditis, Rheumatism, Paralysis, Locomotor-Ataxy, Tetanus, Epilepsy, Hysteria, Melancholia, Deafness, Hydrocele, Impotence, Leucorrhœa, Dysmenorrhœa, Amenorrhœa, Spermatorrhœa, Elephantiasis or Barbados-Leg, Leprosy, and similar other diseases have been and are being treated with the Magnetic Healer, with more or less success according to their nature. I have here to observe that diseases of recent origin have been more successfully treated than when chronic. Surgical diseases of different varieties have also been benefited and cured by the applications of the Magnetic Healer, when, of course they have been helped by local applications of the galvanic battery. I must here fairly confess at the same time that the Magnetic Healers at present, in my possession, have unfortunately met with sad failures in a good number of cases, the reason whereof I am not in a position to account for at present. One important observation which I have been able to make is that those patients whose blood had been previously vitiated either by some particular disease—poison, drug-poison, or by the effects of over-medication, generally, proved obstinately unyielding to the healing influence of Magnetism.

The diseases that have been first created and then cured by the applications of my Magnetic Healer, though few in number, have led me to presume that all other diseases might be equally created and cured by it. I would give here two cases which I hope will enable every one to appreciate the value of the instrument in question.

On one occasion Babu Ananta Lal Roy, the proprietor of the Ink Manufactory at Baliaghat in Calcutta was put into the instrument and an electric current from 8 Bunsen's cells was applied to it, in such a manner that his head received the north polar current and his feet the south. After 15 minutes, he said on enquiry, that he felt all right, I then connected the battery with the Magnetic Healer in the contrary way and desired him to

\* For the satisfaction of the readers I append to this pamphlet an extract shewing the particulars of the cases which have up to this time been cured by the Magnetic Healer.

perceive the effects. About ten minutes after this he was heard to call loudly by name one of my assistants then sitting by me; and became quite insensible. On immediately running to the instrument I found him labouring under a severe epileptic fit, his eyes being protruded and staring, jaws locked up, froth issuing from his mouth, and his trunk and extremities convulsed. Instead of having recourse to any other means, I without a moment's delay disconnected the battery from the instrument and made fresh connections in the manner they had been made at first. Within about two minutes after this he, to the great astonishment of myself and the spectators, got rid of the epileptic fit and recovered his senses. The only complaint he then made was that he felt very weak and giddy. He was consequently kept in the instrument for 15 minutes more in the same favourable position, and was thereby freed from all sorts of uneasiness. In the evening of that day he felt weak again, but on his lying down within the instrument for 15 minutes in a favourable position, no trace of uneasiness was left behind in him.

The second interesting case was my own. On one occasion while I was experimenting upon the efficacy of the instrument in question, I used it myself to cure a *bronchial* affection which I was then labouring under. I had two powerful applications of the instrument on two successive days. Instead of feeling better I gradually got worse. The cough I had, became very troublesome, especially at night. At twelve a. m. of the day following the last application, I was quite astonished to find blood in the mucus I expectorated. From that time forward blood used to come out not only with the expectorations, but sometimes with the natural evacuations. Further, I felt myself so much dyspeptic that I could not digest anything properly. I generally threw up what I took at night and suffered from diarrhœa. This state of things continued for five days and five nights and prostrated me so much that I could not sit up in my bed for 15 minutes together. During these five days I could not make out the cause of my sufferings, and therefore used almost all the medicines best suited to the complaints, but unfortunately did not derive any benefit from them. My health gradually gave way, and in consequence I became hopeless of my recovery. On the morning of the sixth day, it providentially occurred to me that perhaps by the two applications of the instrument I made the intensity of the magnetic polarity of my body must have been to some extent reduced, or else the complaints would not have been so obstinate as to defy the healing influence of the medicines I took. With this idea I tested the polarity of the instrument by means of a compass-needle, and found to my satisfaction that the two applications I had undergone were perfectly unfavourable on account of a mistake of an assistant of mine, who made reverse connections of the galvanic battery with the instrument in question.

On finding out the mistake, I got the battery connected with the instrument in such a manner that the natural magnetic polarity of the body might be strengthened by it. I then got into the instrument and remained in it for an hour. I fell asleep after being a few minutes in it, and continued in that state till about the end of the hour. Before entering into the instrument, I had found bright red blood in the mucus I expectorated, but on coming out, I expectorated a clot or two of dark colored blood within about ten minutes, and then no trace of blood of any colour was found either in the mucus expectorated or in any other way. I did not throw up my food the following night, and enjoyed a long and sound sleep till the morning of the ensuing day. The next day I underwent a similar application of the instrument and got rid of every discomfort I had to complain of.

In addition to these, I have several times produced and then cured several other diseases of minor importance. Detail description of such cases being uninteresting

to sceptical readers need not be given. Thus the success of my experiment in creating as well as in curing diseases of different descriptions with my Magnetic Healer, has led me to presume that "Health and Disease are but the two phases of Magnetism only."

From the foregoing facts and observations I now propose to lay down my theory of Health and Disease in a few words.

What is health and what is disease and what are their most rational and primary causes? To this vitally important question my concise answer is this: health is that natural condition of the body in which no uneasiness of any kind whatever is felt. That condition is dependent upon the functions and freedom of all the organs of the body. Again, this freedom depends entirely upon that magnetic condition of the body in which the head is the north pole, and the palms and the feet are the four branches of the south pole. Disease is that condition of the body in which some kind of uneasiness is felt. Uneasiness is caused by inactivity or overactivity of the functions of one or more of the organs. The inactivity and overactivity of the functions are again the results of certain derangement or obstruction taking place in the way of the functions. The derangement or obstruction is in its turn caused by a certain amount of diminution of the intensity of the natural magnetic polarity of the body. Though in reality all the diseases which flesh is heir to are but the manifestations of one and the same primary disease, yet, according to the character and position of the manifestations, they are variously named and differently treated by medical men. When all the diseases can actually be created or aggravated in different subjects by merely reducing the normal magnetic attitude of the body, and when again all the diseases can actually be cured or alleviated in different subjects by merely bringing to a proper order the same magnetic attitude of the body, every reasonable being, I think, will concur with me in the above conclusion regarding Health and Disease.

Last of all, in reply to the most important question, What is death? I should simply say that when the normal magnetic polarity of the body is reduced to zero, the derangements and obstructions arising therefrom become so great that all the functions of the body come to an end, and in consequence the body is at once transferred from the animate to the inanimate kingdom.

Now let us take a comparative view of the electric system of treatment as practised in England and America, and the magnetic system of treatment, discovered by myself.

The system of electric treatment which is in vogue at present in Europe and America, consists chiefly in using the constant Galvanic or interrupted or Faradic currents of electricity according to the discretion of the physician or the surgeon. The constant Galvanic current is used sometimes for cauterisation; sometimes for electrolysis or chemical decomposition of tissues; sometimes for producing an *electrotonus*, *i. e.*, tonic, sedative or anodyne actions and *cat-electrotonus*, *i. e.*, stimulating and irritating actions in the system, and sometimes for giving a positive or tonic charge to the body, as invented by Dr. C. B. Radcliffe's. The interrupted current is used to stimulate and thereby to give tone to particular part or parts of the body.

In the purely electrical system almost all sorts of surgical operations are performed either by Galvanic cauterisation or Electrolysis. The most astonishing points of those operations are that they are thoroughly bloodless and that the sores heal up very rapidly without much cure being taken for them.

Except Dr. Radcliffe's positive charge, the other modes of using the constant as well as the interrupted currents are more adapted to local complaints than to those of the general system. Radcliffe's positive charge though a mode of general application, yet in the experiments of myself as well as of some respectable authorities, has

proved so inefficient that it requires no mention here. It may be a learned scheme, but not so useful. In the modes of applying both constant and interrupted currents, it is required to select, according to the seat of disease, particular organ, muscle, nerve and tissue for electrization. But this is so difficult a task that even the best pathologist cannot in all cases do it satisfactorily. In some instances the diseases of different organs become so intimately connected with one another, that neither the constant nor the interrupted current can be applied with good results, though their pathological relations are clearly defined.

Further, chemical decomposition is so closely allied, with the application of constant current of electricity that the parts of the body acted upon by it cannot be secured against the effects of more or less decomposition in spite of all cares taken for the purpose. It cannot be denied by any body that unnecessary decomposition or disintegration of a very minute part of the body is detrimental to health and longevity.

In the prevailing system of Electro-therapeutics, although electricity has been deemed to be an agent similar to vital power, yet no means has yet been devised to retain it in the body after it is applied to it. Any effect produced by the application of electricity to the body is accomplished by its passage through it with inconceivable velocity. Such a quick passage of electricity through the human body, which is a bad conductor of Electricity, generates very great heat and in consequence proves injurious to health, even when its intensity is less than moderate. For this simple reason in the purely Electrical system of treatment, which is marching forward rapidly in the medical fields of Europe and America, overaction of Electricity is very often complained of both by the patient and the physician. As the effects of overaction are very dangerous, physicians and surgeons practising in Electricity always exercise all possible care to guard against it. Sometimes even the very cautious and experienced practitioners are found to fail in protecting their patients from overaction.

In the magnetic system of treatment conducted by myself with the instruments now before us, the defects of the purely electrical system mentioned before have been wellnigh remedied. The applications of these instruments act upon the whole system, and therefore necessitate the selections of particular organs, nerves, muscles or tissues to deal with for the removal of a particular disease. In this arrangement magnetism being induced in the whole system, it acts only upon those parts where it is needed, the others remaining almost untouched. According to the general principles of magnetism laid down in the foregoing pages, those parts of the body which are already imbued with a sufficient quantity of magnetism, are not at all affected when an additional quantity of magnetism is induced in them. To express myself more clearly on the matter, I should say that, as by applying soap-water to a piece of white cloth soiled in some particular part, the stain only is removed, while the white parts are not further whitened, so by applying magnetism to a body having some disease in some of its particular parts, the diseased part only is made healthy, while the other parts already healthy are not affected in the least. Consequently the pernicious effects of unnecessary action are very rarely met with in this system.

Like electricity magnetism having no violent motion through the molecules of the body, no heat is generated by it. If however some patients magnetised fully by the instrument described before, experience a sensation of heat just after the operation, that heat must be ascribed to the too great activity of some torpid organ or organs, brought about by magnetism, and not to the violent and rapid motion of the same through the body. That heat though disagreeable to the patient generally, goes off within a day or two without doing any permanent mischief to the system.

In the magnetic system under discussion no chemical decomposition of any part of the body can take place when any magnetising instrument is applied to it. It is perfectly harmless in that respect.

Unlike electricity, magnetism is retained in the body after it is applied to it. Magnetism instead of passing off through the body like electricity sticks to it like a common steel magnet and constantly works upon the machinery of life in the body. It is in my opinion a thing similar to the vital principle of the body.

The effects of overaction cannot be wholly dispensed with in the magnetic system. Like the purely electrical system it has also this defect intimately allied to it. When a patient is magnetised to a far greater extent than what is necessary for his constitution he is surely to suffer from an aggravation of his disease notwithstanding his head is rendered the north pole and his feet the south pole by the operation. Why such aggravation of disease takes place even under favourable magnetisation is a question of great moment. The reasonable solution of this important question may probably be that when a patient gets some serious obstructions of his natural functions he must feel uneasy for a time if they are cleared off or attempted to be cleared forcibly by inducing a high degree of favourable magnetism in his body. Sudden activity of some dormant parts of the body, where obstinate obstructions of some form or other have taken place causes a good amount of violence which is badly borne by the patient. The prudent means therefore to be adopted in all such cases is to magnetise the patient slowly and gradually. This will clear off all obstructions effectually and at the same time bring about no discomfort whatever along with it. The peculiar mode of my feeling the pulse of patients of which a mere mention has been made before, furnishes me with a ready means to discriminate how much magnetism is to be induced into a particular patient to help his vital principle to remove all functional obstructions and irregularities slowly and gradually without causing any kind of uneasiness to him. In consequence of this, although in the magnetic system of treatment under discussion, the overaction of even favourable magnetism may sometimes aggravate the complaints of some patients yet there has been at the same time discovered a mode of operation which in the hands of a discreet physician can successfully avert such aggravations. The aggravation of symptoms if brought about by the overaction of favourable magnetism is by no means a matter to be dreaded. It generally subsides of itself within a short time. If it continues for a longer period than two days it can be very successfully remedied by the application of a very slight degree of favourable magnetism for half an hour or one hour.

Another great defect of the magnetic system is that it has no *Surgery* in it. In this respect the electrical system is unrivalled. I have therefore been led to combine the electrical system as practised in Europe and America with the magnetical system devised by myself for the treatment of diseases I met with in my practice. From this none should infer that I have altogether abandoned drug-medicine in the treatment of diseases. On the contrary I use it in cases where I have to combat with some medical poison in the patient's system. In some cases I use it also to expedite a cure

## Letters to the Editor.

### A QUESTION TO THE AUTHOR OF "MORALITY AND PANTHEISM."

THE author quotes disapprovingly a sentence from the Christian Bible—"He who giveth to the poor lendeth to the Lord." He sees in it an immoral motive as an incentive to doing good; but could not the sentence be considered as a symbolical affirmation of the law expounded in the above article on the subject of happiness and morality?

When giving to the poor, *i. e.*, in practising charity, man places himself in harmony with that grand law of Nature—*Solidarity*. Therefore, acting in communion with the whole, he places himself in the conditions of happiness indicated by the author and thus receives in return for his deed a gift which is not *arbitrary*, but which in fact is the accomplishment of the law. Understood in this way that sentence is not in discord either with Theosophy or with Occultism.

I have remarked that several of the sayings of Jesus are thus illuminated by the light of Occultism. I must even add that they are quite unacceptable without that key. I shall be grateful to the author if he answers me.

J. K. O.

I hasten to reply to the question raised in the foregoing letter. The Christian Scriptures are, no doubt, capable of yielding very satisfactory answers, quite unsuspected by the generality of the so-called Christians, if approached from the Occult standpoint. But that was not the subject to which I addressed myself in my article on Morality and Pantheism; my object was simply to show the unsoundness of the basis upon which Morality is made to depend in the current Christian faith. Helping the helpless poor, certainly generates a beneficent force reacting upon Humanity as a whole—the Lord, the true Adam—of which the helper forms a unit. But how few would read that meaning in the sentence quoted?

It is quite true that a student of the true philosophy will be able to evolve a perfect system of Morality from the nebulous mass of whatever religious system he may be surrounded by. But the fact must always be borne in mind that the vivifying influence of the Esoteric Doctrine is absolutely indispensable before the floating mist can form itself into a pure crystalline sphere. I may take this opportunity to make an attempt to dispel the inchoate dissatisfaction, that seems to be slowly spreading its shadowy wings over many a western mind in regard to the attitude of the Theosophical movement towards Esoteric Christianity. It is as reasonable to complain that our Society does not come forward, lance in rest, as a champion of Esoteric Christianity, as to find fault with the wind of heaven for not seeking admission into our own private chamber, all the casements of which lying in the way of the wind we have taken care to shut. The Theosophical Society will belie its name if it wedded itself to any particular form of faith. But as the humble exponent of the Divine Esoteric Doctrine, it is the supporter of all religions founded on that rock of truth, and who shall say that there is no form of Christianity which is so founded? But, until the windows are thrown open to let in the light, until a gallant band of Christians stand up for their lost Gnosticism, we are quite powerless. In the meantime, however, we have a duty to perform, to prevent a crime from being punished by another crime and by greater criminals—to save, if possible, the still quivering life impulse in the old Asiatic religions from being crushed out by the dead weight of Missionary Christianity, the worse than Islamic Iconoclasm of our modern days.

A HUMBLE CHELA OF A GREAT MASTER.

### ON PRAYER.

In your last issue Mr. V. K. Rajwade solves the question "Why are men averse to prayer?" But his arguments are not satisfactory to many. With your permission, I will explain briefly why men holding the identical views with him as regards *Brahm*, *Iswara* and *Jiva*, differ from the conclusions he arrives at.

Mr. Rajwade does not say what he means by prayer: but if he means the outburst of feeling and the solicitations of one to approach the "Great-self," there can be no harm in whatever way the outburst takes place or in whatever form the solicitations are made. Mr. Rajwade in bringing into field the three terms *Brahmānda*, *Atmā* and *Deha*, virtually admits the existence of three in place of one. Even

if he maintains the last two as the two different phases of the First, the separate existence of *Atmā* and *Deha* is not denied, and it would be impossible as long as one is within the control of *Máyá* to divest one-self of the notion of the difference of the *Atmā* from the *Brahm*. Now, when the *Atmā*, which considers itself a totally distinct entity from the *Brahm*, yearns to unite itself with the latter, or at least tries to approach it, where is the self-applause even if in praying it praises but in reality its own self? It is the Duality that aspires to Unity, and how can this unity be effected without Love? The natural outcome of love is the pouring out of feelings according to the moral status of the lover. The lover should first try to approach the object he loves before he aspires to the union.

The *Atmā*, though unknown to the physical and the mental senses, knows that she has been separated from her Lord and she must strive to be united to her spouse again. Rather try to stop the mouth of the child that cries for its mother, or the yearnings of the faithful wife for her distant husband, or the murmurings of the rivulet obstructed in her way to the ocean, than attempt to impede the soul in her offering praise to her Lord.

Mr. Rajwade is of opinion that the *Atmā* does not become lowered by its connection with *Deha*. This is not understood. The *Parámátmā* is unconditioned, and it can never be polluted or purified; but surely even according to Mr. Rajwade's classification, *Atmā* is inferior to *Parámátmā* and what else can be the reason of her fall if it is not through its contact with *Deha*.

Mr. Rajwade may be an advanced *Yogi*, who has entirely divested himself of the sense of Duality, but for persons who have not yet been able to do away with the phenomenal world and who have not been able to be united with the *Parabrahma*, does prayer imply self-applause? The first series of sensations that a psychist feels even in *Ráhyoga* where the plea of Hypnotism cannot be brought into account, are the standing of his hair on end and the gushing out of tears from his eyes. Do not these imply the love of the *Atmā* for the *Parámátmā*, and does not the very idea of love convey the sense of Duality? And when there is Duality—where is the self-applause?

I do not ask this question in a hostile spirit; but, as a new comer to the road of psychism, I am inexperienced in these matters. I therefore respectfully beg to be enlightened on the subject. I find that prayer is allowed in all the known religions of the world. There must have been some strong grounds for enjoining the practice. Was it because the Teachers thought it advisable not to meddle with the natural feelings of their followers?

Will you not, Madame, give your opinion on the subject that concerns the whole of humanity?

SIMLA,

The 29th December, 1883.

K. C. M.

We act upon the principle that what is meal for one is death for another. While, therefore, some people may not be able to develop their latent psychic capacities without prayer, there are others who can. We set no value upon the words uttered. For, if the words had any effect, how is it that different religionists, although using different forms of expression, obtain the same result? Again, those who pray silently and intensely gain their object, while those who merely mumble some formula without understanding the meaning, get no answers to their prayers. As has been said in *Isis Unveiled*, we believe prayer is the giving of expression to the desire, which generates Will. And this WILL is all-powerful; its effect depending, of course, upon all the surrounding conditions. Philosophers can be but few. They need no external ceremony or object for the purpose of concentrating their Will-force. We cannot expect the ordinary mortals, whose sensuous perceptions and avocations do not permit them to penetrate behind the mask, to do without the help of some external process. What we regret is the degeneration of this real prayer—the outward expression of the inward feeling—into a meaningless jumble of words. The prayer of the philosopher is his contemplation, an article on which subject will be found in the last number of the *Theosophist*.

D. K. M.

### A NEEDED DEFINITION.

THE Adept, the Medium, and the Ordinary Fellow are to be represented by Nos. 1, 2 and 3, respectively.

No. 1 only feels in the Esoteric state.

No. 2 feels and speaks in the Eso-exoteric state.

No. 3 is capable of speaking only in the Exoteric state.

So, No. 2 forms a sort of link between the two states, giving vent, according to destiny, to marks, partly comprehensible and partly incomprehensible to No. 3, and bears a remarkable resemblance to the Zoophite, uniting the animal and vegetable kingdoms.

O. M.

## ESOTERIC CHRISTIANITY.

I HAVE read with satisfaction Dr. A. Kingsford's address to the President, which appears in the *Theosophist Supplement* for January 1884.

Since my acquaintance with the *Theosophist*, I have been sorry to see antagonistic language employed with reference to Christianity and the advertisements of Anti-Christian works appearing in its columns, although I understood that such language, so sure of misinterpretation, was only being used against the adulterators of this sublime creed. I feared too that the public might form their estimate of the Society by detaching phrases from the context of its literature and not by studying the careful expositions of an Editor.

I knew that it was the high aim of Theosophy to remove the disfiguring crusts of exotericism from all creeds, but at the same time I bewailed the habit of calling in the aid of those who sought to overthrow every sign of a creed, without seeing the need of preserving the esoteric and spiritual beauties these signs denoted.

God has said (according to the Chinese) with supreme insight into human impulses, "those who worship idols worship Me;" still, it marks an advance in worship when idols can be dispensed with.

Theosophy is at once Destroyer and Preserver, whilst authors of Anti-Christian literature can only be compared to those barbarian hordes who lay waste a country, heedless of their own interests and those of humanity.

At last, the President of the London Lodge has put into words the thoughts of Esoteric Christians on the subject, and as prominence to them seems to me not out of place and their significance may have been missed by some, I venture to ask you to reproduce them, if space permits.

"To me personally, it has always been a matter of regret that in attacking the orthodox presentation of Christianity, your Society has hitherto been hardly careful to guard itself against the imputation of antagonism to the essential mysteries of that religion.

It is not by wholly setting aside and rejecting names and symbols, hallowed by familiar use among our people from their birth as a nation, that we shall create for ourselves the largest sphere of usefulness. It is not so much the revelation of a new religious system that is needed here, as a true interpretation of the religion now existing."

D. M. STRONG, Lt.-Col., F. T. S.,  
10th Bengal Lancers.

## THEOSOPHY—WHAT IT IS.

THEOSOPHY, as understood by me, is made up of three elements, viz., universal brotherhood, knowledge of truths discovered by science generally known to the ordinary scientists, and knowledge of truths still in store for them. It may be described in another way, viz., "universal religion and science, reconciled." To be a Theosophist, he must acknowledge and practise universal brotherhood. If he is not prepared to admit this principle, he cannot be a Theosophist. In addition to this, he should be a student of truths generally known, of course, to the extent of his capacity. He should besides be a searcher of truths hitherto unknown. If he be all these three, he is undoubtedly a Theosophist. It is however possible that one may not be capable of knowing scientific truths, extant or prospective, and yet may be able to recognise and practise Universal Brotherhood; he is still a Theosophist. No one who does not admit and practise Universal Brotherhood, though he be a scientist of the first degree, can ever be a Theosophist.

What are vulgarly called phenomena, are really effects produced by causes recognised by laws of nature ascertained or ascertainable by science. Steam engine was once a phenomenon to this world. So were telegraph, telephone, gas light, electric light, &c. Even horse-riding was a phenomenon to the aboriginal tribes of America. Eclipse served as a phenomenon to Columbus for very valuable purposes.

A thing is a phenomenon or even a miracle, so long as its natural cause is not known.

KRISHNAVILAS, }  
25th January 1884. }

R. RAGOONATH ROW, F. T. S.

## IDOL WORSHIP.

IN your issue, Vol. 3, No. 12, dated September 1882, page 303, "correspondent's column 2," I read under "Idolatry in the Shastras," that Mr. "D.," F. T. S., is quite prepared to prove that idol worship is sanctioned in the Shastras (*i. e.*, the four Hindoo Vedas); and I wish you will be good enough to extract the letter\* signed B. F. X. in the accompanying *Epiphany*, and inform that gentleman through the medium of your valuable Journal that I am ready to contradict his statements in favor of idol worship.

Yours faithfully,

A. YALPANAM.

CALCUTTA, 10th January 1884.

DEAR MR. EDITOR:—I hereunder enumerate a profusion of golden proofs selected from various Shastras of the Hindoos as I promised at the end of my introduction to the origin of idol worship in India; but I wonder where Babu Ishan Chandra Ghose found that "the Vedas enjoin upon the Aryan Hindoos the worship of that Supreme Being through the manifestations of His attributes in nature's works." I assure you that there is not a single Text in the so-called Veda or Sruti which could encourage the idol worship, but many which discourage it. However I shall deal with his letters Nos. I and II in their right place. As I fear that your journal cannot afford much space for both the Texts and their translations, I beg to note here a few names of the Hindoo's sacred books, and the respective pages wherein the Texts are found with their translations.

Translations of the Texts:—Man (God says) dishonours me by idol-worship while I live always in all moveable and immoveable things. Whosoever through foolishness, neglecting the worship of me in spirit, adores idol worship, his pujan will go in vain as ghee is poured into burnt ashes. Oh Sinner! I shall not be pleased with those who cause disgrace to fall on nature's works by making idols, and worship these, placing before them valuable fruits, &c. :—Bhagavata, 3rd Skandha, 29th Adhyaya.

He who desires very earnestly the worship of idols is neither a votary of me, nor any other but a worldly man :—Bhagavata, 11th Skanda, 2nd Adhyaya.

(These two quotations, from the Bhagavata, are originally drawn from the Vedas.)

The eye does not go thither, nor speech, nor mind. We do not know, we do not understand, how any one can teach it. It is different from the known, it is also above the unknown, thus we have heard from those of old who taught us this.

That which is not expressed by speech and by which speech is expressed, that alone know as Brahmin, not that which people adore here.

That which does not think by mind, and by which they say, mind is thought, that alone know as Brahmin, not that which people here adore.

That which does not see by the eye, and by which one sees (the work of) the eyes, that alone know as Brahmin, not that which people here adore.

That which does not hear by the ear, and by which the ear is heard, that alone know as Brahmin, not that which people here adore.

Talavakara-Upanishad I-Kanda 1-8.

Whenever a man believes and trusts that his happiness is in Him Who is a Spirit, then only he frees himself from every sort of fear. Whenever a man thinks it otherwise, does not fear rise in him? (See the Commentators.)

Taitrya-Upanishad. Brahmananda Vally Anuvaka 7—.

He (the Self) encircled all, bright, incorporeal, scatheless, without muscles, pure, untouched, &c., &c.

All who worship what is not real knowledge enter into blind darkness, &c., &c.

Vagasaney-Samhita-Upanishad 8-9.

Whatever action which is not disgraceful; that should be done and observed.

Whatever thing is good to me and that should be exercised by you. (The context here shows that the disgraceful action referred to, is idolatry, so also do the Commentators.)

Taitrya-Upanishad. Shishta Vally Anuvaka 11—.

Whatever is found consistent with the Vedas in the Agama, Itihasa Purana, &c., is acceptable, and inconsistencies should be cut off—Sankarachariar (the Great Commentator of Vedas.)

Sankaracharia, in the context, speaks of idolatry as "inconsistent with the Vedas."

One that dispels his heathen blindness and proclaims Him that shines as sun has risen "I know Him the Mahapurush," he conquers death. There is no other way except this to obtain heaven.—Suvatha-Suvethara-Upanishad, 3rd Adhiyaya, 8th Anuvaka.

"Heathen blindness" here admittedly refers to idol-worship.

Who understands Him that He is beauty of beauties, no body or pain, they shall enjoy everlasting bliss, the contrary shall suffer—the same as above 10th Anuvaka.

Vide the same Upanishad, 6th Adhyaya 11-12 verses. "None shall obtain heaven except those that see God is in themselves."

\* ED. NOTE.—We accede with pleasure to our correspondent's desire, and re-publish the said letter from *Epiphany* of Dec. 15, 1883—*verbatim*.

See 15th verse "Kadopa-Upanishad, 4th Vally, 11th verse. (A man) "could reach Him by mind only. There are no kinds. One that sees God here in various forms and shapes, goes from death to death."

See 5th Vally, 12th verse,  
" " " " " " " " " " " "

Rise up and awake from the sleep of idol-worship; and having approached able teachers (holy men), acquire knowledge of God, the origin of the Soul: for the way to the knowledge of God is considered by wise men difficult as the passage over the sharp edge of a razor.—Kadopa-Upanishad, 3rd Vally, 14th verse.

All who worship what is not the true cause, enter into blind darkness; those who delight in the worship of the created enter as it were into greater darkness.—Vagasnicy Samhita-Upanishad, 12th verse.

It is thought to be known (as if) by awakening and (then) we obtain immortality indeed.—Tulavakara Upanishad, 2nd Kanada, 4th verse.

Those fools who immersed in ignorance, that is, the foolish practice of rites, consider themselves to be wise and learned, wander about, repeatedly subjecting themselves to birth, disease, death and other pains, like blind men when guided by a blind man.—Mundak Upanishad, First Mudak, 2nd Adhyaya, 9th verse.

Engaged in various manners of rites and sacrifices, the ignorant are sure of obtaining their objects: but as the observers of such rites, from excessive desire of fruition, remain destitute of a knowledge, &c., &c.—Mundak Upanishad, First Mudak, 2nd Adhyaya, 10th verse.

There are thousands of other proofs from the Vedas, which I will write down if any of your idol-worshipping correspondents think the foregoing are insufficient. By the bye I shall be ready to argue from the 4 Vedas verbally with any desirous of conviction of the true worship of the true God, if they care to call on me at the Oxford Mission House, No. 154, Bow Bazaar Street.

B. F. X.

(To be continued.)

## REQUIUS.

### LA LINGUISTIQUE DÉVOILÉE (LINGUISTICS UNVEILED.)

By M. L. LEVY BING, F. T. S.\*

THIS extraordinary and learned work on a most fascinating subject in the circle of the sciences is by one of our Fellows belonging to a Paris Branch. The gentleman is an Israelite, an eminent member of many scientific societies and known as a great scholar and original thinker in Philology, especially Semitic. This quarto book of some 450 pages is a valuable contribution to the Science of Language. With no ordinary skill and boldness the author supports a long exploded philological hypothesis—still no doubt a pet theory with many a Jewish or Christian Ecclesiastic, and one in no way very original, as the author in the fulness of his heart imagines.
